Standard Oil of California..	115	$116\frac{1}{2}$	$114\frac{1}{4}$	$114\frac{1}{4}$
U. S. Steel................	$104\frac{1}{4}$	$104\frac{1}{2}$	103	$103\frac{1}{8}$

Another type of data is that which expresses variations at a single point in time. This kind of data is usually formed into groups of equal width. It is illustrated in Table 7, reproduced from Secrist's "An Introduction to Statistical Methods" (p. 146), showing classified weekly wages for employees for all manufacturing industries in Massachusetts in 1912.

Table 7. Classified Weekly Wages for Employees in All Manufacturing Industries in Massachusetts in 1912

Wage Groups	Number and Per Cent of Employees Receiving Specified Amounts	
	Number	Per Cent
Total	681,383	100.00
Under $3 per week	2,266	0.3
$ 3 but under $ 4	5,792	0.9
4 " " 5	16,909	2.5
5 " " 6	34,070	5.0
6 " " 7	52,604	7.7
7 " " 8	63,879	9.4
8 " " 9	68,787	10.1
9 " " 10	75,006	11.0
10 " " 12	103,160	15.1
12 " " 15	107,677	15.8
15 " " 20	104,585	15.3
20 " " 25	32,536	4.8
25 and over	14,112	2.1

In this table the width of groups varies from $1 to $5, while in the last group no upper limit is given. Care should be used in varying the width of groups because wrong conclusions are liable to be drawn in comparing groups of unequal width.

Averages

FUNCTION AND LIMITATION OF AVERAGES.—To interpret large masses of data it is necessary to secure certain brief summaries which, while not presenting all the information which may be secured from the original data, do bring out the fundamental tendencies which underlie it and which a casual inspection of the data does not ordinarily make evident. The purpose of averages is to interpret the tendencies hidden under great masses of figures. In making this interpretation, details must be neglected because it is the essential purpose of averages to avoid details. The process of finding

and using averages is a process of interpretation. In employing averages as short-cuts to an understanding of statistical data, care must be used not to make a wrong interpretation. Purely mechancial construction of averages unaided by judgment and the process of elimination of material which serves to obscure real tendencies is apt to lead to erroneous results. Averages are frequently fictitious, in that they may not be representative of any actual existing thing. They are representative of types which do not necessarily have actually existing counterparts.

Such generalized expressions necessarily possess limitations as to usefulness. Sometimes their employment indicates neglect or a willingness to forego a more searching inquiry. They must be used with judgment and caution. On the other hand, where detail may be neglected, averages oftentimes give an accurate picture of tendencies.

THE ARITHMETIC AVERAGE.—This is the average most widely used. It is described as being the center of gravity of a statistical series. To secure it, all items in a given series must be considered. It is a mathematical concept and may have no actually existing counterpart. The average of two entirely different series may be the same. The average of 7, 6, 5, 3, 2, 1, is 4. The average of 1, 3, 8, is also 4. The arithmetic average ignores the character of the distribution within the series. It should be used with great care because it is of a highly abstract character. In the absence of bias, i.e., where the members of a series are determined by chance, the arithmetic mean approximates more nearly the true value as the number of members or items in the series is increased. Series of this type are infrequent in economics and business because data on wages, sales, purchases, and so on are not determined purely by chance.

COMPUTATION OF ARITHMETIC AVERAGE.—The arithmetic average is secured by totaling the items in a series and dividing their sum by

Table 8. Prices of Suits, Number of Each Sold in a Given Period, and Products of Prices and Numbers

(1) Prices Suits	(2) Number of Each Suit Sold	(3) Products of Prices and Numbers
Total	422	$11,993
$15.00	47	$ 705
16.50	36	594
18.00	53	954
22.50	80	1,800
30.00	60	1,800
33.00	30	990
36.00	25	900
45.00	60	2,700
50.00	31	1,550

the number of items. In this connection, however, it is necessary to consider the subject of **weighting.** The importance of items in a series is sometimes affected by the frequency with which they occur. When each item occurs but once, the question of weighting does not arise because due allowance is made for each occurrence when the average is found according to the rule stated above. When the various items of a series have various frequencies, it is necessary to take these frequencies into account in securing a true or weighted average. In column 1 of Table 8 are shown the prices of the various kinds of suits of clothes sold in a clothing store; in column 2 are shown the number of each kind sold during a given period; in column 3 are shown the products of the prices of each kind of suit multiplied by the number sold.

The weighted average price per suit sold is secured by dividing $11,993 by the total number sold, 422, which gives $28.42. The simple average of prices of suits secured by dividing the total of the amounts in column 1, by the number of items in the column, is $29.56. In this illustration the numbers in column 2 were selected by chance, which accounts for the fact that the simple average and weighted average are of nearly the same amount. Care must be taken in the selection of weights and it may be well to make tests with and without weights to determine to what extent the weighted average differs from the simple average. When the items to be weighted are arranged miscellaneously, it is surprising to find how little various systems of weights affect the average. In Table 9 the items shown in column 1 in Table 8 are arranged by chance. In the columns which follow various systems of weights are applied. The weighted averages secured by the application of these systems are shown below the table.

Table 9. Prices of Suits and Systems of Weights Used to Secure a Weighted Average Price Per Suit

Prices of Suits	Systems of Weights					
	Numerals 1-9	Products of Prices and Numbers	Numerals 9-1	Products of Prices and Numbers	No. Words in Consecutive Lines in a Book	Products of Prices and Numbers
Total....	45	$1,447.50	45	$1,212.50	82	$2,351.00
$16.50.......	1	$ 16.50	9	$148.50	7	$115.50
18.00.......	2	36.00	8	144.00	9	162.00
50.00.......	3	150.00	7	350.00	9	450.00
30.00.......	4	120.00	6	180.00	8	240.00
15.00.......	5	75.00	5	75.00	12	180.00
22.50.......	6	135.00	4	90.00	7	87.50
33.00.......	7	231.00	3	99.00	12	396.00
45.00.......	8	360.00	2	90.00	8	360.00
36.00.......	9	324.00	1	36.00	10	360.00

Average price when weighted with numerals 1-9 is 1,447.50 ÷ 45 = $32.17.
Average price when weighted with numerals 9-1 is 1,212.50 ÷ 45 = $26.94.

Average price when weighted with number of words in consecutive lines in a book is 2,351 ÷ 82 = \$28.65.

The average prices, secured by using various systems of weights, differ, respectively, by \$3.75, \$1.48, and \$0.23, from the average secured when the weights used were the numbers of suits sold. Weighted averages frequently vary so little from simple averages that it is desirable to consider carefully he advisability of using weights.

SHORT-CUT METHOD OF COMPUTING ARITHMETIC AVERAGE.—Sometimes the arithmetic average can be computed to advantage by assuming an average and then calculating the plus and minus deviations from this assumed average. The algebraic sum of these deviations represents the difference, plus or minus, as the case may be, betwen the assumed average and the true average, because the algebraic sum of the deviations from the true arithmetic average is 0. In case of a frequency series it is necessary to multiply the deviation in each instance by the numbers of frequencies. Using data in Table 8, results by this method are as shown in Table 10.

Table 10. Method of Computing Arithmetic Mean by Use of an Assumed Average

(Average price assumed is \$30)

Prices of Suits	Number of Each Suit Sold	Deviation of Price from Assumed Average		Deviation Multiplied by Frequencies		Algebraic Sum of Deviations
		−	+	−	+	
Total....	422			\$2,427.00	\$1,760.00	−\$667.00
\$15.00.......	47	\$15.00		\$705.00		
16.50.......	36	13.50		486.00		
18.00.......	53	12.00		636.00		
22.50.......	80	7.50		600.00		
30.00.......	60					
33.00.......	30		\$ 3.00		\$ 90.00	
36.00.......	25		6.00		150.00	
45.00.......	60		15.00		900.00	
50.00.......	31		20.00		620.00	

−667 ÷ 422 = −1.58, the amount by which the assumed average must be reduced to secure the true average. \$30, the assumed average, minus \$1.58 = \$28.42, the true average.

In the case of statistical series consisting of **frequency groups** the number of items falling within the limits of each group is given but the arrangement within the group is not known. It is therefore necessary to assume an even distribution within the group and to multiply the frequencies by the middle terms of each group. In Table 11, column 1 shows wage groups, column 2 shows the frequencies in each group, column 3 shows the products of frequencies and middle term of each group, column 4 shows the plus and minus deviations from an assumed average wage of \$8.50, column 5 shows the products of these deviations and the frequencies, and column 6 shows the algebraic sum of these products.

Table 11. Wage groups, Frequencies in Each Group, and Data for Determination of the Arithmetic Average

(1) Wage Groups	(2) Frequencies in Each Wage Group	(3) Products of Frequencies and Middle Terms of Each Group	(4) Deviations from Assumed Average of $8.50		(5) Products of Deviations and Frequencies		(6) Algebraic Sum of Deviations
			−	+	−	+	
Total	359	$2,512.50			$665.00	$126.00	− $539.00
$ 2.00 to $ 2.99	12	$ 30.00	6		$ 72.00		
3.00 " 3.99	15	52.50	5		75.00		
4.00 " 4.99	30	135.00	4		120.00		
5.00 " 5.99	70	385.00	3		210.00		
6.00 " 6.99	65	422.50	2		130.00		
7.00 " 7.99	58	435.00	1		58.00		
8.00 " 8.99	41	348.50					
9.00 " 9.99	30	285.00		1		$30.00	
10.00 " 10.99	22	231.00		2		44.00	
11.00 " 11.99	12	138.00		3		36.00	
12.00 " 12.99	4	50.00		4		16.00	

This table illustrates two methods of finding the average in a group frequency series. One method is to divide the total of the products of the frequencies and middle terms of each group, \$2,592.50, by 359, the total frequencies, which gives as a quotient and the average, \$7. The other method is to divide \$539.00 (the algebraic sum of the products of deviations from an assumed average and the frequencies) by 359 (the frequencies) which gives +\$1.50 (the excess of the assumed average, \$8.50, over the true average). Therefore, the true average is \$8.50 − \$1.50 = \$7.00.

THE MODE.—The mode is the typical item in a statistical series. It is never an abstract concept because it is always represented. It is always real. This does not mean that a mode exists in every series. In this connection it is desirable to distinguish between **discrete** and **continuous** statistical series. Discrete statistical series are those which show breaks in continuity which no amount of data will serve to eradicate. Thus, a table showing interest rates on mortgages will show percentage of 3%, 3½%, 4%, 4½%, 5%, 5½%, 6%, 6½%, and so on; but no matter how much material is collected there will always exist breaks of ½%. Continuous statistical series are those which show breaks merely because of the limited amount of data available. The character of the data in continuous series is such that breaks disappear as an increasing amount of data is made available. Thus, a table showing lengths of oak leaves shows breaks between lengths because of the limited number of leaves measured. The breaks decrease as the number of leaves measured increases.

Frequently the mode can be located with much greater certainty in case of continuous series than in case of discrete series. Many of the series with which the accountant deals are of the discrete type, although in some cases the unit of measurement is so small that the series, for practical purposes, approximates the continuous. In case of group frequency series, the wider the groups are made, the more the individual data are submerged, hence the greater the difficulty of locating the true mode. If the series is a continuous one, the mode may be located within a group by interpolation. The method of interpolation must be employed with caution in case of discrete series, however.

Locating the Mode.—The location of the mode in both historical and frequency series is a matter of inspection. The process of inspection is facilitated by tabular arrangements which visualize the modal groups. The mode may also be located graphically. Sometimes more than one mode is found in a given frequency distribution. Table 12 is taken from Secrist's "An Introduction to Statistical Methods" (p. 273), and illustrates the method of approximating the mode in a historical series.

In column 2 the group limits are fixed at 5 million, beginning at 45 million; in column 3 the group limits are fixed at 10 million, beginning at 40 million; in column 4 the group limits are fixed at 10 million, beginning at 45 million; in column 5 the group limits are fixed at 15 million, beginning at 45 million; and in column 6 the group limits are fixed at 8 million, beginning at 46 million. Secrist says: "The most characteristic amount with a 10-million group is 46 to 56 millions, of which there are 7 instances; more narrowly there are 5 years in which the amounts imported are between 49 and 56 million. It is probably not wise to locate the mode more accurately than in the group 46 to 54 million (column 6). To do so for this type of distribution would be to strive for too great accuracy."

In frequency series the mode occurs in the group of maximum frequency. It is located by interpolation, proper weight being given to the frequencies

Table 12. Data Showing Importation of Raw Cotton Into the United States, Arranged so as to Determine the Modal Amount

Year	Amounts in 000's	Frequencies					
			Approximate by Groups				
		(1) Identical	(2) 5 Mil. beginning at 45 Mil.	(3) 10 Mil. beginning at 40 Mil.	(4) 10 Mil. beginning at 45 Mil.	(5) 15 Mil. beginning at 45 Mil.	(6) 8 Mil. beginning at 46 Mil.
1901....	46,631	1					
1904....	48,841	1	3	3			
1895....	49,332	1					
1899....	50,158	1			6		6
1897....	51,899	1	3	4		7	
1898....	52,660	1					
1896....	55,350	1	1		2		2
1905....	60,509	1	1	2			
1900....	67,398	1	1				1
1906....	70,964	1				5	
1908....	71,073	1	3	3	4		3
1903....	74,874	1					
1910....	86,037	1	2	2	2	2	2
1909....	86,518	1					
1902....	98,716	1	1	1	2	2	1
1907....	104,792	1	1	2			2
1912....	109,780	1	1		2	2	
1911....	113,768	1	1	1			1
1913....	121,852	1	1	1	1	1	1

in the groups on either side of the group of maximum frequency. In Table 11 (p. 720), which for practical purposes is a series of the continuous type, 70 is the group of maximum frequency. In the next lower group are 30 and in the next higher group are 65. There are 95 in the two groups. The width of groups is \$1.00. 30/95 of \$1.00 = \$0.32. 65/95 of \$1.00 = \$0.68. The mode, theoretically, is \$5.68, because the tendency of the 65 items in the group above is to place it at \$0.68 above \$5.00, while the tendency of 30 items in the group below is to place it at \$0.32 below \$6.00.

By plotting frequency data the mode may be located. In a simple graph the mode is the maximum ordinate. In cumulative graphs, or ogives, the mode occurs where the curve approaches most nearly to the vertical. The data in Table 11 are shown plotted in Fig. 1 in the form of a **simple graph** and in the form of an **ogive.** The plotting points used are the mid-points of the wage groups, \$2.50, \$3.50, and so on.

THE MEDIAN.—The median is the middle item in a series the members of which are arranged in the order of magnitude. If the number of items is odd, the median exists in the series; if even, the median is non-existent,

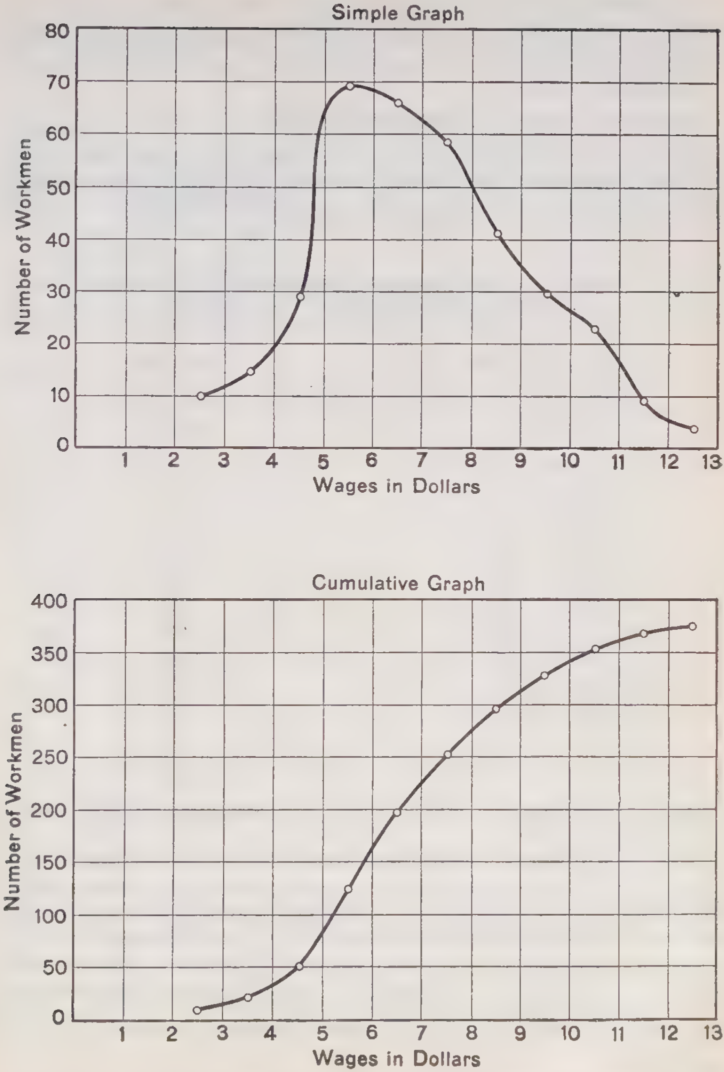

Fig. 1. Curves of Simple Graphic and Ogive (Based on Table 11)

but theoretically lies between the two middle items. Like the mode, the median is not a mathematical concept; but unlike the mode, it is sometimes non-existent. The median may or may not be a good representative of the series in which it is found. In general, it is useful only when the distribution of the series is uniform.

Locating the Median.—In locating the median, distinguish between discrete and continuous series. Great accuracy is not to be expected in discrete series. In group frequency series it is necessary to locate first the median group, then the median within that group. For this purpose, assume a uniform distribution within the group. Using the data given in Table 11 (p. 720) we have the figures given in Table 13.

Table 13. Wage Groups and Frequencies in Each Group, for Determination of the Median

Wage Groups	Frequencies
Total	359
\$2.00 to \$2.99	12
3.00 " 3.99	15
4.00 " 4.99	30
5.00 " 5.99	70
6.00 " 6.99	65
7.00 " 7.99	58
8.00 " 8.99	41
9.00 " 9.99	30
10.00 " 10.99	22
11.00 " 11.99	12
12.00 " 12.99	4

When n is the number of items in a series, the median is $\frac{n+1}{2}$. Here $n = 359$. $\frac{359+1}{2} = 180$. That group which contains the 180th item is the median group. Counting down or up, this is the group \$6.00 to \$6.99. There are 65 men in this group. Assuming an even distribution of these between \$6.00 and \$6.99, the rate received by the 180th man is the rate of the 53rd man in the group. It is, therefore, $\frac{53}{65} \times \$1.00 + \$6.00$, or \$6.82, which is the median wage rate. The lower class limit is \$6.00; to get the average, $\frac{53}{65}$ of \$1.00 is added to it. The arithmetic average for the same series is \$7.00.

THE GEOMETRIC MEAN.—The geometric mean is the nth root of the product of the items in a series, n being the number of items in the series.

The computation of the geometric mean is laborious and for most practical purposes its usefulness is questionable. It is valuable in constructing index numbers because index numbers made thus can be shifted readily from one base to another.

Index Numbers

DEFINITION.—Index numbers, in the form usually of averages, are employed to show trends in prices or in other movements which can be quantitatively expressed by means of statistical data. Usually these averages are averages of relative numbers, although it is not uncommon to employ sums of actual prices as index numbers.

CONSTRUCTION OF INDEX NUMBERS.—Table 14 shows the open, high, low, and closing prices of stocks of eight railroad stocks on the New York Stock Exchange on Sept. 25, 1922.

Table 14. Opening, High, Low, and Closing Prices of Eight Railroad Stocks on the New York Stock Exchange, on Sept. 25, 1922

No. Shares Sold	Name of Stock	Open	High	Low	Close
2,500	Atchison	$106\frac{7}{8}$	$106\frac{7}{8}$	106	106
4,900	Baltimore & Ohio	$56\frac{3}{8}$	$56\frac{1}{2}$	$55\frac{1}{8}$	$55\frac{3}{4}$
1,600	Chicago & Northwestern	92	93	92	$92\frac{1}{2}$
100	Illinois Central	113	113	113	113
3,200	Lehigh Valley	$69\frac{3}{8}$	$69\frac{7}{8}$	$68\frac{1}{2}$	$68\frac{1}{2}$
1,800	Northern Pacific	$86\frac{7}{8}$	$87\frac{3}{8}$	$86\frac{3}{4}$	87
1,500	Pennsylvania	$48\frac{1}{2}$	$48\frac{1}{2}$	$48\frac{1}{8}$	$48\frac{1}{4}$
1,100	Union Pacific	151	151	$150\frac{1}{4}$	151

The opening, high, low, and closing prices are to be converted into an index number based on the opening price taken as 100. That is, the high, low, and close prices are to be reduced to percentages of the opening price, and an average taken of these percentages. The results are shown in Table 15. The index numbers of relatives based on the opening prices bring out the significance of price movements better than any inspection of the table of actual prices can do. These index numbers were made without weighting. The eight stocks might be weighted on the basis of the number of shares of each sold, which would change slightly the results secured.

Index numbers can be applied to show tendencies in any phenomena which can be measured statistically and which are chronological in character. Exports, imports, sales, gross and net profits, and practically all items in balance sheets and income statements, may be reduced to an intelligible basis of comparison by being reduced to index number.

Index numbers may be constructed as averages of actual prices rather than as averages of relatives. This method is preferable where it is desirable to make changes in the base year, because when index numbers are

Table 15. Opening, High, Low, and Closing Prices of Eight Railroad Stocks Reduced to Relatives Based on the Opening Prices

Name of Stock	Open	High	Low	Closing
Atchison	100	100.00	99.18	99.18
Baltimore & Ohio	100	100.22	97.78	98.89
Chicago & Northwestern	100	101.09	100.00	100.54
Illinois Central	100	100.00	100.00	100.00
Lehigh Valley	100	100.72	98.74	98.74
Northern Pacific	100	100.57	99.86	100.14
Pennsylvania	100	100.00	99.23	99.48
Union Pacific	100	100.00	99.50	100.00
Index numbers in form of averages of relatives	100	100.33	99.29	99.62

averages of relatives it is necessary, if theoretical accuracy is desired, to make the whole computation anew when it is desired to change the base year. However, the short method is sometimes used in connection with other index series, such checks being made as to the error probably resulting as are available. When index numbers are based on actual prices they are still averages, but not averages of relatives. Consequently any year may be used as a base by assuming the average for that year to represent 100 and dividing it into the average of actual prices for the other years represented.

GENERAL AND SPECIAL PURPOSE INDEX NUMBERS.—General purpose index numbers are those constructed for the purpose of being used by all who may have occasion to apply them. This sometimes leads to their misuse, because they are employed to prove things which are quite incompatible. Special purpose index numbers are those constructed for a single purpose, as, for example, to show the trend of sales of a department store.

STEPS IN CONSTRUCTION OF INDEX NUMBERS.—Professor W. C. Mitchell enumerates the steps involved in the construction of index numbers as follows:

(1) Defining the purpose for which the final results are to be used; (2) deciding the numbers and kinds of commodities to be included; (3) determining whether these commodities shall be treated alike or whether they shall be weighted according to their relative importance; (4) collecting the actual prices of the commodities chosen, and, in case a weighted series is to be made, collecting also data regarding their relative importance; (5) deciding whether to measure the average variations of prices or the variations of a sum of actual prices; (6) in case average variations are to be measured, choosing the base upon which relative prices shall be computed; and (7) settling upon the form of average to be struck.

At each one of these successive steps choice must be made among alternatives that range in number from two to thousands. The possible combinations among the alternatives chosen are indefinitely numerous. Hence there is no assignable limit to the possible

varieties of index numbers, and in practice no two of the known series are exactly alike in construction. To canvass even the important variations of method actually in use is not a simple task.

Use great care in the selection and use of data for purposes of index number making. There is never a single price for a commodity, because prices vary as between wholesale and retail, locality, and so on. The data used must be truly representative. If selection is necessary because of the impossibility of including all data, use care to see that it is representative. Regarding the choice of commodities and the importance assigned to each, Professor Mitchell says:

As for the small series made from the prices of foods alone or from the prices of any single group of commodities, it is clear that, however good for special uses they may be, they are untrustworthy as general-purpose index numbers.

The second conclusion . . . . is that large index numbers are more trustworthy for general purposes than small ones, not only in so far as they include more groups of related prices, but also in so far as they contain more numerous samples from each group. What is characteristic in the behavior of the prices of farm crops, of mineral products, of manufactured wares, of consumers' goods, etc.—what is characteristic in the behavior of any group of prices—is more likely to be brought out and to exercise its due effects upon the final results when the group is represented by 10 or 20 sets of quotations than when it is represented by only one or two sets. The basis of this contention is simple: In every group that has been studied there are certain commodities whose prices seldom behave in the typical way, and no commodities whose prices can be trusted always to behave typically. Consequently, no care to include commodities belonging to all the important groups can guarantee accurate results, unless care is also taken to get numerous representatives of each group.

TENDENCIES IN PRICE FLUCTUATIONS.—Most economic phenomena tend to move in cycles and to obey certain laws. Periods of falling and rising prices alternate. The prices of a large variety of commodities tend to fluctuate in unison but variations in rate of increase or decrease occur, while in some instances movements of individual commodities are opposite to the general tendency. Large differences from the normal tendency are fewer than small ones. The following chart (Fig. 2) constructed by Mitchell shows variations of 1913 prices of 241 commodities from (1) prices of the same commodities in 1912, and (2) from average prices of the period 1890-1899.

As shown by the solid line, a close correspondence exists between 1913 and 1912 prices. As shown by the dotted line, the co-ordination between 1913 prices and average prices for the years 1890-1899 is not nearly so great. "Price fluctuations, then, become dispersed over a wider range and less concentrated about their mean as the time covered by the variations increases."

THE BASE TO USE.—In the application of index to prices the choice of a base year is affected by the method followed in constructing the index number. If it is an average of relatives, the base cannot be easily changed. If it is an average of actual prices expressed in percentages related to a given year taken as a base and expressed as 100, the base can be readily changed by a recomputation of these percentages on the basis of some other year taken as the base. When the base is recomputed each year the index number is known as a chain-relative. Chain-relatives show differences from year to year but not over extended periods of years. Chain-relatives readily admit changing of items in case some become obsolete or unrepresentative. No definite rule can be laid down, but the base to use must be made dependent upon circumstances which affect the problem in hand.

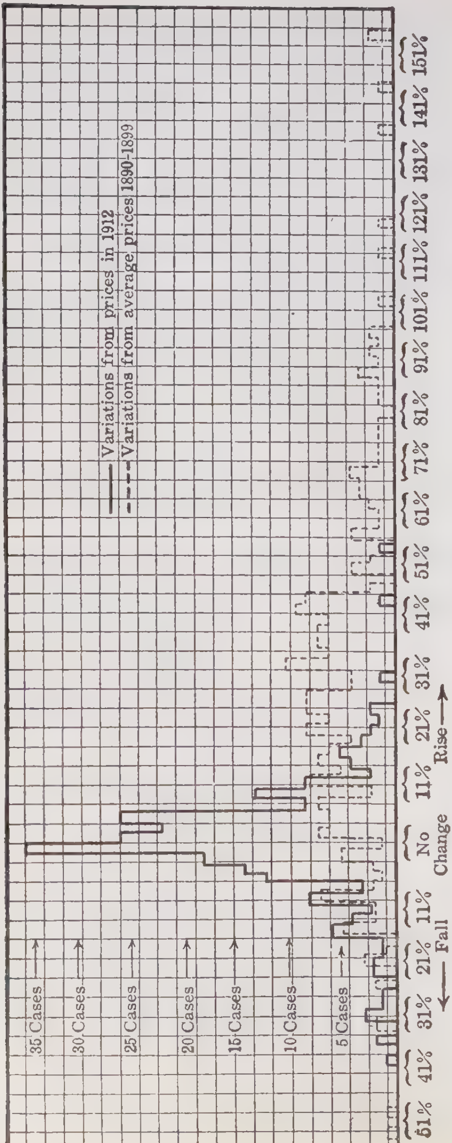

FIG. 2. Distribution of the Price Variations of 241 Commodities in 1913
(Percentage of rise or fall in prices)
(From Horace Secrist, "An Introduction to Statistical Methods")

THE AVERAGE TO USE.—Ordinarily the best average to use in making index numbers is the arithmetic average. It is simple and familiar to all accountants. The geometric mean possesses one important advantage, viz., shifting of the base without a recomputation of all data. Mitchell says:

Wise choice of the average to use in making an index number, then, involves careful consideration of the materials to be dealt with and of the purpose in view. (1) If that purpose be to measure the **average ratio of change** in prices, the geometric mean is the best, indeed, in strictness, is the only proper average to employ. . . . . (2) But . . . . geometric means are not proper averages for measuring alterations in the amount of money that goods cost. And as a rule our interest does center in the money cost of goods rather than in the average ratio of changes in price. . . . . For such purposes the arithmetic mean is the logical average to use. (3) Frequently, however, the very fact that an article has advanced greatly in price cuts down its market so that the increase in money cost represented by the arithmetic mean exists on paper rather than in fact. When such cases of extreme advance are numerous among the relative prices to be averaged, the median may give more significant results than the arithmetic mean. (4) When the number of commodities included in the index number is small, however, medians are likely to prove highly erratic, representing less the general trend of prices than the peculiarities of the data from which they are made. (5) If the index number is designed for the public at large, the familiarity of arithmetic means is an argument in their favor; but it counts for nothing in figures intended for specialists. (6) Often the usefulness of a new index number may be enhanced without detriment to its own special purpose by throwing it into a form directly comparable with that of index numbers already in existence. Then, of course, not only the form of average but also the base period employed in making the existing series has special claims for imitation. (7) Finally, the desirability of making index numbers that can be shifted from one base to another deserves far more consideration than is commonly accorded it. On this count the score is in favor of the geometric mean. If geometric means were invariably used, all index numbers could readily be compared with one another, whatever the bases on which they were originally computed. And that would be a great gain to all students of prices.[1]

WEIGHTING.—In weighted index number the influence of each item averaged is proportional to its relative importance. Various systems of weight are in use. In a given instance that system should be followed which best accomplishes the purpose of giving to each item its due relative influence. If retail prices are being studied the normal family budget is a logical basis for weighting. In case of wholesale prices the amount produced serves as a basis. Sometimes weighting occurs unconsciously, as when an unimportant item is given equal weight with an important one in constructing an index number. Usually the effect of weighting is less than would be supposed. Bowley's rule is: "In calculating averages give all care to making the items free from bias, and do not strain after exactness in weighting."[2] Weighting is simply securing a proper distribution of samples. If this distribution is secured in collecting data, i.e., if the data is free from bias, weighting is superfluous. It is sometimes easier, however, to use weights than to secure a correct distribution of samples. When correct weighting does not materially affect the result, it may be assumed that a correct distribution of samples has been secured. When it does materially affect the result, it may be assumed that the sampling is not representative. Weights should then be used or more representative sampling made. Ordinarily weights, having once been determined, should not be changed, unless the need is very evident because of the greatly altered status of the commodities or prices from which the data is secured.

Dispersion

DEFINITION.—By dispersion is meant the variation of the items in a statistical series from the average of the series. In economic statistics uniformity of distribution is rare. Measures of dispersion express the essential facts about this variation from the average or characteristic.

MEASURES OF DISPERSION.—One measure of dispersion is the **range.** It expresses the limits of the distribution in a series. In determining the range, time series and frequency series must be treated differently. In time series the range is expressed by citing the upper and lower limits, but these may not be the same as the opening and closing dates. In frequency series the range is expressed by citing units. The range may not give any conception of distribution between extremes, however and in series of irregular distribution this is also important. Frequently extremes in a series are of little importance as compared with intermediate items. What is desired is an expression which summarizes extent of deviations from average.

The **decil** method of showing dispersion consists in plotting the extreme limits and the nine intermediate points which measure equal distances along the series. Table 16, taken from Professor W. C. Mitchell's "Business Cycles" (p. 112), illustrates the decil method of showing dispersion of wholesale prices:

Table 16. The Decils of Relative Wholesale Prices in the United States, by Years, 1890-1910

Years	Lowest Relative Price	1st decil	2nd decil	3rd decil	4th decil	5th decil (Median)	6th decil	7th decil	8th decil	9th decil	Highest Relative Price

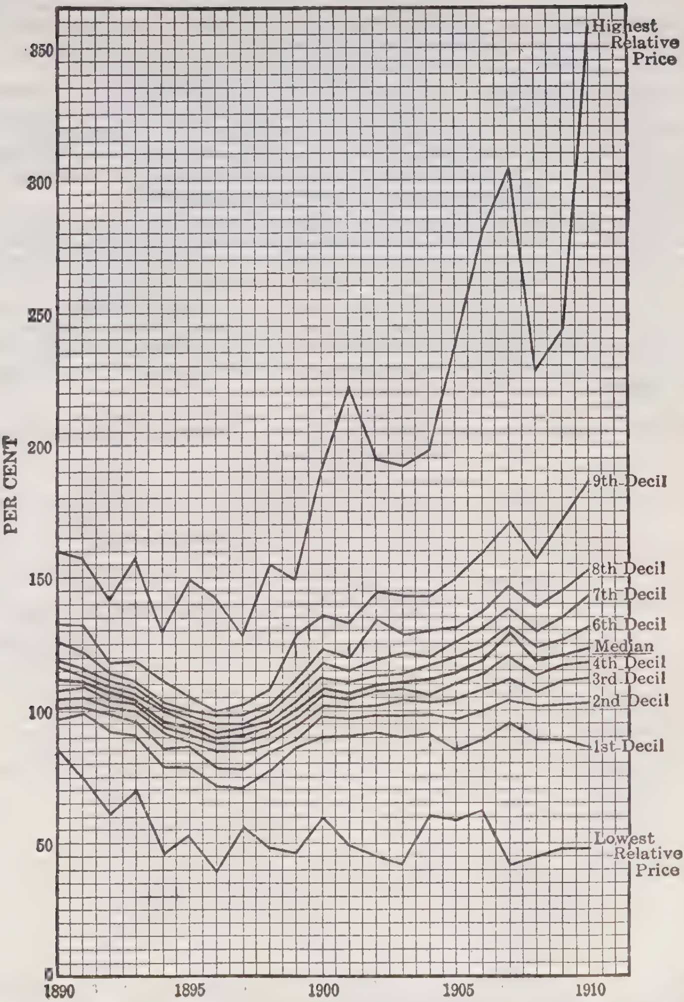

FIG. 3. Curves showing by the Range and the Decil Methods, the Dispersion of the Fluctuations in Relative Wholesale Prices of 145 Commodities, 1890–1910 (Based on Table 16)

(From Horace Secrist, "An Introduction to Statistical Methods")

An examination of this table indicates to what degree the various series of prices are described and their distribution indicated by the decil method. The table also shows the ranges of the various series. In the following diagram (Fig. 3) these decils and extremes are shown graphically.

The **average deviation** is the sum of the deviations from an average divided by the number of items in the series. In case of the arithmetic average the sum of the deviations, signs considered, is a maximum, i.e., is greater than for any other average. For the median the sum of the deviations is a minimum, i.e., is smaller than for any other average. In the following illustrations the arithmetic average is used. Secrist says:[3]

> The average deviation is an average. It is not different in this respect from the average of the original data. It does not represent a series of deviations in detail but only attempts to record a type. When they are uniform and small it does this satisfactorily. When they are large and different, it fails here as it does in the original case.

In calculating the average deviation, either the true arithmetic average or an assumed arithmetic average may be employed. Table 17 shows the calculations necessary for the computation of the average deviation in a historical series which shows respectively, the freight revenue of the Pennsylvania Railroad Co. to the nearest million dollars.

Table 17. Freight Revenues of the Pennsylvania Railroad Co. for the Years 1912-1917, Inclusive

(In round millions of dollars)

Years	Amount in Round Millions	Frequencies	Deviations: From 146, the Average −	Deviations: From 146, the Average +	Deviations: Total (ignoring signs)
Totals...	Aver. $146	6	49	49	98
1912.........	$128	1	18		
13.........	135	1	11		
14.........	131	1	15		
15.........	141	1	5		
16.........	164	1		18	
17.........	177	1		31	

The average deviation is $98 \div 6 = 16.33$. This means that the average difference of the amounts received as freight revenue from the average of freight revenue for the years 1912-1917, inclusive, was 16.33 million dollars.

Table 18 shows the method of computing the average deviation when an assumed average is used.

The difference in + and − deviations is 24, the excess of minus over plus

[3] An Introduction to Statistical Methods, p. 388.

Table 18. Freight Revenues of the Pennsylvania Railroad Co. for the Years 1912-1917, Inclusive

(In round millions of dollars)

Years	Amount in Round Millions	Frequencies	Deviations: From 150, the Assumed Average –	Deviations: From 150, the Assumed Average +	Deviations: Total (ignoring signs)
Totals...	$876	6	65	41	106
1912..........	$128	1	22		
13..........	135	1	15		
14..........	131	1	19		
15..........	141	1	9		
16..........	164	1		14	
17..........	177	1		27	

differences. The average error is $24 \div 6 = 4$, which subtracted from 150 leaves 146, the true average deviation.

Table 19. Method of Determining Average Deviation in a Group Frequency Series (Direct Method)

Wage Groups	Frequencies in Each Wage Group	Deviations: From the Average $7.00 –	Deviations: From the Average $7.00 +	Deviations: Products of Deviations and Frequencies –	Deviations: Products of Deviations and Frequencies +	Deviations: Total (ignoring signs)
Total........	359			$319.00	$318.50	$437.50
$ 2.00 to $ 2.99..	12	$4.50		$ 54.00		$ 54.00
3.00 " 3.99..	15	3.50		52.50		52.50
4.00 " 4.99..	30	2.50		75.00		75.00
5.00 " 5.99..	70	1.50		105.00		105.00
6.00 " 6.99..	65	.50		32.50		32.50
7.00 " 7.99..	58		$ .50		$29.00	29.00
8.00 " 8.99..	41		1.50		61.50	61.50
9.00 " 9.99..	30		2.50		75.00	75.00
10.00 " 10.99..	22		3.50		77.00	77.00
11.00 " 11.99..	12		4.50		54.00	54.00
12.00 " 12.99..	4		5.50		22.00	22.00

The average deviation in a frequency series is found by multiplying the deviations from the true or assumed average by the frequencies, as shown in Table 19.

The average deviation is found by dividing the sum of the deviations, \$437.50, by the total frequencies, 359, which gives \$1.21 as a result. In this instance the frequencies are in groups and the deviations from the true average are figured on the assumption of an even distribution within groups, the mid-point of each group being taken as representative of the group. Table 20 shows the procedure when the frequency series is not a group frequency series.

Table 20. Method of Determining Average Deviation in a Non-Group Frequency Series

Prices of Suits	Number of Each Suit Sold	Deviations: From the Average \$28.42		Deviations: Products of Deviations and Frequencies		Total (ignoring signs)
		−	+	−	+	
Total........	422			\$2,088.72	\$2,085.48	\$4,174.20
\$15.00...........	47	\$13.42		\$630.74		\$630.74
16.50...........	36	11.92		429.12		429.12
18.00...........	53	10.42		555.26		555.26
22.50...........	80	5.92		473.60		473.60
30.00...........	60		\$ 1.58		\$ 94.80	94.80
33.00...........	30		4.58		137.40	137.40
36.00...........	25		7.58		189.50	189.50
45.00...........	60		16.58		994.80	994.80
50.00...........	31		21.58		668.98	668.98

The difference of \$3.24 in the totals of + and − deviations is due to the fact that the exact true average is slightly over \$28.42.

The average deviation is \$4,174.20 ÷ 422 = \$9.89.

The **standard deviation** is found by squaring the deviations from the arithmetic average, finding the average of these after being squared, and then extracting the square root of this average. It is expressed as a formula as follows:

$$\text{S. D.} = \sqrt{\frac{\Sigma(d^2)}{n}}$$

in which

n = the number of items in the series.
d^2 = the sum of the deviations squared.
Σ = the sum of the products of the frequencies and the squares.
S. D. = standard deviation.

The standard deviation gives emphasis to extreme items in a series because they are squared. In frequency series which follow fairly closely the

normal law of error, the greatest number of frequencies occur near the arithmetic average and the least number farthest from the average. Consequently, in case of extreme items the influence of squaring is greater than that of the number of items in each group. Near the average the greater number of frequencies exerts a correspondingly greater influence. In case of historical series no multiplication for frequencies is made, since each item appears but once, and the distance of the item from the average exerts greater influence by being squared.

As between average deviation and standard deviation, the standard deviation gives emphasis to extremes. It should therefore be employed when it is desired to bring out the influence of the exceptional items in a series. When the influence of the typical is to be emphasized the average deviation should be used.

As a working rule it may be assumed that for symmetrical distributions the average deviation is usually about four-fifths of the standard deviation.

The method of finding the standard deviation for historical series is illustrated in Table 21. The standard deviation is $\sqrt{\frac{1{,}980}{6}} = 18.165$. The average deviation for this series is 16.33, or 89.89% of the standard deviation.

Table 21. Method of Computing the Standard Deviation in a Historical Series

Years	Amount in Round Millions	Frequencies	Deviations From Average, 146 −	Deviations From Average, 146 +	Squared	Squares Multiplied by Frequencies
Total . . .	Aver. $146	6				1,980
1912.	$128	1	18		324	324
13.	135	1	11		121	121
14.	131	1	15		225	225
15.	141	1	5		25	25
16.	164	1		18	324	324
17.	177	1		31	961	961

The method of finding the standard deviation for frequency series is illustrated in Table 22. $\sqrt{\frac{1{,}715.75}{359}} = 2.12$. The average deviation for this series is $1.21, which is 57% of the standard deviation.

The standard deviation has been used more in the field of biology than of economics. Usually in economic statistics the average deviation is prefer-

Table 22. Method of Computing the Standard Deviation in a Group Frequency Series

Wage Groups	Frequencies in Each Wage Group	Deviations: From the Average $7.00		Deviations: Squared	Deviations: Squares Multiplied by Frequencies
		−	+		
Total..................	359				$1,715.75
$ 2.00 to $ 2.99............	12	$4.50		$20.25	$ 243.00
3.00 " 3.99............	15	3.50		12.25	183.75
4.00 " 4.99............	30	2.50		6.25	187.50
5.00 " 5.99............	70	1.50		2.25	157.50
6.00 " 6.99............	65	.50		.25	16.25
7.00 " 7.99............	58		$ .50	.25	14.50
8.00 " 8.99............	41		1.50	2.25	92.25
9.00 " 9.99............	30		2.50	6.25	187.50
10.00 " 10.99............	22		3.50	12.25	269.50
11.00 " 11.99............	12		4.50	20.25	243.00
12.00 " 12.99............	4		5.50	30.25	121.00

able, because it is not desirable to emphasize extreme cases. The average deviation also possesses the advantage of being more easily computed. The standard deviation is used, however, in computing Pearson's coefficient of correlation.

The **quartile measure** of dispersion applies only to those items of a statistical series which lie between the first and third quartiles. It is found by dividing the difference between the first and third quartiles, by 2. The quartiles are those items of a series which lie ¼, ½, and ¾ the way along it. They thus divide it into four parts, each containing an equal number of items. If Q1 and Q3 represent the first and third quartiles, respectively, the quartile measure is expressed as,

$$\frac{Q3 - Q1}{2}.$$

In symmetrical series the quartile measure and the median coincide.

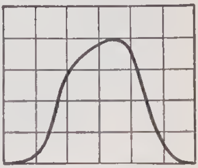
The semi-quartile range may be reduced to a ratio basis by dividing the difference between the two quartiles by the sum of the quartiles, thus:

$$\frac{Q3 - Q1}{Q3 + Q1}.$$

This ratio always lies between 0 and 1, but increases as the distance between the quartiles increases. The quartile measure is a suitable means of summarizing a series when extremes are not important. It must be used with care, however, because one-half the items in the series are ignored. It is sometimes desirable to employ it in conjunction with the average and standard deviations.

The **probable error** is employed in statistics to indicate how closely samples taken from a large mass of data approximate to the results which would have been secured had the whole mass of data been used. Sample measurements must ordinarily be used because of the obvious impossibility of measuring all data. Thus in studying the operating ratio of grocery stores it is obviously impossible to take into consideration all grocery stores. In studying family budgets it is impossible to study more than a relatively small number of samples. The usefulness of the probable error is based on the assumption that if all data were used the distribution would follow the normal curve of error, i.e., that it would be perfectly symmetrical. When data which follows the normal law of error is plotted, the curve is of the regular bell shape shown below.

The probable error bears a definite relation to the standard deviation of such distributions, but it is only when the data follow the normal law of error that this definite relationship holds. It is .6745 of the standard deviation. Approximately, the probable error is two-thirds of the standard deviation in case of distributions which follow the normal law of error. In using the probable error to check up the reliability of samples, its limitation to distributions which follow the normal law of error should be borne in mind. The following quotation from W. S. Jevon's "The Principles of Science"[4] illustrates the meaning of the probable error:



> Suppose, for instance, that five measurements of the height of a hill . . . . have given the numbers of feet as 293, 301, 306, 307, 313; we want to know the probable error of the mean, namely 304. Now the difference between the mean and the above numbers, paying no regard to directions, are 11, 3, 2, 3, 9; their squares are 121, 9, 4, 9, 81, and the sum of the squares of the errors consequently 224. The number of observations being 5, we divide by 1 less, or 4, getting 56. This is the square of the mean error, and taking its square root we have 7.48 (say 7½), the mean error of a single observation. Dividing by 2.236, the square root of 5, the number of observations, we find the mean error of the mean result to be 3.35, or say 3⅜, and lastly multiplying by .6745, we arrive at the **probable error of the mean result,** which is found to be 2.259, or say 2¼. The meaning of this is that the probability is one half, or the odds are even that the true height of the mountain lies between 301¾ and 306¼. We have thus an exact measure of the degree of reliability of our mean result, which mean indicates the most likely point for the truth to fall upon.

The probable error is the deviation above and below the median such that one-half the items in the series are included. The chances are even that any given measurement will fall between the first and third quartiles in a statistical series; consequently we can say that the chances are even that the true value lies between certain limits. These limits are the probable error. In other words, the probable error is the amount of deviation both above and below the median which includes exactly one-half the measures of the series.

The probable error may be computed for the arithmetic averages of a series of measurements. The formula is:

$$\pm 0.6745 \times \frac{\text{Standard Deviations of the means}}{\sqrt{\text{Number of Variates}}}$$

or

$$\pm 0.6745 \times \frac{\text{S.D.}}{\sqrt{n}}$$

[4] 2nd. Ed., p. 388.

This formula is used where several series of measurements are made and the average for each is determined. Its purpose is to ascertain the probable error of the averages thus secured. An illustration would be the determination of proper time for doing piece work. Having made several series of tests, the probable error of the averages of these series would be determined.

It should be borne in mind, however, that the probable error is useful only when the distribution approaches the normal probability curve and when the samples used in securing averages are numerous.

Skewness

DISTRIBUTION WITHIN SERIES.—Whereas measures of dispersion such as the average deviation and the standard deviation indicate the extent of variation of the items of a series from the average, they do not show how the distribution is made within the series. The differences from the average are taken into consideration but are not localized so that a general view of the serial arrangement is obtainable. Measures of skewness show this arrangement, thus indicating to what degree the distribution varies from the normal. When a series accords with the normal curve of error the distribution is symmetrical; when it does not, the distribution is asymmetrical.

FIG. 4. Curves Illustrating Skewness

Coefficients of skewness reduce the amounts of asymmetry of statistical series to a relative basis, thus permitting an exact comparison of skewness of statistical series.

In practically all economic statistics skewness exists. It is positive or negative accordingly as the arithmetic average exceeds or is less than the mode. In the following figures (Fig. 4) skewness is positive in 1, negative in 2, and absent in 3:

As a rough working rule it may be assumed that in moderately asymmetrical distributions the median lies about $\frac{2}{3}$ the distance between the mode and the arithmetic average, lying $\frac{1}{3}$ the distance away from the arithmetic average and $\frac{2}{3}$ from the mode. It is expressed as an equation:

$$\text{Mode} = \text{arithmetic average} - 3(\text{arithmetic average} - \text{median})$$

In the group frequency series on page 736, the mode, by inspection, is \$5.50. The median is \$6.82 and the arithmetic average is \$7.00. According to the above formula the mode should be:

$$\text{Mode} = \$7.00 - 3(\$7.00 - \$6.82) = \$6.46$$

When mode = mean − 3(mean − median) is exceeded, the skewness is large; when the result is less than the true mode, skewness is small. It is large in the following illustration, because the mode \$5.50 is exceeded by the results secured with the formula. This is shown by the following plot of the series (Fig. 5).

Skewness may be reduced to a coefficient by dividing the difference between the arithmetic average and the mode by the standard deviation, expressed as a formula, thus:

$$\frac{\text{Arithmetic average} - \text{mode}}{\text{S.D.}}$$

If the arithmetic average is larger than the mode, the result is positive, and skewness is positive. If it is less than the mode, the result is negative, and skewness is negative. For the above series standard deviation is \$2.12, and the coefficient of skewness is:

$$\frac{\$7.00 - \$5.50}{\$2.12} = +.71$$

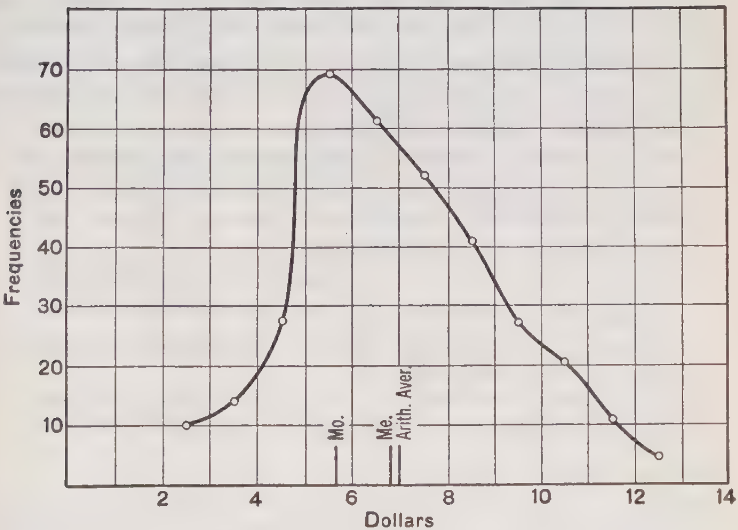


Fig. 5. Plot of Frequency Series

A coefficient of skewness may also be secured by dividing by the average deviation, thus:

$$\frac{\$7.00 - \$5.50}{\$1.21} = +1.24$$

The purpose in reducing skewness to coefficients is to permit comparison of one series with another.

Measures and coefficients of both dispersion and skewness should be employed in practical statistical work, such as studies of wages, sales, price movements, and so on. Coefficients are especially useful in bringing out comparisons and relationships which are otherwise obscured in a multiplicity of details.

Comparison

DEFINITION.—In statistics the study of comparison has for its object the determination of any connection between two sets of phenomena statistically expressed. In correlation, not only is this connection determined but its extent is measured. When one group of phenomena moves in a greater or less degree of conformity with another group and in the same direction, correlation exists and is positive. When one group moves in conformity with another but in the opposite direction, correlation exists but is negative.

METHODS OF COMPARISON.—The better known methods of comparing frequency distributions of two or more groups of data are given by King[5] as follows:

> 1. **Simple frequency tables and historigrams.**—These are desirable to show the absolute as well as the relative size of the various classes in the groups compared.
> 2. **Percentage frequency tables and historigrams.**—These are desirable to show relative distributions between the higher and lower groups, but do not show actual quantities.
> 3. **Absolute cumulative tables and ogives.**—These are intended primarily to ascertain the median, quartiles, decils, etc., but also serve as substitutes for simple frequency tables and historigrams.
> 4. **Percentage cumulative tables and ogives.**—For purposes of comparisons these are better than absolute cumulative tables and ogives, but not as good to compute quartiles, etc.
> 5. **Lorenz tables and curves.**—These are employed to show the distribution of wealth, etc., at different periods or in different places.
> 6. **Coefficients of dispersion.**—These afford a numerical measurement of deviations of a series from some type.
> 7. **Coefficients of skewness.**—These furnish a numerical measurement of symmetry of statistical series.
> 8. **Coefficients of correlation.**—These afford quantitative measurement of the degree to which two or more series move in relation to one another, and whether such relationship is positive or negative.

King comments on 1 as follows:

> This is the best method of showing the actual changes in different variables. If the wheat crops of the leading nations are plotted, both the change in production for each nation during the period and the relative product of each nation at any given time is revealed at a glance.

and on 2:

> These are used when the only desideratum is to compare changes and not the absolute size of the quantities in the two series. All the curves being reduced to like bases, it is easy to compare the proportional changes relative to the base, in the different variables during the same period. Thus, we can see at a glance whether the proportional increase in the population of New York from 1900 to 1910 was greater or less than that of Wyoming for the same period. The fact that the absolute increase in New York was vastly larger than that in Wyoming in no way obscures the record of the comparative proportional change. It must be reiterated that the index curves, however, do not indicate the proportional change in either state for the last decade as compared with the change of some past decade.

and on 3:

Simple logarithmic historigrams show by their vertical movements the comparative **proportional** changes, relative to the preceding period, in two or more variables during the same time-interval. Their respective inclinations from the horizontal at the time of crossing any given time-ordinate indicate the **proportional rates** of change in the different variables at this date. As has been before stated, comparison of logarithmic historigrams is facilitated by vertical shifting of the curves until they are in proximity to each other, the eye being thus enabled to better follow and compare their trends. This effect is accomplished mathematically instead of mechanically if the original data, in each instance, are reduced to index series and the logarithms of the indices instead of those of the original numbers plotted. Since logarithmic curves are of no practical value for showing the absolute size of the different variables at any given date, nothing whatever is lost by the preliminary reduction to index-series or the consequent vertical shifting for the graphs.

LONG- AND SHORT-PERIOD FLUCTUATIONS.—In many series of the historical type, two or more variations of fluctuations frequently exist. The short-period fluctuations are usually seasonal in character, whereas the long-period fluctuations are due to fundamental forces operating over terms of years. In order to study a given type of fluctuation, eliminate the other or others.

In studying long-period fluctuations, eliminate the short-period by means

of the moving average. In fixing a moving average group, give attention to the size of the cycle. This may be ascertained by first plotting as a historigram, and then observing the average time-distance between successive crests or between successive troughs. In the accompanying table (23) and graph (Fig. 6), taken from King's "Elements of Statistics" (pp. 170–171), the wave lengths run 6 to 8 days.

Use an odd number of items for the moving average, so that the average may be plotted each time opposite the central item. In this illustration 7 days are taken for the moving average, one being dropped at one end and one added at the other, each time the average is moved along a point. The moving average cannot be carried out to the extremes of the data because the first item of the moving average is located four points from the opening date

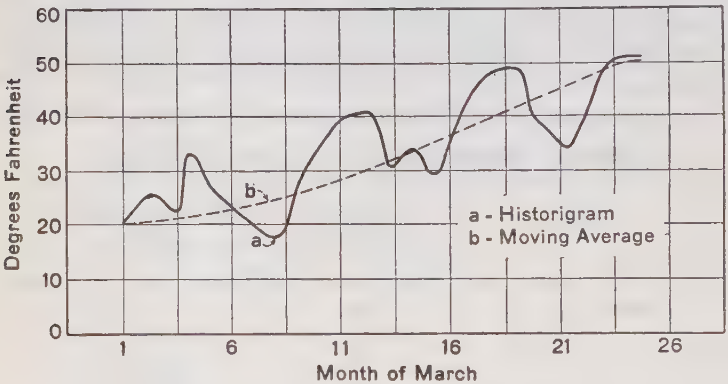

FIG. 6. The Moving Average of Trend (Based on Table 23)
(From W. I. King, "The Elements of Statistical Method")

and the last item four points from the closing date. When no regular periodicity occurs do not use the moving average to remove short-time trend. In plotting historigrams use care in selecting the vertical scale. If too much space is given to each vertical unit, fluctuations will be exaggerated. If too little space is given, too great uniformity will occur.

ELIMINATION OF LONG-PERIOD VARIATIONS.—It is sometimes desirable to eliminate long-period variations, thus showing only short-period oscillations. To do this plot the data as a graph and find the moving average. Find the deviations from the moving average and plot these on a horizontal base line. Illustration of the foregoing is found in the following data reproduced from King's "Elements of Statistical Method" (pp. 194-196).

The table (24) shows hypothetical data for supply and prices. Moving averages are constructed for both based on a 5-year period, and deviations from these averages are computed. The first graph (Fig. 7) shows the elimination of short-period fluctuations. The second graph (Fig. 8) shows the elimination of long-period fluctuations and brings out the short-period fluctuations.

ABSOLUTE AND RELATIVE CHANGES.—For purposes of making comparisons between series it is frequently best to reduce them to a relative basis, because rates of increase and decrease are more easily interpreted when reduced to a percentage basis. For showing proportional changes graphically, logarithmic historigrams have been devised. These are based on the principle that an equal increase in the logarithm of a number indicates

multiplication by an equal number, and therefore an equal proportional change. Prepared paper can be secured for the purpose of plotting ratio curves and no knowledge of logarithms is required in its use.[6] The same effect is secured by reducing the data to be plotted to index or relative numbers, and then plotting these. This process is especially useful when the absolute differences are so great that it is difficult to plot them as such on the same chart. When variables are thus expressed as percentages, the base

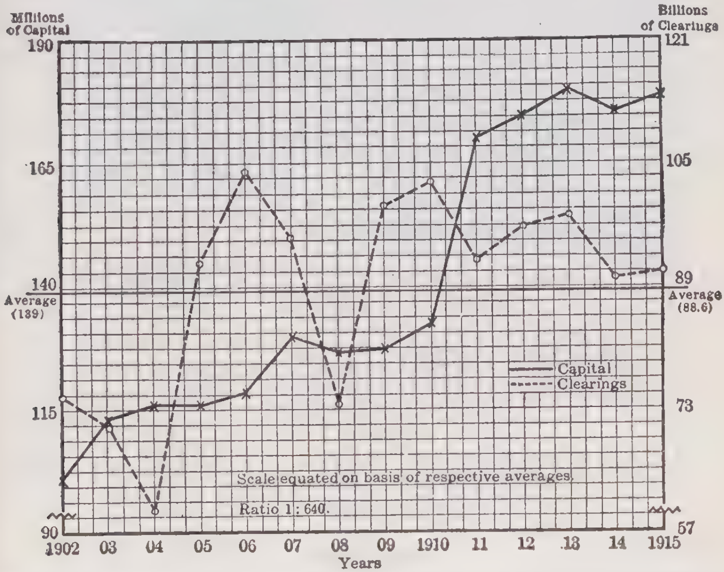

FIG. 9. Capital and Clearings of New York Clearing House Banks, 1902–1915 (Method of scale conversion)

(From Horace Secrist, "An Introduction to Statistical Methods")

upon which they are computed and which is regarded as 100% is the first, last, intermediate, or an average of the different variables. These principles are illustrated in Figs. 9 and 10, reproduced from Secrist's "An Introduction to Statistical Methods" (pp. 224, 226), showing capital and clearings of New York Clearing House banks, 1902–1915. Fig. 9 shows capital and clearings plotted on the basis of absolute amounts but different scales. Fig. 10 shows the same data reduced to relative bases and plotted on the basis of both the first and last variables.

In Fig. 9 the comparison is between absolute amounts based on different scales. In Fig. 10 the comparison is in percentage of increase and decrease,

[6] Logarithmic paper may be secured ready for use from the following firms: Educational Exhibit Co., 26 Custom House St., Providence, R. I.; John Wenzel, 63 West 107th St., New York City; Keuffel & Esser Co., 127 Fulton St., New York City; and the Standard Graph Co., 32 Union Sq., New York City.

a true ratio basis of comparison. The ratio chart is useless, however, if the absolute and not the relative changes are to be emphasized.

(From Horace Secrist, "An Introduction to Statistical Methods")

Correlation

DEFINITION.—Correlation measures the degree of conformity existing between statistical series, and shows whether it is positive or negative. The existence of correlation does not necessarily prove a causal connection which must be determined through analysis. Correlation may be indicated graphically but graphs do not give a quantitative measurement of the degree of correlation. To supply this want a **coefficient of correlation** is necessary.

PEARSON'S COEFFICIENT OF CORRELATION.—The most satisfactory method of reducing correlation to a coefficient is provided by Karl Pearson's formula. This formula was originally meant for use in biological studies but it has also been widely used by economists and financial students. If $x_1, x_2, x_3, x_4, \ldots\ldots x_n$, are the deviations of the items from the arithmetic average of one series, $y_1, y_2, y_3, y_4 \ldots\ldots y_n$, the deviations of the items from arithmetic average of the other series, o_1, is the standard deviation of the former series, o_2 is the standard deviation of the latter series, then r, the coefficient of correlation, is expressed as:

$$r = \frac{\Sigma\,(xy)}{n\,o_1 o_2}$$

This formula can be applied both to data representing variations in items at a given time and to historical series, but in its original form it can be used only in connection with long-time changes. To make the formula show correlation for short-period fluctuations, take the deviations of the items from the trend instead of from the arithmetic average. The application of this plan is illustrated in the following table (25) reproduced from King's "Elements of Statistical Method" (pp. 204–205).

Table 25. Illustrating the Correlation of Short-time Oscillations by Means of Pearson's Modified Coefficient

Date	Supply				Price				xy

6	110	−	106	+	−
7	107	−	114	+	−
8	113	+	103	−	−

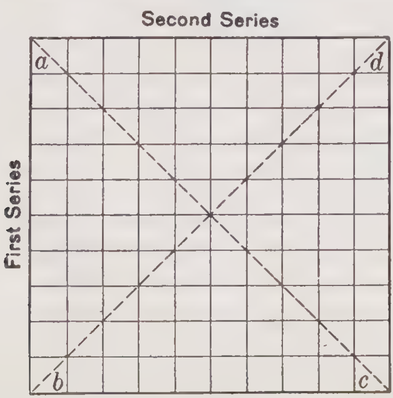
short intervals of time requires considerable work. The following shorter method is useful for practical purposes. Take into consideration only the direction of the deviation of the items from the last preceding date given. This plan is defective in that it does not take into account the size of the deviation; consequently a small change has the same effect as a large one. When the number of items is large, errors resulting from this defect are not usually serious. The formula is:

$$r = \pm\sqrt{\pm\frac{2c-n}{n}}$$

in which r = the coefficient of correlation, n = the number of pairs of items, and c = the number of concurrent deviations. If $\frac{2c-n}{n}$ is negative, the minus sign is introduced before it and also before the radical, in order that the extraction of the square root may not change the sign from that of the original. The above table (26) reproduced from King's "Elements of Statistical Method" (p. 209), shows the manner of deriving the necessary data.

$$n = 28$$
$$c = 0$$
$$r = \pm\sqrt{\pm\frac{2c-n}{n}}$$
$$\therefore r = \pm\sqrt{\pm\frac{0-28}{28}}$$
$$\therefore r = -\sqrt{-(-1)}$$
$$\therefore r = -\sqrt{1}$$
$$\therefore r = -1$$

This shows perfect negative correlation. This plan can be used with irregular eries which do not admit of smoothing by use of a moving average.



Another method of showing correlation, but which does not furnish a coefficient or quantitative measure of it, is to plot the data in a correlation table. The table should be arranged so as to permit one series to be represented in

vertical columns and the other series in horizontal lines. When this is done the arrangement should be somewhat like that shown in Table 27. If positive correlation exists, the corresponding frequencies tend to group themselves more or less closely along the line *ac* (see figure on p. 749). If negative correlation exists, the corresponding frequencies tend to group themselves more or less closely along the line *bd*.

Table 27. Giving the Results of 500 Connected Throws of 12 Dice, in the Second Throws of Which 10 Dice Were Left Down and Counted

			Second Throws												
			0	1	2	3	4	5	6	7	8	9	10	11	12
		Total→ ↓	1	2	7	24	55	93	111	100	64	31	11	1	
	01	1	1	...	...	...	...	...	...	...	...	...	...	...	...
	1	1	...	1	...	...	...	...	...	...	...	...	...	...	...
	2	7	...	...	2	5	...	...	...	...	...	...	...	...	...
	3	24	...	1	3	8	9	3	...	...	...	...	...	...	...
First	4	55	...	...	2	10	18	19	6	...	...	...	...	...	...
Throws	5	110	...	...	...	1	24	43	32	10	...	...	...	...	...
	6	93	...	...	...	...	4	22	37	24	6	...	...	...	...
	7	96	...	...	...	...	...	6	27	39	19	5	...	...	...
	8	60	...	...	...	...	...	...	9	17	24	9	1	...	...
	9	42	...	...	...	...	...	...	...	10	14	11	7	...	...
	10	10	...	...	...	...	...	...	...	...	1	6	2	1	...
	11	1	...	...	...	...	...	...	...	...	...	...	1	...	...
	12		...	...	...	...	...	...	...	...	...	...	...	...	...

This method is clearly illustrated by throwing dice, leaving a given number of dice down each second throw. It was found that the results of 500 connected throws of 12 dice each in the second throws, of which 10 dice were left down and counted, were as shown in Table 27, or, when plotted, as shown in the accompanying graph[7] (Fig. 11). A very considerable degree of positive correlation is here indicated.

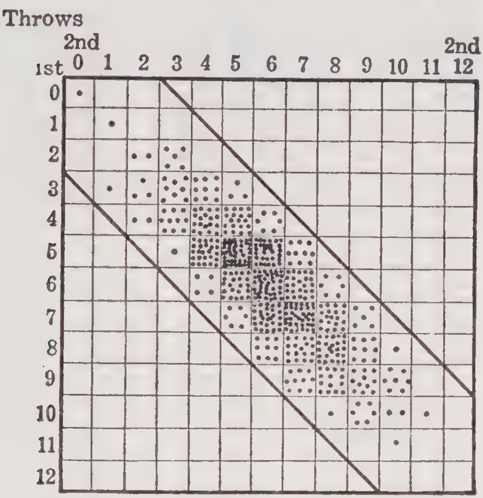
APPLICATIONS OF PEARSONIAN COEFFICIENT OF CORRELATION.—In using Pearson's coefficient of correlation, two different movements may be correlated: (*a*) long-time or secular changes; and (*b*) short-time or cyclical changes. For finding the correlation in case of secular changes, the coefficient should be plotted from the original data. For finding the correlation in case of cyclical changes, the coefficient should be plotted from the smoothed data. The above qualifications apply to historical series. It must be remembered that correlation of a certain amount may often be found to exist between statistical series which have no causal connection whatever; also that positive correlation may exist in long-period or secular fluctuations, whereas negative correlation exists in the short-

[7] Reproduced from Secrist, An Introduction to Statistical Method, pp. 138, 139.

period or cyclical fluctuations. It is sometimes desirable to lag one series behind the other in order to find the correlation when lags of various intervals are taken. The following quotation from Professor H. L. Moore's "Economic Cycles, Their Law and Cause" (pp. 109-110, 122), illustrates the principle involved:

If . . . . we correlate them for lags of various intervals, we shall find it possible to determine the lag that will give the maximum coefficient of correlation, and this particular value of the lag we may then regard as the interval of time required for the cycles in the crops to produce their maximum effect upon the cycles of the activity of industry. When the calculation of the coefficients of correlation is made according to this plan, it is found that for a lag

Of zero years,	$r = .625$
Of 1 year,	$r = .719$
Of 2 years,	$r = .718$
Of 3 years,	$r = .697$
Of 4 years,	$r = .572$



Second Throws Dependent on First Throws—10 Dice in Common

Fig. 11. Graphic Figure Illustrating Correlation by Means of 500 Pairs of Throws of Dice (Based on Table 27)

(From Horace Secrist, "An Introduction to Statistical Methods")

It is clear, therefore, that the cycles in the yield per acre of the crops are intimately related to the cycles in the activity of industry, and that it takes between one and two years for a good or bad crop to produce the maximum effect upon the activity of the pig-iron industry.

If the cycles of the yield per acre are correlated with the cycles of general prices, we find, for a lag of 3 years in general prices, $r = .786$; for a lag of 4 years, $r = .800$; for a lag of 5 years, $r = .710$. The cycles in the yields per acre of the crops are, therefore, intimately connected with the cycles of general prices, and the lag in the cycles of general prices is approximately four years.

The use of the lag to determine maximum correlation finds application in the study of business cycles and in the study of business barometers.

Pearson's coefficient of correlation is also of practical usefulness in connection with frequency series. It has been used by the Commonwealth Edison Co. of Chicago in connection with studies in the concentration of power supply. It was shown that a significant degree of correlation exists between the load factor and income per kw. hr., and the conclusion was drawn that income per kw. hr. goes down as the load factor improves with the lowering of selling prices. Table 28, reproduced from Secrist, shows how the calculations were made.

The standard deviation of the x and y series are, respectively, 9.39 and 1.95. According to Pearsons's formula,

$$r = \frac{\Sigma\,(x\,y)}{n\,\sigma_1\,\sigma_2}$$

$$= \frac{-\,444.735}{860.593}$$

$$= -\,0.517$$

The probable error is $\pm.0721$; therefore the correlation is significant.

PROBABLE ERROR OF COEFFICIENT OF CORRELATION.—The probable error of the coefficient of correlation is found by multiplying the coefficient of correlation by $\frac{1 - r^2}{\sqrt{n}}$. According to Bowley, the standard deviation, to be significant, must be not less than six times the probable error. Significance can be attached to the probable error, however, only in case of normal distributions.

Diagrammatic Presentation

DEFINITION.—Graphic charts are used for a variety of purposes. A. C. Haskell outlines the principal functions of charts as follows:

1. Computation (mechanical)
   - Arithmetical and geometrical calculations
   - Interpolation
   - Calibration
   - Integration
2. Tabulation
   - Statistical comparisons
3. Plotting
   - Sketches
   - Maps
   - Stadia surveys
   - Organization plans, location of buildings and machinery
4. Recording
   - Filing
   - Blue-printing
   - Photographic reproduction
   - Statistical comparison
5. Demonstration
   - For instruction
   - For advertising
6. Statistical prediction
   - Weather
   - Population
   - Vital statistics, etc.
7. Notations
   - Field notes

Statistical comparison occupies a large place in this field. Several important varieties of graphic methods used to make statistical comparisons have been developed. These are roughly classified as diagrams and graphs. Diagrams in turn may be classified into: (a) those used to show frequency or magnitude alone, and (b) those used to show frequency or magnitude in relation to geographical distribution. Diagrams which fall under (a) are

known as **pictograms.** Graphs are the plotted curves of mathematical equations, and are employed where two variable factors are to be expressed one of which is said to be the function of the other.

DIAGRAMS.—For the purpose of showing frequency or magnitude alone, lines and bars are preferable to surfaces and volumes because the latter are more difficult to interpret by observation. In case of surfaces, dimensions vary as the square roots of the areas. In case of solids, dimensions vary as the cube roots of the volumes. When bars and lines are used, the amounts represented vary as the length of the bars and lines; consequently it is necessary to interpret but one dimension. The only equipment necessary for the construction of charts are a straight edge and a pencil or pen. Avoid methods which give false pictures of the facts to be presented. Some methods of shading and cross-hatching cause optical illusions. These should be

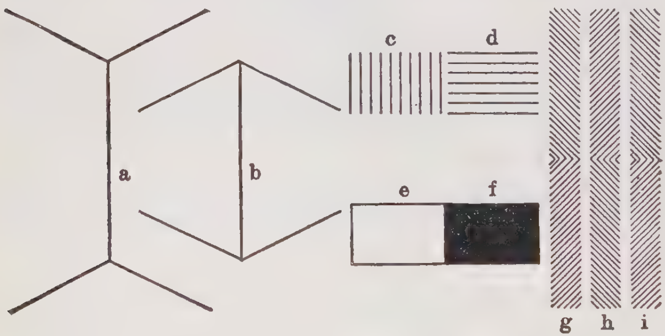

Fig. 12. Optical Illusions Illustrated
(From A. C. Haskell, "How to Make and Use Graphic Charts")

avoided. In Fig. 12, taken from Haskell's "How to Make and Use Graphic Charts" (p. 55), line *a* appears to be longer than *b*, but they are equal. The shaded area *c* looks wider than *d* but they are of equal width. The white area *e* looks larger than the black area *f*, but they are equal.

PAPER TO USE.—In so far as possible, standardize the size of sheet, lettering, titles, etc., employed. Sheets of standard letter-head size, 8½ by 11 inches, or multiples thereof, such as 17 by 11, will be found convenient for most purposes. Rulings on an 8½ by 11 inch sheet usually measure 7½ by 10 inches, leaving margins of ¾ inch at the top and left, and ¼ inch at the bottom and right, thus allowing room for lettering, binding, making of notes, etc. If copies of the chart are to be made, translucent paper should be used to permit the making of blue-prints. Either onion-skin paper, glazed or unglazed, or a high grade of light-weight bond paper may be used. The latter prints well and stands erasures better than onion-skin paper. To keep the sheets clean and smooth, secure them in bound pads. For ruling use olive green ink which is easier on the eyes than more brilliant colors. Where the chart is made primarily for producing blue-prints, use black drawing ink,

CONSTRUCTION OF DIAGRAMS. Since one of the first considerations in chart-making is clearness, carefully key or letter all parts of it so that there can be no misunderstanding regarding its meaning. Each sheet should be given a carefully worded title showing what the chart or diagram represents and any references that may be necessary to indicate authorities, etc. The following illustrations of graphic charts are reproduced from an article by Stanley C. Tarrant, in *Gas Age*, Jan. 1, 1917. Although made to illustrate gas company statistics, the methods involved are applicable generally. The use of the bar diagram to illustrate the statistics of Table 29 is shown in the three diagrams (Figs. 13, 14, 15).

Consider carefully the particular form of chart which will best fit the case under consideration before adopting any given one. The first of these charts (Fig. 13) is spectacular, but does not permit comparison of one year with another as readily as the other two charts do. On the other hand, the first chart shows the monthly trend better than do the other two, in which the monthly amounts are placed in juxtaposition. The third form (Fig. 15) has the advantage of making the monthly fluctuations stand out prominently. The bar chart is easily understood and can be used to advantage where the variety of data to be represented is not too great or too complicated.

In the following figure (Fig. 16), also taken from *Gas Age*, are shown three forms of growth charts, the block, step, and peak top curve. The last chart of this group is simplest in form and is probably the easiest of the three to read.

Diagrams intended to show the relationship between magnitude or frequency and geographical distribution, are known as **cartograms** and when properly used they are much superior for that purpose to any form of tabular presentation, because they bring out comparisons and contrasts which

tables do not. Like other graphic methods, they are simple aids to the understanding and in no way displace the data upon which they are based. There are three general types of statistical maps, viz.: (*a*) those in which colors are employed to indicate frequency; (*b*) those in which frequency is illustrated by relative density of cross-hatch; and (*c*) those in which frequency or density is indicated by means of dots. Of these three kinds of maps, those requiring coloring are for most purposes the least satisfactory, both on account of the expense involved and on account of the difficulty of making changes in coloring represent facts. Unrelated colors should not be used except where there exists no relationship in point of fact between the various classes of data to be represented. Usually colors should be confined to

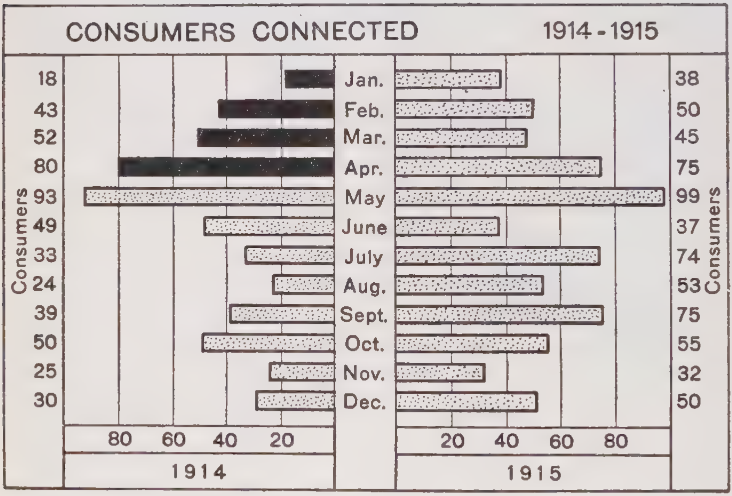

FIG. 13. Horizontal Bar Method (Based on Table 29)
(From A. C. Haskell, "How to Make and Use Graphic Charts")

varying densities of the same color. If the number of shades is too great to be represented satisfactorily in this way, two colors, such for example as red and blue, may be used, the deepest tints of each being used at the extremes of the series and each being shaded down to an almost white color where the two join.

An illustration of cross-hatching is shown in the map (Fig. 17, p. 759), reproduced from the "Abstract of the Thirteenth Census of the United States." Maps of this type are valuable in studies of population density, land values, etc. In maps of this type shades range from white to black. Extremes in the range of statistical data should be represented by extremes in shades. The more typical conditions should be represented by medium shades. The number of groups of data determines the number of shades to be employed. Groups to be represented should be of uniform width. This principle is not consistently followed in the accompanying map. The width of the groups determines the number of shades to be used. Choice

of shades is of less importance than having each shade represent equal width of groups. When the facts to be presented by means of different shades of cross-hatch are unrelated, the shades need not be related.

It is extremely important to remember that the use of both color and cross-hatch diagrams is limited to data of the discrete type, because distri-

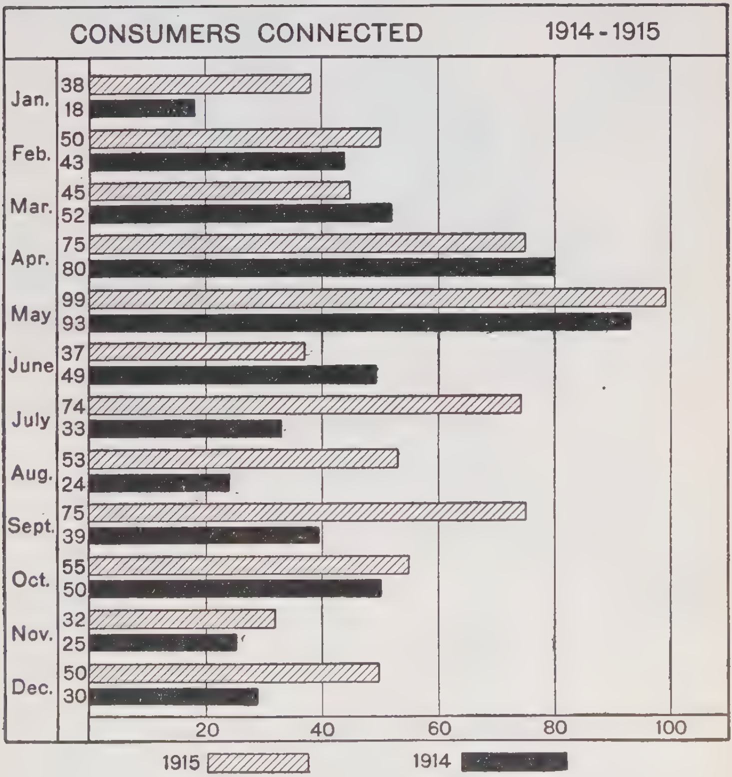

Fig. 14. Paired Horizontal Bars (Based on Table 29)
(From A. C. Haskell, "How to Make and Use Graphic Charts")

bution within areas represented by a given shade appears to be perfectly even, while abrupt changes appear at the boundary lines. Where it is necessary or desirable to show gradual change from less to greater density, these methods are useless. In speaking of population per square mile by states, it is considered that there should properly be sudden breaks at boundary lines. When it is necessary to show distribution within districts and without reference to arbitrary boundary lines, the dot map should be used.

There are three classes of dot maps: (a) those in which the dots range in size according to the range in amount or density to be represented; (b) those

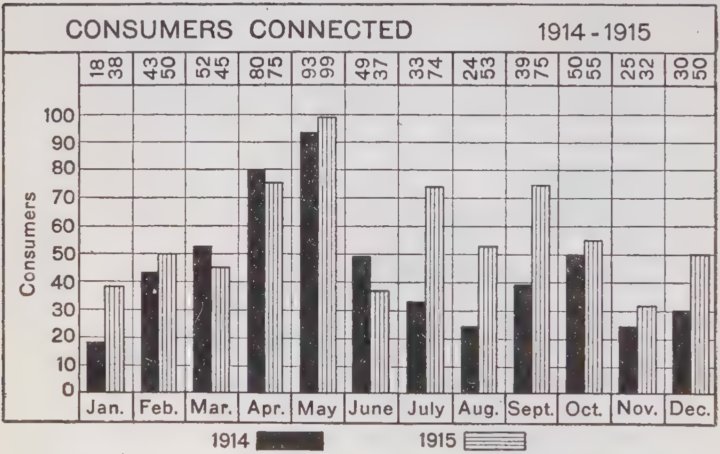

Fig. 15. Vertical Bars Arranged in Pairs (Based on Table 29)
(From A. C. Haskell, "How to Make and Use Graphic Charts")

in which the dots are of equal size but are shaded to indicate different values; and (c) those in which the dots are small and of equal size and shade, and

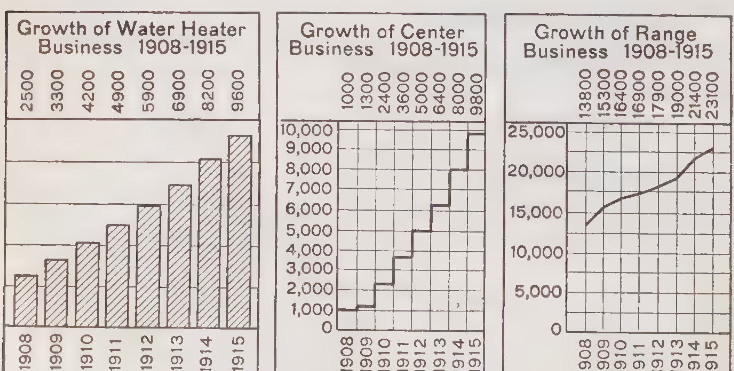

Fig. 16. Forms of Growth Charts
(From A. C. Haskell, "How to Make and Use Graphic Charts")

in which varying values are represented by varying density of dots. Illustrations of these three types of dot maps are shown in Figs. 18, 19, 20.

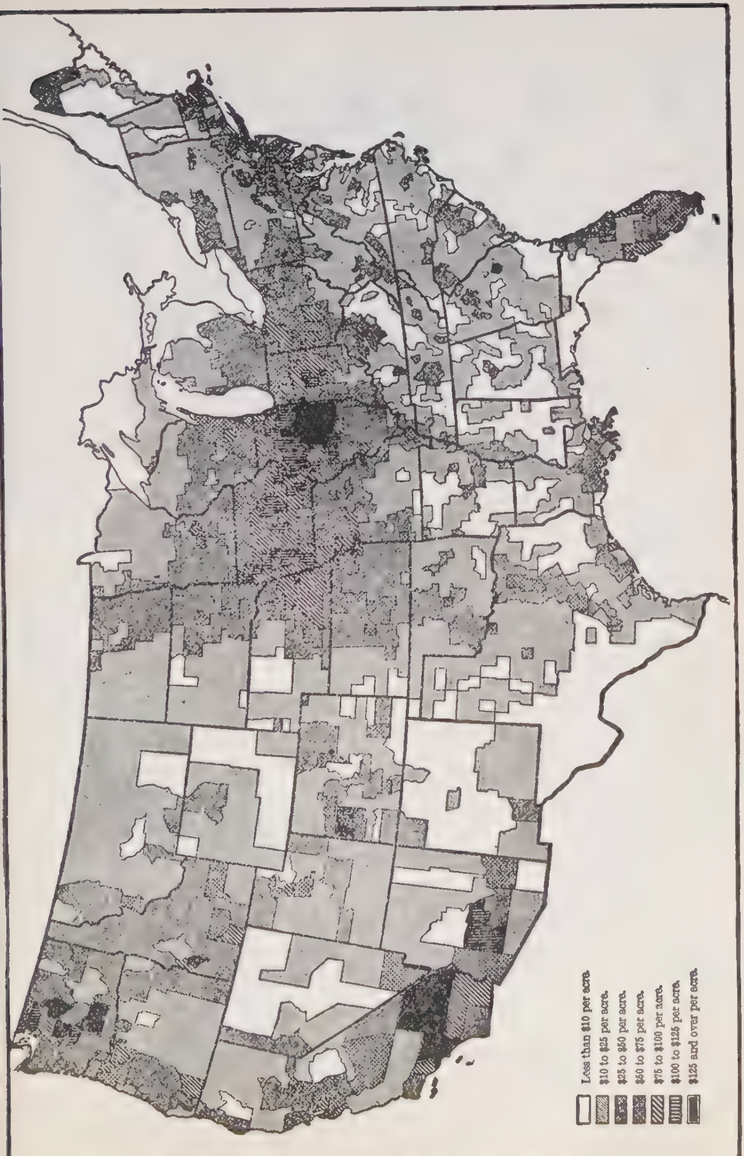

FIG. 17. Average Value of Land in Farms in U. S. per Acre, by Counties, in 1910
(Abstract of the Thirteenth Census of U. S., 1910)

FIG. 18. Relative Distribution in U. S. of Cattle Other than Dairy Cows
(From *Country Gentleman*)

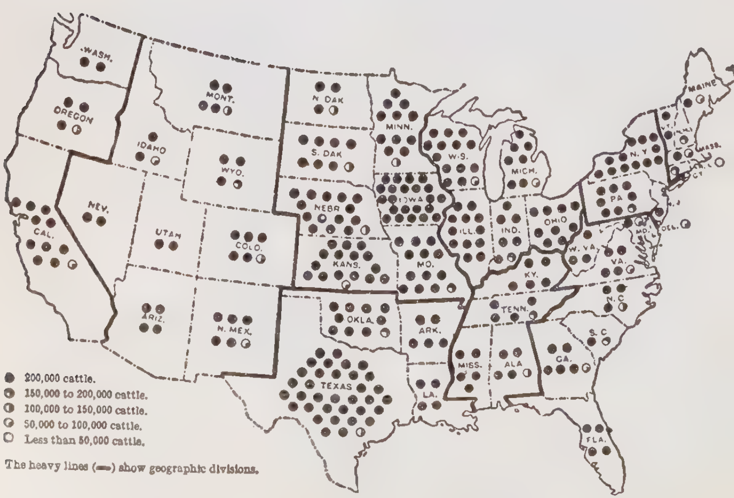

FIG. 19. All Cattle on Farms in U. S., by States, Apr. 15, 1910
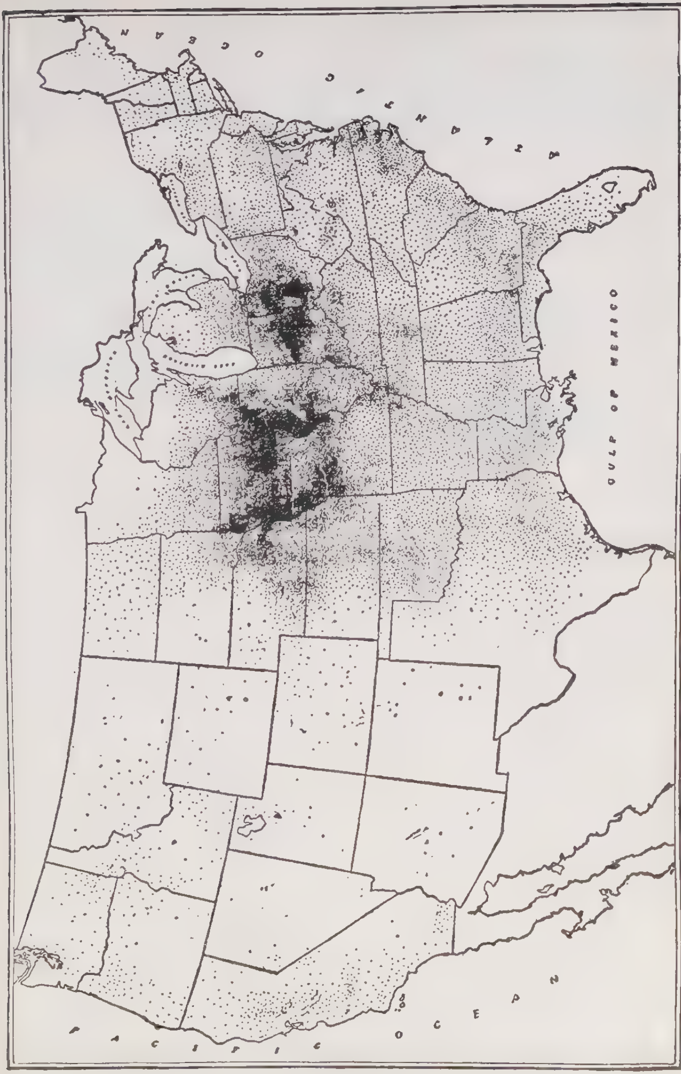
(Abstract of the Thirteenth Census of U. S., 1910)



1 Dot = 2,500

Fig. 20. Number of Swine on Farms and Ranges, Apr. 15, 1910

The first type of map (Fig. 18) must be used with caution. It does not show absolute frequency and geographical distribution is shown only roughly. It is apt to be misleading because surfaces are used as bases of comparisons.

In case of the second type (Fig. 19) comparison between districts is more easily made because it is the number of dots instead of the size which serves as the basis of comparison. For most purposes cross-hatching is equally good as, if not preferable to, this method.

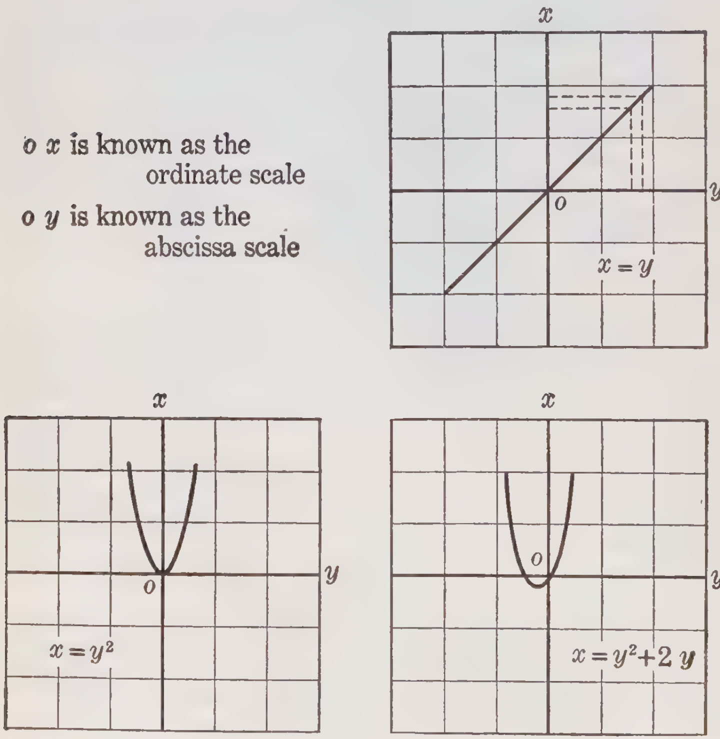


Fig. 21. Graphic Illustration of Equations

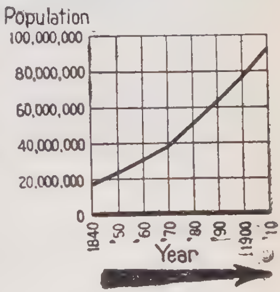
The third method of showing density and distribution possesses certain distinct advantages, especially where relative instead of absolute density is to be shown. Absolute frequency can be indicated only within rather broad limits, and usually it is not best to attempt to show it. It should be used where data of the continuous rather than the discrete type are to be shown. Boundary lines are ignored and political subdivisions are employed to enable the reader of the map to determine relative locations.

Graphic Presentation

DEFINITION.—Graphic presentation consists in the use of curves to show the relationship between two or more variable quantities. As much statistical data is either historical or frequency in character, so graphs may be used to show the occurrence of a series of events or a tendency during time, or it may be used to show the facts with regard to a variable condition as at a given point in time.

CONSTRUCTION OF GRAPHS.—Graphs are based upon mathematical principles and every curve has its corresponding equation in which x may be said to represent one variable and y the other. Three simple equations and their corresponding graphs are shown in Fig. 21.



(1)

For ordinary graphic work a knowledge of mathematics is not necessary. In case of frequency series it is customary to plot the units or quantities along the horizontal axis known as the **abscissa,** and the frequencies along the vertical axis, known as the **ordinate.** To secure the curve, extend lines at right angles from ordinate and abscissa until they meet, as shown by dotted lines in the first graph above. The meeting point of corresponding lines thus extended from ordinate to abscissa determines the curve. In case of continuous series the curve is properly smoothed to indicate the form it would take if the number of measurements were indefinitely increased. In case of discrete series it is better to connect the points of intersection of lines extended from ordinate and abscissa by straight lines, because the only purpose of the connecting line is to guide the eye of the reader. The essentials of graphic presentation have been embodied in a report by the committee on graphic presentation of the American Society of Mechanical Engineers. This is reproduced below.

(2)

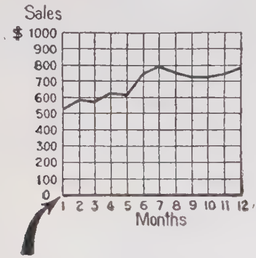
1. The general arrangement of a diagram should proceed from left to right.

2. Where possible, represent quantities by linear magnitudes, as areas or volumes are more likely to be misinterpreted.

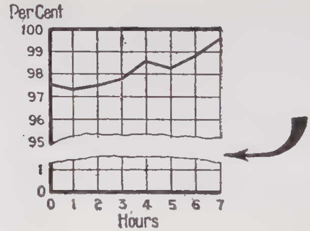
3. For a curve, the vertical scale, whenever practicable, should be so selected that the zero line will appear on the diagram.

4. If the zero line of the vertical scale will not normally appear on the curve diagram, the zero line should be shown by the use of a horizontal break in the diagram.

5. The zero lines of the scales for a curve should be sharply distinguished from the other co-ordinate lines.

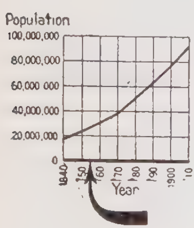


(3)

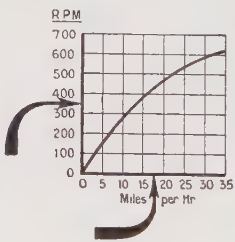


(4)

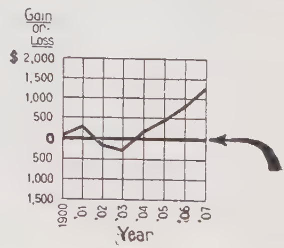
6. For curves having a scale representing percentages, it is usually desirable to emphasize in some distinctive way the 100 per cent line or other line used as a basis of comparison.



(5a)

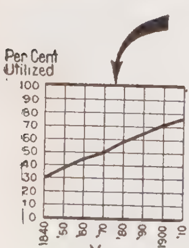


(5b)

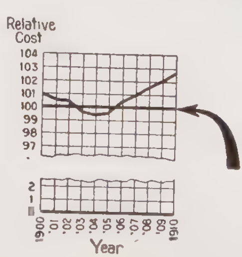


(5c)

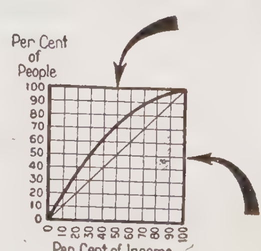
7. When the scale of a diagram refers to dates, and the period represented is not a complete unit, it is better not to emphasize the first and last ordinates since such a diagram does not represent the beginning or end of time.



(6a)



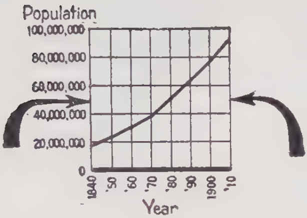
(6b)



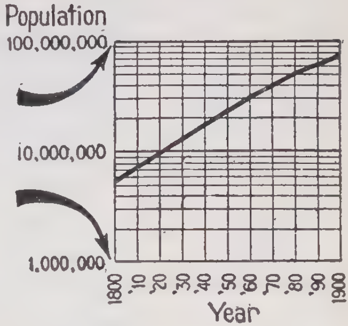
(6c)

8. When curves are drawn on logarithmic co-ordinates, the limiting lines of the diagram should each be at some power of ten on the logarithmic scales.

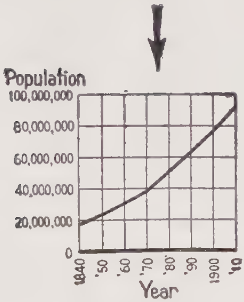
9. It is advisable not to show any more co-ordinate lines than necessary to guide the eye in reading the diagram.



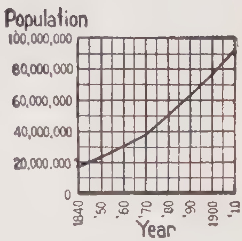
(7)



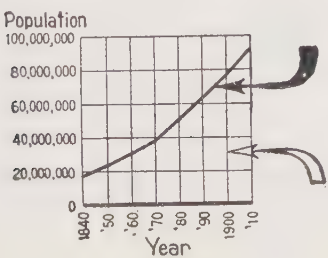
(8)



(9a)



(9b)

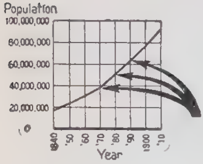


(10)

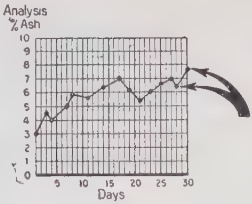
10. The curve lines of a diagram should be sharply distinguished from the ruling.

11. In curves representing a series of observations, it is advisable, when-

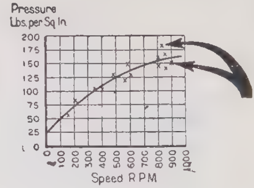
ever possible, to indicate clearly on the diagram all the points representing the separate observations.



(11a)

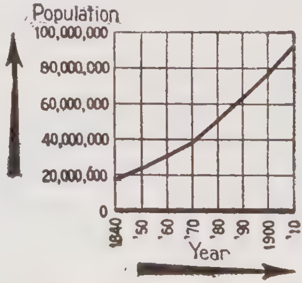


(11b)



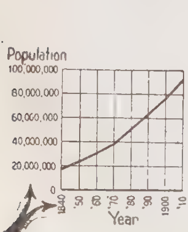
(11c)

12. The horizontal scale for curves should usually read from left to right, and the vertical scale from the bottom to top.

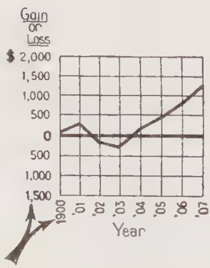


(12)

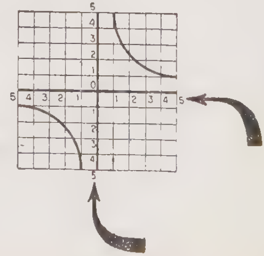
13. Figures for the scales of a diagram should be placed at the left and at the bottom, or along the respective axes.



(13a)



(13b)

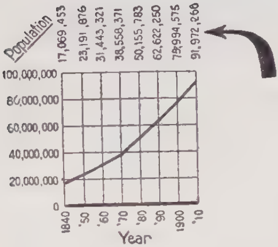


(13c)

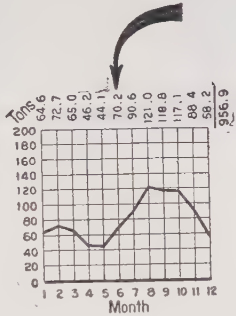
14. It is often desirable to include in the diagram the numerical data or formulæ represented.

15. If numerical data are not included in the diagram it is desirable to give the data in tabular form accompanying the diagram.

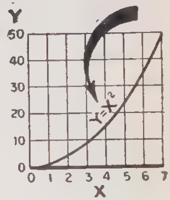
16. All lettering and all figures on a diagram should be placed so as to be easily read from the base as the bottom or from the right-hand edge of the diagram as the bottom.



(14a)

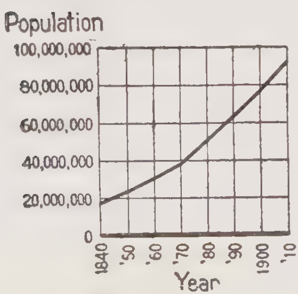


(14b)



(14c)

17. The title of a diagram should be made as clear and complete as possible. Subtitles or descriptions should be added if necessary to insure clearness.



Year	Population
1840	17,069,453
1850	23,191,876
1860	31,443,321
1870	38,558,371
1880	50,155,783
1890	62,622,250
1900	75,994,575
1910	91,972,266

(15)

PLOTTING FREQUENCY SERIES.—In plotting frequency distributions, plot the measurements of the groups into which the series is divided. On the ordinate scale plot the frequencies which appear in the various groups. Ordinarily the points on abscissa and ordinate should be sep-

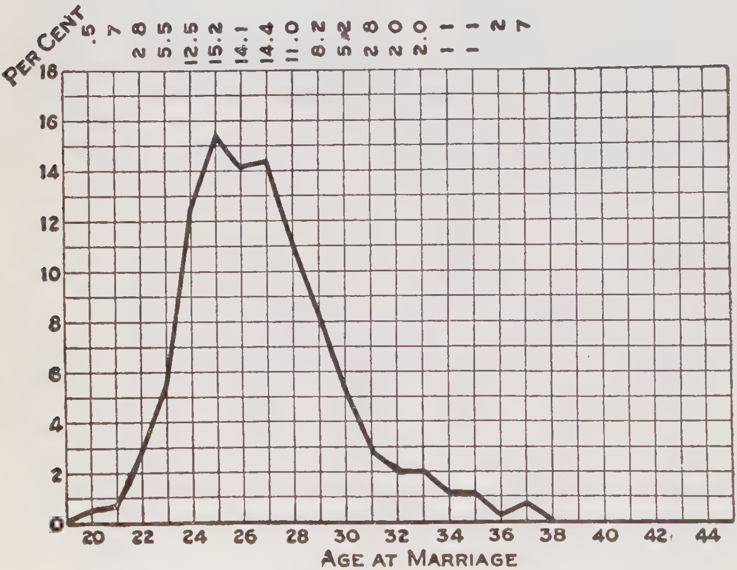
arated by the same distance. Use judgment in determining the range of both measurements, that is, from ordinate and abscissa, in order to throw the graph into proper relief. If the ordinate scale is too short, the curve will be flattened too much. That part of the curve which shows the greatest rate of increase should be well inclined to the vertical, but all fluctuations must be clearly indicated. If co-ordinated paper is used, the scale points should correspond to the ruling. If paper is divided into tenths, the scale



Data of Amy Hewes, in Publications Am. Statistical Assn.

FIG. 24. Age at Marriage of 439 Married Graduates of Mount Holyoke College, who graduated from 1890 to 1909

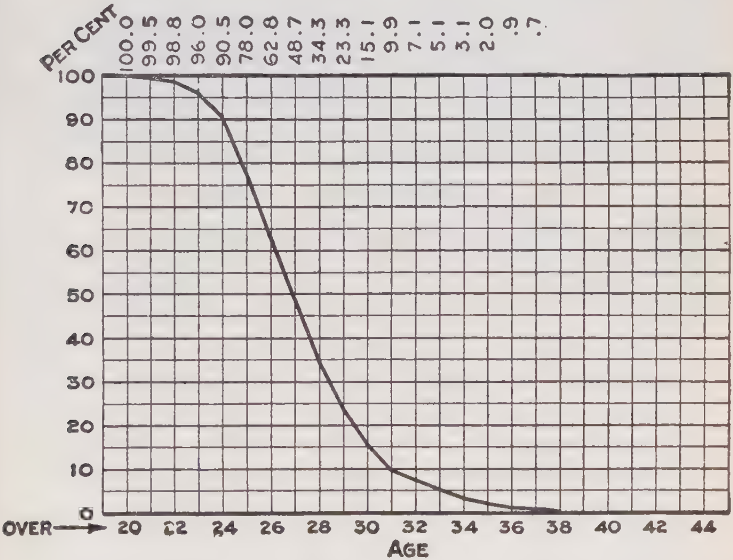
The vertical scale shows the percentage of the whole 439 who married at each age given on the horizontal scale. The total of all percentage figures at the upper margin of the chart is 100%. If a greater number of persons were included in a frequency curve of this sort, the curve would be less irregular and the mode would show more distinctly.

(From W. C. Brinton, "Graphic Methods for Presenting Facts")

points should correspond to that base whenever the scale consistent with the proper graphic presentation of the data can be so adjusted. See that the frequency groups to be represented are uniform in size. Frequency distributions are either discrete or continuous. In case of discrete series, units on the abcissa should be regarded as points, not spaces. For that reason lines connecting the ordinates — points of intersection of lines extended from ordinate and abscissa—should be straight, their function being to guide the eye. The graph (Fig. 22, p. 768) shows a frequency distribution for

the number of telephone messages each hour for one day in a business district in New York City as compared with a residential district.[8] Preferably the data should accompany the graph in tabular form. Note that the lines connecting ordinates are straight.

In case of frequency distributions describing continuous series, it is proper to curve the line connecting ordinates so that it approximates the line which



Data of Amy Hewes, in Publications Am. Statistical Assn.

Fig. 25. Percentage of 439 Married Graduates of Mount Holyoke College (Women), graduating 1890 to 1909, who married at ages greater than any specific age selected from the horizontal scale of the chart.

This is a cumulative frequency curve plotted from exactly the same data as Fig. 24. The word "over" with the arrow at the lower left-hand corner of the chart shows that the chart does not indicate the percentage who marry of any age but the number who marry later than any specific age read from the horizontal scale.

(From W. C. Brinton, "Graphic Methods for Presenting Facts")

would result were an indefinite number of measurements taken. The curve should be free from sharp angles. At each point the relative size of adjoining frequencies and the nature of the entire distribution must determine the contour. The above (Table 30) and graph (Fig. 23) are from King's "Elements of Statistical Method" (pp. 103, 104). The table shows the results of 196 throws of 3 dice. The graph shows the actual results, also a smooth curve which is an approximation to what could be expected if the

8 Reproduced from Brinton's Graphic Methods for Presenting Facts, p. 108.

number of throws were increased indefinitely. Although this series is not strictly continuous it illustrates the point under consideration.

Frequently it is desirable to plot frequency distributions in form of cumulative graphs, or ogives. The above figures (Figs. 24, 25), reproduced from Brinton's "Graphic Methods for Presenting Facts" (pp. 166 and 167), show the same data plotted as frequency and as cumulative graphs.

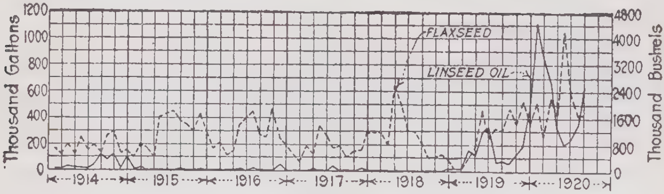


FIG. 26. The Imports of Flaxseed and Linseed Oil

PLOTTING HISTORICAL SERIES.—The principles to be followed are much the same as in case of frequency series. Time is a constant element. Short- and long-time tendencies must be brought out. The changes may be shown either as absolute or ratio differences (see pp. 745, 746). If absolute

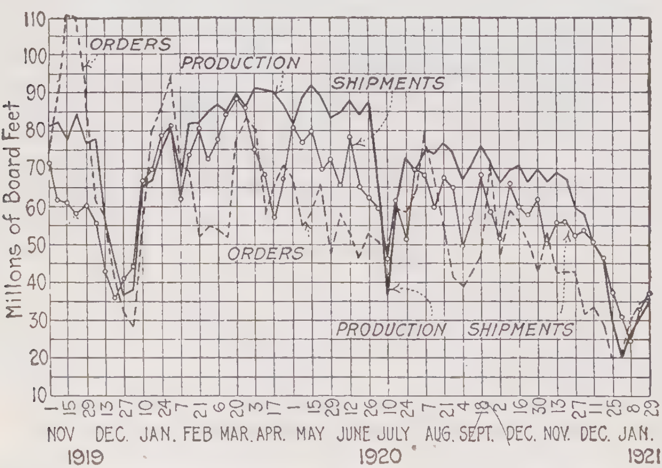

FIG. 27. Typical Chart of Production, Shipments, and Orders, over a Period of 15 Months

(From article by P. M. Marshall in *Management Engineering*, October, 1922)

differences are to be shown, study the extreme range of variations, then adopt a unit of measurement which will give the proper emphasis to fluctuations. The size of the paper used, the nature of the graph, its use, and so on, must be considered. Plot the variable factor on the ordinate and

time on the abscissa. Divide the scales into equal parts and see that the scale corresponds to the ruling of the paper used. If two or more curves are to be shown on the same sheet, it may be necessary to use different scales for them, as in the illustrations on pp. 745, 746. However, the use of more than one scale should be avoided, if possible. Another plan is to indicate the break by a wavy line drawn between the two curves parallel to the base. Above are two illustrations of historical graphs (Figs. 26, 27). The first (Fig. 26) shows the imports of flaxseed and linseed oil. The second (Fig. 27) shows a typical chart of production, shipments and orders, over a period of 15 months.

RATIO CHARTS.—Ratio charts and logarithmic charts are based on the same principle, viz., that increases and decreases are represented as percentages or ratios, not as absolute quantities. A knowledge of logarithms is

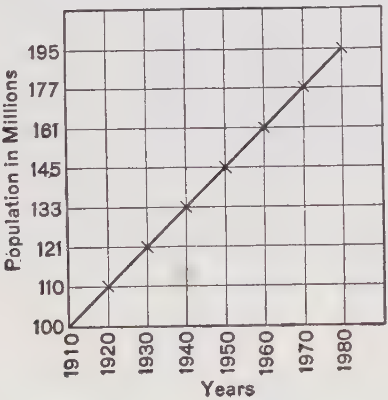

FIG. 28. Ratio Plotting

Uniformity is here evident to the eye, being represented by a straight line.

not necessary in the use of ratio or logarithmic charts. The fundamental principle of ratio charts is that equal vertical intervals on the charts represent equal **ratios** of increase, instead of equal amounts of increase. Ordinary plotting paper can be transformed into ratio plotting paper by labeling the existing lines and interpolating new lines. To do this, label the existing equidistant horizontal lines with numbers increasing in a given ratio, as shown in Fig. 28, reproduced from Professor Irving Fisher's "The 'Ratio' Chart."

Each interval of vertical space on this chart represents an increase of 10% over the next lower one. The same data shown on a difference chart, i.e., one in which equal spaces represent equal absolute amounts, are shown in Fig. 29. In the ratio chart uniformity in the percentage rate of growth is represented by a straight line, whereas in the ordinary difference chart uniformity in the rate of growth is represented by an exponential curve, which it is impossible to interpret accurately on a percentage basis. The

rising curve is apt to be interpreted as representing an increasing ratio. The difference between the ratio chart and the difference chart is merely one of spacing. In the ratio chart vertical spaces representing equal absolute amounts are unequally spaced, while in the difference chart they are equally spaced.

The actual growth of population in the United States from 1790 to 1910 is shown in Figs. 29, 30. The first chart (Fig. 29) is the ordinary or difference chart; the second one (Fig. 30) is the ratio chart. The rising curve on the difference chart does not represent an increasing rate of growth, but might be interpreted as such. The ratio chart shows a nearly uniform rate of growth from 1790 to 1860, and a slightly decreasing rate of growth since 1860.

Ratio chart curves are more easily compared than are difference chart curves. This is shown in the three charts (Figs. 31, 32, 33), which are reproduced from Fisher's "The 'Ratio' Chart." Fig. 31 shows a comparison of index numbers by the difference method. Apparently "all commodities"

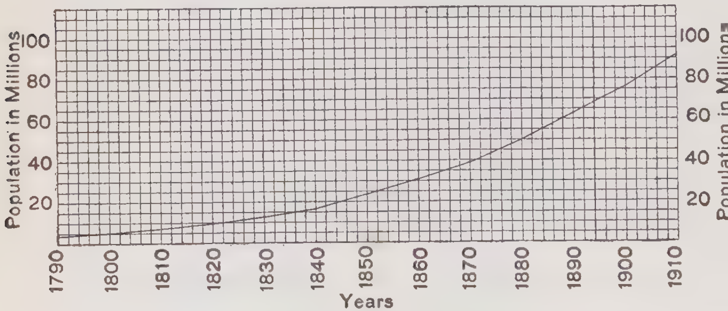

Fig. 29. Actual Population in U. S.—Difference Method
Showing the impossibility of correctly comparing rates of increase at different periods
(From I. Fisher, "The Ratio Chart for Plotting Statistics")

fluctuated more than "breadstuffs." In reality "breadstuffs" fluctuated more, as is shown by the second, or ratio, chart (Fig. 32). Fig. 33 brings out the comparison by bringing the curves close together, a procedure legitimate when the ratio method is used but not when the difference method is used. Business men are sometimes greatly surprised when they change difference charts into ratio charts.

The following summary is adapted from Professor Fisher's "The 'Ratio' Chart" (p. 23):

In ratio charts a straight line represents a constant percentage rate of increase or decrease. A curve indicates a changing rate of increase or decrease. Two parallel curves represent the same ratios of increase or decrease. Curves not parallel represent differing ratios of increase or decrease. When numbers to be plotted are halved or changed in any other ratio, the direction of the resulting curve will not be changed. The curve will simply be raised or lowered. There being no base line, no waste results on its account, and the diagrams can be cut off close, both above and below the curve. The necessity of reducing original data to index numbers is avoided.

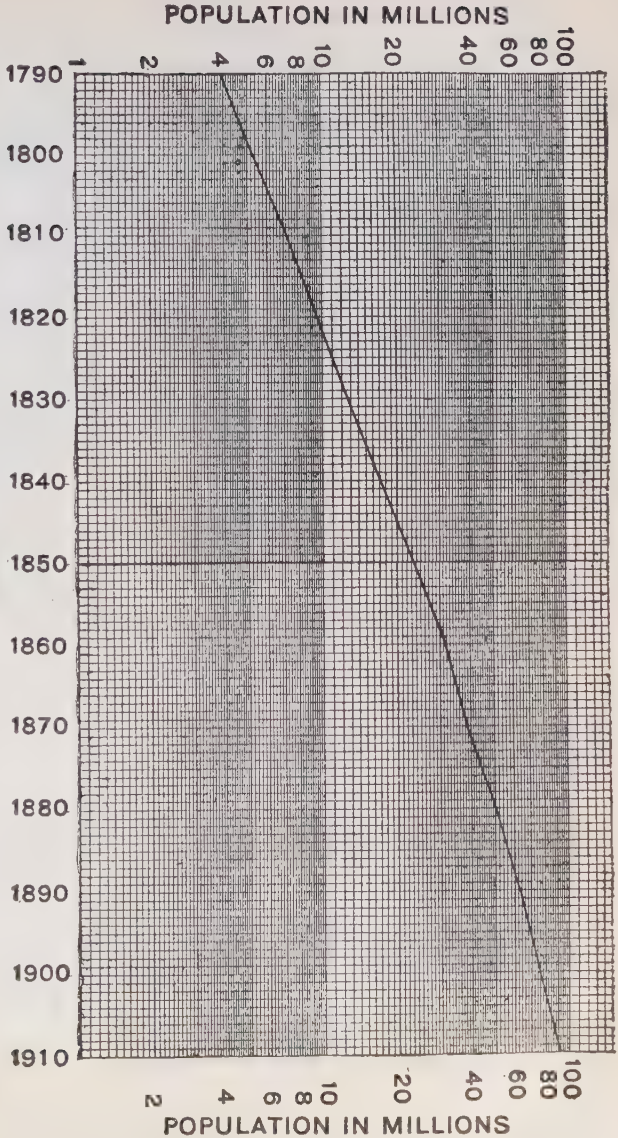

Fig. 30. Actual Population of U. S.—Ratio Method
Showing clearly the slight deviations, since 1860, from a uniform rate of growth.
(From I. Fisher, "The Ratio Chart for Plotting Statistics")

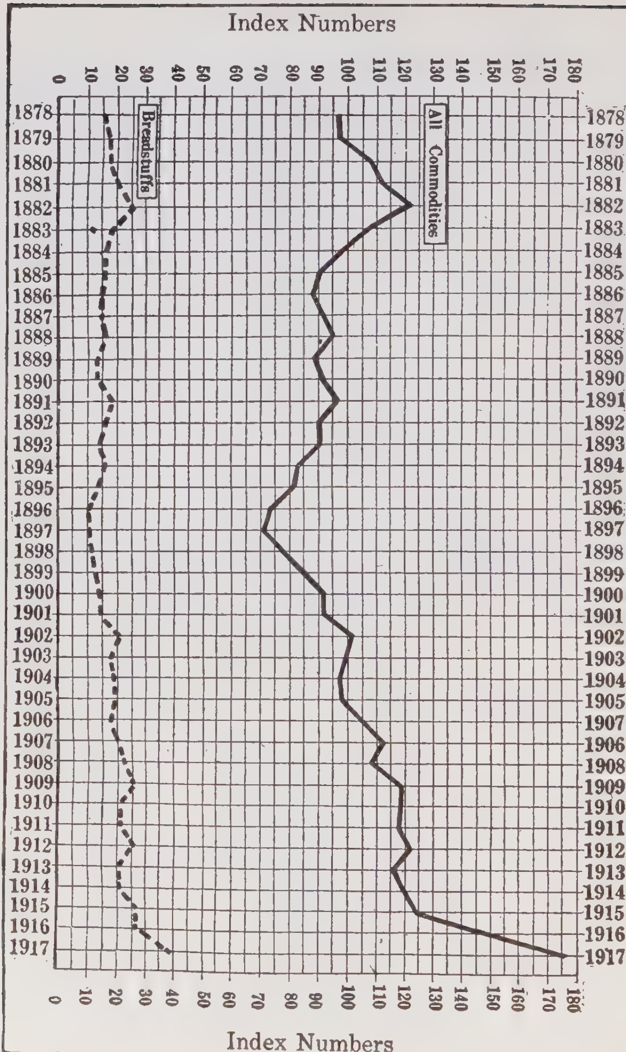

FIG. 31. Index Numbers Compared—Difference Method

Apparently, "all commodities" fluctuated more than "breadstuffs."

(From I. Fisher, "The Ratio Chart for Plotting Statistics")

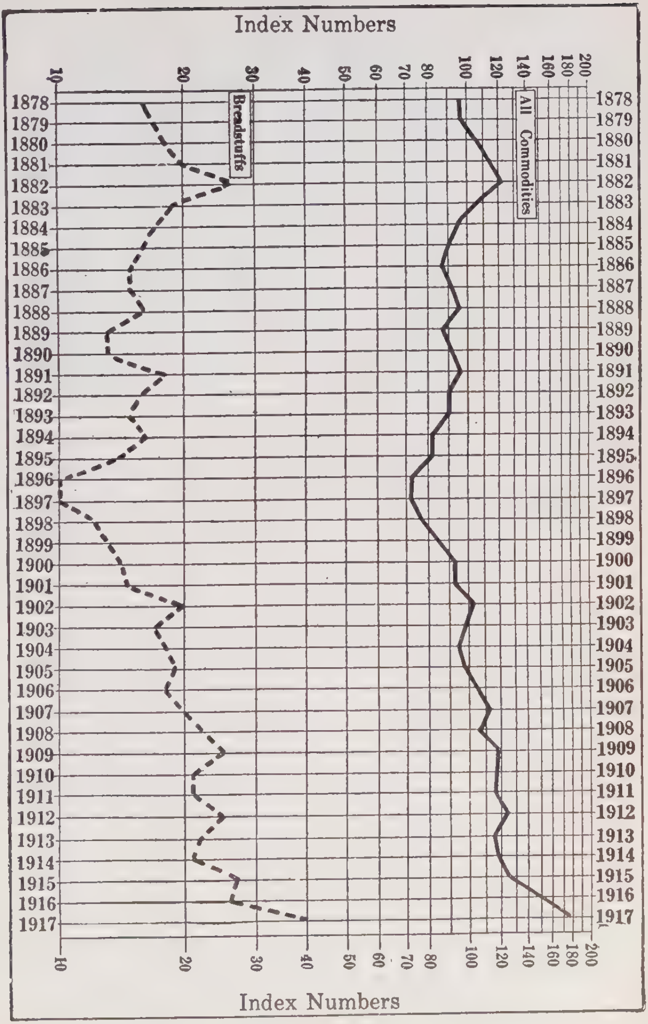

FIG. 32. Index Numbers Compared—Ratio Method

Actually, "breadstuffs" fluctuated more than "all commodities."

(From I. Fisher, "The Ratio Chart for Plotting Statistics")

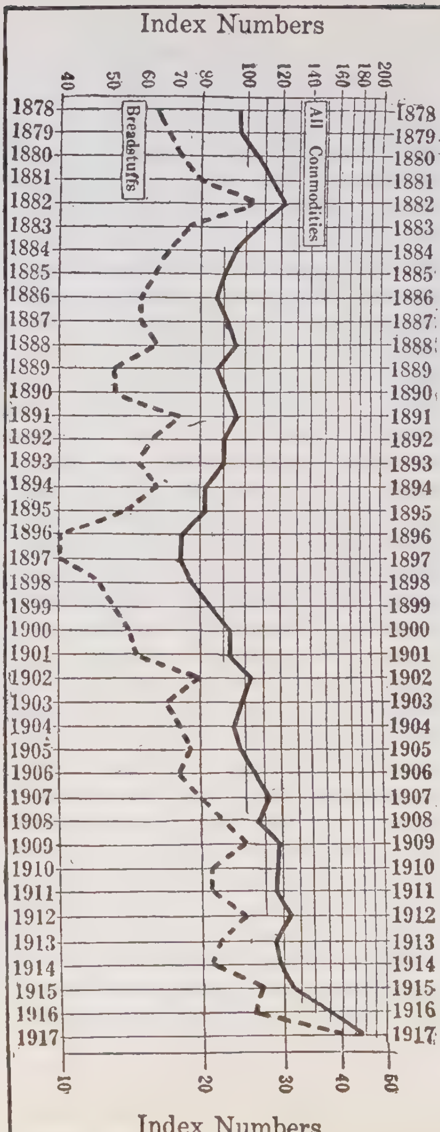

FIG. 33. Index Numbers Compared—Ratio Method

Showing more sharply the contrast by bringing the curves closer together. This procedure is legitimate in the ratio method, but not in the difference method.

(From I. Fisher, "The Ratio Chart for Plotting Statistics")

Internal Financial Statistics

COMPARATIVE RECORDS.—Comparative records may be kept for nearly every form of activity. The trend of sales and profits by departments and for the entire enterprise, activity of salesmen, inventories carried, and other phases of business enterprise, may be compared by means of statistical tables and graphs. Percentage as well as absolute quantities are useful, because they show relative increases and decreases.

OPERATING AND FINANCIAL STATISTICS.—Certain financial statistics should be planned and developed to support and explain the income statement and the balance sheet. Likewise **account classifications** should be in co-ordination with these statements. In this way the accounts and statistics are co-ordinated. Statistics intended for use of executives should measure relationships, and so should represent analyses of data supplied by the accounts. **Operating statistics** are those developed, in part at least, to support and explain the income statement. They should show on their face all important analyses. **Financial statistics** are those developed, in part at least, to support and explain the balance sheet.

Operating and financial statistics are usually presented in either **report** or **progressive** form. By the report form is meant that used to afford comparisons with previous periods. By the progressive form is meant an open, running file, in which the current periods figures are entered as available, thus permitting study of broken trends. This method is applicable to most forms of statistics from balance sheet down and has distinct advantages. In the following illustrative plan (Table 31) the first columns show progress by weeks and the last columns show accumulations to date. The plan is applicable to sales, expenses, earnings, etc.

Table 31. Sales—Department M

Weeks	By Weeks				Year to Date			
	Weight		Amount		Weight		Amount	
	1922	1923	1922	1923	1922	1923	1922	1923
Jan. 7..........								
Jan. 14..........								
Etc............								

Study of operating and financial statistics should be made from the point of view of the balance sheet and income statement, because these show the major trends and relationships, and statistical analysis is applied to bring to light facts not discernible in these general statements although forming parts of the general information reflected in them. Thus if the final results indicated by the income statement are unfavorable, statistical analysis of the items found in it will bring to light the source of loss.

SALES STATISTICS.—Those most commonly kept are for daily, weekly, and monthly sales by departments and by salesmen. Prepare columns to

show increases and decreases by both quantities and percentages. Cumulative figures to date may be shown, and averages may be reduced to percentages. The combinations desirable must be determined by the nature of the business and the information needed. Following are simple forms of statistical records.[9]

Table 32. Monthly Record of Sales by Departments

Months	Dept. 1	Dept. 2	Dept. 3	Dept. 4	Dept. 5	Total
January	$1,327.76	$2,976.47	$4,567.34	$3,091.23	$5,684.92

External Financial Statistics

GENERAL STATEMENT.—A great amount of financial statistical material is now collected by various governmental and private agencies. Proper attention to this material will often aid business men to determine what policy to adopt relative to future operations.

BAROMETRICS.—Barometrics makes use of statistics to forecast business conditions, tendencies in the prices of commodities, stocks and bonds, and so on. Well-known agencies such as Babson's and Brookmire's provide a regular service to which thousands of business men subscribe. Several journals have statistical departments given over wholly or in part to barometrics. Among these are the "Annalist" (published by the *New York Times*) and "Conditions and Prospects in Business and Industry," by Lewis H. Haney, in *Management and Administration* (published monthly by the Ronald Press Co.). The accompanying chart and explanation (Fig. 34) are reproduced from September, 1923, number of *Management and Administration.* It shows the manner in which this type of barometer operates.

THE BUSINESS CYCLE.—Barometrics attempts to forecast the business cycle, which is the more or less regular recurrence of periods of prosperity and depression. There are a number of monthly indices of industrial and commercial activity which reflect business conditions. Certain of these serve as forecasters because they act in advance of those movements which, taken together, constitute prosperity. Reliance should never be placed on any one series of statistics as an index of conditions, and special care should be taken always to discount the effects of abnormal circumstances, such as a war. In the autumn of 1919 statistics of pig-iron production were useless because of labor difficulties. In 1920 the disorganization of the railroad system made railway statistics unreliable guides to conditions. It is better to use an average, giving due weight to the various factors. The Harvard Committee on Economic Research has classified the principal business indices in accordance with the promptness with which they respond to changed conditions. Three series resulted:

1. Those reflecting speculation.
2. Those reflecting business activity.
3. Those reflecting banking conditions.

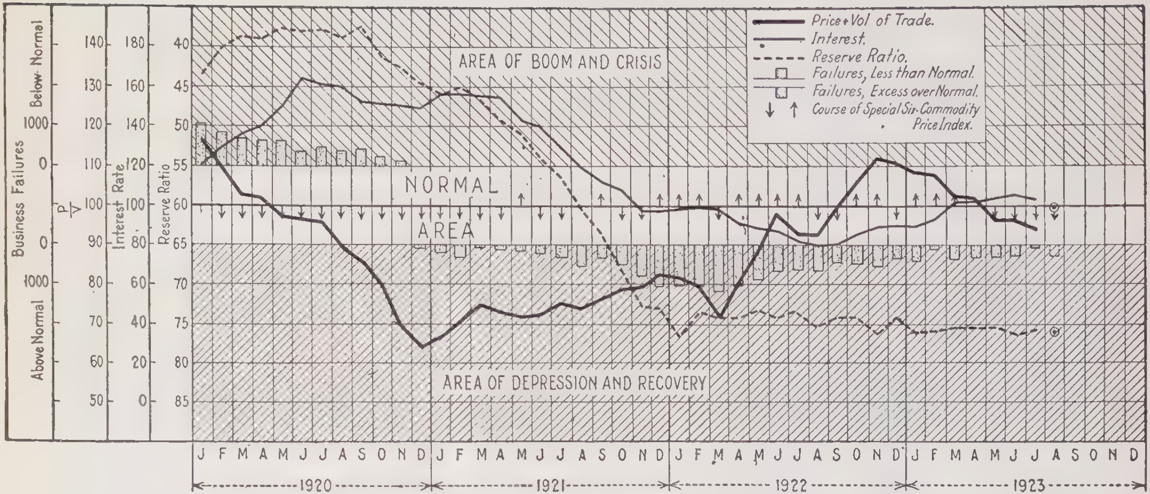

FIG. 34. The Barometer of Industry and Trade

Areas in which curves lie indicate that business is good, normal, or poor, respectively. Curve P/V shows the trend of commodity demand and is the ratio between Bradstreet's index of wholesale prices and physical volume of trade (carloadings times tons per car), based on 1912 as the normal year. A rise in the curve indicates increasing demand, and vice versa. Interest rate curve has been corrected for seasonal variation, and index number 100 equals 5%. Federal reserve ratio of cash reserves to note and deposit liabilities is inverted to harmonize its indications with the rest of the curves, and is corrected for seasonal variation on revised basis from January, 1923, on. Business failure bars are based on Dun's reports, and "normal" equals the trend for 40 years. Six-commodity price index based on N. Y. U. Bureau special investigation. August, 1923, data shown is probable trend.

(Taken from article by Lewis H. Haney, in *Management and Administration*, September, 1923)

FINANCE

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 16.

FINANCE

Forms of Business Organization

DEFINITION.—As used in this section the term **finance** covers the obtaining and handling of funds by business enterprises and the various details of handling money and credit. To carry on business it is necessary to raise capital both for plant and working purposes; to determine profit and loss and its resulting effect on capital; and to determine policies regarding dividends, reserves, and upkeep.

RELATION OF FINANCE TO ACCOUNTING.—Proper financing is dependent upon correct accounting for the information needed for determining policies. Among topics which relate to both accounting and finance are depreciation, treatment of reserves, good-will, valuation, handling of sinking funds and redemption of various obligations. Accountants are frequently asked to give advice regarding methods of borrowing, investing, surplus distribution, etc. Accounting records past transactions, whereas finance deals with the obtaining of certain results, such as raising funds, issuing securities, and use of proceeds thus obtained.

TYPES OF BUSINESS ORGANIZATION.—The three fundamental types of business organization are: (1) **sole proprietorship,** in which an individual owns and manages his own business; (2) **partnership,** in which there are two or more owners working together under an agreement; (3) **corporation,** in which several or many individuals associate themselves under a more or less formal organization specifically sanctioned by general state laws or by special legislation. The corporation is the product of modern industrial conditions. Whereas sole proprietorships and partnerships are largely personal in nature, the corporation is more formal and contains much in its method of control that is impersonal.

Under any form of organization there are three elements to be distributed, viz., risk, income, and management. Under sole proprietorship and partnerships the owners assume the risk, take the income, and do the managing. Under the corporate form the situation is different. Creditors and shareholders assume the risk and divide the income according to some more or less complicated form, but the management is delegated to officers and directors. Thus the ownership and management of capital is in different hands.

Sole proprietorships are the simplest forms of business organization. Illustrations are found in firms, shops, the professions, etc. Ownership and management are in one man. There are some large businesses still in form of sole proprietorships, having started as small concerns. Informality and freedom from legal restrictions are advantages found in sole proprietor-

ship. Disadvantages are: limited supply of capital, actual or potential; lack of experienced executive ability; and personal liability of the proprietor.

Partnerships, fundamentally, are like sole proprietorships. The chief difference is that risk, income, and management are distributed among several persons instead of being centered in one. The **partnership agreement** is the contract to which the partners are parties. The number of possible partners is unlimited. A **sleeping partner** is one not known publicly to be a partner. A **limited partner** is one whose liability is limited to the amount of his investment. Special forms of partnerships are found in **syndicates** and **joint ventures.**

Professional activities are usually carried on as partnerships. In certain other activities where the unlimited liability feature of partnerships is desirable, the partnership form of organization is retained. Examples are brokers and underwriters.

The chief defects of partnership organization are unlimited liability and limited command on capital.

In partnership the **personal element** is a consideration of great importance and perhaps increases with the increase in number of partners. Each partner's fortune is dependent upon the behavior of all the other partners.

In case of **corporations** capital is supplied by the stockholders and management by officers and directors whom the stockholders elect. The stockholders thus exercise control indirectly. Their liability is limited to the amount of capital they contribute. Division of capital into **shares** makes wide distribution of ownership easy. The corporation is a distinct legal entity capable of suing and being sued, making contracts, etc., all operations being carried on by the officers in the name of the corporation.

Limited partnerships are formed under special laws to enable one or more **silent partners** to be members of a firm. Silent partners have no part in management but share in profits. Partners with limited liability are known also as **special partners,** to distinguish them from the **general partners** who have unlimited liability. W. H. Lough says:[1]

> To secure this restricted liability it is necessary to comply closely with the statutory provisions. The procedure necessary to form a limited partnership is almost as formal as the incorporation of a stock company, and failure to observe the required formalities may result in making the special partners liable as general partners. Sometimes it is attempted to secure the benefits of this limited liability without complying with the law. In such case, the individual who invests his money keeps the matter secret and is known as a dormant or "sleeping" partner. If the arrangement is discovered, he would be liable in exactly the same way and to the same extent as an active partner.

A joint-stock company is a partnership having transferable shares to represent its capital. In New York, joint-stock companies must conform to the state law regulating their organization. In other states they are formed by ordinary agreement. Owing to the unlimited liability feature of joint-stock companies and to the fact that those of the voluntary type cannot hold real estate, little recourse is had to this form of organization outside of New York. In New York individual members cannot be sued until it is proved that the claim cannot be collected from the company; also, joint-stock companies sue or are sued in the name of the president or treasurer. Outside New York these companies bring suit in the name of all their members, and only those members served with process can be held. In Great Britain the joint-stock company is practically the equivalent of the American corporation.

---

[1] Business Finance, p. 19.

Trusts are sometimes formed to carry out business undertakings. One plan is to organize a board of trustees who take over stock of constituent companies and thus form a unified control. The owners of the stock receive therefor receipts known as **trust certificates.** This form of organization has been declared illegal as restricting competition.

Holding companies have superseded the trusts, but are often wrongly called trusts.

In Massachusetts "voluntary associations" are a type of trust originally organized to deal in real estate because prior to 1912 the state law did not authorize corporations to do this. Recently these have become active in other forms of business. Lough gives the important features of these as follows:

1. A deed or declaration of trust, drawn up to define the rights and powers of the trustees and the shareholders.
2. Two or more trustees who are authorized to take over and manage the capital, business, or property supplied by the shareholders.
3. Shareholders who receive transferable certificates representing their respective interests in the profits and in the property on dissolution.
4. Provisions for division of profits, appointment of trustees to fill vacancies, and for dissolution at termination of the trust.

The advantages of such voluntary associations are thus summarized by the Massachusetts Commissioner of Corporations:

> 1. The experience of 25 years shows that they furnish a convenient, safe, and unobjectionable form of co-operation, ownership, and management.
>
> 2. Their form of management is more flexible, more economical, and more convenient than that of a corporation. Trustees can do business with more ease and rapidity than a board of directors.
>
> 3. In particular they afford a convenient form for combining capital for the development and improvement of real estate as the form of organization insures a continuity of management and control that specially appeals to investors in real estate, and which cannot be secured by a corporation on account of the change of officers each year. Trustees are not changed as frequently as are directors of a corporation.

Capital Financing

COMMON STOCK.—The problem of securing funds for the construction of production facilities arises not only at the inception of an enterprise but also at intervals during its career. Usually the company makes some form of appeal to outside investors. To persuade them to invest it is necessary to show to their satisfaction that their principal will be safe and that an income therefrom is assured. **Stocks** and **bonds** are the securities usually offered.

> **Stocks** represent ownership.
> **Bonds** represent loans.

Stocks carry with them the risks of the business. Bonds carry fixed interest charges and their holders are creditors of the company issuing them. In case of liquidation the bondholders have a claim upon the assets superior to that of stockholders. Failure to pay interest on bonds, other than income bonds, means insolvency. Failure to pay dividends leads to no direct legal

consequences. Dividends are a division of profits made only when profits exist. Stock represents a proprietary interest, not a liability. It also usually represents a proportionate contribution to the corporation's original capital. The values back of stock may or may not include the entire assets of the company.

TYPES OF CAPITAL STOCK.—There are two principal kinds of stock, common and preferred. One kind of **common stock** stands for the entire capital of the business, if there are no preferred stockholders, no bondholders, and no noteholders. Another kind of common stock merely represents an equity in the assets after other securities having a prior lien are considered. The tendency is away from the simple capital structure of the older form of corporation with but one class of stock, all common, toward a more complicated capital structure. Dewing says that common stocks of the first groups are now

> . . . . restricted to a few small railroads, the majority of Massachusetts electric light and gas companies, most small and medium-sized cotton mills, locally owned manufacturing companies, banks, insurance companies, and mines. There have been in almost every case some special reasons tending to hold back these types of industry from developing the more elaborate form of capitalization. Until recently the tax laws in Massachusetts levied a general property tax on bonds, but not on stocks, so that gas companies, electric light companies, and even cotton mills, found a readier sale for their tax-exempt stocks among local capitalists.[2]

Form 1 shows the essential provisions of the stock of the New York Central and Hudson River Railroad Co. Form 2 shows the essential of the partnership shares of the American Express Co.

PAR-VALUE vs. NO-PAR-VALUE SHARES.—When shares of stock have par value, this par value theoretically expresses the amount of the stockholder's original investment. It does not represent a right of ownership because there is no right to collect such par value. The real value of a share changes with the changing fortunes of the enterprise. Since each share represents a proportionate interest in net worth of an enterprise there has arisen recently a demand for stock of **no-par value.** No-par shares do away with the meaninglessness of "par value," avoiding any supposition that there is an equivalence between actual values and par value of stock. The following is from the report of the Hadley Railroad Securities Commission:

> We do not believe that the retention of the hundred-dollar mark, upon the face of the share of stock, is of essential importance. . . . . It is less in accord with existing business habits and usages; but it has the cardinal merit of accuracy. It makes no claim that the share thus issued is anything more than a participation certificate.

FULL-PAID STOCK.—When stock is exchanged for money or property equivalent in value to the par of the stock, the stock is full-paid. Frequently full-paid stock is a legal fiction, the directors resolving that such equivalence exists when it in reality does not. When admittedly not full-paid, stock is subject to assessment for the unpaid balance. This enables the directors to call for the unpaid balances at any time, but interferes with marketing the stock.

VOTING POWERS.—Ordinarily the owner of stock has the power to vote at stockholders' meetings. Frequently ownership and voting power are held by different parties. A **voting trust** is created when stockholders owning a majority of the stock pool their voting power by transferring their stock to **trustees** who issue **voting trust certificates** in exchange. Dividends

received by the trustees are turned over to the real owners but the voting power lies in the trustees' hands. Voting trusts are formed most frequently to control for a certain period of years the activities and policies of reorganized concerns. To prevent mismanagement by speculators, the bondholders and minority stockholders sometimes require that the voting trust be controlled by three or five responsible men. When the voting trust is used properly, it insures a stable and continuous policy and provides responsible management.

In most states the laws require that such trusts be kept open to all stockholders who desire to enter it. Even thus restricted these trusts sometimes operate to the advantage of the trustees rather than to that of the corporation. The voting trust, when organized to look after shareholders' interests, are usually supervised by some large banking firm interested in protecting its own reputation and the interest of its customers.

TRANSFER OF STOCK.—Stock certificates show on the face the number of shares represented, to whom they were issued, and the legal conditions under which issued. Stock certificates are transferable, and when indorsed in blank by person to whom issued, are negotiable. They sometimes pass through many hands before being transferred on corporation's books. Dividends are paid to stockholders of record. One purchasing shares should attend at once to their transfer, although if the dividend is paid to the previous holder who sold it before it become ex-dividend, the purchaser has recourse against him for the amount of the dividend.

Issuance, transfer, and handling of capital stock, in case of large corporations, are entrusted to a **transfer agent** and a **registrar.** The transfer agent sees that the record of stockholders is kept up to date—that when transfers are made old certificates are canceled and new ones issued. The registrar checks the issuance and sees that the total does not exceed the amount authorized to be issued.

CORPORATION'S OWN STOCK.—In some states, including Wisconsin, California, and New York, the courts have held that, in absence of contrary statutory provisions, a corporation may deal in its own stock if the transaction is bona fide. In many states the practice is forbidden. If used to reduce outstanding stock without due process of law, it is objectionable.

PREFERRED STOCK.—Preferred stocks are those given a preference over common stocks as to dividends and sometimes as to other rights. The most common rate is 7%. Preferred stock dividends are either **cumulative** or **non-cumulative.** A cumulative dividend, if not paid, accumulates from year to year, so that if profits are not sufficient to pay full rate in one year the unpaid dividend or portion thereof is a prior claim in succeeding years before holders of common stock receive dividends. Non-cumulative preferred stock has a prior claim on the profits of the current year only, so that the corporation need not make up in future years any unpaid dividends. Ordinarily non-cumulative preferred stock is undesirable because it is to the interest of the common stockholders to defer dividends on it. Most industrial preferred stocks bear **cumulative dividends** at the rate of 6%, 7%, or 8%. Unless the charter provisions authorizing the preferred stock specifically state that it is non-cumulative, it will be held to be cumulative. It is best, however, to have the cumulative feature expressly provided. Unpaid cumulative dividends which have accumulated over a period of years and have so become burdensome are sometimes **funded,** securities of

some kind being issued in satisfaction of the claims of the preferred stockholders.

Conditions and limitations governing issue of preferred stock may be classified as:

1. Those regarding the position of preferred stock in case of corporate liquidation.
2. Those pertaining to the lien of the preferred stock on earnings.
3. Those pertaining to the protection of preferred stock against issuance in future of securities having a prior lien on assets or earnings.
4. Those pertaining to the participation of preferred stock in management of the corporation.

These are enlarged upon below:

1. **The lien on assets given preferred stock** in case of liquidation usually is equal to its par value. This, however, may not be worth as much as it appears to be, as other securities having a prior lien may, in case of liquidation, absorb most of the value. It has been found, in practice, that in industrial and railroad reorganizations preferred stockholders possess no material advantages over common stockholders.

2. As to **earnings** the points to be covered are: (a) what the fixed dividend rate shall be; (b) whether or not the dividend shall be cumulative; (c) what rights of participation may be given in excess earnings.

3. **Protection against bond issues** is frequently provided for, because these take a lien prior to that of the preferred stock. There is usually no restriction on any increase in floating indebtedness. Protection against bond issues usually takes the form of a provision requiring that the consent of a large majority of outstanding preferred stock is necessary to secure authorization of a bond issue. Sometimes mortgaging the property is prohibited entirely. In some instances directors have destroyed the effect of such protective provisions by guaranteeing bonds of other companies. Sometimes preferred stockholders are protected against an increase in their stock without their consent by requiring that a special meeting of preferred stockholders be called to get consent. Sometimes the amount of authorized preferred stock is made so large that such consent is unnecessary. In such cases a possible way of protecting holders of outstanding preferred is to require that net earnings or surplus be ample to meet all dividend requirements on both old and new stock.

4. **Voting privileges** are usually denied preferred stock. Sometimes control is transferred to preferred stock if dividend payments are not made in accord with requirements.

Preferred stock in industrial corporations usually represents the tangible assets, whereas common stock is a capitalization of expected excess income.

Frequently corporations retain the right to redeem preferred stock, usually at a premium of from 5% to 20%. **Sinking funds** may be established for this purpose.

The following provisions appear in the certificate of incorporation of the New York Air Brake Co. The class A stock to which it refers is, in effect, non-par cumulative preferred as to dividends and preferred as to assets.

1. Out of the surplus or net profits arising from the business of the corporation, the holders of the Class A Stock shall be entitled to receive dividends at the rate of $4. per share per annum, payable quarterly on the first day of January, of April, of July and of October in each year, from October 16, 1922, (or if so determined by the Board of Directors and so expressed in the certificates of stock, from the date of issue), before any dividends shall be declared or paid upon or set apart for the common stock, and such dividends shall be

cumulative, so that if in any year or years dividends upon the outstanding Class A Stock at the rate of $4. per share per annum shall not have been paid the deficiency shall be paid before any dividends shall be declared or paid upon or set apart for the common stock.

2. The corporation shall set aside, on January 1st, 1925, and, so long as any of the Class A Stock shall be outstanding, on each succeeding January 1st, as a **Sinking Fund for the purchase or redemption of its Class A Stock,** a sum equal to one dollar per share on the maximum aggregate number of shares of the Class A Stock which shall theretofore have been issued and not converted into common stock, whether or not such Class A Stock shall be then outstanding. The sum or sums so set aside in each year shall be promptly applied to the purchase of Class A Stock at public or private sale at the lowest price at which the same may with reasonable diligence be obtained by the corporation, but in no event shall any stock be purchased under the provisions of this paragraph at a price exceeding $50. per share, or if the price which the corporation shall have received for the said stock upon the issuance thereof shall have been less than $50. per share, then at a price not in excess of such issue price; and to the extent that the same cannot be so applied within one year from the date when the same shall have been so set aside it shall thereafter revert to the company free from the restrictions contained in this clause 2. All amounts required to be set aside for the Sinking Fund, as herein provided, shall be set aside in each year from, and only from, surplus or net profits of the corporation (including surplus or net profits accumulated in previous years and unapplied) remaining after full cumulative dividends on the Class A Stock outstanding shall have been declared and paid or provided for, including all accrued unpaid dividends, and this obligation shall be cumulative so that if in any year said remaining surplus or net profits shall be insufficient to permit the full amount required as aforesaid to be set aside, or if for any reason the full amount shall not be set aside, the deficiency shall be made good out of the surplus or net profits of the succeeding year or years before any dividends shall be declared upon or set aside for the common stock. If in any twelve months' period ending December 31st, the corporation shall have set aside and applied out of such remaining surplus or net profits any amounts in excess of or in advance of the above requirements, the corporation shall be entitled to be credited on its obligation to set aside moneys as aforesaid in subsequent periods to the amount of such excess or advance. The obligation of the corporation as to the setting aside and application of the Sinking Fund, provision for which is in this clause 2 contained, shall be contingent upon such action by the stockholders of the corporation as is necessary under the laws of the State of New Jersey. Prior to January 1, 1925, and during each year thereafter so long as any of the Class A Stock of the corporation is outstanding, the corporation will, however, either at a special meeting of the stockholders called for the purpose or at their annual meeting, upon due notice, request such consent of the stockholders as is necessary under the laws of the State of New Jersey for full compliance with the provisions of this clause 2.

3. Out of any surplus or net profits arising from the business of the corporation remaining after full cumulative dividends as aforesaid upon the Class A Stock shall have been paid for all past quarterly periods, and after or concurrently with making payment of or provision for full dividends on the Class A Stock for the current quarterly dividend period and the quarterly period next succeeding, and after the corporation shall have complied with the foregoing clause 2 in respect of any and all amounts then or theretofore required to be set aside or applied in respect of the Class A Stock Sinking Fund and shall have made ratable provision for compliance with said clause 2 in respect of the twelve months' period ending the next ensuing December 31, and after making such provision, if any, as the Board of Directors of the corporation may deem necessary for working capital, then, and not otherwise. dividends may be declared upon the common stock at a rate not in excess of four dollars per share per annum, except that when in any year dividends amounting to four dollars per share thereon have been declared and paid upon the common stock of the corporation, dividends in excess of four dollars per share may be declared and paid upon the common stock, but only concurrently with the declaration and payment of a dividend or dividends upon each outstanding share of Class A Stock equal in amount to that declared or paid on each share of common stock over and above the said four dollars per share thereon. The dividend of four dollars per share per annum upon the common stock herein provided shall be non-cumulative, so that if in any year or years the corporation shall have failed to declare and pay dividends on its common stock at the rate of four dollars per share per annum, nevertheless the corporation shall not in any year declare or pay dividends on its common stock in excess of four dollars per share unless concurrently therewith a dividend

(in addition to the preferential dividend of four dollars per share hereinabove provided) shall be declared and paid upon each share of its outstanding Class A Stock equal in amount to that paid upon each share of the outstanding common stock of the corporation in excess of four dollars per share. No increase in the annual rate of cash dividends on the common stock above the annual rate of four dollars per share shall be made, and no extra cash dividend which shall cause the dividends on the common stock for the fiscal year in which such extra dividend is declared to exceed in the aggregate four dollars per share and no stock dividend shall be declared, and no right to subscribe for additional stock of any class shall be granted, upon or to the common stock, unless notice of such increase in rate or declaration or grant shall be given by publication at least once a week for three successive weeks in one newspaper of general circulation in the Borough of Manhattan, City of New York, and a similar notice be mailed to each record holder of Class A Stock of the corporation at his last known post office address at the same time as the first publication hereinbefore provided is made.

4. **The Class A Stock shall be preferred also as to assets,** and in the event of any voluntary liquidation or dissolution or winding up of the corporation the holders of the Class A Stock shall be entitled to receive an amount equal to sixty dollars per share, or if such liquidation or dissolution or winding up be involuntary, a sum equal to fifty dollars per share, in each case with all dividends accrued or in arrears, for every share of their holdings of Class A Stock, before any distribution of the assets shall be made to the holders of the common stock; and, in the event of any such distribution of assets, the holders of the common stock shall be entitled to the exclusion of the holders of the Class A Stock to share ratably in all the assets of the corporation then remaining. If upon any such liquidation, dissolution or winding up of the corporation, the assets thus distributable among the holders of such Class A Stock shall be insufficient to permit the payment to such Class A stockholders of the preferential amounts aforesaid, then the entire assets of the corporation to be distributed shall be distributed ratably among the holders of the Class A Stock. The terms "dividends accrued or in arrears" and "full cumulative dividends" whenever used herein with reference to Class A Stock shall be deemed to mean that amount which shall be equal to four dollars per share per annum thereon to date from October 16, 1922, (or in the case of stock certificates which express that dividends thereon shall be payable and cumulative from some other date, from such other date), less the amount of all dividends paid upon such stock.

5. Upon at least sixty days' previous notice, given both by mail to the record holders of Class A Stock to be redeemed and by publication at least once a week for three successive weeks in one newspaper of general circulation in the Borough of Manhattan, City of New York, the **corporation may redeem the whole of the Class A Stock or any part thereof** by lot or pro rata on the first day of January in the year 1926, or on any quarterly dividend payment date or dates thereafter, at the price of sixty dollars per share plus dividends accrued or in arrears, or if said price be less than the price which the corporation shall have received upon the issuance thereof, then at a price equal to such sum plus ten dollars per share—all by such method as shall be provided from time to time by resolution of the Board of Directors and permitted by law. From and after the date fixed in any such notice as the date of redemption, unless default shall be made by the corporation in providing moneys at the time and place specified for the payment of the redemption price pursuant to such notice, all dividends on the Class A Stock thereby called for redemption shall cease to accrue and all rights of the holders thereof as stockholders of the corporation, except the right to receive the redemption price, shall cease and determine. Class A Stock redeemed or purchased under any provision of this Certificate of Incorporation or otherwise shall not be reissued and no Class A Stock shall be issued in lieu thereof or in exchange therefor and such stock shall be retired from time to time in the manner permitted by law.

The following provision relating to the retirement of preferred stock appears in the charter of the Underwood Typewriter Co.:

There shall be set aside from the net profits of the Company at the rate of not less than \$100,000 per annum a fund to be known as **Special Surplus Capital Reserve Account,** which shall be made and kept going at the rate of \$100,000 per annum for each year before any dividend shall be paid on the common stock and after the expiration of three years from the date of incorporation of the company said Special Surplus Capital Reserve Account shall be used annually in the purchase and retirement of said preferred stock at the lowest

price at which the same may be obtainable, but in no event exceeding a premium of 25% over and above the par value thereof. Such purchases may be made at the option of the Company either at a public or private sale, and all preferred stock so acquired shall be cancelled.

Other provisions looking to the security of preferred stock are as follows. A cumulative reserve fund of 50% of outstanding preferred stock, maintained by setting aside out of earnings an amount equal to at least 3% par value on outstanding preferred stock, is provided by the charter of the Canadian Inter-Lake Line. The Moline Plow Co. must keep net quick assets always equal to at least $140 per share of first preferred. Before additional preferred stock can be issued by Montgomery Ward & Co., it must be shown that net quick assets equal 120% of outstanding preferred stock. Sometimes preferred stockholders have power to veto an increase of bonds or preferred stock. The preferred stockholders of the American Sumatra Tobacco Co. obtain the right to elect a majority of the stockholders if unpaid dividends accumulate above 14%. The preferred stockholders of the American Rolling Mill Co. secure the right to vote if three successive preferred dividends are passed. The chief objection to giving preferred stockholders control in this way is that it may involve frequent shifting of control from one set of stockholders to another. In Canada it is customary to give preferred shareholders the right to vote.

Participation equally with common stock in all dividends after common and preferred have received an equal dividend, is the rule unless specific provision is made to the contrary. However, such provision to the contrary usually is found in the charter, according to which the preferred stock receives a fixed dividend and no more. But numerous exceptions are found. The charter of the New York Air Brake Co. provides specifically for equal participation of its preference "A" and common stock after both receive the regular $4 dividend. The preferred stock of Aberthaw & Bristol Channel Portland Cement Co., an English concern, receives 10%, and after 10% is paid on the common, two-thirds of additional dividends declared.

Redemption of preferred stock is frequently the subject-matter of charter provisions. Often preferred stock is made convertible into common, which gives it speculative possibilities. The conversion may be on a share for share basis, or the ratio may not be equal. Market value is made the basis of redemption in case of some English companies.

Special forms of stock are frequent. In close corporations the sale of stock to persons not already stockholders, or its sale without the consent of the directors, is a frequent qualification; but such provisions are illegal. The stockholders may, of course, agree among themselves not to sell to outsiders. Usually such restrictions prove ineffective when tested.

Stock certificates are formal receipts indicating the number of shares owned by the individual to whom issued. The terms under which the stock is issued are usually set forth briefly on the face of the certificate and detailed provisions may appear on the back. Loss of a certificate, while inconvenient, in no way affects ownership thereof. The tendency is to consider stock certificates strictly negotiable and transferable by indorsements, thus making possession of an indorsed certificate proof of ownership. Stock certificates of large corporations are **registered,** i.e., a **register** is kept containing a list of stockholders. Transfers are made from the name of one stockholder to that of another when a certificate properly indorsed is presented. In England a **bearer** form of certificate is issued but this is practically unknown in the United States.

Watered stock results when the capitalization of a corporation is fixed at a figure higher than is warranted by asset values. With the exception of cash, most assets admit of overvaluation; but the ones in which it is most difficult to detect such overvaluation are the intangible assets—patents, good-will, trade-marks, etc. Services are also sometimes capitalized as organization expenses and afford an opportunity for being overvalued. Sometimes the optimism of promoters proves to be justified through later earnings, but frequently not. The U. S. Steel Corp. started with a large amount of water in its stock as is shown by the fact that the common stock sold at first for about one-third of par value. The water arose through the overvaluation of the securities of subsidiary corporations purchased to secure control and of syndicate services rendered in carrying out the organization procedure. Courts do not insist on a more strict adherence to the law requiring that stock be full-paid because of the difficulty of proving declared valuations incorrect. When the question comes before a court, two possible rules of procedure may be followed. The **true value** rule is to the effect that in case of wide discrepancy between market value of property and par value of shares issued therefor, it is assumed that the shares are not full-paid and therefore the holders may be sued for difference between true property value and par of stock issued for it. The **good faith rule** assumes that the directors are acting in good faith unless fraud is conclusively shown. Legal evidence of fraud is usually difficult to prove.

VOTING.—It is customary to give one vote to each share of stock, unless there is an express provision to the effect that preferred stock has no voting power. This gives control to the large stockholders. This also makes it comparatively easy for one man or a small group of men to secure control of a corporation, sometimes through minority ownership. In England, to prevent control by large stockholders, the number of votes which any one stockholder may cast is limited. Sometimes this is accomplished by making the number of votes which a stockholder may cast smaller in proportion to the number of shares as that number increases. Some English companies limit the number of votes per shareholder to a specific number, as 20 or 30.

Cumulative voting[3] is that method of voting at elections of directors by virtue of which a stockholder is entitled to as many votes as equal the number of his shares of stock multiplied by the number of directors to be elected, all of which votes may be cast for a single director or distributed among any two or more of them.

In Pennsylvania the right to vote in this manner is given to stockholders by the Constitution. In Delaware, New Jersey, and New York it is permitted where provision therefor is contained in the certificate of incorporation.

RULES AND FORMULAS FOR CUMULATIVE VOTING.—

First Rule.—To ascertain how many votes a stockholder may cumulate on a particular number of directors, multiply the whole number of directors by the number of shares held and divide by the number to be cumulated on. This may be put in a simple algebraic formula as follows:

First Formula.—Let d represent the whole number of directors; h the number of shares held; n the number of directors upon whom it is desired to cumulate votes; and x the number of votes which may be cast for each of such directors.

$$\text{Then, } x = \frac{dh}{n}$$

[3] Quoted in entirety from "Where And How," a handbook on business corporations, by John S. Parker, (6th Edition).

For example, there are 5 directors to be elected, a person holds 200 shares, and he desires to cumulate his votes on 2 directors.

$$x = \frac{5 \times 200}{2} = 500$$

Second Rule.—To determine the minimum number of shares a person must hold or control to elect a certain number of directors, multiply the whole number of shares by the number of directors it is desired to elect and divide by the whole number of directors plus one and add one share, disregarding the fraction if any. The following formula may be used:

Second Formula.—Let s represent the whole number of shares entitled to vote at the election; d the whole number of directors to be elected; n the number of directors it is desired to elect; and x the number of shares required to elect n.

$$\text{Then, } x = \frac{sn}{d+1} + 1$$

For example, there are 1,000 shares voting; 5 directors to be elected; it is desired to know how many shares are needed to elect 2 directors.

$$x = \frac{1{,}000 \times 2}{5+1} + 1 = \frac{2{,}000}{6} + 1 = 334\tfrac{1}{3}$$

Disregarding the fraction, the number of shares needed is 334.

Third Rule.—To determine how many directors a stockholder or group of stockholders holding a certain number of shares may elect, multiply the whole number of directors plus one by the number of shares held and divide by the whole number of shares, disregarding the fraction, if any. The following formula may be used:

Third Formula.—Let s represent the whole number of shares entitled to vote at the election; d the whole number of directors to be elected; h the number of shares held; and x the maximum number of directors h may elect.

$$\text{Then, } x = \frac{h(d+1)}{s}$$

For example, in the case supposed, of 1,000 shares voting and 5 directors to be elected, it is desired to know how many directors a stockholder or combination of stockholders holding 400 shares may surely elect.

$$x = \frac{400\ (5+1)}{1{,}000} = \frac{2{,}400}{1{,}000} = 2$$

and applying the second rule and formula, it being found that only 334 shares are needed to elect 2 directors, the 66 additional shares may be cumulated on one or more other candidates.

There are many opportunities for surprise where cumulative voting is allowed, and, unless careful, the holders of a majority of the stock may lose control of the company. Thus, in the case supposed of 1,000 shares voting and 5 directors to be elected, if the holders of only 376 shares should cumulate their votes on 3 candidates and the holders of the remaining 624 shares should cast a straight vote for 5 directors, the holdings of the 376 shares would be successful, as they could cast 626 votes for each man on their ticket as against the 624 votes received by each of the majority candidates.

VOTING BY PROXY.—Notice of stockholders' annual meetings are mailed to stockholders. Proxies are sent with the notices by means of which the stockholder may authorize some officer of the corporation, usually the

secretary, to cast his vote if the stockholder cannot attend in person. It is customary to request that the stockholder forward his proxy, and for that purpose a stamped envelope is usually sent him. The stockholder signs the proxy and returns it. In practice many proxies fail of return because of the stockholders' lack of interest. Frequently at stockholders' meetings there are present the secretary and one or two other officers who carry out the usual formalities, elect a chairman and a secretary, make the usual reports, cast the votes, and carry out a program already agreed upon.

BORROWED CAPITAL.—Borrowed capital is a popular method of financing, owing to the improved machinery of credit facilities. Usually funds secured by means of loans are cheaper than funds secured through stock issues, because the security is better. First-class bonds yield 4%, 5%, or 6%. Preferred stocks yield 6%, 7%, or 8%. Common stocks yield still higher. When money borrowed at 5% can be made to earn a considerably larger return, borrowing becomes profitable. Owned capital then receives a higher return than when borrowing is not resorted to. In extreme instances a very large proportion of total capital is borrowed. Increasing accumulations of funds in hands of individuals, trustees, life insurance companies, and savings banks make it relatively easy to market good bonds. The chief disadvantage of borrowed capital is the increased risk to owners of capital stock, especially in case of corporations whose earnings fluctuate widely from year to year. It is for this reason that industrial corporations prefer to raise their capital through stock issues rather than bond issues. The general rule to follow is that capital should be borrowed only in case of certainty of continued ability to pay the interest thereon. In putting this rule into practice the lowest earnings that are possible during periods of industrial depression must be considered.

SHORT-TERM SECURITIES.—Borrowed capital is divided into two general classes, **short-term and long-term.** Although the distinction between the two is not always clear, obligations having not more than 5 years to run are usually regarded as short-term; securities having 20 or more years to run are regarded as long-term; while those running from 5 to 20 years are classed in either group.

Short-term securities comprise notes, acceptances, and accounts payable. Notes are further classified as merchandise notes, notes discounted at banks, and notes sold to the public. Accounts payable acceptances, and merchandise notes, comprise the principal forms of trade credit. Trade credit is one method of borrowing capital. It is frequently found in form of credit by manufacturers to wholesalers, and in turn by wholesalers to retailers. Note-giving is till common in certain lines of business, but in most lines goods are sold only on **open account,** use of notes being resorted to only when sales are made to weak concerns.

Bank credit enables merchants to bridge over short periods of stringency in cash and to take advantage of cash discounts in making their purchases. The custom of thus depending on banks for short-term loans is well established. In some lines of business, notably manufacturing, it is customary to sell notes through brokers, who in turn sell them to bankers. In this way the notes of reliable concerns become widely scattered among the banks of the country that have idle funds to invest. One method of avoiding an overissue of such notes by a concern is to have them registered by a trust company. A concern should avoid use of both banks and note-brokers simultaneously, so that in an emergency one or the other may be turned to

for aid. Bank credit may be abused by making wrong use of funds secured or by securing funds by means of misrepresentation of conditions. The three legitimate reasons for bank loans are:

1. To finance temporary shortages.
2. To purchase additional goods.
3. To extend additional credit to customers.

Misuse of bank credit may take the form of financing of permanent investments, or in securing funds by means of discounted notes which do not represent actual business transactions, i.e., are not based on merchandise purchases and sales. **Accommodation indorsements,** given as business favors, are being given up as a means of lending credit. Since such indorsements are given without consideration, it is probably illegal for corporations to give them.

If a concern borrows at a bank on an unsecured note, it does so on the basis of its general credit standing. It is often customary to back up notes thus discounted by **collateral security.** Such collateral security may consist of stocks and bonds, merchandise, or notes and accounts receivable. On account of their ready marketability, stocks and bonds are favored by bankers. Of course, not all stocks and bonds have a ready market. It is not good practice to use stock of subsidiary companies as collateral, because it usually has no active market and because the corporation which hypothecates it may thus lose control of the subsidiary which issued it. They may, however, quite properly be used as collateral for long-term bond issues. Merchandise may be used as collateral by hypothecating warehouse receipts, bills of lading, or other forms of specific liens thereon. In this manner great quantities of grain, livestock, and various kinds of goods in transit are used as collateral. When the salability of the merchandise is questionable, bankers will ordinarily make advances up to, say, not over 60%, or 70% of the face value of the draft. This is also true in case of perishable goods. **Accounts receivable** are not usually regarded as sound collateral by bankers. Borrowing on general credit of a company is usually preferable to assigning its accounts receivable. Certain concerns make a specialty of advancing money against assigned accounts receivable. Usually they make advances up to from 70% to 85% of face value of accounts assigned, and charge 6% interest plus a commission of 1% or 2%. The **chief principles underlying bank loans** are four in number, as follows:

1. Bankers should confine themselves to short-term loans.
2. Bankers should ascertain that the funds loaned will not be so expended that they cannot be readily converted into cash.
3. Bankers should secure full knowledge of the internal affairs of a concern before making a loan.
4. The collateral taken should consist of readily salable merchandise or of securities easily convertible into cash.

The custom of requiring detailed financial statements from customers is spreading, and customers of banks are coming to view this requirement as a just one, for in this way they improve their credit standing. Many bankers insist on statements certified by public accountants because such statements reflect the results of wide experience.

If notes are to be rediscounted under the requirements of the federal reserve system, they must conform with certain requirements, the chief one being that they must arise out of actual commercial transactions. Time

to run is also carefully regulated. Paper based on certified statements is given preference.

Banks pursue certain lines of policy in regard to commercial paper. It is customary to clean up all loans yearly or oftener, to prevent them from going into permanent investments. This rule is given special emphasis in case of loans made to concerns engaged in seasonal business.

Whereas notes sold to bankers usually mature within 3 to 6 months, notes sold to the public customarily run for from 1 to 5 years. They are frequently issued in series to facilitate redemption, an equal amount maturing each year; are usually issued in $1,000 and $500 denominations, although sometimes lower or higher than this; and are employed to secure funds in anticipation of issues of long-term securities or to finance undertakings which will produce enough revenue to redeem them at maturity. They are employed during temporary periods of financial stress when interest rates are high, being refunded later on by long-term issues at lower rates of interest.

LONG-TERM SECURITIES.—Long-term obligations usually take the form of a **bond and mortgage.** This theoretically consists of a transfer of title to real estate to a new owner under condition that former owner may redeem it by repaying the loan at maturity. The **bond** is his formal written promise to pay. In reality a mortgage is a pledge of the property as security for repayment of the loan, no actual transfer of ownership taking place. The bond and mortgage is used when the amount of loan is relatively small and the whole is to be secured from one party. When it is necessary to appeal to many persons in order to secure a large sum, bond and mortgage are separated, the mortgage then becoming a **deed of trust.** This is placed in the hands of a trustee, usually a trust company, which thus holds title to the mortgaged property and presumably acts in behalf of the bondholders. Sometimes, owing to the fact that the corporation selects the trustees, such action is not very vigorous. The **deed of trust** is usually a long and complicated document. The **preamble** sets forth the legal status of the company, the amount of the bond issue, the authority therefor, the text of the bond, and other data. The **granting clause** transfers the property to the trustee, describes his duties, and sets forth the company's obligation as to principal and interest. Other clauses govern the duty of the corporation to keep the property in good condition, insured and free of tax liens. It provides that in case of defaults the trustee shall foreclose the mortgage, and gives details governing the duties and compensation of the trustee.

Various special provisions are found in individual instances. Some trust deeds contain an **after-acquired-property clause** by which the mortgage is made to cover property acquired at a later date. This serves as additional protection to bondholders but may be disadvantageous to the company in that it may make it difficult to secure additional loans. Frequently this difficulty is obviated by turning the title of the newly acquired property over to a subsidiary company which is then able to give a first mortgage thereon. A **closed** mortgage is one under which, after the bonds under consideration are issued, no further bonds can be issued. An **open-end** mortgage does not place a limit on the amount of bonds issuable thereunder. **Limited open-end** mortgages are a compromise between the two, the amount authorized exceeding the amount it is desirable to issue at first.

CORPORATION BONDS.—Most corporation bonds are in denominations of $1,000 and $500, but $100 bonds are more frequent than formerly. The disadvantage of small denominations is the increased cost of marketing

them. The totals of single issues sometimes run into the hundreds of millions, there being many issues in this country of $100,000,000 or over.

Bonds are frequently made payable both as to principal and interest in **gold coin.** This prevents their depreciation in value as the result of fluctuations in the value of irredeemable currencies. Corporations may suffer losses as a result of such provision and it may occasion their bankruptcy.

The life of bond issues is determined on various considerations. Nature of the business is a factor. Some issues are perpetual and many run for 100 years or longer, especially railroad bonds. Condition of the money market is frequently a determining factor.

Interest on bonds is usually paid semiannually. Interest dates vary, but January and July are most popular. More or less complicated problems arise in connection with the handling of discount and premium on bonds and these are closely related to the rate of interest. (For full treatment of these problems, see section on "Mathematics.") When bonds are sold at a discount, the discount becomes a burden supplementary to the nominal or coupon rate and should be distributed over the life of the bonds. When bonds are sold at a premium, the premium becomes a deduction from the nominal rate to be distributed over the life of the bonds.

Bonds are **registered** and **bearer** in form. Bearer bonds are transferable by delivery, whereas registered bonds are transferable by assignment. It is customary to permit bondholders to change from one form to another. Registration affords safety, whereas the bearer form affords convenience. Frequently bonds are registered as to principal and have interest coupons attached.

Security for bonds may be of one or more of the following four types:

1. Real estate.
2. Stocks and bonds.
3. Movable property.
4. General credit of the issuing company.

Bonds secured by real estate are known as **mortgage bonds.** Ordinarily these are the most satisfactory type of security from the investor's point of view, because land very often tends to increase in value and buildings are tangible and fairly permanent. For small corporations it is about the only practicable type of bond. The other types necessitate a widely distributed knowledge of the credit standing of the issuing concern. Mortgage bonds are first, second, third, etc. Most of them are first mortgage, but some companies have been compelled to create junior lien issues. Naturally the quality of first mortgage bonds of any given company is better than that of its junior lien mortgage bonds; consequently the interest rate on the junior liens is usually higher.

In case of the best mortgage bonds the amounts of the issues do not exceed 50% or 60% of the value of the property as conservatively appraised, and when a second mortgage is issued the prior and junior liens combined should not exceed 80% of the property value.

Equipment trust bonds differ from first mortgage bonds in that title to the equipment remains with the manufacturer, the equipment being leased to the user, usually a railroad company. The lessee secures title ultimately by completing a series of payments to the lessor. Sometimes a financing company intervenes between lessor and lessee. This company secures title to the equipment by paying the manufacturer and issues a series of equipment trust obligations secured by the equipment. This is an excellent security and defaults on such bonds are practically unknown.

Collateral trust bonds are those secured by deposits of other securities with the trustee who holds the deed of trust. Usually securities of subsidiary companies are used for this purpose. This type of bond is often used to finance the purchase by one concern of the securities of another. Loans are secured temporarily from bankers, these being repaid from the proceeds of the sale of the collateral trust bonds. Railroad and public utility companies make frequent use of this type of security.

Debenture bonds are those issued on the general credit of the company, without any specific pledged security. To successfully float an issue of this type, the issuing company should enjoy high credit standing. Debenture bonds are sometimes used as a means of obtaining funds by corporations having a small amount of money invested in tangible assets but a large amount of good-will.

Various provisions are inserted in debenture bonds to give them a better credit standing than would otherwise be the case. One of these is to provide that in case of any default in interest payment, the principal shall at once fall due. Sometimes the owners are given a preferred charge upon property and income over owners of subsequent issues of debentures or certain other obligations.

Income bonds are secured as to principal, usually by mortgage, but the only claim for interest rests upon the existence of sufficient excess earnings over prior claims from which to make payment of the interest. This unsatisfactory form of bond usually results from the scaling down of creditors' claims in reorganization proceedings, the junior bondholders being compelled to accept income bonds in place of their former holdings. Sometimes the common stockholders, by manipulating the accounts, manage to defer payment of interest on income bonds longer than necessary.

Convertible bonds are those which possess the privilege of conversion into some form of security on some predetermined basis. Usually the security into which bonds may be converted is common stock. The conversion privilege adds a speculative element to the bond which possesses it. If the privilege is valuable, the bonds sell on a basis higher than is justified by their purely investment merits. The value of the conversion depends upon the likelihood that its exercise will become profitable. Issuance of convertible bonds is usually a concession made by the issuing company because of unfavorable money market conditions. The New York Central Railroad Co. in 1915 issued $100,000,000 of 20-year 6% convertible debentures, convertible into capital stock of the company at any time prior to May 1, 1925, at 105. This means that $105 par value of the bonds is convertible into one share of $100 par value of stock. After the conversion privilege expires, the bonds sell on a purely investment basis.

REPAYMENT OF BONDED INDEBTEDNESS.—Provision should be made in advance of the issuance of bonds for their repayment when due. Investors demand this measure of safety. Theoretically a sinking fund which accumulates by the process of periodic instalments and the accretions of compound interest until at maturity of the bond issue it is just sufficient to pay off the bonds, is the ideal method. (For principles governing growth of sinking fund, see section on "Mathematics.") The various plans used in practice are usually more or less radical variations from such an ideal program, and the term **sinking fund** is applied to practically any plan which provides a definite arrangement for the repayment of long-term indebtedness. The actual provision for repayment of a debt is known as its **amortization.** Some of the variations in plans are as follows. The debtor may set aside

fixed sums in the hands of a trustee, annually or semiannually, which the trustee invests, being governed by such general rules as may have been agreed upon. Instead of placing these funds in the hands of a trustee, the debtor may administer them itself. Also instead of investing the funds to accumulate until the issue matures, they may be used to repurchase outstanding bonds. Frequently bonds are issued in series, a given amount falling due each year. In business it is no longer customary to establish sinking funds to accumulate to the amount of the bond issue at maturity. Either more or less continuous repurchase of outstanding bonds or the issue of serial bonds is now the custom. Usually when bonds are repurchased they are kept alive and interest payments are continued. This forms a kind of sinking fund. Sometimes, however, the bonds are canceled, in which case the effect is approximately that secured by serial maturities.

Under the formal sinking fund plan the trustee sometimes invests the funds with a view to his own advantage and he sometimes makes poor investments. If high-class securities only are purchased, the rate of return is low. In practice sinking funds rarely meet expectations. The process of investing and reinvesting funds occasions much idle money. For these reasons redemption of portions of the outstanding issue has become the most popular plan of amortization, which leads to a choice of two methods, viz., (1) serial maturities, and (2) the regular setting aside of the fixed amounts for the redemption of bonds. Serial maturities are preferable for short-term issues; redemption is preferable for long-term issues. W. H. Lough[4] suggests that the best device for amortizing long-term issues is to establish a sinking fund and invest it solely in bonds of the issue outstanding. He lists the following advantages of this plan:

> 1. Danger of losing money is avoided when a corporation invests in its own bonds.
>
> 2. The interest earned is at the same rate as is yielded by the market price of the bonds being amortized.
>
> 3. Repurchase of the bonds tends to maintain their market price, and thus to sustain the corporation's credit.
>
> 4. The burden on the corporation is equally distributed over the life of the bond issue. By keeping the bonds alive the corporation pays out the same amount of interest each year. If interest payments on the bonds thus held are added to the sinking fund, an increasing amount is redeemed each year, but the actual burden remains constant from year to year.

When a **call price** is specified in the bond, the corporation has the right to redeem at that price, having first met requirements as to notice. Bonds are frequently made callable at interest dates on, say, 60 days' notice, and at premiums ranging from a fraction of 1% to 10% or 15%. Such bonds are preferably made **callable by lot** to avoid discrimination against holders. Payment of redemption premiums may be avoided by adopting **serial bonds.**

TRADING ON THE EQUITY.—This phrase, borrowed from English financial terminology, refers to the practice of increasing the profits by borrowing funds at rates of interest lower than the rate of profit which can be earned by the use of the funds in the business of the borrower. If a manufacturer can make 15% in his business, he increases his profits when he borrows at 6%. There are limits, however, beyond which it is dangerous to

[4] Business Finance, pp. 165–166.

carry this policy. If in a year of depression he can earn only 4% on his invested capital, he earns less for himself than if he had not borrowed, because ee is compelled to pay a higher rate than this on the part borrowed.

Illustration.[5]—A manufacturer in good years makes 15% on his capital of $20,000. His affairs at end of first fiscal year are as follows:

Personal capital invested................	$20,000
Percentage earned on capital............	15%
Return on capital.......................	$ 3,000

After borrowing, his annual statement is:

Personal capital invested................	$20,000
Borrowed capital invested...............	20,000
Total capital.......................	$40,000
Percentage earned on capital............	15%
Total return on capital..................	$6,000
8% on borrowed capital..................	1,600
Return on personal capital..............	$4,400

By borrowing at 8%, the manufacturer's return on his own investment is increased from 15% to 22%.

If in a bad year, with borrowed capital as above, he can earn only 5% on his own investment, his statement is as follows:

Personal capital invested................	$20,000
Borrowed capital invested...............	20,000
Total..............................	$40,000
Percentage earned on capital............	5%
Total return on capital..................	$2,000
8% on borrowed capital..................	1,600
Return on personal capital..............	$400

This is only 2% on the manufacturer's own investment, whereas he would have earned 5%, or $1,000, had he not borrowed. The lender is thus protected in the bad year by the proprietor's equity. In corporations the common stockholder is the trader on the equity, making large profits in good years and sacrificing income in bad years.

A corporation disburses its gross income as operating expenses, interest, and dividends. In the income statement, net income is the first significant figure. Its amount and fluctuations depend on amount and range of fluctuations in gross income in relation to amount and range of fluctuation of the percentage of gross income used in operating expenses. This is the **business risk,** being dependent on managerial ability, etc. The next significant figure is surplus, being the one from which dividends are paid. It depends on changes in net earnings in relation to interest costs. This is the **financial risk.**

PRINCIPLES OF CAPITALIZATION.—The word **capitalization** as used in law refers to the total par value of a corporation's authorized capital stock. In the popular sense it refers to par value of secuurity isses, both

[5] Taken from Lyon's Corporation Finance, Part I, pp. 51–52.

stocks and bonds, outstanding at a given time. The word **capital** refers to the actual value of the investment, or net worth. Theoretically when a corporation begins business its capital stock plus any paid-in surplus is supposed to be a fair index of values, but this is not always true. After operations begin the net worth changes constantly, the result being reflected in periodical adjustments of surplus. Net worth, as represented in book figures, is at best an awkward measure of value. Values change constantly, whereas book figures representative of values are adjusted only at intervals and then perhaps on an arbitrary basis. Also, the criteria of value are difficult to limit and define. **Three bases of value** of interest to accountants are cost, cost to reproduce, and earning power. Cost plays such a large part in accounting that it is sometimes mistaken for value, with which it is rarely equivalent in any given instance. Cost to reproduce is frequently more nearly the equivalent of value, yet there are sometimes elements of intangible value adhering to used property which would be neglected by using this as an exclusive criterion of value. This takes the form of good-will, system, harmonious operation, etc. Earning power as a valuation basis considers both tangible and intangible factors. Merely to consider current earnings is insufficient. Potential future earnings are a factor.

For most accounting purposes the **accepted basis of value** is investment. Inaccuracies resulting from the use of this basis are usually disregarded until conversion of the property through sale or otherwise makes necessary an adjustment of book values. Sometimes appraisals show such material discrepancies between book values and present values that the differences are adjusted through capital surplus, but all such changes should be made in a conservative way.

When, as is the policy of most small corporations, stocks and bonds are issued on a basis which causes par value to correspond as closely as possible to actual value, capital stock and net worth are practically equivalent. The agreement which thus exists between capital stock and investment disappears after profits or losses from operations occur. In case of most large corporations such agreement between capital stock and investment at the beginning rarely exists, most corporations starting with a burden of watered stock. In some cases the discrepancy is great.

Initial capitalization legitimately covers not only cost of tangible assets, but also certain intangible elements in form of promotion, engineering, and developmental expenses. Frequently these are capitalized in a single account, such as Organization Expenses or Deferred Expenses. Ultimately, depending on the nature of the items and the policy of the management, these are either written off or are permanently capitalized. **Interest during construction** is usually permanently capitalized.

Where capitalization is based on earning power it usually bears little relationship to tangible values, and frequently is not even based on a carefully considered plan. In case of railroads and public utility companies, stocks yielding 6% or 7% sell around par, but industrial stocks, to sell near par, must ordinarily yield a somewhat higher return. Many corporations whose earnings have been large have adjusted their assets to agree, later to find themselves unable to pay dividends on their increased capital stock. The objection to attempting to capitalize on the basis of earnings is the difficulty involved in estimating future earnings. This is especially true of industrial corporations. The following table shows the percentage of earnings of a number of industrial consolidations as related to earnings of the subsidiary companies before consolidation took place.

Mount Vernon-Woodberry Cotton Duck Co.	166%
National Salt Co.	134
New England Cotton Yarn Co.	98
International Cotton Mills Corp.	56
United States Ship Building Co.	56
United States Realty & Construction Co.	50
Asphalt Co. of America	40
American Malting Co.	31
American Bicycle Co.	24

Good-Will is frequently an important factor in capitalization. (For full treatment of the subject see section on "Good-Will.") Valuation of good-will must not be made on an arbitrary basis. Before capitalizing good-will its permanency should be considered. This is a factor which varies greatly in different businesses.

For discussion of surplus in its relation to capitalization see section or "Net Income and Surplus."

THE FINANCIAL PLAN.—Every corporation should pursue a systematic plan of financing its activities. This involves the exercise of discrimination in the selection of types of securities and the use of judgment in fixing their relative proportions. The familiar forms of securities should be adhered to as they are more easily marketed and their legal status is fixed. The general financial condition at time securities are marketed is an important factor to be considered in selecting the type of security. Issues which under normal conditions are readily marketed, may slump when conditions are unfavorable. Attention should be given to the desires of prospective investors. At the same time the requirements of the company must be kept in mind; and this may make necessary the rejection of a form of security which is otherwise desirable This involves the consideration of the outstanding securities in relation to **assets** and to **earnings.** Failure to observe the principle results in the incurrence of indebtedness which the company is not able to liquidate, or else capital is secured at an excessive cost.

RELATIVE PROPORTIONS OF SECURITY ISSUES.—In certain types of enterprise it is necessary to secure a considerable part of capital by means of bond issues if the common stockholders are to receive a sufficiently high dividend to make their investment attractive. This applies especially to the public utilities in which earnings are low but relatively stable. Under such circumstances it may be an injustice to common stockholders to expect them to supply all funds required for capital financing.

As to the issuance of **funded obligations,** the rule should be followed that income of the company at its minimum must be sufficient to cover fixed charges including interest and sinking fund payments, and also leave a reasonably large margin in addition.

Prudence requires that corporate income under all conditions be adequate to meet **contingent liabilities,** such as may arise through guaranty of bonds of other companies. Good faith requires that in connection with the issue of common stock there be reasonable certainty that there will be an increasing return on such stocks. In brief, estimates of future earnings should not be mere optimistic guesses but should be based on careful analysis.

In addition to proper relative proportions of assets *inter se*, their **relationship to the liabilities** should receive consideration. Assets usually fall into three natural divisions: fixed, current, and intangible. The relationship between these is as follows:

Actual value, not mere book value, of fixed assets should exceed at least 25% to 50% outstanding bonded obligations.

Actual value of fixed assets, plus value of net current assets (after deducting current liabilities) should equal, and generally exceed, all outstanding contingent obligations—preferred stock, income bonds, etc.

Actual value of tangible assets plus value of intangible assets should equal or exceed all outstanding obligations, such as bonds, and preferred and common stock.

Common stock, when found in connection with preferred stock, ordinarily represents the capitalization of intangible values, whereas **bonds** and **preferred stock** ordinarily represent the full value of tangible assets. Frequently intangible values back of common stock are shown in a Good-Will or other account. Usually no direct correlation between classes of assets and classes of securities can be discovered, although a measure of relationship may in reality exist.

ILLUSTRATION OF A FINANCIAL PLAN.—The financing of a short railroad involves the investment in construction work, including terminals, of about $4,183,000. It is estimated that two years after date of opening the road to operations gross earnings will be $2,018,000. Operating expenses are estimated at about 65%, or $1,300,000, and taxes and insurance at $80,000, a total expense of $1,380,000. This leaves an estimated net revenue of $638,000 to pay fixed charges and provide surplus. It is estimated that there will be a deficit of about $100,000 during first 2 years of operation. Equipment is estimated to cost $1,650,000 and the working capital to amount to $500,000. Total capital required is:

Cost of construction	$4,183,000
Cost of equipment	1,650,000
Loss first 2 years of operation	100,000
Working capital	500,000
	$6,433,000

Some capital required for earlier stages of construction is tied up without any income to pay interest on it, until operations begin. One plan of taking care of this expense is to form a construction company to build the road and furnish all other required property and cash. This company should be prepared to hand over to the railroad company $600,000 in cash, the sum required to provide working capital and to cover loss on first 2 years' operation. Construction company should also pay interest, taxes, insurance, etc., up to time property is handed over to railroad company. In exchange for the railroad and cash the railroad company will then turn over all its securities to construction company, from sale of which construction company will derive its profit. The promoters of the railroad will be the organizers of the construction company.

On basis of normal earnings of $638,000 the company might be capitalized as in the following table.

This leaves a balance of $58,000 a year for contingencies out of income for first 10 years.

Common stock required for bonuses to purchasers of first mortgage bonds and preferred stock is $1,100,000. For their own remuneration and to retain control of the company the promoters issue $4,000,000 common stock to the construction company, which, under above estimates, leaves $2,900,000 common stock for themselves.

	Nominal Value	Cash Receipts to Corporation	Fixed and Contingent Charges
5 % first mortgage bonds on all property, exclusive of equipment, to be disposed of at 90 with a bonus of 2 shares of common stock to each $1,000 bond......	$4,000,000	$3,600,000	$220,000
6% 10-yr. serial equipment notes..	1,500,000	1,500,000	90,000
Annual payment during 1st 10 years of operation to retire above notes			150,000
8% cumulative stock to be disposed of at 90, with a bonus of 1 share of common to each 5 shares of preferred.....................	1,500,000	1,350,000	120,000
	$7,000,000	$6,450,000	$580,000

During first 10 years common stock could not expect to receive dividends $150,000 of serial notes is to be retired each year. Interest on that amount each year should be added to the balance available for contingencies. At the end of 10 years there will be no interest to pay on the notes and annual payments on the principal will cease. Therefore $298,000, less any reserve or payments for contingencies, may then be paid as dividends on common stock.

Note that first mortgage bonds are approximately equal in amount to actual cost of mortgaged property, not a very conservative arrangement, but rather common in railroad finance. Preferred stock is equal to more than remaining value of tangible assets, being partly offset by good-will. Common stock is offset only by good-will and prospective earning power. The amounts of the different classes of securities have been determined rather on the basis of earnings than of asset values.

FINANCIAL PLAN FOR CORPORATE COMBINATIONS.—Combinations may be divided into two classes. **Vertical combinations** are those in which joint control is established over two or more concerns having buying and selling relations. **Horizontal combinations** are those in which joint control is established over two or more concerns having competitive relations. Vertical combinations are frequent between producers of raw materials and those who consume these materials in manufacture. The U. S. Steel Corp. is an illustration, carrying on the whole process of mining, manufacture, and selling. **Promotion** is not a distinct process where one concern purchases a controlling interest in others, but it is where a new concern is established to take over previously existing concerns. Although combinations are most important in the field of manufacturing, there are numerous instances of it in trading concerns and in the theatrical and moving picture field. Combinations among banks are also frequent. Also among public utilities—gas and electric light and power companies, water works, etc. Cities Service Co. owns or controls over 100 subsidiary companies. Following are notes of the meeting at which the early plans for the United States Starch combination were arranged.

MEMORANDUM OF MEETING held in the office of Charles R. Flint, June 30, at 10 A.M.

Present: Messrs. Flint, Auerbach, T. P. Kingsford, Higgins. Duryea, Morton and Allen.

It is agreed to organize the United States Starch Company with a capital of $2,500,000 preferred 6% cumulative stock and $3,500,000 common stock. And that the former shall be held in trust by the United States Mortgage and Trust Company, and issued later through bankers to be provided by Mr. Flint. The common stock shall also be held in trust for the owners for such a time as they may elect.

It is agreed and understood that the vendors shall receive $950,000 in cash, $1,550,000 preferred stock, and $3,000,000 in common stock, for their plants and inventories, to be provided for as follows:

First, a loan shall be made by the United States Mortgage and Trust Company for $950,000 for nine months, same to be paid from the proceeds of the sale of an equal amount of preferred stock to be issued at such time as in the judgment of the Directors may be proper. The proceeds of this loan to be used as follows:

To pay Kingsford	$400,000
" " Morton	175,000
" " Graves	350,000
" " Duryea	25,000
Total	$950,000

Second, in addition to the cash paid as above, preferred stock shall be assigned to the vendors as follows:

Kingsford	$1,100,000	on plant and inventory
Morton	125,000	" plant
Duryea	100,000	" inventory
"	75,000	" plant
Graves	100,000	" inventory
"	50,000	" plant
Total	$1,550,000	

which shall be held in trust by the United States Mortgage and Trust Company for account of the owners until the time of issue.

$3,000,000 of common stock is to be issued to the vendors in part payment of real and personal property turned over to the new company, as follows:

Kingsford	$2,422,500
Morton	255,000
Duryea	322,500
Total	$3,000,000

Included in the property turned over by the vendors, it is estimated that there will be about $750,000 of quick assets, consisting of grain, package materials, and starch manufactured and in process.

$500,000 in common stock shall be paid to cover the entire costs of promoting the company, including the charter, the organization, the commission paid in stock for securing the loan, the fee of the bankers who issue the preferred.

Common stock to vendors	$3,000,000
Common stock to promoters	500,000
Total	$3,500,000

ILLUSTRATION OF PLAN FOR A SMALL COMBINATION.—The Western Manufacturing Co. was organized to manufacture patented specialties. Its capital stock was $150,000. First mortgage bonds were issued for $25,000. $100,000 capital stock was given for patents, and $50,000 was given to a promoter for selling the bonds at par. The $25,000 received for the bonds represented total cash actually invested.

It was found that the business could not thrive with the few specialties it controlled, and other specialties were added. As a result, practically all

profits earned from year to year were spent securing and developing new patents. After 5 or 6 years the output became satisfactory. Then a depression wiped out the company's business and cut profits to zero. A recovery has occurred and profits are now about $20,000 yearly. The business has changed considerably in character and is established on a reasonably sound basis. The company, however, is handicapped by its location which is not favorable for its business.

A few miles away is located the Western Machinery Co., a related but not competitive business, owned by James Smith. His plant is worth $60,000 and net earnings are $6,500. In the neighborhood there is also the plant of a concern which went bankrupt some years ago. It has been closed over three years. In their run-down condition the building and other assets are worth over $100,000 but can be bought for much less.

The proposed plan is to combine these three plants under the name and charter of the first-named company. Smith will remain for a short time with the new organization and then retire. It is proposed to capitalize the Western Machinery Co. as follows:

	Authorized Issue	Issued at Time of Combination
6% first mortgage bonds	$500,000	$150,000
6% cumulative preferred stock	250,000	180,000
Common stock	250,000	250,000

It is proposed to distribute the securities of the reorganized company as follows:

	Bonds	Preferred Stock	Common Stock
Western Machinery Co.	$ 30,000	$100,000	$250,000
James Smith		20,000	
Owners of abandoned plant	20,000	40,000	
To be sold to public	100,000	20,000	
	$150,000	$180,000	$250,000

It is anticipated that the bonds, with a 20% bonus of preferred stock, can be sold to an underwriting syndicate at par. The syndicate can probably dispose of the bonds alone at par, its selling expenses and profits being covered by the preferred stock bonus. The company will realize $100,000 cash.

The financial plan also provides that Smith shall receive in addition to $20,000 preferred, $30,000 cash, leaving $70,000 cash to rehabilitate the abandoned plant and for working capital.

It also provides that when earnings on preferred amount to 12%, the 70% of preferred remaining unissued at time of organization shall be distributed as a bonus in agreed proportion among owners of the three plants entering the combine.

Net profits are estimated to average at least $60,000, or about three times interest and preferred dividend requirements at the outset.

An independent analysis and criticism of the foregoing plan shows that earnings of proposed combination appear to be loosely estimated, and that a much more thorough investigation of probable markets for products, of selling expenses, and of actual expenditures required to build up an efficient

working organization in the abandoned plant, would be demanded by careful investors. Unless it can be shown as a reasonable certainty that earnings will average $60,000 or more, there will be no advantage to the Western Machinery Co. in carrying through the combination. Its plant is the only one earning large profits. Although the Western Machinery Co. could advantageously use enlarged facilities, it may be asked whether a small bond or preferred stock issue based upon its own assets would not provide needed additional facilities with less risk. Under the plan proposed this company assumes most of the risk, contributes its own profits to the payment of interest and dividends, and must rely on its ability to develop new business for the other two plants. The most successful of the three companies would have to give up the certainty of continued satisfactory profits for the uncertainty of developing a new enterprise. The wisdom of combining a successful going concern with an unsuccessful one may always be questioned. It may be better for the successful concern to raise cash on its own credit and purchase outright the assets of the unsuccessful one. The above plan was abandoned for these reasons.

Application of Funds

FIXED AND WORKING CAPITAL.—Money expended on permanent investments such as plant, machinery, and other equipment to be used as instruments in forwarding production or service, constitutes **fixed capital.** Money invested in raw materials, goods in process, finished goods, salable securities, and accounts receivable, as well as cash, constitutes **working capital.** Working capital represents a flow of goods, certain parts thereof being constantly converted into cash, and cash being as constantly converted into other forms of working capital. Working capital is sometimes termed **revolving capital.** To determine **net working capital** it is necessary to deduct from total working capital or working assets the **current liabilities.** Instead of the term current liabilities, sometimes the term **quick liabilities** is used. These are usually composed of bank loans and accounts payable.

Fixed assets and a great part of permanent current assets should be covered by stockholders' investments and long-term bonds. Current liabilities should be carried chiefly to finance seasonal requirements of current funds.

It is more difficult to determine working capital requirements than fixed capital requirements. The working capital supplied must be sufficient to provide the requirements of all normal processes—purchase of materials and supplies, production of finished goods, selling costs, and the cost of delay in securing payment for the product. Certain unavoidable losses and various miscellaneous expenses are liable to be underestimated or entirely overlooked. Since quantity of working capital usually bears a more or less definite proportion to quantity of fixed assets, construction of plant additions involves also the need of increased working capital. Failure to provide sufficient working capital has been a prolific source of financial embarrassment and insolvency. Frequently concerns enjoying a period of prosperity create trouble for themselves by failure to reserve sufficient liquid assets to meet liabilities which have increased as a natural result of such prosperity.

ESTIMATING FIXED CAPITAL REQUIREMENTS.—Under favorable conditions this is much less difficult than is ordinarily the case with working assets. In constructing new plant the cost of many kinds of fixed assets can be based on carefully laid plans. Nevertheless change of plans after construction is begun, and frequently after operations are under way, requires

additional amounts of capital for purchase of fixed assets. Ambitious managers often start various new activities of a costly character. These may be summarized under the following heads:

1. Extensions of original plant.
2. Increased or changed equipment.
3. Operation of side issues.
4. Investment in other concerns.

In considering **relative proportions of fixed and working capital,** the mistake may be made of providing all fixed capital requirements and using whatever is left, without much regard to its amount, as working capital. Adequate working capital is just as essential as adequate fixed capital, and the latter is useless unless business, to the upbuilding of which working capital is essential, can be secured. The problem depends largely on the type of undertaking. In case of a projected hydroelectric company which is to construct a power plant for delivery of current for which contracts have already been secured, payments to be made therefor on a monthly basis, fixed capital can be estimated closely and not much working capital will be required. Quite the opposite situation presents itself in case of a company incorporated to **produce and sell** a patented device. Two important functions are involved—production and selling. Instead of experimenting with costly manufacturing processes, it is preferable to have had the manufacturing done at first by a manufacturer already equipped for the work, and to devote available capital to building up a selling organization and developing the sales field. These problems solved, the construction of a plant should be considered. In this way the tying up of capital is avoided until it can be done with assurance of ability to use the products when the factory is finished.

ESTIMATING WORKING CAPITAL.—The factors to be considered in estimating working capital requirements for a manufacturing business are:

1. Amount and cost of raw material.
2. Labor cost.
3. Overhead.
4. Length of time occupied by manufacturing process.
5. Rate of turnover.
6. Terms of purchase and sale.
7. Ease with which various kinds of working assets may be converted into cash.
8. Seasonal variations.

Working capital, being the excess of current assets over current liabilities, must vary in relation to other balance sheet items in accordance with the nature of the business. Proportion of current assets to current liabilities in manufacturing industry should not, as a rule, be less than 100 to 75, or 100 to 80.

The **working capital ratio** is the relation of current assets to current liabilities. It is sometimes called the **banker's ratio,** because it is used in judging a business for credit purposes. It is best expressed in dollars of current assets per one dollar of current liabilities.

Expansion of current assets and current liabilities on the same **net working capital** produces a lower ratio, and vice versa.

Manufacturing costs are cumulative, beginning with the purchase of raw material and following through a series of processes. In some cases a great

amount of capital is thus tied up not to be realized for several years, as, for example, shipbuilding and the construction of large buildings. Usually construction contracts provide payment for work completed at certain stages after being inspected and approved. This proviso diminishes somewhat the investment required on the part of the contractor, but does not avoid the necessity of investing large sums.

Time is an important factor in determining working capital requirements, especially where a **seasoning period** is necessary, as in suburban real estate developments and in the hide and lumber businesses. Ordinarily payments cannot be secured in advance of delivery of finished product. These conditions necessitate the more or less constant impounding of large sums of working capital.

Variations in market prices so frequently upset calculations based on current or past prices that additional working capital should be provided to meet emergencies of this kind. In 1920 the leather companies suffered great loss on this account. Whereas the Central Leather Co.'s net profit in 1919 was over $15,500,000, its loss in 1920 was over $21,000,000.

Variations in demand are especially troublesome when the manufacturing process is lengthy, whereas in case of producers of commodities which can be made on short notice this is a relatively unimportant factor. These two types are illustrated by bread manufacture and leather manufacture, respectively. In the one case a sudden shift in demand to a commodity of a different quality or type can be readily met without great loss, but not in the other.

Turnover is considered in detail elsewhere in this section, and also in the section on "Inventories." It is of greater relative importance to the trader than to the manufacturer, but is nevertheless of real importance to the latter also. The reason for its greater importance to the trader is the relatively larger proportion of his total investment required to be kept in form of working assets. The tendency is to shorten terms of credit granted to retailers by wholesalers and manufacturers, which makes it increasingly difficult to dispose of goods thus purchased in time to use the returns in paying for them. The time required to dispose of goods is always indefinite and seasonal demands have a certain influence. It is for these reasons that large amounts of working capital are required in trade.

Increasing rapidity of turnover means increasing trade per dollar of working capital invested. A newspaper stand selling morning and evening papers only has a turnover of from 500 to 700 times a year, and requires a small working capital. Requirements are increased when magazines and books are added because turnover becomes smaller. As stocks increase in size and cost this tendency continues. Factors which in any given case tend to increase turnover are **timeliness** and **standardization** of goods, also the **sales policy.** The latter should be formulated to secure quick results. Shelves must not become loaded with unsalable goods. **In manufacturing** raw materials, goods in process, and finished goods must be kept moving. **Standardization** is important because it eliminates unsalable materials and reduces styles and varieties. It is desirable in so far as possible to avoid the manufacture of articles intended merely to satisfy whims because these may be found unsalable at any time. There should be **clean-up sales** at regular intervals. Attention should be given to reduction of time required by the manufacturing process.

Rate of turnover, in general retail stores, is sometimes from 8 to 10, but usually 2, 3, or 4. In retail shoe stores it ranges from .7 to 5.1 according to the Harvard Bureau of Business Research. The Bureau found the turnover in

many stores to be 1.8, and considers one of 2.5 a fair realizable average. Retail hardware stores range from .85 to 5.75, a common figure being 1.8. A realizable average is 2.5. Retail grocery stores range from 3.5 to 23.8. A common figure is 7, and 12 a standard to strive for. In the wholesale grocery business the range is from 2.8 to 11.6 times a year. A common figure is 5.7.

Terms of purchase vary from a cash basis to various periods of credit. Where a cash basis is in effect, considerably more working capital is required, other things being equal, than where a credit period intervenes between purchase date and payment date. Sometimes purchase bills can be paid out of sales receipts. The tendency is to reduce the credit period by granting concessions in the form of cash discounts or other concessions. Six months' time was formerly allowed to retailers. This was cut to 30, 60, or 90 days by offer of liberal discounts. To enable themselves to take advantage of these terms merchants began borrowing at local banks. The cash discount has now come to be a penalty, the wholesaler basing his calculation upon a cash price. This tendency has made larger working capital a necessity. **The shorter the credit period, the larger the working capital required.**

Terms of sale influence working capital in the opposite way from terms of purchase. **The longer the credit period, the greater the amount of working capital required.** In the export trade to South America an interval of at least 5 months intervenes between date of shipment and date of receiving payment—1 for shipment and draft to reach destination, 3 until draft matures, and 1 more for payment to reach shipper in the United States. Sometimes the period is extended to 6 months or more. These conditions necessitate a large working capital.

The **instalment plan** is popular in retailing certain high-priced goods, as pianos, books, real estate, agricultural machinery, etc. The burden of financing such sales has frequently caused bankruptcy, so that many bankers discriminate against those merchants who follow the plan. In case of **real estate** payments are sometimes spread over a period of 5 or 10 years; pianos, 3 years; furniture and agricultural machinery, 1 year. Many buyers default on payments, and goods are gotten back only by an expensive process and in more or less worn condition. At best, expense of collecting instalments is considerable. In case of costly articles it is customary for the seller to **retain title** until the price is paid in full. This is legally permissible in most states. Sales of railroad equipment are an illustration. One plan is to require the purchaser to give a series of notes covering the several instalments, in order to place the transaction on a definite basis and to enable the seller to secure funds by hypothecating these notes.

Illustration of Instalment Plan.—An article sells at retail for \$100. Cost to manufacturer or retailer is \$60; selling expense is \$20; overhead charges \$10; net profit \$10. 50 articles are sold during 1st month's operation; 100 the 2nd month; 150 the 3rd month; 200 the 4th month; 200 each month's thereafter. Instalments are paid at rate of \$10 a month. To simplify matters, assume that the whole \$90 outgo is incurred when each sale is made. How much working capital is required to finance the stated volume of business?

During 1st month the outgo is 50×90, or \$4,500, and cash receipts are $50 \times$ \$10, or \$500, leaving a cash deficiency of \$4,000. During 2d month the outgo is 100 times \$90, or \$9,000, while receipts are \$500 covering sales made during 1st month, plus \$1,000 for sales during 2d month, making a total of \$5,000; leaving a cash deficiency of \$7,500. In tabular form these calculations are as follows:

	Outgo	Receipts	Cash Deficiency for Month	Accumulating Deficiency
1st month..........	$ 4,500	$ 500	$ 4,000	$ 4,000
2nd "	9,000	1,500	7,500	11,500
3rd "	13,500	3,000	10,500	22,000
4th "	18,000	5,000	13,000	35,000
5th "	18,000	7,000	11,000	46,000
6th "	18,000	9,000	9,000	55,000
7th "	18,000	11,000	7,000	62,000
8th "	18,000	13,000	5,000	67,000
9th "	18,000	15,000	3,000	70,000
10th "	18,000	17,000	1,000	71,000
11th "	18,000	18,500	500*	70,500
12th "	18,000	19,500	1,500*	69,000

* Excess receipts.

If the seller does all of his own financing, he must have at its maximum a working capital of $71,000. These figures emphasize the principle that **during periods of rapidly increasing business cash receipts do not keep pace with volume of sales and outgo.** The first stage in building up an instalment business is a stage of heavy investing. There are three ways of shifting a portion of the financial burden of building up an instalment business to financial agencies:

1. By securing a heavy line of credit from the bank on the strength of general showing of profits and accumulating assets in form of accounts receivable.
2. By securing notes from purchasers as indicated above, and discounting them.
3. By arranging with a financial company to purchase the instalment accounts or notes receivable, or by securing advances on the basis of these notes or accounts when used as collateral.

LIQUIDITY OF ASSETS.—Cash must always be distinguished from other **quick assets,** such as accounts and notes receivable having early maturity dates, as well as salable merchandise, although some of these may be regarded as being very nearly the equivalent of cash. All items convertible into cash only after a considerable time are in a different category; the more easily current assets are convertible into cash, the less need be the proportion of current assets to current liabilities, hence the less need of working capital. The only method of increasing the liquidity of stocks of merchandise is by exercising care to buy only those that are readily salable.

Finance corporations discount instalment and commercial accounts receivable, thus aiding merchants to convert them into cash before maturity. These corporations operate in two distinct fields and are divisible into two groups. One group makes advances against **instalment accounts.** The other makes advances against **commercial accounts receivable.** On instalment accounts these finance corporations advance from 60% to 65%; on commercial accounts, from 75% to 80% of face value. Sometimes a fixed time of credit is granted against which the borrower maintains the required amount of collateral, paid and bad accounts being constantly replaced by

new ones. On the other hand, the loans may be in blocks, each being based on a new group of accounts and being regarded as a distinct transaction.

Seasonal variations are a serious handicap in some lines, such for example, as the manufacture of rubber shoes, agricultural implements, and sporting goods. This necessitates either accumulation of large stocks of raw materials during the remainder of the year to meet requirements of the busy season, or the purchase of large stocks of raw material at a given season to be gradually used up during remainder of the year. This requires periodic tying up of working assets. The usual method of handling this situation is to secure larger bank loans to meet the peak load, then pay them off as the goods are sold. But this dependence on banks is unsafe practice; loans or renewals of loans are sometimes refused. One solution is to carry a larger permanent working capital, investing the surplus not required during the off-season in securities which can be easily liquidated, such as short-term notes. These do not fluctuate much in value and may be bought in any quantity desired.

Promotion

DEFINITION.—Promotion consists in raising required capital for launching an enterprise by selling securities, and in making the necessary preliminary arrangements for such sale of securities. The **promoter** is the man who performs the work of bringing capital and enterprise together. Promotion consists of three stages:

1. Making a preliminary investigation of all aspects of the proposed enterprise.
2. Assembling the enterprise—organizing a plan, securing options, securing a charter, etc.
3. Financing the concern, which consists in the actual selling of securities.

INVESTIGATIONS.—Upon the thoroughness and accuracy of the investigations the future success or failure of the enterprise is largely dependent. Investor and promoter are equally interested in the investigation. In case of reorganizations or consolidations of old concerns, certain parts of the investigation may be omitted. Too frequently all parts are done carelessly, resulting in costly miscalculations. Most uncertainties can be eliminated by a careful preliminary investigation. Investigation covers an infinite range of variations, embracing such unlike subjects as social and political conditions on the one hand, and technical engineering and construction problems on the other. Large reports contain from 50,000 to 200,000 words of concise, boiled down information. In a paper entitled "Initial Financing of an Enterprise," E. K. Chapman, president of the Hudson Trust Co. of New York City, lists the following points to be covered in investigating the desirability of promoting a manufacturing corporation which is to take over either tangible property or such intangible assets as patents, copyrights, and good-will:

1. Validity of the patents, copyrights, and other titles and rights, or the soundness of the claim of good-will.
2. Strength and dangers of present and potential competition.
3. Likelihood of securing for the new company proper grade of managerial talent.
4. Sufficiency of capital and dependable resources. Enough capital should be provided to afford a margin to meet emergencies and cover losses and expenses of the experimental stage. A second application for capital should be avoided.

5. Par of capital shares should be low if an appeal is to be made to small investors, and in any case not over $100.
6. Contract between corporation and promoter. Promoter should be reimbursed in cash for his actual cash expenditures; for his services he should be paid in stock of the company promoted.
7. Necessity of investing a large sum of capital in constructing a plant for manufacturing proposed product. It may be less risky to have the product manufactured under contract by outsiders or by assembling the parts which have been purchased or manufactured under contract.
8. Probability of securing capital from men with experience in similar lines of business or with special information.

The **preliminary analysis** of enterprises should, in so far as possible, conform to accepted standards. In the field of public utilities bankers have worked out certain **standards**, so that their preliminary estimates of earnings are based on the following probable yearly receipts, from each person in the territory to be covered by the utility:[6]

Electric light and power companies	$3	to	$6	per	capita
Gas companies	2	"	6	"	"
Electric street railways in small cities	4	"	5	"	"
Electric street railways in large cities	7	"	10	"	"
Interurban railways	6	"	10	"	"

The following description of the **preliminary survey** of an electric railway project is adapted from the *Annalist*, July 20, 1914:

In New York City, 25 or 30 banking houses specialize in financing electric railways. Each year each of these receives from 500 to 1,000 proposals for building new lines or purchasing and rehabilitating old ones. **In judging new projects** the bankers take into consideration, first, the political attitude of the state or city regarding public utilities. They have on file tabulated data regarding the political record and activities of each state. They consider, next, the **United States census figures** of population and statistics, which indicate **rate of growth of population.**

Next, the promoter is asked to pay the expenses and fees of an expert engineer designated by the banking house, who makes a preliminary survey of the proposed line. He tabulates the number of cuts and fills, and arrives at an approximate estimate of cost of construction. He also inquires closely into costs of rights of way and terminals. His **advance estimates** of cost of construction and operation are expected to come within 5% of the actual figures.

This **preliminary report is checked** against the previous experience of the house. They add to cost of construction the carrying charges on the investment before it begins to make any return. They may get bids on the construction of power plants. This office analysis and checking is expected to result in very accurate estimates of gross earnings and outgo.

Some bankers decline to take up any such propositions unless advance estimates show **net interest earnings** equal to 2½ times interest charges on the bonds that will be necessary. Each mile of track should earn a minimum of $5,000, a generally accepted figure for interurban roads.

If operating cost is 60%, this leaves net earnings of $2,000. If construction cost is $25,000, all provided by bonds at 5%, interest charges per mile are

[6] Promotion and Organization of Public Service Corporations, by L. R. Nash, of Stone & Webster.

$1,250, leaving $750 per mile to provide for depreciation, unexpected losses, and accidents.

A population per mile in a strip 2 miles wide on each side of the road is considered a safe minimum. The interurban railroad which exists mostly on paper is not in large favor, as it is believed that most choice locations are occupied.

The **preliminary analysis required in case of a railroad** is indicated by the following questions put to the promoter of a proposed railroad, 30 miles long, passing through three prosperous villages, and connecting a rich agricultural and lumber country with Port "D" on the sea:

1. How much traffic is now hauled by existing transportation agencies in this region?
2. How much standing lumber will be made available for shipment by this new road?
3. What are the important markets for this lumber?
4. At what price can it probably be sold in these markets?
5. What, approximately, will be the cost of cutting and of hauling lumber to railroad and loading on cars?

(Answers to the above questions will give a basis for figuring the possible rates on lumber from the point of loading to the markets.)

6. Just how much rail and water traffic through "D" is in sight?
7. What advantages as a port for rail and water traffic will Port "D" have over competing ports?
8. What inducements can be offered which will lead to the diversion of traffic now moving through competing ports to the route through Port "D"?
9. At what rates does traffic now move through competing ports to and from the markets which the promoter hopes to reach by his proposed route?
10. What is the attitude of connecting rail and water lines? Will they be inclined to assist in the development of Port "D" or will they find it to their interest rather to discourage the growth of this port? (This is perhaps the most important question of all, for a short railroad, such as the promoter has in view, could scarcely exist, let alone thrive, unless it has the cordial co-operation of connecting lines.)
11. Assuming that connecting lines are friendly, what rate per ton-mile can the proposed railroad probably secure on through traffic?
12. What will be the exact cost of securing the right of way and constructing the proposed road?
13. What will be the cost of providing docks and other terminal facilities at Port "D"?
14. Do the above estimates contemplate providing a well-built, modern road, or rather a temporary construction which will have to be replaced later?
15. What will be the cost of equipment and of necessary supplies of all kinds?
16. Will it be possible to secure local subsidies or other assistance?
17. Does the promoter have banking connections on which he can rely for assistance in floating the securities of the proposed road?
18. Does the promoter know any capitalists who may be willing—provided satisfactory answers to all the above questions are given—to buy the stock issues of the proposed road?
19. Is the promoter able and willing to incur the expense that will be necessary to secure correct, dependable answers to all the above questions?

An analysis preliminary to the combination of going concerns should cover the following:

1. What is the financial history of each concern that is to be considered as a possible member of the combination? How long has it been in existence? Is its organization stable? Are its earnings increasing or decreasing? Are adequate depreciation and other reserves deducted before estimating profits? Is the plant and physical property in good condition?
2. Who are the men engaged in this industry who have shown the most enterprise and good judgment? Will they join in the proposed combination and work together on harmonious terms? Will it be necessary to give positions to incompetents or to make unfair concessions in order to influence men who are essential to the combination?
3. What, if any, advantages as a money maker will the proposed combination have over the separate, independent concerns? Will the combination be in violation of any laws? Will it be necessary to raise prices or otherwise incur any unpopularity in order to secure

larger profits? Is it possible to introduce more efficient methods into the management of the various plants without arousing undue hostility at the beginning?

4. Assuming that the combination is agreed to, what should be the financial plan of the proposed combination? Upon what basis can its securities be exchanged for the securities of the independent concerns? On what basis can other securities be underwritten and sold to the public? How much fresh capital will the combination need? Will there remain a block of securities sufficient to compensate all who took part in the promotion, for their respective risks and expenditures?

THE PROMOTER.—Promoters are of two types, **professional** and **occasional.** In the latter class are found lawyers, bankers, engineers, and business executives. **Local lawyers** and **bankers** are natural leaders in organizing local enterprises. Many such opportunities come to the lawyer or banker who is in a position to give them attention. This plan is especially suitable for small projects.

A few large engineering firms are actively engaged in organizing, financing, and operating public utility properties. Stone & Webster, J. G. White Engineering Corp., H. M. Byllesby & Co., and Henry L. Doherty & Co., are typical. With these companies promotion has grown from a side issue to a leading activity.

Certain large manufacturing companies finance new enterprises to secure their orders for machinery and equipment. Examples are the Westinghouse Electric & Manufacturing Co. and the General Electric Co., which, through subsidiary companies, sell the securities of the companies which they wish to develop. When it is decided to finance some proposed company, one of two lines of procedure is followed. One kind of firm works in close co-operation with bankers who underwrite the securities and sell them to the public. The other kind has its department for selling securities and does its own financing, thus carrying the enterprise through the stages of investigation, flotation, construction and perhaps the initial stages of management.

Business executives are called upon to act as promoters under various circumstances. In case of **competing manufacturing concerns** it is not unusual to find the task of carrying through a combination undertaken by executive officers of the companies involved. Another instance is where one plant is a **recognized leader** because of size, enterprise, or personality. Here the leading concern usually becomes the promoter. Such promotions are relatively few in number. The **typical instance** is where the business executive promotes entirely new enterprises, usually expecting to become manager after the promotion period is past. Promoters of this type should watch the following points:

1. Sufficient capital should be raised or authorized, but if the construction period is long the sale of securities should be postponed until the company is on its feet. Connections should be made with bankers to carry through the preliminary financing and to underwrite the securities of the completed undertaking. This plan is customary in case of large enterprises but infrequent in case of small ones, although it is suited to the latter.

2. He must protect his own interests. Many executives fail to realize the amount of compensation to which they are entitled. He should retain for himself the equity in the business which remains after he has raised needed capital by sale of bonds and stocks.

3. If the promoter acts as agent rather than as principal, he should protect himself by a definite contract, otherwise he may find himself frozen out after he has given valuable information to his associates.

DIFFICULTIES AND PROFITS OF PROMOTION WORK.—The promoter's work is expensive and hazardous, requires patience and diplomacy, and may end without profit. If he is attempting to unite previously independent and perhaps competitive enterprises, he must conciliate various conflicting interests. Under these circumstances the creation of a working organization, involving selection of officials for the combination, is especially difficult. One solution is to make an outsider the chief official, giving him free rein in choosing subordinates. Another solution is to choose his men from among the old organizations, relying on their influence to forward his plans. Ordinarily the first alternative is preferable.

Half of the really serious attempts at promotion result in failure, except in certain fields where standards for estimating probable income and expenses have become very exact as the result of long experience.

The **promoter's profit** should be whatever remains of the capitalized value after the enterprise is financed.

Illustration.—A promoter estimates that a manufacturing enterprise will earn, after completing a 2-year development period, more than $110,000 net profits yearly. He plans on creating securities salable at par on following basis:

	Capitalization	Interest and Dividend Requirements
$ 500,000	7% first mortgage bonds	$ 35,000
250,000	Preferred stock	22,500
500,000	Common stock yielding 10%	50,000
$1,250,000		$107,500

Assume that the corporation needs $1,000,000 cash, and that expense of investigating, securing options, incorporating, and selling securities is $150,000. The promoter enters into a contract to turn over $1,000,000 cash, or possibly property and total assets for which he pays $1,000,000, in exchange for all bonds, preferred and common stock. He then sells bonds, preferred stock, and $250,000 common stock, and retains for himself $250,000, against which he offsets expenses, $150,000. His net profit, in form of common stock, is $100,000. Among conservative promoters it is a recognized principle that the promoter, to show his faith in the enterprise, should receive his compensation in common stock.

In England **founders' shares,** ranking after preference and ordinary shares, are taken by promoters. These receive dividends only after certain dividends are paid on ordinary shares, when the latter receive a participation in additional dividends. Thus the ordinary shares might be given 6% preference over founders' shares, any additional dividends being divided equally between ordinary shares and founders' shares.

U. S. Realty & Construction Co. was organized in 1902. Capitalization: $30,000,000 preferred, $36,000,000 common. The five promoters announced that:

> It is proper to state that we expect to receive for the responsibility and risks assumed by us in organizing the new corporation, procuring the cash capital, and for the expenses incurred, an individual profit which will or may include the stock of the new corporation remaining in our hands after carrying through the transaction.

In this case the promoter's profits amounted to about $6,000,000 common stock, approximately 10% of total securities, having at the outset a market value of about $1,800,000.

PROMOTER'S SECRET PROFITS.—The promoter's relations to others interested in the enterprise are confidential and he must disclose any secret profits; otherwise he cannot retain such profits. Any special profits are illegal unless made with full knowledge of others interested, or with consent of an independent and fully informed board of directors, or unless those to whom stock is to be sold are fully informed. Otherwise either the corporation or the stockholders who bought the original issue of stock may bring suit for redress at any subsequent time.

OVERVALUATION OF PROPERTY BY PROMOTER.—This may or may not be fraudulent. Overvalued property may be accepted by the corporation and stockholders with full knowledge, in which case they have no recourse against the promoter. But a creditor might proceed against the stockholders on the ground of overvaluation.

PROPERTY OWNED BY PROMOTER.—If the promoter acquired the property in question before inception of the company, he did not act as its agent; consequently he can sell it to the company at any price obtainable without disclosing amount of profit made. His own interest in the property must be disclosed, however, and his offer be made without misrepresentation. Thus, he must not hold himself out as owner when he merely holds an option on the property in question. He must not represent that he turned it in at cost when he is really making a profit. Without such misrepresentation he is entitled to whatever profit he can secure.

SOURCES OF CAPITAL FUNDS.—**The first source of capital funds** is the stock subscriptions of the men who associate themselves together to form the corporation. Next, they may associate with them those who have executive ability and money to invest. So far, the capital is supplied by those actively engaged in the work of the enterprise. The **second source of capital** is the profit earned and retained in the business. The tendency to put profits back into the business is especially strong in case of closely held corporations. Sometimes this policy is pursued for years. This policy has been followed by some of our largest corporations, such as the U. S. Steel Corp. The **third source of capital** is the outside investing public. The outside public consists of **investors** and **speculators.** With investors the chief consideration is **safety of principal.** With speculators the chief consideration is **large profits.** Securities issues are designed to be attractive to one or the other of these two classes; although no definite dividing line separates them.

Investors may be individuals or institutions. First among institutional investors are **banks,** especially **savings banks.** Savings banks investments are restricted by the laws of most states to certain approved issues. **Commercial banks** are also investors, but chiefly in short-term bonds. **Insurance companies** also buy great quantities of securities. Other purchasers are universities and eleemosynary institutions. Trust companies invest the estates of deceased persons in high-grade securities.

Individual investors who look after their own funds can take a higher degree of risk and need not comply with statutory requirements.

Investment associations or trusts are popular in Europe. These sell their own bonds and shares and invest the proceeds in securities of corporations. The purpose is to substitute for the uninformed judgment of the individual with a small amount to invest the judgment of men experienced in investments, also to secure a wide risk distribution. As a rule these associations are ably managed.

Speculative and semi-investment securities are sold chiefly to individuals. Semi-investments consist of preferred stocks and junior bonds, possessing reasonable safety, but subject to greater uncertainty than are gilt-edged securities. The above-mentioned individuals consist of three classes:

1. Those whose first desire is safety of principal. These buy preferred stocks, junior bonds, etc.
2. Those whose first desire is appreciation of principal, but who incidentally do not object to a high yield. These buy common stocks not as yet well seasoned.
3. Those who speculate on margin. Many of these are gamblers; others buy and sell on the basis of inside information, or on the basis of general business conditions, present and prospective.

SELLING SECURITIES.—Four methods of sale are in common use:

1. Allotment to insiders or to previous stockholders.
2. Direct sale to outside public.
3. Sale to banking houses, which in turn dispose of the securities by direct sale to outside public.
4. Sale to banking or brokerage houses, which in turn dispose of the securities through the machinery of the stock exchange.

It is a **universal rule of law** that where new voting stock is issued by an established concern, every voting shareholder must be given an opportunity to buy new shares in proportion to his holdings of old shares. In close corporations new issues of common shares are usually allotted on this basis. Bonds and preferred stock are more frequently sold to outsiders.

STOCK RIGHTS.[7]—The privilege extended to stockholders to subscribe to new stock at a price below the market value of outstanding stock is known as a "stock right." It is evidenced by a **warrant** which resembles a stock certificate. These rights are transferable and are bought and sold in the open market. The right to subscribe is on a pro rata basis, say, for example, 1 share of new for each 4 shares of old stock.

Usage varies as to the **definition** of a single stock right. Sometimes it refers to the privilege of subscribing for 1 new share. Sometimes, as in New York, it refers to the subscription privilege attaching to each share of old stock.

Illustration.—The McAlister-Brown Co. has a capital stock of 10,000 shares, par value of $100 per share, all outstanding and selling considerably above par. An offer is to be made of 5,000 new shares at par to the stockholders. The announcement reads as follows:

To The Stockholders:

The McAlister-Brown Company will extend to shareholders of record on May 1, 19—, the privilege of subscribing, at $100 per share, to 5,000 shares of additional common stock, par value $100 per share, in the ratio of one new share for every two shares of old stock held. Subscriptions will be payable on or before June 1, 19—. Transferable warrants specifying number of new shares for which they are entitled to subscribe will be mailed to stockholders of record as soon after May 1 as practicable.

New York, April 2, 19—.

RIGHTS SOLD ON "WHEN ISSUED" BASIS.—In above illustration rights are bought and sold on a **when issued basis** between Apr. 2 and May 1. The market price is determined as follows. Suppose Kramer, on Apr. 2, buys two shares of old stock on the market at $150 per share. On May 1

---

[7] Adapted from an article by Thomas York in Conyngton's Corporation Procedure, pp. 805–813.

he receives 2 rights entitling him to subscribe for 1 new share at par. He does this, and on June 1 is the owner of 3 shares which have cost him \$400, or \$133⅓ a share.

Instead, Kramer might have sold the rights on Apr. 2, each for the difference between \$150, the prevailing market price of the old stock, and \$133⅓, the average cost per share of old and new stock combined, or \$16⅔. The cost of his 2 shares is thus reduced by \$16⅔ to \$133⅓, as is shown below:

Cost of 2 shares of old stock at \$150 per share	\$300
Amount realized on sale of 2 rights	33⅓
Net cost of 2 shares	\$266⅔
Net cost of 1 share	133⅓

A purchaser of the old stock at \$150 fares the same if he sells the rights at \$16⅔ as if he retained them and subscribed for new stock at \$100.

The **parity value** of rights dealt in on a "when issued" basis is their value (\$16⅔ in above example) when it is immaterial whether one buys 2 shares of stock and subscribes for a new share, or whether he buys 6 rights and acquires 3 shares by subscription. Cost per share in either case is \$133⅓. If m is market price of old stock, s the subscription price of the new, and n the number of old shares carrying the subscription privilege to one new share, then p, the parity value of the right, is:

$$\frac{m - s}{n + 1}.$$

Actual market price of rights tends to equal **parity value** and consequently fluctuates with the market price of the stock. If an appreciable difference arises between parity value and market price of the rights, it is profitable to undertake certain market operations which tend to bring market price of rights back to parity value.

First Illustration.—Assume that market price of old stock is \$150, so that parity value of rights is \$16⅔, whereas market price of rights is \$15. Consequently rights are relatively cheaper than stock, and those who desire to secure stock should take advantage of the opportunity to buy rights and subscribe for new shares, as is shown by the following computation:

1. When old stock is purchased:

Cost of purchasing 2 shares of old stock at \$150	\$300
Subscription price of 1 new share (the 2 rights being acquired with purchase of old stock)	100
Cost of 3 shares	\$400
Cost of 1 share	133⅓

2. When rights are purchased:

Cost of 6 rights at \$15 per share	\$ 90
Subscription price of three new shares	300
Cost of 3 shares	\$390
Cost of 1 share	130

By buying rights \$3⅓ per share is saved.

Second Illustration.—If market price of rights is below parity, owner of old stock gains by selling it and buying rights, thus:

Sale of 2 old shares (with rights) at $150 yields		$300
Value of the 2 rights attaching to 2 shares sold		30
Amount realized on stock exclusive of the rights		$270
Purchase price of 4 rights at $15 per right	$ 60	
Subscription price of 2 new shares	200	
Total cost of new shares		$260
Profit on 2 shares		$ 10
Profit on 1 share		5

Proper basis for comparing amount realized on old stock with cost of purchasing rights and subscribing to new stock, is to compare old and new stock as they will be after May 1 when old stock loses the value of the rights. This is done in the computation by deducting market value of rights from proceeds of sale of old shares.

ARBITRAGING IN STOCK RIGHTS.—Disparity between market price of stock and of rights affords opportunity for **arbitraging transactions.** These consist of:

1. Selling stock short (i.e., broker borrows stock to make delivery).
2. Buying rights and subscribing to new stock.
3. Turning this stock over to lender of old stock.

Illustration of Arbitrageur's Profit.—

He sells 2 old shares short at $150		$300
At same time he buys 6 rights at $15 each	$ 90	
He subscribes for 2 new shares	200	
Total cost of 2 new shares		$290
Total profit on 2 shares		$ 10
Profit on 1 share		5

Any of the three types of transactions illustrated above, by readjusting demand and supply of stock and rights, tends to bring them back to parity. Since many stockholders choose to sell their rights rather than subscribe for additional stock, any disparity in price of stock and of rights is usually a discount from the parity value of the rights.

STOCK EX-RIGHTS.—When stock ledger is closed (in above illustration May 1) to prepare warrants as per list of stockholder on a pro rata basis, the stocks sell thereafter **ex-rights,** i.e., minus the value of the rights, and the rights are bought and sold independently of the stock. The formula for finding parity value of rights when stock sells ex-rights is:

$$\frac{m - s}{n}$$

m being market price of old stock, s subscription price of the new, and n the number of old shares carrying the subscription privilege to one new share.

SELLING SECURITIES DIRECT TO OUTSIDERS.—The selling problems which arise in connection with the sale of securities direct to the public are indicated by the following questions:

1. How shall names of prospective purchasers be secured?
2. How shall their interest be aroused?

3. How shall these prospective customers be approached?
4. How shall their confidence be secured?
5. How shall a desire to buy our securities be aroused?
6. How shall the sale be consummated?

Circularizing is one method of selling securities, but it is usually worthless for good securities. It has been employed extensively for swindling purposes, and its close connection with fraud causes it to be regarded with suspicion. The expense is also likely to make this method prohibitive—as much as 25% to 50% of the offered price—whereas the expense of selling good securities ought not to exceed 5% or 10%. The method has, however, been employed legitimately by oil companies and by the United States government in selling Liberty bonds. Moreover, reputable bankers use the mails for advertising high-grade securities. A modification of the plan is to use **selected lists of customers,** which, properly safeguarded, is economical and effective.

Personal effort is ordinarily most satisfactory because it arouses a feeling of confidence in the prospective buyer. Ordinarily a small company cannot market its securities except through the personal influence and work of its officers or representatives. These must work through acquaintances and the influential business men of their communities.

The **prospectus** is essential to a successful selling campaign. It gives the history, present status, and future prospects of the company, as well as the terms and conditions of sale of the securities to be marketed. It is printed, if intended for wide distribution. In case of a going concern the most important features of the prospectus are the **statement of past earnings** and the **balance sheet.** The statement of earnings should extend back at least 5 years, if the company is that old. **Vague but plausible statements** should always arouse the suspicion of the reader because they are a favorite recourse of fraudulent enterprises. Reference to what other companies have done in similar lines should be regarded as valueless. The **balance sheet** should be so constructed that it will submit to analysis and interpretation. **Widely advertised names** appearing on the board of directors are words which the shrewd investor examines with suspicion. The **style** should be concise and dignified. A sentimental appeal should not be used unless it is really sincere.

Direct selling ordinarily grows increasingly difficult as the amount of capital to be secured increases, so that it may be cheaper to sell through bankers. Moreover, as a rule, good investment securities are sold through investment bankers, so that there is an initial prejudice against the concern which attempts to sell its own securities. This statement does not apply to small companies. Bankers do not care, as a rule, to undertake the sale of securities for companies capitalized at less than $1,000,000; or to undertake the sale of a single issue of less than $200,000. Smaller issues may quite properly be sold through the personal effort of the corporation managers.

DEALERS IN SECURITIES.—Security dealers are either wholesalers or retailers, and the retailers do either a general or a special business. The wholesalers deal only in large issues. Among leaders in this group are J. P. Morgan & Co., and Kuhn, Loeb & Co. These houses usually market large issues through syndicates whose members are chiefly in the general retail class. Another type of house is represented by such concerns as the National City Co. and Harris, Forbes & Co., which sell to investors through large sales forces. These concerns frequently take up small issues without form-

ing a syndicate. The specialty houses deal only in one kind of security, as oil, steel, equipment trusts, etc.

Before a banking house undertakes to underwrite an issue, it makes a preliminary **investigation,** which, if satisfactory, is followed by a more thorough one usually carried out by the firm's own engineers and accountants. This is followed by an advertising campaign by means of a conservatively written prospectus, the purpose being to aid the salesmen and attract the attention of prospective investors. One of a firm's best assets is a **list of prospective buyers,** and once secured it is used for future issues.

Investment bankers usually prefer to underwrite large issues at a small commission rate than small ones at a high rate. A **commission** of from 3% to 5% prevails for large railroad bond issues, whereas smaller bond issues and first-class preferred stock issues are sold at commissions ranging from 5% to 10%. Sometimes as high as 20% is charged for marketing small industrial preferred stock issues.

After a banking house has marketed an issue of securities, it has a certain **moral obligation** to look after the interests of the purchasers, although it usually is careful not to obligate itself in any contractual way. In fact it usually adds some statement to its prospectus to the effect that while it regards the information therein contained as correct, it does not guarantee that it is. Should an issue prove unsatisfactory, the house which sold it will try to protect the interests of its customers, by trying to maintain the price. If bankruptcy and reorganization follow, the house obtains the most favorable terms possible for the security holders.

Listing on the New York Stock Exchange usually is a factor in security issues of $10,000,000 and over. As in other instances, such issues are underwritten but listing makes it possible to create a wider demand and thus facilitates sales.

The expense of underwriting and the inability of banking houses to handle some issues because of limited facilities are factors which sometimes prevent the marketing of some sound securities.

THE STOCK EXCHANGE.—In the United States the leading exchanges are in New York, Boston, Philadelphia, Chicago, Cleveland, Cincinnati, New Orleans, and San Francisco. Brokers operating on exchanges charge **standard commissions** for buying and selling. On the New York Stock Exchange they are:

On stock selling below $10 per share	7½¢ per share
On stocks selling at $10 per share and above, but under $125 per share	15¢ " "
On stocks selling at $125 per share and over	20¢ " "

The minimum commission on one transaction is $1. Although the majority of transactions are made for speculative purposes, many are for investment purposes and so result in real absorption of an issue.

To dispose of securities through the stock market it is necessary to arouse public interest, this process being known as **making a market.** To do this either of two steps may be taken. First, arouse the interest of traders in stocks to such a point that the syndicate selling the securities can, by a process of buying and selling, gradually dispose of its holdings without depressing prices. At the same time it sells **over the counter** to persons who do not care to avail themselves of the stock exchange facilities for buying. Second, give the security issue wide publicity, thus aiding sales both through the stock exchange and over the counter.

Selling securities through the stock exchange is uncertain at best, and buying and selling commissions may prove to be very expensive. Frequently listing on an exchange is merely incidental to its flotation; if its market price can then be maintained above its quoted price, this is an aid to selling over the counter.

THE UNDERWRITING SYNDICATE.—The chief purpose of underwriting syndicates is to relieve the corporation issuing them of all risk. In every case the syndicate guarantees to secure for the corporation a fixed sum of money within a given time, and either purchases the securities outright or agrees to take what cannot be sold at an agreed price. This enables the corporation to proceed at once with its projected undertaking, since the raising of the entire sum required is assured. The corporation also secures the assistance of the banker regarding form, price, and other details of the issue, thus minimizing the possibility of errors. Purchasers of the securities regard the willingness of the syndicate to market the issue as a guaranty of its soundness, also as a guaranty that the entire issue will be disposed of, thus insuring the success of the enterprise.

ORGANIZATION OF SYNDICATES.—The essential function of syndicates is the distribution of risk among banking houses. The original agreement is usually between the corporation and a single banking house, after which other houses join with this banking house to aid in selling the issue, thus forming a syndicate. Syndicates not only diversify risk; they also enable banking houses to offer to their customers a more diversified list of securities than would otherwise be possible.

In Wall Street there is a tacit understanding among banking houses that they will join each other in syndicates, and this is so effective that scarcely any consultation precedes their formation. It is not customary to refuse participation in a syndicate when the invitation to do so comes from one of the three or four leading houses. Syndicates involving millions of dollars are formed through informal telephone conversations.

There is an understanding among banking houses that they will not compete, so that in trying to secure a contract with a banking house a corporation should break off all negotiations with one house before approaching another. The banker regards his service as professional in character.

TYPES OF SYNDICATE AGREEMENTS.—There are four types of syndicate agreements, as follows:

1. The corporation markets the issue, the function of the syndicate being to guarantee disposal of the entire issue within a predetermined time.

Illustration.—A corporation issues $10,000,000 5% bonds, offering same at 90. Any bonds unsold at end of 6 months are to be taken by the syndicate at 85. For consideration the syndicate is to receive a commission of 2%. If the issue is successfully disposed of, the syndicate collects and distributes its commission and dissolves. If all the bonds are not sold, the syndicate takes over the remaining and sells them at the best price obtainable.

2. A single banking house contracts with a corporation to handle the issue in question. It then invites other houses to participate. All dealings with the corporation are through the house which makes the original contract.

3. The contract is between the corporation and the syndicate, the latter being formed before the signing of the contract. Management and selling activities are, however, left in the hands of the house which organized the syndicate. No distribution of securities to the other

syndicate members is made unless this member fails to sell them after making the attempt to do so.

4. The contract is between the corporation and the syndicate, the securities being distributed at once among the syndicate members in participation ratio. This is the most common form of syndicate as well as the most useful for handling large issues.

SYNDICATE MANAGEMENT.—In all cases the **active management** of the syndicate is carried on by the house which organizes it. This is illustrated by the following extract from the agreement of the United States Steel syndicate.

J. P. Morgan and Company shall be sole managers of the syndicate, and in behalf of the syndicate they may make any and all arrangements, and may perform any and all acts, even though not herein provided for, in their opinion necessary or expedient to carry out the provisions of this agreement; or to promote or to protect what they deem to be the best interests of the syndicate. The enumeration of specific powers in this or any other article of this agreement, shall not be construed as in any way abridging the general powers of this article intended to be conferred upon or reserved to J. P. Morgan and Company.

For compensation for managerial services the leading house receives a special commission, which is first deducted; then remaining profits are distributed among syndicate members.

Underwriting commissions range from $1\frac{1}{2}\%$ to 10%, or even higher, depending, among other things, upon the credit of the issuing company.

Financial Standards and Policies

DEFINITION.—A financial standard is the expression, usually in quantitative form, of normal relationships among tendencies and facts of a business nature; or else of averages, secured from collected experience data, which may be used as bases from which to judge results secured in a given business. Such standards may be applicable only to particular industries or they may be of more general usefulness. If, for example, the study of income statements of a large number of retail stores shows that the cost of conducting such business is about 30% of gross sales, this may be regarded as a standard of more or less general applicability. Likewise the elements of cost in manufacturing may be reduced to standards. Depreciation rates are being standardized in many industries. In general, it should be recognized that such standards represent approximations. Trade associations are the organizations best equipped to undertake the work of establishing standards. The work being done by the U. S. Chamber of Commerce is illustrative.

Each branch of industry has its characteristic financial and operating ratios, these being the result of its peculiar nature and activities. Within a given industry it is possible to average the ratios of individual concerns, thus securing standard ratios which each concern may regard as standards by which to judge its results. In this way a check on operating and managerial efficiency is secured. Consult Bliss' "Financial and Operating Ratios in Management" for a discussion of methods of preparing financial and operating standards in business.

The following is stated by J. H. Bliss:

In times when business conditions are on an even keel, the statistics on a company's business over a period of years afford the best measure of the standards which should be maintained in its fundamental relationships. The several operating ratios, turnovers, and other measures will naturally vary from year to year more or less independently of

each other. The best ratios, margins, or turnovers obtained at any time, taken together, present standards which should be worked for or improved on if possible. It is often very much worth while to take the statistics on a business for a current year; and compute the improvement in showing made, if all the ratios and measures had been maintained at the highest levels reached in any period. In many cases such an analysis develops the most surprising possibilities of profit. In any event it points out the cost of errors that may have been made. Whether they are avoidable or not is another question which should be answered.

With the changes that have come about in the war and post-war periods, one cannot refer to the standards of previous years with such assurance that they are either proper or possible. The gross margin—the spread between markets—which most industries have to work on, is now proportionately much larger than in former years. In many industries it has to be, particularly when there has been great expansion in plants and production facilities, where organizations have been built up, and where demand has slackened and prices fallen off sharply. Competitive conditions in these lines will likely establish somewhat different normal relationships from pre-war standards.

Labor conditions and the expanded capitalization in many industries will also have considerable influence on the relationships of the future. Probable future price levels for products must be taken into consideration.

Where a business has an unsatisfactory showing, probably the **best basis to work on** is to obtain full information on present conditions and relationships together with all available data on conditions and ratios of previous years, and on this basis to consider what possible improvements in relationships are necessary to re-establish profitable business conditions.

The facts developed by such analysis will not be consoling. On the other hand, if reorganization may be avoided such information will prove of inestimable value. But if a business must go through reorganization or have a house-cleaning, the more intelligently and thoroughly the job is done, the better are the prospects for the future.

RATIO OF WORKING CAPITAL TO TOTAL ASSETS.—The following tables show percentage of working capital to total assets of large American industrial concerns. The first column shows pre-war conditions; the second, post-war conditions. The great increases are due largely to inflated inventory values. The three groups classify the corporations on a pre-war percentage basis; the first group having working capital below 15% of total assets; the second, between 15% and 35% of total assets; and the third, above 35% of total assets.

Percentage of Working Capital to Total Capital

I

	Pre-War	Post-War
Mexican Petroleum Co.	3.5%	
California Petroleum Co.	3.9	(6.4%)
Sloss-Sheffield Co.	6.1	(10.6)
Corn Products Co.	6.7	(30.2)
Pittsburg Coal Co.	8.9	(27.5)
United Fruit Co.	9.0	(28.2)*
Union Bag & Paper Co.	9.4	(25.6)
Harbison Walker Refractories Co.	10.0	(17.2)
American Can Co.	11.5	(30.2)
Railway Steel Spring Co.	13.0	(48.0)
International Paper Co.	14.4	(51.7)

II

Sears-Roebuck Co.	15.1%	(69.1%)
Butterick Co.	15.6	(14.6)
The National Enameling & Stamping Co.	15.7	(38.5)

* Does not include current stock distribution.

	Pre-War	Post-War
U. S. Food Products Corp	16.0	(17.7)**
U. S. Steel Corp	16.2	(38.3)
Pressed Steel Car Co	18.3	(32.8)
Bethlehem Steel Co	19.4	(51.8)†
The B. F. Goodrich Co	19.7	(50.0)
Republic Iron & Steel Co	20.2	(37.4)
May Department Stores	20.7	(55.8)
New York Air Brake Co	21.0	(13.7)
American Steel Foundry Co	21.3	(46.3)
Loose-Wiles Co	21.8	(39.3)
National Biscuit Co	22.3	(30.4)
Lackawanna Steel Co	24.4	(40.1)
Baldwin Locomotive Co	28.1	(61.9)
III		
Studebaker Co	35.5%	(34.0%)
Crex Carpet Co	36.8	(59.9)
Armour & Co	37.0	(68.0)
American Woolen Co	37.4	(77.2)
American Cotton Oil Co	37.7	(34.5)
American Sugar Refining Co	39.6	(57.9)
American Tobacco Co	42.8	(53.3)
Underwood Typewriter Co	43.2	(74.9)
General Motors Co	45.0	(45.8)
Central Leather Co	48.6	(62.0)
Packard Motor Car Co	51.0	(102.1)
Swift & Co	51.0	(84.0)
Morris & Co	53.0	(46.6)
Eastman Kodak Co	57.0	(190.5)
Deere & Co	70.0	(64.2)
International Harvester Co	81.3	(103.4)

** Name changed in 1919 from Distillers Securities Co.
† Including $30,000,000 of 5-year notes.

The following **generalizations** are drawn from these tables. Companies engaged in competition with each other or doing the same general type of business have approximately the same percentage of working to total capital, as shown by California Petroleum Co. and Mexican Petroleum Co. **Extractive industries** do not require large inventories of raw materials, and their chief requirements in form of working assets are cash and accounts receivable. Even their accounts receivable are usually for short terms. **Railway equipment companies** have relatively low working capitals. All steel manufacturers fall in second group. As in case of paper manufacturers which own their own forests, **integrated production** favors a low working capital because it reduces the need for large stocks of raw materials. Note close correspondence between Loose-Wiles and National Biscuit companies. Two important types are found in third group: (1) those which require large inventories of raw materials, goods in process, and finished goods, and (2) those which grant credit to customers on a long-term or instalment basis. In the first class are such concerns as American Sugar Refining Co., Central Leather Co., and Crex Carpet Co. In the second class are International Harvester Co., Deere & Co., and Underwood Typewriter Co.

Each kind of business has its appropriate financial structure. Whether in

a given instance the financial structure is as it should be, must be determined by a consideration of **ratios and turnovers.** Thus, too much capital tied up in fixed assets results in a low turnover of fixed assets, and so on. Everything depends on economy and efficiency in use of capital. Efficient investment of capital is as essential as efficient operation.

CASH RESOURCES.—These include both cash and assets immediately convertible into cash. By experience **banks** have found that the proportion of cash to demand liabilities should be from 15% to 25%. In case of industrials, average cash to gross sales ranges from about 3% to about 6%, and cash resources should be from 12% to 25% of current liabilities. Current liabilities should not exceed 20% or 30% of annual sales if the company pays its bills on time.

TURNOVER.—This is discussed elsewhere in this section. See also section on "Inventories." The following table shows dollars of sales per dollar of capital used in leading industries:[8]

	1914	1919
BUSINESSES WITH RAPID TURNOVERS:		
Women's clothing	$3.09	$3.09
Bread and bakery	1.82	2.18
Butter	4.08	3.59
Slaughtering and meat packing	3.09	3.61
Sugar refining	2.06	3.78
BUSINESSES WITH SLOW TURNOVERS:		
Cement	$0.42	$0.65
Brick and tile	.49	.59
Paper and wood pulp	.62	.87
Fertilizer	.71	.90
Iron and steel and blast furnaces	.69	.99

The following is quoted from Bliss:

> The significance of the **difference in turnover** must not be overlooked. If a business turns its total investment over one time per year, and desires to make a return of 6% on its total investment, obviously it must average an operating profit of 6% on its sales. If, on the other hand, the sales of the business for a year are 3 times the total amount of capital used, and it desires the same 6% return on its total investment, a margin of only 2% operating profits on the sales is necessary. The more rapid the turnover of capital, the smaller is the margin of per cent profit on sales necessary to yield any given return on the investment.

Bliss lists the following **measures of turnover:**

1. Turnover of accounts.
2. Turnover of inventories.
3. Turnover of plant investment.
4. Turnover of all capital.

TURNOVER OF ACCOUNTS RECEIVABLE.—This expresses the relationship between amount of sales and outstanding accounts receivable. The longer an account is carried, the smaller the return realized on the investment and the greater the liability of loss. Figure the turnover as number of days of average sales outstanding in unpaid accounts receivable to end of period. Thus, if receivables outstanding to end of period are $200,000, and average

[8] J. H. Bliss.

daily sales for a period are 6,000, turnover is 33 days of average sales outstanding and uncollected. The rapidity of turnover depends on sales terms and business conditions. The turnover which should be realized in a given business may be approximated by considering sales terms and allowing for slow accounts. Slowing up of turnover usually ties up funds when interest rates are high, as in 1920 and 1921, thus increasing the cost. Advantages of a rapid turnover are illustrated by Bliss, as follows:

Assume a business does an average daily sales volume of $3,000, and carries accounts receivable of $150,000, making outstanding in receivables of 50 days of average sales. If turnover can be cut to 40 days and capital released used to reduce liabilities, bringing accounts receivable down to $120,000, a saving of interest on borrowed capital, interest figured at 8%, would equal $2,400.

The following table shows characteristic turnovers in recent years:[9]

Average Turnover of Accounts Receivable for Representative Companies in Various Industries

(Stated in Number of Average Days' Sales Outstanding in Accounts Receivable)

	88 Cos. 1916–1921	54 Cos. 1914–1921
1914	....	42 days
1915	....	45 "
1916	43 days	43 "
1917	41 "	41 "
1918	44 "	38 "
1919	43 "	44 "
1920	49 "	52 "
1921	53 "	67 "
Average for period	44 "	45 "

In case of **coal** and **electrical machinery** companies, turnover is from 80 to 90 days. In case of **retail chain stores** 3 days is the average. Below is a comparison of accounts receivable turnover in the railway equipment manufacturing industry, based on statistics of representative concerns, and the average of 54 companies:

	Railway Equipment Cos.	Averages of 54 Cos. in 14 Manufacturing Industries
1914	96 days	42 days
1915	167 "	45 "
1916	65 "	43 "
1917	47 "	41 "
1918	53 "	38 "
1919	37 "	44 "
1920	107 "	52 "
1921	126 "	67 "
Average for period	70 "	45 "

[9] J. H. Bliss.

TURNOVER OF FIXED PROPERTY.—This is expressed as relation of volume of business done to capital invested in fixed assets. Preferably, the ratio should be figured on **physical volume** of product handled—pounds, tons, gallons, etc.—per dollar invested in plant and equipment. These measures are absolute. If these statistics cannot be secured, use **sales** in relation to investment in fixed assets. This is not so good because of constant price changes. However, it may be possible to eliminate effects of price changes. One plan is to compile an **index of volume,** based on sales, eliminating increases or decreases due to price changes.

An unfavorable investment turnover means increased overhead costs and resulting disadvantages in competitive business. The **remedies** are:

1. Adjustment of property values.
2. Increase of output.

The first is usually difficult or impossible, and the second is also difficult. Bliss says:

> The point of this is that these relationships must be watched with the greatest of care. Errors made which result in unfavorable relationships in this respect, cannot be cured. The burdens imposed by an unfavorable ratio are of a most lasting kind. A disadvantageous position may be the immediate result of an unwise move or it may be the result of a long period of unconservative policies . . . . in the handling of repairs, depreciation, replacements and additions to capital. . . . . These disadvantages, before they are noted and corrective action taken, have in many cases assumed proportions equal to the dividend requirements of the average concern. . . . .

As between industries there are **wide variations in turnover of fixed property,** because in some lines a heavy fixed investment is necessary relatively to amount of business done, while in other lines the amount of fixed investment required is relatively small. **In similar lines** the turnover is a measure of competitive advantage or disadvantage. Within large organizations the turnover test should be applied to each line of activity. Following table shows average turnover of a large number of companies in various industries. **Measure** used is **dollar of sales per dollar of fixed property investment.**

	1916–1921	1914–1921
1914	$....	$0.99
1915	.....	1.15
1916	1.65	1.66
1917	1.97	2.06
1918	2.81	2.31
1919	1.99	2.07
1920	1.98	2.07
1921	1.25	1.26
Average for period	$1.69	$1.73

Differences in turnover between industries are shown in following table:

	Average for Period of Years
INDUSTRIES WITH RAPID TURNOVER:	
Tobacco products manufacture	$13.05
Mail-order merchandising	9.74
Slaughtering and meat-packing	9.62
Retail chain stores	8.96

Industries with Slow Turnover:	
Bituminous coal mining	$0.34
Iron and steel products	0.70
Petroleum oil	0.75
Sugar production and refining	1.11

TURNOVER OF TOTAL ASSETS.—This is expressed as the ratio of volume of business to total capital. It is a broad measure of effectiveness of financial administration, being a sort of average of all other turnovers. Turnover of total assets should be considered as the connecting link between:

1. Relation of operating profits to sales.
2. Relation of operating profits to total capital.

Thus, if the operating profit is 5 % on sales, and turnover of total assets is 2 times per year (indicating that capital employed is ½ total sales), operating profit is 10 % of capital used. Margin of operating profit on sales multiplied by turnover of total capital should agree with percentage of operating profits on total capital.

Variations in turnover of total assets as between different industries are the result of differences in the businesses. Sales equal to total assets in some lines are made in from 3 to 4 years; in other lines in from 4 to 5 months. As between companies engaged in similar lines, differences in turnover of total assets reflect relative degrees of economy and efficiency in operation and management as well as competitive advantages and disadvantages. The following table shows average turnover of total assets of various industrial concerns. Note the slowing up in 1921. Such a slowing up increases operating costs.

Turnover on Total Capital Employed in Representative Companies in Various Industries

	95 Cos. 1915–1921	57 Cos. 1914–1921
1914	$....	$0.63
1915	....	0.69
1916	0.86	0.90
1917	0.93	0.99
1918	0.99	1.07
1919	0.91	.96
1920	0.88	.92
1921	0.62	.64
Average for period	$0.84	$0.88

Range in turnover in different industries is shown below.

	Average for Period of Years
Industries with Rapid Turnover:	
Slaughtering and meat-packing	$2.36
Mail-order merchandising	1.32
Retail chain stores	1.27
Auto accessory manufacturing	1.16
Industries with Slow Turnover:	
Bituminous coal mining	$0.26
Paper manufacturing	0.45
Iron and steel	0.50
Machinery manufacturing	0.57
Leather manufacturing	0.60

OPERATING RATIO.—This is the percentage of total running expense, including manufacturing, selling, and administrative, to gross sales. The difference between 100%, representing gross sales, and the operating ratio, is percentage of profit on sales. A high operating ratio indicates instability from a money-making point of view, because what profit does exist may easily be transformed into a loss. On the other hand, a very low operating ratio is so favorable that there is danger of increased competition. The use of this ratio was originated by railroad companies, where it ranges from 55% to 95%, or more, but usually is near 70%.

HOW TO STUDY FINANCIAL AND OPERATING RATIOS.—In studying relationships in a given business, these should be brought together in condensed form, detailed statistics being relegated to subordinate schedules or exhibits. The following form (Form 3) is taken from Bliss and is an effective plan for study of all important financial relationships of a business. As many columns may be employed as there are years to be compared. It may also be arranged to show monthly comparisons for each year. To do this, reduce all ratios, turnovers, and earnings to a yearly basis to make the months directly comparable with the years.

The relationships expressed in this form indicate all important trends. By reducing it to a monthly basis bad tendencies may be quickly remedied.

CORRELATION OF ACCOUNTS AND STATISTICS.—Before beginning the development of the accounting scheme a careful survey of the business should be made. The needs of both general and departmental or operating executives should receive consideration. Each class of executive should adopt certain **measures of efficiency**, and the system of accounts and statistics must supply the required information.

Methods of analysis are described in preceding pages. These should be applied to both the business as a whole and to all departments, all important ratios being worked out. This necessitates the allocation of all financial burdens to departments or processes, including capital employed. All general results should be traceable to departments or operations. **Turnover of accounts receivable** and **working capital ratio** are the two important measures which cannot be reduced to a departmental basis, unless the accounts from which they are determined are kept on a departmental basis. The aim should be to make it possible to trace unfavorable trends in general results to their specific causes.

ANALYSIS BASED ON FINANCIAL STANDARDS.—By use of standards derived from study of many cases it is possible to analyze data applicable to a given concern with reference to such common experience. If financial standards are available it is sometimes possible to derive valuable conclusions from data which in itself is incomplete. The following is an illustration of method to pursue in such analysis:

Illustration.—A firm has paid-in capital of $125,000, has been in business 3 years, and has surplus of $25,000. Of this capital, $35,000 is invested in store building, warehouses, furniture, drays, and general equipment. There is approximately $90,000 stock. The surplus is working capital. Credit of firm is $25,000 to $200,000 high credit.

1. What should be average stock of merchandise at all times?

2. What maximum open accounts is it conservative to carry? Goods sold at 60 days' time, 75% of business sold to merchants with good credit, 25% of business retail, principally city accounts collected on first of each month after purchase.

Particulars	1921 Amount	1921 %	1922 Amount	1922 %	1923 Amount	1923 %
1. Cash	$ 50,000	5.0				
2. Accounts Receivable	125,000	12.5				
3. Inventories	200,000	20.0				
4. Other Current Assets	25,000	2.5				
5. Total Current Assets	$ 400,000	40.0				
6. Investments	$ 75,000	7.5				
7. Fixed Property Investment	400,000	40.0				
8. Intangible Fixed Assets	100,000	10.0				
9. Deferred Charges	25,000	2.5				
10. Total Capital Employed	$1,000,000	100.0				
11. Accounts Payable	$ 25,000	2.5				
12. Notes Payable	100,000	10.0				
13. Other Current Liabilities	50,000	5.0				
14. Total Current Liabilities	$ 175,000	17.5				
15. Long-Term Liabilities	$ 200,000	20.0				
16. Reserves	25,000	2.5				
17. Capital Stock—Preferred	$ 100,000	10.0				
18. Capital Stock—Common	400,000	40.0				
19. Surplus Appropriated	50,000	5.0				
20. Surplus Account	50,000	5.0				
21. Net Worth	$ 600,000	60.0				
22. Total Liabilities and Capital	$1,000,000	100.0				
23. Net Working Capital	$ 225,000					
24. Working Capital Ratio	$2.28					
		% to Sales				
25. Volume of Business, lbs.	10,000,000					
26. Pounds per $1 of Plant investment	25					
27. Sales, amount	$1,000,000	100.0				
28. $ of Sales per $1 of All Capital	$1.00					
29. $ of Sales per $1 of Plant Investment	$2.50					
30. $ of Sales per $1 of Inventory	$5.00					
31. $ of Sales per $1 of Accounts Receivable	$8.00					
32. Gross Earnings	$ 300,000	30.0				
33. Per Cwt.	$3.00					
34. Expenses	$ 210,000	21.0				
35. Per Cwt.	$2.10					
36. Operating Profits	$ 90,000	9.0				
37. Per Cwt.	$ 0.90					
38. % on All Capital	9.0%					
39. Miscellaneous Loss and Gain	$ 4,500	.5				
40. Interest Cost	$ 25,500	2.5				
41. % on Borrowed Money	8.5%					
42. Surplus Net Profits	$ 60,000	6.0				
43. % on Net Worth	10.0%					
44. Dividends—Preferred	$ 7,000					
45. Dividends—Common	$ 40,000					
46. Dividends—Other	....					
47. Surplus Adjustments	....					
48. Net Change in Surplus	$ 13,000					
49. Book Value of Common Stock	$ 125.00					
50. % Earned on Common Stock	13.2%					

Note.—This form may be built very advantageously to compare years, preferably to show the changes from pre-war times down to date. It may be used for comparing monthly balance sheets, in which case all turnovers and measures of earnings should be reduced to a yearly basis; for example, the per cent earned on net worth per year as based on the rate of current month, etc.

Form 3. Method of Summarizing Financial Statistics and Ratios for a Business

(From J. H. Bliss, "Financial and Operating Ratios in Management")

3. What maximum amount of bills payable should books show for borrowed money, goods, etc.?

4. What amount in bills receivable is conservative at any one time?

5. What is maximum amount of yearly business firm should do on its capital invested?

6. What amount of dividends should stockholders be paid, average net earnings of firm being 25%, after all expenses and losses are paid and accounted for?

Analysis of Problem.—From information given, a highly condensed balance sheet reads somewhat as follows:

Assets

Building, Furniture, and Equipment	$ 35,000
Stock	90,000
Working Capital	25,000
Total Assets	$150,000

Liabilities

Capital	$125,000
Surplus	25,000
Total Liabilities	$150,000

The $25,000 working capital must consist partly of cash and partly of an excess of accounts receivable over accounts and other obligations payable.

To prepare an opinion, the following additional information is essential:

Normal amount of cash in bank.
Normal amount of accounts and bills payable.
Normal amount of accounts and bills receivable.
Average percentage of gross profits.
Average operating expenses per month.

As these facts are not furnished, following assumptions are made:

Normal Cash Balance	$10,000
Normal Accounts and Bills Receivable	90,000
Normal Accounts and Bills Payable	75,000
Average Operating Expenses per month	15,000
Average Gross Profits (on selling price)	25%

These assumptions may be far from the facts, but that does not affect the reasoning.

With these assumptions, the balance sheet reads as follows.

Assets

Building and Equipment	$ 35,000
Stock	90,000
Accounts Receivable	90,000
Cash	10,000
Total Assets	$225,000

Liabilities

Capital	$125,000
Surplus	25,000
Accounts Payable	75,000
Total Liabilities	$225,000

The **above balance sheet** on its face indicates a fairly strong financial position. **Quick liabilities** are only 75% of quick assets, not counting stock, most of which is readily salable. This percentage in mercantile companies and in manufacturing companies carrying large inventories of finished products is conservative. The percentage in emergencies or at certain seasons of the year may rise as high as 85% or even 90% without indicating recklessness, but this high ratio should be short-lived.

Another ratio to consider is that between quick liabilities and total current assets, including stock. This percentage should not normally be higher than 50%. Balance sheets for a period of years of a large wholesale dry goods company showed a ratio of quick liabilities to total quick assets at end of each fiscal year as follows: 40%, 55%, 40%, 57%, 45%, 40%, 38%. In above assumed balance sheet, total of current assets is $190,000, and of quick liabilities, $75,000 or less than 40%. This is conservative.

Buyers of commercial paper, especially large banks, sometimes make an arbitrary requirement for a definite ratio. In Babson and May's treatise on "Commercial Paper" following rule is laid down:

> Two and a quarter of quick assets, that is, assets which can be converted readily into cash, to one of debts, have been taken as a fair showing to be called for on an annual statement. . . . . The ratio of 2¼ to 1 should be regarded as a fair ratio to be expected on the statement of the average mercantile company, and most borrowers of this class in the open market, under our present system of commercial paper, ought to show this much.

Going back to the hypothetical balance sheet, gross volume of business which can be carried on with safety can be determined only by a study of proper relations of various assets and liabilities to each other. Assume that gross sales in month following date of above balance sheet should amount to $100,000. What would be the effect on the business? First, goods of a cost value of $75,000 would have been sold and would have to be replaced. In addition, with this volume of business, stock on hand would have to be increased to, say, $125,000. This would make it necessary to buy during the month $110,000. Assume that $50,000 of $90,000 accounts receivable fall due during the month and that $40,000 of accounts payable become due, then cash receipts would be $50,000 (assuming that there are no cash sales), $15,000 of which would go for operating expenses, leaving $35,000 to apply toward accounts payable. It would be necessary in addition to draw $5,000 from cash on hand. We must assume that such a volume of business would require an increase in equipment, which we may assume amounts to $5,000. Condensed balance sheet at end of month would then be:

Assets	
Building and Equipment	$ 40,000
Stock	125,000
Accounts Receivable	140,000
Total Assets	$305,000
Liabilities	
Capital	$125,000
Surplus	35,000
Accounts Payable	145,000
Total Liabilities	$305,000

Evidently this is an impossible situation; yet business concerns frequently work themselves into a situation like this by trying to carry a volume of business far beyond their capital.

With only the facts given and with only above assumptions to work on, it is not possible to give an intelligent answer to the questions as to amount of yearly business a firm of this size should do. Probably something like $500,000 a year would be near normal, but it is unsafe to name that figure without knowing more about the situation.

The 1st question, as to average stock of merchandise, can be answered only with reference to the 5th question, as to maximum amount of yearly business. Stock must be proportioned to volume of sales. Sales must be proportioned to equipment and working capital.

It is not possible to answer questions 2, 3, and 4 by giving definite figures, because right amounts of receivables and payables are determined by **relations** of these items to each other and to other assets and liabilities of the business. The attempt has been made to indicate above what are generally considered the right percentages; also to indicate line of reasoning to be followed in passing judgment on any particular business, all essential facts being available.

In a mercantile business running on a sound basis and not increasing volume of sales too rapidly, it is proper to pay out a fairly large proportion of net earnings in dividends. If net earnings are 25% and the volume of sales is near the maximum, a dividend of 15%, or possibly even a little more, is not out of place. The case is different if the business is growing rapidly. Then it is necessary to reserve more cash to build up working capital.

The Budget

ADVANTAGES OF THE BUDGET.—The main object of a budget is to secure internal control. The advantages are:[10]

1. Everyone in the establishment has a definite goal to attain.
2. Sales and production plans are co-ordinated with financial resources.
3. More continuous operation and greater regularity of employment is provided.
4. Products, processes and equipment can be standardized.
5. Costs can be used for purposes of control rather than as historical information.
6. Reduction of waste is encouraged by the maintenance of better balanced inventories, by instituting wage payments based upon results, by definitely assigning responsibility for expenditures.
7. Taken in conjunction with the business cycle, the budget gives warning when to be cautious and the cue to go forward with manufacturing plans.
8. At all times, the budget serves as a measuring stick to compare actual performances with promises and standards, showing not only what may be done but what should be done.

BUDGETARY REQUIREMENTS.—Some of the **essentials of a budget system** are:

1. Careful estimates of sales based upon previous years' experience, tempered by the immediate business situation.
2. Scheduling of production in keeping with sales estimates.
3. Careful gauging of material requirements.

[10] Budgeting for Business Control, published by Fabricated Production Department, U. S. Chamber of Commerce, Washington, D. C.

4. Establishment of standards of labor performance.
5. Careful analysis of expenses, with limits set for auxiliary services, such as power, maintenance, and delivery.
6. Provision for funds to carry through projected sales and production programs.
7. Provision for checking and revising standards by performances.
8. Predetermining of profits and losses.

Material requirements should be determined by anticipating the market 6 months or more. **Expenses** should be watched to keep them in balance as compared with sales. **Provision for funds** to meet all accruing liabilities should be made. **Profits** should be estimated in advance by quarters, and, if possible, by years.

Budgets should be **flexible.** Minimum, maximum, and intermediate programs should be provided, these to be made the measures of operations according to amount of business done. The manner of operating such a flexible budget is described in *Factory*, June, 1922, as follows:

By the end of 1920, the Penberthy Injector Co. had a table, on an ordinary 8½ by 11-inch sheet, showing the amounts allotted to each major item of expense for each $10,000 increment of business over the range of business expected to be done in 1921. Assume, for example, that the minimum business was likely to be $120,000 monthly, and the maximum business $240,000. Then a table was . . . . made out to show the allowable expenditures in each department for an incoming monthly business of $120,000, of $130,000 or $140,000, and so on up to $240,000. Each department budget was itemized on the same plan so that an anticipated business for the month of $200,000 meant a definite figure to be expended for fuel oil in the oil melting department, and so on with each item in each department. These figures were planned to give not only a reasonable working allowance for each item of expenditure throughout the factory, but also to give the profit desired on any given volume of business. For a small amount of business the percentage of profit was kept low.

With these budget sheets prepared in detail for each department and in the hands of each department head, the simple announcements to these executives at the beginning of the month that a budget of $180,000 or whatever figure has been determined upon as the quota for the month will be effective, is enough to notify them what their allotted expenses may be. They turn to their budget sheet and the $180,000 column shows their detailed expenses. These predetermined figures constitute a great convenience as well as a real time saver. At the middle of the month a brief report is made out and sent to each department head showing the half-month's allowance together with the actual figures for the first half of the month. This helps to steady things. A report is also made out showing the actual results at the end of each month compared with the budget figures. Over the desk of the factory manager is a rack of half a dozen swinging frames, each about 30 inches square, in which are kept sets of curves for each department showing from month to month, the budget set for the month, the cumulated budget figures, and the actual performance figures.

In the case of **special order establishments,** sales cannot be planned so definitely, because requirements vary from contract to contract. The elements and operations common to all contracts must be ascertained. Analysis of past sales may show that output falls into certain definite classes and that as between customers only slight and immaterial changes may be necessary. As a result many parts may be made for stock. It is possible to plan the next year's business by careful analysis of sales by territory, products, and customers, supplemented by a study of market conditions. An engineering concern should be able to budget **expenses** and **machine capacity** as well as a concern producing for stock.

Auxiliary services such as power, delivery, maintenance, and administrative routine, should be budgeted as carefully as production, sales, and material requirements. **Clerical work** and **fuel** are illustrations In large plants these are very considerable items.

Finances should be budgeted. Capital will safely reach only so far and it must be distributed in ratios most likely to result satisfactorily. These ratios necessarily differ in different lines. Care should be taken not to invest capital in an uneconomical way, because once it is permanently invested it cannot easily be changed should such investment prove to be larger than was thought necessary.

Working capital is sometimes unprofitably absorbed in inventories which are out of proportion to requirements. Installation of a good system of production control sometimes frees a large amount of working capital tied up in ill-balanced inventories. Sometimes **long-time dating** ties up working capital. Poor collection methods have the same results. A proper budget system will help to remedy these evils. Storing **finished goods** in excess of requirements is costly, consequently should be controlled by the budget.

If possible, finances should be budgeted so as to permit a concern to **go out of debt** once each year, i.e., have on hand sufficient cash to readily liquidate outstanding bank loans. This prevents overexpansion and necessity of funding floating indebtedness. This is especially true in seasonal lines. Short-time obligations are not a permanent contribution to capital.

To permit proper budgeting of finances a business should be planned on either a **minimum plan** or on a **maximum plan.** Under a minimum plan the object is to secure a sufficient volume of business to yield a fair return on investment. Beyond this point the elasticity of the organization must take care of expansion in business. The object is not to secure the greatest possible volume of business, but enough to yield a fair profit. Under a maximum plan the object is to secure as much business as possible. Greater risks are involved and greater profits are possible here than under the minimum plan.

MAXIMUM AND MINIMUM PLAN ILLUSTRATED.—The following illustration of minimum and maximum plans is quoted form "Budgeting for Business Control," published by the Fabricated Production Department of the U. S. Chamber of Commerce:

A prominent manufacturer of farm implements, in an effort to place before that industry something concrete and definite by way of a **financial goal,** used the following illustration:

Finding that there is now employed in the agricultural implement industry $1.35 of available capital for each dollar of sales, this manufacturer estimates a **well-balanced farm machinery company** would require $1,200,000 fully paid-up capital stock, together with the usual seasonal borrowing, to take care of an $800,000 minimum and a $1,000,000 maximum sales volume. From the information at hand drawn from a number of companies over a period of years, he estimates that the $1,200,000 capital would be properly distributed as follows:

Assets	Amount	Per cent of Available Capital	Per cent of $800,000 Sales
Plant	$ 420,000	35	52½
Inventory	400,000	33⅓	50
Receivables	240,000	20	30
Cash	140,000	11⅔	17½
Total	$1,200,000	100	150
Liabilities			
Capital stock	$1,200,000		
Payables, at beginning and end of year	None		
Surplus	As accumulated		
Reserves	As accumulated		

The manufacturer then proposes two plans of operation, a **maximum plan** and a **minimum plan.** The maximum plan contemplated establishes the production and sales organizations on the basis of maximum volume of sales possible, and in the event the maximum sales are not attained, then the net profits are less than expected, while if sales are materially in excess of the maximum, then the finances of the company will be strained.

The minimum plan is based on organizing for a minimum volume of sales on which a satisfactory profit can be made on the capital employed. The minimum plan is predicated on the belief that there are few salesmen who cannot increase their sales 25% in favorable years over normal experience, and that there are few branch houses that cannot handle an increase of 25% with their storage and clerical organizations should the business be available. In other words the minimum plan makes full provision for taking advantage of the elasticity in the organization, particularly in the sales and production departments, while the maximum plan takes no advantage of this elasticity, thus making almost certain large losses in earnings if the business does not come up with the maximum amount of sales. Illustrating this point, the manufacturer uses the following exhibits:

Minimum Plan of Organization

If organized on an $800,000 minimum sales basis, the year's operations would be somewhat as follows:

	Per cent	Amount
Total cost of operations, including—		
Cost of production	.....	....
Sales expense	.....	....
General and other expenses (including taxes)	89.75	$718,000
Interest paid	.....	....
Net profit	10.25	82,000

Should sales exceed expectations and reach $1,000,000 (cared for in part by reduction of inventory and in part by increased production), the showing would be approximately as follows:

		Per Cent	Amount
Net profit on $800,000 sales as shown above (before taking into account savings as outlined below)		10.25	$ 82,000
Plus increased earnings due to larger volume on account of:			
Amount saved by having greater production over which to distribute overhead	4.00%		
Having a larger sales volume over which to distribute sales expense	3.00		
Total saving	7.00%		
Deduct possible increase in interest charges incident to increased volume	.90		
Net saving	6.10%		61,000
Total net profit on $1,000,000			$143,000

NOTE: On an increased volume of sales, no saving is estimated on "General and other expenses," but allowance is made for these to increase in the same ratio on the $1,000,000 volume as obtained on the $800,000 minimum.

Maximum Plan of Organization

If organized on a $1,000,000 maximum sales basis, the year's operations would be somewhat as follows:

	Per Cent	Amount
Total cost of operations, including—		
Cost of production	.....	....
Sales expenses, general and other expenses (including taxes)	86.65	$866,500
Interest paid	.....	....
Net profit	13.35	133,500

Should sales for any reason reach only $800,000, the showing would be as follows:

		Per Cent	Amount
Net profit on $1,000,000 sales as shown above		13.35	$133,500
Less decreased earnings due entirely to lessened sales on account of:			
Reduced factory operations increasing cost of production through having to carry full overheads on decreased volume.	4.00%		
Having to carry a maximum sales expense that could not be reduced in time to make material savings	3.75		
General expense and other expenses that could not be decreased (including taxes) would add in percentage not less than	2.50		
Total decrease in earning percentage	10.25%		
Deduct possible saving in interest, which saving is doubtful	.90		
Total increased cost of carrying on the business on a sales volume of $800,000		9.35	93,500
Leaving net profit		4.00	$40,000
Net loss in earnings due to decreased volume when maintaining full maximum organization			93,500

The foregoing illustration is an interesting attempt to formulate a financial program that will yield a reasonable profit on a balanced volume of business.

Sweet-Orr Budget Plan.—Through the courtesy of Sweet-Orr & Co., Inc., of New York, their budget plan is presented. The descriptive matter has been supplied by Arthur T. Davenport, general manager of the company.

Master Budget

Date...................

Classification	Budget Allowance, May, 1922	Expense May, 1922	Balance May, 1922	Budget Balance, June 1, 1922
Shipments				
Returns and allowances				
Total net shipments				
Purchases material				
Purchases trimming				
Total purchases

Direct labor				
Manufacturing overhead				
Total manufacturing				
Purchasing expense				
Total expense				

The monthly budget performance for the 14 factories, purchases, shipments, selling and administrative expenses, are shown on this report. The report shows the management just which part of the business is operating within or exceeding the budget. The supporting detail budgets will show just which factory or department is exceeding the budget. In setting up the budget amounts, the works managers or department heads who are responsible for the expenditures are called in conference with the Budget Committee and they set the lowest amount necessary for the various classes of expense. The budget allowances are figured every 6 months and as our fiscal months consist of two periods of 4 weeks each, followed by one of 5 weeks, the budget for pay-rolls and expenses are so figured in our monthly allowances.

Since the budget is revised every 6 months, no changes are allowed after the budget is passed by the board of directors. If the actual sales exceed the budget allowance, a corresponding excess in the purchase of materials and factory expenses is satisfactorily explained.

Form 4. Master Budget

General and Administrative Expense

Telegraph and telephone.......				
Traveling..................				
Water and ice...............				
Tabulating..................				
Special....................				
Total..................				

Monthly reports of the budget operations are prepared for each factory and for the general and selling expenses of the organization. Each executive in charge of the various expenditures must explain any excess expenditure. The expenses of each function in the organization are carefully checked up, so that when the budget allowances are revised every 6 months there will be no possibility of economy overlooked.

FORM 5. General and Administrative Expense Budget

Of the 14 manufacturing points in this organization, 4 are shipping points and as such have a warehouse and shipping department expense. This expense, while not a charge against factory operations, is under the control and supervision of the works manager in charge of that particular plant. He is therefore held responsible for the shipping expense and must satisfactorily explain any excess expenditures over the budget allowance.

Each of the 14 factories in this organization has a budget report form. The works manager in charge of each one receives a copy monthly. Of course, the responsibility of the factory expenditures rests on the works manager in charge and he must explain satisfactorily any item exceeding the budget allowance.

FORM 12. Factory Budget

Mismanagement and Fraud

DEFINITION.—Fraud is gross deception or breach of trust operating to the injury of an innocent party. It is usually difficult to prove because it is necessary to secure evidence of intent to defraud or mislead. **Exploitation,** being more subtle than fraud, is more difficult to expose. Ordinarily it does

not provide ground for legal action. Nor are mismanagement and consequent bankruptcy grounds for inferring exploitation, as these may result from **mistakes.** "Exploitation may be said to differ from fraud in that, while the intended results are practically the same, there is always room, in case of exploitation, for varying interpretations of the facts."

The **corporate form** of organization **favors exploitation,** because individuals hide their identity and avoid personal responsibility. The legal fiction of **corporate entity** favors exploitation. Legislation has been slow to cope with new conditions.

FORMS OF ABUSES.—One form of abuse arises out of **personal favoritism** in letting contracts and making purchases. The Interstate Commerce Commission says: "Corporate economy is not practicable where gifts and obligations arising from friendship tend to obscure official duty." **Exorbitant salaries** are a means of exploitation in the hands of a controlling faction. **Secret payments** are sometimes made to avoid openly increasing salaries. These may take the form of a **bonus** omitted from the pay-roll. **Contracts beneficial to officers** are a frequently employed means of exploitation. Sometimes **construction companies** are organized by corporate officials and then manipulated to their own advantage by means of improper contracts. Another plan is to purchase at high prices subsidiary companies in which the officials of the purchasing company are interested.

In some cases contracts with other companies in which the officers are in one way or another interested are beneficial, so that it is difficult to affirm exploitation. In so far as possible such relationships should be avoided, but if unavoidable the negotiations should be open. All such contracts should be submitted to disinterested parties for criticism. Officers taking part in the organization of a new concern in a related field should leave the concern in which they have previously been interested.

Officers sometimes try to avoid losses in unprofitable enterprises by unloading their holdings upon the company. If they are active and influential they are likely to succeed, especially if the directors know little about the details of the business.

Sometimes officers in a company secure control of another company by inducing their board of directors to acquire stock therein which, along with their own personal holdings enables these officers to control the other company.

Misuse of inside information is a frequent abuse in connection with speculative proceedings on the stock market. Officers and directors have peculiar responsibilities in respect to speculative operations in the stock of the companies they represent. The fact that they may lose through miscalculation does not negative these responsibilities.

Misuse of corporate funds by officials sometimes occurs, especially in connection with speculative ventures. By trying to bolster up the price of sisal and hemp two officers of the National Cordage Co. changed it from a well-managed enterprise to a speculation. So much capital was tied up in stock of sisal and hemp that the company went into bankruptcy.

Manipulation of accounts is common to secure an overstatement of income, thus bolstering up tottering enterprises. There are many ways of accomplishing this result. The following are examples:

1. Capitalization of expenses.
2. Failure to write off adequate depreciation.
3. Writing up assets and crediting same to Profit and Loss.

4. Padding of inventories of merchandise, supplies, etc.
5. Failure to write off bad notes and accounts receivable.
6. Understatement or omission of liabilities.

Sometimes the purpose is to understate earnings. This may be done by:

1. Undervaluing assets.
2. Overstating liabilities.
3. Writing off excessive depreciation.

and, in general, doing the opposite of what is done when it is desired to make a poor income statement look good.

Where there are **subsidiary companies** opportunities to juggle accounts are increased, because the statements of the subsidiaries may not be shown. In this case falsification of their earnings does not appear. If they incur losses these may be omitted and only the results of profitable subsidiaries be brought in. Intercompany sales may be made to swell profits. This results in inflated inventory valuations. One scheme sometimes pursued by corporation officers is to buy stock in subsidiaries when conditions appear unfavorable and later dispose of these shares when, as the result of grossly inflated statements of earnings, the public is induced to buy them at high prices. Properly prepared **consolidated statements** go far toward prevention of these abuses.

Inside information is sometimes made the basis upon which directors buy and sell stock in their own companies. Some financiers approve of this, but the ethical view appears to be that it is wrong for a director to base such action on information which should be, but is not, made public. It is an abuse of trusteeship to profit by the advance information which directors, by the nature of their work, secure.

Stockholders controlling a majority vote sometimes defraud the minority, or exploit creditors. One plan of defrauding minority stockholders is to pay all profits earned into the treasury of a company owned by the controlling stockholders. Another plan is to elect themselves officers and then vote themselves large salaries. **Creditors** are sometimes defrauded by officers who, having bought heavily, sell out, take the proceeds, and then permit the corporation to become bankrupt. This is so grossly fraudulent that more refined methods are usually pursued. Bond issues are sometimes sold on the strength of large surpluses which are later depleted by heavy dividend payments. Sometimes cash secured by sale of bonds is used to pay dividends. Sometimes large dividends are paid without regard to upkeep requirements, resulting ultimately in heavy losses to creditors. Sometimes dividend payments justifiable under more favorable circumstances are continued in bad times with resulting injury to creditors.

Selection of responsible directors is a remedy for many of these abuses. The power to do this is, however, largely theoretical in case of most stockholders because they have neither time nor facilities for making careful investigation of the affairs of their companies.

Four methods of tiring out minority stockholders are given by T. Mulvey, as follows:

1. Piling up huge undistributed surplus.
2. Making a contract with a subsidiary permitting subsidiary to take most of the profits.
3. Paying out profits in form of exorbitant salaries.
4. Selling profitable features of an enterprise to a new company promoted by majority stockholders.

Charter or by-laws should contain provisions controlling such abuses. Mr. Mulvey says:

Salaries may be limited, the dealings with subsidiary companies for the purpose of withholding profits may be regulated, methods of accounting may be devised whereby dividends may not be withheld. A sale of the undertaking may be prohibited, except with unanimous consent. The shareholder has a contract with the company which is made up of the statutes, charter, and articles or by-laws. These may be framed so that exactions or overbearing methods of the majority may be eliminated.

Cumulative voting is a means of securing minority representation on the directorate.

Salaries, contracts, accumulation of surplus, and **sale of assets** may be regulated, if a business is well standardized. But there is the danger of placing hampering restrictions. Moreover, it is hardly possible to make regulations which prevent **misrepresentation** and **misuse of inside information.**

Publicity is the best remedy for these evils. Statements given wide publicity must be accurate and impartial. This serves as a powerful incentive to honest service on the part of officers and directors of corporations.

Financial Involvements

INSOLVENCY.—Somewhat less than 1% of all concerns become insolvent each year. The record for the years 1912-1921, inclusive, is:[11]

	No. of Failures	No. of Business Concerns	Percentage of Failures
1912	15,452	1,564,279	.98
1913	16,037	1,616,517	.99
1914	18,280	1,655,496	1.10
1915	22,156	1,674,788	1.32
1916	16,993	1,707,639	.99
1917	13,855	1,733,225	.80
1918	9,982	1,708,061	.58
1919	6,451	1,710,909	.38
1920	8,881	1,821,409	.49
1921	19,652	1,927,304	1.02

This table does not cover embarrassments settled out of court, or sales of concerns which have grown decrepit and have been sold to men or companies willing to rebuild them with fresh capital. Some concerns become chronic money losers and pass from hand to hand until liquidated or absorbed by some powerful company. In case of many small retail establishments, the owner himself does not know what the results are until he has become hopelessly insolvent.

Economic insolvency exists when liabilities exceed assets.

Bankruptcy exists when this condition is recognized by a court of competent jurisdiction.

A concern may be economically insolvent but not become a bankrupt. **Rigid retrenchment** may bring it back to a solvent condition. Such a condition of affairs may arise in periods of rapidly falling prices because inventories of goods are carried which cannot be sold except at heavy losses.

Technical or financial insolvency sometimes arises as the result of inabil-

[11] Dun's Review, January, 1922.

ity to meet current liabilities when total assets exceed total liabilities. It is the result of **poor financial management,** there being a wrong distribution of fixed and current assets.

Two chief classes of business failure are:

1. Those for which the management is responsible.
2. Outside circumstances for which the management is not responsible.

Under the first class are those resulting from:

(a) Incompetence.
(b) Lack of capital.
(c) Poor credit management, etc.

About 80% of failures are accounted for by this group.

Under the second class are those resulting from:

(a) Competition.
(b) Physical disasters.
(c) General business conditions.

About 20% of failures result from these causes.

Lack of working capital causes one-third of legal insolvencies in the United States. Sometimes lack of working capital results from too rapid growth during which working assets are converted into fixed assets. This is **capital mismanagement.** A given type of business requires a certain **minimum capital** to start right. In each industry these limits are so well known that those who understand the situation will not launch a new enterprise unless sufficient capital is forthcoming.

Overextension of capital assets frequently absorbs cash which should be held in reserve for payment of current liabilities. Under these conditions borrowing is difficult because of the company's poor financial showing. **Merchandise inventories** are sometimes expanded at the expense of a satisfactory showing of cash resources. **Slow collections from customers** after merchandise is sold may have a like effect. **Payment of dividends** when the cash position does not justify it, may cause technical insolvency. **Inability to dispose of refunding securities** owing to money market conditions often results in great stringency in cash and may cause technical insolvency.

PROCEDURE IN INSOLVENCY.—The five possible courses of action are:

1. Voluntary agreement among creditors, confirmed by a court, to some form of settlement of their claims. This is termed a **composition.**
2. Voluntary dissolution on part of corporation, its assets being divided among its creditors.
3. Individual, partnership, or corporation may be adjudged bankrupt and a **receiver in bankruptcy** be appointed to dispose of assets and distribute proceeds.
4. Corporation may secure appointment of a **receiver in equity** who carries on the business and works out a **reorganization plan.**
5. Assignment for benefit of creditors.

Compositions are more frequent in case of small than of large concerns, because it is difficult to get a large number to agree to a plan. It is the most economical and satisfactory plan where practical. In some instances an agreement on the part of creditors to wait one or more years for the satisfaction of their claims is effective. It is well in such cases to place some trusted person in charge to supervise conditions during the critical period of recovery.

Dissolution followed by distribution of assets among creditors is now

common. To do this it is necessary to secure consent of both creditors and shareholders. This is difficult because these parties distrust the officers in charge. **Voluntary dissolution** is, however, often feasible when conditions are unsatisfactory but actual insolvency does not exist. Illustrations are the dissolution of **combinations in restraint of trade** due to court decrees. The procedure consists in gradually closing down, disposing of assets, and distributing proceeds among creditors and stockholders. The U. S. Express Co., although solvent, was gradually losing business because of competition of other companies and the parcel post. It succeeded in disposing of most of its assets to other express companies at reasonable prices and thus avoided serious losses.

Bankruptcy proceedings in the United States are governed by the National Bankruptcy Act of 1898, and its various amendments. Bankruptcy proceedings have two objects, viz., (a) protect creditors, and (b) free the bankrupt from insupportable debt. Bankruptcy is either **voluntary** or **involuntary.** **Railroads, banks,** and **insurance companies** cannot take advantage of the bankruptcy law, because it is against public interest to permit stopping of their operations. National and state banking and insurance acts provide for the winding up of banks and insurance companies. Under the Bankruptcy Act one is insolvent "when the aggregate of his property, exclusive of any property that he has conveyed, transferred, concealed or removed, or permitted to be removed with intent to hinder, delay or defraud his creditors, is not, at a fair valuation, sufficient in amount to pay his debts." To throw a person or concern into involuntary bankruptcy it is necessary that he or it, being insolvent, commit an **act of bankruptcy.** See section on "Bankruptcy, Insolvency, and Receivership."

Owing to the wastefulness of bankruptcy proceedings it is often preferable to petition a **court of equity** to appoint a **receiver,** who carries on the business under the court's supervision until a **reorganization plan** is worked out. In some jurisdictions the petition is known as a **bill in chancery.** Any one of the following parties may present the petition:

1. The corporation itself
2. The stockholders
3. Secured creditors
4. Unsecured creditors

Applications by stockholders are made but infrequently. **Friendly creditors** frequently make application, requesting the court to appoint one of its own officers or some person close to the management as receiver. This is known as a **friendly receivership.**

POWERS AND DUTIES OF RECEIVERS.—A receiver in bankruptcy takes possession of property of the insolvent, disposes of it as quickly as possible, and distributes the cash realized. A **receiver in equity** continues the business in operation with as little loss as possible. He introduces as many economies of operation as possible and endeavors to place it on a profitable going basis. Concerns which are **technically insolvent** but whose assets exceed liabilities are usually handled in this way. It is the best procedure in case of practically all forms of undertaking, including banks, insurance companies and railroads.

A receiver acts under direct authority of the appointing judge. The receiver ordinarily secures special authority from the court for all acts which fall outside the ordinary routine of business. **Receiver's certificates** are securities issued upon such authority and rank ahead of all other claims.

The receiver's powers of management are extensive. He purchases new equipment, finds new markets, and establishes improved systems of operation. If very successful he may be made an executive of the reorganized concern. Receiverships are frequently of 2 or more years' duration. Occasionally the results of receivership are so bad that a reorganization cannot be worked out and it becomes necessary to wind up the business; but frequently the extensive powers given receivers result in benefit.

CORPORATE REORGANIZATION.—Reorganization consists in the tearing down of an old concern and the use of the materials to reconstruct a new one. A **financial reorganization** consists in the rearrangement of liabilities so that dividend and fixed charges will conform to earning power. To attain a successful reorganization it is necessary to secure the assent of both the court and a sufficient number of security holders. The various, and oftentimes conflicting interests are represented by creditors, stockholders, and banking houses who underwrite the new plan. Within these general groups there may also be conflicting interests, as where there are various classes of bondholders possessing various liens. Naturally the most influential security holders are owners of **prior lien bond issues;** next, the holders of **junior lien issues.** These bondholders usually make their wishes effective by having as their representative a reliable banking house which acts as their advisor. The stockholders, in drastic reorganizations, may have their claims brushed aside. On the other hand, the stockholders, if needed to supply additional capital, may be given some voice in the reorganization. Before a plan can become effective the consent of a high percentage of bondholders of all issues is essential. For this reason **free discussion** of the situation is usually desirable.

Protective committees of the security holders are formed as soon as announcement of insolvency of a large concern is made. Each security issue usually has its separate committee, but one committee may represent two or more issues if their interests do not conflict. A committee usually consists of a group of self-appointed individuals who seek to gain the authority of their fellow security holders to act for them. The members of these committees are paid substantial fees and membership is usually regarded as an honor. In some small reorganizations, however, these committee members serve without compensation. Attorneys' fees must in any case be paid; also the reorganization managers and trust companies or banks which act as depositaries of securities must be paid. **Other items of expense** are accountants' services, costs of advertising and circularizing, receiver's fees and those of his consulting attorneys. The **total cost** of **reorganization** is heavy.

These committees, in consultation with the receiver, usually agree to form a **reorganization committee,** which consists of at least one representative of each separate interest. This committee, after various conferences and negotations, devises a **plan of reorganization.** When the number of security holders is large the committee method of reorganization is the only practicable one. Even in small corporations the plan sometimes saves trouble and expense.

The **first step in reorganization** is an **examination and analysis of the accounts.** To determine actual income and expense it may be necessary to reconstruct the accounts over a series of years. Any plan of reorganization must await the results of this examination before being thrown into final form. The **second step** consists in securing agreement of the various committees to the proposed plan. This usually requires much time because the

members of these committees are occupied with various other interests. The **third step** is the conduct of the company by the receiver as economically as possible. He raises new capital, improves the operating organization, and disposes of non-essential property. The **last step** consists in putting the new plan into operation. It is customary, although not necessary, to organize a new company and sell the property of the old company to the new one. If this is done the reorganization committee turns in the securities of the old company in payment for the property, issuing securities of the new company in exchange. Non-assenting security holders, under these conditions, are liable to find themselves interested in a company which is practically non-existent.

WORK ACCOMPLISHED BY REORGANIZATIONS.—Specific ends to be attained are:

1. Raising of additional capital needed and subsequent operation of corporation.
2. Reduction of fixed charges.
3. Simplification of financial structure.
4. Increasing facilities for raising capital in future.
5. Elimination of unprofitable lines.
6. Liquidation or refunding of urgent obligations.
7. Caring for unpaid dividend accumulated on preferred stock.

Ordinarily the **most urgent task** is to secure additional funds either for fixed or working capital. Cash is needed. The three possible ways of getting it or of securing a reduction of indebtedness are:

1. Selling securities on very favorable terms.
2. Assessing bond or stock holders.
3. Liquidation of current indebtedness by issuing bonds or preferred stock in payment.

METHODS OF RAISING ADDITIONAL CAPITAL.—One method of raising additional capital is to **sell securities.** If securities of other corporations are owned these may be available for sale; but usually this expedient for raising capital is exhausted before the receivership occurs. Sometimes there are assets sufficiently free from lien to permit the issuance of new securities which are marketed at a heavy discount. The tendency is to treat old security holders harshly in order to provide issues that are attractive to outside investors.

Assessments are levied on common stockholders in nearly every reorganization, the reward being an interest in the reorganized concern. Occasionally preferred stockholders and junior bondholders are assessed; in short, any security holder not fully protected by marketable assets may be assessed. If he refuses to pay, a new corporation is organized which at judicial sale turns in prior lien securities in payment for property of the corporation, thus automatically wiping out the junior security holder. In return for the assessment the person assessed is usually given new stock of nominal value and possibly something in securities of better grade. In the reorganization of the San Francisco Railway Co. in 1916 an assessment of $50 per $100 par of old first preferred, second preferred, and common was levied. In return stockholders received $50 par of prior lien bonds and a bonus of common stock—the first preferred receiving $100 par of new common, the second preferred $90, the old common $82.

In 1897 the common stockholders of the Houston & Texas Central Railroad Co. were assessed 73% of the par of their holdings.

If the assessment is too drastic it may not be profitable for the stockholder to pay; consequently the assessment should be made sufficiently attractive to secure the money asked. It is the experience of most persons paying assessments in railroad reorganizations that the increase in value of their holdings following the reorganizations has fully justified paying the assessment.

Funding floating indebtedness by issuance of long-term securities is practicable only when the company is fundamentally prosperous and is merely suffering from temporary shortage of cash. This plan was pursued in both Westinghouse reorganizations.

Services of an underwriting syndicate are an essential when cash is to be raised by assessment or sale of new securities. In return for a commission the syndicate agrees to pay assessments of defaulting security holders, taking over the securities such holders would have received had they paid the assessment. If new securities are to be issued the syndicate takes them over on an agreed basis, as is done in case of normal financing of solvent concerns.

REDUCTION OF FIXED CHARGES.—In cutting down fixed charges in reorganizations, the following principles should be noted:

1. Maximum fixed charges after reorganization should not exceed minimum net earnings of the reorganized company.
2. As far as possible fixed charges should be limited to bond interest. Avoid burdensome sinking fund requirements, guaranteed dividends, fixed rentals, etc.
3. The junior lien security holders should take the losses; the prior lien security holders should not suffer unless the reorganization is drastic.
4. The nominal value of new securities received by old security holders should not be reduced greatly below that of the old securities surrendered in exchange.
5. Bondholders who have their claims reduced should benefit by future increased earnings.

In case of 27 industrial reorganizations, reduction of fixed charges averaged 25%.

REORGANIZATION RESULTS.—The tendency is toward **drastic measures** to avoid a recurrence of the situation making reorganization necessary. Frequently **capitalization** is increased, but by substituting for bonds issues having claim on future earnings. Bond capitalization is reduced and share capitalization is increased by a greater amount. **Simplification of financial structure** is aimed at. Many small issues are replaced by a few large ones, and facilities are provided for raising additional capital in future. This is accomplished by securing authorization of issues larger than are required for present purposes. The **deed of trust** usually contains provisions to be met in the way of additional security when new bonds are to be sold under such provision. **Elimination of unprofitable business** is frequently accomplished in reorganizations. Bondholders who have some unprofitable plant as security may be required to reduce their claims, or they may be given the plant, thus letting them out of the reorganized company.

SECTION 17

BANKING AND BANK CREDIT

Banking Fundamentals

SCOPE OF SECTION.—This section applies mainly to **commercial banks,** or to the **commercial departments of banks.**

PURPOSE OF BANKS.—Many individuals and corporations have surplus funds. Such funds are safely left in banks, ordinarily without charge. The bank pays out money on order and keeps a record of transactions. All business houses and many individuals actively receive and pay money. In some cases payees reside at a distance so that paying actual currency is difficult. It always involves risk of robbery and misplacement. Banks pay funds on order of depositors. Payments are made by drawing checks for the desired amounts. There is no necessity for making change, little or no risk is involved, and the checks furnish an absolute record of payment.

INTEREST ON DEPOSITS.—Usually banks make no charge for this service; sometimes they pay the depositor. On savings accounts banks pay interest, usually 3% or 4%. A few banks pay higher. In cities where competition is keen, interest is paid on checking balances.

The practice of paying interest on checking accounts varies widely. Some banks pay interest on an average daily balance of over $500; others on $5,000 or over. Activity of the account and borrowings are factors considered and the rates paid vary between individual accounts in the same bank. The most common rate is 2%.

MAKING FUNDS AVAILABLE.—Active business men are frequently in the market for funds needed to promote their undertakings. Most businesses are to some extent seasonal, there being periods when business is active, with a large demand for funds, and other periods when a minimum working capital suffices; there are times when collections are slow and others when there is outstanding only a moderate total of accounts.

When a business needs funds to tide it over a peak, or when it can make 8% on money obtainable at 6%, it tries to borrow.

The **bank's business** is to loan funds to those who can employ them profitably and safely. Both factors are necessary.

A bank serves by securing funds from individuals who cannot use them immediately, and turning them over to others who can employ them profitably. The community is thus served by employment of otherwise idle capital.

SUMMARY OF BANKING BENEFITS.—The man who, having surplus money, deposits it in a bank, gains through having a safe place for its keeping and a convenient method of making payments, and through receiving inter-

est. The man who employs extra funds by borrowing gains through having such funds available at reasonable market rates. The community gains by placing of surplus funds in hands of those who use them to pay wages and buy supplies.

Banks profit through renting out funds for more than they cost the banks. The banks' cost is interest paid depositors, cost of service, and losses. In a commercial bank service is the heaviest cost, consisting of wages, taxes supplies, rent, and general operating expenses.

General Method of Operation

RECEIVING OF DEPOSITS.—To attract funds, banks encourage opening accounts and making deposits. The bank takes the signature of the new customer for its signature file. Signatures on checks are compared with these to determine their genuineness.

References are sometimes required of new depositors. Banks are jealous of their reputation and are judged by their customers. A depositor of poor business character harms the bank's good name and, by depositing uncollectible items or overdrawing his account, causes loss and expense.

City banks often require a **minimum initial deposit** to eliminate small, unprofitable accounts. Competition reduces the severity of these requirements. Banks with minimum rules make many individual exceptions.

Banks furnish **passbooks,** in which tellers receipt for deposits, and blank check books. At intervals, generally each month, a statement of deposits received and checks paid, together with canceled checks is given customers. In place of such periodic statement, customers in many banks may leave passbooks for balancing and return of canceled checks.

In **savings accounts** each deposit and each withdrawal is entered in customer's passbook as made and balance is extended. No statement is required.

LOANS.—Banks, to earn profits, must keep their funds employed. Commercial banks do this chiefly by means of loans to business borrowers on 30 to 90 days' time.

Banks are usually anxious to make short-time loans to all who are willing and able to repay them at maturity. They sometimes take the initiative in locating possible borrowers. Generally, however, there is sufficient demand and the banks need only wait for loan applications. With borrowers as askers there is presented an opportunity for making the necessary investigations. These cover both ability and willingness to repay.

Banks, although anxious to loan, cannot afford to take many losses. They scrutinize applicants for credit, eliminating all who present material elements of risk. Financial strength, earning power, security, moral character, and general conditions are factors affecting ability to repay.

RESERVE.—A large part of deposits in commercial banks may be withdrawn on demand. The **first principle of banking** is to have sufficient cash available to meet this demand.

Not all customers of banks ask for their money on the same day. Deposits normally offset withdrawals, so that it is unnecessary to maintain a 100% reserve. The amount to maintain varies with individual banks—their location, connections, kind of customers, and policies.

Banks belonging to the federal reserve system are required by law to keep their **legal reserve** with the system.

Reserve requirements, member banks:

In central reserve city, 13% of demand deposits.
In reserve city, 10% of demand deposits.
Outside central reserve or reserve city (country banks), 7% of demand deposits.[1]

For all banks **reserve requirements on time deposits** are the same, 3%. No legal requirements exist as to amount of cash to be kept in bank's own possession. The Federal Reserve Board may place a bank in the outlying parts of a reserve city, in the country bank class.

For state banks not members of the system, each state has its own reserve requirements. These require that a certain amount of cash be kept in bank's own vaults and that another percentage of bank's deposits be kept either in cash in its own vault or on deposit with approved banks.

In addition to legal requirements banks must maintain **certain reserves** so that their business will be conducted on sufficient margin of safety.

Funds are usually kept on deposit with one or more other banks. These balances earn interest at from 2% to 3% and may be withdrawn on demand. In addition **secondary reserves** are necessary. These are assets which can be converted quickly into cash without disturbing the bank's customers or its general business. United States government bonds or others having a wide and ready market, are the most common form.

To illustrate, a member bank located in a reserve city has demand deposits of $3,000,000 and time deposits of $2,000,000.

10% of $3,000,000 demand deposits	$300,000	
3% of $2,000,000 time deposits	60,000	
Required reserve with federal reserve bank	360,000	
Actual balance with federal reserve bank		$ 390,000
Cash in bank's own vaults		100,000
On deposit with other banks		400,000
Federal reserve collection account		90,000
Loans eligible for rediscount		1,500,000
Call loans		124,000
Bonds		700,000

The only reserve required by law is with the federal reserve bank. The other items are determined by the bank itself. The **voluntary reserves** may vary materially according to bank's policy and type of business.

If customers begin drawing funds faster than they are deposited, banks first pay out cash from their own vaults and then draw on federal reserve bank and on deposits in other banks. Deposits in other cities may be transferred by telegraph.

If withdrawals continue, money is obtained by selling bonds or rediscounting notes. Thus cash is raised quickly without calling in bank's own loans or discommoding customers by refusal to renew.

Call loans and **commercial paper** quickly sold furnish another important class of reserves. These latter investments are often made through the agency of a city bank, chiefly New York. The owning bank may never see the actual paper, holding merely an acknowledgment.

[1] New York and Chicago are the only central reserve cities. There are about 60 reserve cities.

Banking Development in United States

ADVANTAGES OF LOCALLY OWNED INSTITUTIONS.—In the United States the banking system does not follow the European and Canadian practice of having a few large banks with branches spreading throughout the country.

Instead, legislation and custom favor the growth of individual banks. There are now about 31,000 independent institutions.

The **advantages** claimed for this individual system are: locally owned institutions are more interested in community growth; the officers have their money invested and make their homes in the town; dividends are kept in the community where earned; individual banks prevent centralization of power.

DISADVANTAGES OF LOCALLY OWNED INSTITUTIONS.—Many communities depend on one industry, such as wheat-growing or a single factory. In such wheat sections, if crops fail or if market prices drop so that farmers produce at a loss, a local bank cannot collect loans. The bank's customers, being dependent on wheat, draw out funds to meet expenses. The bank facing demands for funds is unable to realize on its principal assets. If such condition continues long, the bank fails.

If the bank's business is spread over several states and industries, a crop failure in one locality is not serious. National banks are not permitted to loan to one borrower more than 10% of the bank's capital and surplus. This restriction, however, does not apply to discount of bills of exchange drawn in good faith against actually existing values. With small banks this restriction may handicap some of its customers. With large banks maintaining branches, individual borrowers can secure the full accommodation which their credit and standing rate.

Federal Reserve System

HISTORICAL BACKGROUND.—Alexander Hamilton organized the Bank of the United States. It was fiscal agent of the government, had authority to issue notes which circulated as money, and had branches throughout the country.

In 1816, 5 years after the expiration of the charter of the First Bank, the Second Bank of the United States was chartered for 20 years. When the charter came up for renewal, President Jackson opposed it and definitely and finally destroyed the central bank idea.

There then sprang up many small state institutions with power to issue notes with circulation privilege. There was little or no supervision.

Gradually control became more strict; state banks were deprived of power to issue notes. At the close of the nineteenth century banks generally were conservative, well-managed, individual institutions; but the panic of 1907, which was a product of our banking system, brought home to the public that having well-managed individual banks was not sufficient to prevent panics.

The Aldrich Commission recommended changes in our banking system to eliminate "banking panics." On the basis of its investigations and reports, the federal reserve system was developed.

PURPOSE OF FEDERAL RESERVE SYSTEM.—One purpose of the federal reserve system is to provide means whereby banks with sound assets

may convert them quickly into cash. If the public knows that banks can obtain quickly all necessary cash, withdrawals due to fear are eliminated.

The federal reserve system is a compromise between the individual and the centralized system.

MODE OF OPERATION.—Member banks may rediscount short-time commercial notes with federal reserve banks. To obtain currency to make such loans, the federal reserve banks use this commercial paper as security for issuing federal reserve notes. These circulating notes are protected by the maturing paper and by a 40% gold reserve. Movements of crops and legitimate transactions create the notes and acceptances used for rediscount purposes.

To illustrate, the Northern National Bank has $3,000,000 in promissory notes. Needing cash to meet demands of customers it rediscounts $500,000 of these with its federal reserve bank. Federal reserve bank credits account of member bank, $500,000. Member bank's indorsement guarantees the discounted paper. Member bank can convert the credit into cash by drawing a check.

Federal reserve bank obtains currency to rediscount this paper by putting up promissory notes deposited by member bank as collateral with agent of Federal Reserve Board. These agents have authority to authorize issuance of federal reserve notes.

Federal reserve bank continues this process as long as it has sufficient gold to meet the 40% reserve requirement. This requirement is a check on rediscounting which became effective in 1921.

NATIONAL BANKING SYSTEM.—From 1836 to 1863 only state banks existed in the United States. The government, to finance the Civil War, desired to enlarge the market for United States bonds and bring stability to the demoralized currency situation. Congress authorized the establishment of banks with authority to issue paper money secured by United States bonds. In 1865, to compel application for national charters, a tax of 10% was levied on notes issued by state banks.

At first national banks confined themselves to commercial banking. In recent years, savings and trust departments have been added.

The law has been so liberalized that the business of national banks is about the same as that carried on by state commercial banks. National banks, however, are under supervision of the Comptroller of the Currency, while the state banks are supervised by state banking departments.

FEDERAL AND STATE EXAMINING SYSTEMS.—To protect the public, it is necessary to provide supervision and examination of banks. Under the national banking system a **minimum capital** is required based on size of the city in which bank is located. Stockholders are liable to assessment to the extent of the par value of their stock holdings, and the bank must make three sworn reports of condition each year, at surprise dates. The Comptroller's office has special examiners who, twice each year, examine each national bank to determine solvency.

The various state banking departments have a similar system. The federal reserve banks also make examinations of their member banks. In addition, the national laws and those of most states require an examination twice yearly by directors. These directors' examinations, although useful, are not as complete as those made by regular examiners, due to lack of time and experience. Sometimes directors hire an outside auditing organ-

ization, thus obtaining a thorough investigation. In a few cities clearing house examiners keep careful check on solvency of member banks.

Outline of Bank Operation

RECEIPT AND PAYMENT OF DEPOSITS.—Banking, briefly sketched, consists of receiving and repaying deposits; keeping a record of the amount owed each depositor; the investment of funds; maintaining investment records; and furnishing various collection and exchange services.

A teller receives the funds deposited, receipts to the customer, and forwards the deposit slip to the bookkeeper (deposit account bookkeeper in large banks) to be credited to the depositor's account. When a check drawn against this account is cashed, the teller sends the paid check to the bookkeeper. It is charged against the account and reduces the balance. By keeping a list of deposits received and items cashed, the teller knows how much cash he should have at the end of the day. A cash count then determines if there have been any errors.

LOANS AND DISCOUNTS.—When money is loaned, a promissory note is received. Information as to the amount of notes so purchased is furnished the bookkeeper at the end of the day. He debits the asset account, **Loans and Discounts.** When payment is received a notice is likewise sent the bookkeeper (general ledger bookkeeper in large banks), who credits the account for the payment on principal. These credit and debit slips, first regarded as memorandums, have come to serve, in many cases, as original entries. Posting is made directly from these slips into the ledger.

When a borrower, in place of taking currency, wishes amount of loan credited to his checking account, the effect of the entries is exactly the same as if the proceeds of the note had been drawn in cash and then deposited by the customer. There is a debit to Loans and Discounts and a credit to depositor. In neither case, whether borrower is given cash or credit on his account, would entries be made to a cash account. The amount c cash at close of business must be counted to get the figure necessary to balance.

INCOME AND EXPENSES.—When the borrower makes an interest payment, the teller writes a slip, called a credit, authorizing the bookkeeper to credit **Interest Income.** When expenses are paid, a debit slip authorizes the charging of **Expense Account.** After posting day's business, the bookkeeper takes a trial balance, including therein the teller's cash count.

When a draft or other item is collected for a customer, a small **service charge** is customarily made. A credit slip is written for the total of such fees. The teller sends this slip to the bookkeeper, who credits it to **Commissions,** or a corresponding account.

As banks increase in size a division of labor is necessary. In expanding the system to cover the division of work, hardly any two banks follow exactly the same methods. Details vary widely, but the same broad accounting plan is followed.

Bank Accounting in Detail

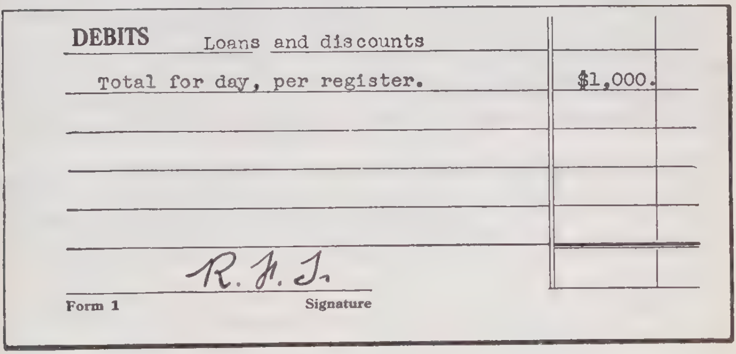
TWO GENERAL DIVISIONS.—Bank accounting consists of two general divisions. The first deals with the records necessary for the control of the bank's assets and the income therefrom, including liability to stockholders,

while the second deals with the records necessary to show the bank's liability to its individual depositors.

Records which deal with the bank's assets follow in scope the same general accounting plan as might be found in a simple holding corporation. The **modifications** come chiefly in the manner of making the original entry and the necessity of always taking a daily trial balance.

ORIGINAL ENTRY—DEBIT AND CREDIT SLIPS.—The original entries in bank work are usually made on slips. A check, for instance, forms an original debit entry. The deposit ticket is another slip which forms an original credit entry. Considering the accounting system in its simplest forms, suppose that John Jones makes a $1,000 loan at the Northern National Bank.

The **note teller** uses a printed slip, possibly 3 x 5 in., with the heading "Debit" (Form 1). On this debit slip he writes the account **Loans and Dis-**



DEBITS Loans and discounts

Total for day, per register. $1,000.

R. H. T.

Form 1 Signature

Form 1. Debit Slip

counts, a brief explanation of the transaction, and the amount, "$1,000." Then for the credit entry he makes up another slip which serves as deposit ticket for John Jones' account.

The **debit slip** goes to the general bookkeeper and is entered in his journal opposite loans and discounts, usually with no explanation. The journal is posted to the general ledger and the amount of loans and discounts is increased. The **credit slip** goes to the individual ledgers and is posted to the credit of John Jones' account. It is there grouped with other deposit tickets and the total for the day is given to the general bookkeeper who enters it in his journal as a credit opposite individual deposits.

If Jones wishes to draw the amount in cash, no credit slip is made. Entries are not made to the Cash account. The contra entry is the only one used. A debit to any other account is automatically a credit to Cash.

The **teller** starts the day with, say, $10,000. Brown makes a deposit of $100 in currency. Brown's deposit slip is a credit entry to individual deposits. The teller should now have $10,100 on hand. Next, a check is cashed for $50 on Smith's account. The check is a debit entry. It decreases the teller's cash, making the net amount that should be on hand, $10,050.

The teller, **to balance his work for the day,** adds to his beginning cash all

the credit items. He counts his cash on hand at the close of the day and to this figure adds his debits. In the example just given, he would add the $100 in credits to the beginning cash of $10,000, making $10,100, and to the closing cash of $10,050 he would add the debits of $50. If the two totals agree, the cage balances. With the volume of work that goes through a busy cage, it is the rule almost more than the exception that the exact amount of cash needed to balance is not on hand at the close of the day. These differences are carried in a suspense account known as **Over and Short** till the close of the current period and then charged off. A record is kept showing each teller's net differences.

Small banks with five or six employees or less, often do not balance the cages separately, but combine the work of the different tellers and strike a balance for the bank as a whole.

JOURNAL.—A bank journal is much the same as that in a commercial house. Entries are made in the journal direct from the debit and credit slips, with little or no explanation. A number of banks are eliminating the journal, posting directly into the general ledger from the slips.

GENERAL LEDGER.—A common form is the **loose-leaf pen-posted book** with a column for debits, a column for credits, and a column for balance. In modern bank work the balance is always extended. **Bound ledgers, machine-posted ledgers,** and **Boston ledgers** are also used for the general books.

DAILY STATEMENT BOOK.—Banks take a **daily trial balance,** having for this purpose a bound or loose-leaf book, printed with the names of the accounts. Such a trial balance is called a daily statement and is kept as part of the bank's permanent record. The officers in well-managed institutions watch the daily statement, noting changes in assets and changes in deposit totals.

Reports of condition for the Comptroller's office and for state banking departments are always called for as of some previous date. The information is taken from the daily statement book.

Asset Accounts

LOANS AND DISCOUNTS.—The most important assets in the ordinary commercial bank are notes. These notes are generally for 90 days or less and one borrower may have many separate obligations owing to the bank. Because of the importance of the asset and the frequency with which the items change, this department requires accurate records.

LOAN REGISTER.—Loans as made are entered on a loan register, usually one line to the loan. At the end of the day the new loans are totaled and a **debit ticket** sent to the general books. A serial number is assigned each note.

When payments are made on notes, the payments are entered in another column of the note register, and an indorsement is made on the note itself. Such payments are totaled at the end of the day and the figure is entered on a credit slip. Interest payments are handled in the same manner, the credit going to interest income.

In small banks, such items may be entered individually in the journal.

DISCOUNT REGISTER.—Notes discounted may be kept separate from interest-bearing paper by being entered on a separate register. Some banks regard all paper, except demand, as discounted by adding to the principal the

interest that will be due at maturity and computing discount on the total so obtained.

TICKLER.—Each note is entered on a tickler under its payment date. Notices are usually mailed to the makers from 5 to 10 days in advance. The tickler may be a book, cards, or a file, in which a notice or a copy of the note can be filed under the payment date.

The notes themselves are filed alphabetically, numerically, or by maturity dates. The total notes on hand must balance with the control account in the general books. Sometimes notes, as they become due, are sent to another department for collection. Those past due may be kept in a separate pouch in order to come to the attention of the officers responsible for pushing collection.

LIABILITY LEDGER.—As a single borrower may have many different notes owing to the bank and may be indorser on other paper, it is advisable in all banks and customary in those of any size, to maintain a liability ledger (Form 2). This ledger may be in various forms, but with all, the purpose is the same. Under the name of the borrower is shown the total amount of his obligations to the bank, both on his direct line and on his secondary line as indorser. This liability ledger should balance with the control account Loans and Discounts.

Common forms of liability ledger are loose-leaf sheets, cards, and actual copies of the notes filed so as to serve the purpose.

COLLATERAL REGISTER.—On many loans collateral is deposited. As this collateral is held in trust and may run into a great deal of money, it is necessary for the bank to keep a careful record and control thereof. Either the notes themselves show a record of the collateral, or there is supplementary agreement, or the securities are listed on a duplicate or triplicate receipt form.

In addition, banks use various types of **registers for listing collateral.** To check collateral it is best to work from the original entries and, where possible, obtain the borrower's verification. Care must be taken to see that the collateral is genuine, that the market value is sufficient to cover the loan, that the amount agrees with the original entry, that all coupons which should be attached to bonds are thereon or accounted for, and that stock certificates and registered bonds are indorsed so that they can be collected by the bank in case of necessity. Such indorsements may be made in lead pencil.

The bank is not ordinarily allowed to take its own stock as collateral.

CHARGED-OFF ITEMS.—Conservatively managed banks charge off all assets which become bad or doubtful.

Such items when charged off are debited directly against **Undivided Profits,** or against **Profit and Loss.** The explanation is shown in detail on the general ledger. The note itself should be kept in a special **charged-off file** or envelope in the vault. The auditor should verify all such entries, see if they were authorized, and see if the actual notes are on hand. Payments of principal or interest made after date of the charge-off should be credited to the Undivided Profits account. The indorsements on the notes should be gone over to see that such credits have been made.

CASH AND DUE FROM BANKS.—On a condensed statement this heading is used to cover actual cash, cash items, clearing house items, cash collection items, lawful reserve with the federal reserve bank, collection items with the federal reserve bank, cash items in transit, and balances due from other banks.

Actual cash is principally a problem of counting. Foreign currency, if the amount on hand is small, may be carried either at par or cost. If the total of foreign money is of any size, it should be carried at cost or market, whichever is lower, though so doing requires care in verifying the book figures.

Cash items merit special attention. It is a "catch-all" account. If a check has been cashed for party without an account and the check comes back unpaid, it may be carried in cash items for a few days while an attempt is made to recover from the indorser. This is only one of the many causes for items being carried under this heading. The danger is that such items will stay there in place of being charged off; that unauthorized loans will be carried; or that checks will be held in place of going on the books and showing an overdraft. All items, before being permitted to go as cash items, should bear the approval of an officer and the account should be checked through frequently. There is no ledger account for cash items, such items being run each day and used to balance as would a corresponding amount of cash.

Clearing house items represent checks drawn on banks that clear through the local association. All such items are to be paid in the clearing house settlement of the following day.

Cash collection items are local items that are collected by messenger. All items so carried should be current.

When checks drawn on out-of-town points are deposited with the federal reserve bank, immediate credit is not given the depositing bank. The items are put in a **collection account.** The country is divided into zones according to the number of days required to make collection. If the check is drawn on a 2, 4, or 8-day point, the amount is switched from the collection to the reserve account automatically at the end of that time, even though in the particular case there might have been required more or less than 2 or 8 days. The member bank should keep a record showing under each date the amount that will come available as reserve.

The bank gives the customer, in most cases, immediate credit and then sends the item to the federal reserve or to another bank. If sent to a bank, which is not a correspondent, for collection, the amount sent will be charged to the **Transit account,** or **Due from Other Banks—Collection account,** pending the receipt of payment. When sent to a bank that has funds on deposit with the sender, the same practice may be followed, the debit to the correspondent's account not being made until advice is received or days required to reach correspondent have elapsed.

When funds are on deposit with another bank there is usually carried a separate general ledger account for that bank. As soon as items are mailed to a bank with which funds are deposited, that bank is debited even though the items may be in the mail for several days. It is figured that drafts drawn on the account will take at least as long in transit before being presented for payment.

BONDS AND WARRANTS.—Banks ordinarily own a number of different issues of bonds. It is customary to use a **subsidiary ledger** with an account for each issue. In this subsidiary ledger is shown both the par and the book value. Thus if a $100 Province of Manitoba bond is purchased for $98, a debit ticket for $98 is made to bonds and warrants in the general books and a subsidiary ledger account opened. In the subsidiary ledger account there is a debit column for the par entry of $100; a debit column for the book figure of $98; and final columns for extending both par and book balances.

As the **control account** does not cover par figures, it is probable that

errors will creep in. To find such errors or prove there are none, it is necessary to check back each par entry and par extension. It is not a sufficient check on the bonds on hand merely to see that the total agrees with the par balance called for by the **subsidiary ledger.** It is necessary to verify the par figures as shown.

With **coupon bonds** it is important to see that all not-due coupons are attached. If an audit is being made, see that the proper amount of interest was credited on interest dates and on sales to the income account.

Warrants, when carried as a bank asset, are merely checks drawn by a county, city, or other political subdivision, which checks are not paid for want of sufficient funds. Under state laws these warrants draw interest from date presented and stamped "Not paid" to the date on which called for payment. The rate varies in different states. As interest ceases on the date the warrant is called for payment, it is frequently necessary for the holding bank to investigate whether any of the warrants in its possession have already been so called.

BOND DISCOUNT AND PREMIUM.—Banks that have purchased bonds at a discount do not ordinarily amortize the discount on a so-called scientific basis, although savings banks are sometimes required to do so. Following the principle of always being conservative, the banks continue to carry the bonds at their cost figure until paid at maturity or until sold. At that date the entire profit is taken up as an earning.

In case of **bond premium** the practice is reversed. Here banks may write down the premium more rapidly than would be called for under an amortization plan. The practice varies among institutions. Some banks carry all bonds at par irrespective of cost.

FURNITURE AND FIXTURES.—Banks quite generally write down Furniture and Fixtures account to materially below the depreciated value. Many banks go so far as to write the furniture and fixtures entirely off, or merely show a nominal figure. New purchases are often charged directly against expense. For income tax purposes this practice of writing down furniture and fixtures arbitrarily or charging purchases to expense is not permitted. Where such has been done it is necessary to go back and set up a supplementary record from as good data as there is available and charge off depreciation on some fair basis. Charging depreciation on supplementary records is permitted banks by a specific income tax ruling.

REAL ESTATE.—Banking laws generally prohibit a bank from owning any real estate except that which it occupies for its home and such real estate as may have been acquired to protect loans previously made in good faith. National banks and state banks of most states are required to dispose of the property acquired for debts within 5 years or entirely write the amount off the books.

A subsidiary ledger account is usually opened for each piece. Some institutions debit carrying charges and credit income directly against the Real Estate account on the theory that the land is not carried as an investment but only till it can be disposed of, at which time the net profit or loss will be accounted for. The better practice is to charge carrying costs against expense as incurred. This is required on income tax returns.

STOCKS AND SECURITIES.—Items in this account are principally those that have been acquired on foreclosure. Real estate may be so carried up to the time the mortgagor's right of redemption expires. Under restrictions,

banks are permitted to subscribe for and hold stock in international banking organizations or to own stock in subsidiary companies.

Liability Accounts—Owing to Customers

DEPOSITS.—The most **important liability** of a bank is its deposits. A bank is the only institution that boasts about its liabilities. The reason is that the deposits measure the confidence which the community has in the bank, and determine the institution's influence and potential earning power.

As banks are dependent on public confidence, they must use every care that depositors' accounts are accurately kept. Most accounts can be withdrawn on demand. It is of first importance that all entries be posted up to date so that the bank may know instantly the amount a customer is entitled to withdraw.

So important is the balance, that modern bank ledgers, almost universally, contain space not only for debit and credit entries, but also for the balance. This balance may be extended with each posting or, as is usual, at the end of each day.

COMMERCIAL DEPOSITS.—A commercial deposit is subject to check. The customer may draw all or any part of it without warning. Ordinarily the account is active, with frequent entries. The bank is responsible for the genuineness of the checks which it charges against the account. It must ordinarily refuse to pay checks presented over the window, or send back checks coming through the clearings, if the balance in the account is not sufficient. Special arrangements are sometimes made to permit overdrafts. In doing this, time is a material element. Clearing house items must go back by a definite hour, usually about the middle of the afternoon, or not at all; money once paid over the counter is difficult to recover.

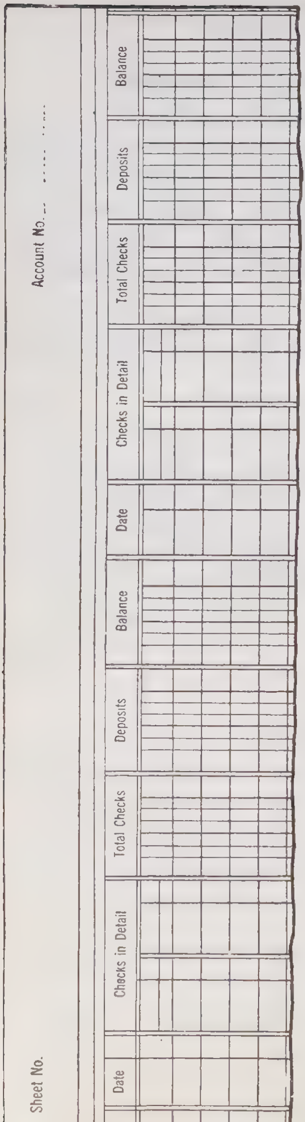
INDIVIDUAL LEDGERS.—There must be an **individual account** with each commercial depositor. These accounts are kept in what is actually a subsidiary ledger, with a control in the general books. Owing to the volume of transactions these individual books dwarf in comparison all other parts of the bank's accounting system.

There are **three principal types** of individual ledgers in use: the Boston ledger, pen-posted loose-leaf ledger, and the machine-posted ledger. The Boston ledger (Form 3, p. 871) is probably the most popular type in New England and New York, being quite generally used by the large New York banks. It is customary to print the depositor's name, leaving blank lines for new additions. The balance in every account must be carried forward each day, whether the account moves or not. The footing of the balance column is a daily proof that the ledger total is correct. When there are a number of checks on an account, an adding machine tape may be made with only the total posted to ledger.

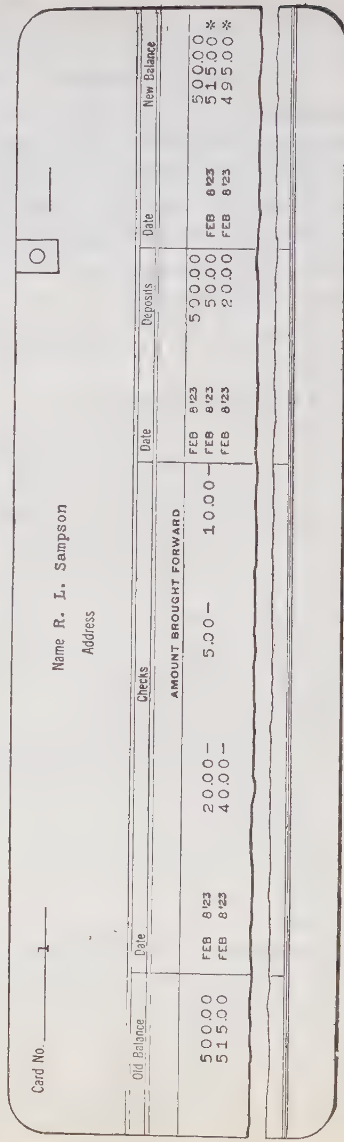
EXPLANATION OF DIFFERENT TYPES OF CUSTOMERS LEDGERS.—The pen-posted loose-leaf ledger (Form 4) is not as widely used as either the Boston ledger or machine-posting.

In case of the machine-posted ledger the machine used in posting to the ledger (Form 5) automatically subtracts any entry made in the check column and adds any entries made in the deposit column, printing the result to the right under "balance."

When the next entry is made, either the following day or a month later, this balance is picked up and carriage moved so as to print in the old balance



FORM 4. Loose-Leaf Pen-Posted Ledger Sheet



FORM 5. Machine-Posted Ledger

column to the left. The machine then automatically jumps to the check column. Items entered there will subtract. The carriage then goes to the deposit column and then to the balance column on the right.

Common method of proof is to give the same items to a second bookkeeper who posts the statement. The statement is arranged in the same form and is virtually a duplicate of the ledger. After posting an account, the bookkeeper offsets the sheet. The statement clerk does the same. After both have completed their work, they call back the new balances on these offset accounts. If one of the two has made an error by picking up the wrong old balance, writing a check or deposit wrong, or posting to the wrong account, the new balance which he obtains will not agree with the new balance obtained by the other.

When checks are large enough to cause an overdraft the machine locks, thus automatically bringing the overdrafts to the bookkeeper's attention. If he wishes to permit the overdraft, he presses the subtract lever and the balance is written with the letters opposite "O. D."

A **separate control** is kept, usually as a supplementary record, of every 400 or 500 accounts. Checks and credits are sorted to these divisions. In listing these sorted checks on the adding machine, totals are obtained for charging or crediting the control balance.

OVERDRAFTS.—Well-managed banks try to eliminate overdrafts, but this ideal is rarely realized. Where overdrafts do not show on books, it is possible that they are covered by checks, being carried as cash items or otherwise, instead of being charged against the customers' accounts.

American banking is run on a speed basis. Thousands of items must be handled in an individual bank in a few hours. The labor cost per item must be held low. Checks come in in the clearings against an account, and on the same day other checks are cashed over the counter. Immediate credit is ordinarily given on checks deposited. The customer draws against this credit. Sometimes the item deposited comes back unpaid. It is the best practice to charge this item back against the customer, even though so doing overdraws the account, since with the account shown as being overdrawn, no more checks will be paid.

Usually, however, the overdrawing is done with the knowledge of the bank. Many customers are careless in keeping a record of their balance. They issue more checks than there are funds to cover. The bank, considering the customer's credit good, pays the item, instead of marking it "not sufficient funds" and thus stigmatizing the depositor among the people with whom he does business. Overdrawing from any cause is objectionable and should be held to the lowest practical minimum.

In making official reports banks are called on to show the full amount of the deposit liability, without deduction for overdrawn accounts. The control account, when posted merely from the totals of debit and credit entries, shows only the net amount. It is necessary, therefore, to run the overdrafts and add them to the total of deposits shown by the control. The overdrafts are then shown on the asset side, either as a separate item, or combined with loans and discounts. There is no way of determining the correctness of this overdraft figure except by a run of the ledger on the particular day.

VOUCHERS.—Deposit tickets and checks are the ordinary items posted to individual accounts. Most banks that use bookkeeping machines no longer journalize, but post direct to the ledger. An adding machine list

is made to prove the work before it goes to the bookkeeper. These lists are preserved. If an item is to be traced, it is necessary to look for the particular amount and the identification is seldom positive; there might be other items the same day with the same figure.

This difficulty proves serious in so few cases, compared to the volume of work handled, that it is only here and there that a bank goes to the additional work and delay of describing the entries.

Debit items, consisting of checks and charge tickets, are usually perforated with the date by a canceling machine and filed alphabetically. They are returned to the customer with the statement or when passbook is balanced.

The credits are retained by the bank. The filing is by dates and alphabetic under the dates.

STATEMENT AND PASSBOOKS.—When the checking system first began to assume its present form and magnitude, the theory was that the passbook was the depositor's record of the account. All deposits were entered therein. The depositor was requested to leave the book at intervals and the checks which had been paid would be entered as a total and the balance brought down.

There are some objections to this system. It is difficult to get all depositors to leave their books regularly. By turning over his book to the bank, the customer temporarily loses possession of his receipt for deposits made. As the majority of books are left at the first of the month, a peak load is thrown on the balancing force.

To meet these objections, many banks have adopted the **statement system.** The passbook becomes merely a convenient method of issuing a receipt for deposits. It is always retained by the customer. Checks as paid, or on the next day, are entered on a statement sheet, which is virtually a duplicate of the ledger. At the end of the month the vouchers are taken from the check file, folded with the statement, and the whole either mailed or placed in a a **statement file,** where the customer may obtain it whenever he calls.

A few banks use carbon copies of the ledger sheet for statements. Some German banks photograph the ledger account. With American banks, the most common form is the duplicate posting system.

DUPLICATE POSTING SYSTEM.—While bookkeeping machines are not a necessary part of the duplicate posting system, most duplicate systems are machine-kept. Even where the ledger is posted with pen, machines are frequently used for the statement.

Every entry is first posted on the ledger. A different person, working entirely independently, then takes the same items and posts them to the statement. The accounts that have moved are marked, ordinarily by offsetting, and the ledger balance of each of these accounts called back against the statement balance.

If the calling back is done accurately, no error can go undetected unless both bookkeepers have made exactly the same mistake. This method furnishes a protection against posting to the wrong account, one of the most difficult protections to get. In practice this system has proved very satisfactory from standpoint of accuracy. Even with help not fully trained, undetected errors have been infrequent.

On the last day of the month, or when called for by the customers, vouchers are assembled with the statement. Some banks at that time do not check the vouchers at all, but depend on the accuracy of the original check filing. Others check each voucher against the entry on the statement. Still others count the number of vouchers and the number of debit entries,

and possibly glance through the signatures. Banks in some sections take a receipt for the vouchers and require a postcard be returned within 10 days stating that the account has been reconciled. In other places the postcard is omitted. Elsewhere no receipt is obtained, the statement being handed or mailed out without a record.

CERTIFICATES OF DEPOSIT.—Checking accounts, as the predominating form of banking, are a development of hardly a hundred years. Far more ancient are **certificates of deposit,** dating back to the birth of banks and almost before. The goldsmiths that issued negotiable receipts for the bullion and coin left in their possession were issuing the same type of document which we now have as certificates of deposit.

The bank issues a receipt for money deposited. These receipts may be either payable on demand or after a certain time, and may or may not bear interest. Due to the different reserve requirements, demand certificates outstanding are usually kept in a control account separate from time certificates.

The common practice is to have these certificates numbered serially, there being a different series for time certificates than for demand. As issued an entry is made in a register. At the close of the day a credit is sent to the general books for the total. As the certificates come in for payment they are charged directly against the general ledger control account and the date of payment stamped in the register. If an interest payment is involved, a debit to interest expense or to the interest reserve account, is made.

To prove the account, the canceled certificates are compared with registry entries, to see that every certificate marked "Paid" is canceled and on hand. Then all unstamped entries should be outstanding. Such items are run and the total compared with the control figure.

In most city banks in the United States, certificates of deposit do not form a large percentage of the deposits. In many country districts they still mount to important totals.

The certificates are negotiable and it is not customary for the bank to keep a ledger account with the individuals to whom issued. Where such records are kept it is more for information as to the amount of business being obtained from an individual than for strictly accounting purposes.

CASHIER'S CHECKS.—A cashier's check is a draft drawn by the bank on itself. Payment cannot ordinarily be stopped if the check in due course comes into the hands of an innocent holder. Cashier's checks are issued when the bank itself pays expense bills or makes nearby remittances. They are also issued in exchange for cash at a customer's request, when either the customer does not have a checking account or his personal check would not be acceptable.

There is a **control account** in the general ledger and the system of issuing and proving is practically identical with certificates of deposit. In some small banks cashier's checks are issued in lieu of demand certificates of deposit.

CERTIFIED CHECKS.—Personal checks are not always acceptable. The party to whom presented does not know but that payment may have been stopped or that there may not be sufficient funds to cover. To remove any question the check can be presented to the bank. If it is good the bank will stamp across it "Certified" or "Accepted," and have the certification signed by an officer. Such a check becomes an obligation of the bank, the same as a cashier's check. Payment cannot be stopped.

The bank charges the customer's account immediately and makes an

entry of the transaction in a register, similar to a certificate of deposit register. The total of checks certified is credited to the **Certified Checks account.** As such checks come in for payment, they are charged against the Certified Checks account, but not against the individual drawer. The canceled items are not ordinarily returned to the drawer, but are held by the bank so that "paid" notations in the certified check register may be verified.

Certified checks are an important element in stock-broker's settlements and as an evidence of good faith in bidding on government or municipal propositions. If certification is obtained by the payee or subsequent holder, the drawer is released from liability, but not if the drawer obtains the certification.

SAVINGS DEPOSITS.—The Federal Reserve Act defines savings accounts as those governed by the following conditions:

1. The passbook, certificate, or other form of receipt must be presented to the bank when a deposit or withdrawal is made.
2. The depositor may be required to give notice of not less than 30 days of intended withdrawals.

In some states only mutual savings banks are allowed to use the word "savings." Where such a law exists, other banks call their savings department "special interest department" or "thrift department." For banks doing both a commercial and savings business, a few states require that the savings department assets be segregated. Savings deposits can only be invested in specified types of securities. Such securities must be labeled "savings department." If a bank liquidates, the savings depositors have a prior lien on the savings department assets. National banks are not required to make such a segregation. In normal times savings banks do not enforce the option of requiring notice on withdrawals. The right to notice is retained in the rules, however, as its elimination would mean that under the law the reserve requirements would then become the same as for demand deposits.

Savings department methods vary widely between different banks in different sections. The following methods are used in many banks. Paying and receiving is done by the same tellers. Customers make up their own deposit and withdrawal slips. On a deposit the teller enters the amount in the passbook and extends new balance. On withdrawals he first verifies the signature, then checks with the bank's ledger, makes the passbook entry, and pays the money. At end of day, or several times during day, the teller runs his withdrawal and deposit slips, using the totals to balance his cash. After the cash has been balanced, the slips from all cages are combined; then sorted numerically and grouped according to divisions of the ledger. The ledger, for convenience in proving, is divided into sections containing from 500 to 1,000 accounts each. A journal sheet is made on an adding machine. There are three columns—one for account numbers, one for debits, and one for credits. A total is obtained of each column. The tickets are then posted, each account being marked either with a marker or by pulling the ledger card. Then, working from the accounts themselves, the old balance and the new are run. The total of the account numbers as secured from the ledger must agree with the total of the account numbers obtained from the run of slips on the journal sheet. This is proof of posting to the right account. The difference between the old balances and the new balances must agree with the difference between the debits and credits. This proves that posting and extensions are correct.

Some banks require the customer to first present the withdrawal to the bookkeeper, who posts the amount and "O K's" the item. The customer then presents it to the paying teller. Other banks have the tellers write all deposit and withdrawal slips.

Ledgers are usually numerically arranged by account numbers. They may be pen-posted cards, machine-posted cards, loose-leaf pen-posted ledgers, or bound ledgers.

GOVERNMENT, MUNICIPAL, AND OTHER OFFICIAL DEPOSITS.—For such deposits the bank nearly always is required to put up security. Security may be government or satisfactory municipal bonds, or a surety bond issued by a reputable company. Interest is paid and deposits ordinarily are withdrawable on demand. Refunds may be obtained on surety bond premiums if deposits do not average the amount of bond.

LETTERS OF CREDIT.—A letter of credit (Form 6) is a formal document in which a bank agrees to accept a customer's draft or drafts up to a definite total. Various conditions may be attached, such as the requirement that bills of lading covering specified items be attached to draft. Letters of credit are issued for cash or on the customer's guaranty to reimburse the bank.

If issued on credit, the bank debits an account, **Customer's Liability under Letter of Credit,** and credits **Letters of Credit Outstanding.** Letters sold for cash are separated from those sold on credit. A separate liability account for cash letters is opened under the name of **Travelers' Letters of Credit Outstanding** or **Circular Letters of Credit.** When a bank pays a draft drawn under a letter of credit, a debit is made to the proper letters of credit outstanding account. If the letter is one that has been issued on credit, the customer's individual account is charged or the money collected by messenger, and the account, Customers' Liability under Letters of Credit, is credited.

BANKERS' ACCEPTANCES.—Under arrangements, the bank may accept drafts drawn on itself with a future maturity. These acceptances, being the obligation of the bank, may then be sold by the holder to other banks, sold in the open market, or sometimes taken up by the accepting bank itself. Acceptances are an important element in European banking and the Federal Reserve Board has encouraged the use of this type of paper here.

CONTINGENT LIABILITY.—Banks sometimes sell notes to other banks with the agreement to repurchase; or have one of their customers borrow direct from a larger bank with the understanding that if payment is not made at maturity the requesting bank will take up the obligation. In all cases where the actual liability exists, it should be shown on the general books.

BANK ACCOUNTS.—Large banks in reserve cities secure a material proportion of deposits from other banks. These bank deposits are kept in a separate ledger. The statement of account sent the depositing bank, either daily or monthly, is ordinarily more detailed than that furnished commercial depositors. Draft numbers and an explanation of the credits are shown. Interest is usually paid.

CIRCULATION.—National banks, on depositing as security specified government bonds, are permitted to issue national bank notes. If the market price on the government bonds bearing circulation privilege is not too high, this right is a source of profit to the bank as well as an advertisement. The amount that can be issued is limited by the par value of the bank's stock and by the par value of securing bonds. The bank is required

First National Bank of Seattle

No.______ Circular Letter of Credit. $______ U.S.

Seattle, Washington, ______________ 19__

To our Correspondents and other
Banks and Bankers.

Gentlemen;

We beg to introduce to you, and to commend to your courtesies ____________________ in whose favor we have opened a credit of ____________________ Dollars U.S. Currency, and whose drafts to that extent, at sight, upon the

FIRST NATIONAL BANK
OF SEATTLE

we engage shall meet with due honor, if negotiated prior to ____________

The amount of each payment must be endorsed on this letter, and your negotiation of the drafts will be considered a guarantee that the requisite endorsements have been made.

You will please observe that all such drafts be marked as "Drawn against The First National Bank of Seattle, Wash. Letter of Credit No.______"

This letter must be attached to the last draft drawn.

We remain, Dear Sirs,
Yours faithfully,

Signature of

____

____

THE FIRST NATIONAL BANK
OF SEATTLE

____
VICE PRESIDENT

____
CASHIER

FORM 6. Circular Letter of Credit

to maintain 5% redemption fund with the Treasury Department at Washington and pay semiannually a tax on the average amount of circulation it has outstanding. The rate is ¼% if the bonds securing are 2%, and ½% if the bonds securing bear a higher rate.

DIVIDENDS PAYABLE.—When a dividend is declared a charge is made to **Undivided Profits** and an account, **Dividends Payable,** credited. Checks marked "Dividend check" are issued. As these checks are paid they are charged against the Dividends Payable account. If all checks were cashed promptly this account would be closed out within a few days.

Capital and Liability Accounts

CAPITAL STOCK.—So far as accounting records are concerned, a bank's stock record is the same as that for any other type of corporation. For national banks, however, there is a real difference in case of liquidation. Stockholders can be assessed 100% of the par value of their holdings. When stock has been transfered within 60 days of the bank's failure, the selling stockholder may be held liable for unpaid portions of the assessments. This is in addition to the original obligation to pay for subscribed stock. Many state laws carry the same provision.

Capital stock must be fully paid in. Before the amount can be increased or decreased permission must be obtained by national banks from the Comptroller of the Currency. The minimum capital permitted is based on population of city in which located.[2]

SURPLUS.—Banks ordinarily start business with a paid-in surplus. This amount can only be added to or decreased by action of the directors. The account may go for years without change. A certain percentage of profits must be carried to surplus until it amounts to 20% of capital. Such funds up to 20% of capital may be used only for payments of losses in excess of undivided profits.

UNDIVIDED PROFITS.—Due to the rigidity of Surplus account, it is necessary to have another proprietorship account into which earnings and expenses may be closed, and from which losses and dividends may be paid. The account is called **Undivided Profits.** To find the book value of bank stock it is necessary to add capital stock, surplus, and undivided profit and divide the total thus obtained by the number of shares outstanding.

REDISCOUNTS AND NOTES PAYABLE.—Banks borrow from the Federal Reserve Bank or from city banks by depositing collateral. Government bonds or notes receivable are commonly used as such security. Often a bank rediscounts notes signed by its customers.

REDISCOUNTING WITH THE FEDERAL RESERVE BANK.—The Federal Reserve Bank will accept for rediscount commercial and agricultural paper with a definite maturity. It must be accompanied by the borrower's statement or a certified copy. If the note is interest-bearing, the amount of interest that will be due at maturity is added to the principal. On this new total the federal reserve figures the amount of discount. The discount is collected in advance, only the net amount being credited to the member bank's reserve account. At maturity, unless previously taken up, the notes are charged against the discounting bank.

---

[2] Population not over 3,000, $25,000; 3,001 to 6,000, $50,000; 6,001 to 50,000, $100,000; over 50,000, $200,000.

Income and Expense Account in the General Ledger

GENERAL INCOME AND EXPENSE ACCOUNTS.—Due to the necessity of a daily trial balance, banks desire to keep number of accounts in general ledger at a minimum. As a result **income accounts** are usually limited to a few heads:

Interest Income
Commissions
Exchange
Rent Income
Collections
Discounts

Individual banks will of course vary these headings, possibly adding a number of new ones or changing the titles.

Expense accounts will likewise be headed under some of the following titles:

Interest Paid
Taxes Paid
Miscellaneous Expense

SUBSIDIARY RECORDS.—As these general ledger accounts do not give enough detail to satisfy the needs of intelligent administration, or for income tax purposes, banks maintain subsidiary expense records. The most common form is an **expense book,** which is a large columnar journal with from 10 to 20 headings, in which journal are classified the items charged against the general ledger account "Expense." Other banks maintain a **subsidiary ledger.** Some of the headings under which banks itemize are:

Salaries—Employees
Salaries—Officers
Rent
Stationery and Printing
Supplies
Insurance
Advertising
Postage
Telephone and Telegraph
Heat
Water and Light
Express
Transportation of Funds
Clearing House
Exchange
Filing Fees
Revenue Stamps
Credit Reports
Charity
Subscriptions
Miscellaneous

VOUCHERS.—Banks usually pay expense items with cashiers' checks or use a special check called "expense check." In the first case a debit is made to Expense and the contra credit goes to **Cashier's Checks Outstanding;** in the latter case there may be a general ledger account headed **Expense Checks Outstanding,** in which case the debit goes to Expense and the credit to the **Expense Checks Outstanding** account. Some banks follow the practice, when expense checks are used, of not charging expense until the actual check is cashed. In this case the expense checks go to the general bookkeeper and are charged by him directly against the Expense account. The subsidiary records may be posted either before the check is given to the payee, or after it comes in for payment.

Interest

INTEREST ON NOTES.—Rules for figuring interest vary between banks and under different state laws. The following methods are widely used:

When time of note is specified in days, such as 90 days, the actual number

of days elapsed are counted, including the day of maturity but not the first day. The number of days is used as the numerator and 360 days as the denominator. Example—$800 6% note for 30 days dated Jan. 3, would be due Feb. 2. On that date one collects 30/360 of a year's interest. Answer: $4. If the note were paid Feb. 3, 31 days interest (31/360ths) would be collected.

If time of note is expressed in months, each month is considered as though it had 30 days. A 3 months' note dated July 7 would be due Oct. 7 and the interest would be 90/360ths, or ¼th of a full year. When notes call for partial payment or interest payment to be made on a specified day of the month, as the 10th, interest is figured as though all months had 30 days. (1/12th of a year—same for 28- or 31-day months.) Notes maturing on a holiday are due the following business day. The additional interest is collected.

INTEREST ON DISCOUNTS.—On non-interest bearing notes discount is figured on the face of the note, actual days are counted and interest computed on a 360-day basis. If note matures on holiday or Sunday the extra days are added. Practice of using face of note as base is called **bank discount** as distinguished from **true discount.** True discount is based on present worth and not maturity value.

Actual Day Basis.—In place of 360 days, many banks use 365 or 366 as a basis for calculating interest or discount.

Special Points.—The principal is always taken to the nearest even dollar. Transactions with the United States government and the federal reserve banks are figured on the actual number of days in the year, 365 or 366. Delinquent interest is not compounded unless there is an agreement to that effect.

INTEREST ON BONDS.—Bonds are quoted "plus accrued interest." The purchaser pays the quotation and in addition pays interest on the par value at coupon rate from the last interest date. All months are considered as having 30 days. From the 15th of one month to the 15th of the next is always 1/12th of a year's interest. If the interest date is Jan. 1 and the bond is sold Feb. 3, interest is figured for 1 month, 2 days. If sold on the 31st of the month, interest is the same as though sold on the 1st of the following month. From the 15th of any month to the 1st of the next is 16 days.

INTEREST ON CHECKING ACCOUNTS.—The average daily balance is the basis on which interest on checking accounts is paid. An adding-machine tape is made, showing the balance in the account for each day of the month. If the balance remains unchanged for several days the repeat key is used. In a 30-day month there would be 30 items. One day's interest is figured on this total. For 2% on a 360-day basis, point off 3 places, divide by 6 and then divide that answer by 3. To convert this figure to a 365-day basis, subtract 1/73. For paying interest a 365-day basis is widely used.

Many items are deposited, such as checks on out-of-town points, which require from 1 to 8 days or more before the bank obtains actual funds. The customer is given immediate credit, but before interest is computed collection time is customarily deducted. Deposit tickets are marked with number of days required for collection. The amount of item is multiplied by number of days. The total of such amount is deducted from total daily balance. This leaves the net amount on which bank pays interest. The depositor, not knowing the number of days required for collection, can only check the interest received approximately.

SAVINGS DEPARTMENT INTEREST.—Typical rules provide that deposits made up to a certain day of the month, as the 3rd, 5th, or 10th, shall draw interest from the 1st. Deposits after this date draw interest from the 1st of the following month. Money must be on deposit 3 months for interest to be paid. If left for longer time, interest will be paid from date first deposited. Withdrawals are considered as made from balance on hand at start of interest period or, if that is not sufficient, from earliest deposit made during period.

A few banks pay savings interest on the average daily balance. This is not customary, however, and the various restrictive rules tend to reduce the actual rate paid by the bank. A bank with a 4% rate will possibly only average 3.72% interest actually paid on the total deposits. This percentage will vary with the restrictions imposed. Once experience has shown the actual rate, it is possible to forecast closely the total amount of interest on the average of deposits under the same rules.

Outside of a few clearing house associations that set rules for their members, each bank is free to make its own regulations under which interest will be paid. With interest credited twice a year, which is the practice, a large amount of computation and posting must be done at that time in a savings bank of any size. It is often necessary to use help from other departments. Interest is figured and noted on the card in pencil. It is then checked and changes made on account of later deposits or withdrawals. One or 2 days before interest date, interest is entered and extended. A few banks have on their ledger special debit, credit, and balance columns for interest. As each deposit is made, interest is figured on it to the end of the period and added to the previous interest balance. On withdrawals interest is computed to the end of the period and subtracted. At end of period it is only necessary to transfer the interest into main balance of the account. Up to time of this transfer the interest balance is merely a memorandum figure. This method of figuring interest on every deposit and withdrawal reduces the peak at the end of the period, but requires a careful system of checking the computation or it cannot be depended on.

Accrual Accounting

INTEREST EARNED BUT NOT COLLECTED.—Under this heading, banks carry the asset, Accrued Interest Receivable. Under the accrual system, interest earned on notes is computed daily. When a bank changes from the cash basis, it separates all interest-bearing notes from those on which discount has been collected in advance. The accrual on each interest-bearing note is figured. This amount is set up in the book as **Interest Earned but Not Collected** and the **Interest Income account** credited. The notes are then sorted according to the interest rate—all 5% notes together, all 5½% notes together, etc. A total is obtained of each group and entered under the rate in a columnar book (Form 7). When 5% loans are made they are added to the 5% column, and when payments are made on 5% loans the amount is subtracted. Daily interest is figured at 5% on this columnar balance. In the same way 1 day's interest is taken at the rate on the balance in the other columns. The total is the interest earned for the day. It is debited to **Interest Earned but Not Collected** and **Interest Income** is credited.

When interest is paid it is credited to Interest Earned but Not Collected. At intervals, usually once a year, accrued interest is figured from the actual notes. At that time a correction is made in the **Interest Earned but Not**

FORM 7. Form for Computing Interest Earned but Not Collected

FORM 8. Form for Computing Interest and Discount Collected and Not Earned

Collected account. In accruing daily it is not possible to eliminate errors entirely.

A list, giving the par value and the coupon rate, is made of bonds and other securities on hand at end of month. Accrued interest is figured on each issue separately, and account is taken of those issues purchased or sold during the month. The total accrued is added to the Interest Earned but Not Collected account. Or bonds are handled the same as notes, and interest is accrued daily.

Another system is to compute on each interest-earning asset the daily amount earned. The total is the interest earned on such new investments for the day. As new investments are made, the daily interest earned is added to the previous day's total and as investments are sold, paid, or otherwise eliminated, the daily earnings on these items are subtracted. Thus a \$1,000 6% note earns daily \$0.1667, and a \$500 4½% bond, \$0.0625. If these were the only two assets the total earning would be \$0.2292. The next day \$200 is paid on the note, reducing the earning rate by \$0.0333 to \$0.1958.

DISCOUNT COLLECTED BUT NOT YET EARNED.—Under the accrual system banks, when collecting interest in advance, credit **Discount Collected but Not Yet Earned** with the discount so collected. Column balances may be kept as on the interest-bearing paper (Form 8). Each day the earned interest is taken out of this account and credited to **Interest Income.**

ACCRUED EXPENSES.—It is customary to accrue only the larger items such as interest and taxes payable. The calculated amount will be charged monthly against the expense account concerned and credited to the reserve. When the interest or the taxes are actually paid the charge goes against the reserve, and not against earnings.

Collections

DEFINITION.—The term **collection item,** carefully used, means an item which will not be credited to the owner's account until actual funds are in the possession of the bank. Included in this class are drafts requiring acceptance and other papers on which the bank considers final payment a matter of uncertainty. The term is also used for items on which immediate credit has been given the depositor or which belong to the bank and require special attention in securing payment; notice must be sent or a messenger call on the payer. Checks drawn on non-clearing house banks may be so classified.

LOCAL COLLECTIONS.—A record is kept of all items furnished a messenger. On completing his route he either returns an item with reason for non-payment, or turns in the cash or certified checks. A messenger is given specific instructions, leaving him little or no discretion.

OUT-OF-TOWN COLLECTIONS.—These are forwarded to a bank in or near the place where payable. A record is kept, usually numerically. If a report is not received within a few days, mailing time being considered, a trace is sent. One system of records makes use of quintuplicate forms. One copy goes with the items to the collecting bank, a second is filed under that bank's name, a third is put ahead in a date file to be used as a tickler and tracer, a fourth is filed under the owner's name, and the fifth is a permanent record. The collecting bank may remit by draft or, if the sending bank maintains an account with it, credit that account.

Exchange

DOMESTIC EXCHANGE.—A merchant located in California buys in New York. The New York firm is not willing to accept the California merchant's personal check because it will have to pay its bank a collection fee. The New York bank makes this charge because out-of-town checks require additional clerical work and interest will be lost for the number of days required for collection.

To make payment the California merchant goes to his local bank and obtains a draft drawn on New York in favor of the New York firm. In order to issue such draft the California bank maintains an account with a New York bank. The draft is merely a check against this account. A small fee called **domestic exchange** will be charged the California merchant.

Since the establishment of the federal reserve collection system, domestic exchange is not as important as formerly. The federal reserve collects checks without expense, though the bank depositing the item loses interest for number of days required to collect. The customer usually receives credit at once or next day and may be charged **exchange** to cover interest for days the item is in transit. In many cities banks now receive on deposit out-of-town checks without charge.

FOREIGN EXCHANGE—NO ACCOUNT ABROAD.—Foreign exchange is sold under one of two methods. In the first case the retailing bank maintains no account in foreign countries and takes no risk on the transaction. Under previous arrangement a firm quotation is obtained from some bank that maintains foreign accounts. The retailing bank sets its own price, obtaining a profit by the difference between the two rates. The retailing bank has been supplied with a set of blank draft forms (Form 9). These bear only its own name. The customer does not know that the selling bank is dealing through a wholesaling organization. These draft forms have an advice stub attached. On making the sale the retailing bank fills out this stub and mails it to the wholesaler. The wholesaling bank notifies its correspondent to honor the draft when presented.

The bank selling incurs no risk on rates or otherwise. It merely remits for each transaction at the rate which had been previously quoted. Small and medium-sized banks usually handle all of their foreign exchange in this manner. Even fairly large banks use this method when drawing on points at which they do not have direct banking connections.

ACCOUNT HELD ABROAD.—Under the second system the selling bank carries its own account in the foreign country. For example, the Northern National opens an account in London by depositing £10,000 with the London Joint City & Midland Bank, Ltd. Then when it sells sterling exchange it merely issues a draft on its own account in London.

The draft is usually issued in duplicate. This is an old custom, first made necessary by the frequent loss of overseas mail. The two copies are forwarded by separate mail. The first to arrive is paid, whether original or duplicate, and serves as a stop-payment order on the other copy. On issuing a draft a notice is mailed at once to the bank on which drawn. On receipt of this notice, in nearly all countries except England and sometimes there, the foreign bank charges the Northern National's account. The foreign bank does not pay interest on the amount for the time between the arrival of the advice and the presentation of the draft. With speculators holding drafts, this amount may be material.

It is necessary for the bank to replenish its London balance by buying exchange from other banks, or by buying in America items drawn in pounds sterling, such as British coupons, collections payable in London, or the like, and forwarding these items to England with instructions to credit the pro-

FORM 9. Foreign Exchange Draft Supplied to Interior Retailing Bank by Bank Carrying Foreign Account, together with Advice and Receipt Forms Used by Retailing Bank

ceeds to its account. The bank's profit from this department depends to a considerable extent on the rate of turnover. If the bank purchases each day the approximate amount sold, the danger of the bank losing on the market is largely eliminated.

If the Northern National Bank had but a single foreign account, it would show that account in dollars as a separate item on the general ledger. If it had a number of accounts abroad, it would maintain one general ledger control account, **Due from Foreign Banks,** and would have subsidiary ledger showing the amount due from each separate institution. These separate accounts would have double columns, one for entering in pounds sterling, francs, lire, or whatever the foreign unit may be and the other for entering in dollars. Every transaction would be entered both ways. Thus, when the original deposit was made the debit would show £10,000, and if the price had been $4.80, then $48,000 in American money. As sales are made the credit would be entered in pounds sterling for the actual amount of the draft, and in dollars for the actual selling price not taking profit or loss into account.

Exchange rates are constantly fluctuating. A bank may sell sterling at a dozen prices during an ordinary business day, varying its rate with the market.

ACCOUNTING FOR FOREIGN EXCHANGE EARNINGS.—As all new purchases and all sales are commonly entered in dollars at actual cost or selling price, foreign accounts become, like an old-style merchandise account, a mixture of a real asset and profits or losses. A practical method of accounting for the profits or losses is to take inventory at regular intervals. The inventory is taken **at the market.** In a sense this practice violates the accounting principle of not taking a profit until it has been earned. Any other procedure, however, presents practical difficulties. If the practice of taking a profit on items unsold is ever justified it may be in the case of foreign funds. Here the profit is actually in money and may be converted into American dollars at any time at the market. By market is meant selling price of cable transfers.

Interior Routine

DIVISION OF WORK AMONG CLERKS.—In banks employing half a dozen people or less, it is necessary to have the duties largely interchangeable. While it is desirable for each man handling cash to have his separate funds and balance separately, the practice is not at all common. It will be found more often that the tellers group their work, the bank balancing as a whole. If there are errors, it is necessary for everyone to check until located. As banks become larger the routine is split so that different sections may balance as units. Thus a receiving cage will keep a record of all deposits received and of all items, such as checks, which have been forwarded for payment to other departments in the bank. The difference between the total of the deposits received and the amount of checks and other items sent out of the cage, should equal the net amount of cash.

Whether paying and receiving should be done through the same cage, and whether a teller should be limited to handling certain letters of the alphabet or be permitted to handle any customers, are debatable questions.

UNIT SYSTEM.—With the unit system, only a certain division of the alphabet is handled by the same tellers. Two receiving tellers and one paying teller may handle all customers' items whose names begin with letters between A and C. Or one teller may be a unit himself, handling both paying and receiving. Bookkeeping follows the same division. One section of the alphabet is handled as though it made a little bank in itself. Customers must do business at their own window. The arguments in favor are; The

teller can remember the names, faces, and signatures of his depositors since they are relatively few; a customer wishing to make both deposit and withdrawal does not have to wait in two lines; signature files, stop-payment notices, and pertinent data on the accounts can be kept in the cage; and information can be obtained whether checks have been cashed or deposits made that have not yet had time to reach the ledger. One of the main arguments against the unit system is that tellers in some sections may be idle while in others customers are lined up waiting.

ROUTINE OF RECEIVING CAGE.—Mr. Brown makes a deposit of $500. Receiving teller checks off the item on the deposit slip, verifies the footing and makes an entry in Mr. Brown's passbook. Possibly in the deposit there was $200 in cash, three checks of $50, each on the Northern National itself, one $80 check on a local clearing house bank, and a $70 check on an out-of-town bank. The teller, as soon as there is a slack moment—or if he has an assistant, the assistant, while the teller is receiving other deposits—sorts each check received into one of the following groups:

On us	Transit
Clearing house	Collection

(These groups are only suggestive, some banks sorting into more divisions.)

A list is kept in the cage of all checks sorted under these headings. For this purpose a sheet known as a **teller's blotter** is used. This sheet is ruled with columns for the groups indicated. At intervals during the day checks received on deposit and the deposit tickets are collected from the cage. The "on us" checks and deposit tickets are further sorted by bookkeepers and are charged or credited to the customers' accounts. Clearing house checks are sorted by names of banks where payable and duplicate lists run ready for collection through the clearing house. Transit checks are items drawn on out-of-town banks. They are routed to the transit department from where they are forwarded for collection.

If the bookkeepers make an error it will not affect the teller, as he can balance his cash without obtaining any figures from outside departments.

BATCH SYSTEM.—The batch system is designed to relieve work in the cages. The receiving teller is only responsible for verifying the amount of actual cash received from a depositor. He does not pay any attention to checks deposited, except possibly to run through them quickly to see that all are indorsed. He takes, temporarily, the customer's footing on the deposit ticket without question and enters that amount in customer's passbook. The deposit tickets ordinarily contain a clause at the top stating that depositor consents to having any differences charged back against his account. The teller keeps the cash deposited but all checks and deposit tickets are thrown in a basket. At frequent intervals, possibly every 15 minutes, the contents of these baskets are collected by a clerk who has this special duty. There may be 15 or 20 deposits in such a batch.

PROOF DESK.—The batch goes to a proof desk, where the checks are sorted under the same heading as would have been done in the cage. The work is proved on a sheet known as a **batch sheet** (Form 10), which may either be a blank listing paper or a sheet with simple printed columns. In the first column is listed, with an adding machine, the amount of actual cash deposited. This figure may be obtained by either of two systems. First, receiving teller makes a ticket for each deposit showing amount of cash. This is clipped to the deposit ticket. Second, the proving clerk reads itemizations made by customer on deposit tickets.

The checks in each group, such as "on us" or "clearings," are run under their respective headings and a total of each obtained. These five or six totals are then combined into a grand total, which must balance with the total of deposits. If there is any error, the clerk has merely to check back the 15 or 20 deposits in a single batch. Often the mistake will be found to have been made by the depositor, possibly in his addition or in his failure to deposit a check that is listed. In such cases the total on the ticket is corrected and a notice immediately mailed.

At end of day the total amount of cash, excluding checks and other items deposited, that has been received by each teller, is computed by the proof

FORM 10. Batch Sheet

desk. To get this figure the desk either runs the cash tickets that the teller has prepared, or it totals all of the currency figures (the first column as previously explained) on a teller's batch sheet. When the cash ticket system is used, a batch may include deposits received by several tellers; under the latter method, but one teller's work is gathered to make a batch. The cash received, added to the currency on hand at start of day, less checks cashed, must equal the amount of money which the teller has on hand at close of day. All that a teller need do to find if he balances, is to count his cash at end of day.[3]

[3] In various parts of the country the batch system and the proof desk are known by varying names. "The block system" is a title commonly used. The "proof desk" may be known as the "check desk," or "interior clearing house" abbreviated to "interior," or as the "pivot desk."

All departments must balance to the figures of the proof desk. Thus, during the day the proof desk has sorted all checks drawn on clearing house banks under the heading, **clearings.** It obtains a grand total for the day. The checks themselves go to a clerk or clerks who sort them according to the clearing house bank on which drawn. The combined total to be collected from other banks as computed by the clearing house clerk must agree with the proof desk figures. All "on us" checks are sorted to bookkeepers, such as A to C bookkeeper, D to H bookkeeper, etc. Each makes a run of checks which he receives. At end of day these combined bookkeepers' figures must equal the total of "on us" checks obtained from batches by the proof desk.

Transit Department

SYSTEM USED IN CHECK COLLECTION.—Transit department receives from proof desk all checks to be collected from out-of-town banks. National banks and state banks belonging to the federal reserve system collect the majority of out-of-town checks through the federal reserve collection service. In such cases it is necessary to sort these items in accordance with number of days taken for their collection. The number of days is determined by mail distance of city where check is payable. The federal reserve banks issue zone maps showing for each center the number of days required on checks payable at other points. When the time shown by the zone map expires, credit is given the depositing bank without waiting for advice of actual payment or taking into account delays that may have arisen on the specific item.

Thus, if a bank in New York obtains a check drawn on a country bank in California, the check will be sent to the Federal Reserve Bank of New York and the general ledger account, **Federal Reserve—Collection account,** debited. On the 8th day the depositing member bank debits **Federal Reserve—Reserve account** and credits the collection account. On same day the Federal Reserve Bank of New York automatically credits member bank's reserve account.

The federal reserve banks do not themselves make any charge for this service. Arrangements can be made by a member bank to send items direct to the federal reserve bank or branch in the territory where payable. By direct sending a time saving is made over depositing the items in its own federal reserve bank and having that bank resend them. When a New York bank sends items direct to the Federal Reserve Bank of San Francisco, it notifies its own reserve bank (the Federal Reserve of New York) of the amount sent.

Illustration of collection system in use before the establishment of the federal reserve and still widely used is as follows: The Northern National of Seattle may have a correspondent in New York City. Items drawn on New York or nearby points will be forwarded to that correspondent bank. The items are listed on a special deposit form known as a **"cash letter."** The total of such letters for the day may be $10,000. The account with the New York bank is debited for this amount the day the cash letter is mailed, no consideration being given to time required for collection. On receipt of cash letter 5 days later, the New York bank will credit account maintained with it by Northern National.

Other items will be mailed for collection to banks which are not correspondents. In the latter case the debit is made to a general account called

transit, or **Due from Banks—Collection account.** When item is paid or returned transit account is credited. This account, therefore, always represents current items which have been forwarded for collection and, if no more items are added, it is wiped out in a few days. The total amount charged daily against federal reserve, correspondent banks, and transit must equal total of transit items as obtained for day by proof desk.

Loan Department

APPLICATION FOR LOANS.—Customers apply for a loan or a line of credit to one of the **loaning officers.** Ordinarily, unless collateral is offered and sometimes then, a customer is requested to fill out and sign a statement of his assets and liabilities. During the interview, the officer gains an idea of purpose for which money is to be used, and forms an impression of applicant's ability and character. The information gained in this first interview is supplemented from bank's own files, from mercantile agency reports, from consulting references, and where necessary from special investigation. After officer has fully made up his own mind, he makes a recommendation to **loaning committee.** This committee is composed of senior officers and must finally approve every important application. Small loans and those amply secured may be made direct by loaning officer.

The **procedure** in making a loan, of course, varies with the size of bank. In small institutions it is practically necessary for decision to be made by the one controlling officer. The tendency is wherever possible to have the judgment of several officers before finally committing the bank.

ORGANIZATION OF DEPARTMENT.—In large banks there is a credit department, divided into sections. An officer is in charge of each section. One officer may handle all loans from one type of industry, such as cotton manufacturing; or the division may be according to size of loan, geographical location of borrower, or merely arbitrary.

The practice is growing of having an auditor attached to the credit department. This auditor goes over applicant's books, making such investigation in the customer's office or elsewhere as may be necessary to verify his statement. A large bank may employ from one to several score of investigators who work outside interviewing references and obtaining trade information.

CREDIT FILES.—A folder is made for each borrower, in which is placed his statement, mercantile reports, letters from references, a memorandum dictated by loaning officer giving details of transaction, and bank's own opinion of customer's credit standing. Where lengthy investigation has been necessary, the folder is divided into sections. From regular borrowers new statements are customarily asked for each year.

In addition a card record may be kept for every customer of the bank, showing the department with which he does business, his average balance, and such additional brief information as is readily obtainable. This record is kept so that the credit department will have some information in case the customer should make application for a loan, or in case he gives the bank as a reference.

JUDGING A BORROWER.—The oft-quoted three "C's," Character, Capacity and Capital, are primary considerations in judging a borrower. In addition, the bank considers market conditions in the particular industry, the amount of available funds that the bank has, and the balance that the borrower maintains. It is customary to require the borrower to have a

minimum balance of 20% of his loans. When a bank's loanable funds are limited it tends to favor those who maintain a profitable account.

Safekeeping

GROWTH OF SAFEKEEPING BUSINESS.—When the Liberty bond subscription drives were on many banks promised to keep customers' bonds without charge. This privilege was widely taken advantage of, both for Liberty bonds and other securities. In such cases non-negotiable receipts were issued in duplicate to customers. Even in moderate-sized banks the amounts left for safekeeping often run into hundreds of thousands, or even millions of dollars. Some banks now charge for this service.

HANDLING SAFEKEEPING SECURITIES.—The usual method is to put each customer's securities in an unsealed envelope which is filed alphabetically or numerically. A few banks take up Liberty bonds at par in a special account in the general ledger and show on the opposite side a liability to customers for safekeeping. Under this latter theory such bonds are treated the same as **money deposited.** They become part of the bank assets, may be used as collateral, and in case of bank's failure, the receipt holder becomes merely a general creditor. Under the more common method the bank is a **bailee.** In case of bank failure the customer is entitled to receive back his securities intact; in case of holdup or robbery the bank is liable only if it does not exercise reasonable precaution.

Safekeeping receipts are numbered and a bound carbon copy kept or a register maintained. As securities are redelivered and receipt canceled, a notation is made on the register or on the bound copy. The bank must have either the customer's receipt showing redelivery or the original securities.

CLIPPING COUPONS FROM SAFEKEEPING SECURITIES.—Some customers leave instructions for clipping coupons as they become due, to be credited either to checking or savings accounts. With such instructions it is necessary for the bank to maintain a tickler with a notation filed under the dates on which coupons are due. The bank is given authority as agent to sign income tax ownership certificates. In many banks the total of Liberty bonds held for safekeeping is so large that a special system has been devised for handling these issues. Under such a system Liberty bonds, on which the coupons are to be clipped, are kept in bulk. For each issue there is a file of cards. Thus, under the Fourth Loan would be a card for John Jones showing that he had left $200 of that issue with the bank, the interest to be credited to his savings account number 8,201. A memorandum control account is kept by issues which must balance with the actual bonds on hand and with the total of safekeeping ledger cards. As additional bonds of this issue are left, the control account is debited and, as deliveries are made, credited.

On interest dates credits to customers' accounts are made up from the cards and coupons clipped as a whole. This bulk system has the advantage of saving time and of enabling check to be made of the total interest credited. The bank's relationship with customer is still that of bailment.

Auditing Department

PURPOSE OF THE AUDITING DEPARTMENT.—An auditing department should work directly under the board of directors, keeping itself aloof

from administrative officers and refraining from making original accounting entries. Thus it is able to criticize where criticism is due.

This ideal is reached in but few banks in this country. More often an auditing department works under the administrative officers and to some extent makes original entries. In small institutions this arrangement is probably necessary.

The auditing department should keep such close control on all branches of the bank's work that no dishonesty or errors of importance can go long undiscovered. In addition it should have the constructive duty of improving the bank's methods with the idea of accuracy, safety, and labor-saving. Among its duties should be the investigation of all differences reported by customers and the preparation of the many reports required by state and national authorities.

To some extent internal auditing parallels the work of the national or state examiners. It works, however, from a somewhat different angle. There should be sufficient help to permit closer supervision than is possible under any outside auditing methods. Examiners are interested in solvency, either immediate or ultimate, of the bank. The internal auditing department ascertains that all income to which the bank is entitled is received; that the chance for dishonesty is minimized; and that efficient methods are used.

AUDIT OF BANK ASSETS.—The auditing department should have joint control of the vault, no securities or other assets to be removed without its knowledge and record. Where this is not practical the assets should be verified from time to time by actual count, preferably at surprise dates. As a count is always made by examiners, the auditing department may to some extent rely on their work. As to assets such as cash in teller's hands, bonds that are actively traded in and the like, it is not the safest policy to leave them unchecked over long intervals between examiners' visits. The auditing department should make its own verifications at frequent intervals.

NOTE DEPARTMENT.—An occasional check must be made to see that all notes and collateral are on hand. Examiners do not attempt to check interest and discount calculations. As a bank's principal income lies here and an error or defalcation once passed would never be discovered except by accident, well-organized departments keep careful control to see that all interest is properly computed and credited on the bank's books. A representative of the auditing department may be kept in the note cage to check all such transactions as they occur. The auditing department may work from the notes themselves or liability record the following day, or may keep a copy of all notes, post all payments to these records, and verify interest computations. The latter method, while involving more work, is in most cases the most effective.

COMMERCIAL DEPARTMENT.—Here the auditing department runs ledgers from time to time, checking with the control. It commonly supervises the making of statements or writing up of passbooks and deals with the customer in making all corrections. A few auditing departments go so far as to mail annually a notice to all depositors, requesting them to verify the balance. This latter practice, while a wise precaution, is not generally followed, due to the work involved and fear of troubling depositors. A detailed check may be made occasionally at surprise dates. At such times a day's work is taken, the signatures on all checks charged against an account are verified, credits are compared with deposit tickets, and the like. Due to volume of work, this is only practical as an occasional surprise measure.

COLLECTION DEPARTMENT.—Here the auditing department receives all tracers sent in by other banks inquiring why advice has not been received. It is felt no extensive defalcation or error is likely to occur without the customer writing and requesting information.

EXCHANGE DEPARTMENT.—In a large department, a method of auditing is to have a representative of the auditing department check each transaction as it occurs. The objection is that a man stationed permanently in a department becomes careless as he gets to know the men he is working with. Owing to fluctuating exchange rates, it is difficult to keep an accurate check, however, by other means. Where a man cannot be kept in the foreign department the auditing department reconciles foreign bank accounts and compares sales and purchases with the general trend of the market.

SAFEKEEPING DEPARTMENT.—The auditing department in many banks is furnished a triplicate entry of the customer's receipt and uses this copy for checking against the actual security. Otherwise it works from the duplicate receipt kept by the bank and from the register, keeping track of serial numbers. This department calls for care as the amounts do not, except with a few institutions, enter into the bank's general books.

BOND INCOME.—The auditing department compares the income recorded on the books from bonds with the amount which should have been received, considering the par value and the coupon rate.

EXPENSE RECORDS.—These are usually carefully supervised by the auditing department. The classifying of expenses should be passed on by at least one man in addition to the one making the original analysis. Unless the classifying is carefully watched, the same type of items will at one time go under one head and at a later date be put under another, thus injuring the comparative value of the records. Payments should be proved to see that goods were actually ordered, that they were all received, that the price is correct, that previous payment has not been made, and that the payment bears proper authorization.

SYSTEM OF INTERNAL CHECK.—Where possible the system is arranged so that every transaction passes through at least two hands. A teller receives a deposit, but a bookkeeper, entirely separated, posts the amount to the account. If the customer notes a difference, he notifies the auditing department direct. One teller receives payment on notes; another department delivers the collateral. One bookkeeper posts the ledger; another, working independently, posts the statement. One department makes entries in the cashier's check register; the checks themselves, as they are paid, are stamped off by the auditing department. Were a teller to start issuing checks and not show the liability on the register, he would be discovered as soon as the checks came in for payment.

The auditing department is responsible for making this system of internal check as tight as practicable. It must take into account the personnel, labor cost, type of customers, and banking education of the bank's force, and of the general public.

SECTION 18

CREDITS AND COLLECTIONS

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 18

CREDITS AND COLLECTIONS

RELATION OF THE ACCOUNTANT TO THE CREDIT MAN.—The accountant and the credit man have much in common. The accountant's interests depend upon the business man's need and appreciation of accurate and informative records and financial reports. The credit man considers it of prime importance that the credit applicant have such information and use it as a chart in planning his operations. In his desire to do constructive work —assisting to increase business by extending all the credit in a given case which prudence and sound practice permit—the credit man co-operates with the customer, and to do so intelligently he requires the light which the financial statement throws upon the affairs.

The **amount of assets** is not necessarily of controlling importance. The honesty, ability, and business prospects of the debtor are weighty factors. The figures must be correct, complete, and faithful representations of the facts. The statement should be in accordance with the books, but particularly with the actual conditions. All qualifying comments required should be plainly and fully stated. The value of the statement is lessened if it does not command confidence. That accountant best serves his client who earns a reputation which inspires confidence in the reports he signs.

Forms of Credit

OPEN ACCOUNT OR BOOK CREDIT.—There are various forms of credit. One is the open account or book credit, which applies to a transaction when goods are sold and delivered on credit and charged or debited on the books of the seller to the customer—this book entry being the only written evidence of the debt. In such transactions, should the one charged deny the debt, it would be incumbent upon the seller to prove the amount claimed was sold and delivered.

ASSIGNMENT OF ACCOUNTS RECEIVABLE.—Open accounts are negotiable. They may be sold or assigned as collateral for a loan. The practice of borrowing by giving open book accounts as collateral has assumed large proportions. There are **two general plans** under which such transactions are usually effected:

1. **Notification.**—Under this plan lender gives written notice to payee of the account that it has been assigned and is payable to lender. Such notices are sent to all whose accounts have been transferred to the assignee and in subsequent transactions the notice is stamped upon the bills.

2. **Non-notification.**—Under this plan debtors of the assignor are not notified. The borrower continues to collect as usual and transfers the receipts to lender in accordance with their agreement.

The banker usually lends up to from 70% to 85% of the amounts of the assigned bills, leaving himself a margin of safety against losses, returns and allowances, dependent upon his judgment as to quality of the accounts. The borrower is charged, in effect, 6% for the use of the money and a commission which varies from ½% to 2%—and in some cases more—of the amount of the invoice, this being gauged by the type of lender, status of the borrower, terms of sale, and risk involved.

Finance companies and bankers who lend upon assigned accounts urge that this system of financing benefits: (1) manufacturers, a large part of whose investment is locked up in fixed assets; (2) capable merchants, generally, whose growth is retarded because of a lack of adequate working capital.

Moreover, they argue that the financing charges are more than offset by advantages resulting from: (a) the doing of a larger volume of business; (b) the ability to take advantage of discounts on purchases and to make advantageous cash purchases.

Credit men are opposed to this method of financing principally because of its secrecy. Besides, they believe that the charges may impose serious handicaps, that the practice may lead to unwise expansion, and that it may lend itself to perpetration of frauds.

Credit departments frequently find it desirable to make investigations between financial statement dates, accepting as a fair barometer the account's payment record. The concern that has become an unsound risk may be enabled to make prompt payments by secretly resorting to this mode of financing, and thus to conceal from the unsuspecting credit man the true condition. The credit man does not want to be prejudiced, but considers that he is entitled to knowledge of such practice so that he can decide in each case whether, in spite of the transfer of these valuable assets, the account is entitled to credit and, if so, how much. Concealment he deems a menace.

The National Association of Credit Men strongly advocates, and has been doing so for years, that the assignment of accounts be given **publicity** and that laws be enacted requiring that notice of all such transactions be filed with a designated public official so that credit men may protect themselves by investigating such records, as they do in respect to chattel mortgages.

PROMISSORY NOTES.—A promissory note is a written promise to pay unconditionally a definite sum of money on demand or at some specified time in the future. If such note is made payable to a particular person, it is non-negotiable; if made payable to a particular person's order or to bearer, it is negotiable and title may readily be transferred by indorsement and delivery, and the note may pass through many hands before it is finally paid.

BONDS.—A bond is a written promise, under seal, to pay a certain sum of money at a fixed time in the future. It is usually one of a series of like tenor and amount, all carrying interest at a fixed rate and usually under a common security. The security for a bond as well as the terms and conditions under which it is issued may be found in the bond itself.

A bond is readily transferable by indorsement and delivery. It may be accepted by bankers and lenders as collateral for loans. The period which a bond runs is usually much longer than that of an ordinary promissory note; and bonds are usually issued to obtain capital for the purchase of equipment and other fixed assets.

SHARES OF STOCK.—A certificate of stock is evidence of ownership in a corporation, the stockholders being the owners of the company's net assets. There are two classes of stock—common and preferred.

A company may issue only one class of stock which would be known as "common." If it issues 10,000 shares of such stock, par value $100, Stockholder A, holding 1,000 shares, possesses an equity equivalent to 1/10th of the corporate assets. Should the directors decide to distribute part of the profits to the stockholders, say $60,000, they would declare a dividend of 6% and A would receive $6,000, being 6% of the par value of his stock, or 1/10th of the total amount distributed. Were the corporation to dissolve, and the net profits of the sale of its assets amounted to $1,000,000, Stockholder A would receive 1/10th thereof, or $100,000.

In addition to this common stock, a company may issue **preferred stock.** Preferred stock possesses characteristics which differentiate it from the common stock, such as preferences as to dividends or as to assets in case of dissolution, or a distinction with regard to voting power. Preferred stock may not necessarily be superior to the common stock, it being merely designated "preferred" to distinguish it from the common stock.

One who contemplates making a purchase of stock should read carefully the stock certificate to ascertain terms and conditions to which the issue is subject.

CHECKS.—A check is a written order by a depositor upon a bank, to pay a certain sum of money at sight to order of a payee named in the instrument. A check drawn to bearer is payable to any person who holds it. A check payable to order or to bearer is a negotiable instrument and the payee, upon indorsing it, may transfer it to someone else for cash or to effect the payment of an obligation.

BILLS OF EXCHANGE.—A bill of exchange is a written order drawn by one person, addressed to a second person, requesting him to make payment of a definite sum of money at sight or at some definite time in the future, to a third person. The first and third persons may be, and frequently are, the same.

Bills of exchange used in domestic transactions are known as **drafts.** Such instruments usually arise out of a sale of goods, the seller ordering the purchaser to pay either himself or someone else who will act as his collector.

Sight Drafts—Bills of Lading Attached.—When sellers are unwilling to extend credit to buyers, cash transactions may be arranged whereby, upon delivery of title to goods to the buyers, they will honor sight drafts drawn upon them by the sellers. For example, the Jones Manufacturing Co. of New York City may arrange such a transaction with the National Jobbing Co. of Chicago. The Jones Manufacturing Co., upon delivery of the goods to the carrier, receives a bill of lading which is acknowledgment of the receipt of goods and a contract for their delivery in Chicago. The bill of lading is attached to the sight draft together with the invoice for the goods, and the papers are forwarded through the New York bank of the Jones Manufacturing Co. to its correspondent in Chicago. The latter bank presents the draft to the National Jobbing Co. and upon receipt of payment, transfers to it the bill of lading entitling the company to the goods.

Time Drafts.—If, instead of insisting upon a cash transaction, the Jones Manufacturing Co., in the foregoing illustration, had been willing to extend—say 60 days' credit, it would have in like manner deposited the documents with its New York bank for forwarding to the bank's Chicago correspondent,

and the Chicago bank then would present the draft to the National Jobbing Co. for acceptance, whereupon the bank would transfer the bill of lading to the National Jobbing Co.

The draft is accepted by writing across its face the word "accepted," the date, the name of the bank where payment is to be made, and the company's signature.

Bank Acceptances.—When the bill of exchange is drawn on a bank or accepted by it, such draft becomes a bank acceptance. In such transactions the bank gives the purchaser permission to use its credit. Instead of the purchaser accepting a draft or trade acceptance drawn upon him, he enters into an agreement with the bank to have the instrument drawn on and accepted by it. The Federal Reserve Board has defined a bank acceptance as "a draft or bill of exchange . . . . of which the acceptor is the bank, or a trust company, or a firm, person, company or corporation engaged generally in the business of granting banker's acceptance credits." Bank acceptances are used largely in financing international trade and domestic transactions in connection with major staple commodities.

WAREHOUSE RECEIPTS.—Receipts for commodities stored in a warehouse. Warehouse receipts are transferable by indorsement. They may be used as collateral in obtaining bank loans.

TRADE ACCEPTANCES.—A trade acceptance (Form 1) is a time draft drawn by seller on the buyer for purchase price of goods and accepted by the buyer, payable on a certain date at a certain place designated on its face. The trade acceptance should be used only in current transactions involving purchases and sales of goods. They should not be given for borrowed money or for past-due accounts.

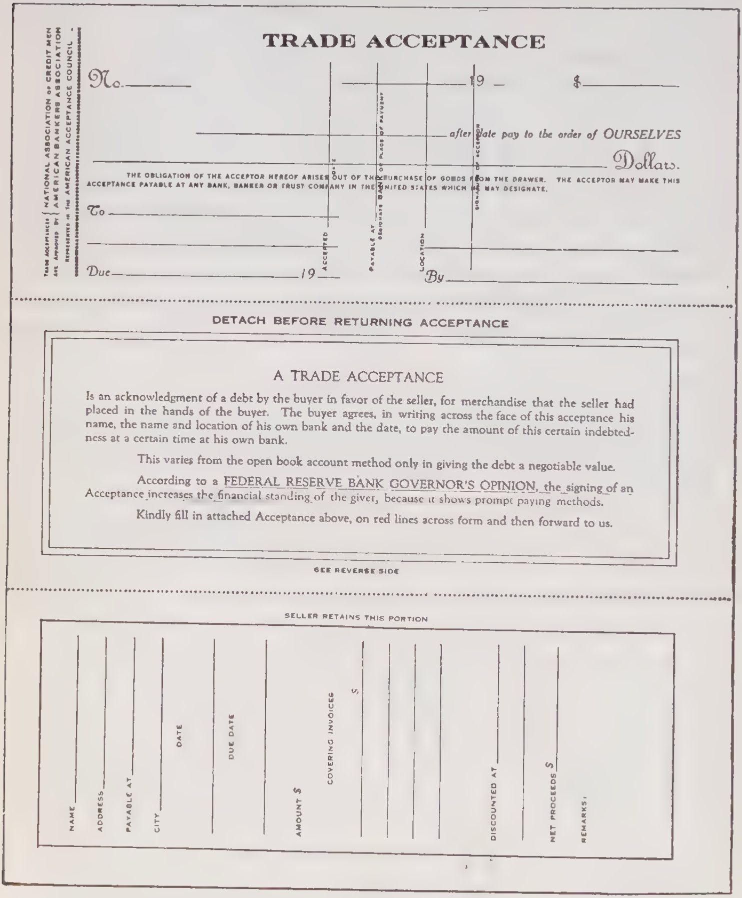
How to Use Trade Acceptance.—The trade acceptance may accompany the invoice, may be mailed afterwards, or, in cases of active accounts, may accompany the monthly statement and cover the total amount of invoices rendered during the month. The buyer who receives the trade acceptance may either decide to discount the bill and ignore the trade acceptance, or if he desires to make payment at maturity, he may "accept" the trade acceptance by writing across the face the date and the words "Accepted, Payable at . . . . Bank," and then signing it and returning it to the seller.

Upon receiving properly "accepted" trade acceptances, the seller may use them for borrowing purposes either by presenting them to his own bank for discount or by selling them in the open commercial paper market. Otherwise he will hold such acceptances and in due time before maturity, depending upon the location, he will forward them for collection through his bank to the banks designated in the acceptances. According to law, the place of payment of a trade acceptance is at the office of the acceptor, unless a definite place be designated on its face, such as the acceptor's bank—this being the usual method.

Eligibility.—To be eligible for purchase by or discount at a federal reserve bank, a trade acceptance should bear *prima facie* evidence that it is drawn by the seller on the purchaser of goods sold and must have a maturity, at time of purchase or discount, of not more than 90 days, exclusive of days of grace, excepting that if drawn for agricultural purposes or against sale of live stock, it may have a maturity at time of discount of not more than 6 months, exclusive of days of grace.

Advantages to Seller.—The advantages of the trade acceptance to the seller are the following:

1. It establishes the **correctness** of the amount.
2. It tends to eliminate common **abuses** such as unwarranted returns of merchandise, deductions of excessive discount, and unjust claims.



Trade Acceptances are Approved by { National Association of Credit Men / American Bankers Association
Represented in the American Acceptance Council

DETACH BEFORE RETURNING ACCEPTANCE

A TRADE ACCEPTANCE

Is an acknowledgment of a debt by the buyer in favor of the seller, for merchandise that the seller had placed in the hands of the buyer. The buyer agrees, in writing across the face of this acceptance his name, the name and location of his own bank and the date, to pay the amount of this certain indebtedness at a certain time at his own bank.

This varies from the open book account method only in giving the debt a negotiable value.

According to a FEDERAL RESERVE BANK GOVERNOR'S OPINION, the signing of an Acceptance increases the financial standing of the giver, because it shows prompt paying methods.

Kindly fill in attached Acceptance above, on red lines across form and then forward to us.

SELLER RETAINS THIS PORTION

NAME ADDRESS PAYABLE AT CITY DATE DUE DATE AMOUNT $ COVERING INVOICES $ DISCOUNTED AT NET PROCEEDS $ REMARKS:

Form 1. Trade Acceptance

3. It facilitates and improves **collections.** Debtors who by habit attach much more importance to written instruments bearing their signatures, are more likely to be prepared to honor trade acceptances which they know will be presented on specific dates and may be negotiated, passing out of the sellers' hands.
4. It reduces **bad debts.** The use of trade acceptances is conducive

to close collections and tends to cause the buyer, impressed by the definite payment date, to be more conservative and to more carefully and soundly regulate his business.

5. It is an aid to **financing**; receipts may be much more easily estimated, also one can frequently borrow to much better advantage on the trade acceptance than on his own note.

Advantages to Buyer.—Trade acceptances enable the seller to do business more economically and to enhance his borrowing power; they give banks sound, self-liquidating commercial paper bearing two names and strengthen the banking position. Better economy in the seller's business and a stronger banking system contribute materially to the strength and stability of the entire community and the retailer shares in resulting benefits.

LETTERS OF CREDIT.—Commercial letters of credit are used to finance transactions in foreign trade. They authorize the exporter to draw upon a branch or correspondent of the issuing bank up to the amount named in the letters, in accordance with terms and conditions stated. In case of **dollar credits** it is customary for the bank to make its credits available by drafts drawn on itself. Importer may take time purchases, but by causing letters of credit to be issued to exporters, they enable exporters to obtain cash at time of shipment by discounting the drafts drawn under the letters of credit, the importers not being called upon to pay until maturity of the drafts.

Smith & Co., New York jobbers, place an order for silk goods with Taro & Co., Yokohama, agreeing to arrange with a New York bank to open a confirmed letter of credit in favor of Taro & Co. for $10,000, the amount of the purchase, drafts to be drawn at 90 days' sight. Smith & Co. either negotiate a loan at the bank covering the amount involved or deposits adequate collateral; or, in view of Smith & Co.'s standing, the bank may open the credit without requiring the deposit of any security, confident that the firm will meet the call for payments when due. The bank then asks Smith & Co. to sign an application and also an agreement (both sometimes being contained in one instrument), the agreement covering, among other things, terms of sale, documents to be delivered, and duties and responsibility assumed by both Smith & Co. and the bank.

The bank, deeming itself secured and having the application and agreement duly signed by Smith & Co., opens the confirmed letter of credit. It gives Smith & Co. the letter of credit, sometimes in duplicate, the original to be mailed to Taro & Co. In urgent cases, the bank cables its correspondent and confirms it by mail. Taro & Co., upon receiving the letter of credit or word from the bank that one has been opened in its favor, delivers the merchandise to the carrier for shipment, securing the necessary documents. Taro & Co. then draws a 90-day sight draft under the letter of credit, addressed to the New York issuing bank, and presents both the draft and the documents to the Yokohama correspondent, requesting that the draft be discounted. If the draft and the documents are in order and meet the requirements, the Yokohama bank pays Taro & Co. the amount of the draft less the discount. The Yokohama bank then forwards the draft together with the documents to the New York bank. The New York bank, finding the draft and documents in order, accepts the draft, usually by stamping across its face the word "accepted" and the date, with the signature of a duly authorized officer of the accepting bank. The bank indorses and delivers the documents to Smith & Co., who sign a trust receipt giving the bank a lien upon the goods.

At maturity, the issuing bank collects from Smith & Co. either by receiving a check or charging the account, and makes payment to the correspondent bank. Of course, in the case of **dollar credits,** the bank pays itself.

Although Taro & Co. received cash at time of shipment, Smith & Co. had the goods released to it without being obliged to pay until maturity of the draft, this transaction being made possible by the New York bank's permission under the letter of credit, to Smith & Co., to use its credit, for which Smith & Co. pays the bank a commission.

Classes of Credit

BANKING CREDIT.—The commercial bank has **two primary functions:** first, to receive deposits, and, second, to make loans and to discount business paper. To accomplish this dual purpose, the bank must set up a very high credit standard for persons who apply for loans or discounts. The borrower must be able to measure up to these high standards; he must be able to give the very best kind of security, either a financial statement showing his business to be in sound condition backed up by his reputation for character and business ability, or he must give adequate acceptable collateral, usually in the form of negotiable instruments.

Since the bank's obligations are in excess of available cash on hand, it is essential that loans and discounts shall be of such nature that a sufficient amount of them can be quickly converted into cash. The facility offered by federal reserve banks to their member banks of rediscounting eligible commercial paper is a potent aid in liquifying loans and discounts.

INVESTMENT CREDIT.—Investment credit is the confidence commanded by incorporated companies by virtue of their integrity, financial soundness, stability, and earning capacity, which induces investors to purchase their bonds, mortgages, or shares of stock. The purchaser gives the corporation the use of his funds in the belief that his principal is secure and will render him a satisfactory return.

RETAIL OR PERSONAL CREDIT.—Retail or personal credit is the power of the individual to obtain things of value for personal use or consumption upon his promise to pay money therefor at an agreed upon time in the future. This credit enables the individual to have a purchasing power in excess of his available cash and also serves him as a convenience by facilitating shopping.

MERCANTILE CREDIT.—Mercantile credit is the power of one merchant to obtain goods or services from another for business purposes upon the promise to pay at a specified time in the future. The transaction rests upon the willingness of the seller to accept the promise, or, in other words, upon the confidence in the buyer's willingness and ability to pay.

Retail Credit Granting

DEFINITION.—**Retail credit** is the power of the individual or consumer to obtain goods or services by giving a promise to pay the agreed upon price in money at a specified time in the future.

ADVANTAGES.—By adopting a credit policy or by authorizing customers to have their purchases charged, the retailer serves their convenience and at the same time establishes a contact with them which tends to build business.

CREDIT RISK.—The decision as to the acceptance of such promise and the measure of credit to extend, relying thereon, is based on the credit's man judgment as to the willingness and ability of the purchaser to pay. Among the essential factors considered in determining the quality of the risk are the reputation of the applicant for integrity and trustworthiness, his financial condition, his earning power, and the nature of his vocation.

POINTS OF INFORMATION.—Specific points covered by an investigation are:

1. Full name—signature
2. Residence
3. Age
4. Business
5. Business address
6. Nature of employment
7. Approximate income
8. Mercantile agency rating
9. Financial condition
10. Bank
11. References
12. Experiences of others
13. Comments as a result of personal interview

SOURCES OF INFORMATION.

Mercantile Agencies.—The retail credit department has available the services of the mercantile agencies—R. G. Dun & Company and Bradstreet's—when investigating persons who are engaged in business. These reports give the business record and reputation, as well as the financial condition, and the experiences and opinions of merchants to whom the subject of the inquiry is known.

Banks.—The bank may be consulted as to its experience and opinion Its information may be given in vague terms and have only negative value, but at times data is received which is helpful.

References.—Retail credit departments usually ask the credit applicant for business and personal references from whom information is sought respecting his character, financial standing, manner of meeting obligations, and prospects.

Credit Information Bureaus.—Probably the most important service available to the retail credit department is that rendered by the credit bureau. Such bureaus are organized on a non-profit-making basis by retail credit men. They foster free and frank interchange of credit experiences and opinions through an agency motivated by the highest standards and organized along economical and efficient lines.

The Reference Clearance Bureau, conducted by the Associated Retail Credit Men of New York City, Inc., has proven an efficient medium for securing valuable information for members. The nature and scope of its operations and the methods and systems employed are most worthy of note and are clearly set forth in the following article, reprinted by permission of *Women's Wear* and the Associated Retail Credit Men of New York City, Inc.

The Reference Clearance Bureau

Organizing and establishing a reference clearance bureau for the purpose of centralizing the clearing of references and the collection of information concerning individuals seeking to open charge accounts in retail stores has become national in scope. Because of its aid to the retail credit man and its value to the retail merchant, in practically every city of any size in the United States a merchant-owned or merchant-controlled reference clearance bureau is in operation. Previous to the establishment of reference clearance bureaus for the collection and collation of information and the ledger experience of stores with respect to individuals who enjoy the privilege of a charge account, the retail credit man was often put to much trouble seeking information about other charge accounts which prospective customers might have but which they did not mention to him when opening the account.

FORM 2. Member Report on Individual to Reference Clearance Bureau

As a general rule an applicant for a charge account always gives as references the stores where her account is in good standing. Unless there is a reference clearance bureau to which the retail credit man can apply, he has no means of knowing where the prospective customer had charge accounts other than those stores whose names she has given him. Oftentimes many stores have had a certain account, but have been obliged to close it because of slow pay or unsatisfactory dealings, either collecting it through an attorney or charging it off to Profit and Loss, and in many instances, if this information could have been obtained, the retail merchant to whom application for credit was made would have been saved hundreds, or even thousands, of dollars.

In order to bring about the disclosure of such information for the protection of the retail merchant, the establishment of a central bureau for the collection and dissemination of such data becomes necessary, and it was for this reason that the Associated Retail Credit Men of New York City, Inc., established their Reference Clearance Bureau.

In the office of this bureau, which is an organization merchant-owned, merchant-controlled, and merchant-operated, are thousands of cards bearing the names of people who have asked for credit or who have received credit from local and out-of-town stores. The expenses of the bureau are paid by the members according to their contracts, which vary in proportion to the number of clearances for which the member wishes to subscribe.

The feature of the reference bureau is that it depends for its existence and its efficiency upon the closest possible co-operation of its merchant members. The slightest carelessness or laxity on the part of any one of the stores composing the organization lessens by so much the efficiency of the bureau. When we consider what the credit departments of the various stores are called upon to do, we realize immediately the splendid spirit of mutual helpfulness which must be the basis of the organization.

Member stores are not merely requested to give their opinion on whether a certain individual is a safe account or not. Such reports may be easily rubber-stamped and are of corresponding value. Instead, the members are sent a report form (Form 2), whereon they are asked to give their ledger experience with the person who asks for credit. They are requested to give the length of time the applicant has been buying from them; his highest credit; how much he owes; for what period; what his paying habits are; and whether he is a satisfactory or unsatisfactory account.

Member stores are also asked to report immediately (Form 3) when they close an account, when they turn it over for collection to an attorney, or any other derogatory information. Upon receipt of such information and if the name of the party reported is already on file, all members whose code number appears on the master card are immediately notified and are given the information reported by the store which has closed the account for their future guidance in dealing with the individual in question.

Members are also asked to report daily (Form 4) all inquiries for credit information which they give to non-members and to report also whenever they open an account which they do not clear through the bureau.

In the case of change of address or of a new account a daily report (Form 5) is requested of the members. This information is not cleared through the bureau but is merely sent to the bureau for filing.

In this way the bureau is continually increasing its store of information which becomes available for every one of its members. In its files may be found the names and credit records of all the individuals whose names were reported on the association bulletins before the bureau's organization. In addition to this original list, information may be found on all those who have applied for credit with members and with a large number of non-members.

We might cite here a complete transaction. For instance, Mrs. John Doe of 401 Park Avenue may apply for a charge account at a store. She furnishes to the credit man the names of two stores where she has an account, a bank, and possibly other personal information. The credit manager will send to the bureau this information, and the subject of the inquiry will be checked through the files, the stores referred to cleared, and any additional information that may be collected on this account sent to the inquiring member. This subsequent information may show that the applicant for the charge account has accounts in several other stores where she is still owing amounts that may be long past due, accounts on which unsatisfactory experiences may have been had; or it may disclose that a suit or a judgment has been taken, or that there may be domestic troubles, in which her husband may notify the store that he will not be responsible for any charges incurred by his wife.

This class of information will immediately put the credit man on his guard. He may send for the prospective customer, or notify her that the application has been declined.

Date ____________________ Member No. ____________________

Members will use this form in reporting DAILY to the Reference Clearance Bureau. All inquiries answered direct to non-members.

FORM 4. Form showing Information Sent to Non-Members of the Bureau

Should the information on the account prove to be satisfactory and at a later date a store notify the bureau that it has closed the account for any reason, all members recorded as having been interested in the account are automatically notified of the action taken by the reporting member and the details given. This automatically serves as a warning to the stores where the applicant has an account. The credit man, on receipt of this information, then proceeds to deal with the account as he sees fit.

Taking another typical example of the operation of the bureau, suppose Mrs. John Smith asks for credit and gives two Fifth Avenue stores as references. The store to which the application is made fills out a form (Form 6) which is printed in "ditto" ink. Each store has a code number and this number is entered in the proper place to indicate for whom the reference is being cleared.

In filling out the form the stores are requested to give the full Christian name and initials of the applicant, the exact address, former address, occupation, and business address to insure adequate comparison. The form is taken to the office of the bureau by a messenger

who makes the trip according to a regular schedule a number of times a day. Enough copies of the form are made on duplicating machines to go to each of the stores mentioned as references. These stores fill in their ledger experiences, and on the next delivery the various copies of the form go back to the bureau. The report is then sent to the original store. The information is also entered on a master card which is kept on file at the office. This card is similar in form to the report and is filed permanently in the bureau.

If a request for clearance is received and the master card on file at the bureau has sufficient information not older than 90 days, a report is made out immediately and sent to the member requesting it. When necessary the reference is cleared by telephone. When a store does not answer within 24 hours, a second request is sent.

Out-of-town references are also cleared by the bureau, which sends for information to merchant-owned associations in other cities or to out-of-town stores directly. When a bank is given as a reference, a separate form is used. This is sent in duplicate so that a copy may remain on file with the bank.

The bureau also keeps the credit man advised of any unusual happenings to an account that his store may be interested in, such as unusual activity on the part of an individual in

General Remarks

PLEASE DO NOT WRITE IN THIS SPACE

Form 6. Form Used in Clearing a Reference

opening new accounts, unusually heavy buying on an account, or information to the effect that an imposter is buying on an account. Information of this type is automatically flashed to all stores interested.

A special daily bulletin is furnished to all stores, publishing items that may be of interest to the retail credit man, reported to the bureau by members. This bulletin service gives the details of bad check operations, advises caution in extending credit to individuals who do not appear to be responsible, publishes notifications of domestic troubles, and any other items that may interest the credit man. Through national affiliation with other bureaus, the credit standing of individuals moving from one city to another is reported for the benefit of the retail merchants.

The importance of getting the Christian name in full, the present and former addresses, and the business connections of an applicant at the time the application is made is impressed upon the members of the bureau. This oftentimes works to the advantage of the inquiring store, as information of a very unsatisfactory nature may be on file concerning the individual at a former address.

With a good reference clearance bureau in operation the fraudulent buyer, the bad check operator, and the poor credit risk meet their Waterloo when they seek to ply their professions amongst the retail trade. A telephone call to the bureau oftentimes brings offenders of these types into the hands of the law.

The most important medium for credit basis today is that of the experience of other houses with the risk in question. The reference clearance bureau is to the retail credit grantor much what the clearing house is to the banks. It is a pivot around which retail credit business may circulate with reasonable safety; it is a clinic for the chronic credit abuser; it is the pulse of the retail charge business. It is a beacon light on an uncharted sea; a nucleus for a credit men's organization and for the promotion of a credit man's welfare. It is an educational center for disseminating among the public such propaganda as will aid a credit man's work.

All authorities on the subject of retail credits are of one opinion—that credit may be granted with more profit and safety to the person whose record is that of paying his bills promptly and keeping his word and living up to his contracts, rather than to a man or woman who can present a substantial financial statement that is not backed up by a record for the prompt payment of accounts.

Suits and Judgment Publishing Companies.—These companies issue services giving information pertaining to suits and judgments. While, of course, a lawsuit may be the result of an honest dispute, it is important to know the facts.

Newspapers.—Clerks in credit departments glean information from newspapers about business embarrassments, such as judgments, receiverships, foreclosures, bankruptcies, bad checks, fires, business losses, and lawsuits In this manner may also be obtained information with regard to separations, divorces, and debts.

LEGAL LIABILITY.—It is important to know whether the one to be charged is legally liable. This requires attention especially in connection with purchases made by minors, and also in cases where credit is given because someone other than the purchaser is relied upon to make payment.

Retail Collections

IMPORTANCE.—The retailer appreciates the value of the credit system as a stimulator of sales but is also mindful of its dangers. He knows that there is a limitation upon the amount of capital he may prudently tie up in outstanding accounts, also that he must avoid disproportionate bad debt losses. These factors, if not properly controlled and regulated, may not only sap profits but lead to serious business embarrassments. Accordingly it becomes essential not only that the responsibility for making credit decisions be entrusted to a competent credit department but that this department be supplemented by an efficient collection department.

No credit man is infallible; there are bound to be errors of judgment, betrayals of confidence, and adverse changes in conditions which cannot be foreseen. A **symptom of a weakened condition** is tardiness in making payment—this status challenges the attention of the collection department. Loose collection policies and methods aggravate risks, whereas close and proper treatment makes possible escape from losses on poor risks. The collector may greatly help or mar the work of the credit department, consequently both these departments should establish a relationship of close and complete co-operation.

FUNCTIONS OF THE COLLECTOR.—Primarily, he must collect as promptly as possible all due obligations. Many retailers suffer, sometimes seriously, because of lax collections. Failing to collect debts due, they find themselves unable to meet their obligations, thus impairing their own credit standing; besides, the longer a collection is deferred, the less collectible the account becomes. Cases have been known where retailers, feeling tender about making any efforts to collect, have invited disastrous consequences. Such a policy is inconsistent with the present-day conception of business. Debtors today should be educated to the understanding that the drawing of their attention to an indebtedness due is not intended as any reflection upon them, but is a businesslike reminder.

The duty to collect should be assigned to one fully qualified. **Retail collectors** do not always deal with people experienced in business and so must be particularly tactful, although not servile. They should, in a considerate, resourceful way, adapt themselves to circumstances and be as forceful and persistent as the situation requires.

Preparedness.—To properly plan their procedure, they must be well informed regarding the actual standing of the debtors as well as regarding the experience of their houses. The credit department files and advices should be at the collector's command.

OUTLINE OF SYSTEM.—Collectors' efforts must not be along haphazard lines. To pursue a methodical course, they must avail themselves of the benefits of records systematically kept.

Statements.—Sending a statement is usually the **first step** in the collection program. It may be sent without any notation whatever and merely to serve as a reminder, or it may bear appropriate comments.

Letters.—Letters usually begin by courteously drawing the debtor's attention to the status of the account and continue with increasing firmness to demand payment.

Visiting Collectors.—It is advantageous to have collectors make personal calls upon debtors. Such collectors should be of a type that will reflect credit upon their houses. They must be gentlemen, commanding the respect of whomever they visit. They acquire a good understanding of human nature which should train them, when they do not collect, to form correct conclusions as to whether promises may be relied upon or whether the issue must be forced. In other words, in the event they do not immediately effect collections, they should have the ability to probe deeply into the debtors' affairs so that their reports may be guides for further action.

Attorneys and Collection Agencies.—When collection departments reach the conclusion that the usual amicable efforts will not get the results, claims are sent to lawyers or collection agencies. This is an expensive method and, while used as a last resort, must not be too long deferred, else the chances of collection will be greatly handicapped. For form of proof of debt used in case of suit see Form 7.

Follow-Up Systems.—Some concerns follow the practice of sending statements monthly only. Others send statements on **fixed days,** which may be the 1st, 10th, 15th, or 20th of the month. The **effective plan,** as has been stated above, is to follow up communications by allowing a reasonable time in accordance with location and the quality of the account, and to avoid entirely the impression that the communication is merely an incident of statement day. This psychology may be further stressed by incorporating in letters references to specific items relative to the account so as to give the communication a distinctive character. In exceptional cases it may be

FORM 7. Proof of Debt

considered policy to give the communication a mechanical or routine aspect. It may also be considered desirable to include sales offers as an indication that the account is valued. In short, the collector should strive to collect but retain the friendship of the desirable account.

CLAIMS DEPARTMENTS.—Very frequently the customer refrains from making payment pending adjustment of a claim. Whether the claim is made in good faith or not, it is important that the credit and collection departments be informed of its existence so that they may co-operate to the fullest extent with the claims department to avoid its being the cause of a delay in effecting the collection. All claims should receive prompt attention. The nature of the claim may give the credit department significant information.

Mercantile Credit Granting

MERCANTILE CREDIT.—This is the power of one merchant to obtain goods or services from another for business purposes, upon the promise to pay money therefor at an agreed upon time in the future.

TERMS OF SALE.—

C. B. D.—Cash Before Delivery.—Sellers resort to these terms when unwilling to take any credit risk.

C. O. D.—Cash on Delivery.—In such transactions the seller does not agree to take any credit risk and should accept cash, money orders, or certified checks only. The seller assumes the risk of having the purchaser refuse to accept the goods, involving expense of handling, transportation, etc., and possible deterioration. **Deposits** are sometimes required as a protection against such losses.

Dating.—Dating is the period of time added to the terms of sale. For instance: **2% 10 days, net 30 days, 60 days extra,** meaning, terms 2% cash payable in 10 days, or net 30 days, with 60 days added dating. A bill charged on Oct. 1 subject to terms of 2% 10 days, net 30 days, with a dating of 60 days, is not due until Jan. 1. In other words, terms of credit begin to run from Dec. 1. The purchaser may pay: (a) between Dec. 1 and Dec. 10 and deduct 2%; (b) on Jan. 1 without deducting any discount; (c) prior to Dec. 1 and deduct 2% plus interest on the net amount for the time unexpired to Dec. 10.

Season Dating.—The duration varies with the different lines of business, being in some instances for a period of several months. It is given to induce the placing of orders in advance of manufacture or importation.

7/10/60 Extra Terms.—These terms mean that the bill is due 70 days from its date, less 7%. The buyer may wait until date of maturity at the end of 70 days and deduct his full 7% discount. The 7% is not a bonus or premium to induce earlier payment, and is really not a cash discount at all. In such cases, if the bill is paid before the end of 70 days, the customer may deduct 7% and also interest on the net amount for the unexpired time. It is usual for the seller to allow 8% on the gross amount of such bills paid within 10 days from date. When such bills are paid after 70 days, the purchaser theoretically forfeits the entire discount. In practice, however, this penalty is not usually enforced. The treatment of these past-due bills lacks uniformity. Some houses allow the full 7% discount and charge interest for overdue time at the rate of 6% per annum. Others require the debtor to lose 1% discount for a month overdue. When the delinquency is prolonged, it is not uncommon to disallow any discount.

E. O. M.—End of Month.—This arrangement provides that all bills charged during a month are to be treated as dated the last day of the month, from which date the terms of sale begin to run. In other words, all shipments between, let us say, June 1 and June 30 will be regarded as being dated June 30. These terms are created only by special agreement.

R. O. G.—Receipt of Goods.—Meaning the time allowed for taking discount begins to run from the time the goods are received by the purchaser.

The Credit Risk

CREDIT POLICY.—Credit policies vary. Natural conservative and liberal inclinations are influenced by business circumstances. Among the

considerations are the strength of the selling position, selling plans, organization problems, scale of production, overhead, financial limitations, and the margin of profit. Credit policy should be in harmony with profitable business building, and should be a promoter of sales expansion, having due regard for financial and bad debt loss limitations.

GENERAL FACTORS.—As a general proposition credit is based on the applicant's character, capacity, capital, and business prospects.

Character.—Integrity is indispensable and a high sense of obligation a prime requisite.

Capacity.—Under this head is considered the applicant's ability, habits, training and experience, location and organization, and business record and its trend.

Capital.—Financially, the condition should be adequately liquid. This is determined by considering the quick assets, the amounts and their availability, in relation to the liability demands. In this connection there should also be considered the volume of business, the merchandise and accounts receivable turnover, the requirements for pay-roll and other running expenses, insurance, outstanding purchase contracts and other commitments, orders on hand, and ripening unrecorded obligations such as taxes and contingent liabilities.

Business Prospects.—The stability of the line of business, its problems and condition, as well as local and general economic, financial and political conditions, are elements considered by the analyst.

Sources of Information

MERCANTILE AGENCIES.—R. G. Dun & Company and The Bradstreet Company.—Prior to the advent of the mercantile agency credit granting was frequently based on superficial and unreliable information. When the buyer came to the market he made arrangements with the seller respecting his credit and the creditor was compelled to rely chiefly upon the information obtained during such interviews and his own impressions. He had no facility for properly checking up the information, nor was he in a position to keep informed as to the trend of the debtor's business. Owing to the loose and haphazard credit methods, creditors suffered severe losses and credit conditions were especially demoralized during periods of depression.

In 1837 a disastrous panic occurred. The crash caused a record-breaking number of commercial failures. This aroused merchants to the need of adequate trustworthy credit information and led to the establishment of the mercantile agency. R. G. Dun & Company was founded in 1841 and Bradstreet's in 1849.

These agencies started systematically to compile records and to make credit investigations. At first their reports were comparatively meager. Many merchants objected to "prying" into their affairs and numbers of creditors were unwilling to impart their knowledge and experience to others. However, in the course of the development of the country, and as business became more complex, there was a constantly growing appreciation of the need and value of the agency service, and it was steadily improved to meet the new requirements. Today the mercantile agencies are honored as powerful business-building institutions. With a network of organization encircling the globe, composed of over 200 branch offices, thousands of trained reporters, many specializing in given fields, upwards of 100,000 correspondents, attorneys, and representatives located in every important trading

Grocery & Hardware

Rv.
HORTON & FLYNN

Hastings, Nebraska
Adams County

WILLIAM HORTON, age 46, married
JOSEPH FLYNN, " 42, "
Cond. 32 700 Feb. 1, 1923

RECORD

Partnership formed Jan. 22, 1922. Succeeded William Horton, who bought the business from his father, John Horton, in 1900, paying $3,000 cash and transferring a lot valued at $600. Horton had worked for his father from the time that he left school. At first used the trade style Horton Bros., but from 1914 to 1922 he used his individual name.

Flynn was reared here and has been employed in various capacities. From 1910 to 1922 he was a traveling salesman in this and two adjoining counties for a wholesale grocery. He says he put in $4,000, and that each partner has a half-interest. Before he came in, the business was hardware only.

STATEMENTS

DATE	ASSETS	LIABILITIES	NET WORTH
Feb. 1, 1922	$10,250	$2,525	$7,725

Jan. 21, 1923, Horton gave the partners as above and submitted the following statement from inventory of Jan. 1, 1923, which he signed for the firm:

Assets:	
Merchandise on hand	$ 9,135
Outstanding accounts	1,970
Notes considered good	150
Cash on hand	100
Cash in bank	135
Fixtures	1,000
Ford delivery truck	350
Total	$12,840
Liabilities:	
For merchandise due and past due	3,640
Surplus	$ 9,200

Insurance on merchandise $7,000. Carry employers' liability insurance. Sales per month $2,600.

GENERAL INFORMATION

Present statement shows an increase of $1,475 in the net worth, and is accepted by local authorities as correct. Are carrying a larger stock than a year ago, and owe more. Carry a general line of hardware, which is said to have inventoried at $6,735; the grocery stock, at $2,400. They say that they inventoried the fixtures, which are modern, at cost, without depreciation.

Balance at bank is usually small, and obligations there are indorsed by Mrs. Horton, who is said to have some means.

Their groceries are sold almost entirely for cash, and the accounts receivable are practically all for hardware. The store is well located, within two doors of the post office.

Both partners bear good reputations, are attentive to business, but both have expensive families and are thought to draw more money than they should. Do not discount; pay interest on some past due bills.

center in the world, the agency is equipped to reach the applicant for credit however obscure or wherever located and to issue a report regarding his business history, training, habits, his financial condition, as well as the experiences and opinions of others to whom he is known; in other words, to what extent he has established his credit, how he is maintaining it, and what the future indications are. The agencies are so universally recognized that it is common for the credit applicant to send them voluntarily a copy of his financial statement and other relevant information. The service facilitates the opening of thousands of accounts and emphasizes the value of a

ACME DRESS CO.................................New York City

Two others report occasional dealings on regular terms, account satisfactory, but give no details.

ANTECEDENTS:

On Jan. 4, 1920, certificate of trade style was filed. Jones was employed as salesman for about seven years, but Dec. 17, 1918, became a partner in firm of York & Atkins; he withdrew on Jan. 2, 1920, to form present connection. Brown was formerly employed as a cutter and commenced on own account Aug. 10, 1905, as a member of the firm Butler & Brown, but withdrew Nov. 11, 1907, and was again employed for a time. Nov., 1914, he commenced individually, locating at 220 E. 19th St., and is said to have made considerable headway financially, continuing until formation of subject firm. It is understood that all his liabilities were paid in full.

FIRE RECORD:

Not known to have suffered loss by fire.

GENERAL REMARKS:

Occupy a loft about 25 x 85 feet. Some goods are manufactured outside. Both partners give full time to the business and are well spoken of personally. They specialize in medium grade evening dresses, selling principally to out-of-town department stores and business seems to be increasing.

60....1..............S C.................................June 2, 1923.

Form 9b. Bradstreet Co. Report (*Contd.*)

Ratings.—Another function of the agency is to assign ratings to each concern investigated and to compile these ratings in books published quarterly. (See Forms 10, 11.) The rating consists of **two symbols,** the first denoting estimated capital after allowance for shrinkage, etc.; the second, the relative grade of credit, designed to reflect the character, past record, present condition, ability, and business prospects. The rating is intended to serve merely as an index to the contents of the report. It does not give a basis for reaching credit decisions. Obviously it is frequently difficult to express several points of information often of divergent nature in the rating. It may have been thoroughly accurate when assigned but be inapplicable at the time the book is being consulted. As a matter of expediency, ratings may be used as a guide in passing upon small rush orders. They are also serviceable in making periodical revisions of credit files—changes possibly drawing attention to the need of later reports. Ratings may also be useful in compiling lists of prospective accounts.

OTHER SOURCES.—The success of the mercantile agency is measured by the confidence it inspires in the integrity and quality of its service. Although in the main the reports give valuable information, reports will

make mistakes—even as do credit men—delays will set in, and material facts be misinterpreted or undiscovered. For these reasons, besides the desire of getting information viewed from different slants, credit departments find it advantageous to supplement the mercantile agency service with other sources of information.

SPECIAL AGENCIES.—These agencies cover more limited fields than do the mercantile agencies. They may lack the enormous files containing antecedent information, as well as other advantages incident to the far-reaching organizations, but within their scope they are prepared to render

an excellent service. They may confine their efforts to certain trades and industries, and to certain localities. Many of them build up past record files in good proportion to their spheres of operations and the more influential receive financial statements from debtors, but their distinctive activity is the gathering of ledger experiences.

TRADE CREDIT BUREAUS.—Many trades associations organized to promote co-operation in the treatment of common problems also establish credit bureaus. These bureaus enjoy the advantages accruing from concentrated attention to debtors and credit conditions in the special lines in which the membership is interested. Some such bureaus merely function to provide their members with the machinery for the interchange of ledger

experiences. Others follow the more ambitious program of compiling reports containing past records, current financial statements, experiences and comments of creditors and others.

These bureaus primarily serve only their members. They seek information direct from the debtor and elsewhere regarding his past record and present financial condition and also make investigations as to the manner of meeting obligations and observing contracts and established trade customs. Infor-

GENERAL COMMENT:

A difference of opinion is expressed regarding the concern and in a number of instances the account is not cared for, however, where sold in a few instances on regular terms payments are met promptly, at times anticipating by request and no one appears to be in possession of later figures than those rendered June, 1922.

ANTECEDENTS:

New York corporation organized November, 1920, authorized capital of $150,000, of which $114,000 is claimed paid in the corporation succeeding to the business formerly conducted under the same style as a copartnership by Dobb and Mooney.

Dobb and Mooney were originally employed as salesman and manager respectively, until March, 1919, when with one Irma Gurlan they commenced trading as Dobb, Gurlan & Mooney. In January, 1921, Mrs. Gurlan withdrew. Dobb and Mooney continued until the present corporation was formed.
Theodore Sands was at one time connected with the Fashion Textile Company, later employed by others.

STATEMENTS:

Feb., 1921, claimed a net worth of $70,179 over debts of $67,421. Submitted the following balance sheet as of May 31, 1921, by S. T. Johnston, C.P.A.

Assets

Cash in banks	$ 3,767.84	
Cash on hand	52.62	
Accts. Rec. less res.	50,573.46	
Loans receivables	350.00	
Notes rec. less res.	9,518.01	
Accts. rec.—Contractors	3,612.24	
Mdse. inventory	48,449.61	
Mach. furn. fix., less dep.	7,965.85	
Rent dep.	3,000.00	
Salary adv.	478.95	
Organization exp.	1,550.00	$129,318.58

Form 13a. Report of National Credit Office

NATIONAL CREDIT OFFICE

45 East 17th Street, New York

The following report is furnished in STRICT CONFIDENCE, at your request, by the National Credit Office, as your agents, attorneys, servants and employees, for your exclusive use, as an aid in determining the advisability of granting credit.

It is expressly agreed, in consideration of the receipt of this information, that the contents of the report will not be communicated to the person reported nor to anyone else.

Please note whether name, business and street address correspond with your inquiry.

UNIQUE DRESS CO., Inc., City
Sheet 2, October 12, 1922, ABD.AS –4–

Liabilities

		$129,318.58
Notes payable—Banks	$32,500.00	
Notes payable—Others	5,000.00	
Accts. pay less res.	24,049.19	
Trade acceptances pay	8,085.19	69,634.38
Capital stock issued	$64,000.00	
Deficit	4,315.80	$ 59,684.20

ANALYSIS:

Above figures indicate liquid assets consisting of accounts receivables and cash amounting to about $54,000 to meet obligations of about $70,000. These figures compared with those rendered February, 1921, indicate a decrease in net worth of $9,000 while liabilities have increased about $3,000.

INVESTIGATION:

Trade consulted at this date finds account checked as follows:

Amounts	Terms	Payments
1. Declined lack of confidence.		
2. $2,000.	Regular	Prompt.
3. Not care for in future.		
4. $2,000.	Regular	Prompt, owe nothing.
5. Do not want.		
6. Declined.

8. Do not want.		
9. Declined lack of confidence.		
10. $800.	Regular	First in some time, not keen.
11. $300-$400.	Regular	Prompt, owe nothing.
12. $3,000-$4,000.	Regular	Prompt, owe $2,000.
13. $4,000-$5,000.	Regular	Prompt and anticipate, owe $3,000.
14. Do not want.		
15. Do not want.		
16. Do not want.		
17. Declined.		
18. Do not care for.		
19. Lack of confidence, do not want.		
20. Do not care for.		
21. Do not care for.		
22. Did not care for in the past.		

INQUIRY:

Inquiry throughout the year has been constant though not excessive.

SUMMARY:

In view of the difference of opinion expressed for the present time, the account is looked upon as one where individual judgment should be exercised.

Form 13b. Report of National Credit Office (*Contd.*)

Many trade and other bureaus operate similarly. These bureaus and agencies deal primarily with ledger experiences. In some instances the plan is merely to supply inquiring members with the names of those to

FORM 14. Interchange Bureau Report—New York Credit Men's Association

whom the account is known. Others adopt a system of gathering and disseminating the information. It is the policy of some bureaus to give free to each contributing member a copy of the report giving the combined

experiences reported. Some bureaus require each member to file a complete list of accounts as well as all new applicants for credit, giving the bureau material for effective clearances. (See Form 14.)

FOREIGN INTERCHANGE BUREAU—National Association of Credit Men.—This is a mutually co-operative, non-profit-making bureau. Its membership represents practically every industry and every section of the country. It is conducted to serve American manufacturers, merchants, banks, and export commission houses engaged in foreign trade. The bureau recently announced that it had credit files on 140,000 firms in foreign countries and commission houses in the United States who make purchases in the American market for export. The annoucement adds: "Facts and figures given are gathered from over 600 sources of information that have known and have been passing on these accounts for months and years, and know the character of the debtor, his resources, his requirements, manner of meeting drafts; the terms of sale to which he is accustomed, his paying habits, and how to rate the account from the standpoint of an American shipper or bank. Details of these essentials are features of every report."

Original reports giving accurate detailed recent information are issued to inquiring members. These reports contain the following items of information:

1. How long sold.
2. Terms of sale.
3. Highest recent credit.
4. Date of latest dealings.
5. Amount now owing.
6. Amount past due.
7. Time past due.
8. Manner of payment.
9. Credit limit.
10. Credit decisions.
11. Comments.

LEDGER EXPERIENCES.—These supply information of inestimable value. Whether obtained through an interchange bureau or other agency, the quality and merit of the service depends upon the trustworthiness and extent of the clearance. A well-prepared report should cover the following important points:

1. First orders.
2. Increased orders.
3. How long sold.
4. Fixed line of credit.
5. Highest credit currently extended.
6. Amount owing.
7. Amount past due and how long.
8. Manner of meeting previous payments.
9. Trade and credit abuses.
10. Comments and opinions.

When several of its members are interested in a foreign account which has become financially involved, the bureau holds meetings for the purpose of organizing the creditors for concerted action.

Reciprocal reports are sent free of charge to all who contribute information. In addition to the experience interchange report (Form 15), a supplementary report (Form 16) is issued. The supplementary report contains the name of the customer, age, nationality, location, language used in correspondence, branches if any, kind of business, number of employees, when established, whether corporation, partnership or individual owner, where purchases are made, financial references, capital, general reputation, etc.

The bureau obtains information not only from its members but from every

FORM 17. Reciprocal Credit Service Blank—National Assn. of Credit Men

The reporting of an unusual number of first and increased orders challenges the interest of the analyst; it may be thoroughly warranted or may disclose an unwholesome activity or the attempt to open new accounts owing to the loss of standing with the old creditors. The balance of the detailed information relates to the debtor's ability to pay and the degree of

confidence enjoyed by him among creditors, tending to measure his credit power; where confidence is lacking it may appear that the debtor will be severely pressed for payments, his credit closely limited and his buying market narrowed, these factors adversely affecting his business prospects and at times proving disastrous.

ORAL INVESTIGATIONS.—Ledger experiences and opinions of others are sought by some credit departments through investigations made by

personal representatives. This method may often be conducive to speed and better quality. The quality of the report will depend largely upon the investigator himself. If he is alert, tactful, and properly trained, he will frequently obtain information of a confidential and delicate nature which the informant might be reluctant to give to agencies for general distribution. To proceed intelligently the investigator should be as fully informed as possible about the account and the reasons for the investigation.

Recognizing the valuable character of the information, houses who seek it are careful to cultivate reciprocal relations with other credit departments, giving freely and fully all information which may throw light upon the case to inquiring creditors.

RECIPROCAL CREDIT SERVICE.—The National Association of Credit Men, in its constant and persistent efforts to promote co-operation, has adopted the form shown on page 931. Attached to the form is a duplicate sheet differing only in that instead of the words "Return this to us," appear these: "Keep this on your files. We give you below our experience."

ATTORNEY REPORTERS.—Companies such as the U. S. Fidelity & Guaranty Co. and the Martindale Co. publish books containing names of attorneys throughout the United States from whom subscribers may draw

Frederick E. Nelson Company was incorporated a few months ago. In May, 1920 they claimed to have net assets of $120,000.00 according to the following statement·

$49,000.00 in merchandise
53,000.00 in fixtures
10,000.00 in accounts receivable
35,000.00 advance payment on rent
39,000.00 balance due from stockholders and other assets

They claimed at that time to owe $60,000.00, $15,000.00 of which was owing to the National Bank of this city. Since that time we have represented three claims of the aggregate sum of $4,000.00 against this company, and have been compelled to file suit on one of them. We understand that they are now in New York trying to make some sort of an adjustment with their creditors.

They have a very fine store but have not met with the success anticipated. Nelson was formerly in the Millinery business.

He claims that additional capital has been invested in the business and that he is now on a sound financial basis, but we are of the opinion that the situation is dangerous for creditors.

The information given on this sheet is communicated in strict confidence as between Company and Client, and it is expressly stipulated that this information is obtained by the officers, clerks, attorneys and employees of the person to whom it is given, and it is expressly understood that the reliability of this information is not guaranteed, nor does the party receiving it hold this Agency liable for mistakes of its agents, attorneys or servants. The receiver of this agrees not to disclose it to anyone, and to use it only in the legitimate course of business.

FORM 18b. Reverse side of Form 18a.

credit reports. The reports may give information pertaining to the business ability, habits, capital, local reputation among merchants, banks and others, location, and manner of payments. The attorney may also give information as to lawsuits, court and public records, and is frequently able to report whether claims are in the hands of local attorneys—most significant information. To use the service advantageously inquiries should contain specific questions and give the attorney guiding information, whenever possible. In urgent cases the desired information may sometimes be obtained by wire. (See Forms 18, 19, 20.)

BANK INFORMATION.—Unlike mercantile credit departments, banks do not as a rule freely give credit information. Dealing in larger units, lending depositors' funds, and operating on a narrower margin of profit, banks are constrained to be conservative, and borrowers, recognizing this, are induced to give information which the banks cannot disclose to others without violating confidences.

ANSWER HERE:

Thos. Bergman & Aaron Ganz.

They claim stock worth $1,000.00. My opinion not worth $200.00. Claim business is poor. One (Ganz) claims $750.00 to $800.00 in bank in own **name.** *In* **business** *6 years. Place poorly located. When I called there, there was a card game going on. Do not think they are a good credit risk. Advise C.O.D., altho they seem to be* **honest.**

Has he assumed any obligations as a bondsman?. ....If so, to what extent?..

All the facts tending in anywise to a just estimate of party's credit-worth are highly desirable. Do not under any circumstances divulge the name of the party desiring this report.

FORM 19. Report from Agency to Client, based on Attorney's Report to Agency—U. S. Fidelity & Guaranty Co.

REED & DIXON
Attorneys at Law
Grimesland, N. C.

Feb. 18th, 1922.

U. S. Fidelity & Guaranty Co.,
75 William Street,
New York, N. Y.

Gentlemen:

Re: I. H. Foote

On the 21st ulto. we find that we made a report for your subscriber No. 164149. Claims are beginning to come in, but he is taking care of them. On account of the number of reports, we have checked him up carefully.

He owes the bank over $10,000.00 and owes other creditors, running his indebtedness to $50,000.00 or $60,000.00. He has his home in his own name, valued on the tax books at $10,000.00. He lists his stock of goods and all personal property for taxes at $30,000.00—last May. He is regarded around town as being overbought His banker advised us that he does not think he should be extended further credit unless he takes care of his account so as to leave the debt about where it was.

He has another store at Hayesville, N. C., which goes under the name of some bargain house. That section has been heavily hit with boll weevil and low prices on farm products. He has a warehouse, in which he stores goods for his retail store. Opinion here seems to be that he could easily reduce his inventory and buy oftener and keep his stock in as good condition. About three or four years ago he had a fire. He is regarded as honest, but prone to buy too heavily.

We are enclosing copy of this report, so that you can send it to your subscriber.

Yours truly,

REED & DIXON,
(Signed)

R–L

FORM 20. Report from Attorney to Agency

However, a good many banks seek information from mercantile credit departments and gladly give information to those whom they can rely upon to understand and discreetly use it. They may not go into detail but will certainly not say anything to mislead and will convey a very fair impression of their experience and opinion.

Customers sometimes refer to banks which, in reply to inquiries, write vague, indefinite, and superficial letters which may only cause the analyst to suspect that the case requires thorough investigation. When bank information seems essential it may be obtained through one's own bank, but such favors should, of course, not be abused.

TRAVELING CREDIT REPRESENTATIVES.—The credit department may have representatives who visit credit applicants in and out of town for the purpose of determining credit treatment. This obtains particularly in houses taking large advance orders for goods to be manufactured. Such representatives may make exhaustive investigations, including the examination of financial books and records, contractual commitments, orders on hand, cost calculation, and all other features which may affect the risk in a given case. The banks and other creditors may also be visited.

SALESMEN.—Some concerns ask salesmen to fill out long credit information blanks. This policy is pursued particularly when small dealers are being solicited, upon whom it would be difficult to obtain adequate credit information through the usual sources. Other houses prefer to limit the scope of the salesman's report to matters which come within his own observation, such items being, the location, condition of stock—does the stock appear to be clean, active, well kept, and well balanced—competency of management, local reputation, local conditions, and names of creditors.

Points included in the **long form** of report are as follows:

1. How long present business is established—date established if new business?
2. Past experience.
3. Is the location well adapted to the line of business.
4. Estimate of present value of stock.
5. The condition of the stock.
6. Buying and managerial ability.
7. What kinds of insurance does he carry and how much of each?
8. To what kind of trade does he sell?
9. Local information as to his ability.
10. Local information as to his habits.
11. What rent does he pay?
12. What is the total monthly cost of business?
13. How many clerks are employed?
14. Is he doing a profitable business?
15. What are the average monthly sales?
16. What proportion of the business is done on a credit basis?
17. Is the owner or any of the owners engaged or interested in other ventures?
18. Is any real estate owned—kind, valued at, mortgaged?
19. If a new enterprise, what is the amount of capital and in what form—cash, other assets (describe and give amount)?
20. Buy principally for the following houses—give names and addresses.

Most of the above points are covered by the information given in the mercantile agency reports. While some salesmen, in a tactful way, secure

valuable credit information without any prejudice to their position as salesman, others unduly antagonize the buyer, defeating the purpose of the visit. The salesman's time, expenses, and efforts should be devoted essentially to soliciting business. His assistance in credit reporting is sought only to the extent that the information cannot advantageously be otherwise obtained and his contact with the customer should be distinctly a co-operative one.

CORPORATION MANUALS—Poor's and Moody's.—Each of these manuals is published annually and covers railroads, large industrials, and public utility concerns. In each is found the most recently available income statements and balance sheets, a summary of past financial statements for several years, and a description of the important assets. They contain also a brief history of the formation and development of the corporation.

TRADE AND BUSINESS NEWSPAPERS, FINANCIAL AND ECONOMIC MAGAZINES, AND CREDIT PUBLICATIONS.—In these are to be found information of considerable value respecting conditions in particular lines of business, the trend of general financial and economic forces, as well as articles of an educational nature. *The Credit Monthly*, organ of the National Association of Credit Men, the most widely read credit periodical, publishes items of personal and general interest to credit men, and also instructive articles on credit methods, legislation, and problems affecting the work of the credit man.

The trade and business papers print, besides news of a general character, items of specific interest; such as incorporations, changes in business names, changes in personnel and organization, changes in capital, litigation, receiverships and bankruptcies, court decisions; and news items pertaining to particular lines of trade, business and finance.

BUSINESS REVIEWS AND BAROMETRICS.—The mercantile agencies, monthly letters issued by a number of the commercial banks, and reports compiled and issued by the United States government, and also private institutions and companies, give reviews of basic business and financial conditions and statistics indicating business and financial tendencies.

Mercantile Collections

IMPORTANCE.—Granting credit enables a merchant greatly to increase his sales, but to conserve its benefits he must be a good collector, quickening the turnover of his capital and minimizing the risks. A capable collector is an invaluable ally of the credit department. Careful and sound as the credit man may be, misconceptions are bound to creep in, and accounts good at the time the credit was passed upon may retrograde. The weakened condition may be reflected in tardy payments and it behooves the collector to effect the payment before it is too late. Furthermore, the collector is concerned with more than the duty of inducing delinquent customers to pay. He must be broad-gauged enough to realize that not infrequently desirable accounts find themselves unable to meet their obligations promptly and that while no proper efforts must be spared to make the collection as early as possible, he must avoid doing anything to offend and lose the account. In other words, the aim of the qualified collector is not only to collect but also to retain for his house the good-will of a good account.

QUALIFICATIONS OF THE COLLECTOR.—To accomplish this dual purpose, the collector must be well trained and thoroughly efficient. He should be tactful, resourceful, analytical, perservering, and experienced.

PREAPPROACH.—The competent collector will have as a background a knowledge of all the available credit information as well as of the ledger history of the account, before he decides upon the mode of handling it. The debtor may at times be slow pay because of negligence, carelessness, or the disinclination to part with funds; usually he is delinquent only because he cannot avoid it. Most business men understand that their payment record affects their credit standing and also may influence the treatment they receive when buying. The collector realizes that his efforts must be directed generally toward collecting from a fund insufficient to meet all due liabilities. The debtor in such condition is naturally less influenced by spasmodic routine appeals than by persuasive systematic methods. The inclination of the delinquent may be to pay preferably those who enjoy a particularly advantageous selling position and are strict in enforing credit terms, but the vigilant persistent collector gets the desired results by pursuing correct methods.

COLLECTION METHODS.—In trying to collect from the account whose good-will it is important to retain, as well as from the one requiring more drastic action, several steps are open to the collector.

STATEMENTS.—Usually the collection process is started by mailing a statement. The first statement is merely a reminder, drawing attention to an oversight or to negligence. This may be followed with more statements, sometimes bearing comments such as: "Please remit," "Evidently overlooked," "Kindly advise if you do not find above account correct."

LETTERS.—The first letter may be extremely mild and be followed by letters of varying degrees of forcefulness but increasing progressively in insistence. Distinctiveness is essential in a letter intended to be attention-compelling. The backward debtor is usually receiving collection communications all the time and becomes calloused to the routine, mechanical letter. Distinctiveness may be realized by injecting personality into the letter, referring to items in connection with the specific transactions or particular matters of interest to the debtor, and by a proper follow-up course. Letters sent at intervals—allowing time for return mail plus such further grace as the conditions may warrant, indicating that a response had really been expected to the previous communication—are much stronger than those sent on the first of month or other fixed dates suggesting that they are merely incidents of collection day. Letters should be clear, sincere, and in keeping with the tone of the collector's house; the attitude should be one of reasonable considerateness. While the collector should be as forceful and firm as the occasion demands, he should never be acrimonious. Definiteness is an important element. All promises accepted should be acknowledged and a definite date specified. In allowing extra time the collector will always fix a definite date when payment is to be made. It is also important that all correspondence from debtors be promptly answered. Delays and laxness on the part of the collector beget like treatment from the sluggish payer. No promise or threat should be made unless the collector is ready to perform; the failure to do so would tend to undermine his position. It is sometimes effective to address the letter to a particular officer, usually the president or the treasurer of the debtor company, and to have such letter signed by an officer of the creditor company.

DRAFTS.—When no satisfactory response is received to collection letters, the collector may try to force the issue by drawing on the debtor. Such draft may be deposited by the collector at his bank which forwards it to a

correspondent bank in the debtor's locality, or it may be sent by the creditor direct to the debtor's bank, or to a bank in the debtor's vicinity. In the latter instance a letter should be written to the bank and a small fee enclosed. Many credit men follow the practice of writing the names of customer's banks on the respective ledger accounts. These are taken from checks, financial statement forms, and reports. The names of local banks may be found in the mercantile agency rating books or in books published by bonding companies and collection agencies.

Usefulness of the draft as a collection instrument is limited. It usually finds the debtor resentful, or he is sensitive of the bank's opinion and apt to give some excuse, refusing to pay. The reason given is marked on the draft which is returned to the collector. Collectors frequently write the debtor that if payment is not received by a certain specified date a draft will be forwarded. If no response is received, collector may sometimes assume that to send the draft would only mean loss of time, and, instead of sending draft, resort to more drastic measures, notifying debtor of the decision. The debtor also may desire to avoid possibly aggravating the case by giving unsolicited knowledge of the situation to the local bank and prefer to proceed by direct methods.

BONDING COMPANIES AND COLLECTION AGENCIES.—These sell services consisting of collection letters, drafts, and a law directory. The U. S. Fidelity & Guaranty Co. and The Martindale Mercantile Agency offer, among others, such services to subscribers. Some of these agencies cover by bond, or otherwise guarantee the integrity of the attorneys listed. These collection services usually supply their subscribers with blank forms to be used for dunning letters, advanced draft notices, and drafts. (See Forms 21, 22, 23.) Drafts bearing the notice that "if not paid upon presentation the claim is to be turned over to an attorney" should not be sent until the creditor is ready to resort to the threatened action. The advance notice, or creditor's letter, informing the debtor that the forwarding of the draft means notice to the bank as well as placing of the claim, if draft is not honored, in the hands of an attorney, is frequently effective.

TELEGRAMS.—The collection telegram suggesting urgency has considerable psychological value. In using it, however, one must avoid liability under the laws against libel and extortion. The telegram should not contain a threat of bankruptcy or criminal prosecution. Following up a strong collection letter, the telegram, however general or cryptic its wording, very often does get the desired result.

Included on a **list of telegrams** recommended by the Western Union Telegraph Co. are the following:

1. Please settle your outstanding account. Unwilling to wait longer.
2. Account overdue. Unless receive prompt remittance collection proceedings will be instituted.
3. Regret cannot extend further credit until account is paid.
4. No reply to our letters. Expect to hear from you without further delay.
5. Will appreciate at least partial payment our account. Urgently need funds.
6. Must take sharp action if remittance not received at once.
7. Have you overlooked invoice of December tenth? Attention greatly appreciated. Reply our expense.

8. Cannot understand failure receive remittance. Account long overdue. Please advise.

9. In need of immediate funds. Can you assist with remittance?

ATTORNEYS.—The decision as to placing a claim with an attorney for collection should be well considered. On the one hand, to do so involves

FORM 23. Collection Letter, Third Step—U. S. Fidelity & Guaranty Co.

an incompetent attorney may be unsuccessful and make necessary avoidable lawsuits.

When a claim is placed with an attorney, the collector should get an acknowledgment and at reasonable intervals keep in touch with the attorney until case is closed.

COLLECTION AGENCIES.—The points to be considered in connection with the attorney apply to collection agencies. The collector must be careful in their selection. Many agencies are short-lived. Many others have excellent records and are qualified to render reliable, efficient service. The good collection agency promptly tries to collect amicably, and advises suit only if considered necessary after the case has been, without undue delay, well considered. The collector should keep himself fully informed respecting cases in agency's hands.

NOTES.—Sometimes debtors whose open accounts are about to become due or are past due, offer notes in settlement. Such notes give good evidence of the debt and fix definite payment dates. Debtors may have more concern about the maturity dates of notes, which are their signed written promises and may be discounted or presented through their own banks for payment. Yet some debtors give notes so commonly that failure to honor them when presented rests lightly on them. In such instances acceptance of a note means that the creditor has given more time, waiving his right of action in respect to past-due accounts until maturity of the note. For this reason, and also in some cases to compliment customers, creditors prefer to keep accounts open and to make other definite arrangements for payments.

DEFECTIVE REMITTANCES.—Scheming debtors seek unscrupulously to gain time. To achieve this object checks may be incorrectly written out, or mailed unsigned. In the former case, creditor may make necessary corrections and write "amount guaranteed" over his indorsement. Likewise, if signature is omitted, creditor may write "signature guaranteed" or "amount guaranteed" over his indorsement and deposit the check. Should remittance slip or letter be received unaccompanied by check, creditor may avoid delay by depositing a draft for collection, notifying the debtor. Under any circumstances debtor should be given notice promptly so that if check is lost payment by the bank may be stopped. Naturally, these items must be handled with tact and good judgment.

EXTENSIONS.—It is not only a humanitarian act but good business judgment to allow extra time required by the worthy debtor who is in sound but temporarily illiquid condition. Should the creditor be uncertain as to the circumstances he should not hesitate to ask for information. Sometimes it is desirable to ask for part payment and give extra time on balance. Such arrangements should be made very definite.

Affairs of debtors may become so involved that they cannot meet obligations satisfactorily. They may ask creditors generally for extension of time. Creditors know that ordinarily such extension agreements tend to impair debtors' ability to obtain additional merchandise on credit and thus to further handicap them. However, should a debtor's reputation for trustworthiness, and the shape of his affairs be such as to inspire confidence, the extension should be granted and the debtor be given encouragement and assistance.

If it appears that debtors cannot extricate themselves from their difficulties, no time should be lost in arranging for friendly adjustments, or liquidation of the business. Creditors should avoid, if possible, expensive

bankruptcy proceedings. In dealing with honest insolvent debtors a fair offer of settlement should be speedily accepted, or the business be wound up outside of bankruptcy, if under the circumstances it is practical. Sometimes this is accomplished by trust agreements. No compromise should be made with one practicing fraud. He should be petitioned into bankruptcy and prosecuted if sufficient legal evidence is available.

ADJUSTMENT BUREAUS.—A number of such bureaus are conducted by, or in co-operation with, local associations of credit men. While some of these offer reporting and collection services, they are maintained essentially to handle involved and insolvent cases, either by way of friendly adjustment, or in bankruptcy. These bureaus encourage and promote creditors' co-operation, and may render available to creditors trained and competent administrators and organized facilities for economical, faithful handling of such cases. These bureaus handle claims of non-members as well as members. They are expected to conform to the high standards of the National Association of Credit Men, which thoroughly considers and actively interests itself in criticisms made to it by creditors or debtors. Some trade associations also operate efficient adjustment bureaus. Those bureaus which command the confidence of creditors and the respect of court officials may exert a powerful influence for good. By reason of their integrity, experience, and organization, they are qualified to render a businesslike, equitable, and effective service.

CLAIMS.—Credit and collection departments should keep themselves informed regarding all claims received. Delays in adjusting claims or controversies over disputed items may retard the efforts of collectors. Particularly in cases where there is the slightest doubt about the risk, there should be no avoidable delay in effectively disposing of claims.

FOLLOW-UP SYSTEMS.—To carry out effectively the distinctive and individualistic idea in collection systems it is essential that a logical sequence be followed. The time element is of utmost importance. The communication must not appear to be an incident of collection day but rather one sent because the expected reply to the previous communication had not, after a reasonable time, been received. That such follow-up plan may be operated without necessitating running through all of the accounts on the ledgers each day, mechanical systems have been devised. Such systems vary, of course, with requirements of the business; principal considerations being the number of accounts, variance and periods of terms of sale, and provision for expansion. The system should be as simple and economical as conditions permit, and one which provides for the automatic coming up of accounts, on the day previously designated, for attention. Some houses use cards. Name and address of debtor, amounts, and maturity dates, are marked on separate cards, each of which is filed in a cabinet under date when it is planned to give it attention, usually immediately after the due date. Cards thus coming up each day are compared with the ledger account and those having unpaid due items are given attention; action taken is noted on the card, which is then advanced to a later date, determined by the time necessary for return mail and quality of the account. On the later date the card comes up automatically for attention and this process continues until the matter is settled.

CLASSIFICATION OF ACCOUNTS.—It has been found useful to classify accounts according to industry and also location so that seasonal, local, and special trade conditions may be taken into consideration.

Legal Remedies

UNPAID SELLER'S LIEN.—When one sells merchandise without agreeing to extend credit to the buyer, such seller has a lien for the purchase price and need not part with the goods until he is paid. Likewise, even if the sale was made on credit terms, the seller would have a lien provided buyer became insolvent and the goods sold or part of them are in possession of seller.

The **Uniform Sales Act,** which has been enacted in a number of states, declares the following principles governing the unpaid seller's lien:

1. Even though the title or property to the goods has passed to the buyer, an unpaid seller has a lien on the goods, or right to retain them for the price while he is in possession of them. This right of lien may be exercised by seller, even though he is in possession of the goods as agent or bailee for the buyer, until the payment or tender of purchase price, when:

   (a) Goods have been sold without any stipulation as to credit.
   (b) The term of credit on which the goods were sold has expired.
   (c) The buyer becomes insolvent.

2. Where part delivery of goods has been made, an unpaid seller may exercise his right of lien as to the goods still in his possession, unless such part delivery has been made under circumstances showing an intention to waive the lien or right of retention.

3. An unpaid seller loses his lien on the goods when:

   (a) He delivers the goods to a carrier or other bailee for transmission to buyer, without reserving to himself the title or property in the goods or right to the possession thereof.
   (b) The buyer or his agent lawfully obtains possession of the goods.
   (c) He waives the lien (obtaining a judgment or decree for the purchase price of goods by the seller is not deemed a waiver of the lien).

ATTACHMENT.—Statutes of the different states vary widely with respect to the grounds on which creditors may "attach" the property of debtors. In general such grounds are:

1. Non-residence of debtor.
2. That debtor has absconded from the state or concealed himself within the state, intending to defraud creditors, or to avoid service of legal process.
3. That debtor has removed, or is about to remove, property, or to conceal, assign, or dispose of it in order to defraud creditors.
4. That debtor has obtained property from creditor by fraudulent representation, such as making of a false statement in writing.

BULK SALES ACT.—Dishonest debtors resort to the practice of conspiring with confederates to effect the sale of their property in bulk ostensibly for a price considerably below its value, or to make such sales and disappear to whereabouts unknown, in either instance the object being to defraud creditors. To afford protection to creditors, Bulk Sales Statutes have been enacted by the states which provide quite uniformly that unless the buyer notifies all

creditors of the seller that the sale is to be made, such sales are either void or voidable.

GARNISHMENT.—This is a statutory right given to creditors by the laws of some states to reach debts due debtors or their property in possession of third persons.

"STOPPAGE IN TRANSITU."—The Uniform Sales Act provides that the unpaid seller may stop goods in transit when buyer is insolvent, providing the goods were not shipped under a negotiable bill of lading which has been transferred to an innocent purchaser for value either prior or subsequent to the insolvency. Accordingly, seller may assume possession of goods subject to same rights as he had before parting with them. If debtor's insolvency becomes known to seller while goods are in transit, he should immediately ask the carrier to stop delivery of goods to debtor. The carrier may require that seller file a bond.

RESCISSION BY SELLER.—An unpaid seller who has stopped goods in transit or who has a right of lien, may exercise the right of rescission if such right has been reserved to him, in case buyer should default in payment for an unreasonable time. Upon such rescission, seller resumes title in goods and is thereafter not liable to the buyer upon contract to sell or sale; he may recover from buyer such damages as he has sustained by buyer's breach.

BAD CHECK LAW.—In general, the Bad Check Law is designed to combat those who issue or negotiate, with intent to defraud, worthless checks. The New York law had in it a requirement that one who issued or negotiated such check must be given 10 days' notice before prosecution, but the law was amended in May, 1923, eliminating the requirement of this notice. The amended law omits the following language of the old law, "unless such maker or drawer shall have paid the drawee thereof the amount due thereon, together with interest and protest fees, within ten days after receiving notice that such check, draft or order has not been paid by the drawee," and the following wording has been adopted in the new law, "where such check, draft or order has been protested, the notice of protest thereof shall be admissible as proof of such presentation, non-payment and protest, and shall be presumptive evidence that there was a lack of funds in or with such bank or other depository."

This amendment means that bad check passers will not be given the additional 10 days in which to make good their escape; moreover, many bad checks were drawn on out-of-town banks, and it was difficult to induce witnesses from such banks to appear and give testimony in a prosecution. The admissibility of the notice of protest in the new law dispenses with the necessity of producing officials from out-of-town banks as witnesses. The notice of protest bears testimony to the actual facts as to the bank account of the bad check passer.

Bankruptcy

WHO MAY BECOME BANKRUPTS.—See section on "Bankruptcy, Insolvency, and Receivership."

VOLUNTARY BANKRUPTCY.—Any qualified person may file a petition to be adjudged voluntary bankrupt. To such petition is annexed a full and true statement of all his debts and (so far as it is possible to obtain) the names and places of residence of his creditors; also a second schedule containing an accurate inventory of all his property. In the petition, which is

filed on a prescribed form, the petitioner acknowledges that he owes debts which he is unable to pay in full, that he is willing to surrender all his property, except such as is exempt by law, for the benefit of his creditors and that he desires "to obtain the benefits of the Acts of Congress relating to bankruptcy."

The insolvent debtor pursues this course to conserve his assets and to avoid their further shrinkage by reason of new losses and payment of insistent creditors to the prejudice of the interests of remaining creditors; and, at the same time, he seeks relief from his burden of provable debts.

INVOLUNTARY BANKRUPTCY.—A petition in involuntary bankruptcy may be filed by creditors against a debtor who has committed one or more of the so-called **acts of bankruptcy,** within 4 months of the commission of such act. This petition may be filed by three or more creditors who have provable claims which amount, in the aggregate, to $500 or over; or if all of the creditors of such person are less than 12 in number, then one of such creditors whose claim equals such amount may file a petition to have him adjudged bankrupt.

ACTS OF BANKRUPTCY.—See section on "Bankruptcy, Insolvency, and Receivership."

FILING OF PROOF OF CLAIM.—Claims against a bankrupt estate must be filed within one year from adjudication. If they are determined by judgment rendered within 30 days before or after one year from the adjudication, such claims must be filed within 60 days after the judgment has been rendered. The creditor should file his claim with the referee and get an acknowledgment that it has been approved. When the referee has allowed the claim, the creditor has established his right to a pro rata share of the distribution of the bankrupt's estate and to participation in the administration of the estate, including a vote at the election of the trustee as well as on all other questions submitted to creditors. The proper protection of a creditor's interests requires much more than the mere holding of an acknowledgment that his claim has been allowed. The results to be obtained depend upon the honesty and efficiency of the administration and this demands creditors' co-operation. The creditor should either himself take an active interest or wholeheartedly support trustworthy and competent creditors' representatives. To further effective co-operation among creditors, business men join associations of high standing who handle involved and bankruptcy matters. Instead of saving the charge by filing the claim direct with the referee, these creditors deem it good economy to file all claims with their associations, paying the fees and strengthening the service. Indifference on the part of creditors frequently makes it possible for scheming and unscrupulous persons to control and manipulate estates at the expense of all creditors. Representatives of credit men's associations and other reliable organizations are aggressively combating these sinister influences, and for obvious reasons should be unstintedly supported.

It is important that the **proof of claim (debt)** in proper order be filed within the prescribed time; otherwise a creditor, whose claim has been scheduled by the bankrupt, loses his rights and interest in the claim. Nor may he pursue the claim after the bankrupt has been discharged. A creditor has the right to delegate his powers to another by executing a power of attorney. Subjoined are given forms of **proof of debt** (Forms 24-27). If the proof of debt covers an open account, there should be filed with it a statement of the account, together with duplicate bills.

FORM 27. Proof of Debt Due Corporation, with Power of Attorney

erty and a list of his creditors. The judge will confirm the composition if satisfied that, (1) it is for the best interests of the creditors; (2) the bankrupt has not been guilty of any of the acts or failed to perform any of the duties which would bar his discharge; and (3) the offer and its acceptance are in good faith. Upon the confirmation of a composition, the creditors are paid in accordance with its terms and the case is dismissed.

DISCHARGE OF BANKRUPT.—After the expiration of one month and within the next 12 months subsequent to being adjudged a bankrupt, an application may be filed for a discharge. If it appears to the judge that the bankrupt was unavoidably prevented from filing application within such time, it may be filed within, but not after, the expiration of the next 6 months. The court will grant the application discharging the bankrupt from his liabilities (except those mentioned below), unless the bankrupt has committed one of the following acts, expressly forbidden by the Bankruptcy Act:

1. Committed an offense punishable by imprisonment as provided in the Act.
2. With intent to conceal his financial condition, destroyed, concealed, or failed to keep books of account or records from which such condition might be ascertained.
3. Obtained money or property on credit upon a materially false statement in writing, made by him to any person or his representative for the purpose of obtaining credit from such person.
4. At any time subsequent to the first day of the 4 months immediately preceding the filing of the petition, transferred, removed, destroyed, or concealed, or permitted to be removed, destroyed or concealed, any of his property with intent to hinder, delay, or defraud his creditors.
5. In voluntary proceedings been granted a discharge in bankruptcy within 6 years.
6. In the course of the proceedings in bankruptcy refused to obey any lawful order of, or to answer any material question approved by the court.

DEBTS WHICH MAY BE PROVED.—Debts of the bankrupt may be proved and allowed against his estate which are:

1. A fixed liability, as evidenced by a judgment or an instrument in writing, absolutely owing at the time of the filing of the petition against him, whether then payable or not, with any interest thereon which would have been recoverable at that date or with a rebate of interest upon such as were not then payable and did not bear interest.
2. Due as costs taxable against an involuntary bankrupt who was at the time of the filing of the petition against him plaintiff in a cause of action which would pass to the trustee and which the trustee declines to prosecute after notice.
3. Founded upon a claim for taxable costs incurred in good faith by a creditor before the filing of the petition in an action to recover a provable debt.
4. Founded upon an open account, or upon a contract expressed or implied.
5. Founded upon provable debts reduced to judgments after the filing of the petition and before the consideration of the bankrupt's

application for a discharge, less costs incurred and interests accrued after the filing of the petition and up to the time of the entry of such judgments.

Unliquidated claims against the bankrupt may, pursuant to application to the court, be liquidated in such manner as it shall direct, and may thereafter be proved and allowed against his estate.

DEBTS NOT AFFECTED BY A DISCHARGE.—A discharge in bankruptcy releases a bankrupt from all of his provable debts, except such as are:

1. Due as a tax levied by the United States, the State, county, district, or municipality in which he resides.
2. Liabilities for obtaining property by false pretences or false representations, or for wilful and malicious injuries to the person or property of another or for alimony due or to become due, or for maintenance or support of wife or child, or for seduction of an unmarried female, or for breach of promise of marriage accompanied by seduction, or for criminal conversion.
3. Have not been duly scheduled in time for proof and allowance, with the name of the creditor, if known to the bankrupt, unless such creditor had notice or actual knowledge of the proceedings in bankruptcy.
4. Were created by his fraud, embezzlement, misappropriation, or defalcation while acting as an officer or in any fiduciary capacity.

The National Association of Credit Men

The National Association of Credit Men, organized in 1896, with about 600 members, has grown to a membership of about 35,000 and has branches in all important cities of the United States.

The association unites credit men for effective co-operation. Among its **activities** are the following. It maintains legislative, prosecution, business service, credit interchange—domestic and foreign—adjustment, research, and educational departments. It issues reports on mercantile reporting and collection agencies and co-operates with them for betterment of the service. It improves and standardizes credit forms, instruments, and methods, publishes *The Credit Monthly*, dealing with items and problems of interest to credit men, and also issues numerous leaflets on credit subjects.

The "Credit Man's Diary and Manual of Commercial Laws," issued by the association annually, contains a compilation of federal and state statutes, with clear and concise explanations giving credit men valuable information concerning matters of common and vital interest.

The annual conventions offer intensive courses in credit principles and practice. The association conducts the National Institute of Credit, offering valuable training to juniors.

Through the efforts of the association, credit facilities are being improved, safeguards introduced, and abuses checked. The association is a factor in promoting the sound development of the credit system and in tending to place the work of the credit man on the plane of a profession.

The **principal office** of the National Association of Credit Men is located at 41 Park Row, New York City.

Selection and Training of Office Employees

Business Departments of a Modern Office

(For list of forms, see complete table of contents.)

SECTION 19

OFFICE PRACTICE

The Modern Office

ORGANIZATION OF THE OFFICE.—Organization in its broadest sense is a plan which renders group effort effective and efficient by defining the duties and responsibilities of each member of the group. It is based upon assignment of duties, and as that is governed largely by the capabilities of the persons who are available, it follows that there can be no such thing as a standard organization.

Writers on this subject usually describe three distinct types of organization:

1. **Military**—in which flow of authority is in a direct line from one person to another and department heads have control of all functions within their departments, including employing personnel, securing equipment, and all other matters connected with work done by their departments.
2. **Line and staff**—a term used to designate those organizations in which much reliance is placed on frequent conferences of specialists selected from the personnel or employed as consultants.
3. **Functional**—which denotes that type of organization in which emphasis is laid on operations rather than on men. Each line of activity is in charge of a specialist, an expert, who controls and is responsible for that function, regardless of the location of persons who actually do the work.

All of these characteristics are present in every organization and classification of a particular organization under one or another of these three heads depends on the prominence given to the characteristics of that type.

In modern practice the tendency is toward the functional plan; but the most progressive managements do not overlook the value of the conference feature which provides executives with opportunities to get the benefit of the specialized knowledge and experience of their subordinates and promotes harmony by creating better understanding; nor do they lose sight of the fact that assignment of responsibility must be accompanied by delegation of authority necessary to secure accomplishment of the work and that the flow of authority must be clearly defined.

DEPARTMENTAL DIVISIONS.—As the size of an enterprise increases, the persons who attend to the different activities of the office are gradually segregated into groups or **departments**. Form 1 indicates the divisions into departments of a typical office of moderate size.

While the **unit of business organization** is usually the department, the term is often loosely used to designate units of departmental organization

that are more precisely described as **sections or divisions** with the result that it does not suggest anything definite as to the size or scope of units so designated. Nevertheless, the term "department" indicates a unit of organization, under executive supervision, controlling certain functions or groups of functions that, taken together, form a logical unit for control and supervision. Large departments may be subdivided into convenient working groups such as are properly called divisions or sections.

In some offices each department is conducted, as much as possible, as a separate unit. It maintains its own files and includes its own stenographic and clerical workers. In other cases all clerical work is drawn into centralized service departments. The best practice lies somewhere between these two extremes. There should be a separate department to handle the bulk of the **stenographic work,** including all routine correspondence, sales promotion letters, circular letters, etc. This leaves in the departments stenographic work of a secretarial nature only, or that for which a technical knowledge of some feature of the business is required.

Likewise there should be a **filing department,** into which should be gathered all material to be filed, with a few exceptions, such as the matter that will be put into the private files of the executive officers—catalogue and quotation files in the purchasing department, prospect files in the sales department, etc.

FORM 1. Departmental Division of Office

DEVELOPMENT OF THE ORGANIZATION PLAN.—This problem is usually encountered where an organization already exists which, due to growth or expansion, is no longer able to function efficiently in its present form. In such cases, the first step is to secure a detailed analysis of work to be done. For that purpose a report is obtained, on a form similar to Form 2, from each employee.

A thorough study and classification of these reports will bring to light any duplication of effort or other waste motion, and, the things that need to to be done, having been decided, the next step is to assign these duties.

At this point it is well to construct **departmental organization charts** (see Form 3). Every desk in the department should be represented on this chart and designated by a number or a combination of numbers and letters. One method that has worked out satisfactorily is to divide each department into sections, use a letter to designate the department, a number for each section and a number for each desk within the section. Thus a certain position in Section 2 of Department A is known as A-2-14 and that number is attached to the desk and is used in the office manual in referring to that position.

This facilitates assignment of duties to the different workers. In attaching duties to the various positions the functional idea must be kept in mind. The best results will be obtained when the number of functions connected with each position is kept down to the minimum. When responsibility for work performed by others is assigned to a position, there must be a corresponding delegation of authority. The lines of authority should be so well defined that every member of the organization knows what he is responsible for and to whom.

Please answer all of the following inquiries and return the blank as soon as possible to ....

4. What forms do you handle in above work and from whom do you receive them and to whom do you pass them? ....

....

....

5. How much of your time is occupied in the above work? ....

....

....

6. What suggestions have you for shortening the time or increasing the value of your work? (State fully, using extra sheet if necessary.) ....

....

....

7. Who consults your records of above work and how often? ....

....

....

8. Describe separately but briefly every other task you do, giving form numbers of records you keep or blanks handled. Designate as daily, weekly or monthly.

....

....

9. Who consults these records and how often? ....

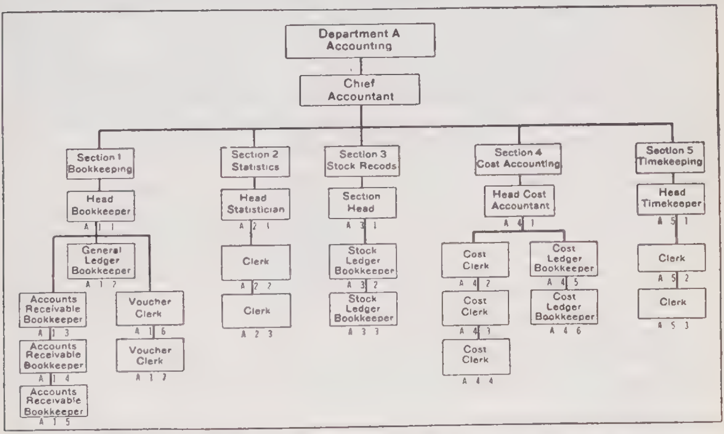
....

10. To whom are you directly responsible? ....

Form 2. Job Analysis Questionnaire

Things to be done by each department or unit of office organization should be studied systematically and manner in which they are to be done should be carefully worked out before attempt is made to put new arrangements into effect. Plans must take into consideration that performance of duties assigned to one department may depend upon receipt of certain information from other departments. Systems must be developed to govern handling of work in each department and transfer or movement of information, forms, and papers from one department to another, so that methods of handling matters in one department harmonize with plans of other departments through which the same matters pass.

In preparing plans or systems to co-ordinate the work and methods of the various departments, **routing charts,** similar to Form 4, for each of the principal forms, showing order of movement from place to place and duties of each department in connection therewith, help to prevent important



FORM 3. Organization Chart of Accounting Department

matters being overlooked and make it less difficult to arrange for the smooth progress of work through the office.

If radical changes in present methods are planned, care must be used to avoid serious disturbance to the routine work of office at the time changes are put into effect. Standard practice instructions thoroughly explaining the new methods should be distributed some time in advance. New forms should be studied and their uses understood by the clerks who are to handle them. Some confusion is practically unavoidable but careful preparation insures that most contingencies will be provided for.

LOCATION OF OFFICE.—Some of the things to be considered in deciding on the location of an office are referred to briefly in the following paragraphs. It is not to be expected that a place ideal in every respect will be found. The best that can be done is to choose the location having the greatest number of desirable attributes.

Accessibility.—Is it convenient to railway stations so that out-of-town customers and salesmen will not find it difficult to make visits? Are street

railway lines nearby and is the service adequate, enabling customers and employees to reach the office without undue fatigue?

Proximity to banks, post-office, office supply, and equipment houses. These all offer services that can be more efficiently taken advantage of if located nearby.

Reputation of building, of tenants, and of the neighborhood. Buildings as well as individuals are of good and bad repute. Appearance of the building and surroundings. Effect that the address may have in attracting or deterring trade; in enhancing or detracting from the reputation of the business. Strangers in forming an opinion of the business are, to some extent, influenced by these considerations and the quality of available office help is materially affected thereby.

In choosing the building, due attention should be given such matters as: **elevator service,** which should be continuous and able to handle passengers at all times without loss of time; **sanitary system,** which should include rest-rooms for girls; **heat,** since efficient results cannot be obtained in a poorly heated office; **janitor service,** etc.

The floor selected should be high enough to be free from dust and street noises and, if possible, above adjacent buildings. The **best floors** for office purposes are those from the 6th to the 12th. With up-to-date elevator service it is better to go above the 12th rather than below the 6th floor. If less than one floor is occupied, **choice of exposure** is usually made in the following order: east, north, south, west.

Provision for future expansion can be made either by taking options on additional rooms or by renting enough space to take care of estimated ultimate requirements and subletting that portion not needed for current operations. If latter plan is contemplated the lease should be examined carefully for clauses referring to subleases. If it is a large organization, requiring many floors, in subletting space held for future requirements, care should be exercised in laying out departments so that sublet space does not separate allied or growing departments.

Dining facilities in the neighborhood should be considered. If proper restaurants do not exist it may be necessary to establish a cafeteria or other form of lunchroom.

PLANNING THE OFFICE LAYOUT.—Arrangement of departments and of desks within departments should be such that the flow of work is continuously forward. The **straight-line method** advocated by factory engineers should be adhered to as closely as possible.

Wide separation of departments between which frequent communication is necessary should be avoided. Thus, if work of credit department requires frequent reference to customers ledgers, credit and bookeeping departments should, if possible, be placed side by side.

An important percentage of office routine is closely connected with the **shipping order,** which in a large measure governs the stream of work and all doubling back or zigzagging in the course of an order through the office should be reduced to the minimum.

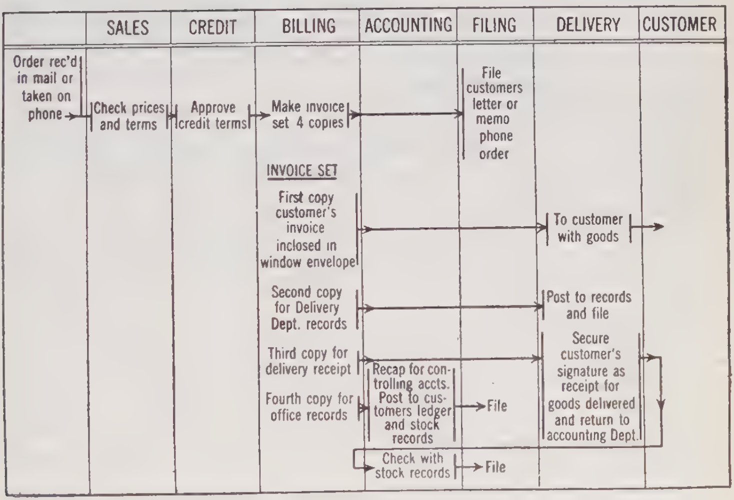
Roughly, 100 sq. ft. of floor space is required for each member of office force. This includes provision for files and other ordinary equipment. The amount of space used per employee varies considerably and is apt to be more than 100 sq. ft., rather than less. A standard desk 36 x 60 with a chair actually occupies 36 sq. ft.

Aisles and spaces between desks should be at least 3 ft. wide; 3½ ft. is better. A space 5 ft. wide is required in front of filing cabinets so that there may be

room to pass when drawers are fully extended. One large firm in New York City has had a special side file built which saves aisle space.

Unless rent is very high it does not pay to sacrifice an orderly arrangement to effect a small saving in floor space. A slovenly arrangement of equipment reacts on workers and makes it difficult to maintain the spirit of orderliness necessary to smooth functioning of the office machine. Desks should be placed in straight rows. Bulky pieces of equipment that rise above level of desks should, if possible, be located in corners or along walls so that the view from one end of the room to the other may be unobstructed.

Private offices should be provided only for executives who hold conferences which require privacy or whose work is such that they must be protected from noise and confusion present, in some degree, in even the best managed offices. These offices are extravagant of space, occupying of



Form 4. Routing Chart

necessity the better lighted parts of the room, and, even when made with glass partitions, cut off a large amount of light from the rest of the office.

A successful and frequently used **method of locating departments and desks** involves the use of a chart or map of the office, drawn to scale, on which cards cut to scale to represent desks are secured with tacks. Cards of different colors are used to distinguish different departments. Proposed private offices or partitions are indicated by strings attached to tacks. The movement of the more important forms may also be plotted on this chart. This aids in visualizing the layout and permits experimental arranging and rearranging until the best result is obtained.

Routing charts are also helpful in working out this problem. Form 4 illustrates a simple form of route or flow chart. On it the course of a shipping order can be traced from the time it enters office until transaction is completed by delivery of goods and invoice and filing of the delivery receipt.

A large bank in New York City had a miniature structure built with portable floors. These floors were made of material on which the layouts could be marked. The advantage of this was in seeing at a glance how the floors would look laid out, the departments above or below other departments, etc. The advantage of this is seen in moving. For instance, if your cut-out is a desk and is set on your chart and numbered 6, and is to go on 3rd floor of the new space, the floor of the space is given a number to correspond with the number on the cut-out. For instance, if cut-out is marked 6-3, it is the 6th position on the 3rd floor. The moving men examine the piece of furniture, and as the tag is marked 6-3 take it to the 3rd floor and look for the No. 6 position on the floor and place it there. Different colored tags for the different floors are also helpful in moving.

OFFICE FURNITURE.—Standardization of color, material and design of desks, chairs and filing cabinets, which are the principal items of office furniture, will do much for the appearance and condition of the office. Material and workmanship should be of the best. Cheap furniture is a poor investment. The additional cost of good furniture that will last a lifetime is not great and is money well spent.

Color and material of desks are to some extent questions of individual preference. For some types of offices, dark finish, such as mahogany, is preferred, but for the average commercial enterprise, oak desks with natural light finish are best. Good working light is easier to secure in offices equipped with light colored furniture than where dark finish is used.

Metal desks are favored by some office managers, but wood still holds first place as desk material and is in many respects superior to metal. The claim that metal for this purpose is a better protection from fire has not been proven. Some firms have found metal desks with battleship linoleum tops practical equipment.

Desks are work benches at which the office work is done. They should be considered as tools. Different kinds of work require different desk equipment and a careful study of the needs of each position in the office should be made before desks are purchased. Where books or other bulky records are handled or where baskets for incoming and outgoing mail, dictating machines, etc., must be placed on desks, a satisfactory size is 36 x 60 in. In other departments 48-inch desks may give as good results with considerable saving of space.

The more progressive furniture houses have done a great deal to develop efficient desks with specialized drawers and other features adapted for different purposes, and are prepared to furnish, from stock designs, desks to fill almost any requirement. **For bookkeepers** who handle large books, desks are made with tops sloping toward the front. **Tub desks,** either upright or sitting styles, may be had for card records. Available styles of **typewriter desks** include single-pedestal (32 x 38 in.), which is desirable where space is limited; double-pedestal (35 x 54 in.), which provides more desk surface and storage space; combination clerical and typewriter desks and many others.

Reliable data on the styles of desks, and arrangement of drawer space, best suited for different kinds of work, can be had for the asking from reponsible dealers in office equipment.

Desks selected should provide no more **drawer space** than is actually needed for the work to be done. Drawers should be fitted out with whatever filing or other time-saving devices will add to the effectiveness of desks as tools for performance of office work. Arrangement of supplies, forms,

etc., in drawers should be standardized as much as possible and periodical checks made to see that standards are being maintained. For example, one drawer may be used for employees' personal belongings; one for unfinished work; one for pencils, pens, scratch pads, rubber bands, clips, envelopes, etc., contained in trays and compartments; and one for the office manual, special instructions, etc. Where a large number of forms are used, additional drawers are provided. If left to their own devices, employees are apt to fill their desks with "junk" and to bury therein matters that should be attended to and passed on.

Some firms have desks with only room for working materials, such as pencils, pens, etc. This lack of drawer space prevents clerks from holding papers out overnight, and expedites work, as papers must go forward in order not to be left out. Where papers must be held over, a safe-cabinet is generally provided.

Chairs should be of the revolving kind to accommodate changes of position without moving the chair. Upholstered chairs are not suitable for office use. Chair backs should be made of spindles to allow ventilation. Wooden saddle seats are most practical and most commonly used. Seats of cane or of perforated leather are better from the standpoint of appearance and ventilation but on account of their poor wearing qualities are not generally used. Special chairs having adjustable spring backs are usually furnished for stenographers and typists.

Filing cabinets should also be standardized so they can be transferred from department to department or used for various purposes as need arises. Files are made in certain well-established sizes and, by cutting card records and forms that are filed in cabinets to conform to these regular sizes, delay and extra expense of having special equipment built is avoided.

In color and appearance filing cabinets should harmonize with desks. High-grade construction is of first importance. Drawers should be interchangeable. Correspondence files and other files larger than 5 x 8 in. or more than 16 inches deep should be equipped with roller bearings and extension slides. Drawers of a well-constructed correspondence file operate as easily with a full load of 60 to 75 lbs. as when empty.

For filing cabinets, **metal** is usually preferred to **wood** because of the saving in space, and in this connection the number of inches of space actually available for filing should be considered rather than the size of the cabinets. If it is not necessary to allow for expansion, solid cases may be used, but as it is seldom possible to definitely predetermine the amount of filing space that will be required, it is usually best to use sectional cabinets.

Correspondence and legal-sized files should not be more than four drawers high. The top drawer of a five-drawer file is too high for the average file clerk to use without standing on a stool, which slows up the work.

MECHANICAL EQUIPMENT.—Use of **machinery** in offices to do work formerly done by hand is now so general that little need be said regarding the desirability of installing machines to take place of handwork wherever possible. Mechanical devices for saving labor, improving records, and speeding up routine office work are on the market in almost unlimited variety. A few of the more important are referred to briefly in the following.

Adding machines and **calculating machines** take much of the drudgery out of the accounting department. If lists are required for record or checking purposes, **listing machines** make printed lists of amounts added. Certain types of these machines are arranged to print identifying numbers opposite amounts listed for addition. Where lists are not needed, greater

speed can be obtained with non-listing machines. These non-listing machines are also used for multiplying and dividing, making extensions, figuring unit costs, etc., and for work that is a combination of adding, multiplying, and dividing are probably the best. They are light and compact, can be placed on desks and readily moved from place to place. See section on "Office Appliances." For straight multiplication and division, calculating machines are recommended.

Bookkeeping machines are coming into quite general use. Well-known makes are Elliott-Fisher, Underwood, and Burroughs. The style of machine that makes use of a **flat bed** instead of the ordinary typewriter **platen** is in some respects to be preferred. The latter requires a ledger card of lighter weight which, after passing around the roller a number of times, does not stand up as well in the tray and cannot be handled as rapidly as the heavier cards used with flatbed machine. Another desirable feature of the flatbed style of machine is the production of proof sheets that can be used to take the place of separately written journals. The style of machine best suited to the work in hand can be determined by the demonstrations which the manufacturers will give at their own expense.

The principal advantage of bookkeeping machines is not in speed of posting which seldom exceeds and in some cases does not equal that attained by hand, but in the fact that the accuracy of each day's posting is proved when completed and that statements of customers' accounts are prepared as the posting is done so that at the end of the month no time is lost in checking for balances and writing statements.

Machines used for billing vary from ordinary typewriters to elaborate electrically driven contrivances, such as Moon-Hopkins and Remington-Wahl, that make mechanically all computations incident to invoicing. On work that they can handle, these combination calculating and billing machines effect an important saving by eliminating one operation of extension but they do not always give satisfaction on very complicated invoicing. The speed claimed for them by the manufacturers is usually based on ideal conditions and must be discounted considerably for ordinary jobs.

One of the newer devices for speeding up billing is the "Fanfold." It is an attachment for an ordinary billing machine and takes its name from the ingenious method of handling papers and carbons. The entire invoice set, including record sheets, is printed in long strips which are folded like a closed fan. Carbons are fed from rolls and require no handling, being renewed by shifting a lever. When an invoice is completed it is torn off, leaving the next set of papers in position ready for typing. Saving of time usually lost in handling carbons and securing proper alignment of papers in the machine results in considerable increase of output.

Tabulating machines, of which there are two on the market, Hollerith and Powers, are practically indispensable where statistical information in considerable volume is required. With these machines, it is possible to compile, at small expense, many useful statistics, cost of which would be prohibitive if otherwise prepared. These outfits consist of three machines, **card punch, sorter,** and **tabulator.** The information to be classified is keyed numerically. Corresponding numbers are punched in specially prepared cards. After the cards have been punched, the sorting and tabulating machines, operated electrically, take off totals under any desired heads.

A **duplicating machine** of some kind should be included in the equipment of practically every office, however small. These machines may be divided into three groups: **gelatine, stencil,** and **typesetting.** The gelatine machines

are especially useful for reports and interdepartmental circulars where not more than about 35 copies are required and for making copies of orders where the papers needed for factory and office records, bills of lading, etc., are too numerous to be made with carbons.

For circular letters and other matter requiring more copies, stencil and typesetting machines turn out very good work at a low cost. Where the appearance of the work is important and a close imitation of typewriting is desired, typesetting machines give best results. Appearance of work done on stencil machines is not as neat and does not resemble typewriting as closely but a stencil can be made in less time than is required to set up type and, if carefully filed, can be used repeatedly, while type must be knocked down after each job has been run off.

Electric typewriters that operate by use of perforated paper rolls on the same principle as player pianos are preferred for some kinds of circularizing, for the reason that they permit the insertion, at any desired points, of special paragraphs, names, dates, or other references, thus giving a touch of individuality to the letters.

If the volume of mail is at all large, machines for **opening letters** and for **sealing and stamping envelopes** should be installed. These machines are made in various styles to meet requirements of either large or small offices. Small, hand-operated machines either seal or stamp approximately 3,000 envelopes per hour, while larger machines operated by electricity count, seal, and stamp from 7,000 to 15,000 per hour.

Addressing machines are used extensively where circularizing is done from lists that are more or less permanent, also for pay-rolls, pay envelopes, time cards, etc.

Office managers should subscribe to **periodicals** having to do with office equipment; they should keep office equipment catalogues up to date, and membership in organizations dealing with office management should be maintained in order to keep in touch with all phases of office practice.

LIGHT AND VENTILATION.—Good natural light is better than any artificial illumination. **Lighting systems** are direct, semidirect, or indirect. **Direct lighting systems** throw the light directly from the lamp to the working surface. In **indirect systems,** the lamps are concealed from view by opaque hemispheres that throw the light against walls and ceilings from which it is reflected into the room. In the case of **semidirect lighting,** the hemispheres permit part of the light to pass through, the remainder being reflected from the walls and ceilings.

Either indirect or semidirect are better than direct systems. Indirect lighting is usually considered best, but as it requires much more current than semidirect systems, the latter are more frequently used. **Wattage** required to properly light a given area depends upon distance lights and reflecting surfaces are from working surfaces and amount of light that passes directly through the bowls or hemispheres of lighting fixtures. Most electric light companies are able and willing to supply data regarding equipment needed. Proper color for ceilings and walls and light-colored furniture improve working light. Light yellow is usually recommended for ceilings and upper parts of walls, a somewhat darker shade being used for the lower part of walls. If possible, use of **individual desk lights** should be avoided.

Without a plentiful supply of **fresh air,** it is impossible for an office force to do its best work. Drafts are as bad as insufficient circulation. Where, on account of outside noises or dust, it is impracticable to open windows, where partitions prevent proper circulation, or where, for any reason, ade-

quate supply of fresh air cannot otherwise be obtained, mechanical ventilating systems should be installed.

Light and **ventilation** materially affect office output and should be thoroughly studied by office managers Where unsatisfactory conditions are found, competent engineers should be employed to recommend changes of equipment.

HANDLING OF MAIL.—Incoming mail must be opened, sorted, and distributed. Outgoing mail must be collected, enclosed, sealed, stamped, and delivered to the post-office.

If desks are cleaned up each day as they should be, the day's work cannot be started satisfactorily until the morning mail has been distributed. Signing of outgoing letters will be continued up to the closing hour. To meet these conditions, the **mail department staff** should be divided into **two shifts.** The first shift should be at work at least an hour before the regular opening time and should have the first distribution completed when the office force arrives. The second shift remains on the job until all outgoing mail has been dispatched. Hours of work can be equalized by adjusting quitting time of the first shift and starting time of the second to harmonize with the irregular time of opening and closing necessary in this department. To handle the **peak load** occurring morning and evening, extra clerks may be drawn from the other departments for a short time and returned to their regular work when the rush hour has passed. In many offices mailing and filing departments are combined, which takes care of this feature satisfactorily.

It is usually better to send to the post-office in the morning for the first batch of mail rather than depend upon the mail carrier for delivery.

Opening and sorting mail involves handling a large number of pieces and unless the work is reduced to an orderly routine, a great deal of time will be lost. This department offers an especially good field for time and motion studies. Each operation should be analyzed and a systematic plan of procedure developed.

The following outline indicates in a general way methods used in an office receiving from 1,000 to 2,000 letters daily. Systems vary, of course, with the quantity and kind of mail received. For example, if numerous cash remittances are received with orders, the plan for handling that feature will have to be elaborated. Other variations are necessary to meet varying conditions of different offices.

Distinctive envelopes should be used for branch office and salesmen's letters, and such letters should always indicate the department for which they are intended. These letters should first be sorted out, opened, time-stamped, and delivered without reading. **Personals** must also be eliminated and either delivered or readdressed to employees' homes, depending upon the policy of the house.

As envelopes come from the opening machine, cut along one side, each clerk takes about 20; arranges them in a stack, face up; rips one end of envelopes with a paper knife to facilitate removal of contents; withdraws letters; and discards envelopes if writer's address is given in letters, otherwise envelopes are pinned to letters. When stack has all been opened, letters are time-stamped, enclosures are noted and attached; letters received with cash remittances are sent to the cashier with remittances attached. It is not good practice to send letters with remittances to another department without getting in return some form of receipt, as later the department might claim it has never received a certain remittance, and the mail-

room has no way of showing that it was received by the department to which it was sent. A good method is to list these remittance letters, showing the date received, amount, form of remittance (whether money order, check, or cash), and have the whole signed by the person receiving the mail. Other letters are passed to the reader who indicates the departments to which they are to be sent and passes them on to the sorting table where they are placed in appropriate compartments of the classification rack and delivered at regular intervals.

The **mail reader** should be familiar with the activities of the different departments and should have a list of departments and persons to whom mail is to be sent, with a concise description of the kind of mail handled by each. The departments should be given a number so that the whole name of the department does not have to be written across a piece of mail, particularly a small piece. Each marker should have different colored crayons so that wrong marking can be traced.

Assembling racks for outgoing mail should contain divisions for branch offices, salesmen, and active correspondents. By accumulating mail in this rack during the day and one large envelope for each address, a considerable saving of envelopes and postage is effected. Use of **distinctive letterheads** for branch office and salesmen's correspondence simplifies the work of classification.

There should be a system of re-reading, to insure mail being correctly sent out.

Stamping and sealing should be done mechanically. Folding machines are used where the volume of mail is very large but this is an operation that can be performed very rapidly by hand. The speed of folding and enclosing by hand varies from 200 per hour using ordinary envelopes, to 500 or more per hour where window envelopes are used and it is not necessary to compare addresses.

Window envelopes are usually considered unsatisfactory for general correspondence. They should be used for invoices and statements and for some kinds of circular letters, such as quotations sent regularly to jobbers and dealers where the appearance of envelopes and irregular folding of enclosures does not detract from the effectiveness of the communications.

A **time table** of departing mail trains should be posted in this department and arrangements made to get mail to the post-office in time to make proper connections. If necessary, important letters should be sent to the post-office by special messenger.

Weighing scales and **schedules of postage and parcel post rates** should be provided and the head of the department held responsible for economical use of postage.

Handling of **telegrams** should be assigned to a responsible clerk who should time-stamp and deliver them personally to the individuals for whom they are intended or in their absence to persons attending to their duties.

INTERDEPARTMENTAL COMMUNICATION.—Information and instructions passed between departments should be put in writing. Verbal instructions are a fruitful source of misunderstanding. A special form should be provided for **pencil memoranda** and used instead of miscellaneous pieces of scratch paper in cases where formal typewritten letters are not necessary.

An efficient **messenger service** should be insisted upon. This should include a regular schedule of collections and deliveries and special messengers for urgent matters that cannot wait for the regular service. In large offices, **basket carriers** and **pneumatic tubes** can be used to advantage.

Regularity is essential. Messengers' trips should be governed by a definite time table, carefully worked out and rigidly adhered to, so that the time required in transit from one point to another can be known and depended upon. Frequency of trips must be arranged to suit individual requirements of different offices and may vary from one to four per hour. **Buzzers** for calling special messengers should be provided where their use can be justified. If the regular service is all that it should be, the need for special messengers will usually be very limited. When the boy makes his last call a red card or some other symbol should be used to indicate that the boy has made his last call; otherwise important mail might lay there until the morning.

It should seldom be necessary for employees to leave their desks to secure or deliver papers. Employees should be encouraged to use telephones and office mail instead of making personal trips. An office in which clerks are continually moving about is not working at its highest efficiency.

Desks should be equipped with **baskets** having compartments for incoming and for outgoing mail and, if necessary, third compartments for papers to be returned to the files. Mail bags or other carrying devices used by messengers should have corresponding compartments to facilitate sorting. Special envelopes should be provided for enclosing important and confidential papers. At convenient points, sorting stations should be established, at which messengers can have use of desks or tables for arranging material for delivery on their routes or for forwarding to other parts of the office.

Messengers are usually youthful and inclined to be irresponsible. They should be in charge of a **head office boy** or mailing department head. Close supervision is necessary to secure maintenance of schedules and to prevent delay at sorting stations and carrier terminals.

Telephones should be installed wherever needed. Where only a few employees need to make outside calls, **interior systems** are used with switchboard connections only for those who need exterior phones. If a great many outside calls are made, all office phones should be connected with the switchboard. Advantages of interior telephones are that connections are made without assistance from the switchboard operator, leaving her free to devote her entire attention to outside calls; exterior phones are not busy with office matters when important outside calls are received; and control of the practice of making personal calls is simplified.

Telautographs are electrically operated mechanisms for transmitting autographic records. Words written at one point are reproduced instantaneously on one or more receiving machines located in other departments or in other buildings. They are useful for interdepartmental messages, for announcing visitors, etc.

FILING.—While some authorities advocate absolute **centralization** of the filing function, it is doubtful if that ideal has ever been attained in any but very small businesses. There are certain kinds of records, of interest only to departments in which they originate, that are usually kept separate from the central files. For example, the credit file, containing reports and other credit information, is usually maintained by the credit department; employees' personal record files are kept in the employment department, etc.

The rule should be that the filing department is to handle all material to be filed, exceptions being made only where it can be demonstrated that better results will be obtained by allowing other departments to have control of certain special files.

To establish a **central filing department,** it is not necessary that all rec-

ords be assembled in one place, but that they be under the control of one central authority. Files in charge of an experienced and competent file clerk can be kept in better order and at much less expense than departmental files operated by comparatively inexperienced and unsupervised employees. A well-trained file clerk will, in a given time, handle nearly twice as many papers as a person who has not had specialized training in this work.

Another argument in favor of centralized filing departments is that all papers pertaining to a correspondent or subject are brought together in one place where they are available for use by any member of the organization, whereas with departmental files, locating a particular paper may be a difficult matter requiring search in several departments.

The success of the filing department depends upon its ability to produce promptly any desired paper or record. This is possible only if the papers or records are turned over to the filing department as soon as they are ready to be filed and not held in desk drawers or baskets. The head of this department should have authority to demand material that properly belongs in the files.

It is also necessary that the filing department, having obtained possession of material, store it in such a way that it can be instantly located, and maintain control of it by keeping a record of all withdrawals. The record to be kept depends somewhat on existing conditions. In some cases "out cards," on which are noted name of persons taking papers and dates of removal, are sufficient. In other cases and for important papers, it may be advisable to use cards or slips printed as receipts to be signed by persons receiving papers.

Nothing should be taken from files by others than members of the filing department, excepting that if papers are needed outside of office hours, when no representative of the filing department is present, they may be taken. In such cases a record of papers taken should be turned over to the head of the filing department as soon as practicable. Under no circumstances should papers be returned to files by persons not employed in the filing department.

To reduce as much as possible the inconvenience of not having all files of a department immediately at hand and to overcome the tendency of employees, especially executives, to hold on their desks, material that they expect to need in the near future but which should meanwhile be placed in the files, a regular and dependable **system of communication** must be maintained. Whether this is operated entirely by messengers or partly by mechanical carriers depends upon conditions. The important point is to promote confidence in the certainty of prompt service. With this feature working properly, it will soon become apparent to all concerned that it is easier to depend upon the filing department than to hold papers even for a short time. It is important to select a folder of lasting quality, as it will mean a great outlay of expense sometime in the future if a paper is used which will dry and crumble with age.

Location of this department should be such that the least possible time in transit is required for papers sent to any point in the office. Importance of prompt service cannot be overemphasized. Time lost waiting for papers from files is usually that of higher paid employees and executives.

Cabinets should be placed on 3 or $3\frac{1}{2}$ sides of a rectangular space, with file clerks' desks, sorting trays, etc., in the center.

This department should be in charge of a person who has made a study of filing systems and who thoroughly understands the work. Girls are more

successful as file clerks than men, being naturally better adapted for the patient concentration on routine necessary to accurate filing.

FILING SYSTEMS.—In recent years, filing methods, designed to increase accuracy and save labor, have been developed in considerable variety. For the purposes of ordinary businesses they may be considered under six heads as follows:

1. **Alphabetic,** which places papers in dictionary arrangement behind guides tabbed with subdivisions of the alphabet.
2. **Numeric,** which assigns to each correspondent or subject a number that is recorded in an alphabetic index, papers being stored in numeric sequence.
3. **Alphabetic-numeric,** a system intended to combine the easy filing of numeric with the quick finding incident to alphabetic methods.
4. **Geographic,** which divides the file into sections territorially with divisions and subdivisions for states, sales territories, towns, etc. Arrangement of divisions and of matter within divisions is usually alphabetic.
5. **Chronologic,** or arrangements by dates. Seldom used except for tickler files.
6. **Subject,** which classifies material by subjects instead of by correspondents' names. Arrangement may be either alphabetic or numeric.

As different kinds of material require different filing methods, the first step in **organizing a filing department** is a careful survey to determine, first, what is to be filed and, second, how it will be asked for—by what name or title, by whom, and how frequently. It is also necessary to decide what is to be put in the general files and what special files are needed. The amount of material to be handled should be estimated and provision made for future expansion.

An examination of papers and records in the current files and records of quantities handled during a short period helps to furnish answers to these questions.

Guides and **folders** should be selected carefully. Valuable information regarding styles best suited for the work in hand can be obtained by studying filing equipment catalogues.

The **alphabetic method** should be used as much as possible. It is simplest and easiest to operate; requires no separate index; involves no decisions as to subjects; and for general correspondence and many other matters, gives as satisfactory results as more complicated and expensive systems.

Vouchers, contracts, orders, etc., are usually filed **numerically** and that method may be suited for correspondence in some cases where numerous cross-references are necessary.

Geographic division of files is useful for certain card records such as sales statistics and for correspondence with branch offices, jobbers, and salesmen.

Every office should have a tickler system, located in the central filing department. This is a section of the files equipped with guides for months and 31 numbered guides for the days of the current month. Papers that should be referred to and memoranda that should have attention on a certain date are sent to the file, marked to indicate the dates on which their return is desired. These papers are filed under dates indicated and each morning those requiring attention that day are distributed. This system

helps to keep desks cleared and to prevent important matters being overlooked.

Subject filing, in business offices, is usually confined to information or data files. The value of files of this kind is not generally appreciated. By accumulating valuable papers referring to the current history of the enterprise, clippings from trade papers, books and pamphlets, etc., on subjects connected with the business, it is possible to develop a reference library that can be of inestimable value in working out the new problems that are constantly being met.

Numeric arrangement is best for this file and, in order to keep related subjects together in the file, primary, secondary, and tertiary divisions are required. This is known as the **decimal system** of numbering. Numbers for divisions are built up on the same principle as account numbers for a ledger classification.

The following, taken from "Office Administration" by J. William Schulze, illustrates the method of numbering as well as the form of classification that a "data" file may take:

10. ADMINISTRATION
    Minutes of executives' meetings, large general reports and plans, relations with employees, etc.
20. PRODUCTION
    Specification of goods, patents, studies of machinery, tests of quality.
30. SELLING
    Sales plans and dates of all kinds, new markets, salesman's management.
40. ADVERTISING
    Plans, campaigns, results, testimonials, suggested copy, mediums to be used.
50. FILES of all publications and printed matter of the firm
60. FINANCE AND ACCOUNTING
90. COMPETITIVE GOODS
    All available information on competitors and their output.

Main numbers 70 and 80 have not yet been needed and are left vacant.

The subdivisions of the **sales division** are shown below:

30. Sales in General
    30. 1 Sales policies, plans, and important memos
    30. 2 Retail vs. jobbing business (including retail extension)
    30. 3 Price schedules
        (Established schedules, discussions of and actual schedules. A copy of any changes must be sent to these files. Includes also repair price schedules.)
31. Sales Department, Organization, System, and Equipment
    31. 1 Charts and functions
    31. 2 Minutes of sales department conferences
    31. 3 Salesmen's report card system
32. Marketing Plans and Special Campaigns
    32. 1 Special contracts (for sale of goods)
    32. 2 Special campaigns
        (All special campaigns, including descriptions, data and copies of all advertisements used in connection with them.)
    32. 3 Export development
    32. 4 Scheme development
33. Salesmen's Management
    33. 1 Employing and training salesmen
    33. 11 Qualifications and selection

33. 12 Preliminary training
33. 13 Sales conventions
33. 14 Special reading courses and study
33. 18 Compensation
33. 2 Formulation of house policy for salesmen
33. 3 Sales supervision

TRANSFERRING.—Current files should be cleared at regular intervals by transferring their contents to storage files. Correspondence, orders, and legal documents are usually kept in current files 6 months or 1 year, in semi-active files until the end of the 2nd year and in storage until the time for bringing suits, as governed by the statute of limitations, has expired. Orders and paid invoices are destroyed after 2 or 3 years. Interdepartmental memoranda have little value after 1 year. Other files such as credit records and data files are being constantly renewed and are, of course, kept indefinitely.

BUSINESS CORRESPONDENCE.—The modern business enterprise maintains its outside contacts, largely, by means of written communications. The esteem in which it is held by its customers and its business contemporaries is, to a considerable extent, dependent upon the quality of the letters it writes.

There are many difficulties in the way of securing uniformly high standards for correspondence. They cannot be maintained in an office in which there is no active supervision of the correspondence function, and anyone whose work requires correspondence is allowed to dictate letters.

Managers who recognize the value of well-written letters and who realize that some specialization is necessary if letters written on company letterheads are to fairly represent standards and ideals of the house, usually either establish correspondence departments to handle all office correspondence or assign the duty of writing letters to one or more persons in each department.

A **central correspondence department** having a staff of trained correspondents in charge of an expert insures an output of letters, satisfactory in composition and mechanical makeup, but this department is seriously handicapped by the fact that it must gather its information from departments in which transactions originate and that it cannot have an intimate knowledge of the details of all matters regarding which letters are written, with the result that letters, perfect from an artistic standpoint, may be inaccurate and incomplete.

This department has the advantage of the broad viewpoint of the whole business rather than the narrow departmental viewpoint. It will handle matters impartially without making unwarranted attempts to defend the action of another department, but a great deal of time is spent investigating matters already clear to someone in another department who could write the letter in less time than is required to make the situation clear to correspondents. Complete separation of a department from responsibility of handling its correspondence results in a lack of understanding and appreciation by the department of some features of its work.

Centralized correspondence departments are suitable for some offices but in most cases the plan of having correspondents in each department gives better results if departmental correspondents are carefully chosen, thoroughly trained, and properly supervised. They should be responsible to their department head for proper performance of their duties and, in a general way, under the direction of the correspondence supervisor who assists department heads by training correspondents and handling difficult corre-

spondence problems and who is responsible for keeping the quality of the correspondence up to standards set by the house.

Ability to write good business letters may, in some cases, be natural but it is more often acquired. When vacancies occur, it is not always possible to find applicants having the necessary experience and training, and if the work is not to suffer, some form of instruction must be provided. Department heads have so many other things to attend to that they are not able to give a great deal of time to this problem. They are apt to assume that, so long as no complaints are received, their correspondence is being handled in a satisfactory manner. Many department heads are themselves unable to write good letters and do not appreciate the importance of this subject.

The correspondence supervisor, devoting all of his time to this matter, is in a much better position than department heads to formulate a correspondence policy and to give training necessary to have it carried out. He should receive copies of all or some of the letters written, criticize the work of correspondents, and give instruction and advice where needed. He should also carry on a continuous campaign for better letters. This usually takes the form of bulletins, sent to departmental and branch office correspondents, containing correspondence problems to be worked out, comments on the work being done, suggestions for handling difficult situations, etc.

CORRESPONDENCE MANUAL.—Form letters and form paragraphs are used to cut down the cost of dictation. For some kinds of work, such as answering complaints and inquiries and handling collections, they give satisfactory results if used with discretion. These forms, being the result of careful study, are often better than personal dictation which is almost certain to become more or less mechanical and stereotyped where the same subjects are treated day after day. Paragraphs are more flexible than complete letters but skilful handling is necessary to avoid the appearance of patching. Several paragraphs from the manual may be combined or one or more incorporated with dictation to make up a complete letter.

The correspondence manual contains copies of all form letters and paragraphs in use, indexed for ready reference, and numbered so that dictators need only indicate numbers required. In cases where no dictation is necessary, letters are sent to the stenographic department with manual slips or marginal notes giving the necessary information.

Constant revision is necessary to keep the manual up to date. New developments will suggest methods of treatment. A customer who gets the same letter a number of times will not be favorably impressed. The correspondence manager has charge of the manual and suggestions for new letters to be included are submitted to him for approval. He sees that manual letters are used where appropriate and that they are not used by careless dictators in cases where personal dictation is required.

Modern business letters resemble telegrams in that they are concise treatments of single subjects in which there is no place for unnecessary words, stereotyped phrases, or rambling generalities; but efforts to be brief and to the point should not be carried so far as to give the impression of abruptness or lack of courtesy, nor should attempts to secure novelty and originality of expression be so forced as to result in the bizarre. Oddity and eccentricity are apt to be as fatal as the use of hackneyed and stereotyped expressions.

Elimination of conventional introduction and conclusion is not considered good form in external correspondence. They should be omitted from interdepartmental letters.

Mechanical forms of letters should follow standards that usage has prescribed as correct, as exemplified by the letters of leading merchants and bankers. **Letterheads** should be dignified and conservative. They may be printed, engraved, or lithographed. **Black on white paper** is usually best, although slight variations are sometimes permissible. Bright colors or more than one color should not be used. The head should occupy no more space than is needed for symmetrical arrangement; not more than 1/5th of the page. It should not contain illustrative pictures or advertisements, nor should it be continued all around the margins of the letters as a series of fancy designs or a list of articles manufactured or sold. Name, address, and business of the concern is all that is necessary. Names of members of the firm or of officers of the corporation, with telephone number and cable address, may be added. Nothing unessential should be included.

Typewriting done in black or blue-black makes the best appearance. The use of purple is sanctioned because of its usefulness in copying. Where letterheads are some other color than black, typewriter ribbons to match may be used.

Arrangement of date lines, salutations, paragraph indentations, etc., should be conventional and should be standardized so that letters have a uniform appearance.

For ordinary correspondence, **envelopes** should be standard size, about 6½ x 3½ in. The sender's return address should be placed in the upper left-hand corner. Like letterheads, envelopes should be free from any attempt to use them as advertising mediums.

STENOGRAPHIC WORK.—The greater part of the stenographic and typewriting work should be done in a central department. Centralization equalizes work, facilitates adoption of standards of quality and style, and makes possible inspection and supervision without which a uniformly high grade of work cannot be obtained.

The stenographic force can be adjusted to the amount of work to be done more readily in a central department than where this work is done throughout the various departments. The central department can better utilize spare time by duplicating form letters, etc., and by doing various related "fill-in jobs" that can be saved up for slack times.

Executives who handle work that is confidential, or who need the services of stenographers to assist them in other ways, should have individual stenographers. There may also be certain jobs of typing that can be better performed under the supervision of the department head for whom the work is done. These are merely exceptions to the rule that best results are obtained by drawing this activity into central departments.

Where the **stenographic method** is used—that is, dictation is given direct to stenographers who take it down in shorthand—correspondents, when they are ready to dictate, notify the head of the stenographic department who assigns stenographers to take their work. The head of the department should have a schedule, showing at all times the amount of unfinished work each stenographer has on hand, to avoid loading up some of them with more work than can be completed during the day.

The **phonographic system** is, in many ways, superior to the shorthand method. Correspondents dictate to machines that record their words on wax cylinders. When filled, cylinders are sent to the transcription department where they are placed on reproducing machines that operate at any speed desired by typists.

With this system, the time of one, instead of two, is used for dictation; none

of the correspondent's time is lost waiting for stenographers, and the necessity of preparing a number of letters before commencing dictation is eliminated as letters may be dictated from time to time during the day as the necessary information is obtained.

Correspondents who have become accustomed to the shorthand method sometimes object to using machines and for some kinds of dictation it is undoubtedly more difficult. Technical descriptions and special instructions are not so easily made clear to operators. In some cases the shorthand method may be preferred, but for ordinary routine correspondence, machines give entire satisfaction and save time for both dictators and typists.

Stenotypes are machines for taking down dictation by a system of letter combinations. They are more rapid and accurate than shorthand and have the added advantage that notes taken by one operator can be transcribed by another.

It is the duty of the stenographic department to turn out perfect letters. Careful dictation is as necessary as skilful transcription. The work should be governed by written rules, stating definitely what the operators are responsible for and what must be done by dictators.

Within the stenographic department a great deal can be done to increase and improve the output by proper arrangement of the work. Machines should be standardized so that operators can change readily from one machine to another. Different employees should, as much as possible, become specialists in the different features of the department's activities. Arrangement of stationery is an important matter. Racks having compartments for the different sizes and kinds of stationery used and with shelves sloping backward so that one sheet can be readily withdrawn at a time, and copyholders to keep material being copied in position to be easily read, help to speed up the work.

Selection and Training of Office Employees

IMPORTANCE OF CAREFUL SELECTION.—The cost of replacing an office employee is difficult to determine but it is probably conservative to estimate it as one month's salary for the position being filled. It includes not only cost of training and at least part of salary paid during time spent in training but also other less definite costs, caused by delays and errors due to unfamiliarity with the work, which disturb orderly procedure and may result in serious loss of good-will.

It is becoming the accepted practice to hire new employees only for the lower grades of work and to fill vacancies in more advanced grades by promotions. This plan, with occasional infusion of new blood in some of the higher positions, is undoubtedly the best. Time is required to gain the understanding of a business necessary for the intelligent performance of even the simplest tasks. An office force made up largely of workers who have grown up with the organization and who by long association have acquired an intimate knowledge of it, performs the maximum of accurate and intelligent work with the minimum of supervision.

This does not mean that an employee should be kept on the pay-roll after his unfitness has been demonstrated, merely because some time and money have been spent upon his training. Mistakes will of course be made and, when recognized, no time should be lost in eliminating incompetent or undesirable employees. They act as a drag on the efficient and loyal workers and slow up the whole organization. The question of salary should not be

given too much importance. Incompetents and malcontents are expensive at any price. The point to be emphasized is that the greatest care should be used in hiring junior clerks so that persons having the necessary qualifications are available for promotion when vacancies occur.

An office that has the reputation for maintaining high standards of character and ability for its employees attracts desirable applicants who are eager to become associated with a progressive organization.

SECURING APPLICATIONS.—Some applications are received from persons who write to or call at the office in search of employment, and in other cases contact with applicants is made through friends, business acquaintances, and employees; but ordinarily most applications are obtained through employment agencies or are received in response to newspaper or trade magazine advertisements.

If employment agencies, located in town or in nearby cities, are reliable and of a type to attract high-grade applicants, the employment manager can save time by making use of them. Agencies should be instructed as to general requirements and should recommend only persons who, after a preliminary examination, appear to be suitable. This relieves the employment manager of the work of weeding out the obviously unfit.

Objections to the use of employment agencies, sometimes heard, on the ground of expense to the employee, are not valid. The person seeking employment is a gainer if, by paying a reasonable fee, he can reduce materially the time required to find a job. Honestly and intelligently conducted employment agencies perform an efficient service. Such connections should be made with care and only after investigating, to some extent, the character of the management as well as methods used and the type of people attracted by the agencies in question.

If newspaper advertising is depended upon, some thought should be given to the wording of advertisements. An advertisement reading "Wanted: bookkeeper; salary $18" does not draw replies from as high-grade applicants as one designed to appeal somewhat to the imagination. A brief statement regarding policies of the house and opportunities for advancement and a request that details of qualifications be given in replies should usually be included. The editorial policy of the newspaper used should also be considered. Different papers are read by different classes of people.

If sufficient time is available, and it is desired to interview all applicants, the firm name may be given in advertisements. Otherwise, some of the best letters are selected and the writers requested to call for interviews.

METHODS OF SELECTION.—Before the process of selection can begin, it is necessary that the employment manager have a clear idea of the qualifications required. In a small office he is able to carry that information mentally, but in larger offices some form of record is necessary. The work done in the office should be analyzed and a record made of the qualifications necessary or desirable for each class. This record should contain a brief description of each kind of work, and the education, training, experience, etc., considered necessary for its proper performance should be listed in sufficient detail to give a good idea of the type of person needed.

In addition to this detailed list, the office manager or employment manager will formulate standards for general qualifications, applying to all employees. These standards, whether or not they are formally set down in writing, cover such matters as health, appearance, mental ability, education and general knowledge, ambition, loyalty, enthusiasm, reliability, energy, initiative, persistence, etc.

To find the right man for the right job is the work of the employment manager. He brings to this task whatever he has of knowledge and experience and usually a vast confidence in himself as a reader of character and a judge of ability. It cannot be denied that a skilful and experienced interviewer often does attain considerable success in choosing efficient employees, but it is generally admitted that the percentage of mistakes is distressingly high and that any system that seems likely to ower it is worthy of consideration.

To assist the employment manager in making selections, various systems of **classifying** the physical and mental characteristics of human beings and determining their fitness for certain kinds of work have been devised. Of the so-called scientific methods, the ones most widely known may be grouped under two heads: **character analysis** and **psychological tests.** The first as usually practiced is described as "character analysis of the observational method." It is based on the alleged principle that human bodies vary in certain definite ways and that variations of character follow, and may be interpreted from, the bodily variations. The accuracy and reliability of this method is not generally admitted by business men. It is expensive to conduct, requiring considerable time and the services of experts, and it is not considered practicable for the average business.

The second group, which depends upon psychological and mental alertness tests, seems to have a better claim to recognition, at least where a large number of applicants are to be examined, and it is impossible to give each a careful interview. Psychologists do not claim that these tests are infallible. They do claim that by their use it is possible to classify men and women into three broad groups, viz., those of superior intelligence, those of average intelligence, and those of inferior intelligence.

Many employment managers make some use of these tests, and while they are still in the experimental stage and absolute dependence should not be placed upon them, it is undoubtedly true that they are useful in grading applicants if properly used and if results are properly interpreted. This subject is one with which the employment manager should be familiar.

In addition to the general intelligence tests referred to above, it is possible, in many cases, to make concrete tests of the applicant's ability in the field for which he is being considered. Bookkeepers may be given problems that will bring out their knowledge of the subject. Correspondents may be asked to write letters based on certain stated conditions. Stenographers may be given dictation and their ability judged by comparing the speed and accuracy with which notes are written and transcribed with predetermined standards, etc. Comparative ability of different applicants can be judged more accurately if tests are so arranged that results can be reduced to definite ratings.

Application blanks are used in most large offices. They vary widely in form, being designed by each employment manager to draw out the information that he considers essential. The detail required on the application blank depends on methods used. If an interviewer's report is also secured and tests or examinations are conducted, the application blank need not be as elaborate as would otherwise be desirable. The application blank and record of interview shown in Forms 5 and 6 were adopted, after considerable discussion, by the Office Managers section of the Manufacturers Club of Minneapolis, Minn. These blanks are intended to cover all essential points without going into unnecessary detail, and in this respect are probably representative of the medium type, being neither exceptionally brief nor very elaborate.

Form 6. Record of Interview with Applicant for Position

References of accepted applicants should be carefully investigated. This is usually done by mail. Open letters addressed to "To whom it may concern" have very little value.

All work incident to securing new employees should be done by, or under the supervision of, one person. In small offices this is attended to by the office manager. Larger offices have employment or personnel departments. Requests for help are made to this department, which selects applicants considered suitable and refers them, for final approval, to the department head requiring help. Promotions and transfers should also be controlled by the employment department. Centralization of the employment function facilitates standardization of employment policies. Experience acquired and records accumulated by this department are valuable aids in improving methods of securing and handling employees.

EMPLOYMENT DEPARTMENT RECORDS.—To facilitate and improve the work of this department, to insure justice being done in matters of promotions, salary increases, etc., and to secure for each employee placement at work for which he is best suited and at which he has greatest opportunity for improvement, some records are necessary and some system of maintaining contact with employees and obtaining data regarding their performances is required.

These records need not be elaborate. In addition to the information given in applications and obtained by investigating references, they should contain, for each employee, records of assignment, transfers, salary changes, attendance, and the information obtained from periodic progress reports furnished by department heads. They should provide a basis for statistics of labor turnover, resignations and dismissals and the reasons therefor, absences and their cause, average length of service, average salary paid, and other matters reflecting the success or failure of the firm's employment policies.

Most essential records can be kept in an ordinary correspondence file with a folder for each employee. Into the folders are put application blanks, interviewer's reports, correspondence with references, etc. Also authorizations of salary changes, transfer records, progress reports, and any other papers pertaining to employees' records that it is desired to keep. When an employee leaves, the resignation or dismissal notice is filed and the folder is transferred. For more convenient reference, this information may be summarized on cards ruled to provide spaces for the data required. Summary of attendance may also be shown on these cards.

In order to make reports required by the U. S. Treasury Department for income tax purposes, it is necessary to make a record of salary payments. Card files or small loose-leaf ledgers should be used. For convenience in posting, cards or ledger pages should have spaces for each pay-day in the year, with dates printed or multigraphed so that it is necessary only to write the amounts.

Attendance records are usually kept separately. 8 x 5 cards having the months of the year printed in the left-hand margin, and 31 vertical columns for days of the month are suitable for this purpose. Spaces may also be provided for carrying forward summaries of previous years' records. If a **bonus** is paid for regular attendance, these cards should include space for record of bonus payments.

The **progress reports** referred to above should be made by department heads at intervals of 6 months or a year, for each employee. The form should contain blanks for rating, as, excellent, good, fair, or poor, on reliability,

accuracy, speed, aptitude, initiative, ambition, energy, personality, etc. Reports should include brief statements, by the department heads, as to the character and ability of employees. Definite values should be assigned to each item so that the combined ratings indicated on a report can be expressed as a quantity for comparison with other reports. This enables the employment manager to keep in touch with work being done by employees. When reasonable progress is not indicated, investigation should be made to determine reasons for poor showing and, if possible, to remove them.

TRAINING OFFICE EMPLOYEES.—In offices that do not make use of any definite method of instruction, new employees are usually turned over, with perhaps a few general instructions from department heads, to older clerks who have had experience in the work. If the older employees are inclined to be helpful, they devote what time they can spare, from their regular duties, for a few days, to training new employees who must depend largely upon their own observation and resourcefulness to acquire knowledge of the business and information regarding the work they are doing.

This lack of method is usually the most expensive method that could be employed. Under such conditions, time required by new employees to become expert at the work assigned is much longer than where adequate instruction is given. Each new employee develops his individual system for handling details which results in as many systems as there are clerks doing the work. Time lost and mistakes made, due to lack of proper training, cost more than expense of providing some effective means of instruction.

Having decided that, inasmuch as clerks cannot be hired ready-trained, it is better to train employees than to allow them to train themselves at the expense of the office, the amount of educational work to be attempted and methods to be used should be considered.

METHODS OF TRAINING.—Some large offices have organized school departments in charge of trained instructors. These departments conduct courses covering the various kinds of clerical work and are used not only for training new employees but also for giving more advanced instruction to older employees where necessary for their promotion. As much as possible of the student's time in the classroom is spent on actual office work, so that it is not altogether an extra expense. In some cases the work from a certain section of the territory is done in the school department.

This method is useful in very large offices in which the volume of work is subject to seasonal fluctuations, necessitating periodical employment of large numbers of new clerks, but for the ordinary business it is considered too elaborate. In other large institutions, the work of the school department, instead of being done in classrooms, is carried on throughout the office. New employees begin their regular work at once but do it with the assistance and direction of a staff of instructors.

For the average office, the use of a carefully prepared **office manual** is the most practical method of giving new employees a good general idea of the business as well as detailed instructions regarding the work to which they are assigned. This method has many advantages. Written instructions may be read at leisure and referred to as often as necessary until thoroughly understood. As conditions change, the manual is revised so that employees always have before them authoritative information concerning details of their work and its connection with, and relation to, work done by other members of their departments and by other departments. Inves-

tigations should be made occasionally to ascertain whether instructions given in the manual are being carried out and employees should be examined from time to time as to their knowledge of its provisions.

Employees should be encouraged to take advantage of opportunities to improve their general education. In all large cities, there are **night schools** in which academic work, interrupted by the necessity of going to work, may be continued or special business subjects may be studied. Where such schools are not available, some of the many **correspondence courses** should be recommended.

New employees who have had no experience in office work are given simple tasks at first and when it is necessary to fill advanced positions from outside the organization, persons selected have some technical knowledge of the work for which they are hired. In either case the office manual gives necessary detailed instructions for performing the work assigned and also general information regarding the business and methods and systems in use that enable intelligent and ambitious employees to prepare themselves for larger responsibilities.

THE OFFICE MANUAL.—A complete manual usually contains four sections:

1. Office rule book
2. Policy book
3. Departmental standard practice instructions
4. Individual instruction sheets or desk cards

A **brief history** of the origin and development of the concern is usually given in either the rule book or the policy book. If the policy book is intended for general distribution, it seems to be the logical place for the historical section. If the policy book is for use only by departments that come into direct contact with the public, the history should be included in the rule book.

The history contains the things employees ought to know about the business; its founders; the goods it makes or sells, and their uses. It may also contain descriptions of improvements in methods of production and distribution in that particular line. It should furnish employees authoritative information on these subjects, enabling them to answer questions intelligently on features of the business that are of general interest and encourage them to take pride in their association with it.

Some manuals also include a section on **organization.** This section is for use of executives only and describes the duties and responsibilities of each executive. It is useful in straightening out the lines of authority. It should follow the organization chart, taking up in turn each officer and department head, and describing in detail the matters for which he is responsible and over which he has control.

The **rule book** contains rules governing personal conduct and the use of office facilities, applicable to all office employees. It usually includes an introduction explaining that rules are necessary to secure harmonious functioning of any organization. This introduction should not be an apology for rules. It should point out that rules are made for the mutual benefit of all concerned and should convey the impression that their observance will be insisted upon.

This section covers such matters as office hours, registering time, tardiness and absences, overtime, vacations and holidays, salary payments, changes of address, visitors, personal mail, telephone usage, personal tele-

phone calls, subscriptions, standards for desk arrangement, use of messenger service, ordering office supplies, use of files, deportment, etc.

Policies, or general regulations, as they are sometimes called, are the rulings of the management upon the manner in which the business is to be conducted. It contains the broad general policies laid down for the guidance of executives, and also definite policies applicable to specific cases based on decisions made from time to time. This provides subordinates with an authoritative basis on which to handle difficult situations that arise in their daily work and relieves executives of the necessity of deciding the same things over and over. Policy books are especially valuable to concerns having branch offices where much of the firm's business is carried on at a distance from the controlling home office.

Compilation of rule books and policy books presents no serious difficulties. It is usually necessary to codify only rules and policies already in effect but not previously put into writing.

Preparation of standard practice instructions is a much more formidable undertaking and one not to be attempted by a novice. Satisfactory results will not be attained unless the work is done or supervised by someone who thoroughly understands underlying principles and has an intimate knowledge of the details of office routine.

While department heads are usually not fitted for the task of writing standard practice instructions for their departments, they should be expected to assist by offering suggestions and criticisms and after instructions are completed, and should be responsible for keeping them up to date and in operation. Successful manuals are usually the result of many revisions.

This section may be a loose-leaf book supplied department heads for the use of their entire departments, or it may be made up of individual instruction sheets for the clerks, a collection of which with a chart of the department's organization and a comprehensive description of its processes and of their connection with work done in other departments, makes up the department head's set. It should be indexed for ready reference and the system of numbering pages should permit inserting new material without disarranging page numbers outside of sections in which changes are made. The decimal system of numbering is usually recommended. Each position described in this section should be identified by a number corresponding to the number shown on the organization chart, which should be displayed somewhere in the office so that employees can locate their positions on the chart and thereby obtain a better understanding of the relation of their work to the business as a whole.

This section is used as a textbook for instruction of new employees and as a source of information for deciding disputes and answering questions regarding office routine. It facilitates establishment of standard methods; enables the management to keep more closely in touch with the details of office activities than would otherwise be possible, and eliminates dependence on memories of employees, who may leave, for information necessary to carry forward routine operations. It should be sufficiently detailed to give all the information necessary to carry on the work in the approved manner, but the information should be presented as concisely as possible.

The completed manual should be in charge of one person to whom suggestions for changes or additions are submitted and who works with department heads to keep it up to date.

Some authorities who advocate making **time and motion** studies, include in standard practice instructions, detailed directions for the location of

papers on desks and for the motions to be made in performing each operation; but while the plan is undoubtedly good in theory, serious difficulties are encountered in making practical application of it to many kinds of office work.

Following is an excerpt from standard practice instructions in use by the Pillsbury Flour Mills Co. covering work done by branch office invoicing departments. It illustrates the usual method of writing instructions where time or motion studies are not attempted. It has been used for a number of years and has proved to be adequate.

Branch Office Invoicing

Importance of: The invoice sheets, F–530 and the group of forms that make up the billing set, are the foundation on which all of our stock records and customers' accounts are based. Accuracy and neatness are, therefore, of the first importance and speed is a secondary consideration. The carbon copies must be legible. Never strike over a figure or letter. If a wrong key is struck, or an incorrect word or amount typed, X out the entire item and rewrite.

When Made: Whenever possible, invoices should be made before the goods are delivered. When this is impracticable, as on rush orders phoned in or where the customer calls at the warehouse, the receipt may be taken on F–135 or F–246 and invoice made from this receipt or from F–258–A.

Numbering: All orders from which invoices are to be made must be identified by order or invoice number and final invoice show same number. Where delivery instructions are phoned to the warehouse, such instructions must include order or invoice number. Use invoice numbers when possible. Invoice clerks can readily give next available number. Where salesmen order goods out on F–651, a separate consecutive series of numbers should be used for each stock so that a missing order can be easily located.

Made From: Invoicing is done from the copy of F–258 turned in by the salesmen or F–258–A which is used for telephone orders received at the office and as a memorandum for deliveries on bookings. On orders already delivered, the invoice can be written up from F–135 or F–246. On outside stocks where goods are ordered out by salesmen on F–651. the invoice for office record is made from that form. The invoice number should be written on the order which is then filed numerically under the invoice number.

Record Papers Made:

Yellow—Ledger sheet
White —Customer's invoice
Pink —Salesmen's duplicate invoice (if wanted marked "Statement" same form as green)
Green —Statement
Pink —Warehouse order and receipt
White —Delivery receipt

On C.O.D. or draft items, the green statement goes to the cashier for his check against C.O.D. and draft returns.

Separation of Warehouses: When deliveries from more than one warehouse are invoiced on a page, F-530, make a separation between each warehouse by spacing several lines and writing the name or number of the warehouse on F–530 above the invoices delivered from it.

Column Headings: The first two columns under the headings "Bookings" and "Immediates" are for the use of the accounting department.

Under "Date Sale" enter the number and date of the booking record (F–383) on which the invoice applies. On invoices of Petty Sales, write the word "petty" in this column. Use "Order Number" column only where delivery instructions carry order instead of invoice number, but be sure to use it in such cases. The next column is headed invoice number. Always be careful to avoid skipping or duplicating a number.

In the date column should be put, as nearly as possible, the actual date on which the goods are delivered. Credit invoices canceling deliveries not accomplished, show date of original charge but a new invoice number. If goods have been delivered and receipted for and later returned, credit should show date of such return.

It is very important that the customer's name be correct as to spelling and initials and that the address be correct, street numbers are always preferable. Names and addresses incorrectly written cause much delay and annoyance. Doubtful names and addresses should always be verified in the directory or the credit file. Use full firm or corporate name for partnerships and corporations. Use both trade name and proprietor's name where business is conducted under trade name (not incorporated). Always invoice in the name in which booking is made. Do not book in the name of firm or corporation and invoice in the name of an individual or official member of the firm or corporation.

In the blank column to the right of the name and address put the classification as per General Regulation No. 41.

The number of packages and the weight per package are entered in the next two columns.

In the column headed "Kind" put the letters, Pa., Ct., Jt., Pa. B., Ct.-B., or Wd. to indicate paper, cotton jute, paper baled, cotton baled, wood. For specialties use cont. or case

In the next column enter the brand as P. Best—4X Pat.—BB. Pat.—H. Bran, Cereal, etc.

The price per barrel, ton, or container is entered in the Price column. On invoices having only one item the amount column is not used, the extension being carried directly to the total column.

If there is more than one item on an invoice put the extensions in the amount column and the total in the total column. Where there are deductions or additions for discount, handling charges, etc., total the extensions in the amount column and under this put the amount to be added or deducted and carry the final total to the total column so that there will be only one amount in the total column for each invoice, and that amount will be the total of the invoice.

Returns and Cancellations: Returns, cancellations, etc., are billed in the same way using a red ribbon and red carbon.

The reason for or explanation of all credit invoices should be stated. Where an invoice is being canceled the number of the original invoice should be included in the explanation, also the original date of booking.

Rechecking: It is essential that form 530 be proven before any copies of billing set have left the office, and incorrect invoices so discovered should be ruled out entirely and rebilled. If an invoice has been made incorrectly and error is not found in proving F–530, or if any copies of invoice set have left the office, cancel the entire invoice and rebill. This is very important.

Proof of Form 530—Invoice Side: The number of barrels for each invoice is entered in the column so headed. Always use the decimal equivalent of fractions of a barrel and carry out to three places if used in making extensions. To arrive at the basing price used in making the extensions, add the package differential to, or deduct it from, the invoice price. Extend into the "Amount" column. Feed and all other items (except specialties for the handling of which see below) on which a differential does not apply are entered for the same amount as on the invoice.

The "Basis Price" for invoices carrying any per barrel deductions or additions, such as discounts, cartage charges, etc., should be the basis price, including such deductions or additions. Add the "Number of Barrels," the "Amount" and the "Total Invoice" columns.

Warehouse Side: In order that pages may be proved as soon as filled without waiting for further billing, make proof on back of the copy of F 530 going to Minneapolis, and take copy on back of previous Branch Office sheet. Enter the number of packages from each invoice. Write in the proper package headings where they are not printed. Make a separate section for each warehouse and total the packages for each section. Reduce these packages to barrels; write the number of barrels in each column under the package total and cross-foot.

Make a grand total of packages for all warehouses at the bottom of the page. Reduce these packages to barrels and cross-foot. The final total will equal the total of the "Number of Barrels" column on the invoice side. Multiply the total barrels for each package by the differential for that package and foot. Multiply the total number of containers at each net price of each specialty by the net price per container and foot. Add these two amounts and the amount thus secured should equal the difference between the total invoice column and the amount of the proof. The figures necessary to the above proof should appear on the sheet where such proof is made. See General Regulations No. 20 and No. 70.

Disposition of Papers: The yellow ledger sheet is turned over to the bookkeeper after F–530 has been proven.

Whenever possible to do so, deliver the white invoice enclosed in transo envelope to the customer with the goods. (Attach to order given to truckman or warehouseman.) Warehouseman takes truckman's receipt on pink warehouse order or F–135 or 246, or on loading slip showing recap with number and assortment of each order. Truckman takes customer's receipt on white copy or F–135 or 246. Warehouseman or delivery men retain the custody of customer's receipts for deliveries made by them as a proof of delivery.

Business Departments of a Modern Office

1. **PURCHASES AND STORES.**—This department is treated fully in another section and is referred to here only to give an idea of its relation to the general organization.

One of the first requisites of a manufacturing enterprise is a supply of raw material. Material must be purchased, received and stored, and issued to the factory as required. In some organizations all of these functions are combined in a purchase and stores department. In other cases responsibility is divided between a purchase department and a stores department. Where two departments are maintained, it is, of course, necessary that they work together but this plan is considered preferable, at least from the accountant's point of view.

By having purchases and stores handled by separate departments, the auditor is able to obtain reports from independent sources and to arrange his system of internal audit so that one department acts as a check upon the other. As amounts involved are large and opportunities for loss or fraud are considerable, the question of adequate internal audit is very important.

All purchases should be made by the purchasing department. This department studies markets and market conditions and keeps in touch with development of new materials and new types of equipment. It develops records and compiles information that enables the purchasing function to be carried on efficiently.

After goods have been counted, weighed, measured, or otherwise accounted for by the receiving department, they are turned over to the stores department where, after entry is made in perpetual inventory records, they are stored until required for use, when they are issued upon requisition. The storekeeper makes such records and reports as are required by purchasing and accounting departments and is responsible for having on hand all material received and not covered by properly authorized requisitions. Stores entrusted to the care of the storekeeper should be recorded and accounted for as carefully as money in the hands of the cashier.

The purchasing department buys only when it receives properly authorized purchase requisitions. These requisitions originate in departments requiring material or are made by the storekeeper when stocks fall below established minimum amounts and should be approved by the manager or other officer of the company; but it should not be necessary for the manager to approve each individual requisition for goods to complete approved schedules of production or to keep stocks of regular supplies above approved minimums. Approval of production schedules and inventory standards should act as authorization to make necessary purchases on requisitions from the departments needing material. This relieves the manager of the detail of approving every purchase requisition an leaves him more time for consideration of requisitions for special purchases not covered by the exceptions mentioned above.

Purchase requisitions should be prepared in detail by persons familiar with requirements as to kinds, quantities, dimensions, delivery dates, etc., giving the purchasing department an opportunity to devote all of its time to buying material and securing delivery as needed. The judgment of this department as to quantities to be purchased, etc., is valuable but it should not have authority to reduce quantities or to delay purchase of material requisitioned without the approval of the requisitioner, nor to anticipate requirements by purchasing goods not requisitioned without special authority of the management.

2. TRAFFIC.—Although organization of separate departments to attend to traffic matters has become general only in comparatively recent years, traffic management is now recognized as a distinct branch of business organization The functions of this department were, and in some cases still are, handled by other sections of the organization.

Tariffs, regulations, and rulings issued by various transportation companies are constantly increasing in number and complexity, new volumes being filed daily. There are also more than 20,000 different classifications of goods. Intricacies surrounding traffic problems have become so numerous and varied that to the uninitiated they seem a hopeless tangle. A remark made by Judge Landis of the United States District Court at Chicago illustrates this point: "The publications involved in the proceedings were so ambiguous and so technically phrased as to be clearly beyond the comprehension of the layman and to necessitate the services of experts to determine the effect of their phrasing and the opinions of these experts were not always in accord."

Reliance upon railroad employees for routing and classification, and leaving the auditing of freight charges in the hands of clerks who have not specialized in this work, may result in serious loss. It has frequently been found that a traffic expert, by better routing of shipments, detection of errors and overcharges, and by securing more economical classification, often made possible by slight changes in methods of packing or in description of goods, saves more than enough to pay all expenses of maintaining this department. Traffic departments, which have to deal only with a limited number of commodities shipped to or from a comparatively limited number of points, soon become better authorities than railroad rate clerks on rates and classifications applying to products shipped by their firms.

The traffic department has charge of all outside transportation, inbound and outbound; furnishes instructions for packing and loading; is responsible for securing lowest rates and best service; verifies all transportation expense bills; and files claims for overcharge, loss, or damage. It expedites movement of shipments urgently needed or delayed in transit and, if necessary, handles claims for customers. It furnishes the purchasing department with rates and estimates of time required in transit from various possible sources of supply, and the sales departments with rates needed for fixing delivered prices.

TARIFF FILES.—Transportation companies are usually willing to supply tariffs needed by bona fide shippers. A good way to build up a file is to have the freight agent indicate tariff authorities on expense bills or shipping receipts for inbound and outbound shipments. Copies are then requested from agents, associations, or committees by whom they are issued. Requests should give I.C.C. numbers and tariff numbers, if known, as well as classes of traffic covered, and should also ask that supplements and reissues be forwarded as issued.

Loose-leaf binders are usually recommended for filing tariffs, although there are various types of special cabinets and racks made for this purpose. Binders should be labeled to show tariffs contained therein and numbers of the shelves on which they are to be filed.

In filing tariffs it is customary to divide them into two groups: (1) those issued by railroads for their own account, and (2) those issued by agents, associations, and committees. These main groups may be subdivided on any convenient basis. Classification used by the Interstate Commerce Commission is as follows:

1. **Class-rate tariffs,** which name only class rates and are so indicated on their title page.
2. **Class and commodity tariffs,** which in addition to class rates, contain rates on specific or general commodities.
3. **General commodity tariffs,** which contain rates on commodities which are too numerous to mention or indicate on the title page of the publication.
4. **Specific commodity tariffs,** which apply on one commodity or on a group of commodities that may be readily designated in a brief description, such as brick and brick products, iron and steel, iron and steel articles, and coal and coke.
5. **Miscellaneous schedules,** which govern special services, such as weighing, refrigerating, milling in transit, storage in transit, switching, demurrage, general rules, classification and exceptions.

Publications are arranged alphabetically within these subdivisions by roads and associations. Superseded issues should be taken out of the working file but should not be destroyed, as it is sometimes necessary to go back several years to support claims or check corrected expense bills.

A **card index** for record of rates to points to or from which shipments are frequently moved prevents waste of time in repeatedly looking up the same rates and refiguring combination rates, and enables clerks not having expert knowledge of rates to check expense bills.

BILLS OF LADING.—There are two kinds of bills of lading, "straight" and "order." Order bills of lading are negotiable, are drawn to the shipper's order, and consignees, to secure goods, must present the bill of lading indorsed by the shipper. They are used when it is desired to secure payment for goods before delivery is made and are usually forwarded to consignee's bank attached to draft. Straight bills of lading are not negotiable and are made out to the names of consignees.

Bills of lading are contracts between carriers and shippers and also receipts for goods shipped. Blank forms are supplied by carriers, but most large shippers use their own forms which are printed to register with other office records so that the greater part of the information called for may be filled in, by use of duplicating machines, from the same impression that makes records for packing, shipping, billing departments, etc. This method effects considerable saving of time and avoids the possibility of mistakes being made in copying. They are usually made in triplicate, consisting of "original," "memorandum," and "shipping order." The original is for the consignee, the memorandum is retained by the freight agent and the shipping order is held by the shipper. A fourth copy, "duplicate," is also sometimes used.

It is important that bills of lading be carefully prepared. Shipper's and consignee's names should be shown in full; complete routing should be given; actual gross weights should be stated; description of freight should be accurate

and complete, should be given in terms used in traffic classifications, and should agree with markings of packages.

TRACING FREIGHT SHIPMENTS.—Tracers are communications addressed to agents of transportation companies, stating that certain shipments have not been delivered and requesting that an investigation be made to locate and, if possible, to expedite delivery of the goods, and that results of the investigation be reported. Printed forms, on postcards, with suitable blanks for filling in necessary data, are an economy where considerable tracing is done. Tracers should contain all available data, including date of shipment and description of goods. They should not be started until there is evidence of undue delay. Tracing clerks should know railroad routes, junction points, schedules of package car service, points of break, and the normal time required in transit. They should keep in touch with traffic conditions so that in case of accident or congestion they will understand causes of delays. Unnecessary, promiscuous tracing is a waste of time, places an undue burden upon the carriers and tends to detract from the effectiveness of bona fide tracers.

When information is urgently needed or it is desired to check railroad service, shippers sometimes do their own tracing instead of addressing freight agents at points of shipment. Waybill numbers (secured from railroad bill clerks) with car numbers and descriptions of shipments are sent, by wire or mail, to junction agents, with request for reports as to whether the shipments in question have been handled. In the case of L.C.L. shipments these requests should also give reference to trains in which shipments were forwarded. This information can be secured from the yard master's office or from freight agent.

Proper marking of each package included in L.C.L. shipments helps to insure prompt handling and to minimize the opportunities for shipments to be delayed or lost in transit. Tracer files should be carefully watched so that claims for loss may be filed within the time limit set by the Interstate Commerce Commission.

CHECKING EXPENSE BILLS.—The principal items to be considered in auditing transportation expense bills are weights, rates, and extensions. Weights should be checked with bills of lading. Where charges are based on minimum weights, the record of "cars ordered" should be consulted. If carrier furnished cars larger than those ordered or if shipments were transferred to larger cars en route, charges should be computed on the basis of size of car ordered, provided shipment could have been loaded therein.

In computing rates, descriptions of articles and size and kind of packages or containers, method of packing, etc., must be taken into consideration. Description includes class or commodity name, material composing article, purpose or use of article (finished, unfinished, raw, damaged or scrap), tariff classification, and value of article. Careful choice of terms used in describing goods on bills of lading is often necessary in order to secure lowest possible rates. Railroads charge the highest rates warranted by descriptions given on bills of lading, and use of a specific designation sometimes brings an article into a class taking lower rates. Shipments moving from one classification territory into another should be packed and described with a view to securing lowest rates in both classifications. Shipments take different rates according to method of packing, that is, whether set up or knocked down, boxed, crated or bundled, nested or unnested, etc.

Routing should be checked. If routes specified by shippers are not

followed, carriers are liable for any additional expense. Where routes are not designated by the shipper, it is the duty of carriers to use cheapest routes. Switching and drayage charges should be verified, as these services are sometimes included in rates.

An important point is to guard against making duplicate payments. This can be done satisfactorily only by tying up freight payments with records of goods shipped and received, and, while it is an auditing department function, it may properly be mentioned here. For **inbound shipments,** receiving report numbers should be entered on expense bills, and pro numbers of expense bills should be noted on receiving department records.

Some large shippers who make a practice of prepaying freight on outbound shipments enter all such shipments in book records having columns for date, shipper's number, car number and initials, loading point, destination, commodity, rate, amount, amount paid, date paid, and voucher number. The three last columns are posted from paid expense bills, the other columns from bills of lading on which rates have been entered by the rate clerk. This provides for an independent computation of amounts due and weights shown in this record are reconciled with billing records.

To guard against the tendency of routine workers to take things for granted, some concerns have printed forms on which are entered data covering both inbound and outbound shipments and on which independent calculations of freight charges are made. When completed, the forms are compared with expense bills.

It is usually possible, by giving bonds, to arrange with railroads for at least 48 hours' time in which to audit expense bills and thereby have errors corrected before payment is made. When mistakes are discovered after bills are paid, claims for overcharges are filed.

CLAIMS.—There are two kinds of claims: (1) loss and damage claims, and (2) overcharge claims. The Freight Claim Association has designed separate standard forms, approved by the Interstate Commerce Commission, for use in filing the two classes of claims, but many firms use their own forms for this purpose. These forms should be prepared in triplicate. A **white sheet**—original—is sent to the carrier, a **yellow copy** is filed with the copy of the letter of transmittal, and a **pink copy** is turned over to the accounting department as a basis for entry on the general books.

The following **documents** should be presented with **total loss claims:**

1. Itemized bill against carrier.
2. Original bill of lading or, if not obtainable, a certified duplicate, accompanied by a statement as to why the original bill cannot be surrendered.
3. Original paid freight bill.
4. Certified copy of invoice.
5. An affidavit of non-delivery of the shipment.
6. If the last shipment has been traced, tracing papers should be attached to claim.

For **damage claims,** items 5 and 6 are not required. Claims for damage are more readily paid if apparent damage to packages or contents is noted on receipts signed by truckmen or, in the case of carload shipments, delivered to private sidings, if agent's notations of damages are secured on expense bills.

In the case of shipments received apparently complete and in good order but when unpacked are found to be short or damaged, additional affidavits to support claims for loss or damage are required, as follows:

1. Affidavit of shipper that shipment was properly packed and delivered to a stated cartman.
2. Affidavit of cartman that shipment was delivered by him to the railroad agent in the same order and condition as when received by him.
3. Statement of consignee regarding condition of shipment, discovery of damage, and notification made to delivery agent.
4. Affidavit of consignee that goods were promptly unpacked and that articles in question were damaged or missing.
5. Affidavit of consignee's cartman that shipment was received by him at the delivery station at a stated time and was delivered by him at a stated time and place in the same condition as when received. Also a statement as to his observation of apparent condition of shipment.
6. Claimant's damage statement. A form provided by carriers, to be filled in partly by shipper and partly by consignee.

Overcharge claims should be supported by the following papers:

1. Original paid freight bill.
2. Certified copy of invoice if claim is based on weight or valuation or if shipment has been improperly described.
3. Original bill of lading.
4. Tariff authority for rate or classification claimed.

Claims should be filed as promptly as possible. The **legal time limit** for filing loss and damage claims is 6 months after damaged shipments are received or after expiration of reasonable time for delivery. This time limit may be extended indefinitely by notice to carrier that a claim will be filed.

Carriers are required by law to make a thorough investigation within a reasonable time after a claim has been filed and are not allowed to settle claims until investigation has been made. Payment of claims can usually be expedited by methodical follow-up, as carriers are apt to be slow in making settlement unless prompt handling is urged in a systematic manner. Claims should be numbered and the numbers referred to in correspondence with carriers.

3. CREDITS AND COLLECTIONS.—Organization of, and methods used in, this department are treated in full elsewhere in the manual and this discussion is intended only to give an idea of the relation of the credit and collection department to the general organization.

Extension of credit is an expression of confidence in the ability and intention of debtors to make payment in accordance with the terms and conditions of their agreements. It is the duty of the credit department to estimate the risk connected with proposed credit extensions and to decide whether the advantages to be gained by entering into contemplated business relations are commensurate to the possibilities of loss involved and, having granted credit, to secure settlement in the manner and at the time agreed upon.

The credit and collection manager derives his authority from, and performs his duties under, the supervision of the treasurer. Where collections are handled by separate departments, the collection manager is usually subordinate to, and under the direction of, the credit manager.

The **credit manager** is responsible for placing proper limitation upon balances of customers' accounts and for keeping the sales department advised as to the financial standing of customers. Before any sale is completed, the

customer's credit should be approved by this department for the amount of the proposed sale. He is also expected to accelerate payment of overdue notes and accounts receivable and, when necessary, to place them with collection agencies or with attorneys for suit. At stated intervals he prepares lists of uncollectible accounts, with statements of the history of each and of efforts made to collect, for submission to the board of directors, which alone should have authority to order them written off the books.

The credit department should work with the sales department to the end that both may profit by exchange of information and establishment of mutual understanding of problems incident to the work of each. The credit manager who is concerned only with keeping losses down to the lowest possible point may fail to serve the best interests of the business by overlooking opportunities for constructive sales promotion work. Salesmen who call on the trade can give valuable information regarding condition of their customers' businesses, although their opinions on credit matters are usually lacking in conservatism and must be discounted by the credit man.

Co-operation of the accounting department is also necessary. Information as to the condition of customers' accounts should be available at all times. Statements of accounts that are past due or that have reached the credit limit set, should be furnished as required.

4. SALES MANAGEMENT.—A broad conception of the sphere of sales management comprehends not only supervision and direction of salesmen in the field, but also control of advertising and of sales promotion work. **Advertising** and **sales promotion** are parts of the sales function and a well-balanced plan for sales efforts must unify and co-ordinate these related activities, but the modern tendency toward specialization has resulted in establishment of separate advertising departments by most large concerns and, where the amount of sales promotion work attempted is extensive, it is also usually handled by separately organized departments. These separate departments are technical divisions of the sales organization and their efforts should be directed by a central authority.

The **relation of advertising to sales departments** is a matter that often causes friction. The plan of having control of advertising vested in the sales manager is undoubtedly correct in theory. Practical application must depend upon capability of the sales manager, size of the concern, extent and methods of advertising, etc. The viewpoint and technical training required for success in the field of advertising is absolutely different from that necessary for successful management of salesmen and it is practically impossible for a man actively engaged in supervising salesmen also to keep up with the details of advertising work. Sales managers who control advertising should not attempt to supervise technical operation of advertising departments but should concern themselves only with broad policies. In some large sales organizations these departments are on a par, both being under the broad authority of a higher official who lays down general policies and settles all disputes arising between them. Where this arrangement can be effective, it is probably the best.

Another point where friction frequently occurs is between sales and production departments. The factory insists that the sales department find a market for whatever it is equipped to produce, while the sales manager demands that production be adapted to meet his ideas of market conditions. Conflicts between these departments must be decided by a general manager who takes into account questions of cost, financial conditions, and other matters connected with the general management point of view. The sales

department must be given some authority over production. There is no profit in making what cannot be sold profitably. On the other hand, the sales manager should understand that factory equipment must be employed as continuously as possible and that it cannot be remodeled to meet all of the ideas of salesmen who imagine that something different would find a readier sale and who are usually inclined to cater unnecessarily to demands of various customers for variety of models and designs.

USE OF STATISTICAL INFORMATION.—Modern methods of sales management depend largely upon use of statistics. Statistics, to the person who knows how to read them and who has imagination to see behind them, are pictures of conditions; signposts pointing out the probable trend of events. It has been said that statistics are no better than the men who make them, and it should be added that their usefulness is limited by the understanding of executives for whom they are made. The executive who is fond of quoting the phrase "lies, damn lies and statistics" is advertising his own inability to understand and make use of statistical information.

Statistics are compiled to indicate results of past performances or possible future developments. For the purpose of **sales control,** sales records are usually analyzed to show: sales, classified by commodities to each customer for months or other suitable periods; periodical recapitulation of sales by salesmen's territories and by branch office territories; also classified by commodities; recapitulation of sales to show total sales of each commodity for corresponding periods. The unit used may be one of value or of quantity as best suits the needs of the business. Total selling expense, classified as may be desirable, and selling expense per unit should be shown in connection with sales statistics for each salesman and each branch office.

These records are usually arranged to display results for the past month and for the year to date, with comparative figures for corresponding periods of the previous year. Without some basis for comparison, statistics of past results have little value.

Information from which these statements are compiled is taken from **orders** or from **delivery records.** In some cases where the unit used is one of value and sales are not considered complete until delivery is made, the figures are taken periodically from the sales ledgers, but this source is seldom satisfactory because the information is ordinarily not up-to-date and most of the value of such information depends upon its being promptly available so that dangerous tendencies may be corrected at the earliest possible moment. It is usually necessary to copy sales orders to provide needed office records and with modern methods of making copies the expense of providing an extra copy for the statistical department is slight.

In addition to the basic analysis of sales mentioned above, which are useful for almost any sales organization, it is possible to compile many other statistical records and comparisons to satisfy the requirements of different situations. **Salesmen's daily reports** contain information which, if properly classified, is useful to sales, production, and credit departments, and there are many other sources of information open to the trained statistician.

One of the first requisites for intelligent direction of sales efforts is reliable data regarding **sales possibilities** in the various sections of the territory. Estimates of possible sales, for an established business, are based partly on past performance and partly on calculations of buying capacity. New enterprises, having no special knowledge of market conditions as related to their product, must depend entirely upon census figures and other published statistics in forming estimates of possible sales volume.

A method commonly used to aid in establishing **sales expectancies,** is to list towns or counties and population and to set opposite each the amount of sales for the previous year. For staple products and for nearly all merchandise, **per capita consumption** is a dependable **measure.** The ratio of business to population is fairly constant. Many valuable statistics are based primarily upon comparison of possible per capita consumption with present rate of consumption. The nature of the business has an important bearing on this question. For example, a firm selling automobile accessories would use the total number of automobiles licensed in counties or states rather than population as a basis for development of consumption statistics. Characteristics of certain towns or localities that affect buying capacity of products under consideration are, of course, taken into account. Such estimates, although they can be only approximately correct, give the sales manager standards with which to compare results obtained.

CONTROLLING SALESMEN FROM THE HOME OFFICE.—Extent of home office control and methods used to maintain the desired degree of control vary with different kinds of business and different types of sales organizations. For example, salesmen selling staple commodities to retail stores and making calls at regular intervals require different handling than specialty salesmen who are more dependent upon the home office for information. It is no longer customary to send salesmen out, relying on their own resources to find business where and as they can. It is becoming more and more the accepted practice to plan salesmen's work for them; to know where they are, and in so far as is possible to know what they are doing each day; to set definite tasks; to furnish all possible aid and helpful information; and check results closely to determine whether home office instructions are being followed out. Territories are clearly defined and definite quotas are established.

LAYING OUT TERRITORIES.—The governing factors in determining sizes and boundaries of salesmen's territories are volume of possible business and transportation facilities. Salesmen should have only so much territory as they can work intensively and efficiently. Number of customers and prospects should be considered as well as frequency of calls. Logical **travel routes** should be followed in laying out salesmen's territories so that they can be covered with the least possible mileage and in the shortest time consistent with systematic development of business possibilities. **Counties** are considered more satisfactory than **states** as territorial limits. Small units allow more flexibility of arrangement and the county is the smallest unit for which census figures are available.

SETTING QUOTAS.—Methods described above, for determining sales possibilities for the territory as a whole, may be used in establishing quotas for individual salesmen. The plan of giving salesmen **definite marks** at which to shoot is coming into general use. Salesmen who know how much business their territories are expected to produce and know that they are expected to secure it, have definite goals toward which to work, do better work, and are better satisfied than if left in uncertainty as to what is expected of them. Quotas should be reasonable—not impossible of attainment. As a general proposition it is better to fix amounts too low rather than too high. A salesman who is given a quota so large that there is no hope of selling it, is apt to become discouraged. A rule followed by some firms is to arrange quotas so that 80% of a salesman's assignment is considered fair business for his territory.

PLANNING ROUTES.—Salesmen should be required to cover their territories in a systematic manner. Without a definite plan and some method of control, a great deal of time is lost and unnecessary expense incurred by salesmen crisscrossing and jumping from place to place in a haphazard manner.

Map and tack systems are generally used to record routes. Strings attached to tacks show routes as planned. Strings of different colors may be used to show actual movement and present location of salesmen. Very useful **graphic records** may be made of these maps by adding different colored tacks to indicate salesmen's headquarters, customers, dealers, prospects, etc.

The **degree of control** to be exercised depends upon the nature of the business. Where most calls are made on prospects developed by advertising and sales promotion departments, routes are sometimes scheduled at the home office in the same way that jobs are handled by a factory planning department, salesmen being given cards or slips describing calls to be made during the next few days. In some lines, where calls are not made regularly, it is customary to prepare the ground for salesmen by advising customers or prospects of impending calls and sending advertising literature or other matter a few days before salesmen's visits are due.

The most efficient routing having been determined, salesmen should be permitted to depart from established routes only for urgent reasons. Where it is practicable to do so, **complete itineraries** should be worked out with lists of calls to be made and reports checked carefully to see that salesmen are following home office instructions and not skipping towns to promote their personal comfort or spending undue time with favorite customers, thereby neglecting more difficult prospects.

DAILY REPORTS.—The basis of home office control is salesmen's daily reports. They should contain records of calls and results in sufficient detail to provide a good bird's-eye view of what each salesman is doing and what conditions are being met in any part of the territory.

In form these reports are made to suit the requirements of individual sales managers. Information usually called for includes: name of dealer; location—good, fair or poor; nature of business—retail or jobbing—city or country; condition of store and stock; display windows; advertising—kind and amount; appearance of clerks; competitive lines carried; average stock turnover; name of buyer and all available information regarding him; salesman's name; date of interview; date next call should be made.

Reports should be arranged so as to require the minimum of clerical work on the part of salesmen. **Compilations** to show number of calls per day or per town, number of orders, class of goods sold, average amount of orders, etc., should be made at the office and not required of salesmen. Such work can be done better and more economically by office employees. Salesmen are temperamentally unsuited for clerical work and to compel them to prepare long complicated reports dampens their enthusiasm and uses up energy that should be employed in securing business. Best results are obtained by making report blanks as simple as possible and insisting that they be filled out properly and completely.

RECORDS OF CUSTOMERS AND PROSPECTS.—Prospect files are an important part of sales office records. They are usually kept in the form of **card indexes,** in some cases supplemented by envelope systems or correspondence files containing special reports, etc. Files are divided by **states**

and **towns,** with names arranged alphabetically within the divisions. Cards should contain prospect's name, address and business, list of competitive goods handled, buyer's name, salesman's name or how secured if not reported by salesman, and any other pertinent information available. Space should be provided for record of correspondence, salesmen's calls, catalogs and other advertising material sent, etc.

Information for this record is taken from salesmen's reports, from correspondence, and from any other available sources.

When a prospect becomes a customer, his card is transferred to the customers' index and such additional information added as may be deemed necessary. Backs of cards are sometimes ruled to accommodate all data called for in salesmen's reports.

EXPENSE REPORTS.—All well-managed firms have definite understandings with their salesmen regarding what should be included in expense accounts and furnish standardized blanks for weekly, semimonthly or monthly reports. Latitude allowed salesmen in spending and accounting for money varies widely with different firms. The item of "entertainment expense" featured extensively by the older school of salesmen is being rapidly eliminated by modern ideas of sales management and closer accounting methods. Sales manuals should contain definite statements of policies as to expense accounts and detailed instructions for making up expense reports.

BRANCH OFFICES.—Branches are established to make possible better services to customers and to facilitate control of salesmen. **Branch managers** are held responsible for results in their territories, but the extent to which they should be given a free hand in management and development of territories assigned to them is apparently not agreed upon. It is, of course, understood that all instructions to salesmen should pass through the branch manager and that nothing should be done to weaken his authority. The sales manager should, nevertheless, take an active part in fixing salesmen's territories and quotas, hiring and discharging salesmen, etc. He should receive the same reports from, and maintain the same records for, salesmen working under branch offices as for salesmen working directly out of the home office, duplicate reports and records being made for the branch manager.

This plan of branch office organization makes the function of branch managers supervisory rather than managerial. It is suitable only for certain types of organizations. In other organizations branch managers are given full authority, the only requirement being that they produce satisfactory profits.

To overcome the tendency of branches to get out of touch with home office policies and methods, it is usually necessary to employ a corps of **traveling supervisors** to advise and assist branch managers and to act as a connecting link between branch and home offices.

Form 7 is a form for monthly reports of branch office operations. It shows results for the current month and for the year to date compared with similar periods of the previous year.

Form 8 is a record of results obtained in individual salesmen's territories. It is arranged to show 3 years' figures on one 8½ x 11 card. Amounts for each month are posted in black and accumulative totals for the year are entered, in the same spaces, in red ink, above the figures for months. The reverse of this card is used for a record of sales analyzed by commodities.

The best method of **rewarding salesmen** is that which supplies the greatest incentive to persistent constructive work. Methods of paying salesmen are

Form 8. Comparative Record of Salesman's Activities

(1) straight salary, (2) straight commission, (3) salary and commission. It is generally conceded that the **first method** is unsatisfactory in that the connection between income and results is too indirect to stimulate and sustain salesmen's enthusiasm and efforts. The **second plan** is still more undesirable because commission salesmen, as a rule, think only of immediate commissions and neglect development work that is necessary from the standpoint of the house that expects to continue in business.

The **salary-and-commission method** seeks to combine the desirable feature of the two others while eliminating the undesirable features. This plan is becoming generally accepted as the proper method of rewarding salesmen, but many firms hesitate to adopt it because of the difficulties met in determining the basis upon which commission should be paid. Various schemes have been developed for overcoming difficulties in the way of establishing equitable methods of figuring commissions. The **plan outlined** below is recommended by many authorities and brings out the points that require attention.

It is first necessary to know what the possibilities are in each territory, how much business a good salesman can secure. Quotas are then set. It is customary to fix quotas so that commissions are paid on sales above 80% of amounts set. A survey should then be made to determine the type of salesmen needed to represent the firm successfully in a constructive way and to discover the minimum such men need for living expenses, taking into account the cost of properly covering the territory. This minimum should be the salesman's **fixed salary** and his compensation for obtaining 80% of his quota.

Commission paid in addition to fixed salary may be based on volume or profits. A **common method** is to pay a certain percentage of sales in excess of the amount agreed on as covered by salary. **Another plan** is to make commissions dependent on profits in the salesman's territory by paying a percentage of profits and disregarding the question of volume altogether as a basis for commissions. Some firms, in addition to salary and commission, pay a **bonus** when quotas are attained. While most commission or quota schemes are based more or less upon arbitrary judgments, they can, by careful analysis of conditions, be made equitable, and it is of the utmost importance that there be no inequality or injustice in setting quotas or crediting sales.

One of the chief advantages of the salary-and-commission plan is elimination of argument over salary increases; quotas and basic salary having been agreed upon, reward depends entirely upon individual efforts and success. It is, of course, expected that sales in any territory will show a reasonable increase from year to year and quotas must be revised to conform to changed conditions. A system sometimes used to make these readjustments automatic provides that a salesman's salary and commission for this year is his salary for the next year and that his total sales this year becomes the basic minimum for next year, the same rate of commission being paid for sales over and above that minimum. In normal times this system is a satisfactory solution of the problem of fixing salaries and quotas but there is the danger that in a "boom" year they will be pushed up so high that quotas cannot again be reached while salaries will continue on an inflated basis until revised by a drastic cut which will have a depressing effect on the organization. It is probably better to leave basic salaries at the amount originally fixed and to revise quotas in accordance with some equitable and well-understood plan.

Contest plans and bonus schemes innumerable have been tried by one

concern and another for the purpose of stimulating salesmen to greater efforts, and in this connection it may be stated as a rule that systems that rely on honorable mention in bulletins, house-organs, etc., or other methods of giving personal distinction, while sometimes the only prizes that it is advisable to use, are not as effective with high-grade salesmen as some form of pecuniary reward.

TRAINING SALESMEN.—Modern standards of sales management require that each member of the selling organization be a trained salesman. To be well equipped for their work salesmen should have a thorough knowledge of the goods they are selling, should know how they are made, their uses and functions, points of superiority, and should be able to make a logical presentation of reasons for purchase. They should be familiar with house policies covering service, guaranty of quality, complaints, adjustments, credits, etc. In addition to specific knowledge of sales matters, and the principles of salesmanship, salesmen should be well grounded in general business principles; should know something about organization, advertising, credits, record-keeping, psychology.

There is undoubtedly some justification for the belief held by many sales managers that good salesmen are born, not made; but the supply of born salesmen falls far short of the demand, and as it is impossible to hire men completely trained to fit into the organization it is necessary to provide some special method of training. Much of the emotional writing that has been done in recent years in developing the theory that salesmanship is a matter of "pep" and "jazz," has been thoroughly discredited, together with the courses of training intended to transform salesmen into combination psychologists and hypnotists. Complete formal schools of selling are advocated by some authorities and have been established by some department stores and large specialty marketing organizations. The fact that there are not more such schools is due to the prevailing opinion that they are too expensive and too difficult to operate, that it is not easy to get the right type of men to run them, and that salesmen, after having been trained, are apt to leave the organization for better-paid positions offered on account of the training.

It is not always necessary that sales schools be complete in grades and classes. Where complete schools are not thought advisable, a great deal can be accomplished by "get-together" meetings Saturday afternoons, trips to headquarters, sales conventions, etc. Correspondence courses from the home office have, in some cases, given excellent results.

The tendency is toward more intensive training, to meet the need for better salesmanship brought about by more scientific purchasing methods and closer competition, and to standardize selling methods, which is impossible in a large organization without central training; and there will, undoubtedly, be many sales schools.

Where schools are operated, the plan should be to make admission a reward rather than a routine duty. New salesmen should not be given the advantage of special courses until they have had time to get acquainted with the firm's method of doing business and the management has had opportunity to pass judgment upon their loyalty and other qualifications. Men who seek employment only to obtain training and plan to leave it at the first opportunity should, if possible, be eliminated. Candidates should be required to show some natural ability in actual sales work under supervision of experienced salesmen preliminary to entering schools.

To avoid the demoralizing effect on students of getting something for noth-

ing, they should be required to contribute in some way toward defraying expenses of their education. This is sometimes accomplished by requiring them to purchase certain books used in the course of study. In other cases, salesmen are assessed directly for at least part of the cost of maintaining schools.

The entire burden of training in salesmanship should not be placed upon employers. Schools and colleges are now giving considerable attention to this subject and there are many opportunities for study of modern salesmanship open to persons ambitious to succeed in the selling field. Study of commodities handled and brief intensive training in the firm's methods and standards is, therefore, all that should be required of sales schools.

5. **THE ADVERTISING DEPARTMENT.**—It is the function of this department to find and use the best mediums for attracting attention of the public to the merchandise that the sales department is offering for sale, to educate the public in use of new products, to stimulate interest of possible buyers. While methods employed for this purpose are highly specialized, the work is very closely connected with that of the sales department. To obtain maximum results from advertising efforts it is necessary that salesmen and sales correspondents be fully informed regarding work being done by the advertising department and that they be alert to develop opportunities created by advertising. Complete knowledge of sales department plans is necessary for intelligent mapping of advertising campaigns. For this reason the sales manager usually has jurisdiction over the advertising department. The advertising manager consults with the sales manager in laying out campaigns, choosing mediums, and, in a general way, deciding upon the manner in which advertising appropriations are spent. Preparation of copy, securing space, letting contracts, checking results, etc., are in the hands of the advertising manager and his decisions should be considered as final on all technical matters.

Every effort should be made to secure close co-operation between sales and advertising departments and to co-ordinate their efforts. There are many possible points of contact. It is customary to provide salesmen with portfolios or albums containing specimens of current advertising for display to dealers as evidence of efforts being made to create consumer demand. Sales manuals should keep the salesmen in touch with advertising the house is doing and should contain instructions regarding the best way to make use of it. Other methods of obtaining mutual support and assistance, depending upon conditions, will suggest themselves as advertising plans are worked out.

The **size of this department** depends, not so much upon amounts of advertising appropriations, as upon methods of placing contracts for advertising. If mediums used are principally magazines having national circulation, and all details of preparation of copy and illustrations and contracting for space are turned over to advertising agencies, the advertising manager will have submitted, for his approval, complete plans for his campaign, and may need the assistance of only one or two clerks. On the other hand, advertising may be done in selected territories, making use of local mediums—newspapers, car cards, billboards, signs, window displays, etc. This may be elaborated by mail and follow-up work carried on by means of letters, circulars, booklets, catalogs, etc. If the advertising department handles all of these details, its staff may include copywriters and artists; clerks to prepare and check mailing lists, a section to keep records and to check bills for supplies, space and services, and results obtained from various forms of advertising; a storeroom for supplies, cuts, etc., files for data, clippings, etc. Duplication of form letters,

stenographic work, and correspondence filing may be done in the department or attended to by central service departments, depending upon the policy of the house.

Some advertising departments are further expanded to include canvassing crews, soliciting orders, and distributing advertising novelties and samples of merchandise from house to house or from store to store, although this is work that is usually considered to be within the sphere of sales department activities.

ORGANIZATION ADJUSTMENTS.—Activities of advertising departments are often subject to extreme fluctuations, expansion, or contraction, depending not upon volume of business as is the case with other departments, but upon market conditions and marketing policies. In forming a new department or enlarging a small department to enable it to handle an extensive campaign, the fundamental rules of organizations procedure should be applied. It is necessary to predetermine, as definitely as possible, what work is to be done and to assign the various operations to persons capable of performing them. Preliminary surveys should include systematic analysis of campaign plans and detailed written descriptions of operations needed to carry them on successfully. The total amount of work to be done can thus be estimated and classified according to types of work and qualifications required for its proper performance.

After the **provisional organization** has been in operation for a time and has become somewhat stabilized, it should be checked up by securing from employees detailed descriptions of tasks performed and of methods used. An adaptation of Figure 2 can be used for this purpose. Employees should be encouraged to describe methods they consider best. From information secured in this way and from study of departmental processes, there should be developed a set of standard practice instructions to record improved methods and to aid the manager in selecting and training new employees.

RECORDS.—To control advertising expense and to insure that plans are followed, **advertising appropriations are usually budgeted.** Definite amounts are set aside for certain purposes and all expenditures are made in accordance with and are controlled by the budget. This system requires the use of **records** designed to permit charging each item of expense against the appropriation made for the purpose for which the expense is incurred and to facilitate preparation of periodic statements displaying, for each item of the budget, amount of appropriation, amount expended, and unexpended balance. As supplies and services are often contracted for a considerable time before payment is made, this record, to show amount of free balances, must include a record of estimated cost of goods, space, etc., for which contracts have been entered into but for which payment has not been made. One firm uses a **form** having columns for date ordered, order number, ordered from, items, estimated cost, invoice date, cost, and as many distribution columns as are needed. A **separate record** is kept for each item of the budget.

It is usually necessary to carry a considerable stock of supplies, stationery, form letters, signs, display cards, advertising novelties, samples, etc., and an adequate **perpetual inventory record** is needed to properly account for this stock. The ordinary form of inventory record should be used. Cards should contain the usual information—location of supplies, amounts and dates ordered, received and issued and balance on hand, and should carry the usual notations as to maximum and minimum stocks.

Provision should be made for **filing** the wide variety of material used in connection with advertising work. Articles such as engravings, drawings,

cuts, electros, photographs, etc., which vary greatly in size and shape are usually stored in **special cabinets.** Catalogs and booklets are filed numerically in vertical files with alphabetic card indexes. Magazine articles, clippings, etc., may be filed alphabetically by subjects. Clippings having a permanent value should be mounted upon manila sheets.

A **data file** (see "Filing," p. 966) should be used for preserving and classifying information, suggestions, or ideas that may be useful for future advertisements.

To assist in making **intelligent choice of newspapers and magazines** as mediums, records should be compiled for every publication that may be used. **Card records** are commonly used for this purpose, with spaces for name of publication, publisher's name and address, territory covered, circulation, class, page and line rates, space and cash discounts, size of page, number of lines to page, number and width of columns, and for any technical information regarding cuts, etc., that it is desired to include. **Envelopes** are sometimes used instead of cards. Rates, etc., are posted on the outside and papers and statements regarding circulation, territory covered, etc., are placed inside.

Cards or **envelopes** are usually **filed alphabetically** by states and cities, with subdivision under each city for dailies, weeklies, monthlies, etc.

Records of experience with each publication should be kept so that use of unprofitable mediums may be discontinued. The purpose of this record is to show comparative unit costs, for different publications, of securing inquiries and orders. Advertising of the general consumer or good-will type can be checked up only in a general way, but where inquiries are solicited the value of each medium can be more definitely determined by keying the advertisements so that inquiries and orders can be credited, as they come in, to the publication from which they are drawn.

Systems of keying usually either employ coupons to be used in making inquiries or depend upon slight alterations of addresses, as: including Department A, Department B, etc., in addresses; changing street, room, and post-office box numbers; using the letters N., S., E., and W. in connection with street names. No system of keying gives absolute accuracy. The best that can be done is to secure fairly accurate reflections of tendencies. If considered advisable, postcards may be sent to persons from whom unkeyed inquiries are received, requesting the name of the publication in which the advertisement was read. This plan is seldom satisfactory and most concerns prorate unkeyed inquiries on the basis of properly keyed inquiries credited to each medium.

This record should include, for each publication, cost of advertisement, number of inquiries, number of orders, cost per inquiry, cost per order, average amount of orders, and ratio of sales to cost of advertising.

Purchases of equipment, supplies, printing, etc., should, whenever practicable, be made by the purchasing department. In the case of purchases made by itself, whether for material, services, or space, the advertising department should follow purchasing department procedure. **Regular purchase orders,** describing in detail the items ordered and s ating prices to be paid, should be issued for all purchases, and invoices should be checked and verified in the same way as those passing through the purchasing department. Invoices for space are sometimes paid before advertisements are printed and such invoices must be returned to the advertising department for final verification after payment has been made. To avoid **duplicate payments,** the auditing department should see that the invoices are stamped with voucher numbers before being returned.

6. ORGANIZATION OF THE ACCOUNTING DEPARTMENT.—Before the advent of present-day methods of management, the work of the accounting department was supposed to consist principally of making records of financial transactions and preparing formal balance sheets and profit and loss statements to display financial conditions at the end of certain periods and to reflect results of operations during those periods. These records and statements are, of course, necessary, and their importance has not diminished, but more emphasis is now laid on supplementary, interpretive statements, and reports. Plans and decisions of modern managements are based largely upon information furnished by accounting departments. This information is taken from books of account and from statistical records. It must be accurate and comprehensive. It should be arranged not only to assist executives in preparing plans for the future, but should also show results obtained in carrying out plans and cost of obtaining results, and should measure the performance of each individual charged with responsibility for part of the business activities. It is by use of such statements that executives are able to keep in touch with operations, fix responsibility for mistakes or inefficient methods, and correct dangerous tendencies before serious damage is done.

The **chief accounting executive,** in order to control the accuracy and completeness of statements and reports for which he is responsible, must exercise authority over all accounting records and statistics whether at the general office, branch offices, or factories, and must direct the work of all clerks engaged in originating or compiling records that are in any way used as the basis for entries in books of account or for accounting statements or reports.

Final control of accounting should be exercised by an officer of the firm, responsible only to the president and the board of directors. His title is not important and is different in different organizations. In some businesses, supervision of accounting is combined with direction of financial matters under control of the **treasurer.** The better plan is to have a separate independent accounting department in charge of an officer who is not directly interested in other departments. The organization of this department varies, of course, with the size and nature of the business. In a large business, it may be in charge of an officer known as **comptroller,** who is one of the principal executives of the firm, who plans accounting methods and interprets accounting reports, and who delegates active supervision of the work of the department to a subordinate who may be called assistant comptroller, general accountant, general auditor, or otherwise designated, and the work may be divided into numerous sections each in charge of a subexecutive. In a smaller business all accounting work may be handled by a head bookkeeper and a few clerks. In either case, the same principles apply. The head of the accounting department should be without responsibility for results obtained by other departments, so that investigations and reports are unbiased, and should have control of sources of information, so that he can be held responsible for the reliability of records and statements.

As the necessary information is gathered from all parts of the organization, much of it will be prepared by persons under the direct authority of other executives, but in so far as their work concerns accounting matters, they should be subject to directions by the accounting executive. The small concern may not find it necessary or expedient to maintain or prepare as many or as elaborate records and statements as are used by a large business, but the ground to be covered and the principles involved are practically the same. The following discussion will consider the divisions of accounting work in a representative manufacturing business, in which the accounting department is

supervised by an executive called "general auditor" who is responsible to the comptroller.

DIVISIONS OF THE DEPARTMENT.—Like most other details of organization, the sections into which a department should be divided depend upon existing conditions. They should be arranged to group, under minor executives, those functions that logically form working units. The following list of sections is illustrative only and is not recommended for use in any particular organization. Many details handled by this department are not mentioned in this outline. Further subdivision may be made, or two or more of these sections may be combined as seems desirable or expedient in any case.

1. General Bookkeeping
2. Cost Accounting
3. Stores Records
4. Finished Stock Records
5. Customers' Accounts
6. Vouchers Payable
7. Pay-Rolls
8. Invoicing
9. Tabulating
10. Auditing

General Bookkeeping Section.—In this section the information compiled and used by all other sections is summarized and controlled. The general bookkeeping section controls the general ledger, subsidiary ledgers for fixed assets, for miscellaneous accounts receivable, and any other subsidiary ledgers not assigned to a separate section, and the journals used as posting mediums to the general ledger. It prepares vouchers for monthly distributions of fixed charges to the various departments and branches, approves the distribution to general ledger accounts, of vouchers made in other sections and prepares trial balances and other statements for use of the general auditor.

Cost Accounting Section.—The cost accounting section maintains records of factory operations—factory ledger, cost sheets, etc., and prepares such statements of cost details and analysis of factory expenses as are required. Its records are controlled by the Factory Ledger account on the general ledger. This section distributes labor and material costs and apportions factory expenses to the various jobs in process and prepares monthly journal vouchers for use of the general bookkeeping section in recording factory operations on the general books.

Determination of costs of finished goods is only part of the work of the cost accounting section. Records maintained by this section should also show the cost of different operations or processes. Comparative efficiency of different departments of the factory, comparison of results obtained by use of different equipment or methods (as, for example, if new methods or new machines are installed, these records should show whether or not the change has resulted in more economical operation), and detailed analysis of factory expense for use of the management in judging past performance and making plans for the future.

Stores Records.—These are perpetual inventory records of raw materials and are kept in the stores department, but the procedure followed is subject to the approval of the general auditor and monthly statements of material purchased, issued, and on hand are made for his use.

Finished Stock Records.—These are also perpetual inventory records and are controlled by the Finished Goods account on the general ledger. They show the location and cost of all stocks of finished goods, whether at the factory, at branches, or on consignment. These records are charged with the output of the factory and it is the duty of this section to see that all

movements of stock are properly authorized and recorded and that all withdrawals from stock are properly accounted for. Stock reports received from branch offices and other stock points are reconciled with records kept in this section, and adjustments and corrections are secured when necessary. Monthly inventories showing the quality and location of stocks of each kind and grade of product are made by this section.

Customers' Accounts.—This section operates ledgers containing customers' accounts handled directly by the general office. Accounts of branch office customers are usually kept at the branches and controlled by the general ledger. If branch office collections are handled by the general office, this section will have a ledger for each branch.

Frequent reference to customers ledgers is necessary in credit work and they should be placed where the credit department can have convenient access to them. This section must co-operate with the credit department, supplying whatever statements or other information is required from these records.

The use of bookkeeping machines in this section is usually recommended. The work consists principally of posting, taking off trial balances, and writing monthly statements. Where posting is done by hand, the accuracy of the work is not proved until the end of the month and considerable time is often lost in checking for balances. Customers' statements are also prepared at the end of the month and are often mailed several days late. With bookkeeping machines the day's work can be proved each day. Statements are prepared as the posting is done and are ready for mailing when the last posting for the month has been made. There is no congestion of work around the first of the month, with resulting delay of posting. For further discussion of bookkeeping machines, see "Mechanical Equipment," p. 961.

Vouchers Payable.—It is the duty of this section to voucher all invoices, to distribute vouchers to the proper accounts in the vouchers payable record, and to prepare for the treasurer's signature, checks in payment of the vouchers.

Incoming invoices are sent to this section when approved for payment and, after entries have been made on the voucher record, are filed in the **unpaid voucher file** until the time for payment arrives.

At the end of each month a **journal voucher,** summarizing the information classified in the voucher record, is made and sent to the general bookkeeping section for entry on the general ledger. Unpaid items in the voucher record are listed and the total agreed with the balance of the general ledger controlling account. The **paid vouchers file** and the **voucher index** may be kept in this section or be maintained by the central filing department.

Pay-Roll Section.—This section, sometimes known as the timekeeping section, controls the recording of "in and out" time in the factory, maintains records of rates paid factory employees, extends time cards, and prepares pay-rolls. It also prices and extends labor tickets for use by the cost department. Pay-rolls completed in this section are turned over to the treasurer's department which attends to preparation and distribution of pay checks or pay envelopes.

Invoicing Section.—Copies of shipping orders, priced by the sales department, are sent to this section as soon as shipment has been made. The invoicing section makes extensions and prepares invoices to be sent to customers. Copies of invoices are made for the statistical and the customers' accounts sections. In some offices, credit and sales departments also receive copies.

Invoicing should be done promptly. If possible, invoices should be

mailed the same day that the goods are shipped and never later than the following day. Success of the sales department's efforts to build up good-will depends to a large extent upon the service the concern is able to give, and in this respect prompt rendering of invoices may be as important as prompt shipment, as customers may not be able to use the goods until they have invoices to cover. Where bills of lading are attached to drafts, customers cannot obtain possession of goods until draft is paid and unnecessary delay in forwarding drafts is certain to be resented. No business can afford to be careless in the matter of invoicing. Inaccurate or carelessly typed invoices create an impression of unreliability that is difficult to overcome. Extensions should be carefully checked and before invoices are mailed they should be inspected for typographical errors and general appearance.

Billing machines that make extensions and figure discounts automatically help to speed up the work in this section. There are, however, some kinds of involved billing which these machines do not seem to be able to handle successfully.

Tabulating Section.—By the use of electrical tabulating machines (described under "Mechanical Equipment," p. 403), this section makes reports showing all statistical information required from sales invoices and purchase invoices. Material requisitions and labor tickets are also classified for entry on the cost records. Final proof of the accuracy of extensions on invoices can be made with these tabulating machines, but that is practicable only where the average amount of invoices is large.

Auditing Section.—In large organizations the head of this section should report directly to the comptroller and be on a par with the executive in charge of accounting work, who in such cases is usually known as chief accountant. This section has general charge of accounting inspection. It audits vouchers payable, branch office disbursements, pay-rolls, bank accounts, cost records, and stock records, and in addition to this routine work makes special audits and investigations at the direction of the general auditor or the comptroller. Traveling auditors, who visit branch offices to verify records and check accounting procedure, are members of this section.

Intersectional Relations.—While the duties of each section may be more or less clearly defined, no section is an independent unit. The work of the various sections is closely related and requires co-operation and exchange of information. As delay in one section may hold up the work of other sections, transfers of such information should be governed by a definite schedule Dates should be set for completion of journal vouchers and reports on which the information compiled in each section is summarized and classified, so that responsibility for delays may be definitely fixed.

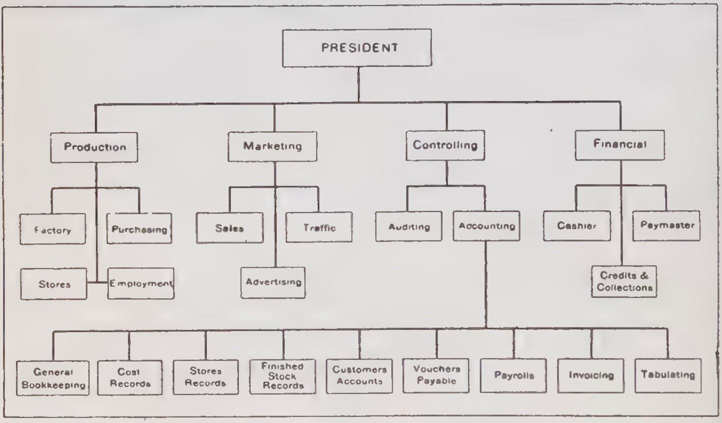
The routine of the accounting department is closely connected with other divisions of the general office work. The credit department depends for up-to-date information regarding the status of customers' accounts upon prompt posting of invoices and collections. Other points of contact are formed by the comptroller's responsibility for stores records maintained in the production department, for shipping department procedure, and for methods used by other departments in handling matters over which he has functional control.

Duties of Comptroller.—The **comptroller** is the final authority on accounting methods and procedure. He plans the classification of accounts and the supporting records, and arranges for the preparation of statements and reports required by law or by other departments, or necessary to show the

condition and progress of the business. He explains and interprets accounting reports for the executive officers of the firm and makes recommendations based on the information contained in these reports.

The comptroller is responsible for safeguarding the assets of the firm by designing records to show the responsibility of individuals for property or values intrusted to their care and by arranging for periodical inspections and investigations to verify the existence of assets as shown by his records.

Maintenance of records and preparation of reports, after they have been planned and authorized by the comptroller, is under the direction of the



FORM 9. Analysis of Business Activities

general auditor. He supervises the work of all employees of the department, decides questions regarding methods and details of making entries, etc., and passes upon suggestions for changes in methods or forms in use.

Many **organization charts** divide business activities into three fundamental groups: marketing, production, and finance, and locate the accounting department within the finance group. The position of the accounting department in an organization in which the modern idea of the existence of a fourth primary function—"controlling"—is recognized, is shown by Form 9.

SECTION 20

BANKRUPTCY, INSOLVENCY, AND RECEIVERSHIP

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 20

BANKRUPTCY, INSOLVENCY, AND RECEIVERSHIP

Bankruptcy

BANKRUPTCY DEFINED.—The term "bankruptcy" denotes: (1) the state of being unable to pay, or of being legally discharged from paying one's debts; or (2) the act or process of becoming a bankrupt.

BANKRUPT DEFINED.—A bankrupt is a debtor who, in accordance with the terms of the law relating to bankruptcy, has been judicially declared to be unable to meet his debts.

SOURCE OF BANKRUPTCY LAWS.—Bankruptcy laws are a development of the English common law of the Middle Ages. The earlier laws, according to Blackstone, merely protected the creditor against the "trader" who secreted himself or acted to defraud his creditors. These laws did not release the debtor from his debts. Consequently property subsequently acquired by the debtor might still be seized for debts that remained unpaid.

In 1705, during the reign of Queen Anne, however, the English law was amended to provide for the debtor's discharge from the unpaid portion of his debts. Since then bankruptcy laws generally have provided relief to debtors as well as protection to creditors.

It was not until the passage of the Bankruptcy Act of 1861 that English Law abolished the distinction between traders and non-traders; that is, theretofore none but traders could be bankrupts, non-traders being "insolvents." This distinction between traders and non-traders has been ignored in the United States since the Act of 1841.

DISTINGUISHED FROM INSOLVENCY.[1]—The prevailing laws of both insolvency and of bankruptcy are designed to effect a fair distribution of the property of debtors among creditors. Many other conditions are common to both these laws. The Supreme Court of the United States considers the two terms, insolvency and bankruptcy, as practically synonymous. Yet bankruptcy laws discharge absolutely debtor and debt, whereas insolvency laws, intended originally to discharge the person of the debtor from arrest and imprisonment, leave his obligation to pay in full force.

The **Bankruptcy Act**, being a federal law, applies uniformly throughout the states; **insolvency laws**, being state laws, vary in their scope and operation. The Bankruptcy Act is paramount to state legislation.

---

[1] See "Insolvency," *infra*.

The several states have power to pass insolvency laws, which may have the general effect of bankruptcy laws, except that such laws may not impair the obligation of contracts, nor conflict with an act of Congress.

ACT OF 1898.—Congress is empowered by the Constitution (Art. 1, Sec. 8, Cl. 4) "to establish uniform laws on the subject of bankruptcies throughout the United States." The Congress has enacted four bankruptcy laws: the Act of 1800, repealed in 1803; the Act of 1841, repealed in 1843; the Act of 1867, repealed in 1878; and the Act of 1898, generally amended in 1903, 1906, and 1910, which continues in force and is now the law.

The Act of 1898, together with (1) its amendments, (2) certain General Orders adopted by the Supreme Court of the United States, and (3) the equity rules of that court, comprises that portion of our federal law generally referred to as the Bankruptcy Act or the Bankruptcy Law.

The accountant may not be directly concerned with the purely legal phases of the act, which are within the province of the lawyer; yet he may not be able to serve a bankrupt or insolvent client efficiently unless he is familiar with the basic principles of the act, and the practice of the courts. Reference to such authoritative works as those of Remington, Loveland, or Collier will repay the accountant engaged in bankruptcy proceedings. For convenience, however, certain controlling phases of the law and procedures are hereinafter explained.

PETITIONS.—Certain **prescribed forms** are used in petitioning the court in all bankruptcy proceedings. Printed copies of these forms may be obtained from stationers. Several of the more important forms, with which accountants should be familiar, are outlined in succeeding paragraphs.

VOLUNTARY AND INVOLUNTARY BANKRUPTCY.—A debtor is a voluntary bankrupt or an involuntary bankrupt according as **he** or **his creditors** petition the court that he be adjudged a bankrupt. If this petition is filed by the debtor, the proceeding is voluntary. If filed by creditors, the proceeding is involuntary.

A debtor, within the meaning of the law, may be an individual, a partnership, or a corporation.

DEBTOR'S PETITION.—The petition of an individual debtor is reproduced in Form 1. The petition of a debtor partnership or corporation is substantially the same as for an individual. The wording is changed slightly merely to identify the partnership or the corporation, as the case may be. In case of partnerships, a full set of schedules is required for each partner involved.

To the Hon Judge of the District Court of the United States for the District of

The Petition of

of the of , in the County of

and District and State of

State Occupation or Profession

Respectfully Represents: That he has had his principal place of business [*or has resided or has his domicile*] for the greater portion of six months next immediately preceding the filing of this Petition at within said Judicial District; that he owes debts which he is unable to pay in full; that he is willing to surrender all his property for the benefit of his creditors, except such as is exempt by law, and desires to obtain the benefit of the Acts of Congress relating to Bankruptcy.

That the Schedule hereto annexed, marked A, and verified by your petitioner's oath, contains a full and true statement of all his debts, and (so far as it is possible to ascertain) the names and places of residence of his creditors, and such further statements concerning said debts as are required by the provisions of said Acts.

That the Schedule hereto annexed, marked B, and verified by your petitioner's oath, contains an accurate inventory of all his property, both real and personal, and such further statements concerning said property as are required by the provisions of said Acts:

Wherefore, your Petitioner Prays: that he may be adjudged by the Court to be a bankrupt within the purview of said acts.

N. B.—Oaths to the above petition, and the schedules thereto annexed, may be administered by officers authorized to administer oaths in proceedings before Courts of the United States, or under the laws of the State where the same are to be taken; and diplomatic or consular officers of the United States in any foreign Country.
Petitioner's attorney cannot act as notary.

FORM 1. Petition in Bankruptcy

Statement of all Debts of Bankrupt.

SCHEDULE A. (1) No.———

Statement of all creditors who are to be paid in full or to whom priority is secured by law.

CLAIMS WHICH HAVE PRIORITY.		AMOUNT Dollars.	Cents.
1. Taxes and debts due and owing the United States.			
2. Taxes due and owing to the State of or to any County, District or Municipality thereof.			
3. Wages due workmen, Clerks or Servants, to an amount not exceeding $300 each, earned within three months before filing the petition.			
4. Other Debts having priority by law.			

Insert in all cases, ledger page, names of creditors and their residence, if known, or unknown, so state, when and where debt was contracted; nature and consideration of the Debt, and whether contracted as partner or joint contractor, and, if so, with whom.

TOTAL———

.... Petitioner.

This Schedule must be executed in triplicate.

SCHEDULE A. (2) No.______

CREDITORS HOLDING SECURITIES

(N. B.—Particulars of Securities held, with dates of same, and when they were given, to be stated under the names of the several Creditors, and also particulars concerning each Debt, as required by the Acts of Congress relating to Bankruptcy, whether contracted as partner or joint-contractor with any other person; and if so, with whom.)

	VALUE of SECURITIES		AMOUNT of DEBTS	
	Dollars.	Cents.	Dollars.	Cents.

Insert in all cases, ledger page, names of creditors and their residence if known, if unknown, so state; also full description of securities, when and where debts were contracted.

This Schedule must be executed in triplicate.

TOTAL...

.... Petitioner.

SCHEDULE A. (3) No.______

CREDITORS WHOSE CLAIMS ARE UNSECURED

(N. B.—When the name and residence (or either) of any drawer, Maker, Endorser or Holder of any Bill, or Note, etc., are unknown, the facts must be stated; and also the name and residence of the last Holder known to the Debtor. The Debt due to each Creditor must be stated in full, and any claim by way of Set-off stated in the Schedule of Property.)

	AMOUNT	
	Dollars.	Cents.

Insert in all cases, ledger page, names of creditors and their residence, if known or unknown, so state, when and where debt was contracted; nature and consideration of the Debt, and whether any Judgment, Bond, Bill of Exchange, Promissory Note, Etc., and whether contracted as partner or joint contractor or with any other person; and if so, with whom.

This Schedule must be executed in triplicate.

TOTAL...

.... Petitioner.

SCHEDULE A. (3 continued) No.________

CREDITORS WHOSE CLAIMS ARE UNSECURED

(N. B.—When the name and residence (or either) of any drawer, Maker, Endorser or Holder of any Bill, or Note, etc., are unknown, the facts must be stated; and also the name and residence of the last Holder known to the Debtor. The Debt due to each Creditor must be stated in full, and any claim by way of Set-off stated in the Schedule of Property.)

	AMOUNT Dollars.	Cents.

Insert in all cases, ledger page, names of creditors and their residence, if known or unknown, so state, when and where debt was contracted; nature and consideration of the Debt, and whether any Judgment, Bond, Bill of Exchange, Promissory Note, Etc., and whether contracted as partner or joint contractor or with any other person; and if so, with whom.

This Schedule must be executed in triplicate.

TOTAL________

________________ Petitioner.

In supplying information as to "when and where" debts due merchandise creditors were contracted, and the "nature and consideration of the debt," it is usually sufficient to state merely:

"Merchandise creditors, as follows:
Jno. V. Smith Co., 96 Branch St., Bontown, N. Y. $2,750.00
Wm. Smith Co.. 97 Main St., Bontown, N. Y. 3,750.00
Etc."

SCHEDULE A. (4) No.______

LIABILITIES ON NOTES OR BILLS DISCOUNTED, WHICH OUGHT TO BE PAID BY THE DRAWERS, MAKERS, ACCEPTORS OR ENDORSERS.

(N. B.—The dates of the Notes or Bills, and when due, with the Names, Residences, and the Business or Occupation of the Drawers, Makers or Acceptors thereof are to be set forth under the Names of the holders. If the Names of the Holders are not known, the Name of the last Holder known to the Debtor shall be stated and his business and place of residence. The same particulars as to Notes or Bills on which the Debtor is liable as Endorser.)

	AMOUNT Dollars.	Cents.

Insert in all cases, ledger page, names of holders as far as known, if unknown, so state; their residence if known, if unknown so state; place where debt was contracted; nature of liability, whether same was contracted as partner or joint contractor, or with any other person; and if so, with whom.

TOTAL______________

______________ Petitioner.

This Schedule must be executed in triplicate.

SCHEDULE A. (5) No.______

ACCOMMODATION PAPER.

(N.B.—The dates of the Notes or Bills, and when due, with the Names and Residences, of the Drawers, Makers and acceptors thereof, are to be set forth under the Names of the holders; if the bankrupt be liable as Drawer, Maker, Acceptor or Endorser thereof; it is to be stated accordingly. If the names of the Holders are not known, the Name of the last Holder known to the Debtor should be stated, with his residence. The same particulars as to other commercial paper.)

	AMOUNT Dollars.	Cents

Insert in all cases, ledger page, names of holders, residence, if known, if unknown, so state; names of and residence of persons accommodated; place where contracted; whether liability was contracted as partner or joint contractor, or with any other person, and if so, with whom.

TOTAL______________

This Schedule must be executed in triplicate.

______________ Petitioner.

_______________________________ Petitioner.

CREDITORS' PETITION.—In involuntary bankruptcy the petition in the first instance is filed by one or more creditors. Creditors cannot petition unless they have provable claims aggregating $500 in excess of securities. One creditor can petition if there are less than twelve creditors, otherwise three creditors must unite in the petition.

Their petition is substantially as follows:

TO THE HONORABLE... *Thomas Maillam*...., Judge of the District Court of the United States for the.. .*Western*....District of....*New York*....:

THE PETITION OF....*A. B. Sea & Company, R. D. Ferson and J. L. Wilmot*....respectfully shows:

THAT....*K. G. Namer*...., of....*Bontown, New York*...., has for the greater portion of six months next preceding the date of filing this petition, ...*had his principal place of business*....at....*609 Broad Street, Bontown, New York*...., in the County of....*Independence*...., and State and District aforesaid, and owes debts to the amount of....*$1,000*....

THAT YOUR....*petitioners are creditors*....of said....*K. G. Namer*...., having provable claims amounting in the aggregate, in excess of securities held by....*them*...., to the sum of....*$500*.... That the nature and amount of your....*petitioners'*....claims are as follows:

...*A. B. Sea & Company—machinists' supplies furnished—balance due $300*....

....*R. D. Ferson—paint furnished—balance due $150*....

....*J. L. Wilmot—automobile hire—balance due $210*....

AND YOUR....*petitioners*....further....*represent*....that said....*K. G. Namer*....is insolvent, and that within four months next preceding the date of this petition the said....*K. G. Namer*....committed an act of bankruptcy, in that....*he*....did heretofore, to wit, on the....*tenth*....day of....*December*....A. D.....19—...., pay to....*C. T. Selarch*...., the sum of....*Two Hundred ($200)*....Dollars, with intent while insolvent to prefer said creditor over others.

WHEREFORE, YOUR ..*petitioners pray*.. that service of this petition, with a subpoena, may be made upon....*K. G. Namer*...., as provided in the acts of Congress relating to bankruptcy, and that....*he*....may be adjudged by the Court to be a bankrupt within the purview of said acts.

....*A. B. Sea & Company*....
....*R. D. Ferson*............
... *Ralph Wier Grover*.... ....*J. L. Wilmot*.............
Attorney. Petitioners.

NOTE: To be acknowledged in joint jurat by all petitioners before an authorized official.

FORM 2. Creditors' Petition

Within 10 days after filing of creditors' petition the alleged bankrupt is required to file detailed schedules in precisely the same manner and form as in case of voluntary bankruptcy.[2]

WHO MAY BECOME BANKRUPTS.—Any person capable of contracting, except a municipal, railroad, insurance, or banking corporation, who owes debts, one or more, may become a voluntary bankrupt. See section on "Credits and Collections." Any natural person or corporation, except a wage-earner,

[2] See "Debtor's Petition," *supra.*

a farmer, or a municipal, railroad, insurance, or banking corporation, may be adjudged an involuntary bankrupt; provided, however, that the debtor owes at least $1,000. See section on "Credits and Collections."

Partners, partnerships, and private banks may be adjudged bankrupts, but state or national banks, municipal, railroad, and insurance corporations are governed by special statutes.

BANKRUPT'S EXEMPTIONS.—The Bankruptcy Act provides for the exemptions specified in the statutes of the state in which the bankrupt resides. The statutes of the state in question should be consulted for these exemptions.

ACTS OF BANKRUPTCY.—There are five so-called "acts of bankruptcy," one or more of which must be proved before a person is declared a bankrupt. These acts occur when the debtor:

1. Conveys, transfers, conceals or removes, or permits to be concealed or removed, any part of his property with intent to hinder, delay, or defraud his creditors or any of them. The intent to defraud creditors is the essence of this act of bankruptcy.
2. Transfers, while insolvent, any portion of his property to one or more of his creditors with intent to prefer such creditor over his other creditors. The intent to favor one or more creditors to the exclusion of others is the essence of this second act of bankruptcy.
3. Having suffered or permitted, while insolvent, any creditor to obtain a preference through legal proceedings, and not having vacated or discharged such preference at least 5 days before final disposition of any property affected by such preference. This act is termed the **passive act.** The debtor commits no act; he merely permits one or more creditors to proceed to the disadvantage of other creditors.
4. Makes a general assignment for the benefit of creditors, or, being insolvent, has a receiver or trustee put in charge of his property under the laws of a state. If an assignment is for a valid consideration, or unless insolvency can be affirmatively proved, this act is not committed.
5. Admits in writing his inability to pay his indebtedness and his willingness to be adjudged a bankrupt on that ground. Admission alone is sufficient here.

DUTIES OF A BANKRUPT.—The bankrupt shall:

1. Attend the first meeting of his creditors, if directed by the court or a judge thereof to do so, and the hearing upon his application for a discharge, if filed.
2. Comply with all lawful orders of the court.
3. Examine the correctness of all proofs of claims filed against his estate.
4. Execute to his trustee transfers of all his property in foreign countries.
5. Execute and deliver such papers as shall be ordered by the court.
6. Immediately inform his trustee of any attempt, by his creditors or other persons, to evade the provisions of this Act coming to his knowledge.
7. In case of any person having to his knowledge proved a false claim against his estate, disclose that fact immediately to his trustee.
8. Prepare, make oath to, and file in court within 10 days, unless further time is granted, after the adjudication, if an involuntary bankrupt, and with the petition if a voluntary bankrupt, a schedule of his property, showing the amount and kind of property, the location thereof, its money value in detail and a list of his creditors, showing their residence if known, if unknown, that fact to be stated, the amounts due each of them, the consideration thereof, the security held by them, if any, and a claim for such exemptions as he may be entitled to,

all in triplicate, one copy of each for the clerk, one for the referee, and one for the trustee.

9. When present at the first meeting of his creditors, and at such other times as the court shall order, submit to an examination concerning the conducting of his business, the cause of his bankruptcy, his dealings with his creditors and other persons, the amount, kind, and whereabouts of his property, and, in addition, all matters which may affect the administration and settlement of his estate; but no testimony given by him shall be offered in evidence against him in any criminal proceeding.

Provided, however, that he shall not be required to attend a meeting of his creditors, or at or for an examination at a place more than 150 miles distant from his home or principal place of business, or to examine claims except when presented to him, unless ordered by the court, or a judge thereof, for cause shown, and the bankrupt shall be paid his actual expenses from the estate when examined or required to attend at any place other than the city, town, or village of his residence.

SCHEDULES OF BANKRUPT.—The courts require accuracy and completeness in preparation of schedules. The care to be exercised in their preparation is not, however, so much a display of accounting technique as of legal technique. Details concerning creditors, properties, exemptions, and related matters must be stated, but it is not usually required to state all information called for as fully as an accountant would ordinarily interpret the forms and instructions. For instance, in one case Schedule B-6, which calls for a "true list of all books," was satisfactorily executed in that respect by the simple statement "a complete set of double-entry books." While this thought is given for guidance of practitioners, it is not meant to prevent them from submitting any information they may find convenient or desirable. If there are any damage suits or other litigation pending, the amount alleged due must be stated. Contingent liabilities must be stated also.

In short, in executing the schedules emphasis must be put on the detailed statement of all legal rights and liabilities.

COMPOSITIONS.—A composition is "an agreement between a debtor and his creditors by which the creditors consent to accept in discharge of their claims a lesser sum than the amount due."

A composition may be effected only with the confirmation of the court. The debtor may move to have the case against him dismissed when he has delivered to the court the amount agreed upon for distribution to his creditors. See section on "Credits and Collections."

DISCHARGE OF THE BANKRUPT.—The bankrupt's right of discharge is statutory. It may be denied, however, if, for instance, he has failed to keep proper books from which his condition might be ascertained, or has destroyed or concealed his books. It must appear that there has been an **intent to conceal** from creditors the true financial condition. Mere failure to keep books, or bad bookkeeping, might not be sufficient to establish such an intent. Mutilation or destruction of essential records, such as receipts and vouchers, probably would be sufficient. See section on "Credits and Collections."

The court may also revoke a discharge if the bankrupt has:

1. Committed an offense punishable by imprisonment.
2. Obtained property on credit from any person upon a materially false statement in writing made to such person for the specific purpose of obtaining such property on credit.
3. At any time, subsequent to the first day of the first 4 months immedi-

ately preceding the filing of the petition, transferred, removed, destroyed, or concealed any of his property with intent to hinder, delay, or defraud his creditors.

4. In voluntary proceedings been granted a discharge in bankruptcy within 6 years.

5. In the course of proceedings in bankruptcy refused to obey any lawful order of or to answer any material question approved by the court.

A petition and an order for the discharge of a bankrupt are substantially as shown in Form 3.

....*K. G. Namer*...., of....*Bontown*...., in the County of....*Independence*....and State of....*New York*...., in said district, respectfully represents that on the....*first*....day of....*February, 19—*....he was duly adjudicated a bankrupt under the acts of Congress relating to bankruptcy; that he has duly surrendered all his property and rights of property and has now fully complied with all the requirements of said acts and of the orders of the court touching his bankruptcy.

WHEREFORE, ...*he*....prays that....*he*....may be decreed by the court to have a full discharge from all debts provable against his estate under said bankrupt acts, except such debts as are excepted by law from such discharge.

Dated this....*25th*....day of....*February*....A. D.....*19—*....

....*K. G. Namer*....
Bankrupt

FORM 3. Petition for Discharge of Bankrupt

IN THE DISTRICT COURT OF THE UNITED STATES, for the....*Western*....District of....*New York*....

WHEREAS, ...*K. G. Namer*...., of....*Bontown*...., in said district, has been duly adjudged a bankrupt, under the acts of Congress relating to bankruptcy, and appears to have conformed to all the requirements of law in that behalf, it is therefore ordered by this court that said....*K. G. Namer*....be discharged from all debts and claims which are made provable by said acts against....*his*....estate, and which existed on the....*tenth*....day of....*December*....A. D.....*19—*... on which day the petition for adjudication was filed by....*him*....; excepting such debts as are by law excepted from the operation of a discharge in bankruptcy.

WITNESS THE HONORABLE....*Thomas Maillam*...., Judge of said District Court, and the seal thereof, this....*25th*....day of....*February*....
A. D.....*19—*......

....
(Seal of the Court) Clerk

FORM 4. Order for Discharge of Bankrupt

DEBTS DISCHARGED.—All of a bankrupt's provable debts are canceled by his discharge, excepting taxes, liability for intentional fraud, and wilful injuries to persons or property. Leaseholds or other contractual obligations that are not provable are not canceled. Alimony is not dischargeable, nor are debts which were not scheduled. See section on "Credits and Collections." The court's order discharging a bankrupt is shown in Form 4.

PROVABLE DEBTS.—Debts founded on legal contracts, expressed or implied, may be proved. If there is no present liability under the contract at

time proof of debt is made, as in case of rent to become due at a future date, the claim is not provable. Damages may be proven, although the exact amount thereof may not have been determined. See section on "Credits and Collections."

CREDITORS.—Creditors are entitled to due notice of all proceedings during the administration of a bankrupt's estate. That is, creditors must be notified of all examinations of the bankrupt, hearings for confirmation of compositions or discharge, creditors' meetings, sales, dividends, and examination of claims and compromises. Therefore, the usefulness of complete lists of creditors, which the accountant is often called upon to prepare, is seen.

The form of official notice to creditors at the commencement of proceedings is substantially as shown in Form 5.

IN THE DISTRICT COURT OF THE UNITED STATES, for the ....
District of.......... In the Matter of..........Bankrupt.
TO THE CREDITORS OF.........., of.........., in the County of......
and district aforesaid, a Bankrupt:
NOTICE is hereby given, that on the..........day of..........A. D. ...., the said..........was duly adjudicated bankrupt and that the first meeting of his creditors will be held at my office, Room.........., ...in ....on the..........day of........... A. D........., at.........o'clock in the (forenoon) at which time the said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt and transact such other business as may properly come before said meeting.

....
Referee in Bankruptcy

Dated at..........

FORM 5. Official Notice to Creditors

APPOINTMENT AND DUTIES OF REFEREES.[3]—

Courts of bankruptcy shall. . . .appoint referees for a term of two years, and may, in their discretion, remove them because their services are not needed or for other cause. Referees shall (1) declare dividends and prepare and deliver to trustees dividend sheets showing the dividends declared and to whom payable; (2) examine all schedules of property and lists of creditors filed by bankrupts and cause such as are incomplete or defective to be remedied; (3) furnish such information concerning the estates in process of administration before them as may be requested by the parties at interest; (4) give notices to creditors as herein provided; (5) make up records embodying the evidence, or the substance thereof, as agreed upon by the parties in all contested matters arising before them, whenever requested to do so by either of the parties thereto, together with their findings therein, and transmit them to the judges; (6) prepare and file schedules of property and lists of creditors required to be filed by the bankrupts, or cause same to be done, when the bankrupts fail, refuse or neglect to do so; (7) safely keep, perfect and transmit to the clerks the records herein required to be kept by them when the cases are concluded; (8) transmit to the clerks such papers as may be on file, as needed in any proceedings; and (9) preserve the evidence taken before them. Referees shall not act in cases in which they are interested; practice as attorneys in any bankruptcy proceedings; or purchase, directly or indirectly, any property of an estate in bankruptcy.

APPOINTMENT AND DUTIES OF TRUSTEES.[4]—

The creditors of a bankrupt estate shall, at their first meeting after the adjudication

[3] Bankruptcy Law, Sec. 39.
[4] Bankruptcy Law, Sec. 47.

or after a vacancy has occurred in the office of trustee, or after an estate has been reopened, or after a composition has been set aside or a discharge revoked, of if there is a vacancy in the office of trustee, appoint one or three trustees of such estate. If the creditors do not appoint a trustee as herein provided, the court shall do so. Trustees shall account for and pay over to the estates under their control all interest received by them upon the property of such estate; collect and reduce to money the property of such estate; deposit moneys in designated depositories; disburse money only by check or draft on the depositories; furnish such information concerning the estates as may be requested by parties in interest; keep regular accounts showing all amounts received and from what sources and all amounts expended and on what accounts; lay before the final meeting of the creditors detailed statement of the administration of the estate; pay dividends within ten days after they are declared by the referees; and set apart the bankrupt's exemptions.

TRUSTEE'S TITLE.[5]—

The trustee, upon appointment and qualification, is vested by operation of law with the title of the bankrupt, as of the day he was adjudged a bankrupt, except as to exemptions, to all (1) documents, (2) interests in patents, etc., (3) powers which he might have exercised for his own benefit, (4) property transferred to him in fraud of his creditors, (5) property which prior to the filing of the petition he could by any means have transferred or which might have been levied upon and sold under judicial process against him, and (6) rights of action arising upon contracts, etc.

RECEIVERS IN BANKRUPTCY.—A receiver is usually appointed by the court to receive and preserve the subject matter of the bankrupt's estate. His appointment usually follows in instances where there is danger of waste, neglect, or fraud if the bankrupt remains in possession. Form 6,[6] showing a petition by creditors for the appointment of a receiver, sufficiently explains the occasion for the appointment of a receiver in bankruptcy.

..........and..........and ...., the petitioning creditors in the involuntary petition in bankruptcy pending herein against ...., the alleged bankrupt above named, move the court for an order appointing a receiver herein, and for a warrant to issue to such receiver, authorizing and directing..........to seize the property of said alleged bankrupt and to hold the same pending the hearing upon said petition; and this..........for upon the ground that it is absolutely necessary, for the preservation of the estate, that...... ...be appointed; that said alleged bankrupt has committed an act of bankruptcy in that heretofore to wit, on the..........day of.......... A. D.........., ...did transfer and pay to................the sum of................Dollars, with the intent, while solvent, to prefer the said ....,..........creditors, over the other creditors of the said..........; and that said alleged bankrupt has neglected and is neglecting, and is about to further so neglect..........property that it has deteriorated and is hereby deteriorating, and is about to further deteriorate in value, and this is so from the following facts, to wit: That on, to wit, the..........day of...... ... A. D.........., the said alleged bankrupt ceased operations at....... .. factory, and the same is now shut down; that the yards of the said alleged bankrupt are not protected or sheltered, that the buildings are open, and that the machinery and stock in said yards and building are not properly guarded and protected against the weather and trespassers; and that the yards, building, and machinery are in a dilapidated condition.

FORM 6. Petition for Appointment of Receiver

[5] Remington on Bankruptcy, p. 2721.
[6] 14 M. A. L. 668.

PROOF OF CREDITORS' CLAIMS.—All claims of creditors must be proved. When proved, and accepted by the court, the claim is allowed in the meaning of the statute. In the proof of a debt there must be a statement in writing, signed and sworn to by the claimant, setting forth the dates of all items, their consideration, collateral held thereagainst, payments thereon, maturity dates, and a statement to the effect that the sum stated to be due is justly owing. It must appear from the proof of claim whether the claimant is an individual, a partnership, or a corporation, and the relation of the affiant thereto. The original of written instruments should be attached to and made a part of the proof of claim. The adaptation of the proof of claim to an individual, partnership, or corporation is effected by wording the statement according to one of the following clauses:

1. That he hereinafter designates **himself** as claimant.
2. That affiant is a member of the **copartnership** trading as.................... and hereinafter designated as claimant. That said claimant does business at the place above set forth, and that affiant has subscribed the partnership name and is duly authorized by said firm to make, execute, acknowledge, and verify this proof of claim and power of attorney.
3. That he is an officer of............................, **a corporation** duly organized under the laws of the state of............... That he resides at the place above mentioned. That he is treasurer or performs the duties of treasurer of the said corporation. That the seal affixed hereto is the seal of said corporation and was so affixed by order of its board of directors and that he has signed its name hereto by like order. Said corporation is hereinafter designated as the claimant.

The statement to be made with respect of the claim itself is as follows:

That the above-named bankrupt was at and before the time of the filing of the petition in bankruptcy herein and still is justly and truly indebted to said claimant in the sum of....*One Hundred and Fifty-seven*....dollars ($....*157.00*....) That the consideration of said debt is....*groceries bought by and delivered to said K. G. Namer*....as set forth in the annexed statement marked "Exhibit A" and made a part hereof. That said amount set forth in said "Exhibit A" is justly due and owing. That no part thereof has been paid. That there are no offsets or counterclaims thereto. That deponent has not, nor has any person for or on behalf of said claimant, or to this deponent's knowledge or belief, for the use or benefit of said claimant had or received any security for said debt whatever. That no judgment has been rendered therefor or any part thereof, nor has any note or other evidence of said debt been received except such note or evidence of said debt, if any, which is attached to this document.

Exhibit "A," just mentioned, takes the form, usually, of the conventional account statement, thus:

Account Statement

New York, Dec. 5, 19—

K. G. Namer,
In Account With
John Hendricks, Dr.

19—		
Jan. 4,	12 cases tomatoes....................................	$ 24.00
Feb. 21,	14 sacks potatoes....................................	112.00
Mar. 1,	400 lbs. sugar....................................	21.00
		$157.00

If it is desired to designate a representative of the creditor in the procedings, it may be accomplished by incorporating a power of attorney in the proof of claim, or by appending thereto a power of attorney, which, in either case, would read substantially as follows:

Said claimant hereby appoints.....................or....................representative.. and each of them, attorneys in fact, authorizing them and each of them to attend any and all meetings of creditors or adjourned meetings of creditors of the bankrupt in any court of bankrupty or before any referee in bankruptcy, and for said claimant and in the name of said claimant to vote for or against any proposal or resolution that may be submitted in reference to the estate of the above-named bankrupt and in the choice of trustee or trustees and for said claimant to appoint such trustee or trustees. To accept or refuse any composition in or out of bankruptcy proposed by said bankrupt. To receive and collect any payments of dividends or fees or moneys due said claimant under any composition or otherwise and in general to take such action and do such acts, execute such consents and documents for such claimant as said attorney may deem best, as fully as such claimant could do if personally present.

SECURED CREDITORS.—According to the Bankruptcy Law, when a creditor has security for his debt, the security must be surrendered or sold before the principal debt can be realized upon. A similar doctrine has been adopted in some states in connection with their insolvency laws (16 Mass. 308; 9 M.A.L. 387). In many states, however, this principle marks a distinction between the Bankruptcy Law and the insolvency laws.

TIME OF FILING CLAIM.—Creditors should be prompt in filing their claims. Their claims are lost unless they do so within one year after date of adjudication; excepting that a creditor who is without fault may file his claim later.

CONTESTED CLAIMS.—Claims may be contested by objection of other creditors at the time of filing. Otherwise, the claim as proven will usually be allowed by the referee.

PREFERENCES.—

A person shall be deemed to have given a preference if, being insolvent,[7] he has, within four months from the filing of the petition and before adjudication, procured or suffered a judgment to be entered against himself in favor of any person or made a transfer of any of his property, where the effect of the enforcement of such judgment or transfer will be to enable anyone of his creditors to obtain a greater percentage of his debt than any other of such creditors of the same class.[8]

A chattel mortgage, a lien, a sale, payment on a note, giving security on an existing debt, and every other mode of disposing of or parting with property or the possession of property, absolutely or conditionally, as a payment, pledge, mortgage, gift, or security, is a transfer, and, contingent upon the facts, may be a preference.[9] Creditors who have received preferences, conveyances, etc., may not have their claims allowed unless such preferences are surrendered.

To establish a preference, insolvency must be alleged and found as a fact, and the intent of the debtor to prefer must be proved. Therefore, the provisions of the Bankruptcy Act forbidding transfers, etc., of assets after insolvency does not invalidate payments made in the usual course of business before the commission of an act of bankruptcy and not in contemplation thereof, though the enterprise, if wound up at the time, would in fact be unable to meet its

---

7 See "Insolvency," *infra*.
8 Bankruptcy Law, Sec. 60.
9 Bankruptcy Law, Sec. 1, Subd. 25.

obligations.[10] In other words, it cannot be said that all payments, transfers, etc., after or in contemplation of insolvency are preferences, if made in due course of business and if not made with a view to prefer one creditor to another. For instance, if after or in contemplation of insolvency a security is given for a debt then created, without fraud in fact, and intended merely to adequately protect a loan made at the time, the transfer of the security is not a preference.[11]

Two illustrations of preferences, taken from reported cases,[12] are given below:

Nov. 6, 1899, Lyon owed Batten & Co. $1,888.61 for advertising. This account was reduced by cash payments until at Dec. 31, 1899, $630.47 was due. During December additional advertising was done for which Lyon was charged $546.02. And it is for this sum that claim was filed. The court refused to allow this claim unless Batten & Co. surrendered the sum of $210.15 alleged to have been paid to them by the bankrupt while insolvent. The $210.15 which was thus held to be a preference, represented a check, dated Jan. 20, 1900, delivered to the payee Jan. 2, 1900, in payment of the final one-third of the account for $630.47. The previous payments on this amount were made prior to Jan. 20, the day the debtor became insolvent; but the third check, the one in controversy, was deposited by Batten & Co. in their bank on Jan. 20, and was paid by the drawee bank on Jan. 21, one day after insolvency.

One Sizer on Dec. 23, 1899, sold to the bankrupt merchandise of the value of $232.46, for which he received

Jan. 24, 1900	Cash	$ 29.68
Jan. 24, 1900	Note, payable and paid Apr. 23	200.00
Jan. 31, 1900	Cash	2.78
		$232.46

At subsequent dates Sizer sold the bankrupt merchandise as follows:

Mar. 10	$357.80
Aug. 16	20.62
	$378.42

It was held that the payment on Apr. 23 of the note for $200 was a preference, and should be returned as a condition of proving debts arising on and after Mar. 10.

After the giving of the note and before its maturity (Apr. 23) and payment (Mar. 10) the bankrupt bought goods amounting to $357.80, so that at such date the bankrupt owed Sizer the note representing an account for goods sold and the additional sum of $357.80. While the payment was distinctly on the note, and for the purpose of extinguishing it, yet it was a partial payment of a portion of the whole amount of the indebtedness owing from the bankrupt to the creditor.

Preferences obtain only in bankruptcy proceedings. But it is often found desirable in proceedings in insolvency, in cases where there may be present the essentials of a preference, to supersede the insolvency proceedings by a petition in involuntary bankruptcy in order to invoke the rule of preferences and thus insure an equitable distribution of the estate.

On any engagement disclosing an apparently insolvent condition, the accountant should be on the alert for preferences or other acts of bankruptcy, if only to counsel the client.

PRIORITY OF CERTAIN DEBTS.—In bankruptcy proceedings, debts due creditors take rank as follows:

1st. Taxes and debts due the United States.

2nd. Actual and necessary costs of preserving the estate.

---

[10] See 174 U. S. Rept. 610, *re* national banks.
[11] 41 Fed. Rep. 234.
[12] 121 Fed. 723, and 112 Fed. 406; 12 M. A. L. 813, 815.

3rd. Filing fees and reasonable expenses paid by creditors in recovering to the estate property transferred or concealed by the bankrupt.
4th. Costs of administering the estate, including attorneys' fees.
5th. Wages of workmen, clerks, salesmen, servants, earned within 3 months and not exceeding $300 for each claimant.
6th. Debts given priority by the laws of the various states.
7th. General creditors.

DIVIDENDS.—Dividends are paid at the discretion of the court, subject to several prescribed conditions. Creditors' rights to dividends are not affected by proof and allowance of their claims subsequent to date of the dividend.

SET-OFFS AND COUNTERCLAIMS.—Sec. 68 of the Bankruptcy Act provides that in case of **mutual debts** or credits between the estate of a bankrupt and a creditor, the account shall be stated and one debt shall be set off against the other and the balance only shall be allowed or paid. But a set-off or counterclaim shall not be allowed in favor of any debtor of the bankrupt which, (1) is not provable against the estate, or (2) was purchased by or transferred to him after the filing of the petition, or within 4 months before such filing, with a view to such use and with knowledge or notice that such bankrupt was insolvent, or had committed an act of bankruptcy.

STATE BANKRUPTCY LEGISLATION.—The extent to which any of the several states may have passed bankruptcy laws, or rather laws having the general effect of bankruptcy laws, is a matter that cannot be treated at length here.

In any event, such laws will be found to parallel the insolvency laws so closely that the comments on insolvency procedure as next presented cover their salient points adequately for all ordinary purposes.

Insolvency

INSOLVENCY DEFINED.—"Insolvency is the state of a person who cannot pay his debts as they mature. This is the real point in insolvency, for a debtor's estate may amount to much more than his debts, yet if he has not money enough on hand to pay as the debts become due, he is practically and legally insolvent."[13]

For purposes of the Bankruptcy Law a person is deemed insolvent whenever the aggregate of his property (excluding any that he has concealed or disposed of to defraud his creditors) shall not, at a fair valuation, be sufficient in amount to pay his debts.

The term insolvency as used in the bankruptcy act, forbidding the transfer, etc., of the assets **after** or **in contemplation** of insolvency, does not mean an absolute inability of a debtor to pay his debt at some future time upon a settlement and winding up of his affairs, but a present inability to pay in the ordinary course of business.[14]

It has been held that a bank is "in contemplation of insolvency" when the fact becomes reasonably apparent to its officers that it will presently be unable to meet its obligations and will be obliged to suspend its ordinary operations.[15]

DISTINGUISHED FROM BANKRUPTCY.—Although the terms **bankruptcy** and **insolvency** are sometimes used indiscriminately, they have in legal and commercial usage distinct significations. Insolvency implies merely the

[13] Conyngton, Business Law, Vol. II, § 524.
[14] 2 Woods 23; 1 N. B. C. 276.
[15] 24 Fed. Rep. 571.

inability to meet one's debts—that one's liabilities are greater than his present means of meeting them. The insolvent may be able to carry on his business by means of credit, paying old debts by incurring new ones, and none of his creditors can institute legal proceedings. If fortunate, he may regain a position of solvency. "It would be possible for a skilful business man to start a business on borrowed capital, in which case it would be insolvent from the start. If his borrowed money did not come due for some time, he meanwhile could do business and make money and when his loans came due, pay part and renew the balance until he succeeded in accumulating assets in excess of his indebtedness and making the business solvent."[16] Even if his insolvency became public and default occurred, a debtor may still avert bankruptcy if he is able to effect a voluntary arrangement with his creditors.

Bankruptcy, on the other hand, usually implies failure, and means the winding up of the estate and discharge from any unsatisfied portion of the debtor's debts then due.

CAUSES OF INSOLVENCY.—The state of insolvency may be caused by a variety of circumstances. In case of a commercial institution, for instance, insolvency may be caused by excessive operating losses, impaired credit standing, insufficient capital for volume of business undertaken, extending too liberal credit to debtors, or otherwise tying up excessive amounts of capital in plant, inventories, or any non-liquid asset.

Insolvency Illustrated.—Balance sheets A, B, and C, following, are submitted to illustrate several insolvent conditions.

(A) **Balance Sheet as at December 31, 19—**

Cash	$ 5,000	Notes Payable, due Jan. 2, 19—		$100,000
Accounts Receivable	6,000	Accounts Payable, due Jan. 2, 19—		40,000
Inventories	10,000			$140,000
Plant	50,000	Capital Stock	$25,000	
		Deficit from Operations	94,000	69,000
	$71,000			$ 71,000

In this instance operating losses have so depleted working capital that the company cannot meet its maturities by cash payments, nor by liquidating or hypothecating its receivables or other assets. If the liabilities matured, say, 30 days hence, the company would still be insolvent, as current operations for the ensuing 30 days could not yield sufficient resources with which to meet maturities.

The condition here presented could be remedied by refinancing and paying in such new capital as would be required to liquidate the maturing liabilities, or such a portion of them as would enable the company to obtain an extension of the due date on the remainder.

Inducing the creditors to extend the maturity of their obligations to a time when the company could recover its solvency, as by issuing capital stock in

[16] Conyngton, Business Law, Vol. 2, § 524.

exchange for the liabilities due to the creditors, would relieve the condition. But any impairment of the company's credit would limit the probability of effecting such an arrangement.

It is wrong to assume the solvency of a concern merely because its books or its balance sheet do not show an impaired capital account (a deficit). These media may not and often do not disclose either the state or the cause of insolvency. The facts govern, and if the maturing obligations cannot be met in due course, the business is insolvent. Such a state of affairs is shown in the following balance sheet:

(B) **Balance Sheet as at December 31, 19—**

Cash	$ 5,000	Notes and Accounts Payable, due		$285,000
Accounts Receivable	6,000	Acceptances Payable		125,000
Raw Materials, requiring 6 months to process, and not otherwise salable	225,000	Capital Stock	$25,000	
Goods in Process	50,000	Surplus	1,000	26,000
Plant	150,000			
	$436,000			$436,000

Assuming that the liabilities as stated in this balance sheet mature before the inventory can be liquidated, the company is insolvent. A concern in this position is not often insolvent, however, because of its having arranged beforehand for the late maturity of its obligations.

Insolvency may be also the result of commitments for large quantities of goods. In the foregoing instance the company would be insolvent if, instead of having its raw material on hand, it had been contracted for delivery and payment in, say, 60 days.

(C) **Balance Sheet, as at December 31, 19—**

Cash	$ 6,000	Notes and Accounts Payable		$385,000
Accounts Receivable, of which only 25% are collectible	230,000	Capital Stock	$25,000	
Other Assets	200,000	Surplus	26,000	51,000
	$436,000			$436,000

Insolvency brought on by extending too liberal lines of credit is apparent in this case (C). Likewise, if receivables are good, but do not mature in time to meet maturing liabilities, insolvency exists.

Insolvency may come quickly. Values may drop rapidly, and creditors may suddenly call their accounts, either or both circumstances causing the debtor to default. During the period of depression following the World War, these two factors were much in evidence. As a result, many otherwise sound and prosperous concerns found themselves insolvent. Realization of this condition of insolvency, and faith on the part of creditors in the ability of these concerns later to work out of their difficulties, gave rise to the creditors' committee

receiverships, popular during 1919 and 1920. These receiverships, further mentioned in a later paragraph, were, in the last analysis, merely agreements among creditors to extend maturity of their obligations.

WHEN INSOLVENCY LAWS ARE TO BE PREFERRED.—As between bankruptcy and insolvency procedure, the former is more severe and is supreme. Proceedings begun in equity must yield if later bankruptcy proceedings are started. Insolvency procedure offers many advantages to the debtor and his creditors. Excepting in a few instances of pronounced failure or fraud, creditors generally favor equity procedure, especially where desired merely to regulate the winding up of an unsuccessful enterprise, or where there is a possibility of the enterprise recovering from its difficulties. Business men generally are becoming less favorable to legal interference, and avoid it wherever possible. Pronounced trend in this direction is indicated by the recently popular creditors' committee receiverships, resorted to in lieu of petitioning for appointment of court receivers. Dewing[17] says that "to force all businesses, whether public or private, through the bankruptcy court because they cannot find the means at some critical time to pay their obligations, involves economic waste—omitting the individual injustice—which our present social order cannot tolerate. Accordingly, the court receivership (insolvency procedure) and the creditors' committee receivership have developed as methods of meeting a situation where the traditional legal processes are ordinarily destructive and socially wasteful."

These reliefs are particularly desirable where it is sought to relieve the debtor of oppressive contracts or commitments which otherwise would wreck the enterprise. These reliefs may be resorted to, however, only with the assent of the creditors.

ASSIGNMENTS FOR BENEFIT OF CREDITORS.—Embarrassed debtors often find a satisfactory means of winding up merely unprofitable ventures in the state assignment laws. "Voluntary assignments for the benefit of creditors are transfers without compulsion of law by debtors, of some or all of their property to an assignee, or assignees, in trust to apply the same, or the proceeds thereof, to the payment of some or all of their debts, and to return the surplus, if any, to the debtor."[18] This is an act of bankruptcy.

RIGHTS AND DUTIES OF ASSIGNEE.—An assignee should be authorized to pay claims in the order in which they are entitled to be paid by law. He must give an accounting as provided by the terms of the assignment. He may hire such clerks, agents, etc., as are necessary to discharge his trust. He receives claims filed by creditors, as provided by the assignment.[19]

Receivership

NATURE OF RECEIVERSHIPS.—In court receiverships, courts assume control and direction of properties in litigation, the receiver being the court representative. Courts appoint receivers for such properties only to prevent fraud, protect the property from injury or preserve it from destruction.[20] (NOTE:—See discussion of receivership accounting in section on "Corporations.")

[17] *Harvard Business Review*, Oct. 1922, pp. 31–32.
[18] Burrill on Assignments, § 2.
[19] Conyngton, Business Law, Vol. II.
[20] See Receivers in Bankruptcy, *supra*, p. 1027, for form of petition for appointment of receiver in bankruptcy.

Creditors can force the winding up of the business of a person who is insolvent and who has committed an act of bankruptcy by bringing a suit in equity to have a receiver appointed, who then takes charge of the business, sells the property, and pays off the claims under direction of the court, or by going into the federal court and bringing bankruptcy proceedings.[21]

The Comptroller of Currency is empowered by federal statutes to appoint, and in practically every case he does appoint receivers for national banks. The Comptroller's power to appoint a receiver is not exclusive, however, and a court of equity of competent jurisdiction may direct a receivership of a national bank.[22]

Insolvent national banks can be wound up only in the manner provided by the National Banking Act.

RECEIVER DEFINED.—A receiver, as defined by Pomeroy,[23] is "a person standing indifferent between the parties, appointed by the court as a quasi-officer or its representative, to hold, manage, control and deal with the property which is the subject matter of or involved in the controversy, under the court's direction, either, (a) where there is no one entitled competent thus to hold it; or (b) where two or more litigants are equally entitled, but it is not just and proper that either of them should retain it under his control; or (c) where a person is legally entitled, but there is danger of his misapplying or misusing it; or (d) where he is appointed in like manner and under like circumstances for the purpose of carrying into effect a decree of court concerning the property."

If the estate includes property in several states in which there are creditors, a receiver is appointed in each state. The receiver appointed at the domicile is called the **principal receiver**; the others are called **ancillary receivers.**

RECEIVER'S POWERS.—At every step the receiver is subject to the control and supervision of the court in his management of the property or funds placed in his charge. As soon as he is appointed, the receiver makes out a complete inventory of the property and effects coming into his hands. Local statutes governing the activities of receivers should always be consulted by the accountant in cases of receivers in equity.

A receiver must usually proceed to wind up a business instead of indefinitely continuing it. But it may be carried on with the approval of the court. Receivers have certain discretionary powers in managing and controlling property in their care. When they exercise discretion and good faith, their acts will ordinarily be confirmed.

Receivers may, with the approval of the court, borrow money to meet necessary operating expenses. Such indebtedness takes precedence over all other debts.

Receivers should pass in the first instance upon the validity and propriety of claims presented.

Compensation of receivers is fixed by statute, or by the court in special cases.

RECEIVERS CLASSIFIED.—Receivers may be divided into three general classes, viz.:

1. Receivers in bankruptcy.
2. Receivers in equity.
3. Receivers, so called, representing creditors' committees and assignees.

---

[21] Conyngton, Business Law, Vol. II, § 525.
[22] 121 Fed. Rep. 287.
[23] Equity Jurisprudence (3rd Ed.) § 1330; 9 M. A. L. 461.

Receivers in bankruptcy are governed by the federal court appointing them. They are governed also in a measure by instructions of their counsel, which the court permits them to employ. **Receivers in equity** are appointed by state courts administering the respective state insolvency or bankruptcy statutes. **Receivers (trustees) representing creditors' committees** are subject to the contractual relationship established by the agreement upon which their appointment is based. The two latter classes of receivers usually continue their business until it may be wound up most favorably, or until it can be restored to its owners.

The distinctions between these three classes of receivers are of interest to the accountant only in that he should know the source of the receiver's authority, so that he may be governed accordingly. The succeeding comments may be applied, therefore, without respect to the character of the receivership.

RECEIVER'S ACCOUNTS.—Receivers, regardless of the principal they represent, are not required to keep books in any prescribed way. They may open new books, or continue to use the old books. If the receiver is to continue the business, the accountant will find it advantageous, for practical reasons, to continue in so far as feasible the accounting methods and procedures of the old administration, even though he opens new books for the receiver.

The receiver should inventory all assets taken over by him at values at which he believes the assets are realizable. The accountant may be governed by these values in opening the receivers books. The accountant may, if directed so to do by the receiver, establish the values at which the accounts will be taken over. Usually, such assets as good-will, treasury stock, deferred charges, or other intangible or "unrealizable" assets are not taken over. The receiver is required to account, however, for any amounts received from the disposal of assets by him that may be in excess of the amount at which they were so taken over. For instance, accounts receivable aggregating $100,000, if taken over at $80,000 and liquidated at $85,000, would be recorded as follows:

Accounts Receivable, Control Account

19—			19—		
Jan. 1	To Receiver's Equity; taking over accounts of X Company aggregating $100,000, but considered worth	$80,000	Jan. 31	By Cash, amount realized from accounts liquidated	$85,000
Jan. 31	To Receiver's Equity, increasing the value at which the accounts were originally taken over	5,000			
		$85,000			$85,000

At the outset of his administration, the receiver should transfer all funds in banks to bank deposit accounts in his official name. He should notify the banks to stop payment on any of the checks of the estate then outstanding. He

should notify creditors to file their claims. He should instruct employees that all correspondence, etc., is thereafter to bear his official signature. He should instruct the receiving department of the company to defer receipt of all materials and supplies or merchandise until he approves the receipt thereof; this because he may reject or discontinue any contracts of the former management, and he should do so if they are not advantageous to the estate. Sales made subsequent to the receiver's appointment should be billed upon billheads bearing his official title. It is usually quite practical for the receiver to obtain a number of rubber stamps and stamp all stationery on hand with his official title, as for instance:

John Smith, Receiver
or
Estate of X Company by John Smith, Receiver

The receiver will also prepare inventories of insurance policies in force, contracts, leases, or similar agreements, and have suitable assignments executed for all of these instruments to be continued by him.

The receiver's accounting procedure embraces, (1) the opening of his books of account, or the reopening, under his direction, of the old books; (2) making accurate record of the transactions of his administration; and (3) closing his books for the desired intermediate accounting periods, and at the termination of his custody of the properties.

In opening his books the receiver needs, in addition to the accounts formerly carried, (1) a capital account, in which to record the net worth of the estate taken over (at his valuations), plus or minus any increases or decreases thereof, and (2) an account, or a suitable classification of accounts, for the recording of liabilities or outlays incurred with his approval for merchandise purchases, borrowed money, and expenses of his administration.

The **receiver's capital account** is usually styled "Estate of John Doe, William Smith, Receiver," "Estate of X Company, William Smith, Receiver," or "Receiver's Equity." The latter title is shorter and preferable.

The receiver must keep separate the liabilities incurred by him and those incurred by the estate prior to his appointment. This is important because the indebtedness incurred by him is paid in full before the general creditors of the estate may share in the assets. This separation is often difficult to make. It is particularly so in respect of merchandise or goods in transit at date of the appointment. Legally, the receiver is liable for any merchandise or goods in transit the title to which passes from the shipper after date of appointment, provided the receiver accepts title. When title passes is an involved legal question. The only safe rule for the accountant or the receiver is to regard all purchases as obligations of the estate, unless they are clearly the obligations of the receiver.

Nominal accounts following, so far as practical, the classification used by the company, should also be opened to record the result of the receiver's operations of the properties when he continues the business. Periodically these accounts are closed into Profit and Loss and then into the Receiver's Equity account, precisely as the former owners would have closed their nominal accounts into Profit and Loss and then into Surplus account.

The **following comments and illustrations** further explain some of the procedures just mentioned.

Assume that a receiver has been appointed for a certain company. The books, having been closed as at the date of appointment, show the following position:

Balance Sheet as at December 24, 19—

Cash	$ 5,000	Notes Payable		$ 55,000
Accounts Receivable	10,000	Accounts Payable		45,000
Inventories	50,000			
Plant	50,000			$100,000
Good-Will	10,000	Capital Stock	$20,000	
		Surplus	5,000	25,000
	$125,000			$125,000

The receiver has the assets appraised, with the following result:

	Book Value	Appraised Realizable Value	Estimated Shrinkage
Cash	$ 5,000	$ 5,000	....
Accounts Receivable	10,000	8,000	$ 2,000
Inventories	50,000	30,000	20,000
Plant	50,000	45,000	5,000
Good-Will	10,000	....	10,000
	$125,000	$88,000	$37,000

Although assets are usually appraised at less than book value, it does not follow that they must be. Often the book value of an asset is found to be less than the realizable value. Such a condition could be due to any one of a number of causes. Excessive depreciation charges, or appreciation not taken into the books, would result in too low book values. In this case, the higher value would be used in opening the receiver's books.

Moreover, it is to be noted that liabilities are to be taken over at their stated amounts, plus any claims of whatever nature. Damage suits or contingent liabilities of whatever nature are given effect to at the probable settlement value. It is rare indeed that liabilities are taken over at less than book value.

The following journal entry will open the receiver's books on the foregoing figures:

Cash	$ 5,000	
Accounts Receivable	8,000	
Inventories	30,000	
Plant	45,000	
Receiver's Equity	12,000	
Liabilities of X Company		$100,000
	$100,000	$100,000

To open the accounts of William Smith, Receiver, Estate of X Company, as of date of his appointment, and at values established by appraisal.

Books of the former owners will remain *in statu quo*[24] until the receivership

[24] See pp. 1046, 1047, *infra*.

is dissolved and the business returned to its owners. If the receiver continues the old books, instead of opening new books, the following entry should be made in lieu of the above entry.

Receiver's Equity	$12,000	
Capital Stock	20,000	
Surplus	5,000	
Accounts Receivable		$ 2,000
Inventories		20,000
Plant		5,000
Good-Will		10,000
	$37,000	$37,000

To close the accounts of the corporation, and reopen them as for the receiver; reducing assets to the value placed thereon by the receiver and charging the receiver with the net estate delivered to and received by him as at date of his appointment.

A credit balance in the Receiver's Equity account indicates the amount the assets of the estate are expected to realize in excess of the liabilities. A debit balance in this account indicates that the liabilities exceed the realizable value of the assets, and that the general creditors will ultimately receive that amount less than the aggregate of their claims.

When additional assets are received or discovered by the receiver during his administration, or if he operates the properties at a profit, the Receiver's Equity account is credited therefor. Likewise, an amount realized on assets in excess of the value at which they were taken over would be a credit to this account. So too, a liability settled for an amount less than that at which it was taken into the receiver's records would result in a corresponding credit to his equity account. Dividends in distribution paid by the receiver should be charged to the respective creditors' accounts as follows:

Liabilities of X Company (list creditors)	$...,...	
Dividends Payable		$...,...

To record dividend in distribution No. — being a dividend of — per cent as authorized by the court and directed to be paid as of —, date.

When the dividend is actually paid the cash book will show the customary entry, which in effect is:

Dividends Payable	$...,...	
Cash		$...,...

After all assets have been liquidated and final distribution made of proceeds, any unpaid balance in the accounts of the respective creditors is to be transferred to the Receiver's Equity account, automatically closing his books.

The Receiver's Equity account should be charged with losses from his operations of the properties, losses due to the disposal of assets for less than they were taken over, and for additional liabilities disclosed during his administration.

In opening his accounts the receiver should show outstanding checks of the former management as liabilities. Accounts receivable showing credit balances are liabilities. Debit balances on the creditors ledgers are stated as assets. Notes payable to banks may be claimed by the holding banks to be offsets against deposits with them. In these cases and in many close cases respecting

set-offs and **priorities,** the accountant should submit them for final approval to the receiver or his counsel, and until that approval is obtained he should treat the items only as they may conclusively be proved. That is, he should not recognize a so-called set-off but state both the asset and the liability, excepting where the facts are beyond question. And so with priorities. The courts have sole jurisdiction in these matters, and the accountant should exercise great caution in passing upon them. It is better to reject a claim for priority or set-off than to cause the receiver to become individually responsible for the amount involved. The receiver has all to gain and nothing to lose by refusing payment or approval of any such claim until directed by his counsel or the court with respect thereto.

The accounting procedure for the receiver's activities subsequent to his appointment will be but slightly affected by the court's direction to wind up the business forthwith, or to continue it for a time. In either case the recognized principles and practices of bookkeeping govern. Cash receipts are credited to the accounts giving rise thereto, as cash disbursements are charged to appropriate accounts in much the same manner as with going concerns. About the only marked differences between the accounting of the receiver and that of a going concern are the substitution of the Receiver's Equity account for the Capital account of the going concern, and the preservation by the receiver of the distinction heretofore commented upon between affairs of the estate as originally taken over and the addition thereto or deduction therefrom resulting directly from the receiver's administration.

If new books had been opened for the receiver, the closing entry therefor, to be made upon his surrender of the properties to the former owners, would be as follows (assuming for convenience the existence of the same state of affairs as used in the preceding entry for opening his books):

Liabilities of the Corporation	$100,000	
Cash		$ 5,000
Accounts Receivable		8,000
Inventories		30,000
Plant		45,000
Receiver's Equity		12,000

To close books of Wm. Smith, Receiver, X Company, as at date of his restoration of the estate to the former owners, in accordance with order of —— Court, dated —

In the illustration just given it is assumed that there has been no change in the company's position, and the old books would, therefore, be continued from the point of abandonment mentioned on page 1038 without any adjustment. If, however, as is more often the case, there has been a change in the position of the company resulting from the receivership, the old books may be brought into agreement with the conditions as at the date it resumes its activities, by the entry given below, wherein it is assumed that the conditions are as shown in the tabulation following the entry.

Cash	$ 5,000	
Plant	5,000	
Notes Payable	30,000	
Accounts Payable	30,000	
Accounts Receivable		$ 7,000

Inventories		$20,000
Surplus		43,000

To give effect to change in position of the X Company by reason of the activities of the receiver.

The conditions on which the entry is based are as follows:

	Position Shown By Books of Company as at Date of Appointment of Receiver	Position Shown By Receiver's Accounts as at Date of His Discharge	Changes in Position During Receivership	
			Increase	Decrease
Assets				
Cash	$ 5,000	$10,000	$ 5,000	
Accounts Rec.	10,000	3,000		$ 7,000
Inventories	50,000	30,000		20,000
Plant	50,000	55,000	5,000	
Good Will	10,000	......		10,000
	$125,000	$98,000	$10,000	$37,000
Liabilities				
Notes Payable	$ 55,000	$25,000		$30,000
Accounts Payable	45,000	15,000		30,000
	$100,000	$40,000		
Capital				
Capital Stock	$ 20,000	......		$20,000

250,000.00	CAPITAL STOCK.....		
25,000.00	SURPLUS............................		
$825,000.00			$285,000.00

A B C Company will be able to pay, on the basis of the above showing, 81.6 cents on the dollar of all unsecured claims.

of Affairs

Where the receiver may have continued the books and accounts of the owners, it is necessary, in order to close the books at the termination of his custody of the estate and to reopen them for the former owners, to restore the Capital Stock and Surplus accounts and any intangible assets formerly carried by the corporation. For instance, on the premises stated on page 1041, the following entry would restore the accounts to a position identical with the conditions stated for the preceding entry, where the receiver had opened new books:

Good-Will	\$10,000	
Receiver's Equity	58,000	
Capital Stock		\$20,000
Surplus		48,000

In resuming operations the company would abandon the distinction maintained by the receiver between assets and liabilities of the original estate and those of his administration.

RECEIVER'S REPORTS.—Receivers are called upon to render various forms of reports from time to time. The reports most frequently called for, however, are those commonly known as the statement of affairs and deficiency account, and the realization and liquidation statement. The receiver or the accountant usually may give full play to his individual taste in the preparation of the receiver's reports.

Certain accepted forms are in evidence, however, and although any pronounced uniformity in these forms is to be found only in textbooks, where they are so presented primarily to illustrate certain theories of accounts, they are treated of at some length in succeeding pages.

The layman (the business man) often prefers to have the data usually embodied in the statement of affairs and the realization and liquidation statement, presented in a manner more closely following established balance sheet and profit and loss statement presentations. Therefore, some illustrations of the adaptation of the balance sheet and profit and loss presentations to these uses will be given.

Statement of Affairs—and Deficiency Account

PURPOSE OF STATEMENT OF AFFAIRS.—Proceedings in bankruptcy, or in insolvency, imply the financial embarrassment of the debtor. Quite naturally, therefore, when such proceedings are started, creditors are at once anxious to know the state of the debtor's affairs, particularly with reference to the amount they may expect to receive, or rather the amount of loss they will sustain in the final settlement of their claims. So they immediately demand a statement of the debtor's affairs, i.e., a statement showing the amounts expected to be realized from the assets, the amounts due to creditors in the order of their rank as to priority, and the ratio of the total assets available to general creditors to the total of their claims. In response to this demand, the accounting profession has developed the so-called statement of affairs, and its related deficiency account.

Specimens of the formal type of these statements are reproduced in Forms 7, 8, 9.

The statements of affairs, as illustrated in Forms 7, 9, differ from the conventional balance sheet and relative profit and loss statement, in that the balance sheet classifies the liabilities as to their liquidity, under normal conditions, and sets forth the net worth of the proprietorship; while the statement of affairs classifies them as to their legal status in regard to payment, and sets forth the

	$347,500.00		$347,500.00

FORM 8. Deficiency Account

realizable value of assets (net free assets) available to general creditors of a liquidating concern.

Fully secured creditors are those holding mortgages or other security of a value equal to or in excess of the amount of their claims. **Partially secured creditors** are those holding security of a value less in amount than their claims. **Unsecured,** or **general creditors** are those holding no security of any kind. Stockholders or former proprietors will not share in the assets until and only when all liabilities are met, and a balance remains undistributed. Contingent liabilities are those which may become claims against the assets through the action or default of some third party.

The **essence of the statement of affairs** is:

1. Secured liabilities are stated net of the realizable value of the security.
2. Pledged assets are shown net of the liability which they secure.
3. Assets are stated at realizable values.
4. Liabilities, whether admitted by the debtor or not, are stated at the amount expected to be settled for.

Statements of affairs are frequently used to show free assets against which prospective general creditors would be extending credit. Likewise, they may be prepared for prospective investors or others desiring to know the company's position with respect to classes of creditors.

The **deficiency account** (Form 8) merely summarizes in statement form the causes of the inability to pay creditors in full. The term "deficiency account" may be given to an account to be used in closing the proprietorship accounts of an organization and bringing the accounts into agreement with the figures upon which a receiver opens his books.

Reserves, unless they are provisions for contingent liabilities, are deducted from book values in preparing statements of affairs.

Realization and Liquidation Account

PURPOSE OF ACCOUNT.—During the continuation of a receivership, as well as at its termination, the court, the creditors, and other parties at

of Affairs

interest, desire to know the result of the receiver's activities in carrying on and winding up the estate, or in simply carrying it on. To meet this requirement there has been developed the so-called **realization and liquidation account.**

"There are three theories upon which the realization and liquidation account has been developed, viz., that it is (a) a summary ledger account, (b) the trustee's report to the court, or (c) merely a condensed summary of the trustee's activities."[28] ("Trustee" as the word is here used is interchangeable with "receiver.")

The form and preparation of this statement is illustrated by quoting in full a C.P.A. problem and its solution as presented by Seymour Walton in No. 18 of his "Advanced Accounting Lectures."

Problem.—The trial balance of the Yellow Pine Timber Co. on Jan. 1, 19—, was as follows:

Cash.......	$ 2,618.03	
Accounts Receivable.............	21,111.17	
Inventory......................	36,133.32	
Unexpired Insurance.............	559.44	
Plant and Equipment............	352,109.75	
Timber and Lands...............	551,539.31	
Preferred Claims................		$ 37,011.99
First Mortgage Bonds, 6's........		212,500.00
Bond Interest Accrued—6 months.		6,375.00
Unsecured Creditors.............		64,471.64
Capital Stock...................		400,000.00
Surplus......................		243,712.39
	$964,071.02	$964,071.01

Not being able to meet their current obligations, the Commercial Trust Co. was appointed receiver on Jan. 1, 19—.

The transactions under the receivership for the year following are hereby summarized:

Purchased Logs (half of which were paid for in cash, less cash discounts, and the balance on credit)................................	$ 9,646.22
Operating Expenses........................	202,972.81
Commissions..............................	4,214.14
Demurrage................................	326.00
Freight Inward............................	585.53
General Expense..........................	4,837.40
Salaries..................................	12,000.00
Shipping Expense.........................	13,574.10
Taxes....................................	1,421.00

All paid for in cash.

Allowance for stumpage cut amounting to $50,000 was credited to Timber account. Interest on bonds to Dec. 31, 19—, was paid in full and the outstanding bonds reduced to $200,000, Dec. 31, 19—, by paying off $12,500 at 101. Sales amounted to $45,000 gross, of which $300,000 was received in cash as net payment by customers

Freight Allowance to Customers..............	$70,510.00
Discounts Allowed..........................	556.33
Discounts Received.........................	500.00
Profit from Commissary.....................	5,000.00
Sundry Income.............................	3,500.00

Accounts receivable of Jan. 1, 19—, realized $20,000 net. Preferred claims were paid in full. Depreciation of $3,500 was allowed on plant and equipment. Unexpired insurance on Dec. 31, 19—, amounted to $125. Inventories, $40,000.

[28] Newlove, C. P. A. Accounting, Vol. II.

Prepare Realization and Liquidation Account, Cash Account and Balance Sheet, Dec. 31, 19—. Prepare a Receiver's Profit and Loss Account, proving gain shown by the Realization and Liquidation Account, and showing all of the elements making up the net amount.

Solution to problem is given on pages 1050 to 1054.

"CHARGE AND DISCHARGE" FORM OF REPORT.—A common form of report for filing with the court is the charge and discharge form:

The receiver charges himself with:

1. Assets at date of receivership, or last report.
2. Additions to such assets since discovered.
3. Increments upon realization of such assets.
4. Amounts realized from sale of receiver's certificates.
5. Increases in the amount of receiver's liabilities.
6. Gross income from his operation of the properties.

The receiver credits himself with:

1. Preferred or other liabilities of the company paid.
2. Decreases in assets as taken over.
3. Losses on realization of assets.
4. Expenditures on fixed assets.
5. Receiver's indebtedness paid.
6. Expenses of operation of the properties.
7. Expenses of receivership.
8. Dividends paid in distribution.
9. Assets at close of period.

The foregoing form is frequently accompanied by balance sheets as at the beginning and close of the period reported, a profit and loss statement, and a statement of cash receipts and disbursements.

It occurs frequently, too, that the demand for a statement may be satisfied by submitting only a balance sheet and statement of operations. These may follow the lines of the companion statements in the preceding illustration of the C. P. A. problem.

Receivers, and their accountants, are called upon at intervals to submit numerous **special reports.** These reports may be, for instance:

1. List of creditors. (Names and addresses, and full particulars of their claims and ranks, should be given.)

2. Reports on relations with banks and other special creditors—bondholders, licensors, vendors holding commitments, etc.

3. Reports on situations at branches, agencies, and subsidiary companies; stock issues; inventory situations, etc.

4. Reports on systems of accounting methods and procedures, involving usually a survey of the systems of the old organization with a view to modifications for adoption by the receiver.

5. Special surveys and reports on operating results for past periods, with a view to ascertaining the faults of the business or its potentialities.

6. Budgetary reports, setting forth the funds and the sources of funds available for use by the receiver, and funds required to continue or wind up the business, or any phase of it. Special attention is given in these cases to the requirements for liquidating large inventories of materials in raw or in process, as by purchasing such additional materials and supplies as may be required to convert the inventories into marketable products.

7. Statements to form the basis of a reorganization plan and agreement. In these cases the claims to be met are listed alongside of the proposed readjustment—as stock to be issued therefor.

Solution.— The Yellow Pine Realization and January 1, 19—, to

	$ 75,413.71			$ 75,413.71

FORM 13. Receiver's Profit and Loss Account

8. Balance sheets giving effect to proposed plans of readjustment or reorganization are often required. These balance sheets should give effect to the proposed transactions, but should clearly state on their face that such transactions have been so applied. For instance, if a company were to issue new stock of a par of $100,000, to be sold for 90, the balance sheet in that particular should read as follows:

Balance Sheet

(After giving effect to proposed sale of $100,000 par value of capital stock for $90,000)

Cash	$ 90,000	Capital Stock	$100,000
Deferred Discount on Capital Stock	10,000		
	$100,000		$100,000

SECTION 21

FIDUCIARIES

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 21

FIDUCIARIES

Fundamentals of Fiduciary Relations

FIDUCIARY'S OBLIGATION TO ACCOUNT.—A **fiduciary** is defined by Webster as "one who holds a thing in trust for another; a trustee." All persons who have legal possession of property which belongs to others are fiduciaries, and as such are under legal obligation to account for trust property which has passed through their hands. The more important fiduciary relationships, such as those of administrators, executors, testamentary trustees, guardians, receivers, and assignees, are conducted under supervision of some court, and are concluded only after the rendering of an accounting satisfactory to the court. The keeping of proper records to facilitate preparation of the report upon which discharge will be granted is therefore essential.

THE PERSONAL REPRESENTATIVE.—The person appointed by the court to settle the estate of a decedent is known as a **personal representative.** If the decedent left a will in which he named his personal representative, that person, if accepted by the court, is known as an **executor.** Otherwise the personal representative is called an **administrator.**

The personal representative's title to the **personal assets** of the decedent dates back to the time of death, though his appointment and qualification have not occurred until later. The **real estate** of the decedent, if the estate is solvent, descends to the heirs or the devisees without passing through the hands of the personal representative.

The **first duty of the representative** is to take possession of all the personalty which belonged to the decedent. He is required to inventory that property and to have it appraised, after which he sells the personalty in order to pay the debts of the decedent and to settle legacies. His procedure in all these steps is governed by law. He must use extreme care to follow the law in all particulars.

TESTAMENTARY TRUSTEE.—A will may provide that certain property or investments shall be held in trust for a certain period during which the income therefrom goes to one or more persons, and at the end of which period the property or investments pass to the same or other persons. The person who receives the income is called the **tenant** or **beneficiary;** he who receives the property at the expiration of the trust is called the **remainderman.**

When trusts are created by will, the trustee may be a different person from the executor, but the executor usually becomes the trustee, and it becomes his duty to manage the trust property; but his functions as executor and as trustee are separate functions which must not be confused. **As executor** he winds up the affairs of the decedent, collecting assets, paying bills, and distributing legacies which are independent of the trusts. He transfers the trust funds and the income therefrom to himself as trustee, and **as trustee** delivers the income

to the beneficiaries. At the end of the period of executorship he makes his report to the court, and is discharged from that responsibility, but continues to serve in the capacity of trustee during the period for which the trust was created.

Corpus and Income

CORPUS AND INCOME DEFINED.—All transactions of estates are separated into two main groups, called **transactions as to corpus** and **transactions as to income.** **Corpus** is the Latin word for "body," and as used in connection with estates means the principal or body of an estate, the whole value of what is actually left by the decedent at time of death. What is afterward derived from or earned on that body, corpus, or principal, is called **income** of the estate. Good accounting requires that in all cases the records show what property was left by decedent, that is, the body, corpus, or principal of the estate, and what is thereafter gained or lost in handling the property.

All assets that would be included in a true and comprehensive balance sheet for the decedent at midnight following his death are corpus, and all liabilities that would appear in that balance sheet must be met out of corpus. Also, funeral expenses and all legitimate expenses of administration, from expenses of probate to those of the final accounting, are chargeable against corpus. Losses of part of the corpus due to casualty and theft are deductible from corpus itself, as is also a failure to realize the appraised value of an asset.

If a **piece of real estate** should properly be listed among the assets of the estate, that piece of real estate is corpus. No matter at what amount it is appraised or for what amount it is sold, the proceeds of the sale are corpus. Establishment of some large industry near a farm, years after death of an owner of the farm, who has included it in a trust estate, may materially increase the value of the holdings above the figure at which they were appraised and entered on the books of the estate; but although that increase is a gain of the estate after the establishment of the trust, it is not income to the life-tenant, but an increase in corpus. All assets of decedent at date of death are corpus for whatever values may ultimately be realized.

Any **interest receivable** by the estate which had accrued prior to midnight of date of decedent's death, is corpus, since it was an (accrued) asset of decedent at time of death. The same principle applies to any other income accrued at the time of death.

Dividends are ordinarily not considered as income until actually declared, because they do not accrue. The time when the corporation earned the profits out of which dividends are paid does not matter; courts have generally[1] held that a **dividend declared after death** belongs to income, because profits of a corporation are property of the corporation until the directors in their discretion declare a dividend. On the other hand, a **dividend declared before death** belongs to corpus, because in law a dividend, even on cumulative preferred stock, is considered earned by the recipient at date of declaration, though perhaps not paid for some time afterwards.

The rule is different, however, in case of **stock dividends** and of **cash dividends** of such unusual size that it is evident that a surplus accumulated over a period of years is being distributed. Courts generally include as corpus any part of

[1] In Pennsylvania and a few other states the rule is to apportion dividends as of time when income was earned by the corporation, and to give the life-tenant only so much as has been actually earned since death of testator

such dividends which accumulated prior to decedent's death, but allow as income any interest arising from this amount.[2]

Corporations often allow stockholders the privilege of absorbing among themselves increased issues to be floated. These **rights,** being transferable, are often valuable and may be sold. Proceeds of sale of such rights are corpus just as the new issue of stock itself would be corpus if the executor chose to avail himself of the right to subscribe and thus invest idle or less profitably invested funds of the estate.

Proceeds of fire insurance policies, whether in form of premiums returned on policies taken out by decedent and canceled by the personal representative, or of money paid to personal representative to cover a fire loss on property owned by the estate or on which the estate holds a mortgage, are always corpus.

Proceeds of life insurance policies payable to decedent or to estate, whether received in a lump sum as a result of decedent's death or due as the last payment of an annuity formerly payable to decedent, are corpus. Classification of proceeds of other forms of insurance may be determined on same principles.

Livestock borne after date of demise are income. **Growing crops** belong to the corpus when land has been sold by decedent with a reservation of the crops. They are income when land becomes part of a trust for a life-tenant. When land on which they are growing is not to be held in trust, they go with the land.

If a will specifies that certain **gifts** made by testator during his life are to be considered as advances and deducted from legacies, amounts of such advances are part of the corpus.

Many partnership agreements specify that the **estate of any partner** shall be entitled to that partner's share of profits earned for a certain period after his death, in which case these earnings are part of corpus.

DEDUCTIONS FROM CORPUS AND INCOME.—The principle regarding liabilities is in harmony with that regarding assets. Anything which was owed by decedent, including accruals to date of death, is a charge against corpus. But in addition to such liabilities there must be charged against corpus the expense of winding up affairs of decedent, including cost of caring for assets until distributed (but not including cost of earning or collecting income from those assets, which is a charge against income).

Principal deductions of this nature are funeral and burial expenses and cost of administering the estate. **Funeral expenses** include undertaker's bill, cost of cemetery lot, a suitable tombstone, and cost of funeral services. They include also transportation of the person bringing body to place of burial, and sometimes an allowance for mourning to be worn by relatives of deceased.

All **legitimate expenses of administration** are charged against corpus. These include office rent and other necessary office expenses, salaries, attorneys' and accountants' fees, and expenses of litigation in estate matters, including will contests. The personal representative is responsible for assembling and caring for the assets, and is personally liable for any neglect, but all expense properly incurred is chargeable against the estate and is a deduction from corpus.

The distinction between administration expenses and charges against income is not easy to define, but may be expressed by saying generally that the expense of collecting and handling the income is chargeable against income, whereas any expense occasioned by the assets themselves is chargeable against corpus. Nearly all the expense of the personal representative is against corpus, while most of that incurred by the trustee is against income. Of course, interest

[2] Conyngton, Business Law, Vol. II, p. 519.

expense accrued after decedent's death is chargeable against income, because the income-producing assets would be reduced if the indebtedness on which the interest was incurred were paid off.

In most if not all states, certain property and usually some amount of ready money is set aside by law for use of the **widow and minor children.** Whatever the statute allows, if used for this purpose, is a charge against corpus. All **legacies** are paid out of corpus (except that if no trusts are created the residuary legatee receives the income also). But payments of these legacies are not considered as deductions from corpus, serving rather to dispose of it after its amount has been finally ascertained.

The **inventory of the estate** should include, so far as possible, all accruals; but the accountant will probably have to make numerous adjustments thereafter to pick up omissions and to correct entries made as a result of incorrect information. The **line dividing corpus from income** is not so plainly drawn as always to be readily apparent. In many cases it requires the court's interpretation of facts in a particular case to decide to which account credit should be given.

In computing and setting up accruals, the general rule is that the expression "to the date of the death of the testator" means to and including that day, so that items earned and dividends declared at any hour on day of death are a part of corpus.

In case of an intestate a trust cannot be created except by operation of dower or courtesy rights. The separation of corpus from income in such cases might seem unnecessary. But the separation in the case of estates of sufficient size to present any accounting problems is wise because inheritance tax laws apply only against the corpus, and because the administrator should be in a position to show easily what gains and losses have occurred as a result of his management and what are due to improper appraising.

Accounting for Personal Representatives

STATUTORY REQUIREMENTS.—The **ultimate purpose** of all estate accounting is the fulfilling of a legal obligation which rests on a fiduciary to account properly for all money or other property which passes through his hands. For this reason any system of accounting devised for a fiduciary should be planned to enable him to prepare his final accounting without difficulty and at same time to handle his current work without unnecessary labor. **Most states** do not prescribe by law any form of estate bookkeeping even where they do prescribe a form of final accounting; but if the fiduciary's records are not so kept as to make it possible for him to prepare the final accounting readily, he is often charged personally with expense of drawing off that account.

The **fiduciary's accounting** is submitted to the court which appointed him, and is usually made after the assets have been collected and debts of decedent and expenses of administration have been paid, and such payments as the executor has found advisable have been made on account of legacies. **Its purpose** is to show amount of cash and property received by the representative, disposition he has made of it, and balance, if any, remaining in his possession. The fiduciary is required to make an affidavit that to the best of his knowledge and belief the statement is a full and true account.

Usual procedure is for the personal representative to present the account to the court with a petition that it be allowed, whereupon the court gives notice to all persons interested in the estate that on a fixed day the account will be

judicially considered. Prior to that day, the account on file with the court is open to inspection. After examining the account on the day named and considering any objections raised against it, the court renders a decision allowing, or refusing to allow, the account. **If account is not allowed,** one satisfactory to the court must be presented. **If court is satisfied** with the accounting, it issues a decree of distribution directing the executor to make distribution of estate assets then remaining in his hands as set forth in the decree.

FORM OF THE ACCOUNT.—It is rarely that the form of account is legally prescribed, but the statute usually states broadly what the account shall show. This has resulted, in practice, in **special forms for each state.** These forms answer the local statutes and can usually be secured from the clerks of the probate court. It always saves work in such matters to follow precedents and use whatever forms the local court approves. Some of these forms are very simple, while others are rather complex and go into great detail, but all are based on an accounting for receipts and disbursements by schedules showing transactions by classes.

The accounts which are to be kept on the books of an estate should be chosen with the final accounting always in mind, and should be so selected that the information required may be compiled with least effort. The **classification of receipts and disbursements** to be used in the final accounting should be followed in the books. **Each schedule of final accounting** should be represented by an account on the books, and the name and even the standard number of the schedule may form part of the title of the account.

INFORMATION NEEDED FOR FINAL ACCOUNTING.—Because of variance between forms in use in different states, it is impossible to furnish a scheme of accounts which will give information necessary for all without going into greater detail than is required by some, but the following is fairly representative:

As to corpus:

Charges to administrator:

1. Amount of inventory as appraised.
2. Assets discovered after filing of inventory.
3. Gain from realizing on inventory.

Credits to administrator:

4. Loss from realizing on inventory.
5. Assets not realized upon.
6. Funeral and administration expenses paid.
7. Payments on debts of decedent.
8. Distribution of cash and other assets.
9. Balance of corpus cash on hand.

As to income:

Charges to administrator:

10. Amount of income from operation of estate.

Credits to administrator:

11. Losses of income.
12. Expenses chargeable against income.
13. Distribution of income.
14. Balance of income cash on hand.

Under the rule that one account should be maintained for each classification which will be needed for the final accounting, the accounts which would result from above list of schedules are·

Corpus Group

1. Inventory.
2. After-Discovered Assets
3. Gain on Realization
4. Loss on Realization
5. (No account appears for the item "assets not realized upon," because it is by nature the residue or closing balance left in the Inventory account.)
6. Funeral and Administration Expenses
7. Debts of Decedent
8. Distribution of Cash and Other Assets
9. Cash

Income Group

10. Income
11. Losses of Income
12. Expense against Income
13. Distribution of Income

No second Cash account is needed for income cash, as it is never difficult to determine how much of the cash on hand belongs to corpus and how much to income.

This number of accounts does not, however, quite exhaust the necessities. The list may seem to include assets and liabilities, income and expense. But in double-entry bookkeeping there is another group, net worth or proprietorship accounts, i.e., Capital, Capital Investment, Capital Stock, Surplus, etc., as may be required under varying circumstances. The place of this group in the scheme of estate accounts is taken by an account known as "Estate Corpus." Whenever books are closed, the balance of this account is amount of the estate in accordance with the various valuations used. Like proprietorship accounts it is necessarily a credit account, showing extent of the accountability of the fiduciary.

INVENTORY.—The accounting of the personal representative is based on the inventory of the estate, the taking of which is one of his first duties. This inventory takes note of assets only, no reference being made to liabilities. It is a list and appraisal of all items composing corpus, classified and valued as required by the state law.

In many states the inventory does not ordinarily include real property, which does not come into the hands of the representative, passing immediately to devisees or heirs-at-law; but the inclusion of all property is required in the inventory used in connection with the federal transfer tax. For this reason there is now being favored the practice of letting the inventory which is made for all purposes include real estate at gross value, any mortgage indebtedness being considered a debt of the decedent.

LIABILITIES.—The ordinary practice in handling accounts of a decedent is not to set up the liabilities of the decedent on the books. Debts appear only through their payment, when Debts of Decedent account is charged. No offsetting credit appears until at time of closing books, when the representative balances this account by closing it into Estate Corpus.

This is done on the theory that the books indicate the responsibility of the fiduciary rather than the net worth of the estate, and is a survival of the cash methods used in all legal accounting. There is, however, no good reason why the liabilities should not be set up in an Approved Claims account if desired, and in large estates such an accrual is usually preferable.

USES OF ACCOUNTS.—The general scheme for handling transactions under the above outline of accounts is as follows:

At the beginning of administration the estate assets are debited to Inventory, their total amount being credited to Estate Corpus. The amount of cash in the inventory is credited to Inventory and debited to Cash.

Subsequent receipts of cash by the administrator are debited to Cash. If they are from the sale of assets included in the inventory, they are credited to Inventory at appraised value, any increase therein being credited to Gain on Realization, or any loss thereon debited to Loss on Realization. Receipts from sale of assets which, although they belonged to decedent at the time of death, were for any reason not included in the inventory, are credited to Assets Not in Inventory. Receipts of income earned by estate assets during administration are credited to Income.

Payments of cash or distributions of assets made by the administrator are credited to Cash or Inventory. Payments made on account of debts existing at time of decedent's death are charged to Debts of Decedent, but if debts of the decedent are set up on the books by a debit to Debts of Decedent and a credit to Approved Claims, the debit at time of payment will be to Approved Claims.

Payments of expenses that are deductions from the corpus of the estate are debited to Funeral and Administration Expenses. Distributions of cash and other assets are charged to the account of that name, and amounts of income cash distributed are charged to Distribution of Income. Expense incurred in earning the income on the estate assets is debited to Expense against Income, and losses of income through theft, fire, etc., are debited to Loss on Income.

METHOD OF CLOSING.—When an accounting is to be made, the books should be closed by:

1. Crediting Estate Corpus and debiting the corpus gain accounts (Assets Not in Inventory; Gain on Realization) with amounts sufficient to balance the latter.
2. Debiting Estate Corpus and crediting the corpus loss accounts (Loss on Realization; Funeral and Administration Expenses; Debts of Decedent; Distribution of Cash and Other Assets) with amounts sufficient to balance the latter.
3. Debiting Income and crediting the income loss accounts (Loss on Income; Expense against Income; Distribution of Income) with amounts sufficient to balance the latter.

FURTHER SEPARATION POSSIBLE.—In the above outline the number of accounts suggested has been kept almost at a minimum, but because the preparation of income tax returns requires an analysis of the income, the books must show its source in a way that will indicate the nature of the transactio from which it results. In the same way, for income tax purposes the expenses must be analyzed so that in the returns the schedules accounting for the deductions from gross income may properly be filled out.

In large estates it is much easier to open separate accounts for all items of most frequent occurrence instead of lumping all income into one Income account and all expense into the Funeral and Administration Expenses account and the expense against Income account.

ADDITIONAL ACCOUNTS NEEDED BY EXECUTORS.—Accounting by executors differs from that of administrators only to the extent that the recording of the slightly more complex duties of the executor requires more kinds of entries. The fundamental principles are the same for both; the same scheme of accounts

is used; and the general form of final accounting is the same. The differences result from the fact that the executor is operating under a will which probably sets aside specific legacies and may provide for the creation of trusts, whereas the administrator merely realizes and distributes.

To record this additional information, certain accounts are used by executors in place of the Distribution of Cash and Other Assets account, and Distribution of Income account of the administrator. These are:

1. Specific Legacies Distributed, debited with appraised values of specific legacies distributed.
2. Payments on General and Demonstrative Legacies, debited with all payments of corpus cash and inventory value of all assets turned over on account of general and demonstrative legacies.
3. Payments of Principal to Trustee, debited with all payments of cash and inventory value of all assets turned over out of corpus to trustee.
4. Distribution of Income, debited with all payments of income cash directly to legatees when no trusts are created.
5. Payments of Income to Trustee, debited with amounts of income paid by executor to trustee.

In closing the books of the executor when an accounting is to be made, the first three of the above accounts are credited with amounts sufficient to balance them, the corresponding debit being to Estate Corpus, and the last two are credited with the amounts necessary to balance them, Income account being debited.

BOOKS TO BE KEPT BY ADMINISTRATORS.—The form of books in which financial records of estates are kept is not so material as is correct use of accounts. **Probate accountancy** presents to the commercial bookkeeper a new nomenclature for the nominal accounts and some new practices, but so long as these are understood and properly handled, the mechanical vehicles used for recording of transactions are a matter of personal preference. No objection can be raised to the forms used in any system if through them one accomplishes the desired result.

For the administrator the greatest efficiency is secured through use of a **cash journal** of such complete distribution that each general ledger account is carried in a separate column therein, making posting to a general ledger unnecessary inasmuch as the accumulations can be carried forward perpetually in the cash journal. (See Form 1.) The trial balance is thus taken directly from the book of original entry, which thus becomes cash book, journal, and ledger in one. The accounts of trust companies are coming to be generally carried on such a form as this.

Such a book is called a "self-posting ledger," a "journal ledger," and various other names, but of all names suggested, "synoptic" is probably best, being short as well as descriptive. Any double-page columnar sheet of sufficient columns (20 to 24 ordinarily) serves the purpose. Care must be taken to use bound books in states which forbid use of loose-leaf books by fiduciaries.

ADVANTAGES OF SYNOPTIC.—The synoptic has three marked advantages:

1. It is easy to learn to use. It has all the ease of single-entry with none of its disadvantages. The bookkeeper who has never acquired the cash journal habit may prefer to use old-fashioned cash book and journal, making postings to his ledger in the usual way. If, however, he has begun to use an "analytical" or columnar cash book (one in which several columns are provided for entry of receipts or disbursements directly to the most commonly used accounts), he will have no trouble in adapting himself to this much less tedious method. If

FORM 1. Synoptic for the Accounts of an Administrator (left and right halves)

the person who is to keep the accounts is not a bookkeeper by occupation, and has acquired no definite habits which the bookkeeper so often finds it hard to break, he will find method outlined much easier to learn than the use of the older separate cash book, journal, and ledger.

2. It involves less work than any other method. Fewer pages have to be turned. An entry made in one record is not recopied in others, for the use of the synoptic makes general ledger posting unnecessary. All the accounts are carried on the double page and the difference between the debit and credit totals of any account at any time is what would be the ledger balance of that account.

3. It makes the understanding of entries and the explanation of them to other persons much easier than the use of the cash book, journal, and ledger, because all transactions of a period are before one's eyes at a glance, with their effect on the ledger accounts, the condition of all of which can be readily grasped without turning pages.

Where a journal is used there is a tendency to exclude the information from the ledger accounts, and the necessity for constant reference hampers an accountant when he desires to extract information, while it reduces what should be perfect simplicity to hopeless confusion, when the accounts are submitted to an executor or legatee.[3]

ARRANGEMENT OF COLUMNS.—A satisfactory arrangement of columns in the synoptic is shown on Form 1. Note that most accounts are provided with only one column, either debit or credit, but in these accounts there will seldom be any entries of an opposite nature. Such as occur may be entered in red ink.

It is wise, however, to provide for **refunds of overpayments** on administration expenses, which may be somewhat numerous. The personal representative may have paid rent in advance and, upon not needing the property for the full period, may receive a refund. Such a transaction would be recorded as Cash/Funeral and Administration Expenses.[4]

To accommodate such entries the latter account on the synoptic is provided with two columns, second of which is for credit entries.

The term Cash account as used herein is generic. In practice it is best to have a separate account in the general ledger, or pair of columns in the synoptic, for each bank account which is to be used for current depositing and checking purposes. Inactive bank accounts, such as savings accounts, may, if desired, be totaled together in one ledger account, or carried on the synoptic in one pair of columns.

BOOKS FOR EXECUTORS.—For executors as for administrators, any form of double-entry records in which the information required may be recorded is adequate. The separate ledger, cash book, and journal are preferred to the synoptic, which is not so well suited to accounts of executors because of the number of columns required for the greater number of accounts. A cash journal and general ledger can be used by executors to advantage.

OTHER BOOKS.—The fiduciary should record in a **diary** the details of all important events, so as always to have at hand memoranda from which to refresh his memory when necessary. The notations in this book should be cross-referenced to entries on the books of account and to the folios of other estate files or public documents. By this practice much time is saved in locating records which have to do with the notations.

---

[3] Caldicott, Executorship Accounts.

[4] Journal and cash book entries will be indicated in the above conventional manner, which indicates in this case a debit to Cash and a credit to Funeral and Administration Expenses.

Examples of the information which should appear in the diary are:

1. Date of reading of will.
2. Steps taken by personal representative before formal appointment.
3. Date of employment of counsel and reasons for choice, with notations as to agreement for compensation.
4. Efforts to locate heirs or proper distributees.
5. Efforts to collect assets.
6. Details of conversations with attorneys, inheritance tax officers, etc.
7. Dates of signing of various court orders, such as that requiring advertising for claims.

It is a good practice to paste in the diary printed copies of all notices, advertisements, and announcements incident to the probate and subsequent procedure.

Innumerable **other records** might be suggested. Memoranda should be kept showing when interest, rents, etc., both receivable and payable, are due. Larger estates require the use of investment record books, notes payable registers, etc. As none of these are in any way peculiar to estate accounting they are not discussed in detail.

THE REALIZATION ACCOUNT.—Whatever style of books is adopted, there should be kept as a subsidiary record a list of the inventory items with the appraised value of each. Maintaining general ledger accounts with each group of inventory assets does not serve the purpose, because the schedule required for the final accounting must, to be complete, show the realization on each item in the inventory. Even if this were not so, it is necessary to keep this record in some form for convenient reference as to what is unsold and to facilitate an audit of the accounts, whether by an interested person or a professional accountant.

This detail of the realization on assets is most easily shown by a **schedule in 6 columns** (see Form 2), the 1st containing the value of each asset (including cash) as appraised in the inventory; the 2nd showing the amount of cash realized from each asset; the 3rd, the difference between the 1st and 2nd if the amount in the 2nd column opposite the item is lower than the amount in the 1st; the 4th, that difference when the amount in the 2nd column opposite the item is higher than that in the 1st; and the 5th, the appraised value of assets distributed without realization, or of deferred expenses included in the inventory and later charged off.

When desired to close the books it is necessary to carry over to the 6th column the appraised value of all assets which have not been disposed of. The total of this column, plus the totals of the 2nd, 3rd, and 5th, minus the total of the 4th, must equal the total of the 1st.

The realization account thus prepared has been spoken of above as a "subsidiary" record. It is subsidiary to the Inventory account on the general ledger. This means that the difference between the total debits and the total credits in the realization account must always equal the balance in the Inventory account. In other words, the sum of the totals of entries made in the 1st and 4th columns at any date, minus the sum of the totals of the 2nd, 3rd, and 5th, would be the total of the 6th if it were filled in, and also the balance in the Inventory account on the general ledger or synoptic at the same date, since that is the appraised value of assets unsold at that date.

In the same way the 3rd column is subsidiary to the Loss on Realization account, and the 4th to the Gain on Realization account.

The keeping of the realization account in addition to the careful record of the synoptic or other books does not involve unnecessary duplication. The reali-

Bonds of Gypsum Valley Co. par value $10,000	Kendall & Shuck	3–7–24	3	9,000.00	7,399.37	$1,600.63			
Accrued interest thereon			1	291.67	291.67				
Five passenger Washington touring car	Luella M. Fry	8–3–23	1	1,000.00	1,200.00		200.00		
Hendricks Coupe	John Speer	8–3–23	1	700.00				700.00	
Deferred interest on note to Second National Bank			1	349.68				349.68	
Pearl necklace	Melvin W. Merrill	3–7–24	3	5,650.00	3,000.00	2,650.00			
Deferred insurance on burglary policy No. 19,685, National Insurance Co.			3	42.22				42.22	
600 shares common stock of Templeton & Co., par value $60,000				78,000.00					78,000.00
Note of Raymond Wallace (non-interest)				1,134.28				1,134.28	
				$152,364.85	$51,273.39	$4,250.63	$952.28	$16,415.18	$81,377.93
ASSETS NOT IN INVENTORY									
Two shares common stock of The Hodges Co., par value $100				142.00					142.00
Savings account in High Street Bank			2	1,000.00	1,000.00				
Accrued interest thereon			2	11.67	11.67				
Note of Robert M. Olmstead (non-interest)				200.00					200.00
War Savings Stamps				121.56					121.56
				$153,840.08	$52,285.06	$4,250.63	$952.28	$16,415.18	$81,841.49

Form 2. Realization Account

zation account shows at a glance the assets which have and have not been disposed of, two things which the executor would otherwise have to search out frequently unless he checked a copy of the inventory as he disposed of assets, a method which would easily lead to errors because of lack of a reconciliation with general books.

The keeping of the realization account has the further advantage that the most difficult schedules of the final accounting are thereby prepared, whereas otherwise the information for those schedules would have to be separately secured at time of closing. The realization account is a schedule showing the amount realized on each of a list of assets; general books are a financial history.

Typical Transactions

ENTRIES BEFORE APPRAISAL.—Theoretically the inventory should be the first thing to appear on the books, but it will usually be necessary to enter various transactions before the appraisal is completed. Suppose for example that a dividend declared before the death is received on the day on which the administrator takes charge. It has been explained that Inventory account is to be debited with the appraised value of the corpus, and that it is to be credited with appraised value of each inventoried asset turned into cash, distributed, or otherwise disposed of. If the inventory had been completed, all would be simple in the matter of this dividend. The entry would be simply Cash/Inventory.

The inventory not yet having been entered, however, the same entry will be made, but it becomes incumbent upon the administrator to see that the figure which he has credited to Inventory account is the figure at which the dividend is later carried in the appraisal, as otherwise his Inventory account will not clear itself when he renders his account, and an adjustment will be required.

As soon as the administrator secures his letters testamentary he should present them at decedent's bank and secure possession of decedent's funds. The entry in this case is like the one described above, in that the asset has not yet been inventoried, and the same principles apply, the entry being Cash/Inventory.

The same principle would apply to other similar cases.

If a separate cash book, journal, and ledger are used, and such entries are necessary before appraisal, it is customary to leave the first line on the debit side of the cash book blank so that the amount of cash on hand at time of death may be entered as soon as it is determined by inventory.

INVENTORY TRANSACTIONS.—The entry setting up the inventory is Inventory/Estate Corpus. As has been said, care must be taken to see that the credit given to Inventory account at time of realizing upon each asset is the same as the amount with which Inventory account has been debited for that asset, i.e., its appraised value. If this is not done, the accounts will not close out properly to show the necessary clearance for the representative.

For this reason it is wise, when entering the inventory, to examine the credits which have previously been passed to Inventory account, to make sure that all such credits are at the figures at which the items are included in the inventory. Adjustments should be made for any discrepancies, crediting Gain on Realization with any increase in the amount received above the inventory value, or debiting Loss on Realization with any deficiency, or crediting Assets Not in Inventory if the item was entirely omitted.

If an automobile entered on the inventory as being worth $1,000 is sold for $1,200, the following entry is necessary:

Cash	$1,200	
Gain on Realization		$ 200
Inventory		1,000

The same principle must be followed in reference to any sale for other than the appraised value. If this automobile had been sold for $800 the entry would have been:

Cash	$800	
Loss on Realization	200	
Inventory		$1,000

Inventory account must be credited with the inventory value of each asset disposed of, as only in this way will Inventory account close out with the assets.

Assets which stand in the name of the decedent should be included in inventory, leaving it to the court to pass finally upon the title thereto. Suppose that in the inventory there were included certain certificates of stock found in decedent's desk, and assigned in blank by him, which were claimed by another person who was able to prove that he had bought and paid for them. The court would order the administrator to turn over the certificates to the purchaser, and it would be necessary for the representative to show the transfer by the entry Loss on Realization/Inventory.

A theft of inventoried articles not yet realized upon would be shown by the entry Loss on Realization/Inventory, made whenever the recovery seemed improbable.

All losses are subject to the same general principles. If in the case of a loss by fire of property appraised at $5,650, there was in effect a fire insurance policy of $3,000, the entry of the loss, made at the time of the receipt of the payment from the insurance company, would be:

Cash	$3,000	
Loss on Realization	2,650	
Inventory		$5,650

ASSETS NOT IN INVENTORY.—The first inventory rendered by the personal representative is seldom complete, even for small estates. This is often due to failure to understand what really constitutes the "corpus" of an estate, or it may occur because it is rarely possible at the beginning of an administration to discover all the property of decedent. Very often there are accruals of various sorts which are unknown to the executor until he begins to collect assets. Sometimes an entire bank deposit is unknown at time inventory is prepared.

Entry in case of after-discovered assets is always Cash/Assets Not in Inventory, for amount realized when they are sold. There will thus be no gain or loss on the realization of after-discovered assets except in cases of theft, fire, etc., because the valuations at which they are to be charged in are not entered until they are disposed of and the charging-out values determined. If any such asset is not sold, a fair market value should be assigned to it at time of closing books and recorded in an entry Inventory/Assets Not in Inventory. Debits to the Inventory account result only from the original inventory and from assets discovered thereafter and not sold.

After-discovered assets may be handled on the realization account in same manner as inventoried assets, and in fact are most advantageously handled by an extension of the same form (see end of Form 2). For after-discovered assets the amount shown in the 1st column is the amount realized upon a sale, if the asset is sold, or, in other cases, fair market value. Each such asset should be listed for memorandum purposes as soon as discovered, although the value will probably not be entered until later.

INCOME.—The entry for receipts of any kind of income is Cash/Income, but any receipts of income accrued prior to the demise constitute corpus and are entered Cash/Inventory if the accrual was inventoried, or Cash/Assets Not in Inventory if it was omitted. Frequently receipts of interest, etc., must be divided on the books between corpus and income. If such a receipt of $60 included $35 which had accrued prior to the demise and $25 earned afterwards, the entry would be:

Cash	$60	
Inventory		$35
Income		25

Suppose the representative discovers the existence in decedent's name of a savings account of $1,000, not included in inventory. The interest for the past 6 months, amounting to $20, must be divided between corpus and income as in case of other interest income, but since the interest accrued to the demise was not included in inventory, it, as well as the principal, must be credited to Assets Not in Inventory. The entry is, then:

Cash	$1,020.00	
Assets Not in Inventory		$1,011.67
Income		8.33

LOSSES OF INCOME.—If the proceeds of a collection of income had been placed by the representative in his safe overnight, together with his own funds, and had been stolen therefrom, it would be necessary for him to record the loss by the entry Loss on Income/Cash. As the stolen money belonged to income the loss should not fall upon general assets of estate, but should be charged against income. It would be improper for administrator to allow books to ignore both the receipt and the theft, because he is chargeable with all amounts he collects and these must appear on his books.

If the money stolen had been part of a net balance left after miscellaneous disbursements, some against corpus and some against income, had been made from miscellaneous receipts, it would have been necessary to add the total receipts from corpus and subtract the total disbursements for corpus, and to add the total receipts from income and subtract the total disbursements against income, thus ascertaining the balance of corpus and income cash on hand, and then to prorate the loss. Loss on Income would be charged with amount of income cash stolen, and Loss on Realization with amount of corpus cash, and the entry would have been:

Loss on Income	$........	
Loss on Realization	....	
Cash		$........

Suppose a bank in which decedent had a savings account of $3,000, plus $60 interest earned after demise, failed. The final settlement of the bank's affairs being made with a loss of $612 to the estate, the estate books must now show this loss thus:

Loss on Income	$ 12	
Loss on Realization	600	
Cash	2,448	
Savings Accounts		$3,060

The loss is proportioned between Loss on Income and Loss on Realization as indicated in connection with a loss by theft.

DEBTS OF DECEDENT.—Entry of payments of debts existing at time of demise depends on whether or not such debts are set up on the books in advance

of payment. Any checks issued by decedent prior to his death become void if not presented for payment before the bank on which they were drawn learns of the demise, and the amounts which they represent are thereafter to be considered debts of decedent.

EXPENSES AGAINST INCOME.—Just as interest receivable which had accrued before decedent's death is corpus and that accrued after the demise is income, so interest payable accrued before decedent's death is a charge against corpus (debited to Debts of Decedent) and that accrued after the demise is a charge against income (debited to Expense against Income). If a mortgage note for $1,000 is paid, together with $30 interest, $18.33 of which had accrued prior to the demise, charge against corpus would be:

Principal	$1,000.00
Interest to date of death	18.33
	$1,018.33

and the entry becomes:

Debts of Decedent	$1,018.33	
Expense against Income	11.67	
Cash		$1,030.00

DISTRIBUTION OF CASH AND OTHER ASSETS.—If the estate funds are sufficient and there seems to be no doubt of the estate's solvency, the administrator may be willing to pay to the heirs reasonable advances on the final distribution. These payments are entered as Distribution of Cash and Other Assets/Cash. The administrator must deduct state inheritance taxes from amounts which he distributes.

If one of the heirs, with proper consent, takes over at the appraised or other value **any assets other than cash,** receiving these in lieu of a regular distributive share, such transfer is considered a sale of the asset to the heir. In such cases it is always best, to make the record complete, to issue to the heir a check for the amount of the sale, if the administrator is willing not to require the heir to pay out his own money. The heir may then issue his own check or indorse the check just received, in either of which cases the administrator deposits the amount received.

If among the estate assets there is **real property** which passes directly to heirs-at-law, without coming into the hands of the administrator, this real estate not having been included in the inventory, the books of account need take no note of the transaction. But if such real estate was included in the inventory, it is necessary to credit it out of the Inventory account. The entry should be Distribution of Cash and Other Assets/Inventory.

PAYMENTS ON LEGACIES.—If under the same solvent conditions executor is willing to pay to the legatees **reasonable advances** on their legacies, the payments are shown by the entry Payments on General and Demonstrative Legacies/Cash.

Specific legacies are handled differently from others because the executor is not entitled to a commission on them. Entry for transfer of a specific legacy is Specific Legacies Distributed/Inventory. Specific legacies distributed are entered in the fifth column of the realization account.

If an **after-discovered asset** constitutes part of a specific legacy, as a block of Liberty Bonds when "all my Liberty Loan bonds" had been bequeathed to a nephew, the executor should appraise it properly and make the entry Specific Legacies Distributed/Assets Not in Inventory for the fair market value of the asset.

When **legacies not specific** are numerous or advances made thereon are likely to be many, it is often advisable to keep a **legatees ledger** in the general style of any subsidiary personal accounts ledger such as an accounts payable (purchase), or accounts receivable (sales or customers) ledger.

All **payments made on other than specific legacies** and charged to Payments on General and Demonstrative Legacies account should be posted to the legatees' accounts in this ledger. The total debits in this ledger will always equal the debit amount of Payments on General and Demonstrative Legacies account, and this ledger will be subsidiary to that account. Legatees are not credited until the books are closed, when Payments on General and Demonstrative Legacies account in the general ledger is credited with payments made. Even then if certain legacies or parts of legacies of this type have not been paid, the full amount of the legacy will not be credited to the legatees' accounts. The credit will be the amounts of payments only. For this reason the titles of the accounts in the legatees ledger should embrace memoranda of amounts of legacies.

INHERITANCE TAXES.—State inheritance taxes, whether paid by administrators or by executors, are to be deducted from the amount which would otherwise pass to each heir. A deposit of the estimated amount of such taxes may be required by the state in advance of distribution. If it is estimated that the tax will amount to $2,000, the representative will be required to deposit this amount, subject to correction when the true amount of tax shall have been determined.

The payment, or so much of it as is properly due the state, is an advance on a distribution of the assets. Even if a will provides that state inheritance taxes are to be paid by the estate, they are an advance on legacies, because if they are not collected from the individual legatees they are a deduction from the legacy to the remainderman. Whether such taxes should be charged (in an executorship) to Payments on General and Demonstrative Legacies, Payments of Principal to Trustee, or to Specific Legacies Distributed, cannot, however, be told at time of the initial estimated payment, as this cannot be divided among the legatees. Therefore this payment is best debited to Inheritance Tax Suspense until the true amount is ascertained.

When the exact tax has been determined, it is possible to divide the tax and charge it against the proper accounts, viz.:

For the administrator: Distribution of Cash and Other Assets/Inheritance Tax Suspense. The administrator must remember to apply the tax against the distributive shares of the heirs.

For the executor:

Payments on General and Demonstrative Legacies..	$........	
Inheritance Tax Suspense................		$........
For amounts which the executor will take as deductions from all except specific legacies.		
Payments of Principal to Trustee................	$........	
Inheritance Tax Suspense................		$........
For amount of tax on estimated residue which will be given to the trustee, if any.		

The balance remaining in Inheritance Tax Suspense account is amount due the executor from recipients of specific legacies. Such collections are entered as Cash/Inheritance Tax Suspense. By these entries Inheritance Tax Suspense account is cleared.

No part of the tax is chargeable to Payments of Income to Trustee because only property existing at time of death is taxed.

The **federal transfer tax** is an administration expense, but it is not an expense deductible in determining amount of the tax. There is one exception to the rule that the tax is considered an expense against corpus of the estate as a whole. If there are life insurance policies in excess of $40,000, there is charged to the beneficiaries under these policies that proportion of the total tax which "the proceeds, in excess of $40,000, of such policies bear to the net estate."[5] In this case the entry would be:

Administration Expense (for the amount to be borne by the estate)	$........	
Distribution of Cash and Other Assets (for the amount to be passed to the beneficiaries)	....	
Cash		$........

OPERATION AND SALE OF A GOING BUSINESS.—If decedent was the individual proprietor of a going business, complications are introduced for the handling of which no uniform rule can be laid down. Of course, the assets of the business must be inventoried with the general assets of the estate, but it is always wise to make of them a distinct class in the inventory. If the court instructs the administrator to continue the operation of the business and a good set of books has been kept for this enterprise, these books should be closed in the manner which has been followed in the past, bringing down the asset and liability balances, and entering the appraisal as an adjustment to the investment.

At this point the administrator has a **choice of two courses**: he may elect to continue the keeping of the books of the business as distinct from the general estate books, or he may carry the whole through one set of books. If the business is of some magnitude and has an accounting staff which is able and used to handling the transactions which occur, the former procedure is probably the more satisfactory, as there will be innumerable details which the administrator will not want to deal with and indeed probably could not handle so well as could those to whom the handling of these details has become a routine matter.

If the administrator follows this course he must, of course, provide a **suitable check** upon the work of those who handle the records. It will usually be necessary for him to tighten up on the methods generally followed in accounting for individual proprietorships. He should require that all receipts be banked, no bills being paid directly out of the receipts. If small payments are necessary they should be made from an "imprest" petty cash fund and properly vouchered.

While for the books of the business any good commercial system of accounting will do, complications arise in connecting these up with the books of the estate. Perhaps the most satisfactory tie is secured by opening on the estate books an account with the business by making the entry Business/Inventory for the appraised value of the assets of the business. All cash withdrawn from the business would be entered as Cash/Business. The payment of debts of the business existing at decedent's death would be entered as usual: Debts of Decedent/Cash, and the expenses of operating the business after the demise would be shown by the entry, Business/Cash.

Whenever it is desired to make an accounting, it will be necessary to reinventory the assets of the business. If possible, all bills incurred for the business should be paid and an entry then made to bring the balance in the account

[5] Revenue Act of 1921, Sec. 408.

with the business to the amount of the new inventory. If the account with Business showed a debit of $22,000 and a credit of $6,000, the new inventory of the business being $14,000, the entry would be determined as follows:

$22,000	debit balance
− 6,000	credit balance
$ 16,000	net debit balance
− 14,000	true value
$ 2,000	loss

and the entry would be:

Loss on Realization	$2,000	
Business:		$2,000

This entry would bring the net debit balance of Business account down to the true inventory of $14,000 and would show the loss from operation.

If on the other hand the new inventory showed $18,000 the entry would be determined as follows:

	$ 22,000	debit balance
	− 6,000	credit balance
	$ 16,000	net debit balance
from	18,000	true value
	$ 2,000	

The entry would be:

Business	$2,000	
Gain on Realization		$2,000

If the business had yielded a large amount of cash the books might show:

$ 40,000	credit balance
− 16,000	debit balance
$24,000	net credit balance

To this there would have to be added the new inventory to obtain amount of gain.

If the books of the business are closed at the same time and on the same basis, a like amount of loss or gain should appear therein and be analyzed in the detailed operating statement of the business.

ACCOUNTING FOR PARTNERSHIP INTERESTS.—A partnership is dissolved by law upon the death of a partner, the assets of the partnership passing to the surviving partner or partners, subject to an obligation to dispose of them in winding up the business and to account to the estate of the deceased partner for his share in the partnership property, including the good-will. The administrator is charged with the duty of seeing that the partnership property is wound up and that the surviving partner or partners render to him a proper accounting, but it is unnecessary for him to record in his books anything having to do with the realization except what he receives as the decedent's share.

The interest of the deceased in the partnership venture is, of course, an asset belonging to the corpus of the estate. It should be appraised with the other assets, in which case any amounts the administrator receives as representing

the realization of the decedent's share should be credited to inventory up to the appraised value of the decedent's interest and after that to Gain on Realization, as the entire amount received is considered a part of the corpus although it may consist in part of profits earned by the surviving partners in the process of liquidating the business. If the amount finally realized is less than the inventory value, the difference should be closed out by the entry Loss on Realization/Inventory.

The law of many states permits the inventorying of a partnership interest without a stated value. If this is done, all that is realized from the interest is credited to Gain on Realization.

Closing the Books and Preparing the Account

PREPARING TO CLOSE THE BOOKS.—When the representative has realized, as far as he can, on all the assets of the estate, and has paid all just claims, he is ready to wind up his transactions before closing his books and rendering his final accounting. He must first reduce to present value any deferred expenses still included in his Inventory account. If insurance, for example, has been prepaid by decedent for several years and had been included in the inventory, the representative must now make the entry Expense against Income/Inventory for the amount of prepayment which has expired since the demise. In other words, he must reduce the book value of the asset to its present worth.

If he has discovered any uninventoried assets which he has not sold or distributed, he should now make the entry Inventory/Assets Not in Inventory for their fair market value.

THE TRIAL BALANCE AND RECONCILIATIONS.—The trial balance used below for purposes of illustrating the accounting has been drawn from the work of an executor, because of the additional complications usually existing therein, but the same general treatment is followed in the work of an administrator.

Trial Balance

Cash in Banks	$ 21,639.76	
Inventory	81,841.49	
Assets Not in Inventory		$ 1,475.23
Gain on Realization		952.28
Loss on Realization	4,250.63	
Funeral and Administration Expenses	5,090.52	
Debts of Decedent	15,758.04	
General and Demonstrative Legacies Distributed	6,000.00	
Specific Legacies Distributed	16,023.28	
Payments of Principal to Trustee	7,239.05	
Estate Corpus		152,364.85
Income		10,132.69
Loss on Income	750.00	
Expense against Income	2,332.28	
Payments of Income to Trustee	4,000.00	
Totals	$164,925.05	$164,925.05

Summary of Account

FIRST, AS TO CORPUS:

I charge myself with:

Inventory, per Schedule A	$152,364.85	
Assets Not in Inventory, per Schedule A	1,475.23	
Gain on Realization, per Schedule A	952.28	
Total Charges		$154,792.36

I credit myself with:

Loss on Realization, per Schedule A	$ 4,250.63	
Specific Legacies Distributed, per Schedule A	16,023.28	
Inventory Not Realized Upon, per Schedule A	81,841.49	
Funeral and Administration Expenses, per Schedule B	5,090.52	
Debts of Decedent, per Schedule C	15,758.04	
Payment of General and Demonstrative Legacies, per Schedule D	6,000.00	
Payments of Principal to Trustee, per Schedule E	7,239.05	
Total Credits		$136,203.01
Leaving a balance of cash of		$ 18,589.35
Inventory Not Realized Upon, per Schedule A		81,841.49
Total Balance of Corpus		$100,430.84

SECOND, AS TO INCOME:

I charge myself with:

Income Realized, per Schedule G		$ 10,132.69

I credit myself with:

Expense Against Income, per Schedule H	$ 2,332.28	
Loss on Income, per Schedule I	750.00	
Payments of Income to Trustee, per Schedule J	4,000.00	
Total Credits		7,082.28
Balance of Income Cash		$ 3,050.41
Leaving a balance of		$103,481.25

to be distributed to those entitled thereto, subject to the deductions of the amount of ....commissions and the expenses of this accounting. The said schedules, which are severally signed by........are part of this account.

FORM 3. Summary of Account

At this point it is necessary to balance the subsidiary records. The total of General and Demonstrative Legacies Distributed account must equal the total of payments charged to legatees on the legatees ledger. This amount must also equal the sum of all the general and demonstrative legacies except those to the trustee, unless some legacies have not been paid, in which case the difference will be the amount of those which have not been paid.

The debit balance of Inventory account must equal the appraised value of all the assets which are still unrealized upon (including any after-discovered assets not sold or distributed), as shown in the realization account, and the realization account must itself balance. Bank accounts should be reconciled with statements furnished by the banks.

FINAL ACCOUNTING.—There appears above (Form 3) the summary of account from the final accounting of the estate whose before-closing trial balance was shown above. The legal statement which precedes this, which is not of accounting interest, and the supporting schedules, which are merely a matter of detail not presenting any problems, are not given here.

This summary and the schedules and closing entries may all be prepared at the same time, in the manner described below.

DEBITS ON ACCOUNT OF CORPUS.—In starting the corpus statement the 6-column schedule (p. 1069), called the realization account, may be put to excellent use. The total of the 1st column, down to the end of the appraisal as filed, is the amount of that appraisal and is entered as the 1st item in the summary.

The after-discovered assets are shown in the remainder of the 1st column, the total of which becomes the 2nd item in the summary. When this amount is recorded, the Assets Not in Inventory account, which will show the same total, may be closed out by the first of the closing entries:

Assets Not in Inventory	$1,475.23	
Estate Corpus		$1,475.23

The 4th column of the realization account represents the other debit to the executor, and when its total is entered as the gain on realization of appraised value, the gain on realization account is closed out:

Gain on Realization	$952.28	
Estate Corpus		$952.28

The total charges to the executor on account of corpus are then the sum of the credits in the Estate Corpus account.

CREDITS FROM THE REALIZATION ACCOUNT.—Three of the credits in our summary of the corpus are also taken from the realization account. From the 3rd column we obtain the amount of loss on realization of appraised value, and having entered it we may close the Loss on Realization account by the entry:

Estate Corpus	$4,250.63	
Loss on Realization		$4,250.63

The next item in the summary is the appraised value of the specific legacies which have been distributed. Its amount is shown by the 5th column of the realization account and by the Specific Legacies Distributed account on the synoptic or general ledger. When this total has been entered on the summary, the ledger account may be closed by the entry:

Estate Corpus	$16,023.28	
Specific Legacies Distributed		$16,023.28

The summary next shows the undisposed-of balance of the inventory, including any after-discovered assets not sold. This figure is the total of the 6th column of the realization account and is the balance in the Inventory account on the synoptic. The Inventory account, which is a balance sheet item, is not closed out.

SCHEDULE A, REALIZATION OF ASSETS.—To prepare Schedule A, simply have a copy of the realization account made with the proper heading, "Schedule A, Realization of Assets." This should be prepared on a sheet so arranged that there is to the right of the figures a space sufficiently wide to enter the various explanations called for, such as manner of sale, reasons why various assets have not been sold and debts not collected, and details as to loss by accident such as theft, fire, etc.

By keeping the realization account during the progress of administration we have avoided at the time of winding up the estate the tedious work of digging out the information needed, and have so arranged our work that the most important of our schedules is prepared for us in the very keeping of our books. In fact, it may be said that the first five of our schedules are prepared for us by our method of keeping our accounts, for under other plans separate schedules are required for each of the five items combined in our Schedule A.

OTHER CORPUS CREDITS.—The other corpus items for which the executor takes credit in the account are shown in the schedules listed below:

Schedule B, Funeral and Administration Expenses
Schedule C, Debts of Decedent
Schedule D, Payments on Legacies
Schedule E, Payments of Principal to Trustee

These schedules are easily prepared from the entries, being, in fact, merely copies of the accounts with the necessary explanatory matter. The form in which they are written is largely a matter of personal preference.

These accounts should then be closed on the books by the following entries:

Estate Corpus..............................	$ 5,090.52	
Funeral and Administration Expenses....		$ 5,090.52
Estate Corpus..............................	$15,758.04	
Debts of Decedent......................		$15,758.04
Estate Corpus..............................	$ 6,000.00	
General and Demonstrative Legacies.....		$ 6,000.00
Estate Corpus..............................	$ 7,239.05	
Payment of Principal to Trustee.........		$ 7,239.05

For the closing, four journal entries are preferred to a compound entry because the result of the separate entries is that the Estate Corpus account now contains the summary of the executor's account in so far as corpus is concerned. The credit in the Corpus account after these entries have been made is the value of the inventory and corpus cash on hand.

The manner of closing the summary as to corpus is self-explanatory on the summary of account.

INCOME SUMMARY.—The debit against the executor on account of income is the amount of the credit to Income account. The items making up this amount are copied with the necessary explanations in Schedule G.

The credits which the executor takes are listed in:

Schedule H, Expense against Income
Schedule I, Loss on Income
Schedule J, Payments of Income to Trustee

These schedules are virtually transcripts of those accounts, which on the books are then closed by the following entries:

Income	$2,332.28	
Expense against Income		$2,332.28
Income	$ 750.00	
Loss on Income		$ 750.00
Income	$4,000.00	
Payments of Income to Trustee		$4,000.00

The Income account on the books will then show the amount of cash belonging to income in the hands of the executor, which amount should also be the difference between the income with which the executor has charged himself on the summary and the charges against income with which he has credited himself.

DECREE OF DISTRIBUTION.—When the accounting has been presented and approved, the court makes an allowance to the personal representative for the expense of rendering the account and sets the commission of the representative. Interest may be allowed on certain legacies, after which the balance of the estate is ordered distributed as specified in the decree.

Before the closing of the books the expenses of the accounting would have been considered an administration expense, but since there are so few entries to be made at this stage, the nominal accounts are not reopened. Since the payment is a charge against the corpus, the entry is Estate Corpus/Cash.

The representative's commission must be prorated between corpus and income in the ratios that the amounts on which the receiving and distributing commissions on account of principal and income are computed bear to the total of both; but in the computing of commissions, corpus and income must be considered together, because in the states in which the commission is payable on a sliding scale, the first amounts being at higher rates, the computation of the commissions would otherwise be excessive.

For the same reason that no corpus expense accounts were reopened, Expense against Income account is not reopened, and the entry is made as a debit direct to Corpus and to Income:

Estate Corpus	$........	
Income	....	
Cash		$........

Interest on legacies is a proper charge against income because the income has been increased by the executor's retention of cash. The entry is Income/Cash.

The final entry showing the distribution of the remainder of the assets of the estate is made as follows, the amounts being the balances in each account:

Income	$........	
Estate Corpus	....	
Cash		$........
Inventory		....

There is now no balance in any account and the books should be ruled off as finally closed.

Trusteeship Accounting

DUTIES OF TESTAMENTARY TRUSTEE.—The trustee takes over the corpus of the estate from the executor. During trusteeship this corpus is called

the **principal**. The same general principles apply to the division of trust funds between principal and income as have been set out in connection with the work of the administrator and executor. The problems of classification are not nearly so frequent or so difficult in the case of the trustee.

The **duties of the trustee** are less varied than those of the executor. The functions of the executor include the realization of the cash value of the assets and the payment of debts owed by the decedent as well as the care of the assets and the distribution of the legacies; but the trustee's duties are in general only the care of assets and the division of income.

The first duty of a **testamentary trustee**, on taking over the assets of an estate, is to examine the executor's decree of distribution and the accounts of the executor sufficiently to satisfy himself that he is receiving all of the assets to which he is entitled. Immediately thereafter he should have transferred to his name as trustee all the assets. If there are two or more trustees the transfers should be to the names of all.

ACCOUNTS NEEDED BY TRUSTEES.—When the books of the executor are closed the assets are included in the two accounts of Cash and Inventory. These are offset by the two net worth accounts of Income and Corpus, the amount of income cash being represented by the balance of the Income account and the sum of the corpus cash and other corpus assets by the balance of the Estate Corpus account. These four accounts are all which are ordinarily necessary for the trustee, as—except in the cases of large estates with much rental property—the accounts are generally kept without the use of analytical income and expense accounts.

It is necessary for the trustee to **account separately** for each of the various trusts for which he acts. This does not mean for the various estates alone, as in one estate there may be several trusts. A will may provide for any number of different trusts; therefore, these four accounts (Cash, Inventory, Principal, and Income) must be maintained for each trust.

The place which **banks and trust companies** are properly taking in acting as fiduciaries presents an accounting need which, due to the number of trusts involved, requires an elaboration on the above simple system. Because of the great number of assets of each kind handled, the handling of the asset accounts is simplified if they are somewhat broken up. The ordinary subdivisions are Cash, Notes and Mortgages, Stocks and Bonds, Real Estate, and other assets. The need for a division of labor and an adequate watch over the keeping of records requires the opening of **controlling accounts** carrying summaries of the transactions having to do with all trusts; but whatever additional safeguards are needed for the efficient handling of a large number of trusts at the same time can be readily placed upon the type of foundation suggested above, because the principles and the legal requirements remain the same.[6]

EXAMPLES OF TRUSTEE'S ACCOUNTS.—The most satisfactory way of keeping the accounts of a trustee has been found to be by the use of a synoptic, showing only the four accounts essential for the trustee, namely, Cash, Investments, Principal, and Income, with a debit and a credit column for each.

Assume that a trust fund of $100,000 has been created, the income therefrom (but not to exceed $5,000 thereof annually) to be paid to donor's sister during her life. After her death the principal is to be paid as directed by her will. This is only one of a number of trusts created by the will. The trial balance of the books of the executor of this estate after distribution was as follows:

[6] For a more complete discussion of accounting for the estates of decedents the reader is referred to Conyngton, Knapp, and Pinkerton: Wills, Estates, and Trusts.

Account	Debit	Credit
Cash	$ 17,000	
Inventory	563,000	
Estate Corpus		$579,800
Income		200
	$580,000	$580,000

Specific assets or specific sums of money have been set aside by the executor to form the trust funds. Before making his opening entries the trustee must know what assets are set aside for the various trusts. With this information, he opens his record of this trust with the entry:

Cash	$ 3,000	
Investments	97,000	
Principal		$100,000

INVESTMENT OF CASH.—When the trustee invests any part of the balance of cash which is lying idle, whether this cash is a part of the corpus turned over to him by the executor or has come into his hands as a result of the sale of assets, or whether it is income which has been collected by him and is not to be immediately distributed, it is necessary for him to make the entry, Investments/Cash.

SALE OF ASSETS.—Suppose the trustee, for certain reasons and with approval of the court, decides to sell some of the securities which have been set aside for the trust. Gains and losses on such sales are not income or a charge against income. (Income from the standpoint of the division of funds between a tenant and a remainderman is not necessarily the same as income from the standpoint of the existing income tax law.)

In case of inventoried assets it is not a certain amount of money which makes up the principal, but the assets themselves for whatever they are worth. In case of assets purchased by the trustee and later resold by him, the increment or loss is an increase or decrease in the principal of the trust rather than an item of income or a reduction of income. Any unusual or extraneous gain or loss, other than the usual yearly income and charges against that income, falls to the principal of the fund.

The assets sold must be credited to Investments account at the valuation at which they entered this account, which will be the valuation at which they were carried in the original inventory of the estate if they were included in that inventory, or the cost, if they were purchased after the decedent's death. The effect of this entry is to make the books show that the investments of this fund have been reduced in amount by that valuation, no matter what the selling price.

If the securities were sold at a profit, the entry is:

Cash (the amount received)	$.....	
Investments (the inventory value or the cost)		$.......
Principal (the profit)		....

If a loss resulted from the sale the entry is:

Cash (the amount received)	$......	
Principal (the loss)	......	
Investments (the inventory value or the cost)		....

BETTERMENTS, REPAIRS, AND REPLACEMENTS.—Expenditures for repairs necessary to maintain property in its previous condition are chargeable to income, but repairs and additions which increase the usefulness or value of

property are charged to principal. This rule is not always easy to apply, but it has been interpreted as meaning that "where repairs improve the property to the extent of their cost, they are chargeable to principal."[7] In other words, any cost which actually adds to value—which is for a real improvement or addition rather than for merely a repair or a replacement—is a proper charge against principal.

PAYING OFF ENCUMBRANCES.—Some of the property turned over to the trustee may have been pledged or mortgaged and it may eventually devolve upon the trustee to discharge this debt. Such a payment is a charge against principal, but all interest on the mortgage is chargeable to income.

If the trustee is required to discharge an involuntary encumbrance, such as an assessment for street improvements, the cost is divided between income and principal. Sometimes the entire amount is charged to Investments at time of payment, and Income is charged with interest thereon annually thereafter. Sometimes the interest is funded and charged to Income in a lump, the present value of the annual payment for the number of years the trust is likely to exist (based on the American Mortality Tables) being determined. The justice of the charge against income rests on the theory that since the income-earning capacity of the investment is increased (theoretically, at least) by the improvement, the recipient of the income should pay a part of the cost.

RECEIPTS AND DISBURSEMENTS OF INCOME.—When income is received from interest, dividends, rents, etc., the entry is Cash/Income.

Payments of income to tenants under the will are entered as Income/Cash.

The provision of the will under which the life-tenant receives income from the trust fund of $100,000, "said payments of income not to exceed $5,000 per annum," creates an indefinite annuity. Income from this fund is, of course, credited to Income account, and payments to the life-tenant, limited to $5,000 annually, are charged to that account.

If the will directs that the excess income over $5,000 is to be transferred to the principal of the trust, it is necessary at the close of each year to record this transfer on the books by the entry, Income/Principal. If the excess were to be transferred to the principal of some other trust, the entry on the books of the first would be Income/Cash, and that on the books of the trust receiving the increase would be Cash/Principal.

If the will had directed that the excess income over $5,000 be disposed of by payment to someone else, such payments also would be entered as Income/Cash.

If the will had not provided for the transfer of the excess over $5,000, but if the excess were to have been simply retained in Income, to make up the shortage in any year in which the earnings were less than $5,000, and were eventually to pass with the principal to the life-tenant's grantees, no entry would have been necessary. The balance not distributed would have been accumulated in the Income account. Any purchases of securities or other assets with the money thus made available would be shown as Investments/Cash, an entry which does not affect Income account but simply shows the exchange of an asset of cash for an asset of investments. The Income account would still show the amount of income which had been earned and had not been distributed

EXPENSES.—The payment of any expenses which are proper charges against income may be entered as Income/Cash. Any disbursements which are charges against the principal of the estate are in the same way entered as Principal/Cash.

Taxes are chargeable against income, with the exception that in some states

[7] Loring, A Trustee's Hand Book, 3rd ed.

taxes assessed on vacant land are charged against principal. Insurance premiums are generally chargeable against income by the terms of the trust instrument, and this practice is usually followed where there are no definite provisions. But recoveries on account of fire losses are principal. In case of partial loss they are generally used to meet expense of repairs. If there is a total loss, the fund is invested either in rebuilding or in some other proper manner.

The **trustee's commission** is usually a percentage of gross income collected and is charged against income. Additional allowances where extra work is necessary, as for sale of real estate, are charged to principal when such services are primarily beneficial to the fund, or they may be apportioned equitably. A broker's commission for purchase or sale of real estate is considered part of the purchase price or a deduction from the sale price, and is consequently a charge against principal.

The same reasoning would seem to apply to the purchase of stocks and bonds, [but] broker's commissions on change of investments, where it was expressly provided that all expenses were to be charged to income, were properly classed as expenses and charged to income.[8]

INTEREST ON BANK ACCOUNTS.—Trustees frequently have in certain funds balances of cash too small for ordinary investment but not likely to be needed for some time. As it is considered necessary for this cash to produce income, the general practice is to deposit it in a savings bank. Such a deposit should not be treated as an investment but should be carried as cash.

Interest credited on such savings should be recorded on the books, like other income, by the entry Cash/Income. If such income is on funds belonging to different trusts, it must be prorated between the trusts. Interest received on the average daily balance in a checking account common to all the trusts must be prorated on the basis of the average daily balance in each.

TRUST FUND PASSING BY WILL.—Under the provisions of the will the principal of this trust is to be paid over as directed by the beneficiary's will. At that time it will be necessary for the trustee to deliver to the executor of the beneficiary's estate the amount of cash and other assets comprising this trust fund and to make the following entry:

Principal	$........	
Income	....	
Cash		$........
Investments		....

If the will creating the trust had specified any other distribution of the principal, the same entry would have been made at time of the distribution. There is then no balance in any account.

AMORTIZATION OF BOND PREMIUM AND DISCOUNT.—Statutes of the different states vary in regard to the propriety of amortization, and are not always consistent in applying the same principles to bond premium and bond discount, but these statutes must be followed in each case.[9]

When bond discount is amortized, as when government bonds, yielding a low rate, are bought below par, the average return being raised on account of the low cost, the entry at the time interest is received is:

Cash (the amount received)	$........	
Principal (the amount of amortization)	....	
Income (the amount of income to be allowed)		$..

8 Loring, A Trustee's Hand Book, 3rd Ed.
9 For discussion of methods of amortization see section on "Mathematics and Formulas."

When premium on a bond is being amortized, the book entry of each receipt of bond interest is:

Cash (the amount received)....................	$........	
Income (the amount of income to be allowed).		$........
Principal (the amount of amortization).....		....

TRUSTEE'S REPORTS.—The **periodical reports** made by a trustee to the court are in two parts. The first has to do with principal; the second with income These are preceded by a summary of the condition of the estate as a whole. The **supporting schedules** making up the larger part of the report analyze this summary in its relation to principal and income of each individual trust.

At either the beginning or the end of the report should appear the **certificate of the trustee** as to the correctness of the report. Practice in the various states differs as to the form of this certificate, and at least the first one submitted by the trustee should be prepared with the assistance of his attorney.

The **form to be followed in the schedules** is specifically provided for in a few states, but the statutes of all mention the things to be shown. The court will have the report audited, and expense to the estate is saved if the schedules are clear and if they reconcile properly among themselves and with the books. Below are presented the principles generally followed and specimen schedules suitable in most states.

VALUATIONS USED.—All assets of the estate must be carried in the reports at book values. These are, in case of assets which were included in the original inventory of the estate, the valuations at which they were appraised for that inventory; in the case of assets purchased since the preparation of that inventory, the cost to the estate.

For the information of the court, many states require that the report of the trustee give also the market value or "bid" price on the day as of which the report is prepared. This means the day on which the trustee closed his books, the last day the transactions of which are included in the report. As it will probably take the trustee some time to prepare his report, it will usually not be actually filed until later. Under no conditions, however, should the books be changed to agree with the market value at any time during the trusteeship. If the asset becomes absolutely worthless it may, if desired, be written off by the entry, Principal/Investments; but if this is done the asset must continue to be carried in the reports and accounted for as of no value.

SCHEDULES.—The **first schedule** accompanying trustee's reports usually shows the assets of the estate at the date of the report.

The **headings** which it is necessary to show are Cash and Investments. Under Cash should be detailed the various depositaries with the amounts in the possession of each.

The general heading, Investments, should be split up into the necessary subclassifications. Those most common are: Real Estate, Mortgages, Notes Receivable, Stocks (or "Shares" as they are called in some jurisdictions), and Bonds. Others are: Accounts Receivable, Unsecured, Jewelry, etc. Each asset should be so described as to distinguish it absolutely.

The **second schedule** lists the sales of assets from the trust since date of last report. All information having to do with the sales should be shown, including date of court order authorizing the sale, a list of items sold, gross proceeds of each sale, expense of the sale, and difference between these two amounts or the net proceeds. The value at which the asset now sold has been carried on the books should also be given, and the schedule should be summarized by show-

ing the difference between the net proceeds of the sales and the book value of the assets sold. This difference is the net increase or decrease in principal on account of sales during year.

If there have been no sales during the year the schedule should be headed up, but instead of a list the words "No sales during year," should be inserted.

The **schedules of purchases of assets** for principal of each trust require usually only date of authorizing order, list of items purchased, their cost, and expense of purchase, the sum of which makes up the gross amount paid. If no purchases have been made during the year the schedules should be shown, but the words, "No purchases during year," take the place of the usual list.

Assignees, Guardians, and Receivers

ACCOUNTING ON CASH BASIS.—Accounting for assignees, guardians, and receivers, since these officers are required to report to courts which still follow the ancient practice of dealing almost entirely in terms of cash, follows the general lines set forth for the estates of decedents. The keeping of really adequate records for receivers, who usually operate going businesses for a time at least, is complicated by the desirability of maintaining accrual records to show the true results, along with the cash records required by the courts.

RECEIVERSHIP ACCOUNTING.—Receivers of corporations must not overlook the fact that the reports required of them by the federal income tax laws are corporation reports, and must follow the lines previously established by the corporation. These returns, for their proper preparation, require the keeping of a full set of corporation records during the period of operation of the business. Many receivers have found themselves with a great deal of extra work on their hands because state courts had instructed them that records of cash receipts were all that would be necessary, whereas full analyses later were found to be required by the Internal Revenue Department.

SECTION 22

CONSOLIDATIONS

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 22

CONSOLIDATIONS

HISTORICAL.—Following the depression of 1873, corporations became a popular form of business organization in the United States. None of the present well-known combinations then existed and to eliminate competition various arrangements were entered into. The **pool** was most common. Those entering into a pool usually agreed to sell their output through some central organization, the object being to secure stabilization of output and prices. The only power of enforcement lay in the good faith of the members in addition to certain penalties. Consequently, it often became profitable for members to break their agreements.

Next came the **trust.** Voting stocks of affiliated companies were placed under control of a board of trustees which issued receipts therefor, known as trust certificates. The trust was abandoned for the **holding company** when the legal test of restraint of trade became decisive.

The holding company was first made a practical possibility through the enactment by the New Jersey legislature of a revised general corporation act, under the provisions of which one corporation was granted the right to purchase and hold stocks of other corporations. Previously, this privilege had been granted only by special legislative act.

Status Under Federal Revenue Laws

WHEN CONSOLIDATED STATEMENTS DESIRABLE.—When securities are held for other purposes than control, it is not ordinarily necessary or desirable to show accounts in consolidated form. But when control of one or more corporations by another is exercised through intercompany stockholdings, concerns thus related are unified. It is desirable to express the full meaning of such unification.

Thus, if Company A owns 90% of outstanding common stock of Company B, it controls it and determines its policies. If it is engaged in same or a related industry, it buys from and sells to Company B, possibly advancing cash to Company B at times. If Company A sells goods to Company B at an apparent profit of $500, and the two companies are considered as a unit, no true profit is made. Inventory values are marked up by transferring merchandise between affiliated concerns. Such inflated values require adjusting to show the true status. Intercompany balances on current account offset each other. When accounts of holding companies are not consolidated with the accounts of their subsidiaries the holding companies may take into their income accounts dividends from subsidiaries which make a profit, but omit losses of other subsidiaries.

Federal taxation of corporate incomes is a factor. The United States

Revenue Act of 1917 contained no provisions concerning consolidated accounts. The American Institute of Accountants submitted a brief urging adoption of consolidated returns. It stated two possible bases, viz., (a) that intercorporate relationships must be on a strictly commercial basis, which would be troublesome both to taxpayer and government, or (b) that combined operations must be treated as one whole. It urged adoption of the latter course as the only one revealing the true situation. Following this the Treasury Department issued regulations providing that whenever necessary more equitably to determine invested capital or taxable income, the Commissioner of Internal Revenue **may** require corporations classified as affiliated under Art. 77 to furnish a consolidated return of net income and invested capital.

A Treasury decision was subsequently issued under which affiliated corporations, as limited and defined in paragraphs C and D of the regulations, were directed to make consolidated returns for the purpose of excess profits tax.

Concerning what companies were to submit consolidated statements the regulation provided: Two or more corporations are not "affiliated" merely because all or substantially all of stock therein is owned by same corporation, individual, or partnership; they must also be engaged in same or a closely related business.

The **Revenue Act of 1918** made specific provision for consolidated returns, stating that "corporations which are affiliated within the meaning of this section shall, under regulations to be prescribed by the Commissioner . . . make a consolidated return of net income and invested capital." The act provided that two or more domestic corporations were to be deemed affiliated:

1. If one corporation owns directly or controls through closely affiliated interest or by a nominee or nominees substantially all the stock of the other or others, or,
2. If substantially all the stock of two or more corporations is owned or controlled by the same interests. (See Art. 633 of Reg. 45.)

The 1918 act thus required consolidated returns where all or substantially all of the voting stock is held **without regard to the similarity or dissimilarity of the businesses.**

Under the Revenue Act of 1918 it was necessary to submit consolidated returns, both to ascertain net income and to ascertain invested capital, latter being required to determine excess profits tax. The Treasury Department ruled that: "Consolidated invested capital must be computed as of the beginning of the taxable year of the parent or principal reporting company and consolidated income must be computed on the basis of its taxable year." (See Art. 638 of Reg. 45.) Thus the consolidated balance sheet submitted to the Treasury Department for the purpose of determining invested capital was to be dated as of the beginning of the taxable year, while the consolidated statement of income was for the taxable year.

As the **Revenue Act of 1921** levied an excess profits tax for the calendar year 1921 only, the consolidated statement for purposes of determining invested capital is no longer of current interest so far as taxation is concerned. However, Sec. 240 of this law provides that corporations affiliated within the meaning of that section may make either separate returns or, under proper regulations, consolidated returns. Whichever plan is chosen must thereafter be followed, unless permission to change is granted by the Com-

missioner. The conditions under which corporations are deemed affiliated under this act are the same as those given above for the 1918 act. If affiliated corporations choose to submit consolidated returns, the law (Sec. 240-b) provides that: "The total tax shall be computed in the first instance as a unit and shall then be assessed upon the respective affiliated corporations in such proportions as may be agreed upon among them, or, in the absence of any such agreement, then on the basis of the net income properly assignable to each."

WHEN CORPORATIONS ARE AFFILIATED.—No fixed rule can be prescribed. The general rules provided by the acts of 1918 and 1921 are given above. The Treasury does not interpret the words "substantially all the stock" as meaning any given percentage, but says that it must be construed according to the facts of the particular case. The Treasury regards the ownership or control of 95% or more of the outstanding voting capital stock (not including stock in the treasury) at the beginning of and during the taxable year, as constituting an affiliation within the meaning of the act of 1921. When stock ownership or control is less than 95%, but in excess of 70%, the Treasury requires a full disclosure of affiliations, including stock owned or controlled in each subsidiary or affiliated corporation and percentage of such stock owned or controlled to total stock outstanding. Such statements should preferably be made in advance of filing the return, but if a consolidated statement is filed subject to the Commissioner's approval, the required statement should be filed as a part of the return. The words "the same interests" mean the same individual, partnership, or corporation, or the same individuals, partnerships, or corporations; but if stock of two or more corporations is owned or controlled by two or more individuals, or by two or more corporations, the corporations will not be held to be affiliated unless the percentage of stock of such corporations held by each individual, each partnership, or each corporation is substantially the same in each of the corporations.

CHANGE IN OWNERSHIP DURING TAXABLE YEAR.—If corporations are affiliated at beginning of a taxable year but such control or ownership is ended during the year, due to change of ownership, or if corporations are not affiliated at beginning of the taxable year but become affiliated during the year through change of stock ownership or control, a full disclosure of such changes of stock ownership must be made to the Commissioner. In the first case the parent company should ordinarily exclude from its return income and invested capital of controlled company from date of change of stock ownership. In the second case parent company should include in its return income and invested capital of controlled company from date of change of stock ownership. The controlled company whose status is changed should make a separate return for that part of the taxable year during which it was not in the affiliated group. If the change of status is for so short a period as to be negligible, a consolidated return or separate returns, as the case requires, may be made. A complete statement setting forth the facts should accompany such return or returns.

NET INCOME OF AFFILIATED CORPORATIONS.—The consolidated taxable net income of affiliated corporations is the combined net income of the consolidated corporations, subject to such provisions as cover the determination of taxable net income of separate companies, and subject to the elimination of intercompany transactions. If the net income of the group as thus determined does not exceed $25,000, only one specific credit

of $2,000 is allowed. If the consolidated net income is more than $25,000, the tax imposed by Sec. 230 of the 1921 law shall not exceed the tax which would be payable if the $2,000 were allowed, plus the net income in excess of $25,000. (See Art. 636, Reg. 62.)

FORM OF CONSOLIDATED RETURN.—Consolidated returns should be filed in Form 1120 by the parent or reporting company in the office of the collector of the district in which its principal office is located. The subsidiary companies are required to file Form 1122, with schedules indicated thereon, in the offices of the collectors of their respective districts. The parent company filing a consolidated return for the first time shall include therein statements setting forth:

(a) The name and address of each of subsidiary or affiliated corporations included in such return.
(b) The par value of total outstanding capital stock of each of such corporations at beginning of taxable year.
(c) The par value of such capital stock held by parent corporations or by same interests at beginning of taxable year.
(d) In case of affiliated corporations, the stock of which is owned or controlled by the same interests, a list of the individuals, partnerships, or corporations constituting such interests, with percentage of total outstanding stock of each affiliated corporation held by each of such individuals, partnerships, or corporations during all or any part of the taxable year.
(e) A schedule showing the proportionate amount of the total tax which it is agreed among them is to be assessed upon each affiliated corporation.

If substantial changes in ownership occur during the taxable year in (b) and (c), the conditions existing immediately after such changes should be shown.

Consolidated returns must be filed in columnar form so that the details of gross income items and deductions for each corporation included in the affiliated group may be readily audited.

STATUS OF PERSONAL SERVICE CORPORATIONS.—If the taxable period of two or more affiliated corporations begins **prior to Jan. 1, 1922,** and if one or more of them, taken alone, would be classed as a personal service corporation, and if one or more of the affiliated corporations would not be entitled to be so classified, those of the former class lose their status as personal service corporations, and all should be consolidated. The consolidated group may be treated as a personal service corporation if capital is not a material factor in producing its income and if its affairs are regularly conducted by the owners or stockholders.

Forms of Combinations

HOW COMBINATIONS ARE EFFECTED.—The three most popular present-day methods of effecting combinations of corporations are the **consolidation,** the **merger,** and the **holding company.** Companies are **consolidated** through the organization of a new company which buys out the business of the old ones, taking over their assets and assuming their liabilities. The stock of the new company may be exchanged directly for the net assets of the old companies, or it may be sold for cash, which is in turn used to

pay off the stockholders in the old concerns. The old companies then go out of existence, after the cash or stock received from the new company has been distributed to their stockholders.

In case of merger no new company is organized, but one of the old companies buys out the others, paying the amounts of their net worths either in cash or in stock, or both. The companies bought out then go out of existence.

In case of the holding company one of the old concerns may act as the controlling or holding company, or it may be found desirable to organize a new company for that purpose. The holding company secures its holdings in the other companies through purchase of stock from their stockholders. The companies thus controlled are known as the subsidiaries of the holding or parent company. If the holding company secures the stock of the subsidiaries by paying for it in cash, the stockholders thus bought out secure no interest in the holding company. If it pays for it by issuing its own stock, they become stockholders of the parent company.

CONSOLIDATION ILLUSTRATED.—The following are the balance sheets of Companies X and Y:

Balance Sheet—Company X

Real Estate	$100,000	Capital Stock	$150,000
Machinery	25,000	Accounts Payable	45,000
Inventories	60,000		
Cash	10,000		
	$195,000		$195,000

Balance Sheet—Company Y

Real Estate	$ 50,000	Capital Stock	$100,000
Machinery	15,000	Accounts Payable	8,000
Inventories	25,000		
Cash	18,000		
	$108,000		$108,000

Company Z is organized with a capital stock of $250,000, takes over the assets of Companies X and Y at their book values, and assumes their liabilities.

Entries on books of Company Z, the parent company:

Subscriptions		$250,000	
Capital Stock			$250,000
To record subscriptions made by Companies X and Y as follows:			
Company X	$150,000		
Company Y	100,000		
Real Estate		$100,000	
Machinery		25,000	

Inventories	60,000	
Cash	10,000	
Accounts Payable		$ 45,000
Company X, Vendor		150,000
To record purchase of assets and assumption of liabilities of Company.		
Company X, Vendor	$150,000	
Subscriptions		$150,000
To charge Company X for subscriptions, representing excess of assets over liabilities of Company X, which is amount of capital stock issued in payment.		
Real Estate	$ 50,000	
Machinery	15,000	
Inventories	25,000	
Cash	18,000	
Accounts Payable		$ 8,000
Company Y, Vendor		100,000
To record the purchase of the assets and the assumption of the liabilities of Company Y.		
Company Y, Vendor	$100,000	
Subscriptions		$100,000
To charge Company Y for subscriptions, representing the excess of assets over liabilities of Company X, which is the amount of the capital stock issued in payment.		

The balance sheet of Company Z now appears as follows:

Balance Sheet—Company Z

Real Estate	$150,000	Capital Stock	$250,000
Machinery	40,000	Accounts Payable	53,000
Inventories	85,000		
Cash	28,000		
	$303,000		$303,000

Entries on books of absorbed companies are:

Entries on books of Company X:

Company Z, Vendee	$150,000	
Accounts Payable	45,000	
Real Estate		$100,000
Machinery		25,000
Inventories		60,000
Cash		10,000
To record the sale of assets to, and the assumption of liabilities by, Company Z.		
Stock of Company Z	$150,000	
Company Z, Vendee		$150,000
To record receipt of stock of Company Z, is-		

	Debit	Credit
sued in payment of excess of value of assets transferred to Company Z over liabilities assumed by Company Z.		
Capital Stock	$150,000	
Stock of Company Z		$150,000
To record distribution of stock of Company Z to stockholders of Company X, thus closing the books of Company X.		

Entries on books of **Company Y** are same as the above, except the amounts involved.

MERGER ILLUSTRATED.—Assume that the balance sheets of Companies X and Y are as shown on page 1094, and that Company X enters into an agreement with Company Y to buy its assets and assume its liabilities, the excess of assets over liabilities to be paid for in capital stock of Company X. Since Company X's authorized capital stock is all outstanding, it is necessary to secure an additional authorization to the extent of the net worth of capital stock of Company Y, $100,000.

Entries on books of Company X:

	Debit	Credit
Subscriptions	$100,000	
Capital Stock		$100,000
To record subscription of newly authorized stock by Company Y, to be paid for by sale of its business to Company X.		
Real Estate	$ 50,000	
Machinery	15,000	
Inventories	25,000	
Cash	18,000	
Accounts Payable		$ 8,000
Company Y, Vendor		100,000
To record transfer of assets and liabilities from Company Y in accordance with agreement		
Company Y, Vendor	$100,000	
Subscriptions		$100,000
To offset credit to Company Y for net worth of business taken over against subscriptions by Company Y to capital stock of Company X.		

The balance sheet of Company X now stands thus:

Balance Sheet—Company X

Real Estate	$150,000	Capital Stock	$250,000
Machinery	40,000	Accounts Payable	53,000
Inventories	85,000		
Cash	28,000		
	$303,000		$303,000

Entries on books of Company Y, the absorbed company:

Company X, Vendee	$100,000	
Accounts Payable	8,000	
Real Estate		$ 50,000
Machinery		15,000
Inventories		25,000
Cash		18,000
To record sale of assets to, and assumption of liabilities by, Company X.		
Stock of Company X	$100,000	
Company X, Vendee		$100,000
To record receipt of stock of Company X in payment for net worth of business transferred to Company X.		
Capital Stock	$100,000	
Stock of Company X		$100,000
To record distribution of stock of Company X to stockholders of Company Y, thus closing the books of Company Y.		

HOLDING COMPANY ILLUSTRATED.—Assume that balance sheets of Companies X and Y are as shown on page 1094, and that a holding company, Company M, is formed to control them. It does this by purchasing stocks of Companies X and Y from stockholders, and so does not deal directly with these companies. The payment therefor may be in cash or in stock of Company M. For purposes of this illustration assume that Company M buys up stock of Companies X and Y by paying in stock. The total authorized stock of Company M is $250,000.

Entries on books of Company M:

Subscriptions		$250,000	
Capital Stock			$250,000
For stock subscribed as follows:			
By stockholders of Company X.	$150,000		
By stockholders of Company Y.	100,000		
Stock of Company X		150,000	
Stock of Company Y		100,000	
Subscriptions			$250,000
To record purchase of outstanding stocks of Companies X and Y.			

The variations from the above procedure in case stocks of Companies X and Y are bought for cash are unimportant. Company M in this case sells its stocks to outsiders for cash, and then uses this cash to buy the outstanding stock of Companies X and Y from stockholders. In case no new company is organized, either Company X or Company Y becomes the holding company. If Company X becomes the holding company, it increases its capital stock by at least the amount of Y's outstanding stock, $100,000, which is subscribed for by the stockholders of Company Y.

Entries on books of Company X:

Subscriptions	$100,000	
Capital Stock		$100,000
To record subscriptions by stockholders of Company Y.		

Stock of Company Y	$100,000	
Subscriptions		$100,000
To record payment by stockholders of Company B in stock of Company B.		

Balance sheet of Company M now appears thus:

Balance Sheet—Company M

Stock of Company Y	$100,000	Capital Stock	$250,000
Stock of Company X	150,000		
	$250,000		$250,000

Principles of Consolidated Balance Sheet

PRINCIPLES INVOLVED.—The separate balance sheets of the holding company and its subsidiaries do not show the true status of the group, which constitutes an operating unit. The consolidated balance sheet shows the true status of the group by eliminating non-essential items. In it all assets and liabilities are combined except intercompany accounts, which are eliminated. In setting up a consolidated balance sheet the **fundamental principle** to be followed is: **Eliminate all intercompany holdings of capital stock as well as all other intercompany balances of every kind.**

Corollary to this principle:

1. Show intercompany current accounts separately. If differences exist between them, reconcile these differences and allocate them to the proper accounts, which then should be eliminated.
2. Eliminate all intercompany profits resulting from intercompany sales above cost, thus removing such profits from inventory valuations.
3. Eliminate intercompany holdings of capital stock, and such part of surplus as is applicable to such intercompany holdings.

It should be borne in mind that these adjustments are made solely in the working papers for the consolidated balance sheet and do not affect the books of the affiliated companies.

ADJUSTMENT OF INTERCOMPANY CURRENT ACCOUNTS.—Discrepancies mentioned in (1) arise from intercompany transfer of wealth, where such transfer is taken up on books of company surrendering it but is not yet taken up on books of company receiving it, usually because it is in transit at time books are closed. Thus, if Company A ships to its subsidiary, Company B, goods, at cost, $5,000, and charges them against Company B and they are in transit when books are closed, Company A's account with Company B is charged $5,000, but there is no corresponding credit on Company B's books. The difference is reconciled by crediting intercompany current account and charging inventories in the working sheet used to compile the consolidated balance sheet. Thus:

Inventories	$5,000	
Intercompany Current Accounts		$5,000

The intercompany current accounts now exactly offset each other and are eliminated in the consolidated balance sheet.

ADJUSTMENT OF INTERCOMPANY PROFITS.—Intercompany profits (2 above) arise from intercompany sales above cost. Thus, if three companies, A, B, and C, are affiliated, and A buys an article from an independent concern for $500, sells it to B for $600, and B sells it to C for $700, considering the three concerns as a unit, inventories have been written up $200 and a paper profit of $100 shown on books of A and B, respectively. Status of the group, taken as a unit, is shown by adjusting profits, surplus, and inventory accounts. The following rule applies:

If **intercompany profit in inventory** is larger at end than at beginning of period, make an adjusting entry charging current Profit and Loss with excess, and Surplus with intercompany profits at beginning of period; credit inventories with intercompany profits at end of year.

If **intercompany profit in inventory** is less at end than at beginning of year, charge Surplus for amount at end of year, credit Inventory for amount at beginning of year, and credit current Profit and Loss for difference.

Thus, if at beginning of an accounting period intercompany profit in inventories is $5,000 and at end of period is $6,000, adjusting entry to reduce inventories to cost and to show effect of such reduction on current Profit and Loss and on Surplus is as follows:

Profit and Loss (current)	$1,000	
Surplus	5,000	
Inventories		$6,000

If figures are reversed so that inventories at beginning of year show intercompany profits of $6,000 and $5,000 at end of year, the entry is:

Surplus	$6,000	
Inventories		$5,000
Profit and Loss (current)		1,000

This form of adjustment is based on assumption that current period's Profit and Loss is kept separate from surplus accumulated during previous periods. Otherwise the adjustment consists in charging surplus with intercompany profits in inventories at close of period, and effect on current Profit and Loss would not be shown.

ADJUSTMENT OF INTERCOMPANY HOLDINGS OF CAPITAL STOCK.—Intercompany holdings of capital stock (3 above) are easily eliminated when stock of subsidiary is held at par on parent company books. It is usually held at some figure other than par, in which case it is necessary to bring accounts into agreement before intercompany holdings can be eliminated. The following rule applies:

When **book value of stock of subsidiary** in balance sheet of controlling company is **in excess of** par value of stock plus surplus of subsidiary company **applicable to such stock** at date of its acquisition by controlling company, excess should be charged to Good-Will.

When **book value of stock of subsidiary** in balance sheet of controlling company is **less than** par of stock plus surplus of subsidiary company **applicable to such stock** at date of acquisition by controlling company, difference should be credited to Good-Will account on books of subsidiary, or if no such account exists on books of subsidiary, then to Good-Will wherever found in consolidated working papers, thus being deducted either from Good-Will account of holding company or that of any other subsidiary or

subsidiaries. H. A. Finney suggests that while this is customary procedure it is not theoretically correct, and explains as follows:[1]

Assuming that subsidiary has no Good-Will account at date of acquisition, the fact that holding company acquired its stock at less than book value indicates one of two things: either (1) some asset on subsidiary's books was overvalued, or (2) the holding company made a fortunate purchase, acquiring right to more net assets than it parted with. If some asset was overvalued, excess of book value over purchase price should be deducted on consolidated balance sheet from the overvalued asset. If no subsidiary asset was overvalued, and if holding company acquired subsidiary stock by an issue of its own stock, excess value received over par of stock issued in payment is paid-in surplus, to be shown on consolidated balance sheet as surplus, set apart as capital surplus if the distinction is desired. If holding company acquired subsidiary stock by a cash payment, excess still appears to be a proper addition to capital surplus.[2]

Assume that holding Company A holds ¾ of outstanding stock of subsidiary Company B, total of which amounts to \$100,000; also that at time of purchase of this stock by A surplus of B was \$60,000. Since A purchased ¾ of outstanding stock of B, ¾ of surplus at time of acquisition of stock, or \$45,000, is applicable to stock held by A. Assuming that A bought the stock of B at 170, a total cost of \$127,500, this is the figure at which stock of B should be carried on A's books. It is in excess of par of stock plus surplus of B applicable to such stock at date of acquisition by A, which was:

Par of stock bought by A..............	\$75,000
Surplus applicable to stock bought by A (¾ of total surplus at time of acquisition by A)........................	45,000
	\$120,000

Therefore book value of stock of B on A's books (\$127,500) is \$7,500 in excess of par value of the stock plus surplus of subsidiary company applicable to such stock at date of its acquisition by controlling Company A, and this excess should be charged to Good-Will. In form of a journal entry the adjustment is:

Capital stock (of B owned by A)..............	\$75,000	
Surplus..................................	45,000	
Good-Will................................	7,500	
Investment in Stock of B..............		\$127,500

This eliminates the intercompany holding of capital stock, also surplus of subsidiary company applicable to such stock at date of acquisition, and charges Good-Will for excess of cost of such stock over and above its par value plus surplus applicable to it at date of acquisition.

If parent company holds all of outstanding stock of subsidiary above adjustments, eliminate all surplus of subsidiary as it stood at date of acquisition. **If parent company acquires only part of stock of subsidiary,** only such portion of surplus is eliminated in consolidated balance sheet as is applicable to stock acquired. Remainder enters into consolidated balance sheet as surplus of subsidiaries applicable to stock outstanding in hands of public. Also stock outstanding is shown in consolidated balance sheet as

[1] Adapted from Consolidated Statements, pp. 74–75
[2] End of adapted material.

stock outstanding in hands of public. The two items, capital stock of subsidiaries outstanding and surplus applicable thereto, may be shown as one item, as for example, outstanding capital stock of subsidiary companies, or similar title. Subsequent profits earned must likewise be allocated to the two subdivisions of subsidiary company stocks, viz., (a) that outstanding in hands of public, and (b) that owned by parent company.

WORKING PAPERS FOR CONSOLIDATED BALANCE SHEET.—To combine similar assets and eliminate intercompany items, **working papers** should be drawn up which show columns for each of the **balance sheets** of the affiliated companies, columns to show **eliminated items,** and columns to show **consolidated balance sheet items.** Following illustration of consolidated balance sheet working papers is based on balance sheets of subsidiaries X and Y shown on page 1094, and balance sheet of holding Company M shown on page 1098:

Working Papers for Consolidated Balance Sheet

	M	X	Y	Eliminations	Consolidated
Assets					
Investment in Stock of Company X..	$150,000			$150,000	
Investment in Stock of Company Y..	100,000			100,000	
Real Estate.......		$100,000	$ 50,000		$150,000
Machinery........		25,000	15,000		40,000
Inventories.......		60,000	25,000		85,000
Cash............		10,000	18,000		28,000
	$250,000	$195,000	$108,000	$250,000	$303,000
Liabilities					
Capital Stock....	$250,000	$150,000	$100,000	$250,000	$250,000
Accounts Payable..		45,000	8,000		53,000
	$250,000	$195,000	$108,000	$250,000	$303,000

The consolidated balance sheet prepared from above working papers follows:

Consolidated Balance Sheet
Companies M, X, and Y
As at ....

Real Estate....................	$150,000	Capital Stock, Company M.....	$250,000
Machinery.....................	40,000	Accounts Payable..............	53,000
Inventories....................	85,000		
Cash..........................	28,000		
	$303,000		$303,000

More detailed illustrations are found in following pages.

Effect of Surplus or Deficit in Balance Sheet of Subsidiary Company at Time of Acquisition

STATUS OF SURPLUS ACCUMULATED BEFORE AFFILIATION.—The amount of **surplus** existing on a subsidiary company's balance sheet at date its stock is acquired by parent company, determines the book value of stock so acquired and hence its cost to the holding company. If all of the subsidiary's stock is acquired by the parent company, it is evident that the entire surplus as well as the capital stock of the subsidiary company becomes a liability to the holding company, and, being an intercompany account, should be eliminated in the consolidated balance sheet. If only part of subsidiary's stock is acquired by parent company, the stock acquired and that portion of surplus applicable to stock so acquired should be eliminated in the consolidated balance sheet.

Likewise, a **deficit** on books of subsidiary at time of acquisition of stock by parent company must be eliminated, wholly if entire stock is acquired, or if only a part of stock is acquired, then such part thereof must be eliminated as the part of total stock acquired is part of subsidiary's total stock outstanding.

SURPLUS ILLUSTRATED.—Company Y's balance sheet at date of acquisition of its entire capital stock by Company X is as follows:

Balance Sheet—Company Y

Real Estate	$100,000	Capital Stock	$100,000
Cash	25,000	Surplus	20,000
		Accounts Payable	5,000
	$125,000		$125,000

After acquisition of entire capital stock of Company Y, Company X's balance sheet is as follows:

Balance Sheet—Company X

Stock of Company Y	$120,000	Capital Stock	$150,000
Cash	50,000	Accounts Payable	20,000
	$170,000		$170,000

The account "Stock of Company Y, $120,000," is an investment account on Company X's books. It is an intercompany account offset by the Capital and Surplus accounts in books of Company Y. It follows that these accounts should be eliminated in the consolidated balance sheet. The procedure is as follows:

Working Papers for Consolidated Balance Sheet

	X	Y	Eliminations	Consolidated
Assets				
Investment in Stock of Company Y	$120,000		$120,000	
Real Estate		$100,000		$100,000
Cash	50,000	25,000		75,000
	$170,000	$125,000	$120,000	$175,000
Liabilities				
Capital Stock	$150,000	$100,000	$100,000	$150,000
Surplus		20,000	20,000	
Accounts Payable	20,000	5,000		25,000
	$170,000	$125,000	$120,000	$175,000

Consolidated Balance Sheet
Companies X and Y

Real Estate	$100,000	Capital Stock	$150,000
Cash	75,000	Accounts Payable	25,000
	$175,000		$175,000

DEFICIT ILLUSTRATED.—When there is a deficit on books of subsidiary company and its entire capital stock is acquired by parent company, entire deficit is eliminated in consolidated balance sheet. If only a part of its capital stock is acquired by parent company, only the deficit applicable to portion of stock acquired is eliminated.

Company Y's balance sheet at date of acquisition of its entire capital stock by Company X is as follows:

Balance Sheet—Company Y

Real Estate	$100,000	Capital Stock	$100,000
Cash	5,000	Accounts Payable	15,000
Deficit	10,000		
	$115,000		$115,000

After acquisition of entire capital stock of Company Y, Company X's balance sheet is as follows:

Balance Sheet—Company X

Stock of Company Y	$ 90,000	Capital Stock	$150,000
Cash	65,000	Accounts Payable	5,000
	$155,000		$155,000

The account "Stock of Company Y" on books of Company X is offset by the Capital Stock and Deficit accounts in books of Company Y. Hence these accounts should be eliminated in the consolidated balance sheet.

Working Papers for Consolidated Balance Sheet

	X	Y	Eliminations	Consolidated
Assets				
Investment in Stock of Company Y	$ 90,000		$ 90,000	
Real Estate		$100,000		$100,000
Cash	65,000	5,000		70,000
Deficit		10,000	10,000	
	$155,000	$115,000	$100,000	$170,000
Liabilities				
Capital Stock	$150,000	$100,000	$100,000	$150,000
Accounts Payable	5,000	15,000		20,000
	$155,000	$115,000	$100,000	$170,000

Consolidated Balance Sheet
Companies X and Y

Real Estate	$100,000	Capital Stock	$150,000
Cash	70,000	Accounts Payable	20,000
	$170,000		$170,000

MINORITY INTEREST.—In preceding illustrations showing method of eliminating surplus or deficit of subsidiary at date of acquisition of stock by parent company, there remained no minority interest because in both instances entire outstanding capital stock of subsidiary company was acquired by parent company. If parent company acquires less than 100% interest in subsidiary company, the minority interest must be considered in setting up the consolidated balance sheet. Effect is given to the interests of the minority by eliminating in the consolidated balance sheet only such proportion of subsidiary's outstanding stock as is acquired by holding company and such part of subsidiary's surplus or deficit as is applicable thereto. This is true because the capital liability to the minority stockholders represented by their proportionate amount of capital stock and surplus or deficit applicable thereto is not an intercompany relationship.

MINORITY INTEREST WITH A SUBSIDIARY SURPLUS ILLUSTRATED.—Assume that Company Y's balance sheet at date of acquisition of 75% of its entire outstanding capital stock by Company X, is as follows:

Balance Sheet—Company Y

Real Estate	$100,000	Capital Stock	$100,000
Cash	25,000	Surplus	20,000
		Accounts Payable	5,000
	$125,000		$125,000

After acquisition of 75% of capital stock of Company Y, Company X's balance sheet is as follows:

Balance Sheet—Company X

Stock of Company Y	$ 90,000	Capital Stock	$150,000
Cash	80,000	Accounts Payable	20,000
	$170,000		$170,000

Working Papers for Consolidated Balance Sheet

	X	Y	Eliminations	Consolidated
Assets				
Investment in Stock of Company Y	$ 90,000		$ 90,000	
Real Estate		$100,000		$100,000
Cash	80,000	25,000		105,000
	$170,000	$125,000	$ 90,000	$205,000
Liabilities				
Capital Stock	$150,000	$100,000	$ 75,000	$175,000
Surplus		20,000	15,000	5,000
Accounts Payable	20,000	5,000		25,000
	$170,000	$125,000	$ 90,000	$205,000

Consolidated Balance Sheet—Companies X and Y

Real Estate	$100,000	Capital Stock	$150,000
Cash	105,000	Capital Stock of Company Y, Outstanding	25,000
		Surplus applicable to Outstanding Stock of Company Y	5,000
		Accounts Payable	25,000
	$205,000		$205,000

MINORITY INTEREST WITH A SUBSIDIARY DEFICIT ILLUSTRATED.—Assume that Company Y's balance sheet at date of acquisition of 75% of its entire outstanding capital stock by Company X, is as follows:

Balance Sheet—Company Y

Real Estate	$ 80,000	Capital Stock	$100,000
Cash	5,000	Accounts Payable	5,000
Deficit	20,000		
	$105,000		$105,000

After acquisition of 75% of capital stock of Company Y, Company X's balance sheet is as follows:

Balance Sheet—Company X

Stock of Company Y	$ 60,000	Capital Stock	$150,000
Cash	110,000	Accounts Payable	20,000
	$170,000		$170,000

Working Papers fo Consolidated Balance Sheet

	X	Y	Eliminations	Consolidated
Assets				
Investment in Stock of Company Y	$ 60,000		$ 60,000	
Real Estate		$ 80,000		$ 80,000
Cash	110,000	5,000		115,000
Deficit		20,000	15,000	5,000
	$170,000	$105,000	$75,000	$200,000
Liabilities				
Capital Stock	$150,000	$100,000	$75,000	$175,000
Accounts Payable	20,000	5,000		25,000
	$170,000	$105,000	$75,000	$200,000

Consolidated Balance Sheet—Companies X and Y

Real Estate	$ 80,000	Capital Stock	$150,000
Cash	115,000	Capital Stock of Company Y Outstanding	25,000
Deficit applicable to Outstanding Stock of Company Y	5,000	Accounts Payable	25,000
	$200,000		$200,000

Purchase of Stock of Subsidiary at More Than Book Value

When the holding company acquires all or a part of capital stock of a subsidiary by paying **more than book value** therefor, the excess paid above book value is in the nature of a premium and should be charged to **Good-Will** in the consolidated balance sheet.

100% STOCK ACQUISITION ILLUSTRATED.—Company Y's balance sheet at date of acquisition of its entire capital stock by Company X is as follows:

Balance Sheet—Company Y

Real Estate	$100,000	Capital Stock	$100,000
Cash	5,000	Accounts Payable	5,000
	$105,000		$105,000

After acquisition of entire capital stock of Company Y for $110,000, Company X's balance sheet stands thus:

Balance Sheet—Company X

Stock of Company Y	$110,000	Capital Stock	$150,000
Cash	50,000	Accounts Payable	10,000
	$160,000		$160,000

Working Papers for Consolidated Balance Sheet

	X	Y	Eliminations	Consolidated
Assets				
Investment in Stock of Company Y	$110,000		$100,000	
Good-Will				$ 10,000
Real Estate		$100,000		100,000
Cash	50,000	5,000		55,000
	$160,000	$105,000	$100,000	$165,000
Liabilities				
Capital Stock	$150,000	$100,000	$100,000	$150,000
Accounts Payable	10,000	5,000		15,000
	$160,000	$105,000	$100,000	$165,000

Consolidated Balance Sheet
Companies X and Y

Good-Will	$ 10,000	Capital Stock	$150,000
Real Estate	100,000	Accounts Payable	15,000
Cash	55,000		
	$165,000		$165,000

75% STOCK ACQUISITION ILLUSTRATED.—Company Y's balance sheet at date of acquisition of 75% of its capital stock by Company X, is as follows:

Balance Sheet—Company Y

Real Estate	$100,000	Capital Stock	$100,000
Cash	5,000	Accounts Payable	5,000
	$105,000		$105,000

After acquisition of 75% of capital stock of Company Y for $80,000, Company X's balance sheet stands thus:

Balance Sheet—Company X

Stock of Company Y	$ 80,000	Capital Stock	$150,000
Cash	80,000	Accounts Payable	10,000
	$160,000		$160,000

Application of Principles

WHEN CONSOLIDATION IS DESIRABLE.—Consolidation of accounts is desirable whenever all, or practically all, of the capital stock of one company is owned by another. Where stock ownership ranges between 50% and 95%, conditions must be allowed to determine whether or not consolidation is desirable. The test is whether or not the affiliated corporations constitute an economic unit guided by the same management. It is for this reason that it is sometimes desirable to consolidate accounts of companies which are controlled by the same interests although not directly related by stock ownership. In such cases the problem of the elimination of intercompany holdings of stock does not arise, and it is merely necessary to eliminate intercompany balances and profits.

TWO CLASSES OF STATEMENTS.—One class of consolidated statements shows simply the results of consolidation. The other class shows the accounts of individual companies, the elimination, and the items consolidated. Which form should be used must be determined upon the requirements of each case. If it is desired to show the status of the affiliated concerns simply as a unit, the consolidated figures only need be presented. If, however, it is desired to show the status of the constituent companies, the separate statements as well as their consolidation should be shown. Usually, in published reports only the consolidated figures are given.

PRACTICAL CONSIDERATIONS.—Although, theoretically, it is necessary to eliminate all intercompany balances on current account, it is sometimes found in practice that some small items not yet adjusted can best be permitted to remain unadjusted in the working papers for the consolidated statements. If such items were taken up on the working papers for the consolidated statements but not on the books, a discrepancy would arise between the statements and the books; if taken up on the books, the work involved would not be justified by the mere technical accuracy achieved. Ordinarily the smaller balance should be eliminated, the remainder of the larger being left in the Accounts Receivable or Accounts Payable account; but in some cases it may be desirable to describe the uneliminated items in the consolidated balance sheet.

Sometimes items which appear as asset items on the balance sheet of one company and as liabilities on the balance sheet of another or other companies are not in agreement because the asset account has been written down. Since the entire amount of the liability must be eliminated, it is necessary to insert a red figure in the eliminations column increasing surplus by the amount of the difference. If a reserve has been established, in place of writing down the asset, the reserve should be eliminated against such increase of surplus.

Bonds of one company purchased by an affiliated company at a discount require same treatment as discrepancies explained above. If, however, issuing company sold them at a discount and still carries some or all of such discount as a deferred charge, a somewhat different procedure is necessary. Thus, assume Corporation X owns $10,000 par of bonds of Corporation Y bought for $9,800, and carried at that amount. Corporation Y sold these bonds, which run for a term of 10 years, 5 years ago at 90, or a discount of $1,000 on the above bonds, of which $500 remains unamortized. The elimination is:

Bonds	$10,000	
Surplus	300	
Bond Investment		$9,800
Bond Discount Unamortized		500

Surplus at date of acquisition has been considered in preceding pages. The following comments merely supplement the discussion of principles found elsewhere. If a holding company acquires all of the capital stock of a subsidiary which has a surplus, it acquires the surplus also, and it is clear that the amount of such surplus as at date of acquisition should be eliminated on the consolidated balance sheet along with the capital stock acquired. If the holding company paid more than the par value of the stock plus the surplus of the subsidiary, it paid for **good-will.** If it paid less than par of stock of subsidiary plus surplus, it made a profit, but not an operating profit;

consequently it should be treated as **capital surplus,** unless some item on books of subsidiary has been overvalued, in which case it should be deducted from the overvalued asset. If, however, in connection with the purchase a Good-Will account has been set up, it should be deducted from it. Circumstances may make it desirable to depart somewhat from this terminology, possibly to secure a somewhat more distinctive title for these items. In case cost of subsidiary's stock is in excess of book value (par value plus surplus at acquisition date), the excess, instead of being charged to Good-Will, might be charged to a distinctive account such as "Cost of Stock of Subsidiary in Excess of Its Book Value on Date of Acquisition;" and in case cost of subsidiary's stock is below book value, the difference, instead of being credited to capital surplus, might be credited to a distinctive account such as "Excess of Book Value of Stock of Subsidiary on Date of Acquisition Over Its Cost."

If the amount of surplus of subsidiary at date of acquisition is small as compared with total surplus, it is feasible to permit it to stand, only the par value of the stock of subsidiary being eliminated. Even when it is considerable it may be permitted to stand if given a distinctive caption stating that it represents surplus earned prior to acquisition date, thus distinguishing it from other surplus.

SIMPLE PLAN OF HANDLING SURPLUS AT DATE OF ACQUISITION.—The following illustration of a simple but practically correct plan for handling surplus of subsidiary as at date of acquisition is based on the discussion given by W. H. Bell in his "Accountants' Reports" (pp. 151-156):

Assume that the par value of stock of subsidiary company, all of which is acquired, is $100,000, and that surplus of subsidiary at date of acquisition amounted to $50,000. Holding company purchased the total stock for $125,000, or $25,000 less than its book value. At date of balance sheet combined surplus amounts to $100,000.

Since the holding company acquires stock having a book value of $150,000 for $125,000, there results a capital surplus of $25,000. At date of balance sheet free consolidated surplus amounts to $100,000 (combined surplus) less $50,000 (surplus of subsidiary at date of acquisition), or $50,000. **In the balance sheet** the surplus may be shown thus:

Surplus:	
Profit and Loss Surplus	$ 50,000
Capital Surplus (excess of net worth of subsidiary at date of acquisition over cost of its stock to holding company)	25,000
Total Surplus	$ 75,000

Another plan of statement is:

Surplus:	
Combined Surplus (date of balance sheet)	$100,000
Deduct excess of cost over par of subsidiary's stock	25,000
Net Surplus	$ 75,000

If cost to the holding company is less than the net worth of subsidiary as at date of acquisition, the second method above cannot be followed, because in that case good-will arises, which cannot be deducted from surplus.

If stock of subsidiary has been acquired at various dates, it is probably best to regard the date at which control is actually acquired as the date of acquisition. An alternative plan is to regard as the date of acquisition the date of purchase of the last large block of stock. The date of closing books nearest to such date must, for practical reasons, be adopted.

If less than 100% of subsidiary's stock is acquired, the procedure must be altered so as to show the minority's interest in the consolidated balance sheet, both as to the par value of stock held and as to their share in subsidiary's surplus or deficit. If the subsidiary has a surplus, the two following methods are practicable for showing the interest of the minority:

(1) Capital Stock:
  Stock of Holding Company
  Stock of Subsidiary Company Outstanding
    Total
 Surplus:
  Applicable to Stock of Holding Company
  Applicable to Stock of Subsidiary Company Outstanding
    Total

(2) Equity of Subsidiary Stock Outstanding:
  Capital Stock
  Surplus
    Total
 Equity of Holding Company Stock:
  Capital Stock
  Surplus
    Total

When less than the whole of the subsidiary's stock is acquired, only the holding company's part of surplus as at date of acquisition should be eliminated. The minority interest in such surplus should be extended and shown in the consolidated balance sheet. To illustrate proper procedure assume the following facts:

Capital stock of subsidiary	$200,000
Subsidiary's surplus, date of acquisition	50,000
Per cent of subsidiary's stock acquired by holding company	75%
Value of stock acquired by holding company	187,500
Purchase price of stock acquired by holding company	195,000
Subsidiary's surplus at date of balance sheet	90,000

In the consolidated balance sheet the interests of minority stockholders are shown thus:

Capital Stock	$ 50,000
Surplus	22,500
	$ 72,500

On the asset side of the balance sheet Good-Will account will appear charged with $7,500, excess of purchase price of stock of subsidiary over its book value. The eliminations from asset and liability accounts are as follows:

Asset Side:		
Investment in Stock of Subsidiary		$195,000
Liability Side:		
Capital Stock	$200,000	
Surplus (amount at date of acquisition plus 25% of increase)	60,000	
		260,000
Net Liability		$ 65,000

for which the following is substituted:

Asset Side:	
Good-Will (excess of investment account over amount at date of acquisition)	$ 7,500
Liability Side:	
Equity of Minority Stockholders	72,500
Net Liability	$ 65,000

It is next necessary to consider this data in connection with the income statement. At the time the acquisition is made by the holding company the minority interest in surplus amounts to $12,500. If the entire surplus of $90,000 is shown in the profit and loss statement, it is impossible to deduct therefrom the holding company's interest in surplus as at date of acquisition, viz., $37,500, which leaves $52,500 as surplus earned since date stock of subsidiary was acquired, divisible into 2,000 shares, because during this period there has been earned $40,000, and $12,500 is divisible into 500 shares. Consequently total surplus at date of acquisition, $50,000, should be eliminated from the income statement. Separate accounts should be set up, $37,500 being carried as surplus applicable to the majority interest and $12,500 to the minority interest. If in the balance sheet it is desirable to show full details of the division of surplus, with reference to the income statement, the following form should be used. It is assumed that surplus of holding company from sources other than earnings of subsidiary is $150,000.

Surplus:	
Profit and Loss Surplus:	
Applicable to Holding Company's Stock	$172,500
Applicable to Outstanding Stock of Subsidiary	7,500
Total	$180,000
Subsidiary's Surplus at Date of Acquisition Applicable to Stock held by Minority	12,500
Total Surplus	$192,500

Working Papers Illustrated

The following working sheets employed for the derivation of the consolidated balance sheet and consolidated income statement illustrate the procedure followed by the American Telephone & Telegraph Co.:

BALANCE SHEET

Exhibit A—Consolidated Balance Sheet.

" B—Balance Sheets at December 31, 1921, of six companies individually designated as Company A, B, C, D, E, and F.

" C—Work Sheets containing in the aggregate 54 columns with headings corresponding to those shown on the 54 lines of the Balance Sheet.

The figures for each company have been transferred from the Balance Sheets to these Work Sheets, totaled, and the intercompany duplications (red figures; here italics) excluded.

The total of each column has been transferred to the Consolidated Balance Sheet, Exhibit A.

" D—List of duplications showing the ownership by certain companies of stock, bonds, notes, and accounts of other companies.

* Adjustments are made through Corporate Surplus Unappropriated, Line 52. If the book value of the Asset Account eliminated is greater than the par value of the corresponding liability, the difference is deducted from surplus, if less, the difference is added to surplus.

INCOME STATEMENT

Exhibit A—Consolidated Income Statement.

" **B**—Income Statements for year 1921 of six companies individually designated as Company A, B, C, D, E, and F.

" **C**—Work Sheets containing in the aggregate 49 columns with headings corresponding to those shown on the 49 lines of the Income Statement.

The figures for each company have been transferred from the Income Statements to these Work Sheets, totaled, and the intercompany duplications (red figures; here italics) excluded.

The total of each column has been transferred to the Consolidated Income Statements, Exhibit A.

" **D**—List of duplications showing intercompany receipts and payments of interest, dividends, etc.

SECTION 23

INSTALLATIONS

CONTENTS

SECTION 23

INSTALLATIONS

GENERAL.—The subject of installations is considered from the point of view of the public accountant or systematizer who has been summoned to the office of a client to discuss the matter of a new system. The same procedure would be followed by a systematizer within an organization.

The accountant may or may not have had previous experience in the client's line of business. Nevertheless, his first problem is to satisfy the client that he has the qualifications to handle the engagement properly—this may be accomplished by references to past experience in the same line, or to general experience, together with references to the distinctive problems of the particular business. An acquaintance with the latter, even though it may be casual, and a definite plan of action will make a favorable impression upon all persons with whom the accountant may come in contact.

Preparatory Investigation

POINTS TO BE DETERMINED.—A system of accounting records is so vital a part of any business that the planning of one should invariably be preceded by a **preparatory investigation** or survey of the entire business.

The preparatory investigation should determine:

I. Nature and scope of the engagement.
II. Purpose or plan as conceived by the management.
III. Nature of the business.
IV. Personnel.
V. Outline of plant, premises, and present methods.
VI. General accounting and office procedure.

A **questionnaire** or **survey sheet** outlining suggestive points to be covered in the preparatory investigation will save time, will constitute a permanent record of the existing conditions, thereby eliminating a possible repetition of the same questions, and will afford a basis for later study of the entire problem.

The following is a suggestive outline of the points to be covered in the preparatory investigation.

I. THE NATURE AND SCOPE OF AN ENGAGEMENT.—It should be determined whether:

(a) A new system is to be designed and installed complete.
(b) It is an improvement in present methods and results, which may be (1) complete, or (2) partial.
(c) It is an elaboration or amplification of results and statistics for management control.

II. THE PURPOSE OF PLAN—AS CONCEIVED BY MANAGEMENT.—The purpose which the proposed installation is to serve, as conceived by the

management, is usually the result of the practical man's views acquired from experience, but sometimes acquired from an interchange of ideas at conferences, etc. These practical ideas frequently go to the very heart of the problem and indicate the essential points to be covered. The systematizer may, however, be able to plan a method for the presentation of these essential facts and other related facts in a manner that may be more clear, and at the same time provide or suggest a unit of measurement.

Example 1.—The general manager of a plant may wish to be informed daily as to the volume of production. The production may be increasing—a fact gratifying in itself; but if the rate of production per man-hour has decreased, it means that the labor costs have necessarily increased—a fact not so gratifying; or the production may exceed the orders received, and thereby be going into inventory. Increased inventories signify idle capital, etc.

Example 2.—An occasional loss of one piece or article may seem small and reasonable if it is 1, 2, or 3% of the production, and on the other hand, it may be a matter that may deserve attention if it is 10% of the production. By proper planning the systematizer can present these facts in intelligible form to managers.

III. THE NATURE OF BUSINESS.—The systematizer should attempt to understand the whole business problem of the client, and to extricate himself from the narrow confines of drawing forms, recording facts, suggesting devices, and guarding against dishonest employees, in order that he may consider the client's requirements from the position of the executive, bring into play the common sense and business judgment which he has presumably acquired, and accordingly plan to gather all the essential points or facts, and no more, that will serve in the administrative control of the business, and at the same time reflect the true financial position of the organization and the result of operations.

The client will be pleased, as a rule, to see the accountant show an interest in his business and will talk freely about his enterprise.

Possible **topics of discussion:**

- (a) **Product or Line** (commodities handled and their use to consumers)
- (b) **Raw Materials or Merchandise**
    1. Source (distance)
    2. Plan of buying and storage
    3. Price (seasonal condition of market)

Seasonal fluctuations in prices may suggest the advisability of the purchase and storage of large quantities of raw materials when prices are low, if there are storage facilities and the necessary capital is available. It may be possible to warehouse the material and hypothecate it for borrowing purposes.

Distances may be short, the transportation question may offer no problem during any season of the year, prices may fluctuate little, and it may be desirable, therefore, to recommend the discontinuance of a practice of buying goods in large quantities and thereby unnecessarily tying up sums of working capital.

- (c) **Method of Distribution**
- (d) **Market or Outlet**
- (e) **Market Conditions**

The method of distribution and the market will suggest the kind of sales statistics that the sales manager should have, and, considered with the type of commodity, will suggest the type of advertising that may be helpful.

The accountant has an exceptional opportunity to observe the methods used by his clients. The keen, discriminating observer absorbs good ideas from the various places he visits, and these observations frequently suggest methods, units of measurement, or other points, which may be used advantageously by some other client.

(f) Trend of Sales and Prices Throughout the Year

For the producer, the trend of sales may be one of the biggest problems. If the sale of a certain commodity is seasonal, the producer is confronted with one of these problems:

1. Whether to continue on an even schedule of production and stock the finished product during the off-season, which carries with it the matter of finance and the danger of changing style, design, or scientific improvements.
2. Whether to build up an organization within season and dismiss it out of season. This method of procedure is both difficult and expensive. It is costly to break in new operators because it requires more supervision, it retards production, and the scrap loss is greater; also the capital investment is unproductive out of season.
3. The ideal method is to complement one seasonal product with other seasonal products, which are in and out of season at different times, and which are produced on practically the same equipment.

(g) Normal Capacity

Normal capacity is an important point to be considered in calculating sales prices, comparing costs, analyzing the results of operations, and preparing budgets.

It is generally conceded that it is unsound economically to attempt to sell, in a competitive market, the output of a plant operating at less than normal capacity at prices that will absorb the burden of the idle capacity and carry the usual per cent of profit. The burden of idle capacity, or the extra profit arising from production in excess of normal capacity, may be shown to advantage as a separate item in the statement of operating results.

(h) Peaks and Valleys in Production

(i) Are Finished Articles Stocked?

(j) Advertising—Extent

1. Mediums
2. How handled?

IV. THE PERSONNEL.—In relation to personnel the systematizer should proceed as follows:

(a) Obtain, if possible, a Chart of Present Organization—with Duties and Responsibilities

Such information will save time and may permit the accountant to avoid occasional embarrassment from having addressed an inquiry to the wrong executive, if jealousy and friction exist in the organization.

(b) Ascertain whether Recommendations as to Rearrangement of Duties and Responsibilities Will be Entertained

V. OUTLINE OF PLANT OR PREMISES AND PRESENT METHODS.—Under this head proceed as follows:

(a) Obtain or Sketch Plan of Building or Buildings

A plan will crystallize and sometimes correct impressions gathered from passing through the premises.

(b) Ascertain Natural Subdivisions or Departments
Kind of Operations in Each.

A knowledge of the natural subdivisions or departments will suggest the proper units for the division of overhead, supervision, and costs.

(c) Ascertain Route of Materials from Receiving Department, through Stores, etc., to Shipping or Delivery Department

The route of material from the receiving room to the shipping or delivery department indicated on the layout of the buildings will clearly show any back-tracking and will probably suggest the vantage point for verifying the counts for the purpose of maintaining the control over quantities of material in process of manufacture.

(d) Ascertain Method of Handling and Storing Materials

Adequate stores control at a reasonable cost is one of the problems of every manufacturing organization. Every business man has experienced the disappointment which comes from discovering at the end of a fiscal period that the profit shown by the books is greatly diminished by an unexplained shortage in inventory.

(e) Ascertain Method of Material Identifications while in Process

A proper system of identifying material while in process will aid in solving one of the difficult problems of controlling such materials in a continuous process of production, in distinguishing the operator responsible for defective workmanship, and in keeping the lots separated for cost purposes.

(f) Ascertain Method of Reporting

1. Material received
2. Material withdrawn from stock
3. Production
4. Scrap
5. Salvage
6. Sales
7. Shipments
8. Labor time
9. Low stock to purchasing department

The method of reporting and summarizing the above points will largely determine how accurately and promptly the management is kept informed of the activities of the business.

(g) Ascertain Method of Controlling

1. Production

The absence of a method of controlling production will spell unbalanced inventories and unkept delivery promises.

2. Inventories

The absence of a method of controlling inventories and in some manner relating them to sales orders will result in tying up large sums of capital, or paying premium prices for small quantities of material purchased for immediate delivery, or paying express charges to prevent a shutdown.

(h) Obtain Samples of Forms in Use and Their Purpose

These will indicate the present practice and may suggest minor details which the client has been receiving, and effect a saving of time in planning the new forms, and minimize the possibility of overlooking some details.

VI. GENERAL ACCOUNTING AND OFFICE PROCEDURE.—Make your investigation along the lines suggested by the following questions:

(a) Purchasing

1. Has a purchasing department been organized to handle purchasing?
2. By whom is purchasing done?
3. To whom is he responsible?
4. How are purchase requirements made known to purchasing agent or department?
5. Are purchase requisitions used?
6. Do requisitions show quantities of materials on hand as well as requirements?
7. What controls or determines quantities to be ordered?
8. Are quotations solicited from vendors?
9. Is a comparative record kept of quotations received?
10. How are orders placed with vendors?
11. Are purchasing order forms used? How many copies are made and what are the various copies used for?
12. What record of filled and unfilled orders is kept?
13. How are purchase orders followed up?
14. Does the purchasing department keep a record of receipts of materials on each purchase order?
15. How is the purchasing department advised of receipt of purchases?
16. Are vendors' invoices passed through purchasing department for approval? What is the routine procedure?
17. What notations are made on purchase order to indicate approval of vendor's invoice?
18. What record is made to prevent approving of duplicate invoices?
19. How are claims for shortages, deficiency in quality, and overcharges handled?
20. Is it possible to determine from the records of the department the liability for purchase commitments?
21. Is a comparative record of purchases by commodities kept?

When the purchasing is done by any person other than the proprietor of a business, a system should be employed which will record the quotations received and indicate the reason for placing an order with one organization rather than another, in order that the purchasing agent's activities may be checked up in the same way as the cashier's. The purchasing agent is always liable to temptation from unscrupulous sales organizations. The consideration may not be a money bribe, but salesmen frequently employ subtle means of creating a sense of obligation on the part of the purchasing agent, and of cultivating friendships. The natural inclination of a purchasing agent is to lean slightly toward a friend.

It is important that the activities of the purchasing agent be controlled as to quantities of materials purchased, because he is tempted sometimes to buy larger quantities than are necessary, to secure slightly better prices, and fails to give adequate consideration to the financial side of the business, and the amounts of capital tied up in a large number of more or less small items considered singly, but which when considered in the aggregate amount to a considerable sum.

A purchasing agent never wishes to be held responsible for hold-ups in production or delays in shipments, and he is, therefore, frequently tempted to meet the wishes of the production or sales departments without giving adequate consideration to the financial side of the business, unless proper control is exercised.

(b) Receiving and Storing Materials

1. Where are materials received?
2. By whom are they received? To whom is he responsible?
3. How are they inspected?
4. What receiving records are kept?
5. Are receiving reports made out? How many copies, to whom are they sent, and for what are they used?
6. How is purchasing department notified of damaged condition of packages? What is the procedure?
7. Where are materials stored?
8. Under whose control are they?
9. Are stock records kept?
10. Are stock records controlled by general books?
11. How often are stock records checked up by a physical count of materials?
12. Are materials withdrawn from stores upon requisitions only?
13. What is the procedure in handling stores requisitions?
14. How are materials received checked against purchase invoices as to quantity, quality, price, extensions, etc.?
15. How are materials to be returned to vendors handled?

As a general thing, it is a good plan to have the receiving and storing of materials come under the purchasing department, or the person to whom the purchasing agent is responsible. When the stores department is under the supervision of the superintendent or production manager, there is frequently a tendency to sacrifice all records and control to getting out production. Even though it may not be the desire or purpose of the chief to destroy the records or control, his assistants frequently override the stores department. The variation that normally exists between the physical inventory and the book records, unless a reserve is provided, is the "jinx" in the profit and loss accumulated from month to month, as shown by the books. Therefore, every effort should be made to reduce this variation to a minimum in order that the interim profit and loss figures may be relied upon.

(c) Sales

1. How are orders received?
2. What record is made of orders received?
3. Are sales orders made out for each order received? If so, how many copies are made and for what are they used?
4. Do all orders pass through credit department for approval before being sent out to be filled?
5. What records are kept by sales department?
6. Is there a field staff of salesmen?
7. How are they paid?
8. What records of their salaries, expenses, and commissions are kept?
9. How are sales classified?
10. Is a record of cost of sales kept? If so, how are sales costed?

11. How are salesmen kept advised of changes in price?
12. Is the sales invoicing done in this department?
13. How many copies of the sales invoice are prepared? To whom do they go and for what purpose?
14. Are all invoices checked for clerical accuracy and prices?
15. If sales orders or acknowledgments of orders are prepared, could this operation be combined with the billing?

The records of the sales department, in addition to recording the orders received, deliveries, follow-ups, and invoicing, should provide sales statistics which will permit the establishment of sales quotas by districts, the outlining of production schedules for the plant, and the preparation schedules for the purchasing department, the keeping in touch with or visualizing the products or lines which are moving and those which are not, the relative production of salesmen, and the cost of sales.

(d) Credits and Collections

1. Who passes upon credits?
2. To whom is he responsible?
3. What kind of credit records are kept?
4. Who is in charge of collections?
5. Are credits and collections handled as a single department?
6. What records of collections are kept?
7. How are slow accounts followed up?
8. What information is passed on to administrative and sales departments?
9. Are losses on account of bad debts heavy?

The relative size of accounts and the number of them will suggest the methods to be employed in verifying credits and in following up collections.

(e) General Accounting

1. Who is in charge of general accounting work?
2. To whom is he responsible?
3. What are the general books in use?
4. What are the subsidiary books in use?
5. How is the information to be recorded collated?
6. How is the work divided?
7. What is the system of internal check?
8. What is the system of control over cash receipts and disbursements?
9. Are all receipts deposited each day?
10. Who signs checks and what routine must be passed through before checks are signed?
11. Is an imprest cash fund maintained?
12. How are expenses distributed?
13. What statistical or analytical statements are prepared?
14. How often are books closed? How often are operating statements of condition prepared? In what form are they presented?
15. What records of plant or fixed assets are kept? Are they controlled by general books?
16. How often are they checked up by a physical inventory of assets?
17. Obtain list of present ledger accounts and note descriptions thereon.

The work of the cashier's department is regarded as coming under this division. It seems that the employer should exercise every reasonable precaution and use every available method to remove temptation from employees who have to do with the handling of cash, or securities, and if the employee defaults when these precautions have not been taken, the employer is as responsible for the loss as is the guilty employee.

(f) **Administrative**

1. What administrative departments are there?
2. Who are accountable heads and to whom are they responsible?
3. What are their various duties?
4. Are regular meetings of the department heads held? How are steps taken to insure co-operation of departments?
5. What records are kept by which the efficiency of departments may be determined?
6. How is incoming mail handled?
7. How is outgoing mail handled?

The filing and mailing departments frequently afford fields in which to make improvements. The opening and distribution of mail is frequently handled loosely. A chief executive, or his delegate, can exercise excellent supervision over all outgoing correspondence for the purpose of standardization of style, improvement of letter form, and prompt correction of errors in policy of the organization, by requiring a tissue copy of all outgoing mail of each day to be placed on his desk the first thing the following morning.

When it is possible for the same person to inspect the incoming mail and the tissue copies of all outgoing mail, that person, if of the proper type, soon has a complete picture of operations of the organization.

(g) **Pay-Rolls**

1. Who prepares the pay-roll?
2. Is a special pay-roll department in existence?
3. To whom is head responsible?
4. How are employees paid—cash or check?
5. How is amount of pay computed—piece-work, day-work, premium, bonus, etc.?
6. How long are the pay periods?
7. How often are pay-rolls closed and distributed?
8. From what is distribution made—time cards, time books, or what?
9. How is working time of employees recorded? By in-and-out clocks?
10. Are in-and-out clock cards checked with time or labor cards?
11. Are time cards extended and checked daily and immediately sent to pay-roll department?
12. Are pay-rolls checked daily?
13. What disposition of the time cards is made after pay-roll is computed?
14. What records of employees are kept?

There should be an absolute division between the persons who are responsible for the accumulation of the time and the preparation of pay-roll figures, and those clerks who are responsible for the filling of envelopes and the delivery of them to the employees.

(h) Cost Accounting

1. Is a cost department maintained?
2. Who is in charge and to whom is he responsible?
3. What kind of a cost system is in use?
4. Are the cost records controlled by the general books?
5. Are costs, including overhead, determined by departments or for the plant as a whole?
6. How often are cost records closed and statements prepared?
7. What are the forms and contents of the statements?
8. How are the various costs collated—from what sources?
9. Upon what basis is overhead distributed?
10. Is a standard burden rate used?
11. Are comparative monthly burden statements prepared? If so, what use is made of them?

(i) Production and Operating Departments

1. Who is in charge of production?
2. To whom is he responsible?
3. Is production departmentalized?
4. Who is in charge of departments and to whom are they responsible?
5. How is co-operation between departments insured?
6. Are standard specifications on file for all jobs or operations?
7. How are orders or instructions imparted to departments or workmen?
8. How is production planned?
9. How is work inspected?
10. What methods are employed to obtain the greatest efficiency from workmen?
11. Do workmen fill out their own time statements, or is this taken care of by time clerk?

Study of Survey

NATURE OF SURVEY.—The preparatory investigation should be followed by:

1. A careful consideration of:
   (a) The existing conditions.
   (b) Any anticipated or possible changes.
   (c) The purpose or plan as conceived by the management.
2. A determination of:
   (a) The objectives to be attained in order to promptly place before the officials the information that will serve most effectively in the administrative control of the business.
   (b) The method of procedure.
   (c) The forms to be used.
   (d) The schedule of accounts required.

THE OBJECTIVES OF A SYSTEM.—The general objectives of any system should be:

1. To record and clearly indicate:
   (a) The financial position of the organization as reflected in balance sheet accounts.

(b) The profit or loss by accounts in sufficient detail to analyze the major kinds of income and expense so that any variation can be readily discerned.
(c) The preventable leaks and losses.

For example, in manufacturing costs it is the usual practice to absorb the difference between the cost value of material spoiled and its scrap value in the prime cost of the good pieces finished. No exception is taken to that practice, but it is important that the production and executive departments be kept informed as to the actual cost value of the scrapped material. In a foundry the loss from oxidation, core breakage, etc., can profitably be shown in dollars and cents.

2. To establish:
   (a) A basis for comparing the results of one period with another.
   (b) Standards—predetermined or budget figures—to measure the variations therefrom in detail (not in total only), so that attention may be devoted exclusively to the unfavorable variations.

Executives cannot be expected to wade through a mass of detail figures, to digest them, and single out the exceptions or irregularities. Such a duty is tedious and laborious for most executives, and in consequence, the valuable information frequently available for the inspection and guidance of executives is not used. Some person who understands the significance of the reports submitted should digest them and single out the exceptions and irregularities for the executive's attention.

   (c) A basis for controlling inventories.
   (d) A basis for internal checks which will reduce temptation to a minimum.

A system which requires the collusion of two or more persons to conceal an irregularity is ordinarily a satisfactory internal check.

3. To make results obtainable promptly and with the least expenditure of effort.

A judicious application of **mechanical equipment** expedites the preparation of results, makes available information that is otherwise too expensive to gather and minimizes the expenditure of effort. Many kinds of appliances have been invented to facilitate the routine of the office. Most of them are good, some excellent, but they cannot all be used in each and every business, and it remains for the systematizer to recommend such appliances as are best fitted to the needs of the particular business.

METHOD OF PROCEDURE.—The methods to be used will vary with each case and will depend upon the volume of detail, objectives, plant arrangement, operating conditions, class of product, and nature of the business.

In each case, the method of procedure should be sufficiently flexible to permit the system to be progressively installed, if necessary, so that the employees may become acquainted with, and become adept in handling the new system without interference with the normal flow of business. Flexibility may prevent the discarding or discrediting of a system that is good as a whole because of some minor point which may interfere with and cause trouble for the whole system, unless that may be temporarily cut off.

FORMS TO BE USED.—In planning forms to be used, the following points should be kept in mind:

1. **Design.**—Forms should be designed to collect only the desired information with the least disturbance or expenditure of effort or time that is consistent with accuracy.

2. **Uses.**—The possibility of utilizing information in two or more ways.

3. **Future Requirement.**—The possible future needs or development.

4. **Number of Forms.**—The number of forms to be used should be kept down to the minimum, consistent with efficient handling and economy.

5. **Size.**—The purpose and use of each form will be the principal factor in determining its size. The following points deserve consideration in this connection.

No form should be so designed that to work with it will be awkward. Such inconvenience results sometimes when an attempt is made to include too much detail on a single form. Wide forms—from left to right—increase the possibility of entry upon a wrong line. Wide forms also result in a waste of paper, as much of the form is generally unused. Where great detail is necessary it is best to design two or more related forms upon which to assemble the detail. At first this may appear to result in an increase in the routine accounting work, but actual practice proves that it not only results in a saving of paper, but also increases the speed and accuracy with which the work is handled.

In planning forms for records, consider the safes and steel storage cabinets in which the records will be kept. Oftentimes, large unwieldy records have left officials between the choice of purchasing new safes or steel cabinets or leaving records out unprotected.

Consideration should also be given as to how forms may be cut from standard sizes of paper with least amount of waste. Forms as originally designed may often be made slightly smaller or larger, with the result that the only waste when the forms are cut from standard sizes is the waste usual to trimming. At least 1/8 inch should be allowed on each side of the form for trimming. More allowance must be made on smaller than on larger forms.

A systematizer should be sufficiently familiar with **standard sizes of paper** to enable him to specify from which size the form may be most economically cut. The Writing Paper Manufacturers' Association has adopted a number of sizes which are considered regular or standard. However, the average printer or paper dealer does not carry all these sizes in stock. The sizes and weights commonly used for office forms and records and which may be obtained with little difficulty are as follows. The **substance number,** which is coming into use, indicates the weight per ream of 500 sheets of the various sizes, as shown below.

Flats and Bonds

Size	Substance No. 13 lb.	Substance No. 16 lb.	Substance No. 20 lb.
17 x 22	13	16	20
17 x 28	16½	20½	25½
19 x 24	16	19½	24½
22 x 34	26	32	40
24 x 38	32	39	49
28 x 34	33	41	51

Ledgers

Size	Substance No. 20 lb.	No. 24 lb.	No. 28 lb.	No. 32 lb.	No. 36 lb.
17 x 22...	20	24	28	32	36
17 x 28...	25½	30½	35½	40¼	46
19 x 24...	24½	29½	34	39	44
22 x 34...	40	48	56	64	72
24 x 38...	49	59	68	78	88
28 x 34...	51	61	71	81	92

Loose-Leaf

Size	Substance No. 20 lb.	No. 24 lb.	No. 28 lb.	No. 32 lb.	No. 36 lb.
19¼ x 24¼...	25	30	35	40	45
22½ x 28½...	34½	41	48	55	61½
22¾ x 35½...	43	52	60½	69	77½
24½ x 24½...	32	38½	45	51½	58
24½ x 38½...	50½	60½	70½	80½	91

6. Quality and Grade of Paper.—Paper is made from two basic substances—wood fiber and rags. The pulp entering into wood fiber paper is treated during the manufacturing process with acid. The finished paper contains a small amount of this acid which causes the paper to turn yellow from exposure, colored ink to fade, and the paper to become brittle. For this reason, wood fiber paper is suitable only for interoffice communications and forms which do not constitute a part of the permanent records.

Permanent records should be made on ledger or bond paper with a **rag content** of 30% or better. The greater the per cent of rag content and the less the rag stock has been chemically bleached or treated, the better the quality of paper. The various kinds of ledger and bond paper are very similar except as to lengths of fiber. Ledger paper contains a shorter fiber and is calendered a greater number of times to give it a smooth and glazed surface.

The paper selected should be tough and durable and flexible enough to crease without cracking. The paper should be of a grade which will not fade, diminish in tone or yellow with age, and be able to take several erasures without blotting or allowing the ink to show through on reverse side.

Ledger papers used in bound books and loose-leaf forms usually run from substance #20 to substance #36. **Loose-leaf forms** require a slightly heavier grade of paper than do bound books of the same size. Small forms can be of a lighter grade than large forms. Bond papers are used mostly for the smaller forms and for letterheads and bill heads.

On the whole, paper is difficult to judge even by men experienced in the industry. Probably the safest plan for the systematizer is to acquaint himself with a few of the better known makes of paper and recommend them for forms and records.

The following is a list of some of the better known or standard makes of ledger and bond paper.

Ledger

Brown's Linen Ledger	L. L. Brown Paper Co.
Whiting	Whiting Paper Co.
Weston Linen	Byron Weston Paper Co.
Scotch Linen	Parsons Paper Co.
Record	Whiting Paper Co.
Advance Linen	L. L. Brown Paper Co.
Reliance	American Writing Paper Co.
Mercantile Record	Parsons Paper Co.
Sales Record	Millers Falls Paper Co.
Prestige Linen	Neenah Paper Co.
Hamilton's	W. C. Hamilton & Sons

Bond

Crane's Safety and Parchment Bond	Crane Co.
Coupon	American Writing Paper Co.
Advance	L. L. Brown Paper Co.
Parsons	Parsons Paper Co.
Imperial	Whiting Paper Co.
Defiance	Byron Weston Paper Co.
Roman	American Writing Paper Co.
Textile	Whiting Paper Co.
Empire	Carew Manufacturing Co.
Certificate	Crocker-McElwain Co.
Hammermill	Hammermill Paper Co.

7. Color of Paper.—Bond paper is made in a wide range of colors. Ledger paper is usually made in white, buff, and blue. In sets of forms where color is a factor, the color should be selected with sufficient contrast so that no confusion will arise from the usual slight variations in color between runs of the same quality or make of paper or from the greater variations between different qualities or makes of paper.

8. Ruling and Printing.—The color combinations generally used in ruling forms are red and blue on white paper, and brown and green on buff paper. Forms may be drawn or sketched in pencil and the colors to be used noted on the form. Lines to be printed and not ruled should be indicated in black ink. Printed headings on the forms should be shown in ink. Vertical money columns should be $\frac{1}{8}$ inch wide for each digit in the largest probable amount to be placed in the column. The ordinary typewriter spacing is 6 lines to the inch.

The System Report

SCOPE OF REPORT.—The content of the system report will depend upon the nature of the engagement, which may be limited to an examination of the system in use and the suggesting of improvements, or it may be to prepare a system and supervise its installation.

If the engagement is limited to an examination of the existing system and the suggesting of improvements, the extent to which such suggestions will be adopted depends largely upon clearness with which they are presented, and the results which may be expected are pointed out. In the event that a complete system has been prepared and is ready to be installed, its success,

while greatly contingent upon the simplicity of operation and the extent to which co-operation is secured from the client's employees, depends somewhat upon the clear and convincing statements contained in the report of the reasons for the changes, the use and importance of the forms and statements to be used, and the necessity for following instructions as outlined.

METHOD OF PROCEDURE.—To make clear the desired purpose, an outline of the existing system should be given, followed by the suggested changes, together with references to forms and statements to be used, exact copies of which should always be incorporated in the report. The advantageous results to be expected should be pointed out, in phrases readily understood by everyone who may be concerned with the operation of the system. Successful co-operation from the client's employees can best be secured when they have a clear understanding of the work to be done.

The report should include a chart of accounts made up of the accounts to be kept in the general or controlling ledger and in the subsidiary ledgers. Each account should be followed by a short description and an outline of the entries to be posted to it, for guidance of the various employees. The volume of matter in the report and the chart of accounts together with any other circumstances connected with an engagement, will have a bearing on whether the chart of accounts should be submitted under separate cover or incorporated in the body of the report.

The judicious use of graphic charts will, in many cases, assist in presenting important facts and help to picture the story as told by the accounting records.

The importance of providing suitable mechanical equipment and such other matters as proper lighting, ventilation, and heating of the offices, should be given due consideration in preparing the report.

Finally, the report should indicate how the installation of the system may be accomplished with least confusion and interruption of regular activities.

Accounting Regulation by the States

Public Utility Valuation

SECTION 24

PUBLIC UTILITIES

History of Public Utility Regulation

PUBLIC UTILITY DEFINED.—The term "public utility" refers to a class of industries in the performance of whose service the public is concerned in a peculiar way. These undertakings are characterized as "affected with a public interest." They comprise steam and electric railways, express, sleeping car, telephone, telegraph, cable, and automotive companies, and pipe lines (so-called common carriers); and gas, electric, and water companies (so-called local utilities). Sometimes other enterprises fall within the scope of the definition, as, heating and refrigerating, messenger and signaling companies, toll bridges, carriers by water, warehousemen and wharfingers.

The public's right to regulate is based on the common law, but it has been strengthened by statutes and court decisions. Originally conceived as a right to be exercised over monopolies, it now has its most important application to common carriers. The services they perform are a legitimate function of the state. Also when delegated to private parties, immunity from legitimate control is not granted. Such enterprises exist by public grant of monopolistic privilege.

NATURE OF STATE REGULATION.—The aim of state regulation is to realize under monopoly the safeguards provided in the industrial world by competition. The common law impose upon monopolies an obligation to protect the public's interests. They must provide adequate facilities to all who apply, at reasonable rates, without discrimination. But the common law does not adequately safeguard users of public services, because it is merely punitive. Positive regulation is essential.

Except for control through charter and franchise restrictions, railroads were not regulated until 1870, and other public utilities until later. By 1870 abuses of unregulated monopoly had become evident. Many state legislatures then adopted a policy of restrictive regulation by confirming the common law obligations and passing restrictive laws. Rates were prescribed and publicity requirements were imposed. In some instances administrative machinery was set up. The utilities, particularly the railroads, questioned the legality of these powers, but it was sustained by the courts and became the acknowledged expression of state regulatory policy up to 1905. The legislatures are still the source of power to regulate, but more effective methods have superseded direct legislative control.

The later history of public utility regulation in the United States is that of supervision exercised through administrative commissions. Congress inaugurated this policy in 1887 when it passed the "Act to Regulate Commerce," which established the Interstate Commerce Commission. The New England

states organized commissions at an early date which were engaged largely in gathering statistical data and promoting safety. The Massachusetts Board of Railway Commissioners, established in 1869, possessed advisory powers only; but it was a step toward effective control. In the decade 1870 to 1879 commissions with mandatory powers were established in Illinois, Iowa, Minnesota, Wisconsin, California, and Georgia. In the reaction following the panic of 1873 most of their powers were withdrawn.

Control through administrative commissions exercising mandatory powers dates from 1900. Establishment of the Wisconsin and New York commissions in 1905 and 1907 gave stimulus to a movement which resulted in the establishment or reconstitution of more than thirty commissions in the decade 1905–1915. On Jan. 1, 1923, each state except Delaware had a public utility commission; also Hawaii, Porto Rico, District of Columbia, and the Philippines. These commissions exercise jurisdiction over common carriers, or local utilities, or both. The Interstate Commerce Commission exercises jurisdiction over steam and electric railways, telephone, telegraph, cable, express, and sleeping car companies, and pipe lines when engaged in interstate commerce. The Interstate Commerce Commission and most of the state commissions have power to prescribe, review, or suspend rate schedules; to prohibit discriminatory practices; to establish service standards; to regulate capitalization; and to impose certain publicity requirements.

REGULATION OF ACCOUNTS—ORIGIN.—In addition to powers enumerated above, the Interstate Commerce Commission and most of the state commissions possess authority to regulate accounting practices of utilities under their jurisdiction. The Massachusetts Board of Railway Commissioners, organized in 1869, received in 1876 the first grant of authority over railway accounts when "authorized to prescribe a system on which the books and accounts of corporations operating railroads or street railways should be kept in a uniform manner." The Massachusetts Board of Gas Commissioners was granted this power over gas companies in 1886, and electric companies in 1887. The subject was considered by the New York Special Railroad Committee of 1879, but the next important grants of authority came with the establishment of the Wisconsin and New York commissions in 1905 and 1907.

Federal Regulation of Public Utility Accounts

ACT TO REGULATE COMMERCE AND ACCOUNTING REGULATION.—The 20th section of the Act to Regulate Commerce, enacted in 1887, authorized the Interstate Commerce Commission, in its discretion, to prescribe for utilities under its jurisdiction "a uniform system of accounts and the manner in which such accounts shall be kept," and to require certain specific reports. The law contained no provision for enforcement and the railways did not co-operate. It was not until 1906 that Congress made uniform accounts compulsory.

Section 20, as then amended, gave the Commission authority to "prescribe forms of any and all accounts, records, and memoranda to be kept by carriers." It also provided that "the Commission shall at all times have access to all accounts, records, and memoranda"; that it "shall be unlawful for such carriers to keep any other accounts, records, or memoranda than those prescribed or approved"; and that the Commission might require monthly and special, as well as annual reports. Penalties are imposed for violation of orders issued under authority of this section.

Effectiveness of the Commission's policy after 1906 has been based on facts secured from accounting records kept according to prescribed regulations.

NATURE OF PUBLIC UTILITY ACCOUNTING.—Public utility accounting is a branch of general accounting and involves no new principles. Application of principles to detailed requirements of the business give it a special character. Railway accounts illustrate this, as shown by the following characteristics of the business, which determine the structure of railway accounts:

1. Railway operating revenues consist of many relatively small items. (Passenger fares paid railroads in the United States in 1920 exceeded 1,200 million.)
2. Railway plant and equipment are distributed over much territory.
3. Railway transportation requires the performance of many highly organized interrelated services.
4. Many railway facilities are used jointly by two or more companies.
5. Through-traffic requirements develop complex intercompany relationships.
6. Costs of transportation service are largely joint costs, subject to allocation on an arbitrary basis.
7. Accounting and statistical requirements of commissions must be satisfied.
8. Various kinds of information, otherwise unnecessary, are needed by the utilities to defend their rights in proceedings before the commissions.

JURISDICTION OF INTERSTATE COMMERCE COMMISSION.—Jurisdiction of the Interstate Commerce Commission, limited by the original Acts to Regulate Commerce to rail and joint rail and water carriers, was extended in 1906 to include express and sleeping car companies and pipe lines, and in 1910 to include telephone, telegraph, and cable companies. The Commission prescribes uniform systems of accounts for all transportation agencies under its jurisdiction.

ACCOUNTING CLASSIFICATIONS.—The basis of supervision of public utility accounts is a system of account classifications and a body of principles governing their use. Classifications for steam railways were first issued. Classification of Operating Expenses, Classification of Operating Revenues, and Classification of Expenditures for Road and Equipment, became effective July 1, 1907. The first was a revision of a classification proposed under the original provisions of the act, based upon the so-called Saratoga Classification of 1879. The Form of General Balance Sheet Statement, and the Form of Income and Profit and Loss Statement first became effective June 15, 1910, and July 1, 1912, respectively.

Classification of Expenditures for Road, and Equipment, Operating Expenses, and Operating Revenues for electric railways became effective Jan. 1, 1909.

Classification of Expenditures for Real Property and Equipment, Classification of Operating Expenses, and Classification of Operating Revenues for express companies became effective July 1, 1908; Form of General Balance Sheet Statement, July 1, 1911.

Classification of Operating Expenses and Classification of Operating Revenues for carriers by water became effective Jan. 1, 1911; Classification

of Expenditures for Real Property and Equipment, Classification of Income and Profit and Loss Accounts, and Form of General Balance Sheet Statement, on Jan. 1, 1913.

Uniform System of Accounts for Telephone Companies, Classes A and B, became effective Jan. 1, 1913; Uniform System of Accounts for Telephone Companies, Class C. Jan. 1, 1915; Uniform System of Accounts for Telegraph and Cable Companies, Jan. 1, 1914.

Classification of Operating Revenues and Operating Expenses for pipe lines became effective Jan. 1, 1911; Classification of Investment in Pipe Lines, Pipe Line Operating Revenues, and Pipe Line Operating Expenses (in part a revision of 1911 classification), Jan. 1, 1915.

Classification of Revenues and Expenses of Sleeping Car Operations, of Auxiliary Operations, and of Other Properties for Sleeping Car Companies, became effective July, 1912.

Classifications for steam and electric railways have been modified from time to time. In some instances thorough revisions have been made, the most important resulting in revised classifications for steam and electric railways and express companies, effective since July 1, 1914. Classifications for steam railways are now in the process of revision.

CO-OPERATION WITH ACCOUNTING OFFICERS.—The various classifications were drawn with the co-operation of public utility accountants. In case of steam railways this co-operation was effected through the Railway Accounting Officers Association and its Committee on Corporate, Fiscal, and General Accounts. Advice and co-operation of the American Railway Association, the Freight Claim Association, the American Electric Railway Accountants Association and its Committee on Standard Classification of Accounts, the Association of Express Accountants and its Committee on Corporate and Fiscal Accounts, and the accounting officers of other utilities interested were sought. Co-operation with state utilities commissions has been effected through the National Association of Railway and Utilities Commissioners. In formulating systems of accounts for utilities under its jurisdiction, "the requirements of railway accounting, strictly defined, were first considered, and the accounting structure thus devised was modified to meet the peculiar requirements of other agencies." [1] For this reason the uniform system of accounts prescribed for steam railways is analyzed in detail below.

PRINCIPLES UNDERLYING INTERSTATE COMMERCE COMMISSION CLASSIFICATIONS.—Accounting classifications prescribed by the Interstate Commerce Commission were based on principles which, prior to 1907, received little attention. By emphasizing proper accounting treatment of construction costs, additions and betterments, and depreciation, the Commission gave greater accuracy to the figure for investment in road and equipment. By proper discrimination between charges to capital and to operations, it gave uniform significance to the figure for net revenue. A line was drawn between transportation service and "outside operations." Distinction was made between operating activities, results of which are shown in figure of total operating income; non-operating, contractual, or financial activities, results of which are shown in figure of net income; and surplus appropriation and adjustment items, net results of which are shown in income balance transferred to credit (or debit) of Profit and Loss. Of

[1] Henry C. Adams, from 1887 to 1911 in charge of accounts and statistics for I. C. C., in "American Railway Accounting."

the 6 classifications applicable to steam railways, 2 are classifications of balance sheet accounts, and 4 are classifications of income accounts.

INVESTMENT IN ROAD AND EQUIPMENT.—An entire classification, with 3 general and 62 primary accounts, is prescribed for investment in road and equipment.

General account **Road** carries cost of land and fixed improvements in 47 primary accounts including, for example: Engineering, Land for Transportation Purposes, Bridges, Trestles, and Culverts, Rails, Track Laying and Surfacing, Telegraph and Telephone Lines, Power Plant Buildings.

General account **Equipment** carries cost of transportation equipment in 8 primary accounts: Steam Locomotives, Other Locomotives, Freight-Train Cars, Passenger-Train Cars, Motor Equipment of Cars, Floating Equipment, Work Equipment, Miscellaneous Equipment.

General account **General Expenditures** carries expenditures made in connection with acquisition and construction of road and equipment, which are not properly assignable to specific property units. The 7 primary accounts are: Organization Expenses, General Officers and Clerks, Law, Stationery and Printing, Taxes, Interest during Construction, and Other Expenditures–General.

OPERATING EXPENSES.—Classification of Operating Expenses provides for 8 general and 198[2] primary accounts "designed to show expenses of furnishing transportation service" and service incident thereto.

General accounts **Maintenance of Way and Structures** and **Maintenance of Equipment** carry cost of repair and loss through depreciation of property devoted to railway operations. The first is subdivided into 8 primary accounts, including, for example: Roadway Maintenance, Roadway–Depreciation, Rails,[3] Rails–Depreciation, Station and Office Buildings,[3] Station and Office Buildings–Depreciation. The second is subdivided into 60 primary accounts, including, for example: Steam Locomotives–Repairs, Steam Locomotives-Depreciation, and Steam Locomotives–Retirements.

General account **Traffic** carries costs of marketing the service of the railway organization in 9 primary accounts, including, for example: Advertising, Traffic Associations, Industrial and Immigration Bureaus.

General accounts **Transportation-Rail Line** and **Transportation-Water Line** carry cost of transporting persons and property by rail and water, the first in 50, the second in 3, primary accounts, covering: salaries and wages of transportation-employees; fuel and other operating supplies; telephone, telegraph, and signal operation; damages to persons or property transported; etc.

General account **Miscellaneous Operations** carries costs of activities incident to performance of transportation service in 6 primary accounts: Dining and Buffet Service, Hotels and Restaurants, Grain Elevators, Stockyards, Producing Power Sold, and Other Miscellaneous Operations.

General account **General** carries cost of a general character, applicable to the railway organization as a whole, in 12 primary accounts, including, for example: Salaries and Expenses of General Officers, Law Expenses, Insurance, Stationery and Printing.

General account **Transportation for Investment-Cr.** carries offsets to items charged elsewhere as expenses, representing costs of operation chargeable to investment accounts.

---

[2] Including two accounts, Equalization–Ways and Structures, and Equalization–Equipment, added to the 1914 classification by order effective Jan. 1, 1921.
[3] For repair charges.

OPERATING REVENUES.—Classification of Operating Revenues provides 4 general and 39 primary accounts "designed to show amounts of money which a carrier becomes entitled to receive from transportation and from operations incident thereto."

General accounts **Transportation-Rail Line** and **Transportation-Water Line** carry revenues from transportation of persons or property by rail or water, the first in 16, the second in 8 primary accounts, including, for example: Freight, Passenger, Excess Baggage, Mail, and Express.

General account **Incidental** carries revenues earned from activities incident to performance of transportation service in 13 primary accounts, including, for example: Dining and Buffet, Hotel and Restaurant, Parcel Room, Demurrage, and Storage.

General account **Joint Facility** has 2 primary accounts. **Joint Facility-Cr.** carries "the carriers proportion of revenue collected by others in connection with the operation of" joint facilities. **Joint Facilities-Dr.** carries "that proportion of revenue from the operation of joint" facilities, "which is creditable to other companies."

INCOME ACCOUNTS.—Classification of Income Accounts provides for 45 primary accounts (19 debit, 26 credit). Besides recording net gain (or loss) to carrier from operation of its transportation plant, these accounts record accruals of income and cost growing out of corporate financial relationship of a contractual nature, ownership of property which it does not operate, and use of properties which it does not own. Balance of these accounts constitutes net corporate income. The schedule below shows these accounts in detail.

Schedule of Income Accounts

Credits:
- Railway Operating Revenues
- Revenues from Miscellaneous Operations
- Hire of Freight Cars—Credit Balance
- Rent from Locomotives
- Rent from Passenger-Train Cars
- Rent from Floating Equipment
- Rent from Work Equipment
- Joint Facility Rent Income
- Income from Lease of Road
- Miscellaneous Rent Income
- Miscellaneous Non-Operating Physical Property
- Separately Operated Properties—Profit
- Dividend Income
- Income from Funded Securities
- Income from Unfunded Securities and Accounts
- Income from Sinking and Other Reserve Funds
- Release of Premiums on Funded Debt
- Contributions from Other Companies
- Miscellaneous Income

Debits:
- Railway Operating Expenses
- Railway Tax Accruals
- Uncollectible Railway Revenues
- Expenses of Miscellaneous Operations
- Taxes on Miscellaneous Operating Property
- Hire of Freight Cars—Debit Balance
- Rent for Locomotives
- Rent for Passenger-Train Cars
- Rent for Floating Equipment
- Rent for Work Equipment
- Joint Facility Rents
- Rent for Leased Roads
- Miscellaneous Rents
- Miscellaneous Tax Accruals
- Separately Operated Properties—Loss
- Interest on Funded Debt
- Interest on Unfunded Debt
- Amortization of Discount on Funded Debt
- Maintenance of Investment Organization
- Income Transferred to Other Companies
- Miscellaneous Income Charges
- Income Applied to Sinking and Other Reserve Funds
- Dividend Appropriations of Income
- Income Appropriated for Investment in Physical Property
- Stock Discount Extinguished through Income
- Miscellaneous Appropriation of Income

PROFIT AND LOSS ACCOUNTS.—Classification of Profit and Loss Accounts provides for 18 primary accounts designed to show appropriations

of surplus at the option of the corporation, and adjustments of surplus in recognition of income or loss items not applicable to current period. The balance of these accounts represents net current adjustment of balance sheet surplus. Arranged as debits and credits, the accounts included within this classification are given herewith.

Schedule of Profit and Loss Accounts

Credits:
- Credit Balance (at beginning of Fiscal Period)
- Credit Balance Transferred from Income
- Profit on Road and Equipment Sold
- Delayed Income Credits
- Unrefundable Overcharges
- Donations
- Miscellaneous Credits

Debits:
- Debit Balance (at beginning of Fiscal Period)
- Debit Balance Transferred from Income
- Surplus Applied to Sinking and Other Reserve Funds
- Dividend Appropriations of Surplus
- Surplus Appropriated for Investment in Physical Property
- Stock Discount Extinguished through Surplus
- Debt Discount Extinguished through Surplus
- Miscellaneous Appropriations of Surplus
- Loss on Retired Road and Equipment
- Delayed Income Debits
- Miscellaneous Debits

GENERAL BALANCE SHEET ACCOUNTS.—Classification of General Balance Sheet Accounts provides for 63 primary accounts designed to show assets and equities of the corporation. The first account in this classification is Investment in Road and Equipment, which controls the subsidiary accounts making up Classification of Investment in Road and Equipment. The Form of Balance Sheet Statement prescribed by the Commission shows these accounts in detail (Forms 1a, 1b.)

The Income Statement prescribed by the Commission is shown below in summary form:

Income Statement Items

OPERATING INCOME:
- Railway operating revenues
- Railway operating expenses
  - Net revenue from railway operations
- Railway tax accruals
- Uncollectible railway revenues
  - Railway operating income
- Revenues from miscellaneous operations
- Expenses of miscellaneous operations
  - Net revenue from miscellaneous operations
- Taxes on miscellaneous operating property
  - Miscellaneous operating income
    - TOTAL OPERATING INCOME

NON-OPERATING INCOME:
- Total non-operating income
  - GROSS INCOME

DEDUCTIONS FROM GROSS INCOME:
- Total deductions from gross income
  - NET INCOME

DISPOSITION OF NET INCOME:
- Total appropriations of income
- Income balance transferred to Profit and Loss

ACCOUNTING PRACTICES.—The accounting rules governing use of classifications are significant. They constitute an important feature of Interstate Commerce Commission accounting regulation.

ACCOUNTING FOR DEPRECIATION.—Prior to establishment of the uniform system of accounts, railroad corporations accounted for maintenance of their properties by current charges for repairs and by charging replacements to operations. Replacement rather than abandonment was recognized as the basis for the charge, and accounting for maintenance was subordinated to the renewals policy.

The uniform system of accounts provides for definite depreciation accounting practice. For equipment this practice is prescribed. For ways and structures, to which it was applied in 1914, it is optional. Depreciation, i.e., loss in value of property units for which repairs cannot compensate, is an operating expense. It should be provided for out of current revenues, spread over the life of the property, and charged on a monthly basis. A depreciation reserve account, **Accrued Depreciation-Equipment,** is credited. Depreciation charges with respect to any unit of equipment "shall cease when the difference between the ledger value and the estimated scrap value shall have been credited to the accrued depreciation account."

Determination of the depreciation rate is left to the carrier's judgment, although statements as to bases of calculation are required in the annual report. Since 1916 carriers have been required, in certain instances, to justify rates used. The Commission's regulations have not accomplished the desired uniformity in depreciation accounting. Carriers have charged from 1% to 6% depreciation on equipment. In 1921 equipment depreciation rates used by several large trunk line railways ranged from 2% to 4%, based on estimated service life of 25 to 50 years. In compliance with provisions of the Transportation Act of 1920 that it shall "as soon as practical, prescribe, ... the classes of property for which depreciation charges may properly be included under operating expenses and **the percentages of depreciation which shall be charged** with respect to each of such classes . . . . ," the Commission has recently considered the question anew.

ABANDONMENTS.—When equipment or fixed improvements are retired and replaced, the appropriate property account is credited with "ledger value" of item retired. Charges are made concurrently to Accrued Depreciation account for **balance therein applicable to the unit retired** and to appropriate asset accounts for amount of salvage and insurance. In case of fixed improvements, remainder plus cost of demolition is charged to appropriate repair account. In case of equipment, remainder plus cost of demolition is charged to Profit and Loss, for depreciation applicable to periods prior to July 1, 1907, and to the appropriate retirement (operating expense) account. Application of this rule requires property records in such detail that the reserve cannot be charged for more or less than amount actually reserved for retirement of this identical property unit. If authorized by the Commission, any large item representing retirements of fixed improvements can be charged to Profit and Loss or to a suspense account, **Property Abandoned Chargeable to Operating Expenses.** When fixed improvements are retired and not replaced the charge is to Profit and Loss instead of Operating Expense.

ACCOUNTING FOR ADDITIONS AND BETTERMENTS.—Additions and betterments were originally provided for in a separate classification. In 1914 they were merged with original construction and equipment costs in the Classification of Investment in Road and Equipment, although the records must be so kept that original costs and subsequent expenditures for additions and betterments can be reported separately.

200A. COMPARATIVE GENERAL BALANCE SHEET—ASSET SIDE.

For instructions covering this schedule, see the text pertaining to General Balance Sheet Accounts in the Uniform System of Accounts for Steam Railway Corporations. The entries in this balance sheet should be consistent with those in the supporting schedules on the pages indicated. The entries in the short column (b_2) should be deducted from those in column (b_1) in order to obtain corresponding entries for column (c). All credit entries hereunder should be in red ink. The making of entries in column (d) is optional.

FORM 1b. Form of Balance Sheet Statement for Steam Railways, prescribed by Interstate Commerce Commission—(*Continued*)

Additions are additional facilities such as tracks, buildings, bridges, equipment; and additions, or devices added, to facilities already in existence, as, additional ties in an existing track, air brakes, etc.

Betterments are "improvements in existing facilities through the substitution of superior parts for inferior parts retired," as, substitution of steel-tired for cast wheels and 90 lb. for 70 lb. rails.

The Uniform System of Accounts provides that additions and betterments should be charged to capital, that "all the cost of maintenance and not more than the cost of maintenance" should be charged to operations. Prior to 1907 no uniformity existed in accounting methods for maintenance and improvements. Formal depreciation accounting was not practiced. The problem received consideration only when retired units were replaced. Although replacements were sometimes charged to capital, maintenance was recognized as operating cost.

The Commission holds that any expenditure reflecting an increase in carrier's investment in property is a legitimate charge to capital, but adopts a compromise policy in its accounting rule. It specifies that cost chargeable to investment in road and equipment "is the excess cost of new parts over the cost at current prices of new parts of the kind retired." Both physical and value aspects of the problem receive consideration. Cost is the basis for measurement of improvement but it is cost in excess of **cost of replacement in kind.** The Commission also rules that "if the total cost of additions and betterments to any class of" property "(except additional, or extension of, tracks), under a general plan, considered as a whole, is less than $100, the amount" shall be charged to Operating Expenses.[4]

DISCOUNT ON SECURITIES.—Investment accounts, prior to 1907, often carried value of investment in road and equipment at a figure approximating par value of securities issued therefor. Present classifications provide that discount on capital stock or discount and expense on funded debt shall not be "included in any account as a part of the cost of acquiring any property, tangible or intangible," except that portion of debt discount which, under a general program of amortization, is applicable to construction period.

Discount on stock can be extinguished, (1) by premiums realized on subsequent sales of same subclass of stock; (2) by assessments levied on stockholders; (3) by appropriations of income or surplus for that purpose; or (4) by charges to Profit and Loss upon reacquirement of stock. **Premium on stock** can be extinguished, (1) by discounts suffered on sales of same subclass of stock, or (2) by credits to Profit and Loss upon reacquirement of stock. Debt discounts and premiums are extinguished by annual charges or credits to the income accounts, **Amortization of Discount on Funded Debt** and **Release of Premiums on Funded Debt,** although carriers are allowed the option of extinguishing the whole debt discount through charges to Profit and Loss and deferring extinguishment of debt premium until maturity of the debt.

EQUALIZATION OF EXPENSES.—Equalization of maintenance expenses in accord with a budget of expenditures adopted for the year is provided for by two primary maintenance expense accounts, **Equalization-Ways and Structures,** and **Equalization-Equipment,**[5] and operating reserve accounts,

---

[4] Made effective Jan. 1, 1921. In the 1914 classifications this practice was optional for charges less than $200.

[5] Both added in 1921.

Equalization Reserve-Ways and Structures, and **Equalization Reserve-Equipment.** Use of these accounts is optional. When amount actually expended for maintenance during any month is less than the equalized portion of proposed expenditures, the difference is charged to the expense account, Equalization-Equipment, or Equalization–Ways and Structures, and credited to Equalization Reserve–Equipment, or Equalization Reserve-Ways and Structures, as case may be. When amount actually expended is more than the equalized portions of proposed expenditures, difference is charged to the equalization reserve account and credited to the expense account. Credit balances in reserve accounts may be carried over from one year to another but under no circumstances may debit balances be so carried over.

COST ACCOUNTING FOR RAILWAY OPERATIONS.—Whether or not cost, as determined by application of cost accounting methods, is a proper basis for the charge for a particular transportation service, cost analysis contributes to the solution of problems now before the commissions. Division of operating expenses between freight and passenger service is the limit to which cost accounting analysis has been carried in practice. A plan for such a division of expenses can be formulated in detail only after careful analysis of operating conditions and relationship between each item of expense and services performed. Two such systems have been in use for some time, employed, respectively, by the Pennsylvania Railroad Co. and the Oklahoma Corporation Commission. Independent analyses have frequently been made in connection with specific issues before commissions.

The Interstate Commerce Commission, on July 1, 1915, prescribed its "Rules governing the Separation of Operating Expenses between Freight Service and Passenger Service." Suspended during the war, these requirements were again put in force on Jan. 1, 1920. The Commission specifies that each operating expense shall be classified as it relates, (a) solely to freight service, or (b) solely to passenger and allied services, or (c) in common to both freight and passenger and allied services, or (d) to neither freight nor passenger and allied services. Appropriate subaccounts to provide for this classification are set up under each of the primary operating accounts of the carrier. The results of such classification shall be shown in the annual reports made by each such carrier to the Interstate Commerce Commission. Rules for division of expenses common to both services are prescribed. Maintenance of signals and interlockers, for example, is to be apportioned on basis of transportation service locomotive miles, dispatching trains expense on basis of transportation train miles, fuel for mixed train locomotives on basis of car miles, superintendence (equipment) on basis of apportionment of certain directly assignable expenses.

MISCELLANEOUS PROVISIONS.—The Commission specifies that accounting for expenses and revenues "shall be as nearly as practicable on the basis of accruals," that "accounts shall be written up, posted to the general ledger, and balanced monthly," and that final entries for a month must be made within 60 days.

Classifications provide for an investment account, **Interest during Construction.** To this account is charged interest paid on bonds during construction period, also reasonable charges for interest on carrier's own funds expended for construction purposes.

Classifications do not sharply define disposition of income and appropriations of surplus. At least five important items may be charged either

to Income or Profit and Loss, namely: dividend appropriations; extinguishment of stock discount; extinguishment of debt discount; appropriations for investment in physical property; and appropriations to sinking and other reserve funds.

Primary classification of operating expenses is an approach to job cost analysis. The account **Rails** (maintenance of rails), for example, carries the cost of labor, materials and supplies, work train service, floating equipment work service, special machine service, etc., used in the repair of rails.

ADMINISTRATION OF ACCOUNTING REGULATION.—The accounting regulations of the Commission are prescribed by order to the railway accounting officers who, by specific enactment, are held "personally responsible for the enforcement of the accounting rules laid down." Besides the formal classifications and the "general" and "special" instructions in connection therewith, accounting bulletins, issued from time to time, communicate the Commission's interpretations of classifications and approved accounting practices.

The Commission has exercised its authority "to inspect and examine any and all accounts, records, and memoranda," including correspondence of carriers, although in recent years it has not done much in the way of auditing accounts of individual carriers. The Commission requires an annual report, monthly reports of railway operating income by general accounts, as well as numerous other reports of matters other than accounting. In 1921 a total of 88 reports of an accounting or other statistical nature were required by the Interstate Commerce Commission. The **annual report** is an elaborate document, containing balance sheet, income sheet, and approximately 90 schedules of an accounting, financial, or operating statistical character. The schedules give detailed information as to control, capitalization, indebtedness, income, surplus, dividend appropriations, and reserves of the corporation; also as to ownership, improvement, operation, lease, depreciation, retirement, replacement, maintenance of, and investment in, property. The annual report for year ending Dec. 31 is due Mar. 31.

The Interstate Commerce Commission exercises jurisdiction over practically all phases of railway accounting. Although it does not usually concern itself with the ordinary routine of internal accounting procedure, the scope of its examinations is broad enough to cover all practices from origin to destination. Effectiveness of commission regulation of railway accounts is assured by the active co-operation of the railway accounting officers through the Railway Accounting Officers Association. Present standardization of internal accounting procedure is the outgrowth of years of endeavor on the part of accounting officers to prescribe, for themselves, uniform practices and standard forms by which to record the business of transportation and its financial results. "Railway Accounting Procedure," published by the Railway Accounting Officers Association, presents in detail the comprehensive body of rules and forms, some mandatory, some recommendatory, governing joint business of carriers where interline movements are involved.

In connection with the classifications, the Commission provides that carriers may subdivide any primary account; may make assignment of the amount therein to operating divisions, to its individual lines or to states; "may keep any temporary or experimental accounts for revenues or expenses, the purpose of which shall be to develop the efficiency of operations," provided in each case that such action does not impair the integrity of the accounts prescribed.

Accounting Regulation by the States

JURISDICTION OF STATE COMMISSIONS.—Most state commissions exercising regulatory powers over public utility corporations are authorized (in some cases required) to prescribe uniform systems of accounts for utilities under their jurisdiction, to examine accounts and other records, and to require such reports as may be necessary to insure proper performance of their functions. An effective administrative supervision of gas and electric companies, as of railroads, can be exercised only on the basis of facts furnished by adequate accounting records.

In 43 states, commissions have been granted authority to regulate accounting practices. In 43 states, commissions have been authorized to "prescribe" uniform systems of accounts, usually with the complementary power to examine and require reports. The authorizing section of the law usually states or implies that no other system of accounts shall be kept, although this does not prevent a company from keeping of special records for its own use and information.

Some commissions have jurisdiction over all public utilities; the jurisdiction of others is limited. At present, in 47 states, there are 14 public service commissions, 11 public utility, 12 railroad, 5 corporation, 2 railroad and public utility (and 4 others) exercising jurisdiction over railroads and/or public utilities (understood as all utilities except railroads) and/or so-called local utilities. The jurisdiction of the Iowa commission with relation to accounts is limited to railroad and express companies; the Michigan commission to telephone, gas, and electric companies; whereas the Oklahoma commission has jurisdiction over steam and electric railways, sleeping car, pipe line, gas, electric, water, telephone, telegraph, express, and automotive companies.

Steam and electric railways, certain other transportation agencies, and telephone and telegraph companies, engaged in both state and interstate business, have a dual responsibility—to the state commission on the one hand and to the Interstate Commerce Commission on the other. To avoid conflict of authority and duplication of effort which might result from independent exercise of regulatory power, many state commissions have been instructed to accept the accounting rules of the Interstate Commerce Commission for these utilities. The New York Public Service Commission Law, for example, specifies that "the system of accounts established by the commission and the forms of accounts, records and memoranda prescribed by it . . . . shall conform in the case of railroad corporations as nearly as may be to those from time to time established and prescribed by the Interstate Commerce Commission." The Michigan statute conferring authority over telephone companies specifies that "no such regulation shall be in duplication or in addition to any regulation . . . . made by the Government of the United States." Where not so instructed, most commissions have recognized the advisability of such procedure, particularly in case of steam and electric railways. State commissions now exercise, independently, little authority over accounts of steam railways. With few exceptions they have adopted the Interstate Commerce Commission's classifications for electric railways.

In 38 states, commissions have been granted authority to regulate accounting practices of telephone companies; in 35 states, telegraph companies. But state commissions make their distinctive contribution to the regulation of accounts in connection with local utilities. In 35 states, commissions

have been authorized to regulate accounting practices of gas companies; in 35 states, electric companies; in 32 states, water companies; and in 21 states, certain automotive companies. Various other enterprises such as toll bridges, water carriers, warehouse, messenger and signaling, heating and refrigerating, and natural gas companies, are brought within the jurisdiction of certain commissions.

EXERCISE OF JURISDICTION.—In 31 states, systems of accounts have been prescribed for telephone companies; in 16 states, the Interstate Commerce Commission classifications as such have been prescribed by law or adopted by the commissions. In 27 states, commissions have prescribed systems of accounts for gas companies; in 31 states, for electric companies; in 21 states, for water companies; and in 5 states, for automotive companies.[6] Under an act of Congress, approved in 1909, the Interstate Commerce Commission promulgated a system of accounts for gas and electric companies in District of Columbia. This system is still in use and has been adopted by at least one state, Georgia. Practically every uniform system of accounts prescribes a definite depreciation accounting practice. The commissions of 42 states require annual reports; the commissions of 13 states require monthly reports.

CLASSIFICATION OF UTILITIES.—A uniform system of accounts for local utilities must meet requirements of companies of various sizes. This is usually accomplished by classifying utilities on the basis of operating revenues and providing successive subdivisions of operating expense accounts for use of the larger classes. These classes, usually three or four in number, depend upon the size of the utility interests in the state. Electric utilities in New York and New Hampshire are classified on basis of operating revenues as follows:

New York		New Hampshire	
Class	Revenues	Class	Revenues
1st	In excess of $500,000	A	In excess of $50,000
2nd	$100,000 to $500,000	B	$20,000 to $50,000
3rd	$25,000 to $100,000	C	$3,000 to $20,000
4th	Less than $25,000	D	Less than $3,000

The New York classifications for the 1st class call for 94 operating expense accounts; 2nd class, 60; 3rd class, 44; 4th class, 43.

UNIFORM SYSTEMS OF ACCOUNTS.—The uniform systems of accounts prescribed for gas and electric companies by the Massachusetts Department of Public Utilities and the New York Public Service Commission represent standard practice. The New York systems have been thoroughly tested in large industrial communities. The Massachusetts systems, originally adopted in 1886 and 1887, were revised recently in conformity with present tendencies toward standardization.

MASSACHUSETTS SYSTEMS.—The complete classifications for gas companies, including expense accounts for Class A utilities (with operating revenues in excess of $200,000), are shown below:

---

[6] Not included in the above are the systems of accounts now in preparation by the Alabama Public Service Commission for telephone, gas, electric, and water companies.

Schedule of Balance Sheet Accounts

Asset Accounts

INVESTMENTS:
- Plant Investment
- General Equipment
- Unfinished Construction
- Miscellaneous Physical Property
- Other Investments

CURRENT ASSETS:
- Cash
- Special Deposits
- Notes Receivable
- Accounts Receivable
- Interest and Dividends Receivable
- Materials and Supplies
- Other Current Assets

RESERVE FUNDS:
- Sinking Funds
- Insurance and Other Funds

PREPAID ACCOUNTS:
- Prepaid Insurance
- Prepaid Interest
- Other Prepayments

UNADJUSTED DEBITS:
- Discount on Bonds
- Property Abandoned
- Other Unadjusted Debits

Liability Accounts

CAPITAL STOCK:
- Common Stock
- Preferred Stock
- Employees' Stock

PREMIUM ON CAPITAL STOCK:
- Premium on Capital Stock

BONDS AND COUPON NOTES:
- Bonds
- Coupon Notes

CURRENT LIABILITIES:
- Notes Payable
- Accounts Payable
- Consumers' Deposits
- Matured Interest Unpaid
- Dividends Declared
- Other Current Liabilities

ACCRUED LIABILITIES:
- Tax Liability
- Interest Accrued
- Other Accrued Liabilities

UNADJUSTED CREDITS:
- Premium on Bonds
- Other Unadjusted Credits

RESERVES:
- Insurance and Casualty Reserve
- Depreciation Reserve
- Other Reserves

APPROPRIATED SURPLUS:
- Sinking Fund Reserves
- Miscellaneous Fund Reserves

PROFIT AND LOSS:
- Profit and Loss—Balance

Schedule of Plant Investment and General Equipment Accounts

INTANGIBLE PROPERTY:
- Organization
- Miscellaneous Intangible Investment

TANGIBLE PROPERTY:
- Lands
- Structures

GAS PRODUCTION EQUIPMENT:
- Boiler Plant Equipment
- Engines
- Miscellaneous Power Plant Equipment
- Benches and Retorts
- Water Gas Sets
- Purification Apparatus
- Other Equipment at Works

TRANSMISSION AND DISTRIBUTION:
- Street Mains
- Services
- Consumers' Meters
- Consumers' Meter Installation

UTILIZATION EQUIPMENT:
- Street Lighting Equipment
- Consumers' Premises Equipment

UNDISTRIBUTED EXPENDITURES DURING CONSTRUCTION:
- Engineering and Superintendence
- Law Expenditures During Construction
- Interest During Construction
- Accidents and Damages During Construction
- Taxes During Construction
- Miscellaneous Expenditures During Construction

GENERAL EQUIPMENT:
- Office Equipment
- Shop Equipment
- Stores Equipment
- Transportation Equipment
- Laboratory Equipment
- Miscellaneous Equipment

Schedule of Income Accounts

OPERATING INCOME:
- Gas Operating Revenues
- Gas Operating Expenses
- Uncollectible Operating Revenue
- Taxes Assignable to Gas Operations

NON-OPERATING INCOME:
- Merchandise and Jobbing Revenue
- Rent from Gas Appliances
- Miscellaneous Rent Income
- Interest and Dividend Income
- Income from Sinking and Other Reserve Funds
- Amortization of Premium on Bonds
- Miscellaneous Non-Operating Income

DEDUCTIONS FROM GROSS INCOME:
- Miscellaneous Rents
- Interest on Bonds and Coupon Notes
- Miscellaneous Interest Deductions
- Amortization of Discount
- Miscellaneous Deductions from Income

Schedule of Profit and Loss Accounts

Credits:
- Credit Balance at Beginning of Fiscal Period
- Credit Balance Transferred from Income Account
- Miscellaneous Credits

Debits:
- Debit Balance at Beginning of Fiscal Period
- Debit Balance Transferred from Income Account
- Surplus Applied to Sinking Fund and Other Reserves
- Dividend Appropriations of Surplus
- Appropriations of Surplus for Depreciation
- Discount on Bonds Extinguished through Surplus
- Other Deductions from Surplus

Schedule of Operating Revenue Accounts

REVENUES FROM SALE OF GAS:
- Metered Sales to General Consumers
- Flat-Rate Sales to General Consumers
- Prepaid Gas Sales
- Sales to Other Gas Companies
- Municipal Street Lighting
- Miscellaneous Gas Revenues

REVENUES FROM MISCELLANEOUS GAS OPERATIONS:
- Steam Sales Revenue
- Rent from Property Used in Operation
- Miscellaneous Operating Revenues

Schedule of Operating Expense Accounts

PRODUCTION EXPENSES:

OPERATION
- Superintendence
- Boiler and Engine Room Labor
- Retort House Labor
- Generator House Labor
- Purification Labor
- Miscellaneous Labor at Works
- Boiler Fuel
- Water
- Power from Other Sources
- Fuel under Retorts
- Coal Carbonized
- Generator Fuel
- Water Gas Oil
- Purification Supplies
- Miscellaneous Works Expense

MAINTENANCE
- Maintenance of Works and Station Structures
- Maintenance of Power Plant Equipment
- Maintenance of Benches and Retorts
- Maintenance of Water Gas Sets
- Maintenance of Purification Apparatus
- Maintenance of Holders
- Maintenance of Other Equipment at Works
- Purchased Gas
- Residuals Produced—Credit
- Production Expenses Transferred—Credit

TRANSMISSION AND DISTRIBUTION EXPENSES:

OPERATION
- Superintendence
- Transmission and Distribution Operating Labor
- Fuel for Heating Outlying Holders
- Transmission and Distribution Supplies and Expenses
- Inspecting and Testing Meters
- Removing and Resetting Meters

MAINTENANCE
- Maintenance of Street Mains
- Maintenance of Services
- Maintenance of Consumers' Meters
- Maintenance of Distribution Holders
- Maintenance of Tools and Implements
- Maintenance of Miscellaneous Structures

Schedule of Operating Expense Accounts—(Continued)

Utilization Expenses:

Operation

Municipal Street Lamps—Labor
Municipal Street Lamps—Supplies and Expenses
Commercial Lamps

Maintenance

Maintenance of Municipal Street Lamps
Maintenance of Commercial Lamps and Equipment
Maintenance of Consumers' Installations

Commercial Expenses:

Commercial Salaries
Commercial Supplies and Expenses

New Business Expenses:

New Business Salaries
New Business Supplies and Expenses
Advertising
Piping and Appliances

General and Miscellaneous Expenses:

Salaries of General Officers
Salaries of General Office Clerks
General Office Supplies and Expenses
General Office Rents
Law Expense—General
Insurance
Relief Department, Pensions, and Welfare Work
Accidents and Damages
Store Expenses
Transportation Expenses
Inventory Adjustments
Maintenance of General Structures
Depreciation
Miscellaneous General Expenses
Gas Expenses Transferred—Credit

The balance sheet, plant investment and general equipment, operating revenue, and operating expense classifications are similar to the Interstate Commerce Commission classifications, but the line between income and profit and loss is more carefully drawn. Dividends are distributions chargeable to surplus. Profits retained to provide for extensions, additions, or betterments are appropriations of surplus.

The subtotals in the income account are significant. The total of operating revenues diminished by total of operating expenses, gives **net operating revenues (or loss)**. The net operating revenues (or loss) diminished by the amount of uncollectible revenues and taxes, gives **net operating income (or loss)**. The addition of **non-operating income** to net-operating income, gives **gross income.** The gross income diminished by the sum of the **deduction from gross income,** gives **net income (or loss)**, which balance is carried to Profit and Loss.

Provision for depreciation of plant is made by periodic charges to operating expense account, **Depreciation,** and the creation of a depreciation reserve for retirement of property. Such reserve can be created by charges to Profit and Loss also. Rates of depreciation are, for the present, determined by the utility, although the basis of calculation must be reported to the department. The maintenance accounts include charges for repairs only. The account, Depreciation, is classified under the general account, **General and Miscellaneous Expenses.**

The investment accounts are charged for "only such portion of betterments as will, when added to original cost of the property bettered, give the value of the property in its bettered condition." The remainder shall be "classed as a repair and charged to the appropriate operating expense accounts."

When property is **abandoned,** whether replaced or not, Plant Investment account is credited. Concurrently, salvage and insurance are recognized, and the balance, plus cost of demolition, is charged to Depreciation Reserve, up to the amount of the balance in that account, and to the profit and loss account, **Appropriations of Surplus for Depreciation.** Property retired as a result of a casualty and not provided for in Depreciation Reserve shall be

charged to the suspense account, **Abandoned Property,** and amortized in the future. No alternative charge to Profit and Loss is provided for.

Organization expenses are amortized within a reasonable period. Reserves set aside for definite and specific purposes can under no circumstances be diverted to any other use without consent of the Department. A company operating both gas and electric properties divides joint non-operating revenues and expenses on basis of respective gross operating revenues. Companies operating both gas and electric properties are required to keep separate gas and electric property accounts, but are not required to keep separate balance sheet accounts (other than plant investment). Separate classifications are provided for gas and electric operating expense and revenue accounts.

NEW YORK SYSTEMS.—Schedules A and B constitute the balance sheet and income account classifications. Plant and equipment accounts are grouped under the subtitle, Fixed Capital, in the balance sheet classification. Schedule B, income account, consists of the revenue, expense, income, and profit and loss items. The text pertaining to the income account contains carefully drawn definitions of every phase of operating, financial, contractual, and ownership activity.

Provision for depreciation of plant is made by monthly charges to General Amortization, classified under General and Miscellaneous Expenses, and the creation of a reserve, Accrued Amortization of Capital. Rates of depreciation are determined by the utility. When capital exhausted is replaced by a unit of "substantially greater capacity," cost of replacing with a unit of same capacity is charged as replacement and the balance as betterment. Betterments involving partial destruction of thing bettered are provided for as in the Massachusetts rule. Cost of property retired, less salvage, is charged to Accrued Amortization of Capital, and necessary adjustments made in Corporate Surplus or Deficit.

STANDARD CLASSIFICATION.—A recent development in state control of public utility accounts is the attempt being made by the state public utility commissioners through the National Association of Railway and Utilities Commissioners, to standardize accounting rules and regulations. This association's Committee on Statistics and Accounts of Public Utilities, after a careful study of accounting requirements of local public utility control, has prepared uniform classifications of accounts for gas, electric, and water utilities. These standards of uniformity have been accepted by the association and recommended for adoption by state commissions.

These classifications represent middle ground of current practice. In several instances there is an alternative practice to permit adjustment to policy. Particularly is this true in connection with depreciation. A retirement reserve may be created by periodic charges to Operating Expense, or by charges to Profit and Loss, or both. The retirement reserve account is provided for equalizing retirement losses from year to year, **"but with due regard for amount of earnings available for this purpose in each year."** Cost of property retired, less salvage and insurance, is charged to "Retirement Reserve" up to the balance in that account. The balance is charged to "Property Abandoned," **or to other appropriate account.** Dividend distributions and appropriations to reserves are chargeable to Income or Profit and Loss. Such standardization leads to a more satisfactory basis for statistical analysis of operating and financial activities of local utilities as a class.

Public Utility Valuation

NECESSITY FOR VALUATION.—An important feature of public utility regulation is the valuation of public utility properties. The "fair value" of property used in serving the public is recognized by courts and commissions as the basis for determining reasonableness of rates, for regulation or capitalization, for taxation and public purchase. Discussion of "fair value" in relation to rates appeared in 1897 as dicta in *Smyth* v. *Ames*.[7] It was declared that "what the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience." This doctrine throws the burden, in rate-making, upon valuation.

VALUATION PROJECTS.—Several states have undertaken on a broad scale the valuation of public utility properties. A Michigan valuation of railway properties for purposes of taxation was made in 1900. This was followed by valuation projects in Minnesota, Wisconsin, Nebraska, and New Jersey.

In 1913 Congress authorized the Interstate Commerce Commission to value railway properties in the United States for purposes of regulation. This work is carried on through the Bureau of Valuation. The Transportation Act of 1920 requires that its results be accepted as prima facie evidence of value for purposes of administering the new rule of rate-making and the program of railroad consolidation.

VALUATION IS PURPOSIVE.—Valuations depend upon the purpose for which undertaken. Valuation for taxation is made to determine ability to contribute toward maintenance of government. Valuation for rate-making is made to determine proper compensation for services rendered rate-payers. Valuation for capitalization is made to test securities outstanding. Valuation for public purchase is made to determine proper compensation for private property.

VALUATION BASES.—Several bases have been proposed to determine "fair value." The Supreme Court in *Smyth* v. *Ames* proposed following elements of value: amounts expended in permanent improvements; market value of stocks and bonds; present as compared with original cost of construction; probable earning capacity; and amount necessary to cover operating expenses. Valuation Act of 1913 instructed the Interstate Commerce Commission to ascertain original cost to date, cost of reproduction new, cost of reproduction new less depreciation, and any other elements of value. Some elements proposed are inapplicable. The others represent three valuation bases: market value, actual investments, and present value determined independently of rates and earnings.

Market value cannot be directly determined because complex properties of this type do not enter the market. Two evidences of market value are relied upon—quotations on securities market, and capitalization of net earnings. Because of many things entirely divorced from value of property or its earning capacity, which affect securities quotations, the first of these methods is not reliable. Both figures depend so directly upon the monopolistic privilege and upon the prevailing level of rates, that market value as a basis for adjusting rates is inapplicable.

The other bases are: actual investment, and present value determined independently of rates and earnings. The most satisfactory evidence of actual investment is construction cost and betterment figures taken from an

---

[7] 169 U. S. 466.

adequate system of accounting records, but usually such records are not available. Preregulation accounting records do not always disclose legitimate construction costs on a cash basis. It is necessary to accept property records as they stand or rely upon a physical valuation.

Physical valuation consists of a physical inventory of property units and application thereto of unit prices. Determination of actual investment (original cost) requires application of past price bases. Present value requires application of present price bases.

ACTUAL INVESTMENT.—Determination of original cost to date by method here proposed requires analysis of the origin and development of the property. To the specific property units now in existence are applied unit prices prevailing at time of their acquisition. Such prices are taken from contract or other records of the company, standard quotations, or any other available data covering cost of similar items elsewhere. This method is seldom used because of difficulty in finding reliable price data. The Bureau of Valuation has not been successful in determining **original cost to date** by this method.

COST OF REPRODUCTION.—Present value found by applying present price bases to a physical inventory assumes a hypothetical construction program. It is equivalent to cost of reproduction, the most generally accepted valuation figure. It is the most important element in the Interstate Commerce Commission's determination of final value.

Under the cost of reproduction method the engineer must assume conditions of construction. He is interested in cost of reconstructing the identical property under geographical and topographical conditions prevailing **at time of original construction.** In considering methods of construction, sources of supply of labor and materials, length of construction period, etc., he must adopt a reasonable procedure.

In railroad valuation the process of reversion to original conditions is described as follows: "The roadbed is assumed to disappear, and in place of the smoothed and well-tended grade the conditions met at the time of construction are restored. The right of way and terminal properties pass into private hands to be devoted to the same use as adjoining tracts. The equipment vanishes, the working force is scattered. The very corporate existence ceases."[8]

Elaborate field investigations are undertaken. Land is easily checked but ways and structures present a more difficult problem. Other railroads are assumed to exist to haul materials for reconstruction. Materials and labor are drawn from the most economical of present sources of supply. Present efficiency of labor is assumed. Materials, supplies, and services of persons or property which, at present, would be needed to reconstruct the property are inventoried in detail. Trackage is measured; yardage of cuts and fills and labor for track laying and surfacing are estimated. Team haul ahead of construction and transportation of workmen to and from point of construction are calculated. Buildings, bridges, and other structures are transformed into thousands of bricks, tons of steel, thousands of board-feet, barrels of cement, etc.

The field investigation completed, the next step consists in applying unit prices. Presumably unit prices prevailing during the hypothetical reconstruction period will be applied to the physical units required for reconstruction of roadway and structures. The Bureau of Valuation has applied the

[8] Homer B. Vanderblue in "Railroad Valuation."

average unit prices over a period of 5 years next preceding date of valuation, June 30, 1914.

Land values are determined by applying **unit prices** based upon "average market value" of adjacent tracts. These unit prices are drawn from, (1) results of special investigations of land values, or (2) tax assessment records, or (3) records of real estate transfers. To these figures, based upon the "normal market value" of adjacent tracts, is usually applied a multiple to cover additional costs of acquiring land for railway purposes. This multiple varies in different valuation projects from 10% to 400%. The use of such multiples was condemned in the *Minnesota Rate Case* and, although still defended by railway engineers, is not included in the Bureau of Valuation's cost of reproduction figure.

The third important element in physical reconstruction of the property is overhead expense of construction and acquisition. Items such as costs of materials inspection and cost of maintaining concentration yards for construction materials are provided for in unit prices for materials. But general charges for superintendence, engineering, promotion, legal services, and interest, taxes, and insurance during construction, are generally included within the reproduction cost total by the addition of a percentage of certain basic construction cost figures.

COST NEW LESS DEPRECIATION.—The most controversial problem in valuations is that of depreciation. It occurs in connection with both the original cost to date and cost of reproduction methods. If accrued depreciation is deducted from **original cost new to date,** a figure called "unimpaired investment" is obtained.[9] If from **cost of reproduction new,** the result is the **cost of reproduction new less depreciation** referred to in the Valuation Act. The utilities deny the legitimacy of such deduction. A "seasoned" plant property, adequately maintained to the proper standards of operating efficiency, they contend, is more valuable than a new plant ready for operation.

INTANGIBLES.—In addition to the physical valuation here described and certain allowances claimed for "contingencies" and "incidentals" which escape the eye of the valuation engineer, certain intangible items have been claimed by the utilities, and in some instances recognized by the courts, as elements in value of a public utility property. For the most part these items constitute what is called franchise value, going value, or developmental value. **Franchise value** represents value which attaches to a property because of the utility's franchise right to operate it for profits. **Going value** represents the value which attaches to a complex property, organized and operating for profit, with established business relations, which would not attach to the unorganized aggregate of property units. **Developmental value** represents sacrifices of investors in foregoing profits during early years of operation, while developing profitable business.

CRITIQUE.—Adjustment for **construction overhead** in cost of reproduction is not always based on fact. From 1% to 15% of other basic costs have been claimed for these items. In most state valuations 4% has been allowed.

Franchise value is the value of a public grant of monopolistic privilege and should not be construed against the public. Its value reflects earnings, and rates are in question. It has no place in valuation for rate-making. Going value represents a large number of important relationships which, doubtless, have a bearing on the success or failure of the business, but neither these

[9] Homer B. Vanderblue in "Railroad Valuation."

elements nor "profits foregone" constitute legitimate additions to **value of property.**

An **analysis of depreciation** in relation to public utility valuation must not be based on the "market value" analogy. Depreciation is a fact. Property units expire. A fully maintained plant property adequately meets service requirements. As income-bearing property it may be more valuable than when new. But depreciation of property units takes place before requirements of operating efficiency force replacement. Present **physical value status** of the property is dependent upon past depreciation, addition, and betterment policies, and upon past accounting for income. In valuation for rate-making, **value as a rate base** is sought, a figure on which the utility should be allowed to earn, and on which the public should be forced to pay. This value should be free from the influence of earning capacity. It may be that the utility should be allowed to earn on a figure representing undepreciated value, **but this has no bearing on value.** When value is sought, whether based on original cost or cost of reproduction, it should be depreciated value.

Original cost is difficult to ascertain and, if based on construction records, involves possibilities of subsidizing extravagant expenditure and of penalizing efficient construction methods It denies to the utility any element of "unearned increment," whereas cost of reproduction allows for it. Cost of reproduction relies upon assumption. In case of land, values produced in part by the railroad enter into the figure on which the utility should earn rates.

VALUATION IS AN ECONOMIC PROBLEM.—Whether actual investment or present value (cost of reproduction) should be accepted as the rate base, and what constitutes "fair return," involve economic, legal, and social considerations. Many factors must be considered to determine the correct policy. Conservative and economical management of construction and operation should be rewarded. Early losses in an industry where profits are limited by regulations should be compensated for. Utilities should not be penalized for shortcomings of past regulation; or for failure of past rate adjustments to cover operating expenses, **including depreciation** and a fair return. But these items should be "capitalized" in fair return; they do not form part of **value** of property. Either these items must be allowed for in the rate and the value figure remain a **value** figure, or value of property as a rate base must yield to "a figure which in view of the circumstances and conditions surrounding the construction and operation of the property will give justice and equity to the parties in interest."

SECTION 25

MUNICIPALITIES

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 25

MUNICIPALITIES

FUNCTION OF MUNICIPAL GOVERNMENT.—Municipal corporations are co-operative societies created to carry on, without profit, those functions of a public service nature necessary to protect life, health, and property of their members; and to provide and maintain, for use of their members, public institutions, buildings, structures, and improvements essential to the community's well-being.

The administration of their functions and activities is directed by salaried officials responsible to the municipality for proper administration of its affairs, and of the funds raised by taxation or by other methods, and entrusted to them to carry on the functions and activities of the municipality.

Out of the methods developed for providing and safeguarding such funds, have grown the present elaborate systems of municipal "funds," fiscal programs, and the various peculiarities of municipal fund and appropriation accounting. Much of the procedure is the outgrowth of the idea of the "internal check," and a desire to avoid responsibility, but is legally established and must be complied with.

ACCOUNTING PRINCIPLES.—Principles of business corporation accounting present the survival of the best in form and method, being the result of modern competitive conditions which require that accurate, detailed information be presented for purposes of efficient administration. Similar methods should prove advantageous to municipalities; yet in few cases is ordinary business expense accounting found in city offices.

Municipal Funds

FUND DEFINED.—A most essential requisite to the consideration of municipal accounting is an understanding of the term **municipal fund.** With municipalities, **fund** signifies a sum of money, or other resources, collected either from various miscellaneous sources **(general funds)**; from sale of financial obligations **(capital funds)**; from assessments against property **(special funds)**, etc., etc.—all to provide means to defray expenditures involved in connection with definitely specified activities or in attaining certain objects.

PROCEDURE.—A **formal procedure**, established by law, is employed by municipalities in establishing "funds," also in utilizing their resources.

Briefly, this formal procedure embraces **four principal steps;**

Establishment of the fund
Authorization of expenditure
Operation of funding
Operation of spending

Establishment.—Funds are created by legislative action, or by executive order, directing that certain receipts be gathered together and accounted for as special resources to be applied in carrying on designated activities.

Authorization.—Authorization to expend from a fund is, in general, an appropriation act of city council, directing that certain amounts be expended for certain purposes. In many cases, however, special funds created for special purposes are expended without further appropriation act because authority for expending is implied in the act by which the fund is established.

Operation of Funding.—This consists in collecting revenues, or money borrowed, gathering collections into treasury, and accounting for them by proper officials.

Operation of Spending.—This consists, (1) in encumbering the fund, or appropriation, by issue of contracts or purchase orders by responsible official; (2) approval of invoices by responsible official; (3) audit of invoice and preparation of a voucher by an auditing officer; (4) cancellation, by reversal of entry, of original encumbrance (see 1), and (5) payment of voucher by treasurer.

CLASSES OF MUNICIPAL FUNDS.—Under a prior caption, reference is made to some characteristic features of municipal "funds." Reference has also been made to the fact that all transactions entered into by a city have relation to the legal restrictions on expenditures and therefore to some one of the funds provided. It follows that through such legal restrictions, all municipal operations are financed from some fund. The funds are divided into **two main groups:**

1. General (or Current) Funds
2. Special Funds

The first of these groups is not further subdivided, but the second includes three distinct classes, viz.,

(a) Capital Funds
(b) Sinking Funds
(c) Special and Trust Funds

Nearly every city uses the name **general fund,** or similar term, to designate the fund the resources of which are available for any purpose to which the city legislative body chooses to apply them. Its resources are all those receipts which have not yet been, by law or agreement, applied to some special purposes and so are available for general purposes.

As direct opposite of general fund, **special fund** is used to designate all funds established to provide for some particularly specified expenditure or class of expenditures.

Object of establishing a special fund is, therefore, to insure provision of means for carrying on a particular activity or attaining a specified object either by diverting certain specified receipts from general resources, or providing funds through some other special means—as sale of bonds, or a special assessment for local improvements—proceeds of which may be used for no purpose other than the one specified.

Since resources of the various funds are provided for different purposes, accounting records must be maintained with a view to presenting resources and surplus of each fund separately from those of all others. This does not mean that the cash, for instance, of each fund shall be physically separated from the cash of all other funds; but fund accounts must be so maintained as always to indicate how much of total city cash and other resources each fund owns.

To carry out such requirements, it is essential that a completed **circle of fund accounts** for each fund be maintained. The accounting of a city must be developed to present the assets of the four principal classes of funds. The **main characteristics** of the four classes of funds are:

GENERAL FUND.—The general or current fund is that out of which most municipal current operating and maintenance obligations are met. Its resources are those receipts ordinarily appropriated to meet liabilities incurred in current administration and operation of city activities, and in general maintenance of properties and equipment during current period. Thus, while it is a going fund—always in existence—it is actually a fund of the current fiscal period. Its **revenues** are receipts from the yearly tax levy and from those other general and miscellaneous sources not given over by law to some special fund. Its **liabilities** are current obligations of the year which, in absence of other provisions, are to be paid from general resources. The larger number of budget appropriations are made from this fund and most of the detail accounting is in connection with this fund.

CAPITAL FUND.—Capital fund resources provide for construction work or other capital expenditures. It includes among its **resources** cash and other properties derived from proceeds of sales of bonds issued to provide for capital expenditure purposes, cash diverted from other funds, or that raised by special tax levies for capital expenditure purposes. Its **liabilities** are those incurred to carry out capital improvement programs undertaken, and outstanding capital bond issues.

SINKING FUNDS.—Sinking funds comprise cash and investments accumulated usually by annual increments contributed from general fund to redeem bonded indebtedness at maturity of the loan. **Liabilities** of the sinking funds are maturing bonds for redemption of which the funds have been created. In some cases bond interest is also paid from sinking funds.

SPECIAL AND TRUST FUNDS.—This class of funds includes all special purpose funds which the city holds and administers as trustee or special agent. They may be expendable in total for designated purposes, or only their incomes may be available for use by the city, according as deed of trust or authority by which they were created may specify. In many cases **annual estimates** of amounts available for city purposes and a **budget program** of expenditures and appropriations are required in greater or less degree as amount and purposes of available resources may determine. This class of funds also includes moneys which may come into hands of the municipality, to be applied for benefit of individuals, or ultimately to be returned to those from whom collected, or to their estate.

FINANCIAL STATEMENTS.—For each of these four separate classes of funds there are to be maintained accounts necessary to presentation of balance sheets supported by statements of income and expenditures.

DEVELOPMENT.—Formal establishment of these definite funds and funding of all receipts, as per legal requirements, are practices universally established by municipal corporations, for following reasons:

1. To safeguard resources of the fund.
2. To control amount of the expenditure.
3. To prevent obligating municipality for expenditures not legally authorized, or in excess of amount of resources provided.

As the natural consequence of such practices, and also of the fact that these requirements are legislative ones, the system of accounting known as

fund and appropriation accounting has, to within comparatively few years, been the only one developed by municipalities.

Fund and appropriation accounting aims at presenting essential information relating to the condition of a fund. It deals with cash receipts and cash expenditures; with disposition of fund resources and liabilities; and with administration of the fund in accordance with the authorization creating it.

It does not provide an **analysis of expenditure** and cannot furnish officials directing the activities of the municipality with the **classified information** furnished by a cost and expense classification of expenditure, essential and necessary to efficient management of private corporations.

Because of such inherent weaknesses in fund accounting, the only system ordinarily maintained by American municipalities, there has slowly developed an understanding that in addition to fund accounting, municipalities must also maintain proprietary and expense accounting, in order to know to what purpose their money is applied and to secure efficient management.

REQUIREMENTS OF MUNICIPAL ACCOUNTING.—While the general purpose of accounting is to provide **historical records** of financial affairs of an enterprise, with municipal corporations the record often is little more than one of receipts and disbursements of cash. As such it indicates only the honesty of officials charged with the duty of receiving and disbursing public funds.

In **municipal administration,** it is legally necessary to know primarily that officials are not spending more money than was appropriated, and that money is being spent only for purposes specified. For this reason the principal end of appropriation accounting has been to indicate whether or not such is the case. Under modern conditions, however, accounting should do more than merely prove or disprove honesty. If the historical record is written in accordance with modern accounting practice, it should display **all facts** regarding municipal administration in a broad and comprehensive way so as to enable one to judge quantity and value of the work done; also to provide information whereby the executive can judge results of the past and plan and prepare for the future.

The **completed municipal accounting system** presents two separately balanced groups or circles of accounts, both of which deal with the same receipts and expenditures. The **two circles** are:

1. Fund and Appropriation Accounts
2. Proprietary and Expense Accounts

Fund and appropriation accounting deals with resources and liabilities of municipal funds; with the budget; appropriation ordinances; estimated revenues and expenditures; actual revenue receipts and the expenditures incurred. This is the accounting now universally in use. **Proprietary and expense accounting** deals with financial and operating activities of the municipality in a manner similar to that in use among business corporations. Fund accounting for governmental corporations is required by law. Proprietary and expense accounting is not, but it is as necessary to efficient administration of city activities as is fund accounting to control of funds. Necessity of the two circles of accounts arises from the different purposes achieved by each.

Since municipal corporations must ordinarily obtain funds to carry on their activities, by assessing their citizens for larger part of costs of operation, they must raise their funds by legally instituted methods and for definite purposes; and the law requires that these funds be controlled and administered separately.

To control funds so raised and activities of officials in administering them, and to insure that funds be expended only for purpose for which raised, **appropriation accounting** has been instituted and developed, but to the almost complete exclusion of **expense accounting.**

Estimates of expected revenues and proposed expenditures are made before or at beginning of each fiscal period, or soon thereafter: and after more or less deliberation, an ordinance, or ordinances, is passed by the city's legislative body authorizing expenditure of definite amounts for specific purposes named in appropriation ordinances in greater or less detail. (See under "Budget.")

On authority of the appropriation ordinances, appropriation accounts must be opened, with each separately named "title" contained therein. To each of such accounts is credited amount of money which may be expended under the title represented by the account. Against some one of the appropriation accounts so set up, each item of expenditure must be charged, thereby decreasing total amount remaining unexpended. If actual expenditure of year equals the appropriation, the account closes with no balance. In brief, the purpose of appropriation accounting is to compare actual with authorized expenditure—and it serves no administrative need beyond revealing whether or not there are any amounts yet to be expended (which may be one reason why it is so well developed).

Appropriation accounting does not distinguish between plant investment and operating expenses except as the appropriation itself is made expressly for one or the other. Purchases for stores are charged, ordinarily, directly against the appropriation providing the funds to make the purchase, regardless of when, where, or for what purpose the material or supply is used.

A purchase of coal or labor must be charged to the appropriation containing the funds provided for making such purchases, which is the end of it; but in business accounting, coal is an asset to be charged to expense only as consumed and pay-roll is distributed and charged against many accounts which may be of either a capital or expense classification. Hence the need of proprietary and expense accounting in addition to fund accounting, if information is desired from accounts. Moreover, appropriation ordinances cannot be made to follow successfully the lines of an **expense classification,** which is further proof that limitations set up in appropriation accounting prevent obtaining from it the information which business corporations require

The Budget

PREPARATION OF BUDGET ESTIMATES.—In city hall circles principal item of interest, near the end of any fiscal period, is preparation of the budget for the next year; and in practice the budget becomes a starting point for municipal activities, including accounting Since money may not be expended except as appropriated, and since it cannot be expended except as provision is made for obtaining funds to be expended, it is necessary to include in the budget estimates of revenues that will probably be collected, as well as estimates of hoped-for expenditures.

These two classes of estimates prepared by the departments upon executive order for consideration of the city council, however complete or incomplete, constitute the report designated as **the budget,** by the aid of which the council passes an **appropriation ordinance** providing funds for continuing city activities and operations.

FORM OF BUDGET.—There is much controversy over the proper **form of a budget.** There is the **lump sum budget, segregated budget,** and **func-**

tional budget. Much of the controversy is due to the fact that it is quite customary to enact the budget as an appropriation ordinance without modification. The budget, however, is merely a request for funds, with an estimate of amount required and purpose thereof. These estimates, or the budget, may be as detailed and in such forms as desired by those charged with the duty of considering estimates and approving, or disapproving, same. In the highly segregated budget it is desirable to condense the data for the appropriation ordinance. Generally, however, budget estimates are not sufficiently detailed to permit proper judgment being exercised in regard thereto, and the appropriation ordinance, in such case, is frequently not detailed enough to insure proper control over expenditures.

BUDGET AS FINANCIAL PROGRAM.—The budget, therefore, is, or should be, the proposed financial program of the city for a future fiscal period. As such it is the most important financial report of the city. To make it most serviceable as an instrument by which the legislative body may determine financial needs and policies for the future period, it should present the following:

1. Statements and schedules containing full and complete information as to present condition of all funds and appropriations.
2. Schedules of estimated revenues for each fund, and in comparison with actual revenues of preceding fiscal period.
3. Schedules of estimated expenditures of the future period for each fund, classified by organization units, and in comparison with actual expenditures of the preceding period.
4. It should also present contemplated borrowings for each fund, in comparison with actual borrowing of preceding period.

Standard form of **budget estimate sheet** and summary form are shown in Forms 1, 2.

APPROPRIATION ORDINANCE.—After consideration of statements presented in budget, the legislative body (city council) authorizes the expenditure of amounts determined upon, by passing an appropriation ordinance which fixes the amounts which may be expended by each organization unit for the objects specified.

TAX RATE.—In passing the appropriation ordinance, amount of tax rate applicable to general fund is also determined (assessed valuation having been determined), since revenue to be raised by taxation is amount by which appropriated amount exceeds estimated revenues. Consideration of this fact makes apparent the need of care in estimating the amount of revenues that will be collected, since if the estimate is too high, there will be a deficit if total of appropriations authorized is expended. On the other hand, if revenues are underestimated, funds collected will be in excess of amount needed, and an unnecessary and tempting surplus will be created.

In some states it is legally required that the miscellaneous revenue item of the budget estimates of receipts shall be the amount of average receipts for preceding 5 years. This requirement checks manipulation.

STANDARD APPROPRIATION AND ACCOUNTING CLASSIFICATION.— Budget estimates should be prepared, and appropriations to the various organization units of the city should be in conformity with a **standard classification of accounts** uniform for all departments, subdivisions, and bureaus, but sufficiently comprehensive in terminology to embrace every requirement of all subdivisions of city organization. Such classification is

FORM 2. Summary Budget Estimate Sheet

presented below, so designed that it may be used in conjunction with tabulating machine records. It permits of decimal subdivision of classification in as much detail as desired. Only primary classification is indicated here.

Standard Codified Classification of Objects of Expenditure

00 – PERSONAL SERVICES
- 1. Salaries of permanent employees
- 2. Wages of permanent employees
- 3. Salaries and wages of temporary help
- 4.
- 5.
- 6.
- 7.
- 8.
- 9. Fees and compensation for personal services not elsewhere provided for.

10 – SERVICES OTHER THAN PERSONAL
- 11. Transportation of persons
- 12. Transportation of things
- 13. Subsistence and support of persons
- 14. Subsistence and care of animals and storage and care of vehicles
- 15. Communication service
- 16. Printing, engraving, lithographing, and binding
- 17. Advertising and publications
- 18. Furnishing of light, heat, power, and electricity
- 19. Special and miscellaneous services other than personal not elsewhere provided for

20 – FIXED CHARGES AND CONTRIBUTIONS
- 21. Rents
- 22. Insurance
- 23. Taxes and fees paid by city
- 24. Pensions and retirement salaries
- 25. Contributions to persons and institutions
- 26. Damages to persons and property
- 27. Interest
- 28.
- 29. Special and miscellaneous fixed charges and contributions not elsewhere provided for

30 – SUPPLIES
- 31. Office, drafting, scientific and educational supplies
- 32. Fuel (including burning and illuminating gases, oils, and liquids)
- 33. Mechanics', engineers', and electricians' supplies; furnace and foundry supplies (excepting fuels)
- 34. Cleaning and toilet supplies
- 35. Wearing apparel, linen and sewing supplies
- 36. Forage and other supplies for animals
- 37. Provisions for persons
- 38. Medical, surgical, and laboratory supplies
- 39. Special and miscellaneous supplies not elsewhere provided for

40 – MATERIALS
- 41. Raw materials
- 42. Metals, and metal products
- 43. Non-metallic mineral products
- 44. Lumber, and wood products
- 45. Fiber products
- 46. Paints, and painters' materials
- 47.
- 48.
- 49. Miscellaneous materials not elsewhere provided for

50 – EQUIPMENT AND PARTS
- 51. Heat, light, power, ventilation, refrigerators, and electrical equipment
- 52. Production, construction, and conveying equipment
- 53. Livestock
- 54. Furniture and furnishings
- 55. Property and life preserving and caretaking
- 56. Educational, scientific, and recreational equipment
- 57. Medical, surgical, and laboratory equipment
- 58.
- 59. Miscellaneous equipment not elsewhere provided for

60 – LANDS AND STRUCTURES
- 61. Lands
- 62. Buildings and structures
- 63. Bridges and viaducts
- 64. Excavations and quarries
- 65. Reservoirs and quarries
- 66. Retaining and restraining walls, dams, jetties, etc.
- 67. Damages and property charges
- 68.
- 69. Other capital outlays

70 – DEBT
(Subdivided as requirements of city dictate)

80 –

90 – MISCELLANEOUS ITEMS NOT OTHERWISE CLASSIFIED

Every need of any division of a city organization may be expressed in such a classification. Apart from convenience of a standardized classification of appropriations to be used by all departments, a greater advantage is permanent uniformity insured in accounts, however simple or elaborate the analysis of a department's requirements may be. Every kind of service or class of thing which may be purchased or acquired, or every object for which an expenditure can be made, falls naturally and rationally under some one or other of the primary classifications, and the secondary classifications where needed follow with same facility.

Department heads, in preparing budget estimates in accordance with a standard classification of this kind, must plan and think systematically along similar lines, which greatly facilitates the task of the budget-passing body. Appropriation accounts, following the use of such a standard classification, also become capable of comparison as between city divisions and as between periods, and are therefore of great value in preparation of budget estimates.

General Ledger Accounts

GENERAL.—As previously explained, municipal accounts consist of two completed circles of accounts, viz., **fund circle** and **proprietary circle**, both groups being maintained for each class of funds previously described, except that ordinarily the proprietary circle of accounts is sufficient to the needs of sinking funds.

The general ledger is, therefore, in practice divided as between the four classes of accounts; or there may be four general ledgers, viz., one for each class of funds. Each of said primary classes, or ledgers, is further divided into two subdivisions, viz., one for fund circle of accounts, the other for proprietary. Under each of such subdivisions required accounts should be arranged in balance sheet order, viz., in order of assets, expenses, liabilities, and revenues. Most accounts appearing in the general ledger will, if the municipality is of any size, necessarily be **controlling accounts.**

BALANCE SHEET.—The representative balance sheet accounts or classes of accounts for each fund group are indicated below. For purposes of reference to matter following, these accounts are coded. This is a practical working code, possessing ample capacity for expansion.

PROPRIETARY ACCOUNTS

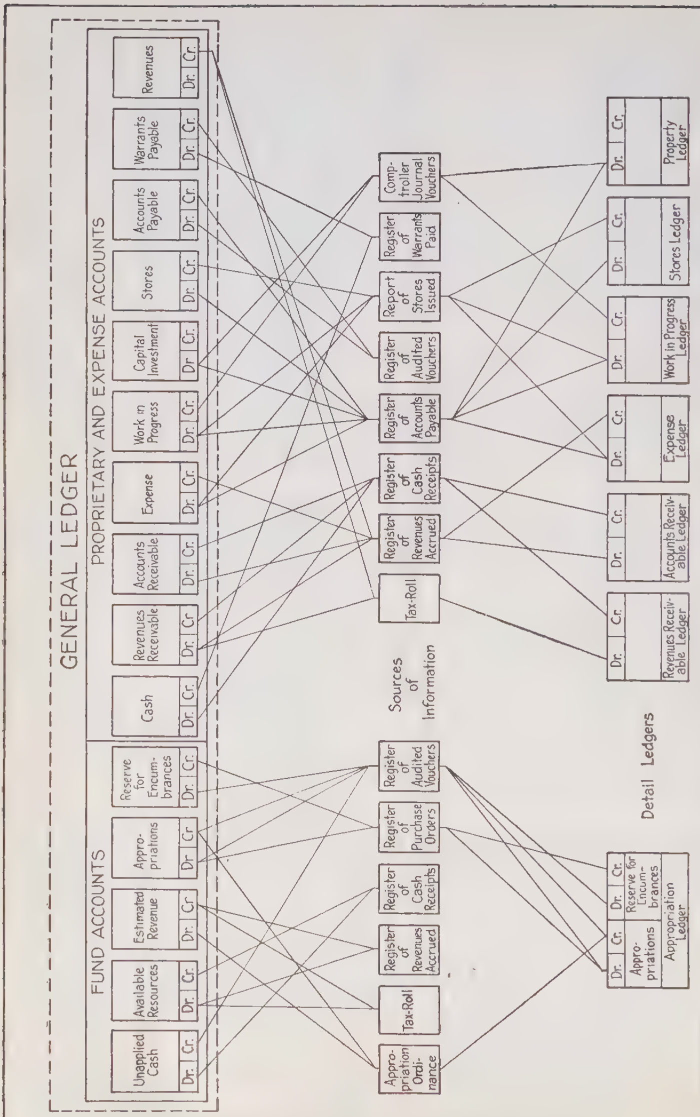
INFORMATION TO BE PRESENTED IN ACCOUNTS.—In following list is noted, as briefly and comprehensively as possible, main classes of facts and transactions to be recorded in municipal accounts to make possible the presentation of statements of revenues, expenditures, obligations, and resources.

Such information is of **three classes,** as follows:

1. Official actions from day to day of governing bodies and officials whereby condition of funds is modified or determined.
2. Daily business transactions of officials in carrying on city activities.
3. Net resources of city.

These essential facts are usually, though not always, to be recorded in both fund and proprietary circles of accounts.

To illustrate intent and purpose of balance sheet accounts designated above, and nature of charges and credits made to them, a list of the principal items



FORM 3. Plan of Municipal Accounting

of information to be recorded is presented below, followed by journal entries necessary to record such information in both fund and proprietary accounts with such references to information to be recorded, journal entries, and accounts, as will assist in conveying the idea it is desired to present

Principal Acts and Conditions to be Stated (Premises)

Symbol		Entry No.
A	Official estimate of the amount of the estimated revenue which will accrue to city within a period	1
B	Official estimate of amount of expenditure that will be necessary to maintain or perform functions of city government during same period	1
C	Amount of tax it will be necessary to raise to meet estimated obligations of city (difference between estimated revenue and estimated expenditure—A and B above)	1
D	Act of council in passing budget ordinances authorizing appropriations	2
E	Amount of annual tax as authorized by council when assessed and confirmed (Tax-rolls)	3
F	Charges made by city for permits, licenses, privileges, etc	4
G	Charges made by city for services rendered—cost of which is recoverable	5
H	Collection of tax assessments	6
J	Receipts from miscellaneous sources of revenue	7
K	Receipts of amounts due city on accounts receivable	8
L	Encumbrances (incurred liabilities) of appropriation through issue of purchase (open-market) orders, or other authorization of services to be rendered by outside parties	9
M	Encumbrances of appropriations, or other funds through execution of contracts	10
N	Registration by city departments, divisions, or offices of invoices payable which they approve for payment and their distribution to appropriation, asset, and expense account	11
P	Audit of invoices and issue of warrants payable	12
Q	Liquidation of encumbrances (through issue of vouchers payable or cancellation of orders and contracts)	13
S	Payment of warrants by treasurer	15
T	Loans in anticipation of collection of taxes	16
V	Provision for uncollectible taxes	17
W	Shortage in collection of estimated revenues	18
X	Excess of amount received over estimated revenue	19

ENTRIES NECESSARY TO RECORD SUCH INFORMATION.—The entries necessary, in event of each of above premises, to reflect conditions resulting therefrom, are stated below. These entries and accounts affected are also represented graphically in the chart presented herewith (Form 3). In the following the alphabetical symbol refers to preceding list of premises; the four-place number, to ledger account affected.

Entries in Proprietary Accounts

Premise		General Ledger Account No.
	Entry No. 1	
A, B, C	No entry in proprietary accounts	
	Entry No. 2	
D	No entry in proprietary accounts	
	Entry No. 3	
E	Taxes Receivable	1102

General Plan of Municipal Accounting

RECORDS REQUIRED.—The first essential to presenting accurate records and statements relative to current transactions, resources, and liabilities, is an efficient plan of reporting transactions, assembling figures, and verifying their accuracy. To accomplish this there has developed in municipal accounting offices a general tendency to build up accounting systems along lines based, however varied in individual cases, on the following **essential classes of records:**

1. Files of documents containing the original entry, describing the transaction.
2. Registers for each class of documents.
3. Subsidiary ledgers, containing only detailed accounts.
4. General ledgers, containing only control or summary accounts.

The **general method of operating** these classes of records is same for all of a city's departments, divisions, and offices, whether applied to revenues or expenditures, and, in brief, is as follows:

1. Preparation of an individual documental record for each transaction, duly authorized, verified, and certified.
2. Registration of individual documents, each class in a register of suitable design, according to class of document and according to fund affected.
3. Posting of amounts involved direct from documents to detail accounts in subsidiary ledgers.
4. Posting of periodical totals from registers to control accounts in general ledgers.
5. Proof of accuracy of work through a comparison of schedules of balances of accounts of subsidiary ledgers with balance of controlling account in general ledger.

Such a method is the logical and natural outcome of conditions existing in all cities if central control over accounts is attempted.

Revenues that accrue from many sources in various city departments and expenditures that originate in all divisions of the city organization, must ultimately be accounted for and controlled through one central accounting office, and cleared through one department, viz., the treasury.

A **system of individually numbered documents**—originating in departmental offices, in as many copies as necessary, with control of such documents (as filed locally or transmitted to central office or to other offices) through registers and schedules, of which also as many copies as are required may be produced without extra labor—is the only system flexible enough to obtain

control and also meet the exacting demands of legal requirements. Also, since for convenience and expediency the detailed records and accounts are usually maintained in departmental offices, while for purposes of control, general ledger accounts must be maintained in the central accounting office, such methods lend themselves to quick and easy proof or detection of errors. Methods suggested here and the form submitted in illustration, are developments of the general plan outlined. A **chart** which attempts to express graphically the principles involved, is shown in Form 3 (p. 1220).

Balance Sheet Accounts of Funds

FUND ACCOUNTS.—Typical general ledger accounts stated in the preceding are those of the balance sheets for each **fund group.**

Accounts of the **proprietary circles** are those of private corporation accounting (excepting as regards profits) as adapted to the municipal corporation, and need no further explanation here.

The accounts of the **fund circles** are easily interpreted when it is considered that, in a municipality, financial operations begin with a budget consisting of two estimates, viz.: (1) Estimated Revenues, (a) Taxes, (b) Miscellaneous; and (2) Estimated Expenditures, and that such budget estimates, as fiscal year advances, are converted into realities in shape of actual cash receipts and expenditures, until finally, at end of year, there exists the record of total actual receipts and expenditures, which differs more or less from the original estimates.

The problem of fund accounting, therefore, is to state in the accounts as regards any fund, the following:

1. Original estimates, or amount of possible bond issues.
2. Official actions taken to materialize estimates.
3. Accomplished realities.
4. Net amount by which final results differ from estimates.

JOURNAL ENTRIES.—Journal entries (without subsidiary ledger entries) necessary to accomplish these steps in the general fund circle are given below. The entry reference numbers are those cited previously (pp. 1221–1223).

1. *When the estimate of revenue is officially adopted by the city council:*
   Estimated Revenues—Year.........
   To Unappropriated Estimated Revenues—Year..........
2. *When the appropriation act is passed by the city council:*
   Unappropriated Estimated Revenues—Year......................
   To Appropriations—Year ....
3. *When revenues are accrued, viz., when the tax-rolls are set up in the accounts as revenue receivable:*
   Available Resources
   To Estimated Revenues—Year....
6. *When taxes are collected:*
   Unapplied Cash..................
   To Available Resources—Year....
7. *When miscellaneous revenues are collected:* (Accruals and Collections of Miscellaneous Revenues are usually simultaneous.)
   Unapplied Cash
   To Estimated Revenues—Year....
9. *When requisitions on stores are made, or when purchase orders are issued:*
   Appropriations
   To Reserves for Encumbrances....
11. *When voucher warrants payable are approved for payment:*
   Appropriations
   To Unapplied Cash.............
   and, simultaneously, an entry reversing No. 9 just preceding, viz.,
   Reserve for Encumbrances
   To Appropriations
   (for the reason that the voucher is for an expenditure already reserved, and replaces that reserve as a charge against the appropriation, which necessitates the cancellation of the amount reserved.)

OPERATIONS IN GENERAL FUND

OPERATIONS	ASSETS			LIABILITIES				
	Estimated Revenues	Available Resources	Unapplied Cash	Unappropriated Est'd Revenue	Appropriation (Ledger)	Reserve for Uncoll. Revenue	Res. for Encumb. of Approp'ns	Surplus (Deficit)
Balance forward, Beginning of Year		$ 10,000	$ 50,000		$ 30,000	$10,000	$ 2,000	$18,000
Budget Estimate of Revenues for Ensuing Year	$ 200,000			$1,980,000		20,000		
Appropriations of Year				2,000,000	2,000,000			
Taxes Levied	1,475,000	1,475,000						
Miscellaneous Revenues Accrued during Year	620,000	620,000						
Taxes Collected during Year		1,460,000	1,460,000					
Miscl. Revenues Collected during Year		615,000	615,000					
Purchase Orders and Contracts of Year					1,990,000		1,990,000	
Voucher Warrants Payable Issued			2,000,000		2,000,000			
Cancellation of Corresponding Encumbrances					1,985,000		1,985,000	
Excess End of Year:								
Accrued Revenue, over Estimated Revenues	95,000			95,000				
Unappropriated Est. Revenue				75,000				75,000
Balance forward End of Year		$ 30,000	$ 125,000		$ 25,000	$30,000	$ 7,000	$93,000

FORM 4. Operations in General Fund

At end of fiscal year, Estimated Revenues closes to Unappropriated Estimated Revenue, and latter account to Surplus, which operation shows either a surplus or a deficit for year according as appropriations have or have not exceeded revenues accrued.

A **chart** presenting **in total** the principal operations of the general fund accounts during a year is presented in Form 4, with a view to making clear relationship of the fund balance sheet accounts.

Accounting for Capital Resources and Liabilities

THE FUND STATEMENT.—A fund statement in connection with the **capital fund** should be prepared, but is frequently disregarded. Such a fund statement should show resources which the municipality has at its command to finance public works which involve too large an expenditure to be paid out of general revenue. The principal capital fund resource which a municipality has is its ability to borrow. This is usually controlled by a state law which fixes **maximum borrowing capacity** at anywhere from 5% to 12% of **assessed valuation** of property in the municipality. This resource may be set up in the accounts as "Possible Bond Issues," with corresponding credit account called "Balance Available for Public Improvements."

WHEN BONDS ARE ISSUED.—

In the proprietary accounts:

Cash
 To Bonds Outstanding

In the fund accounts:

Balance Available for Public Improvements
 To Possible Bond Issues

If an appropriation is made of any amount of the sum obtained through a bond issue, entry is similar to that given under "General Fund," viz.:

Unapplied Cash
 To Appropriations

Frequently a municipality receives a **premium** on sale of bonds. In such case officials usually insist that this amount be used for "Capital Outlay" in same way as the principal. However, since premiums are adjustments of interest rate, they should be taken into the general fund and be written off over life of the bond.

Discount on bonds, on the other hand, is frequently made good out of the general fund through appropriation. While to handle this correctly is easier than in case of the preceding example, it still is difficult in view of the general level of accounting knowledge in municipal administration.

All **construction work performed** should be charged to Work in Progress. When work is completed, this account should be cleared and the expenditure charged to the appropriate asset account.

At end of month closing entries are:

In the proprietary accounts:

(a) Work in Progress
 To Accounts Payable

(b) Accounts Payable
 To Cash

(c) Lands
 Structures
 Improvements
 Equipments
 To Work in Progress

In the fund accounts:

Appropriations
 To Unapplied Cash
 To Reserve for Encumbrances

LOCAL IMPROVEMENT FUNDS.—Local improvements are properly classified under the capital account. The procedure differs among municipalities regarding manner in which improvements are authorized, as well as in connection with financing. Local improvements are usually made by the municipality and disbursements by city officials. Entire cost of an improvement may be assessed against property owners; but where a portion only of cost is assessed, balance is paid out of general city funds or from proceeds of general bond issues. No difficulty is found in accounting where the municipality assumes the entire cost and sells bonds before work is started. Journal entries in this case are:

Cash
  To Bonds Outstanding
	Work in Progress
	  To Accounts payable

Where a municipality pays part of cost of an improvement and balance is assessed against property owners, it is necessary to keep an accurate record of total cost until project is completed and assessments can be made. This is done through a Work in Progress account, with a subsidiary record for each improvement.

If cash is disbursed out of general fund cash, it is necessary to treat the matter as though two companies were involved. In general fund accounts, credit Cash and charge Advances to Other Funds, and in the capital fund, pick this item up by charging Work in Progress and crediting "Due to Other Funds." It may be that part of cash so paid out of the general account represents the city's share, in which case amount paid should be charged to "Advances to Other Funds" and picked up in capital account as before.

When correct amount of city's share of cost of work is determined, such amount is to be treated as a donation to capital fund and charged against General Fund Surplus. Likewise, in capital fund, an equal amount of the liability to the general fund should be canceled and credited to Capital Fund Surplus.

Accounting for Sinking Fund

INFORMATION REQUIRED.—Sinking funds are created through receipts from the general tax levy, from interest on deposits, securities, and frequently from special sources. Facts required to be known about the status and administration of the sinking fund are:

Cash on hand	Reserves
Securities on hand (at cost and market)	Surplus
Accounts receivable	Disbursements of sinking funds
Accounts payable	Per cent of yield on investments

Information should also be presented as to present status of the sinking fund in relation to bonds outstanding and conditions of their issue.

A set of fund accounts will concisely state these facts and would be developed by journal entry as follows:

Unapplied Cash
Investments
Accounts Receivable
  To Sinking Fund Reserves (For each bond issue.)
  To Surplus

Balance Sheet and Statement Forms

FORM 10. Capital Fund Balance Sheet

Subsidiary Ledgers

SUBSIDIARY LEDGERS REQUIRED.—It is customary to carry all accounts of such a group in a subsidiary ledger. With a municipality, the **principal subsidiary ledgers** are:

Property Ledger	Contract Ledger
Revenues Receivable Ledger	Stores Ledger
Accounts Receivable Ledger	Expense and Advance Ledger
Appropriation Ledger	Operating Ledger

In but one or two cases do these ledgers differ from ordinary subsidiary ledgers of private corporations. **Sample forms** for such ledgers, suitable to municipal accounting, are shown hereafter.

PROPERTY LEDGER.—Property, other than cash and investments, owned by a city, falls under one of the following classes:

1. Real Estate
2. Building and Structure
3. Non-structural Plant
4. Plant Equipment
5. Stores and Supplies

All of the above classes, except "Stores and Supplies," should be represented by detailed accounts brought together in the property ledger. **Ruling** of this ledger sheet should be special and so designed as to permit indicating graphically street location and dimensions of **realty.** It is also of advantage to provide on same sheet for carrying the depreciation reserve account for the particular piece of property the sheet represents in conjunction with the property account.

APPROPRIATION LEDGER.—In the appropriation ledger is maintained a separate account for each budget and special appropriation either from general, capital, or special funds and with contracts payable from appropriation or fund resources. For examples of ruling for this ledger, see Form 11.

Encumbrances (purchase orders or contracts) are charged in detail against appropriations supplying cash for expenditures and set up in total as a reserve for liabilities incurred through issue of the orders. Such reserves remain in force until invoices covering amount of original encumbrance are vouchered, when reserve is reversed in each case, and amount of invoice itself is charged against the appropriation in place of order amount. This procedure automatically adjusts all differences between estimated amount of expenditures, which is originally reserved, and actual expenditure covered by the voucher and warrant.

The **register of accounts payable form** is designed to gather such figures in total monthly for the control entries. (See Form 12.)

Entry made to set up appropriation ledger, when budget is passed by council, is:

In the fund accounts:

Charge: Unappropriated Estimated Revenue Credit: Appropriations	For amount of yearly budget in total (by funds) in the general ledger account – and in detail to each of the separate titles of the appropriation ordinance, in appropriation ledger.

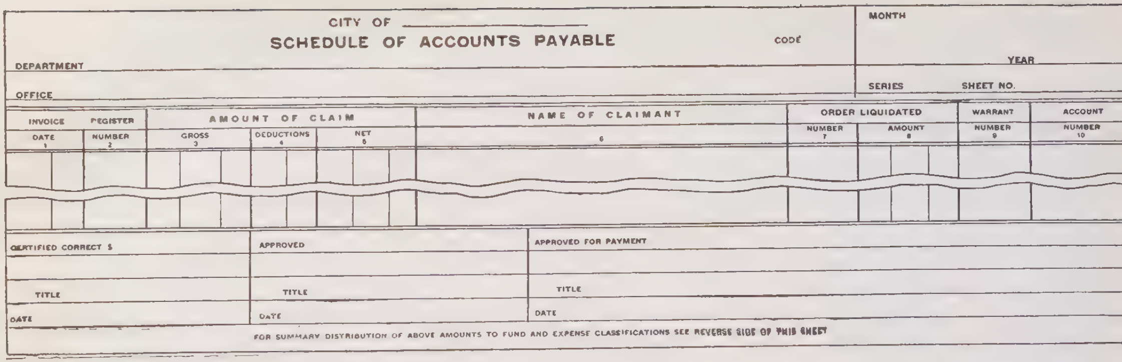
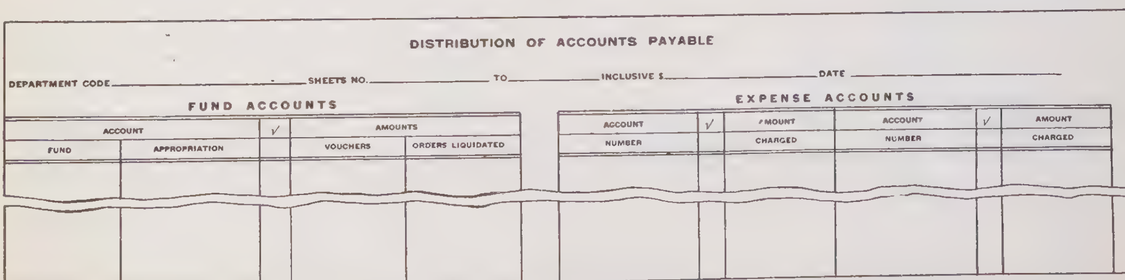
FORM 11. Appropriation Ledger





FORM 12. Register of Accounts Payable (face and reverse)

Entries made in connection with "encumbrances" of appropriations are as follows:

In the fund accounts:

Charge:
Appropriations
Credit:
Reserve for Encumbrances of Appropriations

In general ledger for monthly total of "orders" entered as per "register of orders" and in detail daily as registered, in detailed accounts of appropriation ledger.

In the proprietary accounts:

No entry.

When vouchers are passed covering orders, entries are:

In the fund accounts:

Charge:
Reserve for Encumbrances
Credit:
Appropriations
In general ledger monthly for total amount of canceled original encumbrances as per register of invoices payable and in detailed accounts of appropriation ledger daily as registered.

Charge:
Appropriations
Credit:
Unapplied Cash
As above, for amount of invoices registered.

EXPENSE LEDGER—CENTRAL OFFICE.—Total expenses incurred by city, whether expenditure has actually been made or not, are recorded in this ledger immediately the expense is incurred. **Mediums** through which such charges are made are the registers of accounts payable, and journal vouchers.

Such ledger contains **two distinct groups of accounts,** as follows:

1. Those accounts presenting a detailed classification of expenses of those city departments whose expense accounting is maintained in central accounting office of city.
2. Those "advance" accounts which control expense accounting of departments which, because of their larger activities and larger clerical capacity, maintain their own expense accounting.

Accounts of the second group are suspense accounts, to which are charged amounts of all value going into a department and to which are credited value of all completed construction work or periodical operating and maintenance costs of the department as reported by the department. Such accounts are controls of departmental expense accounting through which departments' accounts are connected with those of central office. Central accounting office of a city and that of the city department stand in same relationship, so far as accounts go, as does the central office of a corporation to the offices of its factories or branches.

With the city, pay-rolls are paid for departments, materials purchased for and delivered to them, expenses paid for them, that they may perform certain functions. They construct or repair streets, build sewers, maintain parks, police the city, clean the streets, furnish water, etc.—all which functions are measurable in some unit. Total costs of performing these various functions (to be obtained through suitable accounting), if divided by determined upon units of measure, give unit cost of construction or operation for each function, at which rates departments are to be credited according to number of units of completed work reported.

Amounts to be credited to departmental control accounts in expense and advance ledger are amounts to be finally recorded as costs of various constructive and operating functions performed by city.

Where **special construction work** is done, special cost accounting systems are maintained by departments performing the work which should be adequate to obtain true cost of the work. If cost of work is recoverable by assessments on abutting property, this is especially necessary, otherwise the city will lose money, as costs are generally above estimates. If work performed increases, value of city expense ledger accounts must be charged.

In general, entries in connection with expense ledger are as follows:

Central Office Books

In the expense accounts:

Charge:
  Expense and Advance Ledger
Credit:
  Vouchers Payable
  In total in general ledger controls
  In detail, by departments, or expense accounts, in expense ledger.

In the fund accounts:

Charge:
  Appropriation Ledger
Credit:
  Unapplied Net Cash
  In total to control accounts.
  In detail to accounts of appropriation ledger.

Department's Books

In the proprietary accounts:

Charge:
  Sundry Expense Accounts
Credit:
  Central Office
  In total to credit of central office.
  In detail to debit of sundry expense accounts (control and subsidiary accounts in operating ledger *if* cost accounts are maintained).

To clear accounts of the department, at end of a period, of costs of various construction and operating functions during the period, following entries are made:

Department's Books

In the proprietary accounts:

Charge:
  Completed Work
Credit:
  Sundry Expense Accounts
  Clearing sundry expense accounts of amounts expended on work and to gather such expenditures for such work into one cost or expense account.

Charge:
  Central Office
Credit:
  Completed Work
  To clear department's accounts of cost of completed work.

DEPARTMENTAL OFFICE.—Ledgers necessary in those departments which maintain their own expense accounting may be as follows, as determined principally by nature of departmental organization and magnitude and character of operations:

1. Operating (General) Ledger
2. Expense (or Cost) Ledger
3. Stores Ledger

OPERATING LEDGER.—This ledger is to the department what the comptroller's general ledger is to him. Its accounts are the general ones of the department, also those necessary for purposes of control over detailed accounts of such other ledgers as department may be called upon to maintain. It may be the only ledger a department may find necessary to maintain, in which case it becomes simply an expense ledger. For sample see Form 13.

FORM 14. Cost Ledger

EXPENSE (OR COST) LEDGER.—Where the functions of the department are numerous and much special construction work is performed, as in a department of public works, the cost of the work of the department should be gathered on special accounts, each of which represents an order for a specific piece of work or a particular kind of a continuous and going expense. Such accounts constitute those of the cost ledger. The control of the cost ledger, or the controls of various classes of expenditure represented in the cost ledger accounts, constitutes in such case the greater portion of the accounts of the operating ledger. See Form 14.

STORES LEDGER.—If materials are purchased and delivered to a department in large quantities, and considerably in advance of their consumption, the department should maintain a stores ledger, carrying an account with every kind of article taken into stock. There should be recorded therein all receipts, issues, and the balance on hand, both quantities and values being shown in every case. The control of the stores ledger will be the Stores account in the operating ledger of the department, if separate "stores" are maintained by the department.

CENTRAL STORES.—While advantageous to a city to establish a central purchasing department, for no other reason than to accomplish large economies in purchasing, there are other advantages.

NECESSITY OF STORES AND STORES LEDGERS.—Only approximately correct figures can be obtained in cost and expense accounting if provisions are not made for taking values of materials and supplies used on work into the expense accounts at time of consumption, rather than at time of purchase. Purchases should be charged to the property account, "Stores," and credited to this account and charged into cost or expense accounts of departments using the supplies, only when used. By this method, value of materials remains on books as property until actually consumed.

A **central purchasing and supply department,** independent of other city departments, but buying only upon authority of a requisition from them, should make all purchases and provide and maintain facilities for storage and delivery of all materials and supplies as needed. **Stores depots** may be established throughout a city in accordance with needs and convenience of the several departments, but such stores and the materials should be under control of the supply department—materials to be drawn for use only upon authority of written requisitions from departments.

STORES WORKING FUND (APPROPRIATION).—The **supply department** is furnished by appropriation with a **working fund,** sufficiently large to make any purchase required, or to enable it to comply with terms of any purchasing contract or program city might wish to enter into. From this fund payments are made for all purchases of materials and supplies. **City departments** are also supplied with appropriations for materials in accordance with estimated needs. Procedure is as follows:

1. A department requisitions purchasing department for any materials and such requisitions are recorded as an encumbrance of department's appropriations.
2. Purchasing agent makes the purchase, and on receipt of material has it delivered directly on work, if desired, or taken into stock, subject to future requisition.
3. Payment to vendor is made for material from working fund of the supply department.

4. Department using material gives supply department stores requisitions for amount of materials delivered from stock for use.

5. Supply department reports periodically value of all materials delivered as per department's stores requisitions.

6. A periodical transfer between appropriations for amounts of reports rendered by supply department is made, charging departmental appropriations for amount of materials used and thereby reimbursing supply department's working fund appropriation by value of materials delivered from stock. The encumbrance, by requisition upon department's supply appropriations, is also canceled, since amount of actual transfer charged to the appropriation takes its place in reducing the unencumbered balance after appropriation.

Result of such procedure is that departmental appropriations are charged correctly for value of materials consumed (not purchased), and also they are charged in the period during which it is used. The stores working fund appropriation remains intact, viz., supplies on hand, plus unexpended balance, plus amounts owed by departments, equal total of working fund.

Revenues

CLASSES OF REVENUE.—Revenues of the general fund of a city consist ordinarily of **two principal classes,** viz., those derived from taxation and those accruing through levying of miscellaneous charges of all kinds, for privileges granted, for services performed, and from fines, penalties, forfeitures, interest, etc. The general designation **Miscellaneous Revenues** is given to this second class of receipts. The estimate of what miscellaneous revenues will total for ensuing year, taken in connection with the appropriation for expenditures, determines what amount must be provided by taxation.

Under head of **Taxes** are included:

1. Taxes on real property
2. Taxes on personal property
3. Poll taxes
4. Taxes on business

Miscellaneous Revenues includes receipts from following sources:

Licenses
Permits
Franchises
Privileges
Fees
Fines and penalties
Grants and donations
Rents
Interest
Etc.

TAXES.—Procedure incident to a tax levy is a familiar one, viz.,

1. Fixing of assessed valuation of property, both real and personal, by tax assessors.
2. Determination thereby, in conjunction with the budget, of the tax rate, and
3. Preparation of tax levy, viz., tax-roll delivered to tax collector.

Amount of tax levy having been determined by Department of Taxes, entries in the accounts are:

In the proprietary accounts:

Taxes Receivable
Sundry Accounts (Subledger)
  To Revenues Accrued—Taxes

In the fund accounts:

Available Resources
  To Estimated Revenues
  To Sundry Accounts (Subledger)

For total amounts of tax-rolls in general ledger controls, and in subsidiary ledger accounts, in detail by class of tax.

MISCELLANEOUS REVENUES—DOCUMENTS.—Most of this kind of revenue accrues with issue to individuals, firms, and corporations of permits, licenses, etc., to do certain things or conduct certain businesses for a definite period, subject to stated restrictions, in consideration of which grantee pays to city definite amounts as required by city ordinances governing the case. Evidence of having made such payments, and therefore that privilege specified has been conferred, is usually in some form of printed certificate, or receipt issued by the city official authorized to do so. Protection of the interest of both city and citizen requires that all blank forms which may be issued by city officials for cash can be accounted for, viz., controlled, and control of all revenue from such sources begins with such procedure. General procedure necessary to its control (described hereafter in more detail) is that which provides that each piece of financial stationery that may be issued for cash be separately accounted for from time printer delivers the blank form to the city auditor or comptroller, to time when amount for which the form is issued is received by the treasurer, or collector, of city revenues, or until proof of destruction of the unissued blank is furnished.

STOCK—FINANCIAL STATIONERY.—The storekeeper's record requirements for control of such forms are as follows:

1. That custodian of financial stationery stock (comptroller or auditor) keep a stores account for each form, showing quantities received, quantities issued, and to whom issued.
2. That the official needing financial stationery be required to make a stock requisition therefor and to receipt for amount delivered to him.
3. That when forms are issued for cash, a report of their issue be made to the auditor or comptroller on forms provided (registers) accompanied by a counterfoil.
4. Periodical inventories, by which stock records and quantities in hands of all officials are verified.
5. Proof of receipt of cash by city treasurer through examination by the auditor of receipts and comparison of same with counterfoils of forms issued and reports received by treasurer.

DESIGN—FINANCIAL STATIONERY.—Principal requirements of design necessary to accomplish this are, in general, as follows:

1. Numbering in series and in sequence of each piece of financial stationery printed.
2. That for each original there be a counterfoil, carbon or printed, to be separated from the original at time of issue, and also a carbon triplicate to remain in files of issuing official.
3. A provision, if possible, for mechanical checks (as by marginal indenture) other than carbon copies, by which amount for which form is issued shall be indicated on both original and counterfoil.

Adaptation of this procedure to needs of each special class may be accomplished as described below.

CLASSES OF FINANCIAL STATIONERY.—The typical classes of financial stationery are:

Licenses
Permits
Certificates
Receipts
Bills (invoices receivable)
Tickets
Tags or plates

The two principal groups are those of licenses and permits. The principles stated below as regards methods of control of license and permit forms apply in general by adaptation to other financial stationery. Details of handling depend upon local regulations and conditions.

LICENSES.—These are documents evidencing formal grants or permissions by persons in executive or administrative authority to persons or corporations to conduct classes of business, to pursue kinds of occupations, and to perform acts and enjoy rights, which persons or corporations, by reason of police regulations enacted or imposed, could not conduct, pursue, perform, or enjoy except for such authorization.

They fall into **main groups** as follows:

1. Those wherein price is based on but one factor and does not change.
2. Those wherein price is based on two or more factors and varies.
3. Those wherein, price being fixed, date of expiration varies.
4. Those wherein price, based on two or more factors, varies and date of expiration also varies.

To whichever group the license belongs, the printed form on which it is issued should conform, for purpose of control, to following mechanical specifications:

1. That it be so designed and printed that three copies, original and two carbons, may be produced at one writing. Stubs not provided in any case.
2. That the three copies all bear one document number, which shall be in sequence in a series of numbers.
3. If either amount for which issued or date of expiration can vary, original and duplicate (counterfoil) should be on one piece of paper, and provision for indicating such varying amount or date, or both, by a marginal indenture should be made.
4. If amount or date of expiration, or both, are fixed, print the constant factors on the form. No indenture necessary for the constant factor.
5. Each form should be so drawn that it may be used for as many different kinds of licenses in the same general class and issued by the same office, as possible, thereby avoiding multiplication of forms.
6. Original and counterfoil should be printed on safety paper.
7. Books (or pads) should be bound in sets, preferably in multiples of ten.

The **original** is the document delivered to grantee. The **duplicate** (or counterfoil) should ultimately reach the central accounting office (either direct or through the treasurer) for audit purposes, while the **triplicate** (second carbon) remains in the files of the issuing office as its record of the transaction.

PERMITS.—These are the documents evidencing formal grants or permissions by persons in executive or administrative authority for performance of special acts, the nature of which is specifically defined by terms of the instrument conveying such grants, and performance of which acts terminates the grants.

They fall into **main groups** as follows:

1. Those issued in consideration of payment of fixed amounts.
2. Those issued in consideration of payment of amounts, which vary according to conditions.

The printed form on which the permit is issued should conform for purposes of control to the same mechanical specifications as stated for licenses. The **original** of the permit is the document to be delivered to the payee. The **duplicate** (or counterfoil) should ultimately reach the central accounting office (either direct or through the treasurer) for audit; while the **triplicate** (second carbon) remains in files of issuing office as its record of the transaction.

CERTIFICATES.—Acknowledgment of receipt of money and compliance with requirements are issued by the city in form of certificates, generally to be posted by payee in some conspicuous place for public inspection. Reason for issue of a certificate is analogous to those attendant upon licenses and permits, and varying factors of amount and periods exist as with licenses and permits. Such being the case, the same principles of design of form and procedure in issuing the certificate hold as with licenses and permits—viz., the certificates should be issued in triplicate, bear document numbers in sequence, have indentured margins where necessary, and be printed on safety paper.

RECEIPTS (OR TICKETS).—In general, receipts are issued by various officials, for amounts received for sundry services rendered by the city—as by the weighmaster for use of public scales, by marketkeeper for fees paid for stalls, etc.—being usually for small amounts and for services or privileges which do not justify any great amount of formality but for which it is at the same time strictly desirable to provide a check upon the official receiving the money, whether in large or small amounts.

Whenever such conditions exist, these methods should be followed:

1. Print the receipts—wording being adapted to particular case in hand—on sheets of five or ten receipts each, and print on each receipt its own distinctive document number.
2. Arrange sheets of receipts in sets of three sheets each, as "Original," "Duplicate," and "Triplicate," all to be produced through use of carbon sheets at one writing, and each sheet bearing the same ten numbers.
3. Original sheet should be perforated so that each ticket may be separately detached. The duplicate sheet should be perforated only along binding edge and detached only as a whole. Triplicate sheet is not perforated at all but remains bound in books and takes place of a stub.

Original receipt or ticket is given to payer. **Duplicate sheets** accompany cash deposits with treasurer (in proof of correctness of deposits) and are delivered by treasurer to comptroller for audit and entry in financial stationery accounts **Triplicate** is the issuing office record in lieu of stubs.

This form should be specially worded for the office using it, only where amount of receipts justifies so doing. There should also be a general form, so worded as to be generally usable wherever cash receipts do not justify a special form. It should be made obligatory that wherever cash is received, no matter how small amounts may be, this receipt method of procedure be observed, if other special forms of financial stationery are not used to evidence such receipts.

In offices issuing **tags**, or plates bearing numbers in sequence, to evidence compliance with city requirements and payment of money, as for licenses for vehicles, autos, dogs, etc., issuance of tag should be accompanied by a receipt. wording of latter being adapted to the case in hand, numbers of documents issued being same as those of tags or plates issued.

Paper stock used for receipt forms should be of such weight as to permit two good carbons being easily produced. For **original** and **duplicate**, paper should be used of some particular brand or make watermarked for the city, and purchased under conditions such that only the city is able to obtain it. The **triplicate** may be on most ordinary paper.

BILLS (INVOICES RECEIVABLE).—For other miscellaneous cases, which are pre-billed, where amount of charge made by city is accrued in advance of its receipts, an **invoice** should be rendered for amount due and a controlled form of financial stationery should be used in doing it. Use of such a form will be for special and varied services for which no other form has been devised. The **form** should be that of an invoice, **original** and **duplicate** (counterfoil) printed on same piece of paper, with provisions for marginal indenture of amount of bill between counterfoil and invoice, just as with licenses and permits. Provision for a **triplicate** should also be made.

The **form in triplicate,** viz., original, duplicate (counterfoil), and triplicate, each copy bearing same printed document number, should be **bound in pads** (or books, if more convenient, as it would be for use in making rounds for collecting rents). **In use,** the invoice in triplicate is prepared and accrual of indebtedness is registered in an accrual register. The duplicate (counterfoil) is then detached, amount of invoice being indicated, in doing so, through use of the indentured margin, and original is delivered to the grantee.

The **counterfoils** are filed in office of the official who is to receive payment from payer. In many cases this is the office of the treasurer; but if some other official collects the cash and remits it to the treasurer, counterfoil remains with him until bill is paid, and is then sent to treasurer with the cash. Invoices being paid and receipted, counterfoil is also stamped paid and ultimately reaches the comptroller through the treasurer for audit. The triplicate copy always remains as the record of the issuing office.

Wording of the invoice, as well as the size, should be adapted in all cases to needs of the office issuing it. The **principles to be followed** are to control use of the invoice form by departments and provide for return by the collecting official of an indentured counterfoil previously registered and charged in some revenue or accounts receivable account.

CONTROL OF REVENUE.—Inasmuch as **miscellaneous revenues** of a city are received through many divisions of a city's organization, the real control of a city's accrued revenues of this class begins with control of issue of financial stationery and proceeds from that point, as shown below.

REGISTER OF REVENUES RECEIVABLE.—The daily reports of city officials issuing any kind of financial stationery, for cash or for future payments, are in form of a **register sheet,** similar in ruling to the schedule of revenues accrued and accounts receivable illustrated in Form 15, made in triplicate, and showing essential information as regards the form (document) issued and amount collected or to be collected at some future time. One copy of the **daily schedule,** together with cash collected, is sent to the treasurer; the other to the central accounting office with the counterfoils of financial stationery issued; third copy remains in office of issue.

Summary registers of revenues receivable committed, compiled from daily reports of officials and maintained in the central accounting office, gather classified monthly totals of such daily revenue commitments. These monthly totals of revenues receivable accrued are then taken up monthly in control accounts, and details posted daily (if desired) to subsidiary ledgers.

Whenever revenues accrue from any source, in connection with the activ-

FORM 16. Register of Encumbrances

ities of any division of the city organization, but without immediate collection of the cash, the same daily system of reporting accruals, immediately the accrual amount is known, whether collected or not, should be required, exactly as if cash were collected.

Accounting for revenues should not be on the cash collected basis (as is generally the case), but on the basis of accruals, whether cash is collected or not collected, at time of accural.

Entries necessary to place accruals of miscellaneous revenues in the accounts are similar to those for taxes. **Detail accounts** of the subsidiary ledger—revenues and accounts receivable—should be in accordance with sources from which revenues are received.

Cash receipts reported through daily commitment sheets from various city officials, also summarized to obtain monthly classified totals, furnish monthly entries, as follows:

In the proprietary accounts:

Cash
To Taxes Receivable
To Sundry Accounts (Subledger)
To Revenues Receivable Miscellaneous
To Sundry Accounts (Subledger)
To Accounts Receivable
To Sundry Accounts (Subledger)
For monthly totals in general ledger control accounts, and in detail in subledger accounts.

In the fund accounts:

Unapplied Cash
To Available Resources
For total cash collections of the month.

REVENUES AND ACCOUNTS RECEIVABLE LEDGER.—This ledger contains detailed accounts to which all accruals of revenue are charged and all cash receipts and all abatements or adjustments are credited. A separate account should be maintained with each source of revenue. The **controls** of detailed accounts in this ledger are in these general ledger accounts:

Revenues Receivable—Real Estate Taxes
" " —Personal Taxes
" " —Miscellaneous Sources
" " —Water
" " —Etc.
Accounts Receivable

Entries involved in setting up the accounts of the ledger are as follows:

In the proprietary accounts:

Charge:
Revenues Receivable—Real Estate Taxes
Revenues Receivable—Etc.
Accounts Receivable
Credit:
Revenues Accrued—Taxes
Revenues Accrued—Water
Revenues Accrued — Miscellaneous Sources
Recovered Expenditures
Miscellaneous Sales
Etc.
Entered in total, monthly (from sundry registers) in the general ledger control accounts; entered in detail as accrued, in subsidiary ledger accounts.

In the fund accounts:

Charge:
Available Resources
Credit:
Estimated Revenues
Entered in total monthly, in general ledger accounts, for total of revenues accrued; entered in total monthly, in subsidiary accounts of estimated revenues.

Expenditures

PROCEDURE.—Authorization to spend city money carries with it restrictions which city officials must constantly keep in mind. The restrictions are appropriations, or resolutions authorizing bond issues, or agreements by which the city stands in the position of trustee or agent. Each transaction of a municipality has relation to some legal reservation, viz., is related to some one of the appropriation or fund accounts. Each amount of cash disbursed, each payable account, each liability, belongs to or encumbers one or more appropriations or funds and must be stated in connection with some fund and appropriation, to protect the city from making unauthorized expenditures.

The procedure in connection with expenditures involves the following **documents:**

Requisitions on Stores	Pay-Rolls
Requisitions on Purchasing Agent	Vouchers } or Voucher Warrants
Purchase Orders and Contracts	Warrants } or Voucher Warrants
Invoices of Claimants	

The principal points wherein the above-named documents differ in form or use from forms in use in private corporation practice, are the provisions, few or many, which must be made to comply with legal requirements peculiar to a municipality, as regards certificates, approvals, and procedure of officials through whose hands the documents must pass. These requirements vary greatly in different states and cities, and frequently put most efficient brakes upon speedy transaction of business, in addition to the complicated procedure they make necessary.

Samples of the principal documents named are shown below, and procedure developed for form illustrated is described where peculiarities are sufficient to warrant descriptions.

REQUISITION ON STORES.—The only pecularity of this form is the certificate required.

REQUISITION ON PURCHASING AGENT.—The peculiarity in the use of this form is that in all cases it must bear an estimate of the probable expenditure or actual amount, and at least one certificate of a properly authorized official, that the expenditure is proper and necessary, etc.

PURCHASE ORDER.—Before the purchase order can be placed, a procedure including requests for bids, and consideration of quotations, etc., is usually required for expenditures involving appreciable amounts (over $25 in many cases).

Having reached a decision as to where to place the order, a purchase order in quintuplicate is prepared. The **disposition of purchase order copies, as follows,** is typical of the usual practice:

Original.................To vendor.
First copy..............Retained by purchasing agent.
Second copy............To central accounting office.
Third copy..............To department that placed the requisition.
Fourth copy............To the inspection department.

It is essential that the order indicate an amount to be expended—actua if known, estimated if necessary—and that before it is issued to vendo it be submitted to the responsible accounting officer for certification tha

the unencumbered balance of the appropriation to be charged is sufficient to satisfy the claim when presented.

The order should not be valid without such **certificate.** This step is necessary to prevent departmental officials from obligating the city for amounts beyond limits of authorized appropriations, viz., to control budget expenditures.

Accounting Procedure.—The accounting officer, if he certifies to sufficient funds in the appropriation, retains his copy of the purchase order and returns the remaining copies to the office of issue for delivery of the validated order to vendor. If funds are not sufficient, he cancels the order.

The amount by which the appropriation is encumbered by the order is charged, if approved, to the appropriation under the caption "Register for Encumbrance" (see appropriation ledger sheet, Form 11, page 1235), and the order is registered in the register of incumbrances (see Form 16), which provides the periodical total credited to the reserve account. The order is then filed to await claimant's invoice when presented for audit.

INVOICES.—The invoice is to be considered as a statement of the claim rendered by a claimant who has furnished supplies or materials, or who has rendered service to the city, said statement of account being the basis for settlement of claims for goods delivered or services rendered. To secure uniformity, a **standard form of invoice** with as many copies as are necessary (at least in triplicate) is needed, and all claims against the city except those for salaries and wages for which pay-rolls are provided, should be stated on this form. As each purchase order is issued, a sufficient number of nvoices for purchases made are enclosed to claimant.

INVOICE CERTIFICATIONS.—As an example of the number of certifications which may be required where the idea of multiplying them has been well developed, the following list of certifications is presented.

Oath of claimant:

State of................, City and County of..............., ss.

The undersigned, being first duly sworn, deposes and says, that he is authorized to make and file this affidavit; that the within account is true and just; that the amount is due from the City and County of ...., and that this bill has not been previously presented or paid, either in whole or in part.

....

Representing..................................

Subscribed and sworn to before me this

..........day of.........19..

....

Attesting Officer

Certificate of commissioner of supplies:

I hereby certify that the prices on this invoice are reasonable and just and in accordance with the order, and that I have a properly approved requisition on file authorizing the expenditure.

....

Commissioner of Finance, Ex-Officio
Commissioner of Supplies.

By..............................

Deputy

Certificate of person receiving goods or responsible for performance of service rendered:

I hereby certify that the claim specified herein is for articles received, services rendered, or amounts expended for the City and County of................, and that the quality of articles received, or services rendered, was as ordered.

Certificate of head of bureau or division:

Approved..................................

Certificate of head of department:

Upon information contained in the foregoing certificate, which I believe to be correct, I hereby approve this invoice for payment.

....

....

Approval of council:

At a meeting of the Council of the City and County of................ on............ this invoice was read and allowed.

....
Commissioner of Property, Ex-Officio Clerk of the City and County of
....

By........................
Deputy

Approval of board:

Office of.................................., 19... Approved, and the Auditor is hereby authorized to issue a warrant in payment of the account. By order of the Board.

....
Secretary

Certificate of auditor:

This claim having been properly audited and approved is now allowed and ordered paid from..................................Fund.

....
Auditor

By ....
Deputy Auditor

The typical procedure followed with the invoice illustrated requires claimant to send two copies of his claim to the commissioner of supplies and third copy to the accounting department. Space is provided as shown for oath of claimant such as is required in many cities, and for various certificates and approvals required of officials, bureaus, and boards before the expenditure claim can be paid.

ACCOUNTING PROCEDURE—INVOICES.—When original invoices are forwarded by the departments to the accounting department, they are audited, registered in the register of accounts payable, and postings are made from the invoices directly to the accounts of both appropriation and proprietary circles. The encumbrance of appropriations by the amount of the corresponding purchasing orders is canceled.

PAY-ROLLS.—Municipal pay-rolls differ little from those of private corporation pay-rolls except in the variety and number of certifications required. The possibilities in this line are shown in the following requirements as to certificates:

CERTIFICATIONS FOR OFFICE PAY-ROLLS.—

A. Certificate of municipal civil service commission:

I hereby certify that this Pay-Roll Sheet has been examined and that the persons named hereon have been appointed or employed or promoted in pursuance of law and of the rules made in pursuance of law, with the exception of those marked thus X.

Date.......................................

....

B. Certificate of examiner, auditor's office:

I hereby certify that this Pay-Roll Sheet has been examined and that it is correct as to calculations, extensions, and proper certifications.

Date.......................................

....

C. Certificate of timekeeper:

I certify that the above Pay-Roll is correct and that the services were rendered as stated, exclusively for the City and County of ...., with the exception of leave of absence granted by proper authority.

Date.......................................

....

D. Certificate of official in charge:

I certify that to the best of my knowledge and belief, the above Pay-Roll is correct and just, and I approve the payment thereof.

Date.......................................

....

E. Certificate of head of department:

Approved and warrants ordered by the.......................................

Date.......................................

....

....
Secretary.

F. Certificate of auditor:

Audited and allowed.

Date.......................................

....
Auditor

....
Deputy Auditor

CERTIFICATION FOR LABOR PAY-ROLLS.

A. Certificate of municipal civil service commission:

I hereby certify that this Pay-Roll Sheet has been examined, and that the persons named hereon have been appointed or employed or promoted in pursuance of law and of the rules made in pursuance of law, with the exception of those marked X.

Date.......................................

....

Certificate of auditor's examiner:

I hereby certify that this Pay-Roll Sheet has been examined, and that it is correct as to calculations, extensions and proper certifications.

Date.......................................

....

Certificate of timekeeper or person who makes up the pay-roll:

I certify that the time credited to each person whose name appears in the above Pay-Roll correctly represents the time such person worked for the City and County of . . . . , as shown by certified time records on file, and that the rates of pay and amounts due are correctly stated.

. . . .

Title

Certificate of foreman or person in immediate charge of the labor:

I certify that I have been in charge of the persons, whose names appear on the above roll during the period indicated; that the labor has been performed, as stated, solely for the City and County of . . . .

. . . .

. . . .

Title

Certificate of head of department:

I certify that to the best of my knowledge and belief, the above Pay-Roll is correct and just, and I approve the payment thereof.
(In lieu of oath.)

. . . .

Head of Department

Certificate of auditor:

Audited and allowed.

. . . .

Auditor

. . . .

Deputy Auditor

ACCOUNTING PROCEDURE—PAY-ROLLS.—When properly certified pay-rolls are received in the accounting department, and invoices payable forms showing distribution of pay-roll are prepared and registered in the register of accounts payable. From such invoices the various appropriation and expense accounts are charged, procedure being same as for a vendor's invoice (see procedure under "Invoices").

VOUCHER WARRANTS.—The voucher warrant of a municipality differs from the voucher check of private corporations only in that it usually requires more approvals (certifications) and is required to pass through a longer routing before payment. It is a statement of account with claimant with a warrant on the treasury attached, which warrant may become a check through entry by treasurer's office of name of bank at which it is desired to make it payable, and attachment of the official signature of the treasurer.

Warrants are usually prepared in the central accounting office, and after passing through the requisite number of offices as legally prescribed, reach the treasurer's office. In other cases, after proper approvals, they are delivered directly to claimant and only reach the treasurer when presented by a bank which demands payment from the treasurer, who satisfies the claim by issuing his check.

REGISTERS.—The usual registers of documents from which totals are taken into the accounts are:

Register of Purchase Order and Contracts
Register of Accounts Payable (Claims)
Register of Audited Vouchers
Register of Warrants
Register of Warrants Paid

Where a department of purchase and supplies is maintained through "revolving funds," which is replenished from the material and supply appropriation of other departments, a register of requisitions on stores is also necessary, since such requisitions are encumbrances of departmental appropriations exactly as are purchase orders, and should be recorded as encumbrances.

REGISTER OF PURCHASE ORDERS.—This record is maintained by the central accounting office and the purchase orders certified (see under "Purchase Orders") as regards appropriation available, are registered therein. See Form 16, page 1246.

REGISTER OF ACCOUNTS PAYABLE.—The departmental offices register their approved invoices (claims) on this form (in duplicate) and forward one copy with invoices listed to the central accounting office. The form provides on its reverse for showing distribution of amounts of invoices listed to both appropriation and expense accounts. See Form 12, page 1236.

The central office then audits the claims, and posts amounts directly to the appropriations and expense accounts charged, on reverse of the sheet. After posting the accounts, central office makes up vouchers (or voucher warrants) in satisfaction of claims, or files the invoice to await vouchering at some future date.

Commitment totals are then registered, a separate register being maintained for each committing office to obtain totals for monthly entries in controlling accounts. The practical way of maintaining such summary registers is through the use of a **standard form of analysis sheet,** which may be headed for any analytical or summary use to which it is desired to put it.

Closing the Books

PROCEDURE.—Closing the books is the last step in accounting for the fiscal year, but as a matter of practice, in opening a set of accounts for the new year with a new budget, it is necessary to close the books and bring forward the balances before opening entries for new year can be made in the fund and appropriation accounts.

The status of affairs at end of the year usually shows a balance of Cash, Uncollected Taxes, Accounts Receivable, and an unexpended Balance of Appropriations. Many of the appropriations remaining may terminate with the end of the year and also many may continue into the next year or even longer, due to contracts or obligations assumed.

When the correct status of affairs is determined, following entries should be made, assuming complete new ledger is opened up for both proprietary and fund accounts:

In the proprietary accounts:

Cash
Revenues Receivable (by years)
Accounts Receivable
Stores
    To Warrants Payable
    To Accounts Payable
    To Reserves
    To Surplus

In the fund accounts:

Unapplied Cash
Available Resources
    To Appropriations (by years)
    To Estimated Revenue

The proprietary entry needs no explanation. Under the fund entry

"Unapplied Cash" is the difference between actual cash on hand and immediate demands for cash represented by the Warrants and Accounts Payable.

Available Resources is the difference between Revenues Receivable, Accounts Receivable and Stores, and the Reserves.

The credit to Estimated Revenues is the balance left after deducting appropriations continued and brought forward, from sum of Unapplied Cash and Available Resources.

Frequently there is a deficit, when the debit Available Cash becomes a minus quantity, and is shown on liability side of fund statement.

SECTION 26

OFFICE APPLIANCES

CONTENTS

SECTION 26

OFFICE APPLIANCES

TYPES OF MACHINES AND ACCESSORIES.—It is not the province of this handbook to express preference for particular types of appliances, but rather to generalize by classes. The descriptions of the various devices listed were received from those who responded to invitations extended to practically all known manufacturers.

The following classification, based on functions of machines, will be followed:

1. Mechanical devices
   - Dictating machines
   - Automatic cashiers
   - Cash registers
2. Calculating machines
   - Adding
     - Non-listing
     - Listing
   - Multiplying and Dividing
3. Time recorders
4. Dating and numbering machines
5. Tabulating and sorting machines
6. Typewriters:
   - Letter-writing
   - Letter-writing multiple
   - Bookkeeping and calculating machines
   - Bookkeeping and calculating machine accessories
7. Protective and perforating machines
8. Addressing and mailing apparatus
9. Miscellaneous

MECHANICAL DEVICES.—

Dictating Machines—Dictaphone and Ediphone.—Both the Dictaphone and the Ediphone manufacturers present tables showing savings effected by dictating machines as compared with dictation to stenographers. In using dictating machines dictation is recorded on wax cylinders which take the place of stenographers' shorthand notes. After dictation the cylinders are delivered to the typist and transcribed by use of a reproducing or transcribing machine. Some of the more recent improvements in dictating machines are:

Visible recording, a pointer showing exactly where the recorder or reproducer point is.

Automatic switch—the motor is started by removing speaking tube from its hook and stopped when tube is replaced.

Cylinder ejector—a lever which loosens cylinder and pushes it to a position where it can be removed without touching the surface.

Automatic back spacer, enabling dictator to "listen back" to the last few lines of dictation.

Automatic forward spacer, returning carriage to the correct position for resuming dictation.

Pneumatic foot control, controlling starting and stopping of cylinder in transcribing.

Sound modifier, controlling volume of sound.

Pitch, regulating speed for transcriber's convenience.

The following table gives a comparison of dictaphone with stenographic work:

Comparison of Dictaphone Work With Stenographic Work

(Made by New York Central Railroad)

Basis: Work done by stenographers during the month of November, 1920.
Work done by Dictaphone Operators during the month beginning two weeks after Dictaphones were installed.

Dept.	Stenog.	Dict. Oper.	Letters One Mo.	Cost per Letter	Monthly Pay-Roll	Yearly Saving
Auditor	6.3	......	5,010	14.33¢	$ 718.20	
Passenger accounts	....	3	4,060	8.42¢	342.00	
Saving	3.3	......	....	5.91¢.	$ 376.20	$ 4,514.40
Auditor	13.1	......	10,666	14.00¢	1,493.40	
Revenue accounts	....	7	10,386	7.68¢	798.00	
Saving	6.3	......	....	6.32¢	$ 695.40	8,344.80
Auditor	12.0	......	11,138	12.29¢	1,368.00	
Freight accounts	....	7	11,933	6.68¢	798.00	6,840.00
Saving	5.0	......	....	5.61¢	$ 570.00	$ 19,699.20

Annual space released 560 sq. ft. @ $3 per year for other purposes			1,680.00
Total Annual Saving			$ 21,379.20
Pay-Roll and Space Saving over a 5-Year Period			$106,896.00
Cost of Dictaphone Equipment:			
40 A–7 @ $195.00		$7,800.00	
17 B–7 @ 180.00		3,060.00	
2 SU @ 85.00		170.00	
		$11,030.00	
Less 15% quantity discount		1,554.50	
		$ 9,475.50	
Less Competitive machines in exchange	$ 165.00		
Less Equipment Released:			
14 Typewriters	$1,260.00		
14 Desks	700.00		
14 Chairs	252.00		
		$2,377.00	
Net Cost of Equipment		$7,098.50	
Cylinders, 2,000 per year @ 40¢, 5 years		4,000.00	
Total cost			11,098.50
Net Dictaphone Savings for 5 years			$95,797.50

Automatic Cashiers.—The Brandt Manufacturing Co., Watertown, Wis., furnish automatic cashiers of two types:

The **paying machine,** which pays out sums of 1 cent to $5 (silver), inclusive, by pressure of one key for cents and one for dollars. Used by banks and in industrial concerns on pay-roll work. Models 60, 62, 64, 68.

The **change-making machine,** which pays out correct change when amount of sale is recorded by pressure of one key for cents and one for dollars. Capacity, 1 cent to $5. Models 61, 63, 69.

Use of automatic cashiers is advisable wherever currency transactions involving change are numerous. Such use tends to promote both accuracy and speed.

The question of the advisability of handling silver dollars is one to be decided by individual preference, being governed more or less by geographical location. Models 60 and 61 have capacity of from 1 to 99 cents.

Cash Registers.—

National Cash Register Co.
Standard Register Co. autographic
Shoupaligner Autographic register
International Accounting Machine Co., automatic bookkeeping system
McCaskey Register Co.
Add Index Corp.

The product of the National Cash Register Co. covers a wide field, from peanut stand to bank. As originally furnished, cash registers consisted of a combination of a cash drawer operated by keys, with a window through which amount of sale was visible when keys were operated and a strip in the machine which recorded all amounts registered. From 1885 to present time cash registers have developed until now when, with what is termed the accounting machine, as many as 30 classifications can be recorded. A description of all machines manufactured by the National Cash Register Co. would be impractical in the limited space available, but readers desiring further information can obtain it at any of the numerous branches and agencies of the company.

Autographic registers, of which there are several types on the market, are used for recording either cash or credit sales, guaranteeing exact and complete records of every transaction without transcription. Some of the uses for autographic registers, as stated by the manufacturers, are:

Cash, charge, and C. O. D. sales	Gasoline and oil sales
Accessory and tire sales	Parts sales and repair orders
Battery service and supplies	Stockroom requisitions
Brokerage customers' orders	

By making several copies at one writing, this form of register facilitates obtaining of customers' signatures to orders, etc.

The **autographic register,** in many small businesses, supersedes the scratch-pad and assures the recording of transactions which otherwise might be overlooked with resulting loss to the business.

Two of the best-known autographic registers are: the **Shoupaligner,** manufactured by the Autographic Register Co., Hoboken, N. J., and the **Standard,** manufactured by the Standard Register Co., Dayton, Ohio.

Devices which combine the functions of cash and charge registers are: the **Automatic Bookkeeping Machine,** manufactured by the International Accounting Machine Co., New York City. The **McCaskey Register,** manufactured by the McCaskey Register Co., Alliance, Ohio. The **Add-Index**

Cash Register, manufactured by the Add Index Corp., 120 Broadway, New York City.

The automatic bookkeeping machine combines the essential features of a cash register, credit register, and an adding machine in one unit, which, together with a special accounting book, make a completed simplified bookkeeping system suitable for the general run of retail store trade.

CALCULATING MACHINES.—

Adding Machines—Non-Listing.—The oldest form of adding machine or device and one still in constant use in oriental countries is the **abacus,** the bead frame seen in use in Chinese stores. The form of this device used by the Japanese consists of a frame divided into two sections, the upper containing a line of single beads each representing 5, according to its column; in the lower section each column has five beads each representing 1 according to its column. The combination of the two sections makes each column represent 10. Many orientals are experts in using the abacus for all calculations for which a non-listing adding machine is suitable. The two principal non-listing machines in general use are: the **Comptometer,** manufactured by Felt & Tarrant Co., Chicago; the **Burroughs,** manufactured by the Burroughs Adding Machine Co., Detroit, Mich.

Comptometer—statement by the company:

The **Comptometer** is a high-speed, direct-acting, easily portable desk machine for both adding and calculating.

As an adding machine, it meets the most exacting requirements of speed, accuracy, and ease of operation on all additions and subtractions.

As a calculating machine, it is equally practical and efficient on all other figuring—multiplication and division.

The comptometer is operated by keys, the values of which when struck are instantly recorded in the answer register. Thus, every operation is performed by simply striking the keys.

For safeguard against human element of error in operation, two exclusive features are provided: First, the "controlled-key"—a positive system of automatic control, which compels correct mechanical operation of the keys, thus avoiding a chance of error from incomplete key-strokes. Second, the "clear" register signal which does away with the danger of forgetting to "clear" the register before starting a new problem.

The comptometer is furnished in three sizes—8, 10, and 12-columns, and also with special columns for the addition of fractions, such as, quarters, eighths, twelfths, etc. However, all additions, multiplications, divisions, subtractions in whole numbers or fractions, decimally expressed, can be handled on the regular decimal comptometer.

Burroughs—statement by the company:

The **Burroughs Calculator** is a very light and compact key-driven machine. It differs somewhat from former machines of this type as it permits of much higher speed operation than any previous key-driven machine.

The accuracy of all key-driven machines depends upon the ability of their accumulating section to function at all times under every conceivable kind of operation.

The lever controls and spring actuated detents have been replaced in the new model Burroughs Calculator by a gear train, the members of which are always in mesh and consequently no speed is too great nor any interruption too serious or severe to affect the accuracy of its calculation.

The actuator or operating section of the machine provides a novel and unique means of operation as it affords the greatest resistance at the top of the key stroke, providing an acceleration of action which makes for high speed and accurate operation.

In the Burroughs system of operation many new features have been introduced, it being conceived by the Burroughs Co. that a greater simplification of operating methods would feature a broader distribution of the machine. Burroughs machines are used extensively by public and private schools for the teaching of commercial arithmetic and for the instruction of students in vocational work.

Burroughs Calculators have been sold covering a period of 12 years and although a large percentage of the first machines manufactured are still in daily operation, improvements in the design and refinements in manufacture warrant our believing that the new machines may be operated over a much longer period with a very nominal cost for upkeep.

Burroughs Calculators are built to handle English currency, also other fractional amounts such as fourths, eighths, and twelfths, also hour and minute machines for use in pay-roll work.

The Burroughs Calculator is particularly adapted to division and is used extensively for figuring percentage.

Adding Machines—Listing.—There are many listing machines on the market, some of the principal being:

The Burroughs	The Victor
The Add Index	The Dalton (10-key)
The Wales	The Sundstrand (10-key)

These machines are all **key-operated,** the lists being usually printed on a roll of paper passing over a **platen.** In some types provision is made for listing on sheets inserted, as in a typewriter. The usual type of listing machine has 81 adding keys, with special keys for sub-totals, totals, repeat, non-add, non-print, and correction. The **Burroughs** machine is made in many different sizes for various purposes; their 15-bank machine has 135 adding keys. The adding and printing mechanism in most listing machines is operated either by hand or electrically.

The **10-key machines, Dalton** and **Sundstrand,** have the advantage of operation by the **touch method,** which is practically impossible with full bank machines. In case of full bank machines all ciphers are printed automatically; with 10-key machines all figures, including ciphers, must be key-printed.

Multiplying and Dividing Machines.—Most of the adding machines can be used for multiplication and division, because multiplication is a short method of adding the same number many times and division is a series of subtractions. There are, however, certain machines which are better adapted to multiplication and division than to addition and subtraction, and vice versa. Some of these machines are:

The **Ensign,** driven by hand or electrically, manufactured by the Ensign Co., Boston, Mass. This is a key-operated machine with a capacity of 9 x 7 figures, giving the result in 16 places.

The **Madas** is manufactured in Zurich, Switzerland. It is of **two types,** the **slideboard** and **keyboard,** with a capacity of 9 x 9 figures, giving the result in 16 places. It is furnished with either hand or electric drive.

The **Marchant,** which is marketed by the Marchant Calculating Machine Co., Oakland, Calif., is furnished in 3 models, 6 x 6, with result in 12 places; 8 x 8, with result in 16 places; and 9 x 9, with result in 18 places. It is a key-operated hand-driven machine. A special feature with this machine is its expandability, as the smaller models can be changed to larger by the addition of certain sections.

The **Mercedes** is made in 4 models. Model 1 is a crank-operated machine with slide-setting arrangement and has a capacity of 9 x 9, with provision for 16 digits in the result. Model 4 is practically the same as model 1, with the exception that keys take the place of slide operation. Model 5, the Mercedes "Triplex," combines the features of model 1 with 2 additional dials for accumulating the group totals, etc.

Model 7 combines the features of models 1 and 5, with electric operation. The makers claim the additional speed of operation will equal the work of from 2 to 5 hand-operated machines and with greater accuracy. Model 8

is an electrically operated model 4. The makers claim that this model is the fastest adding machine on the market, and that it also subtracts direct.

The **Millionaire**, manufactured in Zurich, Switzerland, is furnished with the following capacities:

6 x 6 x 12 digits, slideboard or keyboard, hand-operated.
8 x 8 x 16 digits, slideboard or keyboard, hand- or electric-operated.
10 x 10 x 20 digits, slideboard or keyboard, hand- or electric-operated.

A special feature of the Millionaire machine is a lever which is set for the number of revolutions required, thus necessitating only one turn of the crank for each figure in multiplier or divisor.

The **Monroe Calculating Machine** is manufactured at Orange, N. J. The Monroe is furnished in three capacities, based on the number of digits in the results: 12-place = 6 x 6; 16-place = 8 x 8; 20-place = 10 x 10. For the average business the 16-place probably has sufficient capacity. The Monroe is a keyboard machine and it is claimed can be used to equal advantage for addition and subtraction, or for multiplication and division.

There has recently been introduced the **Automatic Monroe,** electrically operated. It is claimed that the light motor does not seriously affect its portability as it can be used either on the desk or on a stand as desired. Increased ease and speed of operation are also claimed for the automatic. Automatics are furnished in two sizes, 20-place or 16-place, and for either direct or alternating current. Of the hand-operated machines referred to, all but the Marchant and Monroe are operated by a horizontal movement of the crank. The hand-operated Marchant and Monroe are operated by a vertical movement of the crank. Other machines in the vertical operated class are: the **Brunsviga,** the **Triumphator,** and the **Lehigh.**

In selecting a calculating machine due consideration should be given to quietness of operation.

SLIDE RULES.—Many operators have become very expert in the use of various forms of slide rules, especially where "round figures" suffice. Probably one of the types of slide rules most suitable for office work is that known as **Thacher's Calculating Instrument.** In considering the adoption of slide rules for continuous work the matter of eye strain should be given consideration.

TIME RECORDERS.—The chief reason for including time recorders in this accountants' manual is the use by the accounting department of the records produced. Time recorders are of several different types, the principal being card recorders and strip or sheet recorders.

Card recorders are of two general types, those which record in-and-out time, usually located at the entrance to the factory or preferably at the entrance to each department, and what are known as **job recorders,** which are either located at convenient points in the departments for use by the workers, or at central points where the recording is done by clerks on receipt of advice from workers by signal.

Strip or sheet recorders are so arranged that on the insertion of a key (original **Bundy**), by the pressure of a punch on an arm operating on a dial (**International Dial Recorder**), or the pressure of signal buttons (**Simplex**), the man's number is printed on a strip or sheet opposite the time when the record was made. In case of some of the dial and cylinder recorders the record is made on sheets which when removed can be used to complete the pay-roll figuring without rewriting the time.

Some of the principal manufacturers of time and cost recorders are: International Time Recording Co., Endicott, N. Y.; Simplex Time Recorder Co.,

Gardner, Mass.; Stromberg Electric Co., Chicago, Ill.; W. H. Bundy Co., Syracuse, N. Y.

Most **time recording systems** are so arranged that the time and cost recorders in the factory are electrically synchronized with a master clock located in main office. This is important, as considerable dissatisfaction may be caused to the workmen if they find that the recorder time is not correct. Frequently the master clock is also electrically synchronized with time stamps in the office, program instruments for announcing or signaling time, secondary clocks for observing time, etc.

DATING AND NUMBERING MACHINES.—No office equipment is complete without dating and numbering machines or stamps which might probably be better classified as small tools than machines.

TABULATING AND SORTING MACHINES.—The tabulator, sorter, punches, and cards comprise a system by which a mass of data calling for various classifications can be translated into intelligible reports with accuracy, rapidity, etc., at less expense than is possible by hand. In the use of these machines, the data appearing on orders, bills, time cards, or original entries of any kind are transferred by means of punching machines to cards, one card being used for each item of separate classification. The cards are next machine sorted into the desired classifications and are then passed through the tabulating machine which automatically adds the amounts or value of these classes upon one or more counters.

Great care should be exercised in designing the card. A well-designed card facilitates punching, sorting, and tabulating. The fields should follow, so far as possible, the sequence of the items on the original record. (A field consists of one or more vertical columns of numerals, 0 to 9, arranged according to classifications desired for the particular business under consideration. The heading of the "field" denotes the information which it contains, as year, state, customer, department, value.)

For some purposes, such as labor or material analysis, and wherever the original data can be recorded on the face of the card, the same card can be subsequently punched and used for sorting and tabulating. Such a card is called a **dual card.** Where practical to use the dual card some of its advantages are: immediate reference to original record; a possible increase in accuracy of punching; a saving in purchase of forms replaced.

Apart from speed of sorting and tabulating, punched cards have a distinct advantage in the way of group checking. When sorted and before tabulation, each group can be readily checked by holding the cards to the light and making sure that holes representing the group are identical. In large groups a sorting needle may be substituted for visual checking. This group checking prevents the possibility of a card of a different group being erroneously included.

Some of the principal uses of sorting and tabulating macnines are:

Sales analysis
Order analysis
Purchase analysis
Production analysis
Railroad traffic statistics
Railroad freight statistics—local and interstate
Labor and material analysis
Stock records
Accident statistics
Board of health, vital and other statistics
Postal money-order audit
Insurance written
Insurance cancellations
Insurance losses
Insurance reinsurance
Insurance mortality investigations

Two companies are prepared to supply sorting and tabulating equipment, viz.: the Powers Accounting Machine Corp., 115 Broadway, New York City; the Tabulating Machine Co., 50 Broad St., New York City. Both are operating under the same basic patents.

The principal difference between the equipment furnished is the method of tabulation. In case of the Powers Company sorting and tabulating are mechanical, although it is electric-driven; in case of the Tabulating Company the machine is electric-driven and the tabulating is also accomplished electrically. Both types of equipment use the punched cards as the connecting link between the original entries and the finished records. There are minor differences in speed of punches, sorters, and tabulators which will be brought out in the investigations of intending users. In both cases the main equipment is rented, not sold.

Coding.—Most of the information must be coded before being punched on tabulating cards. The code should be written on the original entry before it is sent to the punch clerk. Composite codes are often easily memorized and translated, as for example, 1001, the first two figures indicating state, and the last two town, etc. It is of great advantage in accelerating the work of coding to have codes in such form as to permit easy and rapid reference. Some form of visible index is probably best for filing codes.

Accessories.—Some accessories necessary or convenient in connection with operation of tabulating equipment are:

Punch verifying machines.

Sorting trays, for keeping separate the accumulations of various groups while operating sorting machine.

Filing cabinets and boxes, for permanent filing of punched cards. In addition to regular tabulations, reports are frequently called for which require special sorting and tabulations, and it is therefore essential that the cards should be so filed as to be readily available. These files vary all the way from special steel or wood files which are furnished by all larger office furniture manufacturers, to original boxes in which cards are received from manufacturers. It is essential that cards be filed in a dry place, tightly packed to prevent warping, and that the receptacles be properly labeled for quick reference.

Key-punch tables—conveniently arranged at the right height for most efficient punching.

TYPEWRITERS—LETTER-WRITING.—The principal makes of letter-writing typewriters are:

Corona (portable)	Royal
Hammond	L. C. Smith
Noiseless	Smith Premier
Remington	Underwood

The **letter-writing typewriters** are so well known and the various features have been so thoroughly advertised that it is unnecessary to occupy space by making comparisons in this manual.

TYPEWRITERS—LETTER-WRITING MULTIPLE.—The **Hoover Automatic Typewriter** seems to be alone in this field. In the operation of the Hoover a stencil is first prepared which resembles the record of a player piano. In reproducing, the superscription is first written by hand operation after which each letter is individually written, the machine being operated by the stencil. A special feature of the machine is that if it is desired to write a name or other special matter in the body of the letter, the machine

can be automatically stopped at the desired point and the insertion typewritten by hand after which the automatic operation will continue. The speed of the machine is about 100 words per minute. For most economical operation where there is enough work to warrant, arrangement should be made for one girl to operate three machines. Each letter being individually typewritten gives the effect of being specially dictated and hand-typewritten.

LEDGER POSTING MACHINES.—In this classification are included those adding machines specially adapted to this class of work, irrespective of the fact that they are not properly termed typewriters. The **principal makers** of bookkeeping, billing, and calculating writing machines are:

The Burroughs Adding Machine Co.
The Dalton Adding Machine Co.
The Elliott Fisher Co.
The Ellis Adding Typewriter Co.
The Remington Typewriter Co.
The Underwood Typewriter Co.
Type-Adder Corporation (adding attachment)

The use of these machines applies principally to the posting and balancing of customers' and vendors' accounts rather than to what are usually termed general ledger accounts.

COMPARISON OF MACHINE METHOD WITH PEN-WRITTEN METHOD.—The following advantages are claimed for these machines:

1. **Legibility.**
2. **Relief from mental strain of operator.** The right keys being used the machine will record, add, subtract correctly. Simultaneously the machine prints a daily proof.
3. **Time saving, posting and billing speeded up, elimination of night work.**
4. **Accounts up to date, including all items.** Invaluable for credit and collection purposes.[1]

BURROUGHS.—There are two types of Burroughs machines which come under this classification.

1. The **Burroughs Moon Hopkins Billing Machine,** which is a combined typewriter and calculating machine performing all of the work necessary in connection with billing, including writing names and addresses, terms, date, order number, and items, and making all extensions and additions necessary to complete the bill. Extensions include handling fractions and adding all items of ½ cent and over, and discarding items under ½ cent. The manufacturers claim superior work for billing, owing to the machine having been especially designed for that purpose and not being merely a typewriter with adding attachments

2. The **Burroughs Bookkeeping Machine,** which is especially designed for ledger posting. It is a full bank adding and subtracting machine and is equipped with date keys, reference numbers, and nine keys describing in abbreviated form the nature of items posted. These keys are specially arranged for the user's business. For all ledger accounts where names, etc., can be written on an addressing machine or typewriter and where detailed itemizing is not required, this machine seems eminently suitable. Special arrangement of keyboard and mechanism is furnished for banks, for cost records, for tax collectors' records, for public service bills, etc.

[1] All machines listed, and probably some that are omitted, have certain points of superiority. It is not the province of this manual to express preferences, but it is recommended that an investigation be made to determine which machine will be best adapted for the particular system desired.

DALTON BOOKKEEPING AND STATEMENT MACHINE.—Is furnished in two types:

1. Extended daily balance system on cross-tabulating machine.
2. Accumulated proof system on shuttle carriage machine.

Some of the **special features** claimed for the Dalton are:

1. Simplicity, as only 10 operating keys make operating by touch method simple.
2. Visible printing.
3. Carriage conveniently located for operation.
4. Paper carriage and normalizing lever. When set to do so, carriage moves automatically from column to column as required for posting.
5. Automatic subtracting lever.
6. Adjustable non-add cam.
7. Normalizing lever changing from statement to normal use.
8. Word printing device.
9. Credit balance key.
10. 10-inch shuttle carriage on shuttle carriage machine.
11. Line finders.
12. Variable line spacer.
13. Special ledger posting stands.

ELLIOTT FISHER CO.—WRITING AND ACCOUNTING MACHINES.—These machines have the following features:

Writing—for cuts, forms, automatic feed machines for continuous length forms, book recording machines for writing in bound books.

Accounting—universal and simplex. **Universal** machines write, add, subtract, and compute vertical totals, and cross balances. **Simplex** machines write, add, subtract, and compute vertical totals.

Special features:

1. The only flat writing surface machine.
2. Writes lines up to 24 inches.
3. Adds and subtracts in any number of columns up to 23.
4. Writes and automatically adds and computes with single key operation.

The **Universal** machine has 3 major features: accounting control; writing several records at one operation; writes.

Control positively checks accuracy of various processes and controls the machine operator's work. Operating errors are corrected in minimum time.

Visual audit sheet is a continuous carbonized record of all entries made in sequence of entry.

Flat surface facilitates making of many records at one operation.

Statement of accounts receivable, in duplicate or triplicate if required, is written simultaneously with posting of ledger and is ready for mailing immediately after last posting.

When used for accounts payable, **voucher** in duplicate or triplicate, and **voucher register** are written at one operation.

Other uses—perpetual inventory, pay-rolls, cost records, etc.

ELLIS ADDING TYPEWRITER CO.—Furnishes adding and subtracting machines with and without the typewriting features for bank and commercial bookkeeping, also **split platen full automatic duplex machine** for statistical and auditing work.

Visibility and **simplicity** are two main features claimed.

REMINGTON.—By use of twin cylinder, Remington statements may be itemized in duplicate, while only daily totals are posted to ledger. This accomplishes the dual purpose of furnishing retail store customers with detailed statement, of which a duplicate is available for office use, while the ledger furnishes the information that is most convenient for the credit department and others who are interested in totals.

For wholesale business both ledger and statement are made at one operation, the balances being shown only at the beginning and end of month.

For billing and posting, daily bill is written and total posted to ledger at one operation. Bill is automatically added and grand total for the day secured, proving both billing and posting.

Accounts payable ledger and departmental distribution are posted at one operation. For department stores the purchase record shows purchases at both cost and retail, also claims and returns, transportation and percentage of mark-up by departments.

Remittance voucher and ledger posting are made at one operation; voucher is added and extended and ledger balanced.

Pay-rolls and pay checks are written at one operation, the pay-roll remaining in machine while checks are inserted, written, and removed. Deductions are made from earnings and the net amount extended; separate totals of each column automatically added.

Bills as made can be copied on register sheet and distribution by departments, etc., furnished. Machine furnishes total for each classification and grand total for day.

Distribution capacity—this is controlled by the size of carriage, maximum length 32 inches, providing from 30 to 40 columns. Automatic column selector permits of direct posting to column desired. Cross total furnished, as well as column totals.

Simplicity and ease of operation is claimed to accomplish maximum amount of work with minimum fatigue.

Other features are correction key, automatic visible audit sheet, and automatic proof of work.

UNDERWOOD BILLING MACHINE AND BOOKKEEPING MACHINE.—

Billing Machine.—Two methods are commonly used:

1. **Unit billing**—whereby any number of copies are made at one writing.
2. **Condensed billing**—carbon copies of bills appear on sales sheet in condensed chronological form, the sales sheet being adjusted to the writing on bills by use of ratchet.

Bookkeeping Machine.—Work of posting is proved against pre-figured control by adding register. New balances, machine computed, are made at each posting. Posting to control sheet of previous trial balance, plus debits, minus credits, equals new trial balance, machine computed.

Machine is mechanically locked in case of mistabulation.

Elimination keys permit of correcting errors before operating adding mechanism.

Aligning plate permits of easy alignment of forms to writing position.

Procedure in Large Dry Goods House.—Charge sales tickets sorted by auditing department as collected, according to ledger subdivisions. They are posted in totals the morning following verifications by control bookkeeper. Machine makes tally strip which is handed to control bookkeeper with tickets

when posted. Tickets are next handed to billing clerk in same units and posted in detail on bills. When billing is completed tickets are returned to control bookkeeper with billing tally slip, which should show the same total as posting tally slip. Comparison assures location of errors. Standards set are 1,000 ledger postings per day and 500 tickets billed per day. Experienced operators easily attain these standards and many exceed them.

THE TYPE-ADDER CORPORATION.—Furnishes an attachment which it claims, when attached to any standard keyboard typewriter, makes that typewriter two separate and distinct machines, viz.: (1) a bookkeeping, billing, adding machine; (2) the same typewriter as before.

Special features claimed are:

1. Flexibility.
2. Weight—only a trifle more than a pound.
3. Independence of the typewriter.
4. Mechanical simplicity.
5. Low retail selling price.

ACCESSORIES.—To satisfactorily operate billing and bookkeeping machines, specially ruled sheets as well as binders, tables, and other accessories are necessary. Many concerns are furnishing these, some of whom are:

Baker-Vawter Co.	Library Bureau
Globe-Wernicke Co.	Tatum Company
Irving Pitt Manufacturing Co.	Yawman & Erbe Manufacturing Co.

PROTECTIVE AND PERFORATING MACHINES.—Protective machines are principally used for protecting checks against raising the amount or changing the payer's name. One manufacturer advertises the adoption of a check writing machine by the United States government to prevent forging of liquor permits. Broad claims for safety to depositors and banks are made by the manufacturers of check writing and protecting machines. Some manufacturers support their claims for superiority by furnishing an **indemnity insurance policy** with each machine sold. As the security of the bank account is of vital interest to all, careful investigation should be made before investing. Some of the principal manufacturers are:

Defraine Check Writer Corp., Rochester, N. Y.
Hedman Manufacturing Co., Chicago.
Safe Guard Check Writer Co., New York City
Todd Protectograph Co., New York City
Weig Sales Corporation (F. & E. check writer), New York City

In addition to the protective feature, claims of superiority are made by some manufacturers in the way of time saving in writing checks for payrolls, dividends, and commercial uses, also for electric and gas bill writing. One feature of protection not usually considered is the protection from payroll hold-ups when paying by check. Another feature emphasized is the protection of the payee's name as well as the amount.

PERFORATING MACHINES.—We are indebted to Cummins Perforator Co., of Chicago, for information regarding perforators. Perforating machines, which originally meant check protectors, now suggest multiple marking machines which at each stroke mark 10 or 15 sheets of paper with perforations in the shape of letters or figures.

They are used for dating, numbering and otherwise, marking orders, etc., when multiple copies are made. They are also used in connection with vouchering as a safeguard against duplicate payment of bills. Perforation of postage stamps to discourage pilfering has been adopted in England for

many years, and more recently in the United States. Perforators are largely used by banks and trust companies for cancellation of checks, stock certificates, bonds, etc.

ADDRESSING AND MAILING APPARATUS.—There are **two principal types** of addressing machines, one using metal plates on which the facts to be printed are embossed, and the other using stencils cut in oiled paper. The first type is represented by the Addressograph Co., and the second by the Elliott and the Belknap.

While, as their name implies, addressing machines were originally designed for handling mailing lists, addressing envelopes, cards, etc., their development in the last 25 years has been so rapid that they are now used for many other purposes.

ADDRESSOGRAPH.—The plates are embossed on blanks supplied by the manufacturer by means of a graphotype, after which they are inserted in frames which also hold prints of the embossed plates. The frames are arranged in card index sequence according to the desired classification. Frames are equipped with tabs, plain or colored, either alphabetical, numerical, geographical, etc., and with a selector which permits of printing or skipping plates as desired without disturbing the original order. There are several types of the addressograph printing machine, from the hand-operated envelope or card addressing machine to motor-driven machines which handle the more complicated work, such as:

Filling in form letters for direct-by-mail advertising.
Maintaining fixed mailing schedules for house-organs.
Maintaining fixed mailing schedules for dealers and salesmen.
Printing and distributing shop orders.
Printing names and data concerning parts on inventory sheets.
Other cost-keeping records.
Printing shipping tags, labels, and waybills.
Scheduling shipments.
Filling in insurance notices and receipts.
Heading up and dating customers' statements.
Listing and heading up ledger accounts.
Listing vouchers and filling in checks.
Printing numbers, names, and occupations on time clock cards.
Listing employees on pay-roll sheets.
Printing pay envelopes.
Listing and filling in names and dates on dividend checks.
Printing routes, including customers' names and addresses, for bakeries, laundries, dairies, creameries, cleaners and dyers, newspapers, magazines, factories.

Some of the **special features** claimed for the addressograph are:

1. Comparatively low cost of maintenance and installation.
2. Most flexible and adaptable addressing method.
3. Prints through a ribbon, thereby matching with typewritten forms, etc.
4. Reduces work of keeping lists up to date and accurate to a minimum. It is claimed that this represents 90% of the expense of maintaining a mailing list.
5. Permanent, owing to plates, withstanding fires, floods and earthquakes.

ELLIOTT.—The stencils for use on the Elliott addressing machine may be written on any standard typewriter, the ribbon being removed and the type cutting a stencil instead of printing. For addressing that does not require typewriter type, the stencils furnished are on the Gothic type address card. The company will furnish these stencils ready-cut, or they can be cut by users on stencil cutters which the company furnishes, operating either by hand, foot, or electric power.

Uses of the Elliott machines, as specified by the manufacturer, cover:

Distribution of price lists.	Preparation of shipping tags.
Distribution of bulletins.	Preparation of labels.
Distribution of house-organs.	Preparation of bills of lading.
Distribution of financial statements.	Preparation of packing lists.
Distribution of dividends.	Preparation of pay-rolls.
Distribution of stockholders' notices.	Preparation of pay envelopes.
Distribution of market reports.	Preparation of time cards.
Distribution of advertising matter.	Preparation of work tickets.

Special attachments are furnished as follows:

Sheet listing attachment for pay-rolls and other lists.

Multiplicator for printing names and addresses two or three times on different forms.

Repeating and skipping attachment, which repeats as often as required, or skips cards not wanted.

Dick mailer strip lister for printing on continuous poster roll for use of publishers.

Automatic selector, which selects only those stencils required.

Line cover attachment, which enables any line on stencil to be temporarily eliminated when not required.

Numbering and dating attachment, which consecutively numbers and dates slips, etc., at the same time as they are addressed.

BELKNAP MACHINE.—The claims made for the Belknap machine are so similar to those made for the Elliott that the intending purchaser should make a personal examination of both machines before deciding. Claims are made on behalf of all three of the machines mentioned that they will handle practically the same work; the choice lies first between the metal plates and the stencils, and finally as to price, speed, durability, storage space, quality of work, elasticity, speed, etc.

OTHER MAILING APPARATUS.—

- Envelope sealers
- Envelope sealers with United States government permit printer, with or without meters.
- Postage stamp affixers and recorders.
- Automatic parcel post computing machines
- Speed-o-feeders, facilitating rapid addressing of envelopes and statements by typewriter.

Envelope Sealers.—Are of several different models, from the hand-operated machine sealing 100 to 150 envelopes per minute, to the motor-driven postage meter which seals, stamps, cancels, and postmarks 250 envelopes per minute, at the same time counting on a meter attachment, which count is accepted by the Post-Office Department for the prepayment of postage. The stamping on this type of machine refers to permit printing. Some of the companies handling this class of apparatus are:

The Multipost Co., Rochester, N. Y., hand envelope sealers, permit printing envelope sealers, with and without meter attachment.

International Postal Supply Co. The Hey-Dolphin postal permit machine, which feeds, counts, and stacks automatically any standard envelope. Two models: M imprints 400 pieces per minute; F imprints 800 pieces per minute. Both are electrically operated. Model M is convertible to hand-power.

Postage Meter Co., Stamford, Conn. The Pitney-Bowes postage meter, "A printing and recording mechanism which is licensed for use under special rules and regulations issued by the Post-Office Department for printing postage directly on mail matter." The mechanism is a combination of a mailing machine (with sealing attachment) and a meter which is detachable, enabling it to be taken to the post-office for resetting. It is claimed that, due to the operation of the meter, assuring the authorities that postage has been prepaid, considerable time is saved and delays avoided, as mail so stamped goes directly to the distributing cases on reaching the post-office.

Standard Envelope Sealer Manufacturing Co., Everett, Mass. Standard envelope sealers, 4 models, from hand-operated machine, sealing 100–150 letters per minute, to electrically operated machines handling from 150,000 to 200,000 letters per day; also Standard permit printer and sealer electrically operated, handling 12,000 envelopes per hour.

Postage Stamp Affixers and Recorders.—Made by the Multipost Co., Rochester, N. Y. These work like self-inking rubber stamps. Stamps are placed in containers in rolls, and the Multipost dampens the stamp and affixes it in one operation. Extra containers for different denominations of stamps can be procured to work interchangeably in the Multipost. **Several models** are offered, some equipped with counters to keep track of stamps used and also locked to prevent use by unauthorized persons; also **parcel-post machine,** including eight sections for different denominations of stamps.

The Standard Stamp Affixer Co., New York City, furnishes the Standard affixer with or without register. In general appearance and method of operation the Standard is very similar to the Multipost.

Parcel-Post Computing Machines.—The Postometer Co., Poughkeepsie, N. Y., furnishes an **automatic parcel-post computing machine** which indicates the exact amount of postage required on pressure of the zone key.

Computing scales with charts for figuring parcel postage are furnished by the Dayton Scale Co., Dayton, Ohio, and the Toledo Scale Co., Toledo, Ohio.

Speed-o-Feeder.—Furnished by American Speed-o-Feeder Co., Cleveland, Ohio. This is a typewriter attachment facilitating rapid addressing of envelopes or statements on any standard typewriter. It is claimed that with this attachment typists can address twice as many envelopes as without it.

MISCELLANEOUS.—Under this heading are included:

1. Automatic paper fasteners
2. Cabinets
3. Card indexes
4. Desk organizers
5. Display fixtures
6. Duplicating machines
7. Indorsing machines
8. Finding and filing machine
9. Flexi file
10. Line-a-Time copy-holder
11. Photostats
12. Signagraph
13. Steel grips
14. Telautograph
15. Ticketograph
16. Visible records

AUTOMATIC PAPER FASTENERS.—The Hotchkiss Sales Co., Norwalk, Conn., has been furnishing automatic paper fasteners for over 30 years. The fasteners consist of strips of staples which are fed into the machines. The machine is operated by a blow on the plunger which drives the staples one at a time, through the papers which it is desired to attach, and clinches them on the back. This form of machine, with steel staples, has also been adapted as a tacking machine for use in shipping departments, etc.

The **Spool-o-Wire Stapling Machine,** furnished by the Hutchison Office Specialties Co., New York, and manufactured by the Remington Typewriter Co., is equipped with a spool of special grade stitching wire of more than 1,250 feet in length, furnishing over 15,000 staples before the spool is exhausted. It is claimed that up to 40 sheets can be bound together without any adjustment of the machine.

CABINETS.—Cabinets specially designed for office use, for correspondence, card indexes, documents, ledger cards, etc., made in either wood or steel, are furnished by the Library Bureau, Globe Wernicke Co., Shaw-Walker Co., and many others.

CARD INDEXES.—Some of the principal manufacturers of card index equipment are Amberg File & Index Co., Globe Wernicke Co., Library Bureau, Shaw-Walker Co.

DESK ORGANIZERS.—Called also **work organizers,** are "multiple folders" which lie flat on the desk or in desk drawers. Each fold is a subject-labeled pocket to receive and classify desk work. Work organizers are furnished with capacities of from 6 to 15 pockets, either front or side opening, and in paper, fabrikoid, or leather. The same manufacturers also furnish a **sorter,** built on the same principle but with 43 pockets; also a **desk tray** for the middle shallow drawer with 9 compartments for clips, pins, rubber bands, pencils, etc. These organizers are furnished by Work Organizer Specialties Co., Detroit, Mich.

DISPLAY FIXTURES.—These fixtures are constructed like a large loose-leaf book. The leaves are made in all sizes, from 8½ inches wide × 11 = 96 inches wide × 108 inches high. The leaves have fillers of thumb-tack board, solid wood, or wood stretcher covered with burlap, and also furnished so that samples may be displayed under glass. Many different models of holders are furnished, either fastening on the wall or standing independently on the floor. They are largely used for the display of maps, charts, graphs, advertising matter, printed forms, for visualizing flat material, and for display of samples. Such fixtures are furnished by the Multiplex Display Fixture Co., St. Louis, and the Universal Fixture Corp., New York City.

DUPLICATING MACHINES.—There are three main types of duplicating machines:

- Those printing from stencils.
- Those printing from type.
- Those printing from originals written in special ink by hand or with special ribbons by typewriter and reproduced on a bed of gelatinous material, from which exact copies are made.

The principal manufacturer of the stencil type of reproducer is the A. B. Dick Co., Chicago, manufacturer of the **Mimeograph.**

The **Multigraph,** manufactured by the American Multigraph Co., Cleveland, is probably the best-known reproducing machine of the typesetting variety.

The **gelatine bath,** or **roll type,** is represented by the **Ditto,** manufactured by Ditto Incorporated, Chicago, and the **Speedograph,** manufactured by the Beck Duplicator Co., New York City.

The list of manufacturers, while representative, is not to be supposed as complete.

INDORSING MACHINES.—Where large numbers of checks are handled, especially in the larger banks, the **International Check Indorsing Machine** can be used to advantage. It is claimed that this is the only automatic quantity feed indorser on the market and that it will indorse as many checks as could be indorsed in the same time by hand by a dozen clerks. This machine is motor driven and it is claimed can be operated by anyone without previous experience. It is manufactured by the International Postal Supply Co., New York City.

MECHANICAL FINDING AND FILING MACHINE.—This is a new machine recently put on the market by the Add-Index Corp., New York City, whereby specially designed card indexes for ledgers or similar records are supplemented by a finding device which instantaneously locates the required card for posting or reference. The cards are filed numerically and so constructed that operation of keys on the finder raises the card desired. It is claimed that even a misplaced card can be located in a very short time by the aid of the finder. This machine seems to be particularly adaptable to savings banks. Users of it are enthusiastic and claim a large percentage of saving in personnel since the installation of the machine. These machines are hand-operated.

FLEXI FILE.—The Flexi File is a mechanical device eliminating the follower block and holding the papers in a file drawer always in a vertical position. The equipment consists of a wire frame parallel with and above the drawer side. Metal riders running on these wires support cloth hammocks which divide the drawer into a series of flexible pockets. The Flexi File increases filing capacity and speed in finding and filing papers; it instantly makes available the unused space at the point needed. This device is furnished by the Library Bureau.

LINE-A-TIME COPY-HOLDER.—The Line-a-Time is a copy-holder which greatly facilitates the work of typists in copying manuscripts, statements, etc. It stands on the desk at the most convenient point for the operator. This device is considered a necessity by most operators when copying tabulated statements. The Line-a-Time is manufactured by the Line-a-Time Manufacturing Co., Rochester, N. Y.

PHOTOSTAT.—The Photostat is a photographic copying machine, including developing and fixing apparatus. Its operation is so simplified that it can be efficiently operated by office boy or girl. The great advantage of the photostat is the ability to reproduce in very short time and inexpensively, exact copies of any document, drawing, plan, diagram, etc. Such copies would be accepted as legal evidence in court. The first print from the original is a negative, the colors being reversed. A positive or exact duplicate print of the original is simply made by rephotographing the negative. The photostat is manufactured by the Photostat Corporation of Rochester, N. Y.

SIGNAGRAPH.—The Signagraph is an instrument by which from 5 to 20 original signatures may be affixed simultaneously by one writing to checks, stock certificates, bonds, or other documents. There are **three**

models, the **Junior Signagraph,** the **Cheque Signagraph,** and the **Stock and Bond Signagraph.**

The **Junior Signagraph** is a portable instrument in mahogany case, 20½ × 5½ × 11 inches. This model signs simultaneously and continuously 5 checks in sheet form. It is adjustable to any size of check, not exceeding 3¾ inches in width. Two thousand signatures per hour is a fair performance.

The **Cheque Signagraph** consists of a table bed with folding extension leaf; across both at front and back run endless chains actuated by sprockets and a crank handle. On rotating the handle two sheets of checks are carried under the writing frame upon which are two parallel rows of fountain pens, spaced to cover the signature space of the checks beneath. The pens are under the control of a **monitor penholder,** or handle which when handled as a pen causes all the pens to respond simultaneously. After signing 10 checks the writer turns the crank handle, thereby transferring the signed checks to a receiving tray and simultaneously placing on the writing bed a new set of 10 checks for signature. The instrument is adjustable for any size of check sheet not exceeding 18¾ × 9½ inches. Average signatures on this model are about 5,000 per hour. The instrument is adjustable for either right- or left-hand signatures.

The **Stock and Bond Signagraph** is an instrument by which from 14 to 20 signatures may be affixed simultaneously to stock certificates, bonds, and other similar documents. Documents requiring two signatures may be signed consecutively by two officials working at the same time. The documents are so arranged that the officials do nothing but sign, as the securities are kept in their numerical order and are ready for delivery immediately after the final signature is affixed. The **speed of signing** varies with the capability of writers from 6,000 to 10,000 per hour.

The Junior Signagraph is **sold.** The Cheque Signagraph is **rented.** The Stock and Bond Signagraph is located in the office of the manufacturer and the charge is a **unit price per signature per document.**

The Signagraph is furnished by The Signature Co., 15 Broad St., New York City.

STEEL GRIP MASTER CLIP.—This is a spring steel clip 5½ × 11/16 inches, with a bull dog grip. This clip is especially valuable for such purposes as holding down check stubs when working on a bound check book, separating papers in a brief case, holding correspondence awaiting signature, etc. It acts as a good substitute for paper weights. The Steel Grip is furnished by Lester Collier, Times Square, New York.

TELAUTOGRAPH.—This transmits handwriting instantaneously by wire from sending to receiving station, whether in next room, an adjoining city, or a neighboring state. This instrument is familiar to people who are waiting for incoming trains, as it is largely used by railroads for information service. The transmitting station instruments both send and receive messages. The receiving station instruments only receive. Where necessary, due to connection with distant station or stations, selecting switch keys are installed enabling sender to select the desired receiving station.

Telautograph equipment is used largely by banks, stock-brokers, department stores, hotels, hospitals, railroads, and by many manufacturing, mercantile, and service companies.

TICKETOGRAPH.—Where coupons are used in connection with manufacturing, cost, and production records, the Ticketograph can be used to good advantage. This instrument prints at one operation on from 1 to

82 coupons on a coupon ticket form such information as price, code, lot number, style number, quantity, etc. Manufactured by The Tabulating Machine Co., 50 Broad St., New York City.

VISIBLE CARD INDEXES.—For many purposes the visible index is a considerable improvement over the usual form of card index and loose-leaf record, and while occupying considerably more space per thousand cards and also costing more, the advantage of immediate availability is a consideration not to be lost sight of.

Some of the uses for which visible records seem particularly adapted are:

Advertising records	Quotation records
Collection follow-ups	Customers' lists
Credit records	Mailing lists
Employment records	Membership lists
Personnel records	Production records
Order register	Signature records
Stock records	Real estate records
Purchase records	

There are many manufacturers of visible indexes and equipment, some of the principal being:

Acme Card System Co., Chicago and New York City
Accounting Devices Co., Chicago and New York City
American Kardex Co., Tonawanda, N. Y.
Index Visible, Inc., New York City
Library Bureau, New York City
Rand Co., New York City
Visible Records Equipment Co., Chicago and New York City

The Accounting Devices Co. and the Visible Records Equipment Co. are offering visible records in prong binders, which seem to meet the need of those companies which have decided that visible records with the special cabinets or fixtures usually specified are either too expensive or occupy too much space.

SECTION 27

MANAGEMENT

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 27

MANAGEMENT

DEFINITION.—Management, as used in industry, has two meanings. It is applied broadly to the group which exercises control in a given plant, and when so used includes owners, managers, and executives. It is also applied more specifically to the economic functions of control, or to the activities and work done by the control group. A definition of management as an **economic function** was adopted by the Management Division of the American Society of Mechanical Engineers in 1921: "Management is the art and science of organizing, preparing and directing human effort applied to control the forces and to utilize the materials of nature for the benefit of man." In this definition are three significant words: organizing, preparing, and directing. These indicate the three main subfunctions of management.

Organizing comprehends setting up of a manufacturing concern, choosing site for plant, selecting equipment, planning layout, arranging major departments, securing and allotting operating capital, determining size and make-up of executive staff—or, broadly, setting up the business enterprise. Similarly, problems of sales, personnel, and all other major activities must be subjected to organizing processes before an enterprise is ready to operate. Thus the act of organizing delineates the form which the undertaking shall assume.

Preparing comprehends those activities which must be brought into harmony that a business may function as a unit. When put into effect it works out a procedure for relationships between activities and personnel, sets up labor, purchase, receiving, and storage records, and those records which control production and determine cost.

Directing is the administrative function of management. It comprehends the execution or carrying out of the objects for which the enterprise is organized and for which its various activities are co-ordinated. It initiates work in the factory, makes sure that the personnel is properly trained and cared for, that current day-to-day matters of all kinds are met; in short, that men, materials, and equipment are brought together so that production may be initiated and maintained.

DEVELOPMENT OF MANAGEMENT.—Need for management has grown out of the development of modern industry. Invention and application of labor-saving machinery brought mass production which required mass financing and, finally, mass management. As a science management is little more than a generation old. Disclosures which brought it to the attention of industrial executives were a series of papers presented to the American Society of Mechanical Engineers between 1891 and 1908. These include the classic papers of Frederick W. Taylor, F. A. Halsey, Henry

L. Gantt, and others dealing with shop management and wage-payment plans.

In 1912 a special committee of the American Society of Mechanical Engineers prepared a paper on "Status of Industrial Management," in which **three regulative principles** were quoted from Church and Alford, and indorsed as follows:

1. Systematic use of experience.
2. Economic control of effort.
3. Promotion of personal effectiveness.

In 1922 another paper entitled "Ten Years' Progress in Management" was presented to the Mechanical Engineers, reviewing the developments of the period 1912–1922. Weight of fact and opinion in that report indicated that certain mechanisms of management had made decided headway during the period and were widely accepted both in principle and practice. Arranged according to the importance of application they yield two groups:

1. Balance of stores
   Incentive wage plan

* The two figures shown separately in the metal-trades columns represent totals for the 16 plants (upper figure) covered by the regular questionnaire, and the 12 plants (lower figure) which filled out only a condensed questionnaire.

Summary figures for 51 plants in 4 industries developed from information secured in connection with the "Wastes in Industry" investigation are presented in the preceding table. They show the frequency of cost control compared with other management methods and routines. **Management and cost accounting** records touch at many points, particularly in developing control of a business or industrial enterprise.

Types of Organization

SCIENCE AND ART IN ORGANIZATION.—Two points of view may be taken in connection with any given organization of a business or industrial concern: (1) impersonal or solely as to scope, limits, and relations of functions; (2) personal as to entrusting different kinds of **mental and manual** activity to the right persons and supervising their co-ordination. The first has a scientific basis; the second is an art. Only the first has a bearing on accounting practice.

Various arrangements and interrelations of functions involved have led to recognized types of organization. These may be found in any of the principal activities, as, purchasing, sales, engineering, production, or others. Which type is selected under a given set of conditions depends largely upon the size and degree of complexity of the work to be performed.

TYPES OF ORGANIZATION.—Three common types are:

1. Military or line organization
2. Functional organization
3. Line and staff organization

To these a fourth is sometimes added:

4. Committee organization

Military or Line Organization.—The oldest and most natural form. It is based on essential need of **discipline** where work of large numbers of persons must be directed toward a common objective. Its prototype is the military organization of the past.

Lines of authority and instruction are all vertical from superior to subordinate, extending from general manager to workmen as shown in Form 1, which is for a manufacturing organization. Duties and responsibilities may be deputized from general manager to superintendent, and from superintendent to foremen. No foreman exercises authority over, or gives instruction to, any other foreman; no workman owes duty to, or is held responsible by, any foreman except the one immediately over him. Subdivisions of functions are such that the mental and manual labor required of men on the same organizational level is approximately the same. Mental work of administration is reserved to those in higher authority; simple duties are delegated to those under them.

Advantages of this type of organization are: simplicity; clear definition of duties and responsibilities; and ease of securing discipline.

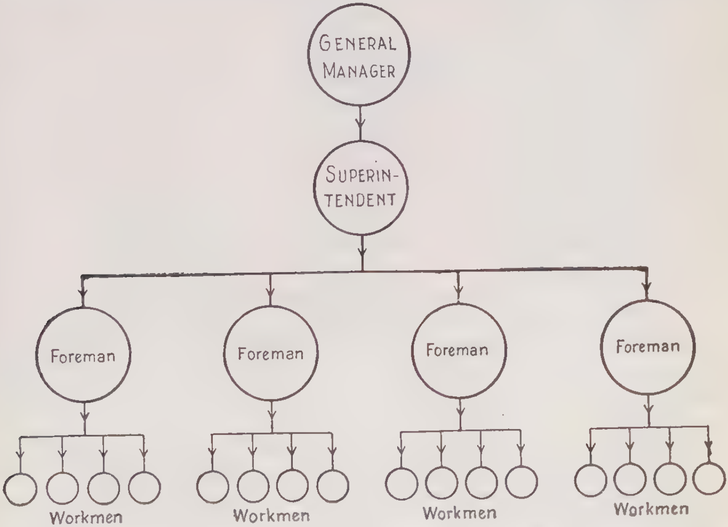
Disadvantages are: difficulty of operation in large or complex undertakings; overloading a few men with duties and responsibilities; tendency to perpetuate inefficient methods; undue reliance upon skill and personal knowledge of workmen; and danger of disaster if a strong executive is lost.

A **pure example** of the military or line is seldom found, and it is restricted to small establishments or where the work done consists of very simple operations or processes.

Functional Organization.—This form has been developed to make the

greatest use of expert knowledge and advice. Mental and manual work is subdivided and deputized as shown in Form 2, which is for a producing organization needing both chemical and engineering counsel. Therefore a chemist gives advice to all the foremen on chemical matters, an engineer on engineering matters, and the superintendent in regard to actual production.

Lines of authority and instruction pass from each adviser to every functional foreman, and from each functional foreman to every workman. Duties of the foremen may be quite different, for each may have charge of but a certain aspect of the work. Different instructions will be received by the workmen from each foreman.



FORM 1. Authority and Responsibility Relationships under Military or Line Organization

(From article by Dexter S. Kimball, *Management and Administration*, December, 1923)

Advantages of this type of organization are: separation of mental and manual labor according to functions to be performed; maximum of expert advice and direction; minimum of functions assigned to any one person; tendency toward high individual efficiency. **Disadvantages** are: weak discipline; difficulty of co-ordinating many separated functions; tendency to produce narrow specialists among the executives and automatons among the workers.

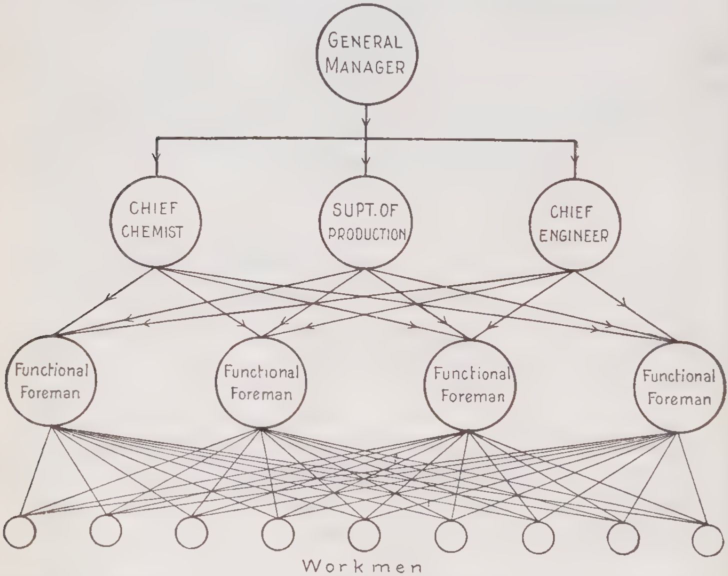
A **pure example** of the functional organization is hard to find.

Line and Staff Organization.—This combines features of both the military and functional types. Form 3 shows the general plan which is used in most industrial plants of any size. The primary functional divisions are into sales, engineering, manufacturing, and finance. The heads of these four

divisions are equal in authority. Each has certain line duties and responsibilities. On the other hand, each has certain advisory or staff functions. For illustration, the treasurer and chief engineer give advice and instructions to the factory superintendent. Under the superintendent are functionalized several departments, while the tool designer, order clerk, and chief inspector give advice to the shop foremen.

Lines of authority and responsibility are vertical for the line executives having the least complex duties, and spread from staff advisor to line executive wherever expert knowledge and counsel are needed.

In general the **advantages** of this type of organization are the sum of those noted for the two preceding types, while the **disadvantages** of these types are minimized.



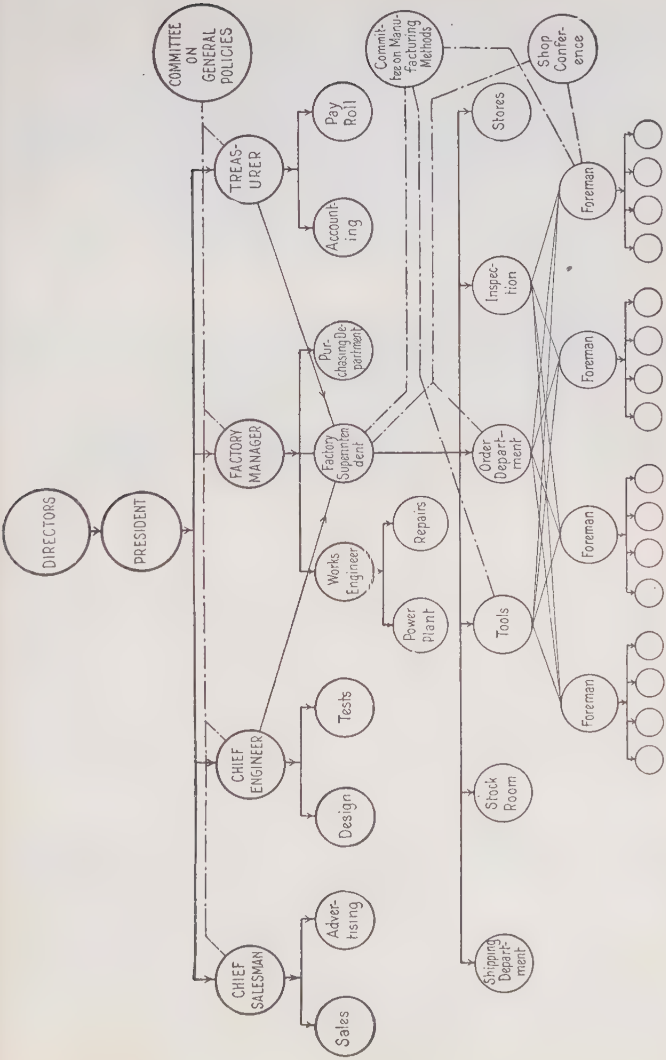
FORM 2. Authority and Responsibility Relationships under Functional Organization

(From article by Dexter S. Kimball, *Management and Administration*, December, 1923)

Committee Organization.—This is a modification of the line and staff type where the advisory functions are exercised by committees. Sometimes such committees are combined with individual staff advisors as shown in Form 3.

Material Control

PURPOSE OF MATERIAL CONTROL.—Importance of **material control** in an industrial plant cannot be overemphasized. Upon it depends



FORM 3. Authority and Responsibility Relationships under Line and Staff Organization
(From article by Dexter S. Kimball, *Management and Administration*, December, 1923)

production and orderly handling of the entire factory operation. Main purposes of such control are:

1. To keep right quantity and quality of materials on hand at all times.
2. To care for and conserve all materials awaiting use.
3. To determine requirements for materials by correlating production and sales programs.
4. To secure cost figures on all materials and supplies used in production and factory operation.
5. To furnish at any and all times records as to quantities of materials on hand, on order, assigned, utilized, needed, and so on.
6. To determine value of the material inventories.

To satisfy these controls, four general **groups of records** are needed:

1. Receiving records
2. Stores records
3. Work in process records
4. Inspection (or quality control) records

RECEIVING RECORDS.—Serve two main purposes: To see that goods ordered are received in time or followed up; to be sure that goods are

SHIPMENTS RECEIVED VIA BETWEEN M & M DATE ____________

CONSIGNOR	ADDRESS	NO OF PACKAGES	CONTENTS OF SHIPMENT	APPLYING ON PURCHASE ORDER NO.	MATERIAL RECEIVED REPORT NO.

FORM 4. Form for Record of Purchase Material Received (in duplicate)
(From Madison Cartmell's "Stores and Materials Control")

received so that invoices can be paid. Nature of receiving records depends somewhat upon size of plant and length of time required to complete the receiving routine. Receiving departments of large plants list all parcels or goods as received, making use of a duplicate form such as Form 4. This form serves as a means of notification to purchasing department of what is received and for inspection of material. It shows carrier, consignor, with the address of each, number of pieces in each shipment, number of purchase orders against which the shipment applies, and contents of the parcel, if such is known. Copy 1 is forwarded to purchasing department follow-up clerk. Copy 2 is held pending the inspector's report as to quality and quantity. **In small plants** where receiving routine is simple and volume of materials handled small, a record of this kind is not required.

A more **elaborate form** for reporting received material is shown in Forms 5a, 5b. On these forms spaces are provided for vendor's name, order number,

quantity received, and quantity rejected, if any. Copies are signed by the inspection clerk and distributed, one to purchasing department for checking quantities of invoices, another to stores records after material has been sent to storekeeper, while third copy is signed by stores clerk and finally by receiving clerk for his own protection. Inspection of quality of purchased goods is technical, and if a lot has been found unsatisfactory and is rejected, its amount is noted not only on materials received report (Form 2), but also on a rejection report (Form 6). General information on rejection report is similar to that on materials received report, except that former describes tests made and why material failed to satisfy specifications and

to meet requirements. Information on Form 3 enables purchasing department to prepare its claim against vendor.

STORES RECORDS.—Prime functions of a storekeeping system as laid down by Gantt are:

1. To have on hand, when wanted, all material needed.
2. To see that all material not needed is disposed of.
3. To safeguard all material not issued to some special order.
4. To keep in the manufacturing office an exact balance of material on hand and on order.

Stores records have been developed in great variety to meet many different conditions. In general, such a record should comprise:

1. Description of material.
2. Factory requirements for each kind of material.
3. Quantities on hand, on order, and allotted or assigned to production.

4. Quantity to be ordered when time comes to procure more, either by purchase or manufacture.
5. Unit price at which particular item is to be priced on requisitions.
6. Quantity consumed during given periods.
7. Value of quantity on hand.

Two **general methods** are used for keeping such records: loose-leaf books, and loose-card files. First is generally preferred because it gives a sheet of a size large enough to carry all essential data. Ruling of sheet or card depends upon amount of information to be recorded and system of control in use. A simple form giving a perpetual inventory with prices and value spaces is shown in Form 7. Such a card is made out for each item of stores, describing in its heading the item, its location in the stores room, unit of issue, and unit price. Unit of issue is stated in number, pounds, feet, cubic

MATERIAL	UNIT
LOCATION	UNIT VALUE

Date		Quantity Received	Quantity Delivered	On Hand	Value On Hand		

Form 7. Simple Form for Perpetual Inventory

volume, or number of packages or containers. Below heading of card are entered date of each issue, quantities received and delivered, balance on hand, and its value.

A simple stores record form with "on order" columns is shown in Form 8. Three columns at left provide for recording date, order number, and quantities on order.

A more elaborate balance of stores record is shown in Form 9. This provides heading for necessary information to identify item and record requisitions and order numbers together with quantities and dates. Below, columns are provided for a record of receipts, issues, and balances.

An important part of the routine of handling stores is physically to show the **order point**. This provides for some form of physical separation of the minimum or order point quantity from rest of stock. When balance on hand is reduced to this amount, balance clerk reports this fact to the storekeeper, using form of Form 10. This method works out as follows: A

factory manager may determine that 2 months are required from time of placing request for a new supply of parts until lot is received in store-

MATERIAL								
LOCATION					UNIT			
					UNIT VALUE			
On Order			Date	Quantity Rec'd	Quantity Delivered	On Hand	Value On Hand	
Date	Order No.	Quantity						

Form 8. Simple Form for Stores Record, with "On Order" Column

room. Storekeeper from his records ascertains that 24,000 of these parts were used in preceding year. Therefore, time of order point is 2 months

						LOCATION			SYMBOL					
Req. No.	Order No.	Quantity	Date Ord.	Date Due	Time Needed	Ord. Point	Am't to Ord.	Cost Per						
RECEIPTS			ISSUES				ISSUES				ISSUES			
Date	Rec'd	Total	Date	Issued	Charge	Balance	Date	Issued	Charge	Balance	Date	Issued	Charge	Balance

Form 9. Form for Balance of Stores Card
(From article by Clark and Davies, in *Management Engineering*, July, 1921)

and quantity 4,000 pieces. Storekeeper then counts out 4,000 parts and places them in one or more bins, separating them physically from rest of

stock by means of boards painted red or by some other sign. These parts cannot then be taken without showing the fact that order point has been reached.

Taylor Balance of Stores Forms for classified stores and for work materials are still more elaborate. They show for each article in the storeroom:

1. In 1st column quantity of articles ordered but not received in storeroom.
2. In 2nd column quantities on hand in storeroom.
3. In 3rd column quantities apportioned, received for shipping orders or manufacturing orders, but which have not been issued.
4. In 4th column quantities available (in excess of quantities apportioned to shipping orders and manufacturing orders) for future requirements. Quantity available must equal quantity on order (column 1) plus quantity in storeroom (column 2) minus quantity apportioned but not yet issued (column 3). Materials on order but not yet available, as soon as ordered, are entered in the available column (column 4).

ORDER TAG

Form 10. Form for Order Tag

(From article by Clark and Davies, *Management Engineering*, July, 1921)

WORK IN PROCESS RECORDS.—Records of work in process are far more numerous and complex than those for stores, depending upon nature of product, manufacturing processes involved, volume handled, and particular system of control adopted. It is, therefore, possible to touch upon but two or three of the important elements in such a system of control records. Charts of the Gantt system are therefore presented, including layout chart, load chart, and progress chart.

Layout chart is used in planning production. A specimen as used in a machine shop is shown in Form 11. It is ruled to represent working hours of the plant and may extend over several weeks, or wide columns may represent days and narrower columns even hours. All machines and work benches in a department or a shop are listed at left. When an order is received a list of operations through which the material must pass is secured. On the layout chart opposite machine to be used first operation is laid out. An angle open to right indicates when job is to be started. An angle to

REASONS FOR STOPPING WORK

B—Break-up.
H—Lack of heip.
M—Lack of material.
P—Lack of power.
R—Repairs.
T—Lack of tools.

left indicates when job is to be completed. A light line connecting two such angles indicates total time scheduled for the order.

In a similar way the machine upon which second operation is to be done is looked up to see when it will be ready for additional work. An order is then assigned to this machine and angles and light line are drawn. This procedure is continued until all orders are laid out.

As daily reports are received showing amount of work done, a heavy line is drawn under the light one. If work is exactly on schedule, end of heavy line will be directly under proper date and hour. If work is behind schedule, end of heavy line will be behind, or if work is ahead, end of heavy line will be ahead of assigned date.

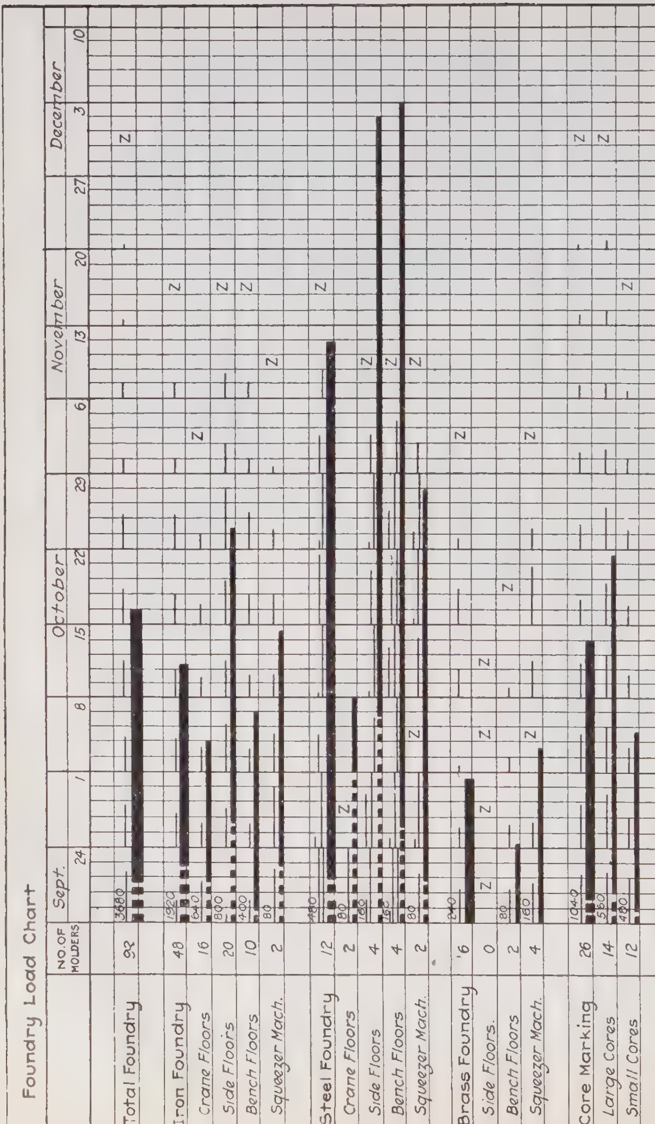
The **load chart** keeps executives of any producing plant advised as to load of work ahead. This information is of value to all executives for it gives an accurate picture of what work is to be done.

The load chart, while similar to the layout chart, is more compact and does not show details. A specimen for a foundry is shown in Form 12. On this chart divisions of the work shown are iron, steel, and brass foundry work and core-making. Secondary subdivisions are indicated in each case.

The **progress chart** shows what progress is being made in the execution of a plan or program. A specimen in Form 13 is for office work. Four departments are indicated and for each is recorded amount of work received each day, amount done, and amount left over at end of day. In this particular case each day's job consisted of work received up to 3 o'clock of that day. Figures at left of each space represent number of orders received day by day. The lines represent amount of work done, light ones showing daily production and heavy ones amount done since beginning of week. For instance, orders for A on Monday were 420 received, 252 passed through. Inasmuch as 252 is 60% of 420, a light line is drawn through 60% of the Monday space. A heavy line drawn under the light line indicates cumulative work done.

INSPECTION RECORDS.—Quality control is quite as important as quantity control. A successful product must be useful and marketable, i. e., it must possess characteristics different from those associated with mere number of volume. In practice, standards of quality are set up and then maintained by some form of examination or inspection.

In Form 6 (p. 1284) is illustrated a form of inspector's report for defective



Form 12. Gantt-Type Load Chart for Foundry
(From Wallace Clark, "The Gantt Chart")

purchased material. A form having similar use, that is, to indicate disposal of defective work and furnish instruction for reclaiming or repair, is given in Forms 14a, 14b. This is from the practice of the Packard Motor Car Co.

Form 14a. Inspector's Tag Form for Disposing of Work (face)
(From G. S. Radford, "The Control of Quality")

Often no special tag is used for the material which is satisfactory, an entry being made on the work tag as to the number of pieces or amount which has passed inspection. The principal use for this tag is to supply information to stores department as to amount of material which has been apportioned and sent along for storage.

Equipment Control

DETERMINATION OF MACHINE RATES.—The method of using machine rates or machine hours as the basis for applying cost burden has grown in favor and is extensively used. This method is based on the theory that a portion of manufacturing burden should be applied to work performed on the basis of the production time required at machines on which work is done. Either three or four items are usually involved in a machine rate. These are:

1. Power cost
2. Depreciation
3. Maintenance (space)

In some cases another item is considered necessary to establish unit of interest on investment in the machine. This gives:

4. Investment (value)

INSTRUCTIONS FOR REPAIR

DEPT	OPERATION

Form G 20 150M 4 20

Form 14b. Inspector's Tag Form for Disposing of Work (reverse)

Procedure for setting a machine rate is simple. It involves determining at the outset the charges for proper power, depreciation, maintenance, and investment (if used), and then dividing these by a factor representing the reasonable number of hours which machines are expected to be in operation. This factor is often 80% or 85% of total possible hours. By this procedure a predetermined rate is established. Thereafter, for each month, actual power, depreciation, and maintenance charges will be known. Their total, with addition of the investment charge (if used), should be divided by the hours which the machines actually run to arrive at a monthly figure as to cost per hour for operation. Form 15 shows a form for determining the machine rate for a machine-shop department, developed by Myron A. Lee, and presented to the American Society of Mechanical Engineers, May, 1923.

DETERMINATION OF IDLE EQUIPMENT TIME.—Idle time of machines and equipment is recorded in various ways, one method in widespread use being the **Gantt Machine Record Chart.** Its purpose is to show whether or not machines and equipment are being used, and, if not, the

FORM 15. Type of Chart Used in Determining Machine Rates of the Various Machines in a Plant

reasons for idleness. Causes of idleness, which may vary on different kinds of work, are usually as follows:

Waiting for set-up	Lack of power
Lack of operative	Lack of tools
Lack of material	Repairs to machines
Lack of orders	Holiday

Form 16 shows such an idle machine record presented by Owen Earhart. At the left of this record are listed machines, benches, or work spaces, designated by number. Opposite each the foreman indicates whether or not the machine has been running, by drawing a line across the space to indicate hours during which machine was in operation. A **blank space** indicates that the machine did not run and a **letter** or **symbol** gives the reason. If desired, a heavy line can be drawn to indicate cumulative running time of the machine for a whole week. Length of this heavy line is always equal to sum of lines for the various hours or days. A record of this kind is intended to bring action to correct lacks and failures which cause equipment idleness.

EQUIPMENT MAINTENANCE RECORDS.—Idleness of machinery and equipment because of repairs can be greatly lessened by systematic overhauling and maintenance. Responsibility for initiating such maintenance is one of the important functions of the planning department. For proper execution three things must be established:

1. Standards for maintenance.
2. Instruction cards for inspection, reports, and overhauling.
3. A tickler as a mechanical aid to show when the work must be done.

Setting up of standards is the responsibility of the engineering department. **Instruction cards** are prepared from these standards and are same in kind as used for regular production jobs. Best type of **tickler** is one which has a portfolio for each day in the year, large enough to insert all reminders, instruction cards, and reports. **Notices** to initiate maintenance work should be placed in the tickler in advance, to come out at proper intervals throughout the year for inspection of each part of equipment, and for examination and repairs at stated intervals of parts of machines, motors, boilers, engines, and belts likely to wear out or give trouble. One tickler for an entire plant is preferable to one for each department.

Forms for recording standards, for instruction cards, notices, and reports are simple in design and in general are well known.

Labor Control

TIMEKEEPING.—A threefold purpose is served by timekeeping:

1. To provide information for the pay-roll department as to time worked, or amount of work done.
2. To advise the cost department as to the amount of direct labor to be charged to any specific work.
3. To advise the cost department as to the amount of overhead to be charged by means of a machine rate or labor rate to any specific work.

Prime functions of a timekeeping system according to Gantt are:

1. To know **who** worked.
2. To know **when** he worked.

3. To know **what** he did.
4. To know what he was **paid for it.**

FORM 16. Gantt-Type Idle Machine Record

(From article by Owen Earhart, *Management Engineering*, April, 1923)

TIMEKEEPING METHODS.—The following timekeeping methods have proved inadequate:

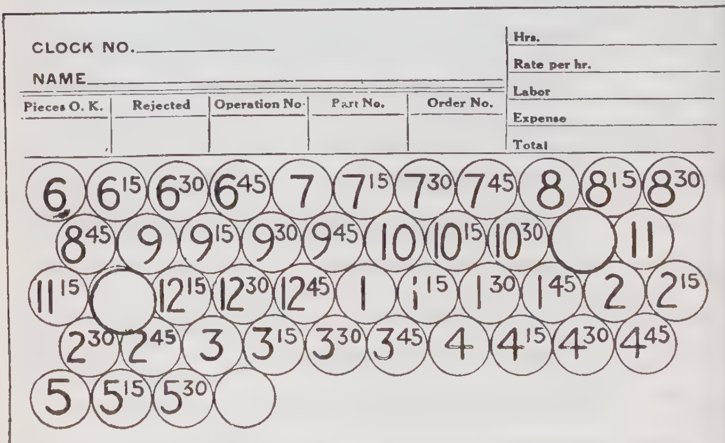
1. To have workmen write down their time in pencil at end of day or week, or upon completion of a job, operation, etc.

2. To have foremen write down such reports for workmen.
3. To employ timekeepers to visit workmen and secure records of operations from them.

Therefore, **in-and-out time records** and **job time records** have grown in favor and use.

The **in-and-out time record** is made by ringing or punching a clock which records on a tape or card the time of entering and leaving work in morning, at noon, after lunch, at night, and for overtime and on holidays. This record gives a check on attendance. Its various forms are well known.

The **job time record** is rapidly gaining acceptance according to Charles W. Lytle, from whose investigation and study[1] the following summary has been condensed.



Form 17. Time and Job Card for Federal Time Recorder
(From article by C. W. Lytle, *Management Engineering*, June, 1923)

Vital feature is to record starting and finishing times of each job without allowing, juggling, or miscalculating. This requirement is satisfied if worker turns in a card when he finishes each job and receives another card for his next job. To prevent human error, a **mechanical time stamp** is advisable, and various kinds are available.

In some Gantt and Taylor management installations the job time record is made to serve as an in-and-out time record also, by having each workman use his rack in-ticket in the morning for his first job ticket, and his last job ticket at night for a rack out-ticket. "Lates" must go to office for first job tickets and are checked.

Punching time stamps are probably the simplest form. A figure is punched out of the time or job card representing starting time, and another finishing time. Form 17 shows a job card used with **Federal Time Recorder**, and Form

Form 19. Job and Time Card, with "Start" and "Stop" Times
(From article by C. W. Lytle, *Management Engineering*, June, 1923)

18 a **master wage card.** Elapsed time is read instantly in upper figures when time card is placed on master card.

There is a master card for each hourly wage-rate, carrying a set of figures for elapsed time and accompanying wage value at successive 15-minute periods throughout day. Cost clerk places first punched hole in the job card over the zero location on the master card, and reads both elapsed time and labor cost through second punched hole. These intervals can be made less than 15 minutes and a time clerk can do the punching.

Printing time stamps are available in wide variety. One, that of Cincinnati Time Recorder Co., uses a card similar to the common workman's time card, but prints "start" and "stop" times. See Form 19, a form used

Form 20. Card for Stamping both "Start" and "Finished" Times
(From article by C. W. Lytle, *Management Engineering*, June, 1923)

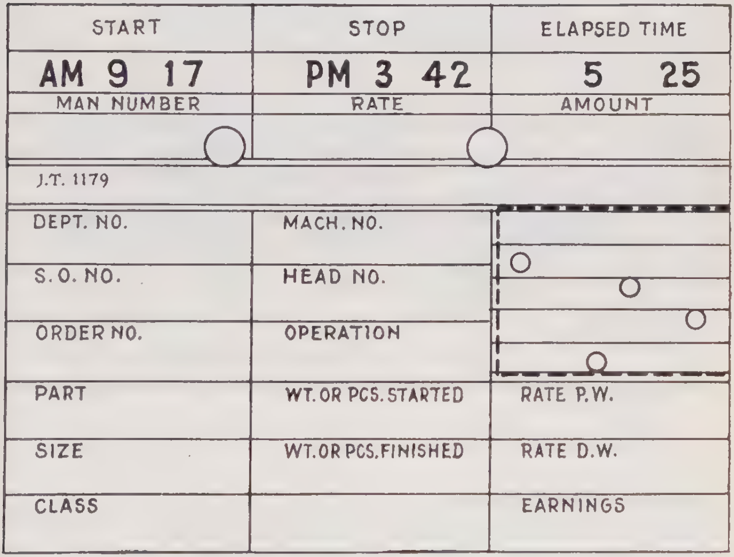
for daily in-and-out pay-roll records; totals should check. Form 20 shows another form of combined job and time ticket as used by Simplex Time Recorder Co.

Printing and elapsed time stamps were the next logical step in attempting to develop error-proof timekeeping. Method involves automatic figuring and stamping of elapsed time as well as clock times. There are many of these recorders, and they approach the problem in several distinctly different ways. The **New International Cost Recorder** with two-color ribbon can be made to print records in periods, hours, and minutes, or tenths and hundredths of hours. The latter units greatly facilitate adding. See Form 21.

The Bishop Calculating Recorder Co. makes a recorder which gives the elapsed time without giving finishing time as such. Two time scales are printed along the left margin of the job card. One of these scales is in clock figures and indicates the starting time when punched. Workman merely has to place card against a stationary abutment and the instrument automatically locates any starting time. At end of the job the workman again places

card, but with reverse side up, and it automatically locates the correct elapsed time on the other time scale, which is in terms of hours and minutes regardless of clock time. In cost department each job ticket is used with a **master rate sheet** to locate the labor cost for given elapsed time. With any of these instruments there is supposed to be a separate job ticket for all **idle intervals.**

Synchronized clock systems do away with discrepancies in running of different clocks. Such systems are often elaborate and one (**Num System** of Stromberg Electric Co.) computes elapsed time as follows: Each clock register contains a set of numbered printing wheels for stamping date and



START	STOP	ELAPSED TIME

CLASS		EARNINGS

Form 21. Form of Elapsed-Time Time Card
(From article by C. W. Lytle, *Management Engineering*, June, 1923)

time period on job ticket. At end of each period central clock advances period wheel one unit by means of an electric impulse. Because 6 minutes is an even tenth of an hour, it is a natural period to use in stamping. Minute hand of each clock moves forward at end of each minute. Recorders automatically start and stop in conformity with any given schedule of hours so that any noon hour is eliminated as well as A.M. and P.M. After an entire working day is passed, including overtime and night work, if any, printing mechanisms are automatically set at zero, at which point they remain until they automatically begin operations again from that point, at exact time working hours begin the following morning. See card of Form 22.

To illustrate, assume that a manufacturing plant begins regular operations at 7 A.M., the lunch period is from 12 noon to 12:30 P.M., and if there is

night work or overtime the supper time is from 5 P.M. until 6 P.M. Basis of time used is the hour and tenths of an hour, and calculations are made thus:

If an operation is started at 7:02 A.M. imprint will show	0.0
If stopped at 3 P.M. imprint will show	7.5
Actual working time is the difference	7.5
Or 7½ hr., from which lunch period of ½ hr. does not have to be deducted.	
If an operation is started at 8:07 A.M. imprint will show	1.1
If stopped at 9:12 P.M. imprint will read	12.7
Actual working time is the difference	11.6
Or 11 6/10 hr., from which ½ hr. for lunch and 1 hr. for supper do not have to be deducted.

FORM 22. A "Num-Hour" Card

(From article by C. W. Lytle, *Management Engineering*, June, 1923)

Periodograph System of Gisholt Machine Co. is based on entire pay period, figured and stamped in tenths of hours, or 6-minute intervals. A separate time card is used for each job. At start and end of any idle-time periods a blue card is punched. A separate absence card is punched by time clerk at beginning and end of each absence period. Periodograph is also applied to systems where Hollerith machines are used for tabulations. A regular card is shown in Form 23.

Clock face time stamps are used in several recorders to print clock dials with indicating symbols.

The **Calculagraph** prints an arrow to indicate starting time. At finish, elapsed time is printed on the familiar meter principle, one dial giving hours and a secondary dial giving tenths of an hour. See Form 24.

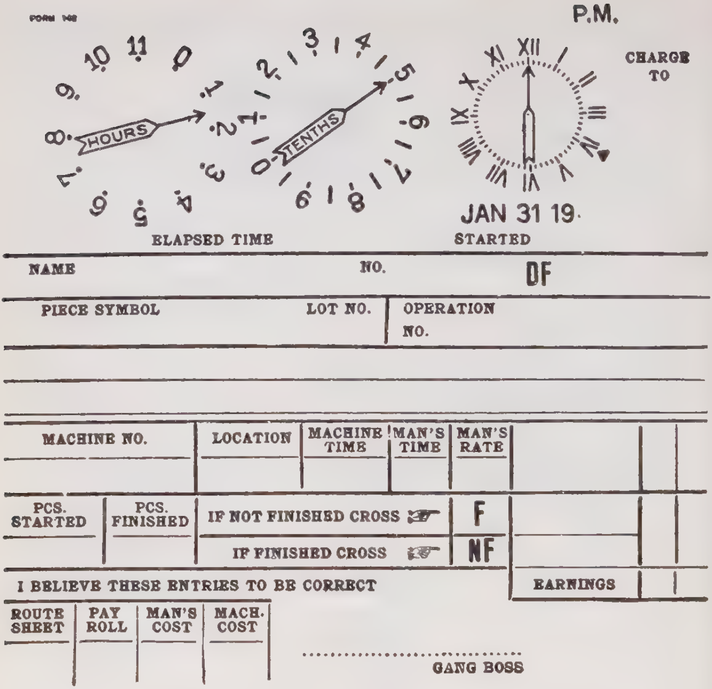
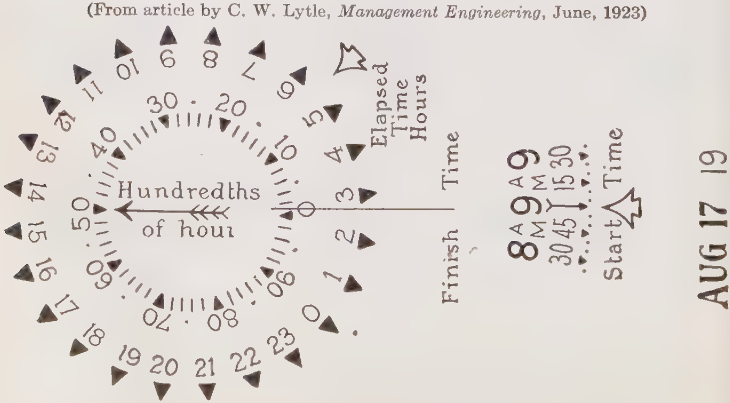
Form 23. A Periodograph Time Card
(From article by C. W. Lytle, *Management Engineering*, June, 1923)



Form 24. A Calculagraph Time Card
(From article by C. W. Lytle, *Management Engineering*, June, 1923)



Form 25. A Tempograph Time Card
(From article by C. W. Lytle, *Management Engineering*, June, 1923)

The **Tempograph** prints the portion of a clock dial indicating starting time, and then a smaller dial at finish on which an arrowhead has advanced from zero to number of elapsed hours and hundredths. This instrument can be arranged to compute money value of time at any hourly rates for any amount up to $24. It always prints the date on each card. See Form 25.

The **Arrowgraph** divides a clock dial into various job times of a single workman. When noon hour is 12:00 to 12:30, the period figure at 12:00 is repeated at 12:30, so that elapsed time can be secured with only one subtraction.

Tape recorders are available in several kinds adapted to special needs, as separating employees entitled to attendance bonus from others, recording idle time, and making up pay-roll.

DETERMINATION OF IDLE TIME.—Idleness of employees is usually and best recorded graphically. A widely used form is the **Gantt Man Record Chart** which shows whether a man does a day's work and, if not, the reason for failure.

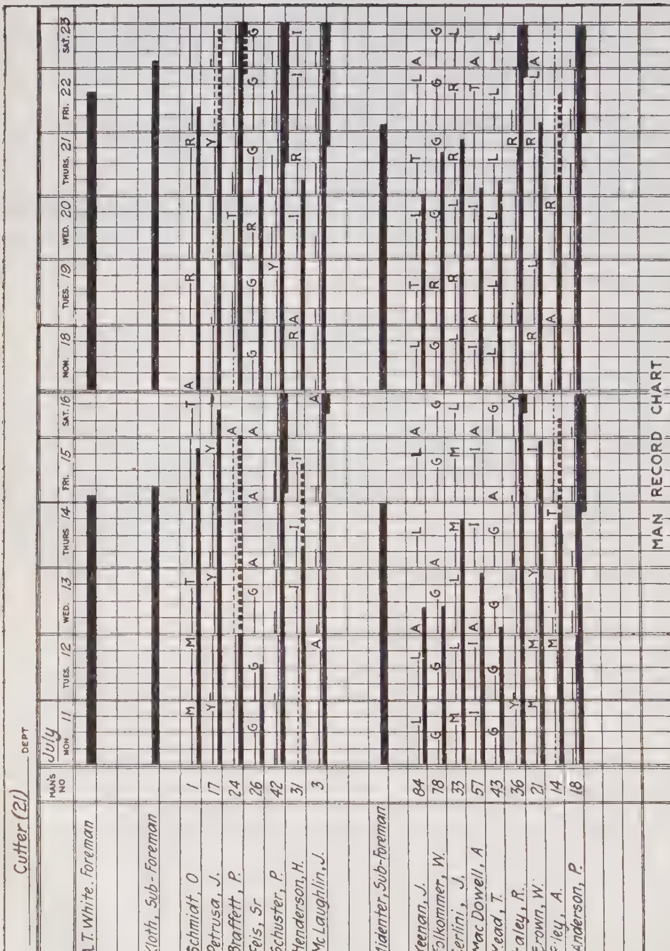
Reasons for falling behind are:

- Absent
- Green operator
- Lack of instructions
- Slow operator
- Material troubles
- Repairs needed
- Tool troubles
- Holiday
- Smaller lot than estimate is based on.

A **typical chart** is shown in Form 26, from the practice of Wallace Clark. This chart is similar to that used for recording idle machine time. At left are names of the men. At top is a space for a heavy line for operation of the department as a whole; opposite name of each man is drawn a line through daily work space, indicating what was done compared with length of space, which represents amount of work man should have done. If an operator produces 200 units in a day where he should have produced 300, length of line is $\frac{2}{3}$ length of space. The $\frac{1}{3}$ of space through which no line is drawn indicates idleness.

Clark describes other features of the chart:

> Expressing this in a different way, the space represents the time actually taken to do a certain amount of work, while the light line shows how much time it could reasonably be expected to take. For instance, a workman has taken 8 hours to do work which the foreman had expected him to do in 4 hours. The width of the column for the day represents 8 hours. He therefore draws a light line through an amount of space equal to 4 hours. Another workman has done in 8 hours what the foreman expected would require 12 hours of a good man's time. He therefore draws a light line through an amount of space equal to 12 hours, i.e., one line all the way across and another halfway across. Light lines drawn through a second day's space are offset from those of the first day so that they will not appear to be continuations. If the foreman has not estimated the time the work should take, he draws a broken line through an amount of space representing the time actually spent on that work. The portion of the daily space through which no line is drawn shows how much the operator has fallen behind in the work expected of him, and the letter at the beginning of the space indicates the reason. At the end of the week a heavy cumulative line is drawn to show the weekly total of each operator, the heavy line always being equal in length to the sum of the light lines. To get the totals of the various groups and of the whole department, the hours represented by the cumulative lines of the individual workmen are added and divided by the number of men. A line about $\frac{1}{8}$ inch wide is used for a group total and $\frac{1}{6}$ inch wide for a department total.



FORM 26. Gantt-Type Man Record Chart
(From Wallace Clark, "The Gantt Chart")

LEGEND

Width of daily space represents amount of work that should have been done in a day.

Amount of work actually done in a day.

Time taken on work on which no estimate is available.

Weekly total of operator Solid line for estimated work; broken line for time spent on work not estimated.

Weekly total for group of operators.

Weekly total for department.

The portion of the daily space through which no line is drawn shows how much the man has fallen behind what was expected of him.

REASONS FOR FALLING BEHIND

A—Absent.
G—Green operator.
I—Lack of instructions.
L—Slow operator.
M—Material troubles.
R—Repairs needed.
T—Tool troubles.
V—Holiday.
Y—Smaller lot than estimate is based on.

When there is more than one reason for failure to do the work in estimated time, the reason entered on chart is determined by asking questions in the following order:

R—Was the machine in good condition?
T—Were the tools and fixtures in good condition?
I—Was the operator given proper instructions and sufficient information?
M—Was trouble experienced with material?
G—Was the operator too green to do the job?
L—Was the operator too slow?
Y—Was the lot smaller than estimate is based on?

A change in circumstances may alter the sequence of these questions.

OPERATION ANALYSIS.—Analyses of shop or office operations are made for several purposes, the most important being to secure information,

1. To set rates.
2. To improve processes or operations of a job.
3. To improve quality of product.
4. To check production in case a standard time or rate is not equaled.
5. To determine personnel factors necessary to do a job.

Three **general methods of analysis** are used:

1. Time study
2. Motion study
3. Job analysis

Time studies are used to secure information to establish standard time set rates, improve product, improve operation and check production. **Motion studies** provide information to record methods and establish standard times. **Job analysis** provides information as to the human content of the job, in setting occupational rates.

TIME STUDY.—Time study is a method of measuring, dealing primarily with time. Its principal objects are:

1. Determination of possible improvements in equipment and conditions for producing a given piece of work or for performing a specified task.
2. Determination of possible improvements in processes or method of performing work.
3. Determination of amount of time in which work or task should be performed, conditions being satisfactory and equipment effective.

Analysis of the job into its **elementary divisions** is first step in taking a time study. Observer or time study taker lists these divisions in the order of their occurrence, splitting the job into a greater or less number, depending upon work and conditions. Merrick[2] explains the elementary divisions as:

In studying the operations in a lathe, a cutting tool would be inserted in and removed from the tool post several times during the course of the work. If a study is being made to determine the length of time required for certain cutting operations, that is, if we are studying the work itself and not the machine in which the work is being done, it probably

[2] Time Studies for Rate Setting, pp. 7, 8.

would be sufficient to enter the time required for inserting the tool in the tool post as a single item, viz:

Put tool in post.. 0.30 min.

On the other hand, if we are studying the lathe with a view to determining the best method of handling it and the tools pertaining to it, it would be desirable to analyze this operation of putting the tool in the tool post still further, as follows:

Get tool from tool stand	0.03	min.
Measure height of tool	0.06	"
Put packing in tool post	0.07	"
Put tool in post	0.03	"
Set tool in position	0.03	"
Tighten tool-post setscrew	0.08	"
Total	0.30	min.

Time study observations are made with the aid of a stop-watch whose dial is divided into 10th's and 100th's of a minute, hands so arranged that they can be stopped and restarted from any point without being set back to zero. Recording is done on an **observation sheet** usually carried on a board which has an opening or pocket to hold watch. A scale or rule for measuring and a speed indicator may be added to this equipment. As readings of stop-watch supply time measure of the operation and are information on which time standards are based, the method of handling the watch is important. Lichtner described five methods: continuous, over-all, repetitive, accumulative, cycle.

1. **Continuous method** gives most satisfactory results in majority of cases and on most operations. Elements are recorded in sequence without stopping watch.

2. **Over-all method** is frequently attempted by novices, for it reduces figuring to a minimum but is of little value except for checking or providing supplementary information. It consists of taking total time for a combination of several elements or even for an entire operation, starting watch at beginning of group or operation and making no record until it is finished.

3. **Repetitive method** is also used by novices. Observer starts watch at beginning of an element, stops watch when element is completed, and records duration. Watch is then thrown back to zero. When element appears again in cycle observer starts watch, which is at zero, stops it when element is completed, and once more records time taken. This method is easy for the observer as it does not require much figuring.

4. **Accumulative method** is adapted to special cases, particularly for recording of elements which are very fast, ranging from 0.003 to 0.02 minute. Observer uses two or more stop-watches; number depending upon his ability and duration of elements. Each watch is used for a separate element. As one element is completed, the watch recording its time is stopped and another watch started for following element, and so on.

5. **Cycle method** is also used for very fast elements. It consists of taking the unit times for the sum of a part of the elements, varying those selected until a group of simultaneous equations has been written. Solving these equations gives the unit time for each element.[3]

---

[3] Lichtner, Time Study and Job Analysis, pp. 165–172.

Operation: Washing outside of factory windows.
Crew: Two men.
Size of Window: 30 panes—10 x 16 in.
Process: Clean with hose and wash with brush. One man washes from ladder, both windows, top and bottom, with hose, then he cleans top windows with brush from ladder, meanwhile the other man cleans bottom windows from ground with brush, then ladder man rinses down.

Element	Preparation Time Minutes		Elementary Time Minutes
1. Change card	2.10		
2. Walk to tool shed (1.75), get hose, etc. (1.00)	2.75		
3. Walk to job (1.40), unroll hose and connect (2.40)	3.80

		and Time per pane	
22.	17.45	(2 men)	0.2
		Per pane (1 man)	0.4
23. ALLOWANCE	5.35		
24. PREPARATION	22.80		

FORM 27. Time Study of Washing Factory Windows
(From *Management Engineering*, July, 1922)

A **skilled employee** should be selected for time study for these reasons, according to Lichtner:

1. His motions are more uniform.
2. He works more steadily.
3. He uses best methods and adapts himself more easily to new ones.
4. Influence of personal equation is less pronounced.
5. Results manifest his fluctuations and are more dependable.

In working up observations for each element, abnormal items are frequently discovered. These are known as **variations** and are usually eliminated before averaging a group of individual times to determine the time for the element. Various mathematical principles are followed to determine which items to eliminate. Merrick advises eliminating those 25% less or 30% greater, respectively, than an adjacent item.

Preparation time and **operating time,** whether machine or hand, are usually totaled separately, thus giving a unit time for a sequence of elementary operations made up of two factors. To this time are added several allowances to give the standard time. Two specimen time studies are given in Forms 27 and 28. First is by Merrick, second by Lichtner.

Form 28. Time Study on an Operator in Making a Man's Sack Coat

(From article by W. O. Lichtner, *Management Engineering*, May, 1922)

PRODUCTION STUDY.—After a standard time or rate has been set from a time study, it sometimes happens that operator is unable to equal

set time or rate. Failure may be due to one or more of several causes as: improper material, improper equipment, machine trouble, tool trouble, unnecessary delays, waste of time, lack of skill, or incorrect standard. A study made to determine cause of such failure is known as a production study. It consists in observing job for a comparatively long period, as a day or possibly several days, to determine time being taken for various elements or cycles of elements, and for all interruptions and delays of whatever kind. It is, therefore, a special form of time study conducted and worked up as previously outlined.

JOB ANALYSIS.—Job analysis is applied to several forms of study but is used here for that form intended to bring out the employee qualifications desirable and the nature and conditions of work for a particular job or task. This method has been developed to a high degree by the International Harvester Co., as reported by Arthur H. Young.[4] A specimen job specification card for an operator on a sensitive drill press is shown in Form 29. The method used in making some 900 such job analyses was to establish a general occupational rating committee and a plant committee at each factory. These groups made the preliminary job analysis and therefrom the job specifications.

MOTION STUDY.—A special form of operation analysis using a motion picture camera and aimed principally to record "the one best way," is generally known as motion study. The devices and methods have been originated by The Gilbreths and have been used to a limited extent except in their own practice. Method records surrounding conditions of work, machine, and operator simultaneously with time. **Micromotion records**, as used to improve methods or set rates, are interpreted by a special form of graph known as a **simultaneous motion cycle chart.**

STANDARD TIMES.—Standard times as used in rate-setting are the sum of the selected unit times from time study observations and certain allowances. Merrick allows for fatigue and variation, for unavoidable delays, for machine delays, and, if necessary, for personal delays. Lichtner adds to the sum of the standard time of each element an allowance for necessary delays, for necessities of life, and for fatigue.

Merrick, whose work has been done largely in the metal trades, has developed factors for these allowances which are applicable in connection with any good time-study work. Fatigue and variation allowances have been plotted into curves and a general formula derived by Carl G. Barth, which is:

$$P = 20 + \frac{49.5 - 0.325C}{\sqrt{0.376 - 0.0000216C^2 + T}}$$

Here P is percentage allowance, C percentage of handling time, and T minimum selected time for cycle.

Large chart (Form 30) gives ten of these curves for handling times, varying from 10% to 100% of time for cycle on which allowance is to be made. Abscissas of large curves cover time in minutes from zero to 20 minutes. Smaller curve, which is useful for short-time cycles, has abscissas up to 2 minutes.

Outstanding feature of these curves is that the larger the cycle time, the smaller the corresponding percentage of allowance. Under no condition is allowance time less than 20%, as shown by the general formula. Percentage allowance is made upon total of handling time. That is, for a job compris-

Form 29a. Job Specification (face)

(From article by Arthur H. Young, *Management Engineering*, May, 1923)

Job Name **DRILL PRESS OPERATOR—SENSITIVE** Job No. **D-23**

THE DUTIES OF THIS JOB ARE:

To set up and operate Sensitive Drill Press on various kinds of light metal parts.

NOTE: At some Works the piece workers buy the high speed drills used, and also, the setting up work and tool grinding is done by a Set Up Man. (See Job No. S-41.)

THE NECESSARY EMPLOYE QUALIFICATIONS TO FILL THIS JOB ARE:

(1) Must be capable of taking care of and operating a Sensitive Drill Press on various kinds of light metal parts, working to samples, instructions or drawings.

(2) Must be capable of using the ordinary measuring tools, gauges or templates of various kinds.

(3) Must be familiar with the machine adjustments and controls, capable of setting up job, jigging parts and doing accurate work.

(4) Must be capable of feeding a Sensitive Drill so as to get maximum production with minimum breakage of drills.

(5) Should be familiar with high speed Steel Drills and be capable of grinding and setting drills and other tools used.

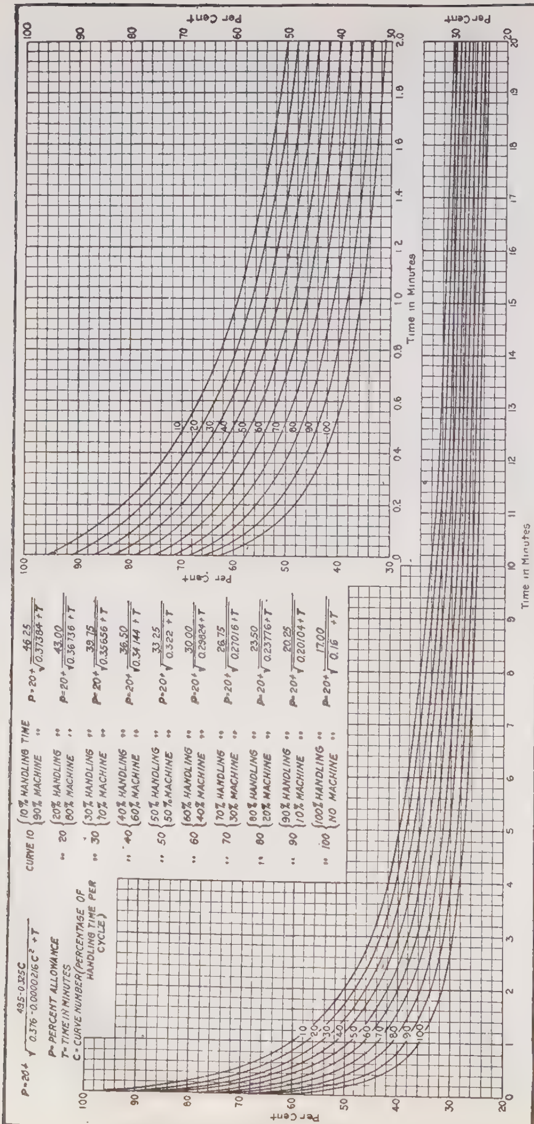
(6) Must have a working knowledge of the proper speeds to use to get the best results with different kinds of material.

(7) Must be an active, careful workman, capable of and willing to follow instructions.

(8) It is desirable that he have had previous similar experience.

Remarks At some Works the employe works to drawings from which he gets the necessary sizes, etc., instead of working to samples.

FORM 29b. Job Specification (reverse)



FORM 30. Curves of Time-Study Allowances
(From *Management Engineering*, February, 1922)

ing 3 minutes machine time and 2 minutes handling time, the 40% curve is used and intersection of 2 minutes ordinate with curve determines allowance percentage to be added to handling time in making up task time. Where there is no machine time the curve representing 100% handling time is used.

UNAVOIDABLE DELAYS.—There are certain delays due to necessary motions which occur irregularly during the performing of a job in one or more cycles in which work is analyzed. Such motions do not ordinarily manifest themselves in time study. To arrive at standards, therefore, time studies would have to be taken extending over long periods so that the observer may be sure that observations have been made of every class of interruption likely to take place. Examples of such unavoidable delays are: changing from one job to another, receiving instructions, adjusting conditions around the working place, inspecting completed parts, and the like. They are of a nature to interfere more or less with operator's attention to his work.

Unavoidable delays are usually cared for by adding an **arbitrary allowance.** Merrick uses factor of 25% of the preparation time. These allowances are often a very small proportion of time for the whole job and may be of little practical value other than their effect upon mental attitude of operator. On automatic work they are often of importance.

Personal Delays.—Allowance must be made for personal needs, rest periods, wash-up periods, and the like. On some kinds of production and automatic work of an intensive nature, such an allowance is of importance. It must be derived from time studies extending over relatively long periods.

Machine Delays.—The allowance for machine delays classifies under three heads:

1. Power-driven operations, power-fed.
2. Power-driven operations, hand-fed, where operator feeds by means of a hand-operated power device.
3. Power-driven operations, sensitive hand-fed, where pressure for feeding operates directly against operator.

For operations on simple machines such as printing presses, cartridge drawing machines, machine tools, and the like, Merrick uses the following allowances as a percentage of time of operation:

Power-driven, power-fed	5%
Power-driven, hand-fed	20%
Power-driven, sensitive hand-fed	25%

These allowances during long practice have proved ample in shops where the machinery is properly cared for and maintained to run as closely as possible at standardized speeds.[5]

Instruction card, Form 31, shows how these allowances are applied in determining a standard time.

Instruction card, Form 28, shows how Lichtner allowances are applied.

INSTRUCTION CARDS.—Instruction cards for employees record standard method of performance after this is adopted. They give all information which bears on the operation with reference to tools, machines, equipment, and material. Instructions describe quality standard and standards for each condition if there is more than one. Frequently a sketch of piece to be produced or of special tools is part of the instruction card. These cards are widely used in industry and are the accepted means for making permanent

[5] *Management Engineering*, February, 1922, pp. 131–132.

results of time studies. Form 28 shows a specimen instruction card for a small wooden object, a plug bait body. Form 28 shows another instruction card for a machine operation in making a man's sack coat.

Name of Part: Plug bait body. *Material:* Red cedar—Benchwork.
Operation: Sandpaper, Operation No. 10.

FORM 31. Specimen Instruction Card
(Taken from *Management Engineering*, February, 1922.)

Description Accompanying Instruction Card

Name of Part.—Plug bait body. A small oval shape piece about 2 in. by ¾ in. by ¾ in. thick.

Material.—Red cedar.

Operation.—Sandpaper (smooth preparatory for a preservative preparation).

Remarks.—This is a quantity production job of a simple kind, done by more or less unskilled labor, nevertheless the workers become very proficient, and therefore the rates should be based on accurately determined elementary operations and carefully constructed task times.

Allowances.—For this job there are three kinds of allowances to be considered:

1. Allowances for the selected cycle time, namely, the working cycle, consisting of items 2 to 6, inclusive, totaling 0.355 min. Allowances for such work are described under "Fatigue and Variation" allowance; and as it is all handling time, it is read from the 100% curve. By reading up, opposite 0.355 min. to the 100% handling-time curve and then over to the left, the percentage is found to be 44%.

2. Unavoidable delays. Preparation time, items 1, 7, 8, and 9, total 0.019 min. These kinds of elementary operations are classified under "Unavoidable Delays," and therefore 25% of this total amount is added as an allowance.

3. The allowance for washing, $1\frac{2}{3}\%$, is classed as "Personal Delays." In the plant in which this instruction card is used, the workers are allowed a certain amount of time just before the noon and the quitting-time day whistle, to wash up and get ready to leave when the whistle blows. This $1\frac{2}{3}\%$ is the percentage that these wash-up period times are of the total day's work period. In taking account of it, this percentage of $1\frac{2}{3}\%$ of the task time 0.615 is added to it, bringing it up to 0.62 min.

RATE-SETTING.—Rates broadly cover unit for wage payment, that is, rate per hour, per day, or per piece, and wage payment plan used in paying wage earnings. As wage payment plan is usually fixed for a long period of time, the term **rate on the operation** is applied narrowly to the wage rate for a particular worker, or to the piece rate for a particular part.

Time study results are used in determining unit or standard time for an operation or job. Instruction cards, Forms 28, 31, show at bottom time per piece, number of pieces per hour, number per 9 hours, base rate, and rate per 100 pieces.

Many rates are set from old time study data, which have been worked up to give unit times. This situation is particularly true with machine-shop work. Merrick has developed a standard division of machining operations which is particularly useful in arranging time study data for general use.

Wage-Payment Plans

HISTORICAL.—Development of **wage-payment plans** in industry began about 1890, being forced upon industrial managers by labor unrest and controversy. Up to that time day-work, piece-work, and contract-work were practically the only forms in use in American factories.

Threefold aim in developing and installing other and newer devices of wage-payment methods is: to increase production; to increase compensation of workers; to decrease unit costs. Increase in production strengthens manufacturing firm; increase in compensation aids in securing superior workers; basis of decreased costs is that as worker earns more per hour, wage cost of employer is lessened.

Period 1880 to 1890 brought many strikes and labor disputes. In 1891, just at close of this period, F. A. Halsey[6] presented his **premium plan** of wage payment in a paper read before the American Society of Mechanical Engineers. In 1895, Frederick W. Taylor,[7] before the same audience, presented his **differential wage-payment plan.** These two pioneer plans have been developed and modified and another type has been added, known as the **bonus plan.**

TWELVE PLANS DESCRIBED.—C. W. Lytle[8] has compiled a comparative table and plotted a comparative diagram of twelve plans, including day-work and piece-work. For each plan, Table 2 gives name of plan, principle involved, its method of application, some of its results, and a statement as to its advantages and disadvantages.

Some of these plans are modifications of others, but the difference is worth noticing. Other variations and modifications are easily possible, thus rendering this particular group of plans sufficiently flexible to meet practically any condition. They include time-payment or day-wage, piece-work, differential piece-work, and multiple piece-rate plans, five bonus plans, and three premium plans. Long-term profit-sharing and contract plans are

Table 2. Comparison of Standard Wage-Payment Plans

Name of Plan	Algebraic Expression for Wages Earned (See Key to Symbols)	Additional Explanation	What Can Be Expected Re. the Cost per Piece Produced	Disadvantages	Advantages
1. Time Payment or Day Wage	$H_a R_h$. Most other methods give way to this when things break down.	$H_a R_h$ for part days. Often considered essential for best quality of workmanship. Of itself, however, there is little security for even quality.	Varying from day to day, but usually high.	Unfair alike to those below and above average in any operation unless R_h is individually and carefully set. Production records alone are poor checks on performance because they seldom describe all variables involved. Daily comparison with the "lead" worker in an operation is safer, but causes ill feeling. Likely to bring out the worst, rather than the best, in employees.	Figured readily from time cards. No complaints from employees because of delays and tie-ups. Can be calculated ahead definitely by the most unschooled employee. Easy to change as other markets go up or down.
2. Straight Piece-work	$N_p R_p$	This is frequently combined with a day guaranty. In so doing much of the value may be lost. (Manchester Plan.) There is no reason, however, why it cannot be combined with it successfully as a temporary expedient.	Constant and fairly low if properly set and if lowest producers are weeded out.	If rates are cut, soldiering of the worst kind will prevail. If not, employees will range from 20 per cent to 150 per cent of a fair, production, the former not justifying the floor space they occupy, and the latter overdriving both themselves and their foremen. Discouraging rather than developing to many while they are learning to be steady producers.	Earning tied up directly with production so that ambitious employees have unlimited incentive to release their reserve capacities. Employees take active interest in having everything well managed.
3. Halsey Premium	$\frac{R_h(3H_a + H_s)}{4}$ or $R_h\frac{(H_a + H_s)}{2}$ coming from the form— $H_a R_h + \frac{(H_s - H_a)R_h}{4\ (\text{or } 2)}$	$H_a R_h$ guaranteed up to standard. Optional with each employee. Any fraction may be arbitrarily adopted from ¼ to ½.	Not dependable, and thus much higher in practice than might be expected.	Lax standards and low incentives for the higher productions. Gives occasion for soldiering on hard jobs and spurting on others.	No preliminary studies involved, therefore easy to introduce where day wage has existed. Presenting it as a proposition to save time rather than to increase production is slightly better psychology from employee's viewpoint.

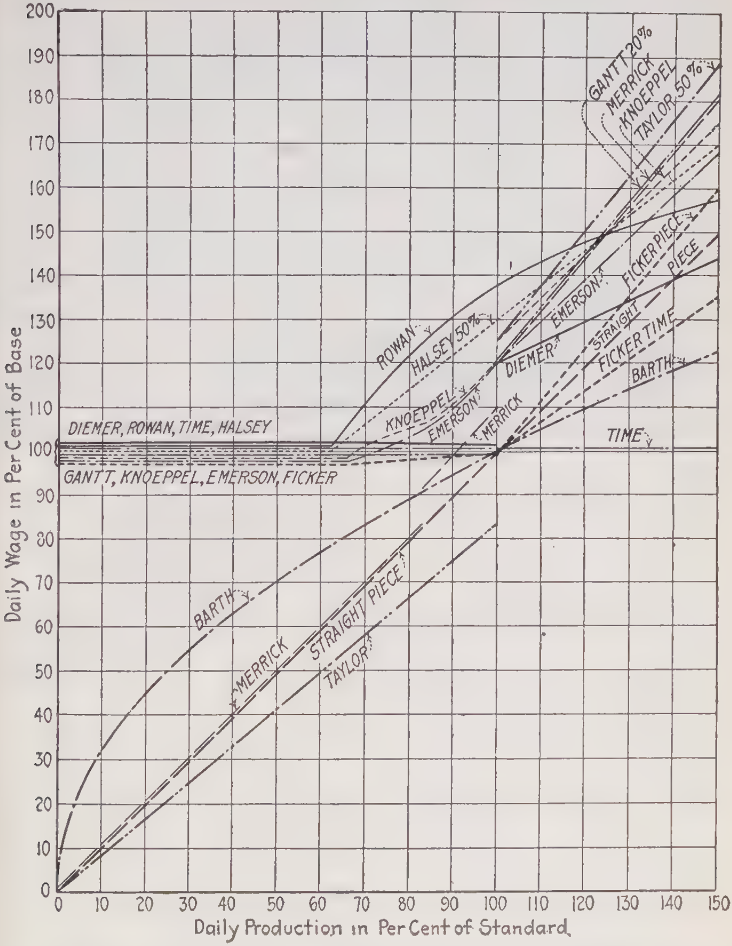
4. Rowan Premium	$H_a R_b + \left[\frac{(H_s - H_a) R_b}{H_s R_b}\right] H_a R_b$ Or figuring from the theoretical maximum backwards, $2 H_a R_b - \frac{H_a}{H_s} (H_a R_b)$ which reduces to $H_a R_b \left[2 - \frac{H_a}{H_s}\right]$	Same as above $\frac{(H_s - H_a)}{H_s R_b} R_b$ $= H_a R_b - \frac{H_a R_b}{H_s R_b}$ As H_a becomes smaller, $H_a R_b$ approaches zero as a limit. Therefore, the fraction becomes unity and the theoretical maximum earning is seen to be—2 $H_a R_b$. (The 200 per cent wage line is the asymptote of this curve.)	Like the above, but slightly higher up to the point of twice its standard production.	Little better than day wage after double its standard is reached, and otherwise like the above. Too complicated in first form and too obscure in second.	Slightly better incentive than the Halsey plan up to double its standard. Certainty that the employer will never have to pay beyond the double day wage.
5. Barth Premium	$\sqrt{H_s H_a} \times R_b$	Figured by use of a simple slide rule. When $H_a = H_s$ it is equivalent to standard day wage.	Lower than day wage, but not much effective in reducing the burden.	Very poor incentive for the higher productions. Too abstract in its form to be trusted by typical employees.	Excellent for beginners if charted out in detail. One fairly simple formula for all stages of production.
6. Taylor Differential Piecework	$N_p (R_p)^a$ up to standard $N_p (R_p)^b$ beyond	$(R_p)^b$ usually equalled 1.50 $(R_p)^a$.	Low on account of great reduction of burden per unit of product.	A severe elimination of the lower grades of employees. Often discouraging to others who cannot pass the standard each day.	A strong incentive to the truly ambitious and a heavy obligation on the part of the management to do their part.
7. Gantt Task and Bonus	1.20 $H_s R_b$ or 1.50 $H_s R_b$ coming from the form $H_s R_b + 0.20$ (or 0.50) $H_s R_b$	$H_a R_b$ guaranteed up to standard. At first optional with each employee.	Low, but probably higher than the above on account of the day guaranty.	All but the most ambitious are apt to fall back frequently onto the guaranty. The use of graphic charts is quite essential to offset this.	A tactful way of adopting the "step" incentive at standard without causing any temporary loss in earning. It is actually a piece-rate in terms of time.
8. Emerson Efficiency Bonus	$(1 + B)(H_a R_b)$ or $^*R_b (H_s + 0.20 H_a)$ coming from the form $H_a R_b + (H_s - H_a) R_b \mp 0.20 H_a R_b$ * This form allows emphasis on time saved, but is only good for performance above standard. B is irregular below standard.	$\frac{H_s}{H_a} = (1 + B - 0.20)$ above standard. This fraction is the measure of performance, and each per cent has a corresponding B per cent. $H_a R_b$ guaranteed up to 66.6 per cent	Much like above.	No conspicuous demarcation at the point of standard production. Otherwise like above.	Mild enough to give opportunity for development. Good psychology in holding attention on time saved.

Table 2. Comparison of Standard Wage-Payment Plans—*Continued*

Name of Plan	Algebraic Expression for Wages Earned (See Key to Symbols)	Additional Explanation	What Can Be Expected Re. the Cost per Piece Produced	Disadvantages	Advantages
9. Knoeppel Bonus	Like above with 0.25 coefficient in place of 0.20.	$\frac{H_s}{H_a} = (1 + B - 0.25)$ *above* standard. Same as above except the scale is more liberal between 67 and 95 per cent, and has a 5 per cent step at standard.	Low, perhaps between Gantt and Emerson.	None, beyond the danger in any day guaranty.	Same as above, plus a conspicuous step at standard. Claimed to be very flexible in its application.
10. Merrick, a Multiple Piece-Rate	$N_p\ (R_p)^a$ up to 5/6 standard $N_p\ (R_p)^b$ up to standard $N_p\ (R_p)^c$ beyond standard	Can be made even more effective by dividing the steps so as to have the upper one larger than the lower. For instance, instead of 10-10, say 8-12.	Very low.	A little complicated to install and difficult for employees to keep track of. A circular tabulation or an arithmetic slide rule can be made so that the pay-roll figuring is fairly simple, otherwise additional clerical work is involved.	The same kind of effect as the Taylor Differential, but in a more moderate degree. The preliminary or partial step meets the need of struggling employees without doing too much to guard their financial safety.
11. Diemer Combined Bonus and Premium	$(0.70\ H_a + 0.50\ H_s)\ R_h$ coming from the form $H_a\ R_h + \frac{0.20\ H_a\ R_h + (H_s - H_a)\ R_h}{2}$	$H_a\ R_h$ guaranteed up to standard	Low if it succeeds in keeping the majority away from the day guaranty.	About an average among the wage incentives, therefore not particularly strong in its effect.	A very safe and easy plan to install if conditions are not mature in their standardization
12. Ficker (a sharing of time *and burden* saved)	$R_h\ H_a + \frac{1}{2}\ (H_s - H_a)\ (R_m + R_h)$ in terms of time basis. $N_p\ R_p + \frac{R_m}{[illegible]}\ (H_s - H_a)$ in terms of piece basis	$H_a\ R_h$ guaranteed up to standard. When $H_a = H_s$ the whole expression reduces to day wage in the one case, and to piecework in the other.	For employees above standard, very low. For others, high.	Too complicated for all to figure readily. Considerable clerical work required. Like the Gantt plan, the incentive is remote from the reach of mediocre producers.	It would seem to remove every suspicion imaginable on the part of the employee. The one is more generous than a piece-rate, but less so than most of the others, as it has neither step nor bonus below standard.

(From article by C. W. Lytle, in *Management Engineering*, May, 1922)

omitted, for they lack definite connection with the daily task. The daily wage rate plan is included to assist in making comparisons.



Form 32. Graphic Comparison of Twelve Wage-Payment Plans
(From article by C. W. Lytle, *Management Engineering*, May, 1922)

Mathematical expressions for all these plans as given in Table 2 have been plotted on chart of Form 32, and show similarities and divergencies. For these curves the Halsey and Rowan production standards were taken at

62½% of the other standard, because these plans are designed to operate on existing conditions, that is, without being preceded by a determination of standards through time or motion studies. At 125% standard production, five of the curves coincide at a point midway between the Taylor and Emerson curves. In fact, every curve except Barth's may be said to have more than on point in common with at least one other. It should be noted further that the consensus of opinion, as indicated by these curves, gives workers 150% of base wage for production of 125% of standard.

If an average of all these plans is desired, it is well approximated by taking the Barth plan to standard and the Diemer plan beyond. But slope of the Diemer plan does not correspond with what may be considered the consensus of opinion as given by the five curves which have a common point.

Reason for **diversity** of plans may be found in the fact that they were evolved by practical experimenting. Theoretical acceptability of the differential piece-rate idea is that it comes nearest to following probable position of the fatigue curve. An even curve with an increasing slope may be out of the question mathematically, but a series of a few differential steps, such as Merrick established, provides a practical method. Advantage of such a method is not only for the employee but is consistent with employer's needs and circumstances. This is so because individual increases in production usually come without much increase in the average overhead burden. When latter is divided by a greater number of units produced, a lower cost per unit results. The Ficker plan, based on piece-rate, is an attempt in this direction. It practically does not accomplish the aim so well as the Merrick plan.

Key to the symbols is as follows:

Np—Number of pieces produced.
Rp—Rate per piece in dollars.
Rh—Rate per hour in dollars.
Rm—Machine-rate dollars.
Hd—Hours per full day.
Ha—Hours actual.
Hs—Hours standard for **Np**.
B—Bonus in per cent.

SIX EXTENSIVELY USED PLANS.—Form 33 presents a **graphic comparison** of six of the more extensively used wage-payment plans, including day-rate, piece-rate, Halsey premium, Rowan premium, Merrick bonus, and Gantt task-and-bonus. This plotting was presented by Harrington Emerson,[9] who comments briefly on each plan of piece-rate:

The experience of centuries shows that when there is neither measure nor incentive, production per hour drops at least ⅓ . . . . The **Halsey plan** does not usually rest on accurate determination of the standard. It takes the worker as he is, and pays a reward for improvement irrespective of starting point. If times are accurately determined under the Halsey plan, as they could be, then the objection is that Halsey takes so much of the gain for the employer, two-thirds, that it proves neither fair nor attractive for the worker.

The **Gantt plan** is exceedingly good. It sets up a target, and unless the bull's-eye is hit there is no count. The objection to the Gantt plan is the difficulty of bringing the worker up to standard. At 99% efficiency he is still on hourly rate. If he reaches 100% he suddenly receives a bonus of 20%. Above 100%, the Gantt plan becomes a piece-rate plan. It is difficult to combine day rates and bonused rates in accounting.

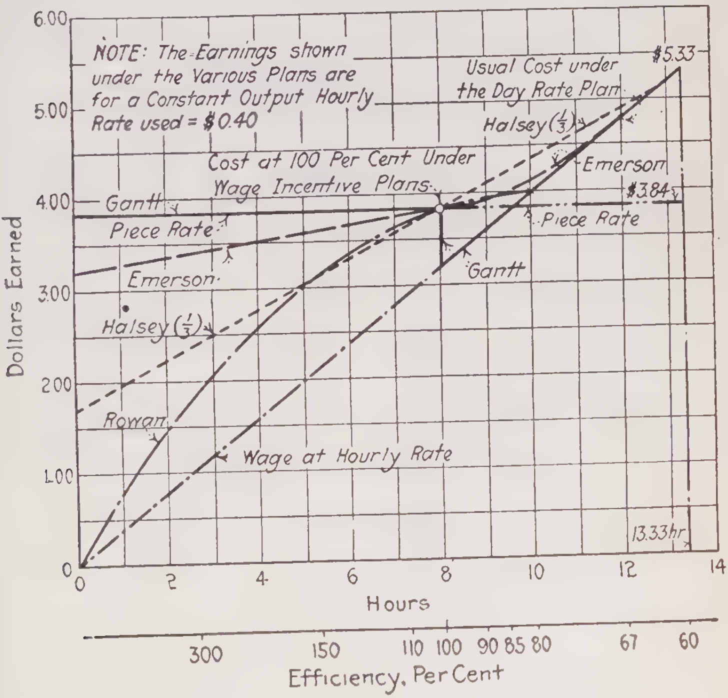
The **Rowan plan** is British, it is based on the fear that the good worker might earn too much. The exceptionally good worker would earn far less than by any other plan except hourly rate. An employer using the Rowan plan would lose all his best workers if any other modern plan were used in competitive shops.

The **Emerson plan,** giving the same standard costs for standard performance as the other plans, has certain practical advantages.

---

[9] *Management Engineering*, June, 1922, p. 370.

1. It is easy and attractive for the beginner.
2. The bonus to beginners is so slight as not to be a burden, yet is an evidence of good faith.
3. It is easily combined with part hourly times.
4. A man is measured and rewarded not by the separate job, but by all his work over a period. His efficiency is determined by dividing the sum of the standard times by the sum of the actual times.
5. It can be applied to a group of men working at different rates and for different times.
6. Above standard it pays a man his full regular hourly rate for all time saved, and pays in addition 20% bonus above wages for time worked.



FORM 33. Graphic Comparison of Six Wage-Payment Plans
(From article by Harrington Emerson, *Management Engineering*, June, 1922)

A variation of the Emerson bonus plan has been developed by W. K. Wennerlund. He begins at 66.7% efficiency, and pays 20% at 100% efficiency After that he pays, as Gantt does, the piece-rate price.

SECTION 28

PROFESSIONAL

CONTENTS

SECTION 28

PROFESSIONAL

HISTORY OF ACCOUNTING.—Records show that the partnership existed in **Babylonia** as early as 2285 to 2242 B.C. The relationship of principal and agent was known, drafts and checks were used, and legal decisions were recorded covering contracts, conveyances by deed, bonds, receipts, inventories, sales, and accounts of all sorts. The records of banking and money-lending firms of Babylon and Nippur have been preserved. These were kept on **sun-baked tablets** or **slabs,** ½ x ¾ inches in size, written on front, back, and sometimes on the edges. Some of the records were much larger, however. Records of ownership of property were carefully prepared by the state for tax purposes. These were kept by a class of persons known as **scribes.**

In **Egypt** accounts were kept on **papyrus.** The state kept carefully made records of revenues and disbursements. Taxes were usually payable in **kind.** For the storing of such receipts **treasure houses** were kept. Upon entering, the taxpayer stopped to give record of his payment, also where he made formal delivery. This afforded duplicate records valuable for audit purposes.

In **Greece** public officials were required to give strict accounting for all transactions. Upon giving up his office each officer was required to render an accounting of the funds entrusted to him. To secure publicity the accounting was engraved on stone and exposed to public view. The Greeks developed a primitive clearing house system.

In **early Rome** the father kept the family accounts in a blotter or memorandum record. Each month he transferred these to a register. If entry was made therein with consent of the debtor it served as sufficient basis for legal suit or civil obligation. Bankers used a similar record and also a book in which customers' accounts were set up. Customers were debited on one page and credited on the other. Balances were figured periodically. The balance might be demanded by the customer or be continued. Cash payments were customary, but checks were used by the wealthy.

In governmental accounting the management and disbursement of funds were entrusted to different officers. The official in charge of disbursements issued orders on the treasurer, thus providing him with a voucher for disbursements made.

In early Roman times provincial and district treasuries were established which were required to account strictly to the central treasury. A **budget** was employed as a basis for tax levies. It showed the requirements of the army, imperial household, etc. Under the later empire this system of levying and collecting taxes became highly organized.

In **England** the earliest system of accounts was that of the exchequer established about the year 1100. It was based on the **Domesday Book.** This was a record of all taxable estates in the country. From it the treasurer's

great roll, or **pipe roll,** was compiled. Each sheriff was entrusted with the collection of his portion, and rendered account twice yearly. At the first accounting he received the half of a tally stick having notches showing amounts. The treasurer retained the other half. At the second accounting the sheriff turned in his tally stick to evidence payments made. It was then compared with the half retained by the treasurer to see that no alterations had been made.

Double-entry accounting was first employed in Italy. Some rather elaborate systems of bookkeeping had been established as early as 1350. In 1340 a double-entry ledger was in use in Genoa. In these early systems Roman numerals were quite generally used because the courts accepted as evidence only books in which this system of notation was used. As a rule, books were balanced infrequently. In 1494 Luca Paciolo, monk and mathematician, published a book entitled "Everything about Arithmetic, Geometry and Proportion" which has been translated into English by J. B. Geijsbeek under the title "Ancient Double-Entry Bookkeeping." In Paciolo's book appears a treatise on bookkeeping, this division being entitled "Reckonings and Writings." Paciolo says the object of bookkeeping is to furnish information regarding assets and liabilities, and bases his opening entries on a statement of assets and liabilities. His system necessitates the use of three books—a memorial, a journal, and a *quaderno*.

The **memorial** is a daybook. Moneys received and paid out were entered here, and later, because of the chaotic condition of currencies, were reduced to a common denominator of value and transferred to the **journal,** in which formal debit and credit entries were made. From the journal, footings were made to the **ledger.** In the ledger the **folio index** always referred to the contra ledger account, never to the journal. Since merchandise transactions were usually of the single venture type, each transaction was charged with its expenses and credited with its income. The balance was transferred to Profit and Loss.

A **textbook** was published by Taglienti in 1525. In 1543 an English translation of Paciolo was brought out. In 1635 Dafforne, an accountant, published the "Merchant's Mirrour," a treatise on accounting which passed through several editions. In 1777 Hamilton published a book presenting systems for shopkeepers, tradesmen, land stewards, and farmers. In it he classified accounts as personal, real and fictitious. His books are a waste book, journal, and ledger. He closes the ledger by a journal entry. In the balance sheet he places assets on the left and liabilities on the right. His ledger contains an inner column for foreign moneys. He gives forms for various books such as suspense book for bad debts, cash book, merchandise charges, petty cash, postage ledger, bill books, and balance ledger for customers.

The **ledger account** was at first narrative in form, consisting of a running statement of charges and credits, one underneath the other on the same page. Classification as now understood was known but little or not at all. In some Egyptian accounts receipts were grouped together followed by disbursements, the daily balance being carried forward. A separate money column developed slowly. An English household account shows a narrative of receipts and disbursements and a money total column to the right free from narrative. This form was usual up to the seventeenth century, the first entry being the opening balance, followed by receipts, and these in turn by disbursements.

During the latter part of the fifteenth century the charge-discharge form

was employed by the Lord High Treasurer of Scotland. It opened with, "I charge myself with," which was followed by the itemized estate entrusted to him and by all revenues. It closed with, "I discharge myself with," which was followed by a statement of moneys lawfully expended and, at the end, uncollected revenue. Several pages were footed but not carried forward page by page. A recapitulation was made at the close arriving at net moneys to be accounted for. It is thought the double account form as now known came into use in Italy about the thirteenth century, and reached England by way of Holland.

ACCOUNTANTS' ORGANIZATIONS.—Organizations of accountants date back only about 50 years, although individuals have been devoting their entire time to accounting practice for a much longer time. The first **accountant's report** of which record exists was made in 1721, by an accountant who investigated the South Sea Company with reference to its exploitation. In 1799 the names of eleven firms of accountants were listed in a London directory. Rapid expansion of manufacture and transportation in the nineteenth century has caused scientifically trained men to enter the accounting profession. In 1854, in Edinburgh, the Society of Accountants was incorporated. In 1870 the Institute of Accountants was founded in London, but was not chartered until 1880, when it was given exclusive right to use of the letters F. C. A. and A. C. A., signifying respectively, Fellow and Associate of the Institute of Chartered Accountants. A students' association was organized in connection with the Institute. Members of this association are admitted to the Institute after passing prescribed examinations. The passage of legislation relative to companies has tended to create a large following of the profession in England.

In 1887 the American Association of Public Accountants was organized in the United States. It was modeled in part after the English societies. In 1896 the New York legislature passed an act authorizing the regents of the state university to grant, upon examination, the privilege of using the letters C. P. A. Many other states followed suit. In 1905 the American Association of Public Accountants took over a federation of the various states. In 1916 the American Association of Public Accountants amalgamated with the Institute of Accountants in the United States, organized under federal charter, and now constituting the national organization. In 1917 the name was changed to American Institute of Accountants. The Institute's membership consists of **members** and **associates.** Admission is based on examination. Concerning growth of the profession in the United States, Kester says:[1]

> Contrary to the history of accountancy in England, there has been little legislation here to foster the growth of the profession until somewhat recently. The corporation and income tax laws have increased the claims upon the accountant's professional services, and some state laws have tended in the same direction. The growing appreciation by the banks of the value of the certificate of the public accountant when attached to a borrower's statement of financial condition; the demand for skilled accountants in public utilities work; the value of the training to a public office-holder; the favorable attitude of the membership of the Federal Reserve Board and Federal Trade Commission in the value of correct accounting methods; and more and more the increasing opportunities for the exercise of abilities of the highest order in the private field—all these things make the profession one of the most attractive to the young man of today.

THE AMERICAN INSTITUTE OF ACCOUNTANTS.—The organization of the Institute is explained in the constitution and by-laws printed

[1] Accounting, Theory and Practice, Vol. I, p. 11.

later in this section. As set forth in Article I of the constitution, the purpose of the Institute is to further the interests of the profession by maintaining certain educational and ethical standards and encouraging cordial intercourse among accountants. Article II sets forth the qualifications of members and associates. Voting power in the institute is vested exclusively in the members, although associates may attend meetings. Article III explains the organization of the **council,** or governing body. It consists of 35 members in practice, also a president, two vice-presidents, and a treasurer. The council elects a **secretary** who acts as executive officer under direction of the council. Article IV names the 12 committees of the Institute. Article V sets forth regulations for holding examinations. The board of examiners consists of 9 members elected for terms of 3 years. Examinations are held semiannually. Article VI sets forth the manner of amending the constitution.

The *Journal of Accountancy* is the **official organ** of the American Institute of Accountants.

The headquarters of the Institute are at 135 Cedar Street, New York City. In 1917 the president of the Institute reported the offer on the part of certain individuals to start an endowment fund to provide permanent headquarters. A campaign was started to raise $150,000. The project has resulted in the establishment, at the above address, of a library and reading room with facilities for efficient work, also a bureau of information. Members take advantage of the opportunity to secure advice on practical questions. An advisory committee assists in making replies to queries sent in. A statistical department is also operated.

The Institute has published several scientific works, among them being the *Accountant's Index.*

In 1919 a small catalog of important books and pamphlets was published by the library.

The **Committee on Professional Ethics** has adopted certain **rules of professional conduct** printed elsewhere in this section. In addition to its work of formulating rules of correct ethical conduct, this committee hears complaints. It reports violations of by-laws and rules, as well as any form of professional misconduct, to the executive committee. One instance of such misconduct is the certifying to misstatements of fact in an audit report. Circularizing and other forms of advertising by professional accountants have come prominently before the committee. The committee has attempted to differentiate between good and bad circularizing, but, in general, discourages the practice. In one report the committee says: "The difference is one of good taste and decency and is intuitively recognized by one who has good taste and a decent regard for his profession." See "Rules of Professional Conduct" printed elsewhere in this section. For additional information on professional ethics consult the various year books of the Institute, and, in particular, pp. 70-76 of the 1921 year book.

The **Committee on Education** works for standardization and betterment of educational courses and professional examinations. The adoption of a uniform examination has met with considerable approval, as is shown by the willingness of many state boards to co-operate by using the Institute's questions and accepting their grading of papers. The committee takes an interest in business schools throughout the country and attempts to have them establish courses which will meet the standard set by the Institute examinations. An extensive report on "Departments of Commerce and Accounts in American Universities and Colleges," giving the status of each

regarding establishment, location, endowment, preliminary educational requirements, length of course, degree conferred, required and elective courses for day and night students, C. P. A. preparation, tuition, enrollment, number of teachers, etc., is printed in the 1917 year book of the Institute, pp. 204-216.

The **Committee on Federal Legislation** has occupied itself with taxation legislation and other matters coming under notice of the federal authorities. An important contribution has been the promulgation of a **program of audit procedure,** prepared at the request and with the approval of the Federal Trade Commission, and published by the Federal Reserve Board. It was published in the Federal Reserve Bulletin of April, 1917, and reprinted in pamphlet form. It is also found in Appendix A of Montgomery's "Auditing, Theory and Practice," Vol. I.

The **Committee on State Legislation** is concerned chiefly with the enactment of state C. P. A. laws. Some laws are disapproved by this committee on the ground that they are not designed to promote the best interests of the profession. The committee makes its recommendations to the council. The committee has recommended recognition on the part of the Institute of certificates issued under state laws where satisfactory arrangements regarding examination requirements have been made.

CONSTITUTION OF AMERICAN INSTITUTE OF ACCOUNTANTS

[As amended to September, 1922]

Article I

Section 1. The name of this organization shall be the American Institute of Accountants. Its objects shall be to unite the accountancy profession of the United States; to promote and maintain high professional and moral standards; to safeguard the interests of public accountants; to advance the science of accountancy; to develop and improve accountancy education; to provide for the examination of candidates for membership, and to encourage cordial intercourse among accountants practising in the United States of America.

Article II

Section 1. The institute shall consist of *members* and *associates,* who shall be further classified as members in practice and associates in practice, members not in practice and associates not in practice.

All questions arising in regard to classification of members shall be determined by the council.

Sec. 2. Members shall consist of the following:

(a) Fellows of the American Association of Public Accountants who shall be such at September 19, 1916.

(b) Associates who shall have been in practice on their own account or in the employ of a practising public accountant for five years next preceding the date of their application and shall be recommended by the board of examiners after examination and elected by the council The determination of who shall be considered as practising public accountants shall be made in all cases by the board of examiners.

(c) Accountants who shall present evidence of preliminary education satisfactory to the board of examiners, who shall have been in practice on their own account or in the employ of a practising public accountant for not less than five years immediately preceding the date of their application, who shall be recommended by the board of examiners after examination and elected by the council.

(d) Accountants in practice who shall present evidence of preliminary education satisfactory to the board of examiners, who shall have been in practice on their own account or in the employ of a practising accountant for not less than ten years, one year of which shall have immediately preceded date of application, who shall be recommended by the board of examiners after examination and elected by the council.

Sec. 3. Associates shall consist of the following:

(a) Associate members of the American Association of Public Accountants at September 19, 1916; or

(b) Persons who shall be not less than twenty-one (21) years of age and present evidence of preliminary education satisfactory to the board of examiners; and

(c) Shall have satisfactory training and experience in public accounting.

The last-named qualification may consist of:

(1) Possession of a certificate of graduation from an accounting school recognized by the examining board and a certified public accountant certificate of a standard recognized by the examining board or instead of a certified public accountant certificate employment for not less than two years upon the accounting staff of a public accountant (students not completing the full course at an accounting school shall be given credit by computing the number of years of study satisfactorily completed as being equal to one-half the same number of years employed in the office of a public accountant); or

(2) Employment for not less than two years upon the accounting staff of a public accountant and possession of a certified public accountant certificate of a standard recognized by the examining board; or

(3) Not less than four years' experience in public accounting work either upon his own account or in the office of a public accountant by a person not holding a certified public accountant certificate of a standard recognized by the examining board; or

(4) Possession of an accountant's certificate issued under the law of a foreign government of a grade accepted by unanimous action of the board of examiners and one year's satisfactory experience in practice in the United States of America; or

(5) In the discretion of the board of examiners exercised in each case, not less than three years' experience in teaching accountancy subjects in a school of accountancy recognized by the board of examiners.

(6) In addition to the foregoing qualifications, candidates for associate membership shall submit to examination by the board of examiners and, upon recommendation of that board, may be elected by the council.

Sec. 4. Voting power in the institute shall be vested exclusively in the members. Associates shall not have a vote but may attend all meetings of the institute and have the privilege of the floor in the discretion of the chair or of the meeting then in session.

Sec. 5. After October 31, 1916, no applicant shall be admitted as a member or an associate and no associate shall be advanced to membership without examination by the board of examiners and election by the council.

Article III

Section 1. The governing body of the institute shall be a council consisting of thirty-five members in practice (not more than six of whom shall be residents of the same state) and the following officers:

A president (the same person shall not be elected for more than two years in succession).

Two vice-presidents (both of whom shall not be residents of the same state).

A treasurer.

The foregoing officers and members of the council shall be members in practice and shall be elected at the annual meeting and shall hold office until their successors shall have been elected and installed.

Sec. 2. The term of office of the officers shall be one year and the term of office of the other thirty-five members of the council shall be five years, except that of the members first elected seven shall be elected for a term of one year, seven for a term of two years, seven for a term of three years, seven for a term of four years and seven for a term of five years, and annually thereafter seven members shall be elected for terms of five years, except in the case of vacancies in the council, which shall be filled by election by the institute for the unexpired terms.

Sec. 3. The council shall elect a secretary of the institute who shall also act as an executive officer under the direction of the council. The secretary may be chosen from without the membership of the institute but he shall have the privilege of the floor at meetings of the institute, the council and the executive committee.

Sec. 4. The council shall also be empowered to elect or appoint such other agents or employees as may be necessary for the proper conduct of the affairs of the institute.

Sec. 5. In the event of a vacancy or vacancies occurring in the membership of council between meetings of the institute the council shall be empowered to elect a member or members of the institute to fill, until the next annual meeting, the vacancy or vacancies so

occurring. Such election may take place at any regular or special meeting of the council, or in lieu of a meeting nominations may be called for by the president and the names of the nominees may be submitted to the membership of council for election by mail ballot. A majority vote of the council shall elect.

Article IV—Committees

SECTION 1. There shall be twelve regular standing committees, namely:

EXECUTIVE—Elected by the council and consisting of five members of the council with the president and treasurer of the institute ex-officio.

PROFESSIONAL ETHICS—Elected by the council and consisting of five members of the council not members of the executive committee.

ARBITRATION.

BUDGET AND FINANCE.

CONSTITUTION AND BY-LAWS.

EDUCATION.

ETHICAL PUBLICITY.

FEDERAL LEGISLATION.

MEETINGS.

NOMINATIONS.

PUBLICATION.

STATE LEGISLATION.

The committee on nominations shall consist of seven members in practice. At the meeting of the council held on the Monday preceding the annual meeting of the institute or any adjournment thereof the council shall elect from among its number, other than officers or those whose terms expire within one year, two members of the council to serve on the committee on nominations. At the annual meeting of the institute the members present shall elect from among the members in practice five members of the committee on nominations, other than officers or members of the council. This committee shall make nominations for officers and members of the council. Such committee shall serve for a period of one year and until its successors are elected and qualify and shall make such nominations as shall be required at least sixty days prior to the annual meeting for the following year. Such nominations shall be sent to the members at least thirty days prior to the annual meeting.

Any ten members of the institite may submit independent nominations provided that such nominations be filed with the secretary at least twenty days prior to the annual meeting, such independent nominations to be sent to the membership at least ten days prior to the annual meeting. Nominations for officers and members of the council may be made from the floor at the time of the annual meeting only by the consent of the majority of the members present in person.

SEC. 2. All committees except as provided above shall be appointed by the president and shall consist of a chairman and two other members who shall be members of the institute.

SEC. 3. A majority of each committee shall constitute a quorum for the transaction of business. In lieu of a meeting of a committee the chairman may submit any question to its own members for vote by correspondence, and any action approved in writing by not less than two-thirds of the whole committee shall be declared an act of the committee.

SEC. 4. The president shall be ex-officio a member of all committees.

Article V—Chapters

Upon application to the council of the institute and subject to its approval there may be organized in any state, by members resident or having a place of business therein, a subsidiary body to be known as a chapter of the American Institute of Accountants under such rules and regulations as the council of the institute may prescribe.

Article VI—Examinations

SECTION 1. The council at the first meeting thereof after the annual meeting of the institute shall elect from among the members of the institute in practice a board of examiners consisting of nine members to serve for terms of three years each, except that of the examiners first elected three shall be elected for a term of one year, three for a term of two years, and three for a term of three years, and annually thereafter three examiners shall be elected for terms of three years.

Sec. 2. The board of examiners shall hold examinations annually or, if deemed expedient, semi-annually for candidates. Such examinations shall be oral or written or partly oral and partly written, and by this or such other methods as may be adopted the board of examiners shall determine the technical qualifications and the preliminary education and training of all applicants for membership before applications are submitted to the council. The examinations shall be held simultaneously in different parts of the country at such places as may be determined by the board of examiners where applicants for admittance may conveniently attend.

Sec. 3. The board of examiners shall organize by the election of a chairman and shall formuate all necessary rules and regulations for the conduct of its work and shall be empowered to appoint duly qualified examiners to prepare examination questions and to mark the grades of papers of applicants and shall charge each applicant an examination fee, which shall be applied to the payment of the expenses incident to examinations. All rules and regulations made by the board of examiners may, however, be amended, suspended or revoked by the council.

Article VII—Amendments

Amendments to the constitution or by-laws of the institute shall be made only at the annual meeting thereof and by a two-thirds vote of the members present, but before becoming effective shall be submitted for a mail vote to the entire membership of the institute, and when approved in writing by a majority thereof shall be declared by the president to be effective. All propositions to amend prepared by the committee on constitution and by-laws shall be embodied in the call for the meeting at which such amendments are to be submitted. It shall be compulsory for the secretary to embody in the call for the annual meeting any other propositions to amend of which he shall have had notice endorsed in writing by thirty or more members in good standing at least sixty days prior to the annual meeting.

BY-LAWS OF AMERICAN INSTITUTE OF ACCOUNTANTS

Article I

Duties of Officers

Section 1. It shall be the duty of the president or, in his absence, one of the vice-presidents or other members of the council designated by the council to preside at all meetings of the council and institute. He shall call meetings of the institute or the council when he deems it necessary or when requested so to do by the executive committee or upon the written request of at least five members of the council for a meeting of the council or one hundred members of the institute for a meeting of the institute. The duties of the vice-presidents and treasurer shall be those usually appertaining to such officers. The secretary, in addition to performing the usual duties of that office, shall discharge such other duties as may be imposed upon him by the council or the executive committee.

Audit

Sec. 2. The accounts of the institute shall be audited by two auditors elected at the annual meeting, who shall report at the next annual meeting. The books and accounts shall be submitted by the treasurer for audit at least one week preceding the date of the annual meeting.

Council and Committees

Sec. 3. It shall be the duty of the council to take control and management of all the property belonging to the institute, to keep a record of its proceedings and report to the institute at each annual meeting. The council shall exercise all powers requisite for the purposes of the institute.

Sec. 4. The council may, in its discretion, delegate to the executive committee all functions of the council except election of officers and members, the right to review the rules and regulations of the board of examiners, discipline of members, filling a vacancy in the executive committee and the adoption or alteration of a budget.

Sec. 5. The executive committee shall keep minutes of its proceedings and report fully to the council at each meeting thereof. It shall be the duty of the executive committee to administer the affairs of the institute, supervise the finances and exercise such other

powers as may be designated by the council. No payments except for duly authorized salaries shall be made by the treasurer without the approval of the executive committee.

SEC. 6. The office of a member of the council shall be rendered vacant by his absence from four consecutive meetings of the council.

SEC. 7. The council shall adopt an annual budget showing the money appropriated for the purposes of the institute and estimating the revenue for the ensuing year. No debts shall be contracted nor money expended otherwise than as provided in the budget without the approval of a majority of the council.

SEC. 8. The duties of each committee shall be those indicated by its title.

SEC. 9. The committee on publication shall supervise *The Journal of Accountancy*.

SEC. 10. The committee on arbitration shall sit as a committee in equity to investigate and decide disputes between members or associates of the institute or others which shall, by agreement of the parties, be submitted to the committee in due form. If the decision of the committee on arbitration, in any dispute between members or associates of the institute, be rejected by either party to the dispute, the matter shall be reported to the council, which may prefer charges against either party if it shall consider, by a two-thirds vote of members present, that the recommendation of the committee on arbitration should have been accepted.

SEC. 11. The committee on professional ethics shall have power to hear and consider any complaint preferred against a member or an associate of the institute and it may advise any one applying to it as to whether or not a submitted action or state of facts warrants a complaint; provided, however, that if the committee finds itself unable to express an opinion it is not to be taken as an endorsement of the action or state of facts. If, upon consideration of a complaint, a prima facie case is established showing a violation of any by-law or rule of conduct of the institute or conduct discreditable to a public accountant, the committee on professional ethics shall report the matter to the executive committee, which shall arrange a formal complaint and summon the member or associate involved thereby to appear in answer at the next regular or special meeting of the council.

Meetings of the Institute

SEC. 12. There shall be a regular annual meeting of the institute on the third Tuesday of September of each year. The annual meetings of 1917 and 1918 shall be held in the District of Columbia; the annual meeting of 1919 in some place in the United States of America selected by the institute at the preceding annual meeting. Thereafter all annual meetings shall be held in the District of Columbia with the exception of every third year, when meetings may be held elsewhere as determined by the institute at the meeting of the preceding year. The fiscal year of the institute shall end with the 31st day of August each year.

SEC. 13. Notice of each meeting of the institute shall be sent to each member and associate at his last known address thirty days before such meeting.

SEC. 14. Special meetings of the institute may be called as provided in article I, section 1, of these by-laws. At special meetings no other business than that for which they were called shall be transacted. The place of such meetings shall be determined by the executive committee. Notice of special meetings shall in all ways conform to the requirements of notices for regular meetings.

SEC. 15. In lieu of a special meeting of the institute, the members in meeting assembled may direct and the council by a majority vote may also direct the president to submit to the entire membership any question for a vote by correspondence and any action approved in writing by not less than a majority of the members of the institute shall be declared by the president an act of the institute and shall be so recorded in its minutes. Mail ballots shall be valid and counted only if received within sixty days after date of mailing ballot forms from the office of the institute.

Meetings of the Council

SEC. 16. Regular meetings of the council shall be held on the Thursday next after the third Tuesday in September, the second Monday in April and the Monday next preceding the third Tuesday in September in each year.

SEC. 17. Notice of each meeting of the council except the meeting on the Thursday after the third Tuesday in September shall be sent to each member at his last known address twenty-one days before such meeting. Such notice as far as practicable shall contain a statement of the business to be transacted.

Sec. 18. A transcript of the minutes of each meeting shall be forwarded to each member of the council within thirty days after each meeting.

Sec. 19. Special meetings of the council may be called as provided in article I, section 1, of these by-laws.

Sec. 20. In lieu of a special meeting of the council the president may submit any question to the council for vote by correspondence and any action approved in writing by not less than two-thirds of the whole membership of the council shall be declared by the president an act of the council and shall be recorded in the minutes of the council.

Committee Meetings

Sec. 21. All committees shall be subject to the call of their respective chairmen.

Quorum

Sec. 22. Fifty members of the institute shall constitute a quorum for the transaction of any business duly presented at any meeting of the institute.

Sec. 23. Twenty members of the council shall constitute a quorum of the council.

Article II

Section 1. Every member of the institute shall be entitled to attend all meetings of the institute and to cast a vote upon all matters brought before such meetings.

Sec. 2. Any member of the institute may be represented at regular and special meetings of the institute by another member acting as his proxy, provided, however:

(a) That no person shall act as a proxy for more than five members;

(b) That no proxy given shall confer power of substitution and that all proxies shall become null and void with the final adjournment of the meetings for which they were given.

Article III—Election of Officers

Section 1. Election shall be by ballot. A chairman and two tellers shall be appointed to receive the ballots for each officer, member of council and auditor. They shall count the ballots cast and announce the result to the presiding officer. A majority of votes shall elect.

In case of no majority on the first ballot for any one or more officers or members of council or auditors, a new ballot shall be taken at once for the particular case or cases in which there shall have been no election until an election be effected.

Article IV—Initiation Fees and Dues

Section 1. The following shall be initiation fees:

By a member on admission	$50.00
By an associate on becoming a member	25.00
By an associate on admission	25.00

Sec. 2. No initiation or admission fees shall be exacted from members and associates elected as provided in the constitution, article II, sections 2 (a) and 3 (a).

Sec. 3. The dues for each fiscal year shall include subscription to *The Journal of Accountancy* and to the year-book of the institute and shall be as follows:

By each member	$25.00
By each associate	10.00

Sec. 4. The initiation fee shall be paid when application is made. If application is rejected such fee shall be promptly returned to the applicant. All dues must be paid in advance or at the date of a member's election to membership. All dues shall be apportioned in the first instance to the end of the fiscal year. No dues shall be paid by members and associates of the institute while they are engaged in military or naval service of the United States or its allies during time of war.

Sec. 5. No member shall be entitled to vote at any meeting when his dues shall be sixty days in arrears.

Sec. 6. Upon election as member or associate each such member or associate shall be entitled to a certificate setting forth that he is a member or an associate of the institute, but no certificate shall be issued until receipt of initiation fees and dues for the current year. Certificates of membership shall be returned to the council upon termination of membership for any cause except death.

Sec. 7. Members of the institute shall be entitled to describe themselves as Members

of the American Institute of Accountants and associates as Associates of the American Institute of Accountants.

Article V

Section 1. A member or an associate failing to pay his annual dues or any subscription, assessment or other sum owing by him to the institute within five months after such debt has become due shall automatically cease to be a member or an associate of the institute.

Sec. 1 (a) No person whose membership shall have been forfeited for non-payment of dues or other sum due by him to the institute may be reinstated, but a member or an associate who shall resign while in good standing may be reinstated by a three-fourths vote of the members of the council present and voting at any regular or special meeting of the council, provided the person applying shall submit with his application for reinstatement the amount of dues and assessments, subscriptions, etc., not in any case to exceed $25.00, which would have been payable by him if he had continued in membership from the time of resignation to the date of application for reinstatement. No person shall be considered to have resigned while in good standing if at the time of his resignation he was in debt to the institute for dues or other obligation.

Sec. 2. A member or an associate renders himself liable to expulsion or suspension by the council sitting as a trial board if (a) he refuses or neglects to give effect to any decision of the institute or of the council, (b) infringes any part of the rules of the institute, (c) is convicted of a felony or misdemeanor, (d) is declared by a court of competent jurisdiction to have committed any fraud, (e) is held by the council to have been guilty of an act discreditable to the profession, or (f) is declared by any competent court to be insane or otherwise incompetent.

Article VI

Section 1. For the purpose of adjudicating charges against members or associates of the institute as provided in the foregoing articles the council shall convene as a trial board.

Sec. 2. The executive committee shall instruct the secretary to send due notice to the parties concerned at least thirty days prior to the proposed session. After hearing the evidence presented by the committee on professional ethics or other complainant and by the defense, the council may by a two-thirds vote of the members present admonish or suspend for a period of not more than two years the member or associate against whom complaint is made, or by a three-fourths vote of the members present the council may expel the member or associate against whom complaint is made. A statement of the case and the decision of the council thereon, either with or without the name of the person involved, shall be prepared by the executive committee and published in *The Journal of Accountancy*.

Sec. 3. The council sitting as a trial board may recall, rescind or modify any resolution for expulsion or suspension at a meeting similarly called and convened by a three-fourths vote of those present at such subsequent meeting within two years after date of the expulsion or suspension under consideration.

Article VII

Section 1. The rules of parliamentary procedure contained in Roberts' Rules of Order shall govern all meetings of the council and institute.

RULES OF PROFESSIONAL CONDUCT

Including amendments and additions prepared by the committee on professional ethics and approved by the council September 18, 1922

(1) A firm or partnership, all the individual members of which are members of the institute (or in part members and in part associates, provided all the members of the firm are either members or associates), may describe itself as "Members of the American Institute of Accountants," but a firm or partnership, all the individual members of which are not members of the institute (or in part members and in part associates), or an individual practising under a style denoting a partnership when in fact there be no partner or partners or a corporation or an individual or individuals practising under a style denoting a corporate organization shall not use the designation "Members (or Associates) of the American Institute of Accountants."

(2) The preparation and certification of exhibits, statements, schedules or other forms of accountancy work, containing an essential misstatement of fact or omission therefrom of

such a fact as would amount to an essential misstatement or a failure to put prospective investors on notice in respect of an essential or material fact not specifically shown in the balance-sheet itself shall be, ipso facto, cause for expulsion or for such other discipline as the council may impose upon proper presentation of proof that such misstatement was either wilful or the result of such gross negligence as to be inexcusable.

(3) No member shall allow any person to practise in his name as a public accountant who is not a member of the institute or in partnership with him or in his employ on a salary.

(4) No member shall directly or indirectly allow or agree to allow a commission, brokerage or other participation by the laity in the fees or profits of his professional work; nor shall he accept directly or indirectly from the laity any commission, brokerage or other participation for professional or commercial business turned over to others as an incident of his services to clients.

(5) No member shall engage in any business or occupation conjointly with that of a public accountant, which in the opinion of the executive committee or of the council is incompatible or inconsistent therewith.

(6) No member shall certify to any accounts, exhibits, statements, schedules or other forms of accountancy work which have not been verified entirely under the supervision of himself, a member of his firm, one of his staff, a member of this institute or a member of a similar association of good standing in foreign countries which has been approved by the council.

(7) No member shall take part in any effort to secure the enactment or amendment of any state or federal law or of any regulation of any governmental or civic body, affecting the practice of the profession, without giving immediate notice thereof to the secretary of the institute, who in turn shall at once advise the executive committee or the council.

(8) No member shall directly or indirectly solicit the clients or encroach upon the business of another member, but it is the right of any member to give proper service and advice to those asking such service or advice.

(9) For a period not exceeding two years after notice by the committee on ethical publicity no member or associate shall be permitted to distribute circulars or other instruments of publicity without the consent and approval of said committee.

(10) No member shall directly or indirectly offer employment to an employe of a fellow member without first informing said fellow member of his intent. This rule shall not be construed so as to inhibit negotiations with any one who of his own initiative or in response to public advertisement shall apply to a member for employment.

(11) No member shall render professional service, the anticipated fee for which shall be contingent upon his findings and results thereof.

(12) No member or associate of the institute shall advertise his or her professional attainments or service through the mails, in the public prints or by other written word; but any member or associate may cause to be published in the public prints or otherwise what is technically known as a card. A card is hereby defined as an advertisement of the name, title (member of American Institute of Accountants, C. P. A., or other professional affiliation or designation) and address of the advertiser without further qualifying words or letters, or in the case of announcement of change of address or personnel of firm the plain statement of the fact for the publication of which the announcement purports to be made. Cards permitted by this rule when appearing in newspapers shall not exceed two columns in width and three inches in depth; when appearing in magazines, directories and similar publications cards shall not exceed one quarter page in size. This rule shall not be construed to inhibit the proper and professional dissemination of impersonal information among a member's own clients or personal associates or the properly restricted circulation of firm bulletins containing staff personnel and professional information.

REGULATIONS FOR INSTITUTE EXAMINATIONS

[Reproduced from a pamphlet issued by the American Institute of Accountants relative to examinations.]

I. Who may become Members

Men and women who have been five years continuously engaged in public practice immediately preceding date of application, or ten years in practice not continuously, one year of which immediately precedes date of application, who are recommended by the board of examiners and elected by the council.

II. Who may become Associates

Men and women who have been four years engaged in public accounting, not necessarily continuously nor immediately preceding date of application, who are recommended by the board of examiners and elected by the council. In lieu of two of the four years the applicant may present a C. P. A. certificate of recognized standing or a certificate of graduation from an accounting school acceptable to the board of examiners, but no applicant will be admitted to examination unless he shall have had at least two years of public accounting experience.

III. Applications

(a) Application for permission to take the examinations of the Institute should be filed sixty days prior to the date of examination on forms supplied by the Institute.

(b) No departure from the constitutional requirements can be made. Applicants seeking special consideration will receive no more attention than is accorded to those applying in the proper way.

(c) Applications must contain full details of schools, colleges and universities attended and of all employment from time of leaving school. Name and address of each school and employer and dates of attendance or employment must be given. Failure to comply literally with this rule always leads to delay. The board will not consider any application lacking complete detail.

(d) If applicants are unable to appear when directed to do so, the board of examiners will give consideration to the cause of such failure to appear, and, if the excuse be considered sufficient, appearance may be postponed until a later examination. Notice of inability to attend must be sent to the board of examiners prior to examination.

(e) The Institute does not supply application blanks for state boards. All applications to state boards must be made direct.

(f) An applicant applying to both Institute and a state board must file a separate application with each body.

IV. Candidates for Certified Public Accountant Certificates in Certain States

(a) Many state boards of accountancy have entered into a plan of co-operation with the board of examiners of the American Institute of Accountants whereby the Institute supplies questions to the state boards and also agrees to grade the papers if the state boards so desire. The Institute keeps a record of all papers graded by its board of examiners.

(b) The Institute will not consent to the examination of an applicant for any state certificate outside the state to which he is applying except in the case of a bona fide resident of such state.

(c) Candidates for certified public accountant certificates in states co-operating with the Institute may simultaneously or subsequently apply for admission as associates of the American Institute of Accountants without further technical examination, provided separate applications are made to the state boards and to the Institute, and provided also that the answers submitted at examinations are forwarded to the board of examiners of the Institute for grading.

(d) State boards have been invited to appoint representatives to participate in oral examination of persons applying simultaneously for admission to the Institute and for certificates as certified public accountants in states wherein the laws permit the issuance of certificates following oral examination.

(e) The Institute does not issue certified public accountant certificates. All information in regard to state examinations and certification must be obtained from the proper authorities in the states concerned.

V. Procedure for Applicants to Institute

(a) In presenting a syllabus and bibliography the board of examiners of the American Institute of Accountants desires to impress upon prospective applicants that the examinations of the Institute are intended to demonstrate the applicant's ability to practise as a professional public accountant. The board feels that without actual accounting experience no one can logically be expected to have a sufficient practical knowledge of accounting to justify him in holding himself out to the public as a professional accountant. Accordingly, examinations are designed to demonstrate the applicant's knowledge founded not only upon text-books and instruction but also upon years of experience.

(b) The bibliography attached hereto is solely for the convenience of prospective applicants. The board of examiners does not recommend any one book especially, but those given in the list are regarded as representative of the authoritative literature on each subject.

(c) The prospective applicant is warned against the error of assuming that any one text-book is in the mind of the examiners in the preparation of questions. The board presents questions which are founded upon experience as well as upon pure theory. The syllabus is prepared in the hope of indicating broadly the general scope of examinations in each of the three subjects.

(d) The constitutional provisions concerning qualifications of applicants are as follows:

Constitution

Article II

Sec. 2. Members shall consist of the following:

(b) Associates who shall have been in practice on their own account or in the employ of a practising public accountant for five years next preceding the date of their application and shall be recommended by the board of examiners after examination and elected by the council. The determination of who shall be considered as practising public accountants shall be made in all cases by the board of examiners.

(c) Accountants who shall present evidence of preliminary education satisfactory to the board of examiners, who shall have been in practice on their own account or in the employ of a practising public accountant for not less than five years immediately preceding the date of their application, who shall be recommended by the board of examiners after examination and elected by the council.

(d) Accountants in practice who shall present evidence of preliminary education satisfactory to the board of examiners, who shall have been in practice on their own account or in the employ of a practising accountant for not less than ten years, one year of which shall have immediately preceded date of application, who shall be recommended by the board of examiners after examination and elected by the council.

Sec. 3. Associates shall consist of the following:

(b) Persons who shall be not less than twenty-one (21) years of age and present evidence of preliminary education satisfactory to the board of examiners; and

(c) Shall have satisfactory training and experience in public accounting. The last-named qualification may consist of:

(1) Possession of a certificate of graduation from an accounting school recognized by the examining board and a certified public accountant certificate of a standard recognized by the examining board or instead of a certified public accountant certificate employment for not less than two years upon the accounting staff of a public accountant (students not completing the full course at an accounting school shall be given credit by computing the number of years of study satisfactorily completed as being equal to one-half the same number of years employed in the office of a public accountant); or

(2) Employment for not less than two years upon the accounting staff of a public accountant and possession of a certified public accountant certificate of a standard recognized by the examining board; or

(3) Not less than four years' experience in public accounting work either upon his own account or in the office of a public accountant by a person not holding a certified public accountant certificate of a standard recognized by the examining board; or

(4) Possession of an accountant's certificate issued under the law of a foreign government of a grade accepted by unanimous action of the board of examiners and one year's satisfactory experience in practice in the United States of America; or

(5) In the discretion of the board of examiners exercised in each case, not less than three years' experience in teaching accountancy subjects in a school of accountancy recognized by the board of examiners.

(6) In addition to the foregoing qualifications, candidates for associate membership shall submit to examination by the board of examiners and, upon recommendation of that board, may be elected by the council.

VI. Examinations

(a) Examinations are conducted about the middle of May and November each year. Special sessions for the conduct of oral examination may be held by the board of examiners if desirable.

Oral

(b) Under provisions of the constitution the board of examiners is permitted to require candidates to pass written or oral or partly written and partly oral examinations.

(c) The rules of the board of examiners provide that persons who are over 30 years of age or are certified public accountants or possessors of equivalent foreign degrees approved by the board of examiners may be subjected to oral instead of written examination, provided such applicants present evidence of having been in public practice for seven years or in practice on their own account for five years.

(d) Oral examinations are technical in character and are designed to demonstate the applicant's practical knowledge of accounting. The questions are based upon the questions of the written examinations, but an effort is made to permit practitioners who have been in practice for many years to explain their treatment of principles and cases involved in a somewhat more informal way than would be possible in a written examination.

(e) Each candidate is examined separately, and the transcript of all questions and answers is presented to the entire board for consideration.

(f) Oral examinations under the rules of the board of examiners must be conducted by members of the board of examiners. Such examinations are usually held in the principal centers of accounting activity, such as Boston, New York, Chicago and San Francisco, but special sessions may be held elsewhere in the discretion of the board of examiners.

Written Examinations for Admission as Associate

(g) Written examinations can usually be arranged to suit the convenience of applicants without involving a long journey to the place of examination.

(h) Applicants whose applications have been favorably considered by the board of examiners will be notified when and where to appear for examination. They may bring fountain pens, but no further supplies are required.

(i) The following is a brief syllabus of the written examination:

First Day—First Session—Auditing, 3½ hours.
First Day—Second Session—Accounting, 5 hours.
Second Day—First Session—Commercial Law, 3½ hours.
Second Day—Second Session—Accounting, 5 hours.

AUDITING

(j) Scope: Practice and procedure in the audit of books and accounts of industrial, commercial and financial concerns, municipalities, estates, etc.

COMMERCIAL LAW

(k) Examination covers only fundamental principles of common and statute law applicable throughout the United States.

Subjects:

(a) Negotiable instruments.
(b) Contracts.
(c) Corporations.
(d) Bankruptcy.
(e) Partnership.
(f) Federal income tax.

ACCOUNTING

(l) Examination in accounting is not divided into theory and practice. The entire subject is considered as one, and problems in practical accounting and questions in theoretical accounting are contained in the papers of both sessions.

Scope: Preparation of trial balance, balance-sheet, profit and loss account; cost, manufacturing, trading, consolidated, executorship, estate, railroad, public utility, shipping and municipal accounts; foreign exchange, investigations prior to public issuance of securities, stock-exchange practice and banking, interstate commerce commission returns, federal tax returns, preparation of statements for credit purposes, systematizing.

(Optional) Actuarial science, including annuities certain, present worth of future interest payments, sinking funds, etc.

(Questions in actuarial science do not extend to life contingencies. A knowledge of algebra up to and including the binomial theorem and the use of logarithms is essential.)

Written Examinations for Admission as Member

(m) In addition to the written examination set for those seeking admission as associates, applicants for admission as members are required to present acceptable theses.

(n) Each thesis must consist of from 2,000 to 4,000 words upon one of a group of subjects to be proposed by the board of examiners and must be accompanied by an affidavit that it is the unaided work of the applicant.

(o) Associates seeking advancement to membership are required to present theses as above described.

VII. Results of Examinations

(a) The board does not make known its solutions and answers and does not divulge the actual marks given in any subject.

(b) Applicants who pass the examinations with peculiar distinction are generally mentioned by name in order of merit.

(c) Because of the great number of states using the Institute's questions and submitting the answers for grading by the Institute's examiners, results of examination cannot be made known, as a rule, within less than six weeks from date of examination.

(d) Failure in two subjects is regarded as failure in all subjects. Accounting theory and practice are regarded as one subject.

VIII. Re-Examination

(a) Applicants who fail in one subject are conditioned in that subject and may be re-examined therein at a subsequent examination upon payment of the required fee ($10).

(b) Failure to satisfy the requirements of the board of examiners in re-examination does not preclude further re-examination.

(c) All re-examinations must be written.

IX. Other Examinations

Until further notice, the board of examiners in its discretion exercised in the case of any individual applicant for admission to the Institute may accept in lieu of its own examinations a certificate as a certified public accountant of any state of the United States, the laws of which are held by the board of examiners of the Institute to be adequate and well administered, or a certificate of membership in a society of professional accountants in a foreign country whose requirements for admission are considered by the board of examiners of the Institute equivalent to the Institute's examinations, provided that such applicant shall have received such certificate as certified public accountant or member of a society of professional accountants after adequate examination, and that he shall have been in practice as a public accountant or in the employ on the accounting staff of a public accountant for a period of two years next preceding the date of his application, and provided further that he shall be recommended for admission by three members of the Institute residing near the place of residence of the applicant, such members to be selected by the board of examiners without knowledge of the applicant and to report to the board of examiners upon the applicant's professional qualifications, character and reputation.

In the case of an applicant conforming to all the provisions contained in the foregoing paragraph, and presenting evidence of five years' public practice immediately preceding the date of his application or ten years' public practice, one year of which shall have immediately preceded date of application, the board of examiners may require such applicant to submit a thesis upon one of a group of subjects to be designated by the board and upon the result of such thesis may recommend the applicant for admission as member of the American Institute of Accountants. The board, however, may accept other evidence of professional qualifications in lieu of a thesis.

X. Right of Rejection

The board of examiners reserves to itself the right to reject the application of any applicant for admission as member or associate and shall not be required to state cause for any such rejection.

XI. Election

The board of examiners recommends successful examinees to the council, which may elect or reject. As a rule, recommendation by the board is favorably considered by the council.

XII. Fees and Dues

(a) Initiation fees of members are $50; on advancement from associate to membership, $25; associates, $25.

(b) In addition to the following examination fees must be paid in all cases whether the applicant has already passed an examination approved by the Institute or not:

For admission as member	$25.00
For advancement from associate to member	25.00
For admission as associate	25.00
For re-examination in one subject	10.00

In the case of advancement from the grade of associate to that of member no additional examination fee is required if the application for advancement be accepted within twelve months of the date of admission as associate.

(c) Examination and initiation fees must accompany the application.

(d) Annual dues of the Institute are: by a member, $25; by an associate, $10.

XIII. Examination Questions

Copies of past examination questions are obtainable from the offices of the American Institute of Accountants at 10 cents each. The examination questions of the Institute from June, 1917, to May, 1921, inclusive have been prepared in book form and may be obtained from the Institute at $1.50 a copy, delivered.

XIV. Bibliography

Suggested Texts For Reading in Preparation For Examination

[See Section V., Paragraphs (b) and (c)]

[*List not shown*]

RULES OF THE BOARD OF EXAMINERS OF THE AMERICAN INSTITUTE OF ACCOUNTANTS

Approved June 13, 1922

Officers

The officers of the board shall be a chairman, a secretary and a treasurer.

Meetings

Meetings of the board shall be held upon the call of the chairman and shall be called by the chairman upon the written request of three members of the board. Five days' notice of all meetings shall be given by the secretary, except that the annual meeting may be held at the place of the annual meeting of the Institute on the day following the adjournment of that meeting. Five members of the board shall constitute a quorum for the transaction of business.

Secretary

The secretary of the Institute shall be the secretary of the board. The secretary shall keep a record of all applications received and also the records of the meetings and transactions of the board. He shall turn over to the treasurer of the board all moneys received by him.

Treasurer

The treasurer of the Institute shall be the treasurer of the board. All moneys received by the board shall be turned over to the treasurer. Disbursements shall not be made by the treasurer except upon the approval of three members of the board.

Office

The office of the Institute shall be the office of the board.

Applications and Fees

Applications will be considered only when made on blanks which will be furnished by the secretary on written request. The fees for examination and for investigation of applicants' records shall be as follows:

For admission as member	$25.00
For advancement from associate to member	25.00
For admission as associate	25.00
For re-examination in one subject	10.00

In the case of advancement from the grade of associate to that of member no additional examination fee is required if the application for advancement be accepted within twelve months of the date of admission as associate.

Examination fees and initiation fees must accompany the application.

No applicant shall be entitled to an examination by the board unless his application shall have been in the hands of the secretary of the board sixty days prior to the date of examination.

Examinations

Except as hereinafter provided, the examination of the board shall be written, and every applicant for admission as a member or an associate or for advancement to membership who shall be found to be qualified to take an examination under the constitution shall be entitled to take the written examination of the board and upon passing such examination to the satisfaction of the board may be recommended to the council for admission or advancement, as the case may be.

No applicant shall be allowed to take an examination who shall not previously have satisfied the board as to his preliminary education. A high school graduation certificate will be regarded as satisfactory evidence of such preliminary education, but until further notice the board will consider such other evidence as may be submitted.

Examinations—Written

Written examinations shall be conducted simultaneously in such places as may be determined by the boards of examiners during May and November, the dates to be selected ninety days in advance of examination.

Due notice will be given to each applicant of the time and place selected for holding the examination. Failure to be present and prepared at the time appointed will be sufficient cause for exclusion from any session of the examination.

Examinations shall include questions in (1) **Accounting Theory and Practice,** including optional problems in the elements of actuarial science, (2) **Auditing** and (3) **Commercial Law.** The time required shall not exceed two days.

Answers shall be written in ink in accordance with instructions which will be issued at the time of the examination. All supplies necessary to the examination will be furnished by the board, and, after use, shall remain the property of the board.

The secretary shall communicate in writing to each applicant the result of his examination, and the applicant shall not be entitled to further information.

Applicants who shall have passed the examination in two subjects shall have the right to be re-examined in the third subject on payment of the required fees.

Examinations—Oral

Applicants possessing such qualifications as the board from time to time may prescribe in the discretion of the board and upon the request of the applicants may be subjected to oral instead of written examination in one or more subjects. Oral examinations shall be conducted at times and places to be selected by the board.

An affirmative vote of five members of the board shall be required before any applicant who has taken an oral examination shall be recommended to the council for election or for advancement to membership.

The board in its discretion may allow any candidate who has had five years' practice on his own account or seven years' experience in public accounting, provided that such applicant shall be over 30 years of age or shall have passed a written examination conducted by a recognized accounting body, to take an oral instead of a written examination in one or more subjects.

Credit for Certain Other Examinations

Until further notice, the board of examiners in its discretion exercised in the case of any individual applicant for admission to the Institute may accept in lieu of its own examinations a certificate as a certified public accountant of any state of the United States, the laws of which are held by the board of examiners of the Institute to be adequate and well adminis-

tered, or a certificate of membership in a society of professional accountants in a foreign country whose requirements for admission are considered by the board of examiners of the Institute equivalent to the Institute's examinations, provided that such applicant shall have received such certificate as certified public accountant or member of a society of professional accountants after adequate examination, and that he shall have been in practice as a public accountant or in the employ on the accounting staff of a public accountant for a period of two years next preceding the date of his application, and provided further that he shall be recommended for admission by three members of the Institute residing near the place of residence of the applicant, such members to be selected by the board of examiners without knowledge of the applicant and to report to the board of examiners upon the applicant's professional qualifications, character and reputation.

In the case of an applicant conforming to all the provisions contained in the foregoing paragraph, and presenting evidence of five years' public practice immediately preceding the date of his application or ten years' public practice, one year of which shall have immediately preceded date of application, the board of examiners may require such applicant to submit a thesis upon one of a group of subjects to be designated by the board and upon the result of such thesis may recommend the applicant for admission as member of the American Institute of Accountants. The board, however, may accept other evidence of professional qualifications in lieu of a thesis.

The board of examiners reserves to itself the right to reject the application of any applicant for admission as member or associate, and shall not be required to state cause for any such rejection.

NATIONAL ASSOCIATION OF COST ACCOUNTANTS.—This association was organized in Buffalo in October, 1919. Its membership consists of business and professional men interested in cost accounting. It is affiliated with the Canadian Society of Cost Accountants. Local chapters have been formed in most of the larger cities. At national headquarters, 130 West 42nd Street, New York City, a service department for carrying on research work is maintained. The results secured are distributed to members through the association's publications. Approximately one hundred uniform cost systems have been collected.

The association is managed by a president, two vice-presidents, a treasurer, and a board of 24 directors. The board meets monthly in New York. At the national headquarters the organization consists of a secretary and business manager who has supervision over all affairs of the association, also an assistant secretary who has charge of research and service work, as well as an adequate staff.

The **publications** of the association are issued in three forms—a year book containing papers and discussions at annual International Cost Conferences held each year under the auspices of the association, official publications which are issued twice monthly, and bulletins, also issued twice monthly and containing all sorts of information concerning costs and the activities of the association and its chapters. The association issues in all about 1,500 pages of printed matter yearly. The membership in the association is distributed among the following classes:

Industrial Cost Accountants	51.7%
Public Accountants	28.5
Business Executives (Presidents, Vice-Presidents, Secretaries, Treasurers and Comptrollers)	13.5
Industrial Engineers	3.0
Teachers of Accountancy	2.0
Students	1.3
	100%

CONSTITUTION OF THE NATIONAL ASSOCIATION OF COST ACCOUNTANTS

(As amended to December 15, 1921)

Article I—Name

The name of this organization shall be NATIONAL ASSOCIATION OF COST ACCOUNTANTS.

Article II—Objects

Its objects shall be to unite and promote cordial intercourse among all persons interested in cost accounting, to collect through research and to disseminate generally by all appropriate means all fundamentally sound cost accounting principles and methods; to develop, improve, extend, and as far as practicable standardize the present science and art of cost accounting; to provide tests by which candidates shall be admitted to membership, and to promote and maintain high moral standards.

Article III—Membership

The Association has no capital stock and the members of the Association shall be the original subscribers hereto, and such individuals as may from time to time be admitted to membership in such manner and upon such requirements as may be prescribed by the By-Laws. The membership shall be divided into classes as provided in the By-Laws. The Association shall have power to exclude, expel or suspend a member of any class for any cause it shall deem to be subversive to the best interests of the Association and in such manner as may be prescribed by the By-Laws.

Article IV—Management

The management of the Association shall be vested in a board of Directors and the officers of the Association, namely, the President, two Vice-Presidents, and the Treasurer, who shall ex-officio be members of the Board of Directors.

Immediately after each annual election of Directors the President shall designate nine or more Directors to have charge of special activities of the Association, as hereinafter provided in the By-Laws, and these Directors, together with the President, the two Vice-Presidents, and the Treasurer, shall constitute an Executive Committee, to which the Board of Directors shall delegate and grant full power and discretion to act in the interim between meetings of the Board of Directors.

Article V—By-Laws

The By-Laws of the Association shall be admitted and taken to be its laws subject to this Constitution. They may be altered and amended only as provided in Article VI hereof. They may regulate and limit the powers and functions of the Board of Directors; they may prescribe the times and places of meetings of the Board, of the Executive Committee and of the Association; the number who shall constitute a quorum at meetings of the Board, of the Executive Committee, and of the Association; regulations as to voting; the qualifications and manner of electing members of all classes and Directors; the manner of electing or appointing officers, committees and agents of the Association and the powers and duties of officers and all others concerned, and shall contain provisions for regulating generally the internal affairs of the Association.

Article VI—Amendments

Amendments to the Constitution of the Association may be made only at the annual meetings thereof. Any proposed amendment shall be signed by at least five members with voting power and in good standing and be submitted to the Secretary at least sixty days prior to the annual meeting. The Secretary shall forthwith transmit the proposal to the Executive Committee, which shall order it printed and mailed to each member with voting power at least thirty days prior to the annual meeting. Notices for the annual meeting shall specifically call attention to the fact that an amendment, a copy of which shall be incorporated in the notice, will be proposed.

Voting members not attending the annual meeting shall vote by secret ballot addressed to the Secretary of the Association in the manner prescribed by the Executive Committee. Written ballots shall be opened by the tellers at the time that ballots of voters present are counted.

The adoption of an amendment shall require a favorable vote of three-fourths of the members present and voting, provided, however, that these favorable votes, together with mailed votes in favor, shall include at least 50% of the voting membership. An amendment shall take effect immediately upon adjournment of the meeting at which it is adopted unless otherwise specified in the amendment itself, and the Secretary shall mail a copy thereof to all members of every class.

Amendments to the By-Laws of the Association may be proposed at any time by any five voting members of the Association in good standing or any five voting members in good standing may request the Director in charge of Constitution and By-Laws to draft amendments to carry out specific changes in the By-Laws as set forth in said request. The Secretary shall present such amendments as may be proposed in either of the above ways at the first meeting of the Executive Committee following the receipt of said amendments and the Executive Committee shall instruct the Secretary to submit said amendments to the voting members of the Association for their approval by mail.

Any amendment which within sixty days of the date of its submission receives the approval of two-thirds of the voting membership as shown in the records of the Association at the time the amendment is submitted, shall immediately become a constituent part of the By-Laws of the Association and the Secretary shall send official notice of this fact to all members.

Any proposed amendment which does not receive the approval of two-thirds of the voting members as hereinbefore required within the period of sixty days shall be lost and the Secretary shall notify the members to that effect.

BY-LAWS OF THE NATIONAL ASSOCIATION OF COST ACCOUNTANTS

(As amended to December 15, 1921)

Article I—Members

SECTION 1. Membership in the Association shall be open to individuals of either sex who are genuinely interested in the aims and objects of the Association; who are willing to subscribe to the Constitution and By-Laws, and who are otherwise qualified as hereinafter specified.

SECTION 2. MEMBERS. Men or women being 21 years of age and qualified as set forth in Section 1 of this Article, may be elected as MEMBERS, provided they are qualified under any one of the following groups:

(a) Persons who are actively engaged as accounting officers, or other employees of business organizations or associations, whose duties consist in whole or in part of executive supervision over, or control of, all or part of the organization's cost accounting.

(b) Persons who are engaged professionally in the public practice of accounting on their own account or in the employ of others so engaged and who have been so engaged for a period of at least three years or who have had experience equivalent to that required in subdivision (a) hereof.

(c) Executive officers or department heads of business organizations or associations who are genuinely interested in the development of the science of cost accounting.

(d) Persons engaged in teaching cost accounting or other branches of business management related to cost work, either through residence or correspondence instruction.

The Board of Directors or the Executive Committee may, at its discretion, add to the above such additional groups as they deem expedient for the best interests of the Association.

SECTION 3. JUNIORS. Men or women being under 26 years of age, but qualified as set forth in Section 1 of this Article, may be admitted to limited membership in the Association as JUNIORS, provided they are qualified under any one of the following groups:

(a) Students who are enrolled for any recognized course in accounting which embraces cost accounting and who have completed at least one-half of said course.

(b) Persons employed in Cost Departments of business organizations or associations who have no executive supervision over nor control of any part of the organization's cost accounting.

(c) Persons in the employ of professional accountants, but who have less than three years' experience in such employ.

The Board of Directors or the Executive Committee may, at its discretion, add to the above such additional groups as they deem expedient for the best interests of the Association.

SECTION 4. JUNIORS shall be entitled to all the privileges of the Association except that they may not vote or hold office within the Association. No person shall be continued as a JUNIOR after reaching the age of twenty-six years. JUNIORS who have not qualified for full membership when they become twenty-six years of age shall be automatically dropped from membership.

SECTION 5. ASSOCIATE MEMBERSHIP. The Cost Associations of particular industries or other associations interested in the development of cost work may be admitted to ASSOCIATE MEMBERSHIP in the National Association of Cost Accountants under such rules as may from time to time be established by the Board of Directors or the Executive Committee.

SECTION 6. (a) The Board of Directors or the Executive Committee shall fix the amount of the initiation fee which shall be paid by new members and shall at their discretion have power to suspend or reduce said initiation fee when in their judgment such suspension shall be in the best interests of the Association, provided that at no time shall the initiation fee be more than $15.00 and provided that in the absence of definite action by the Board of Directors or the Executive Committee the initiation fee shall be $15.00.

(b) The amount of the annual dues of the Association shall be fixed by vote of the Board of Directors or the Executive Committee, provided that at no time shall the annual dues be more than $25.00 per year for MEMBERS and $10.00 for JUNIORS and provided that in the absence of definite action by the Board of Directors or the Executive Committee the annual dues shall be $25.00 for MEMBERS and $10.00 for JUNIORS.

SECTION 7. A candidate who is admitted to full Membership in the Association during any fiscal year shall be subject to dues only for the unexpired portion of said year dating from the date of his election. Each MEMBER shall receive a bill for dues for the balance of the current fiscal year at the time he is notified of his election. JUNIORS shall be subject to dues for the fiscal year in which they are elected, provided that if elected subsequent to March 1 in any fiscal year they shall pay only one-half of the annual dues for the current fiscal year. Dues shall be payable semi-annually.

SECTION 8. At the beginning of each fiscal year, September 1, a notice of dues payable for that year shall be sent to each MEMBER and JUNIOR. The membership of any individual who shall have failed on November 30 of any year to pay his dues for the first six months of that year or who shall have failed on May 31 of any year to pay his dues for the whole of that year may be terminated. Such a person may, however, upon the payment of $10.00 and all dues in arrears and upon his re-election by the Executive Committee be reinstated to his former status, no initiation fee being required upon such reinstatement.

SECTION 9. All applications for membership shall be made in writing on application blanks furnished for that purpose and addressed to the Secretary of the Association. The Secretary shall present all applications to the Director-in-Charge of Membership for his approval and then lay them before the Executive Committee for action. The approval of a majority of the members present and voting at any meeting of the Executive Committee shall be sufficient for election.

SECTION 10. Any MEMBER or JUNIOR may resign at any time, but such resignation shall not become effective until accepted by the Executive Committee and shall not relieve the resigning individual from the payment of dues for the current fiscal year or give any right to a rebate of dues paid or any right to a pro rata or other share of the assets of the Association.

SECTION 11. The Association may refuse to receive the dues of any MEMBER or JUNIOR adjudged by the Executive Committee to have violated the Constitution or By-Laws of the Association, or who in the opinion of the Executive Committee by unanimous vote shall be guilty of conduct rendering him unfit to continue membership, and the Board of Directors by a two-thirds vote may suspend or expel such a person from membership.

SECTION 12. Each MEMBER shall receive a suitable certificate indicating his status in the Association.

Article II—Fellows

SECTION 1. The Board of Directors or the Executive Committee shall, as soon as they deem it expedient, establish standard examinations or other requirements under which members of the Association may qualify in a special group known as FELLOWS. Examina-

tion and requirements for election to this class shall be of such a nature as to limit the class to those members of the Association who have made some original contribution to the science of cost accounting or who are able to demonstrate special qualifications in the field of cost accounting. Special certificates shall be issued to FELLOWS over the seal of the Association. There shall be no charter membership among the FELLOWS.

The board of Directors or the Executive Committee may establish such additional rules as it may deem necessary to carry out the intent of this Section.

Article III—Meetings

SECTION 1. The annual meeting of the Association for the election of Directors and Officers and the transaction of any other business whatsoever relating to its affairs shall be held each year during the month of September. The place and date of each annual meeting shall be fixed by a majority vote of the MEMBERS present and voting at the preceding annual meeting.

SECTION 2. The Secretary shall mail a notice of each annual meeting to each MEMBER and JUNIOR not less than twenty days prior to the meeting, but no failure or defect of notice of the annual meeting shall invalidate the same or any procedure taken thereat.

SECTION 3. A special meeting of the Association may be held at any time and place upon call or notice by the Executive Committee, which it may give on its own initiative and which it shall give upon the written request of twenty-five Members. The call or notice shall be mailed to each MEMBER and JUNIOR at least twenty days prior to the date set therein for the meeting and shall state the purpose thereof.

SECTION 4. At each meeting of the Association each MEMBER present shall be entitled to one vote. There shall be no voting by proxy. There shall be no voting by mail except on the adoption of an amendment as provided in Article VI of the Constitution and except on the authorization of the Board of Directors to assume liabilities as provided in Article IV, Section 8, hereof.

SECTION 5. Fifty MEMBERS shall constitute a quorum at any meeting of the Association, but those present at any duly held meeting, although less than a quorum, may adjourn the meeting without further notice to any given time and from time to time.

SECTION 6. The order of business at all meetings of the Association, of the Board of Directors and of the Executive Committee shall be such as may be prescribed by the presiding officer; or if objection be made thereto, then by a majority vote of the meeting. Roberts' Rules of Order shall govern all meetings of the Association, of the Board of Directors, of the Executive Committee and of all other committees on any point not covered by the Constitution and By-Laws.

Article IV—Board of Directors and Executive Committee

SECTION 1. The Board of Directors of the Association shall consist of twenty-four MEMBERS elected for a period of three years, one-third retiring each year.

SECTION 2. At the annual meeting in September, 1922, eight Directors for a period of three years, two Directors for a period of two years and two Directors for a period of one year shall be elected by a plurality vote of the MEMBERS present and voting, in order that the Board of eighteen Directors shall consist of twenty-four Directors.

SECTION 3. At each annual meeting thereafter there shall be elected, by plurality vote of the MEMBERS present and voting, eight Directors for a period of three years to replace the retiring Directors.

SECTION 4. Directors shall hold office until their successors are elected and have qualified. If any director shall die, or his office otherwise become vacant, his unexpired term shall be filled by a majority vote of the Board of Directors. If for any reason the eight Directors as herein provided are not elected at the annual meeting, they may be elected at any special meeting called for the purpose in accordance with Article III hereof.

SECTION 5. If the membership in the Association of any MEMBER who shall have been elected a Director shall for any reason terminate, his office as Director shall automatically become vacant.

SECTION 6. The Board of Directors shall meet at least semi-annually at such times and places as it may select. At such meetings eight Directors present in person shall constitute a quorum. At all meetings of the Board of Directors the President of the Association, if present, shall act as Chairman. Notices of Directors' meetings shall be mailed by the

Secretary or as the Board may otherwise direct, but no failure or defect of notice shall invalidate the meeting or any proceeding taken thereat.

SECTION 7. Immediately after the annual elections in each year, the President of the Association shall designate nine Members of the Board of Directors, each to have general supervision of one of the following activities of the Association:

Director-in-Charge—Constitution and By-Laws, Legal Matters.
Director-in-Charge—All matters pertaining to the securing, electing and classifying of Members.
Director-in-Charge—Chapters and all matters pertaining thereto.
Director-in-Charge—All matters connected with the relations of the National Association with allied Associations.
Director-in-Charge—Research and Standardization.
Director-in-Charge—Publications.
Director-in-Charge—Library and Education.
Director-in-Charge—All matters pertaining to JUNIORS.
Director-in-Charge—Meetings.

The Directors so designated, together with the President, the two Vice-Presidents and the Treasurer of the Association, shall constitute an Executive Committee which shall have the right to exercise in its sole discretion any and all powers of the Board of Directors in the interim between meetings of said Board. At any meeting, regular or special, of said Executive Committee, five Members thereof present shall constitute a quorum for all purposes. At each meeting of the Board of Directors the Executive Committee shall report all action taken by it since the last preceding meeting of the Board.

SECTION 8. On and after March 1, 1920, neither the Board of Directors nor the Executive Committee shall have power to assume any liability in behalf of the Association for an amount in excess of the funds in the hands of the Treasurer, not otherwise appropriated, unless expressly authorized by a three-fourths vote of all MEMBERS in good standing at a special meeting called for that purpose. Voting by mail shall be permitted at said special meetings.

SECTION 9. The Board of Directors or the Executive Committee may, in its discretion, authorize the President to designate, in addition to the nine Members of the Board of Directors specified in Section 7 hereof, one or more additional Members of said Board, each to have general supervision of any activity of the Association not listed in Section 7 hereof. Each Director so designated shall at once become a Member of the Executive Committee.*

Article V—Officers and Secretary

SECTION 1. The officers of this Association shall be a President, First Vice-President, Second Vice-President, and a Treasurer, all of whom shall be Members and all of whom shall ex-officio be Members of the Board of Directors.

SECTION 2. These Officers shall be elected by a plurality vote of the MEMBERS present and voting at the annual meeting, and shall hold office for one year and until their respective successors are duly elected and qualified. The term of office of each shall expire at the end of the fiscal year in which he is elected.

SECTION 3. Officers shall be eligible for re-election, except that the President shall not serve more than two successive terms.

SECTION 4. The duties ordinarily performed by a Secretary as an Officer shall devolve upon an employee, who shall be engaged by the Executive Committee and be given the title of Secretary and Business Manager. Such employee shall not be a MEMBER or JUNIOR of the Association, nor shall he be associated in business directly or indirectly with any MEMBER or JUNIOR, nor shall he engage in the professional practice of cost accounting or any other business, but he shall devote his entire time and attention to his duties as Secretary. His compensation shall be fixed by the Executive Committee.

SECTION 5. The Executive Committee may allow to any Officer or Director such sums for compensation or expenses as it in its discretion may determine.

SECTION 6. In case of a vacancy in the office of President, the First Vice-President and

* Under authority of this section the Board of Directors on Aug. 29, 1921, authorized the President to create a new department of Publicity and Lectures, and to divide the departments of Research and Standardization and Library and Education each into two separate departments.

the Second Vice-President shall automatically advance; the First Vice-President to the office of President and the Second Vice-President to the office of First Vice-President, the office of Second Vice-President thereby becoming vacant. A vacancy in the office of either of the Vice-Presidents, or of the Treasurer, shall be filled for the unexpired term thereof by a majority vote of the Executive Committee.

SECTION 7. Any Officer or Director may be removed for cause by a two-thirds vote of the Board of Directors at a special meeting called for that purpose, after such proceedings as the Board of Directors may determine. Upon such removal of an Officer or Director his office shall be filled for the unexpired term thereof by a majority vote of the Board of Directors.

Article VI—Duties of Officers and Secretary

SECTION 1. PRESIDENT. The President shall be the executive head of the Association and when present shall preside at all meetings of the Association, of the Board of Directors, and of the Executive Committee. He shall exercise a general supervision over the affairs of the Association and shall see to the enforcement of the By-Laws and to the carrying out of all resolutions and proceedings of the Association, of the Board of Directors and of the Executive Committee. He shall keep the Executive Committee fully informed and shall frequently consult it concerning the business and activities of the Association.

SECTION 2. VICE-PRESIDENTS. In case of the absence or disability of the President the ranking Vice-President shall perform his duties. Each Vice-President shall have such other powers and duties as may be prescribed by the Board of Directors or by the Executive Committee.

SECTION 3. TREASURER. The duties normally to be performed by the Treasurer shall, in this Association, be performed by the Secretary, except that the Treasurer shall receive and deposit such sums as the Secretary may from time to time transmit to him, and he shall disburse such sums only on vouchers approved by the Executive Committee. The funds received by the Treasurer shall be deposited in a bank to be selected by the Executive Committee in an account in the name of the Association. The Treasurer shall draw checks on said account on his sole signature. He shall keep and preserve proper vouchers and books of account which shall at all times be open to inspection by or on the order of the Executive Committee and which shall be subject to audit at any time by the Auditing Committee. At the close of his term of office he shall deliver to his successor all funds, books, papers, documents and other valuables belonging to the Association which shall be in his custody or possession. He shall furnish a bond approved by the Executive Committee as to form and amount for the faithful performance of his duties.

SECTION 4. SECRETARY. The Secretary shall keep a roll of the MEMBERS and JUNIORS, give notices of meetings of the Association, of the board and of the Executive Committee, keep a record of proceedings at such meetings, preserve all communications pertaining to the affairs of the Association, and perform such other duties as shall pertain to the office of Secretary, and as may be prescribed by the Executive Committee. He shall keep proper books of account showing dues receivable and collected from MEMBERS of all classes and all other funds receivable and collected. He shall collect such dues and all other funds receivable by the Association subject to the supervision and control of the Executive Committee, and he shall promptly turn over to the Treasurer all funds collected. The membership roll, all books of account and all other records, documents or other things relating to the Association in the custody of the Secretary shall be open at all times to inspection by any Officer of the Association and shall be subject to audit at any time by the Auditing Committee. He shall furnish a bond approved by the Executive Committee as to form and amount for the faithful performance of his duties.

Article VII—Committees

SECTION 1. Each Director-in-Charge of an activity of the Association as set forth in Article IV hereof, may, in his discretion, appoint such committees from among the MEMBERS as he may deem expedient, to assist him in carrying on the work which has been placed under his supervision. All such committees shall report to the appointing Director-in-Charge and the sole responsibility for the supervision of the activities under their care shall rest with said Director.

SECTION 2. At the annual meeting in September, 1920, and at each succeeding annual meeting, a Nominating Committee of five shall be elected by a plurality vote of the MEM-

BERS present and voting. One MEMBER of this Committee, who shall be its Chairman, shall be elected from the Directors who have served on the Executive Committee during the fiscal year immediately preceding the annual meeting. One Member of the Committee shall be elected from the remaining Members of the Board of Directors during said year. The remaining three Committeemen shall be elected from the other MEMBERS of the Association.

SECTION 3. The Nominating Committee shall nominate candidates for the four offices and expiring directorships of the Association. The Committee shall report to the Secretary on or before August 1 of each year, stating the names of all consenting nominees. The Secretary, on or before August 15, shall mail to all MEMBERS a complete list of the nominations made by the Nominating Committee. At the annual meeting of the Association the nominations previously reported by the Nominating Committee shall be made by the Chairman of that Committee; other nominations may be made orally by any MEMBER.

SECTION 4. Special committees may at any time be created by the Executive Committee and appointed as it may prescribe.

Article VIII—General Provisions

SECTION 1. Whenever the word "Member" is used in the Constitution or By-Laws without qualification, it shall mean MEMBER as defined in Article I, Section 2, hereof, JUNIORS, although technically not MEMBERS, are referred to in the Constitution and By-Laws as MEMBERS of the Association, but such reference shall in no way be construed to confer upon them any rights, privileges or obligations not applicable to their class as specified in Article I, Section 4, hereof.

SECTION 2. The fiscal year shall begin on the first day of September.

SECTION 3. Any notice to MEMBERS of the Association or to any Director or Officer shall be deemed sufficiently given if mailed to the last Post Office address furnished by him to the Secretary; if no address has been so furnished, then to his last known Post Office address. The Secretary may give any notice whatsoever to be given by or on behalf of the Association.

SECTION 4. If at any meeting of the Association, of the Directors, or of the Executive Committee, the President is absent, and no one authorized to perform his duties is present, or if the Secretary is absent, and no one authorized to perform his duties is present, then a Chairman or a Secretary pro tem, or both, as the case may require, may be appointed by a majority vote of the MEMBERS present and voting.

SECTION 5. Any contracts or similar undertakings that may be made by or for the Association shall be made in such manner as the Board of Directors or the Executive Committee may in any given case or from time to time prescribe. No contracts or similar undertakings or obligations shall be binding upon the Association or any of its MEMBERS unless authorized by the Association, by the Board of Directors, or by the Executive Committee.

SECTION 6. The Executive Committee may adopt a common seal for the Association, to be in such form and to be used in such manner as the Executive Committee shall direct.

SECTION 7. In case of dissolution of the Association and liquidation of its affairs, any money or other assets remaining after the payment of all obligations shall be distributed among the MEMBERS in such proportions as the Board of Directors may determine and direct. In general the Board of Directors shall seek to distribute such money or other assets proportionately to the amount that the said MEMBERS have paid to the Association during the course of their respective memberships, but the Board may vary this plan in whole or in part in its sole discretion; in any case the decision and determination of the Board shall be final and conclusive upon all persons in any way interested.

Article IX—Services to Be Rendered by the Association

SECTION 1. With the object of rendering service for the general benefit of its MEMBERS, the Association will undertake such activities as in the sole discretion and judgment of the Board of Directors are designed to promote and develop the Association and to carry into effect the objects stated in Article II of the Constitution.

SECTION 2. Local chapters of this Association may be formed in such places as the Board of Directors may approve, subject to such regulations as to membership, organization, procedures and financial relationship with the Association as the Executive Committee may prescribe.

RULES AND REGULATIONS OF THE NATIONAL ASSOCIATION OF COST ACCOUNTANTS FOR THE GOVERNMENT OF LOCAL CHAPTERS

As Revised by the Board of Directors, September 16, 1921

When Chapters May Be Formed

Fifteen MEMBERS and JUNIORS of the National Association of Cost Accountants, of which number at least ten shall be MEMBERS, resident within a radius of fifty miles of the proposed chapter centre, may petition for authority to establish a local chapter within said territory.

Form of Petition

The petition shall be in the following form:

> To the Secretary,
> National Association of Cost Accountants,
> 130 W. 42d St., New York.
>
> Dear Sir:
>
> The undersigned MEMBERS and JUNIORS of the National Association of Cost Accountants herewith request that a charter be issued for the establishment of a Local Chapter of the Association in the following territory:
>
> Signed

Chapter Territory

The boundaries of the chapter shall be fixed in the charter. Chapters shall, as a rule, include all territory within a radius of approximately fifty miles of the chapter centre where the meetings of the chapter are to be held. In some cases special boundaries may be established to meet local conditions in regard to transportation, adjacent chapters, and similar matters. In all cases the suggested territory of the proposed chapter should be defined in the petition.

Preliminary Steps

A lesser number of MEMBERS and JUNIORS may meet and form a temporary organization for the purpose of securing the necessary number of members for a permanent chapter.

Petition Addressed to Secretary

Petitions for authority to establish a local chapter shall be addressed to the Secretary of the Association. He shall give notice to all members of the Association within the district that such application has been received and then submit the application to the Director-in-Charge of Chapter Organization for his examination, and upon receipt of his report lay it before the Executive Committee for final action.

Who May Be Members of Chapter

All members of the National Association of Cost Accountants, resident within the territory of the chapter, shall be considered members of the local chapter. Members outside of the chapter territory may become members by special request addressed to the chapter secretary and approved by the National Secretary.

Charter Issued by Secretary

When the petition has been approved by the Executive Committee, the Secretary shall issue a charter and constitution to the local chapter . . . . bearing the seal of the Association and the signatures of the President, the Director-in-Charge of Chapter Organization and the Secretary of the Association.

Temporary Officers

The preliminary steps in the organization of a local chapter shall be conducted by a temporary chairman, a temporary secretary and an organization committee of at least five members elected from among the petitioners.

Permanent Officers

Immediately after the charter has been issued, the temporary officers shall call a meeting for the purpose of electing permanent officers for the chapter. It is desirable that a nominating committee be appointed, or elected, for the purpose of suggesting nominees for the several offices, and also the directorships.

Chapter Officers

The permanent officers of each local chapter shall be a President, a Vice-President, a Secretary and a Treasurer and five Directors. The offices of Secretary and Treasurer may be combined if desired. Officers shall be elected for a period of one year and are eligible for re-election. Officers shall be ex-officio members of the Board of Directors.

Term of Office

The fiscal year of the chapters shall be the same as the fiscal year of the National Association, namely, from September 1 to August 31, and the officers shall retain office for this period.

Annual Meeting

Each chapter shall hold an annual meeting not later than May 31 of each year, for the purpose of electing officers for the following year. The officers elected at such meetings shall assume office at the close of the current fiscal year—August 31.

Nomination Committee

At each annual meeting there shall be elected a Nomination Committee of three members who shall prepare a list of nominees for the various offices and directorships to be filled at the ensuing annual election. These nominees shall be transmitted to the members of the chapter by the chapter secretary at least three weeks in advance of the annual meeting. Nominations may also be made at the annual meeting by any two members present.

Duties of the President

The President shall be the chief executive officer of the chapter. He shall preside at all meetings of the Board of Directors and of the chapter. He shall approve all expenditures from chapter funds upon authorization of the Board of Directors. He shall designate the special duties of the members of the Board as indicated in the section dealing with the duties of Directors. He shall perform such other duties as may be necessary for the supervision of the activities of the chapter.

Duties of the Vice-President

The Vice-President shall perform the duties of the President in the absence or disability of that officer.

Duties of the Secretary

The Secretary shall maintain a register of chapter members. He shall give notice of all meetings. He shall make reports of each meeting of the chapter and of the Board of Directors to the Secretary of the National Association, and to the Director in charge of chapters. He shall act in general as the point of contact between the chapter and the National organization.

Duties of the Treasurer

The Treasurer shall keep all financial records and books of accounts. He shall make an annual report of the finances of the chapter to the Board of Directors, a copy of which shall be forwarded to the National Secretary.

Duties of the Board of Directors

Immediately after each annual election the President of each local chapter shall designate one member of the Board of Directors to have general supervision of Meetings, one for Membership, one for Publications, one for Publicity, and one for Research and Standardization. The Directors so designated shall assume such duties as of September 1 following. The Directors, in addition to their general duties as members of the Board, shall supervise the activities of the chapter in the special fields assigned to them. In

this work they shall work in close association with the Directors-in-Charge of the similar activities for the National Association. They may at their discretion appoint committees from the members of the chapter to assist them in carrying on the work under their direction, and it is recommended that this practice be followed in all cases.

Financial Support of Local Chapters

The National Association will defray the expenses of local chapters on the following basis:

(a) The National Association will furnish to the local chapters all the necessary stationery for notices and correspondence. Requisitions for stationery should be made by the local secretary.

(b) The National Association will defray the expense of preparing and mailing notices of regular chapter meetings on the basis of five cents for each notice sent out. In order to keep this expense within reasonable limits the number of notices which will be paid for on this basis is limited to twice the membership of the chapter. If a chapter sends out more than this number of notices, the expense will have to be borne by the chapter. Notices to the National Secretary and Director-in-Charge of Chapters and to the secretaries of other chapters may be counted in the number of notices mailed. Payment for notices each month will be based on the actual number of notices sent out within the above limit. The chapters will be paid their allotments each month on receipt of the reports of chapter meetings. The secretary in making his report of chapter meetings should note thereon the number of notices sent out.

(c) The National Association will pay to the local chapters $15 for each meeting held during the year up to a limit of twelve meetings. This allowance may be used for rent of room, expense of speaker or any other items, according to the judgment of the local officers. The payment will be made on the basis of the secretary's report of the meetings held.

(d) The National Association will remit the membership dues of the secretaries of local chapters.

Local Dues

There shall be no local dues for chapter membership, but the chapters may, if they wish, levy special assessments on their members not in excess of $5 per head to meet special contingencies. Such assessments must be approved by fifty per cent of the chapter members.

An excellent way to supplement chapter funds is to hold chapter meetings in the form of dinners, charging to the members a small addition over the cost of the dinner—usually twenty-five cents or fifty cents. This plan has been followed very successfully by most of the chapters.

Use of Chapter Funds

The chapters may expend their funds either from national grants or from other sources in any way they see fit, provided that all expenditures must be approved by the chapter presidents and semi-annual financial statements must be made to the National Secretary on special forms which are supplied for that purpose.

Expenditures For Other Purposes

Chapter funds as outlined above are to be used in the conduct of the local chapter. The necessary expense for work which the chapters may undertake in behalf of other departments of the National Association, such as membership, is a proper charge against the budgetary appropriations of such departments and need not be paid out of the regular chapter funds; all such expenditures, however, must be approved in advance by the Director-in-Charge of the department involved. For example, if the chapter plans a membership campaign the plan of the campaign and an estimate of the expense should be sent to the Director-in-Charge of Membership for his approval before it is started. If approved, the expense will be borne by the Department of Membership.

Reports of Meetings

The secretary of the chapter shall report each meeting of the local chapter to the National Secretary on special forms supplied for this purpose. Reports should be made at least once each month, and oftener if additional meetings are held.

Annual Audit

There shall be an annual audit of the books of the treasurer of each local chapter, copy of which shall be furnished to the National Secretary. Each treasurer shall turn over all records and funds to his successor.

Cancellation of Charter

Charters may be revoked by the Board of Directors as set forth in Section VII of the constitution for local chapters. If any chapter fails to hold a meeting during any period of sixty days between September 1 and June 1 of any year the charter of that chapter may be cancelled at the discretion of the National Board of Directors.

FORM OF CHARTER
NATIONAL ASSOCIATION OF COST ACCOUNTANTS
CHARTER AND CONSTITUTION
OF

The .... Chapter

Messrs. ....

....

....

being MEMBERS of the National Association of Cost Accountants and.................

....

....

....

being JUNIORS of the National Association of Cost Accountants, having made application for authority to establish a local chapter of the Association in the................. district, as hereinafter defined, and such application having been approved by the Director-in-Charge of Chapter Organization and by the Executive Committee, on behalf of the Board of Directors of the National Association, the above-mentioned MEMBERS and JUNIORS of the National Association of Cost Accountants are herewith authorized and empowered to establish a chapter of the Association in the said district, subject to the provisions of the Constitution of Government hereinafter set forth and subject to such Rules and Regulations as have been established or may hereafter be established by the Board of Directors or the Executive Committee of the National Association of Cost Accountants.

Name of Chapter

SECTION I

This Chapter shall be known as the . ... Chapter of the National Association of Cost Accountants

Boundaries of the Chapter

SECTION II

The chapter is authorized to accept members from the following territory:

Objects of the Chapter

SECTION III

The objects of the Chapter shall be as follows:

(a) To promote better acquaintance among the members of the National Association resident within the territory of the Chapter.
(b) To hold meetings for the discussion of cost questions and for the advancement of the science of cost accounting by the exchange of ideas.
(c) To aid in furthering the best interests and in carrying out the objects of the National Association.

Membership of the Chapter
SECTION IV

The membership of the Chapter shall consist of the members of the National Association of Cost Accountants, resident within the territories set forth in Section II of this instrument. The MEMBERS and JUNIORS named as petitioners in this instrument shall be the Charter Members of said chapter.

Government of the Chapter
SECTION V

The officers and governing bodies of the chapter shall be elected in the manner prescribed in the Rules and Regulations for Local Chapters.

Finances of the Chapter
SECTION VI

The financial affairs of the chapter shall be conducted in accordance with the provisions set forth in the Rules and Regulations for Local Chapters.

SECTION VII

This Charter may be revoked by vote of the Board of Directors of the National Association, provided that the officers of the chapter shall be given notice of such proposed action thirty days in advance of the meeting of the Board, at which it shall be considered and may be represented before the Board when the question of revocation is discussed. If no meeting of the chapter is held during any period of sixty days between September 1 and June 1 in any fiscal year the National Board of Directors may at its discretion cancel the charter of the chapter.

Given under the Seal of the Association this . . . . . day of . . . . . in the year . . . .

. . . .
Director-in-Charge of Chapter Organization.

. . . .
President.

. . . .
Secretary.

AMERICAN SOCIETY OF CERTIFIED PUBLIC ACCOUNTANTS.—This society has its headquarters at 421 Woodward Building, Washington, D. C. Its official organ is "The Certified Public Accountant." Its officers consist of a president, five vice-presidents, a treasurer, a secretary, and a general counsel. To secure proper distribution of activities, the country is divided into ten districts, one director being chosen from each district. Each state also has a representative. Committees appointed are: one on Professional Education, one on Ethics, one on Legislation, and one on the Relations of the national organization with State Societies of Certified Public Accountants.

The American Society was organized in 1921 and has a membership of about 1,000. Its general aim is to extend and protect the rights and privileges of certified public accountants and generally to promote the interests of the accounting profession as they relate to the country as a whole. It co-operates with duly organized State Societies, and members are encouraged to join these state organizations.

CONSTITUTION OF THE AMERCIAN SOCIETY OF CERTIFIED PUBLIC ACCOUNTANTS

[As amended July 1, 1923]

Article I

The name of this organization shall be The American Society of Certified Public Accountants.

Article II

The object of this society shall be to protect and foster the certificate of Certified Public Accountant, as granted by the States and political subdivisions of the United States of America.

Article III

The membership of this society shall consist of certified public accountants. Every member shall be the legal holder of a C. P. A. certificate issued by a State, or political subdivision of the United States of America.

Article IV

Any certified public accountant may be admitted to membership upon application, supported by such evidence as may be considered satisfactory by the board of directors as establishing his lawful possession of a C. P. A. certificate granted by a State or political subdivision of the United States of America.

Article V

Upon admission every member shall be entitled to a certificate of membership in this society, and each member shall agree in writing, prior to receipt of such certificate, to surrender the same to this society in the event of withdrawal or termination of membership for any cause except death.

Article VI

The members of the society shall be classified by States according to residence.

The members from each State shall elect from their number a representative or representatives for that State and shall be entitled to one representative for each 50 members. Each State whose membership is less than 50 shall be entitled to one representative. A State which has more than 50 members shall be entitled to one representative for any membership remainder which is a major fraction of 50.

The States shall be grouped into districts as follows:

The first district shall be composed of the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut.

The second district shall be composed of the States of New York and New Jersey.

The third district shall be composed of the States of Pennsylvania, Maryland, and Delaware, and the District of Columbia.

The fourth district shall be composed of the States of Ohio, Michigan, Indiana, Kentucky, and West Virginia.

The fifth district shall be composed of the States of Illinois and Wisconsin.

The sixth district shall be composed of the States of Tennessee, North Carolina, South Carolina, Mississippi, Georgia, Florida, Virginia, and Alabama.

The seventh district shall be composed of the States of Washington, Oregon, Wyoming, Idaho, and Montana.

The eighth district shall be composed of the States of California, Nevada, Arizona, Colorado, Utah, and New Mexico.

The ninth district shall be composed of the States of Texas, Oklahoma, Arkansas, and Louisiana.

The tenth district shall be composed of the States of North Dakota, South Dakota, Minnesota, Iowa, Nebraska, Missouri, and Kansas.

The representatives of the States of each district, except the second district, shall elect from their number one director annually: Provided, however, That no member who is a resident of the same State as the retiring director may be elected director except by unanimous vote of all the representatives of the States of that district. The representatives of the States of the second district shall elect three directors annually.

The governing body of the association shall be the board of directors, consisting of the directors elected by the State representatives by districts for a term of one year and until their successors shall have been elected and qualified, and such officers elected by said board of directors who are not regularly elected members of the board.

Article VII

The directors shall elect annually from the membership of the society a president, five vice-presidents, a secretary, and a treasurer, all of whom shall serve for a period of

one year and until their successors have been elected and qualified and all of whom shall be members of the board of directors by reason of such election.

Article VIII

Amendments to the Constitution or By-Laws of this society, which have been recommended by not less than twenty-five members, or a majority of the Board of Directors, shall be submitted to the members for a mail vote, and when approved in writing by a majority shall be declared by the president to be effective.

BY-LAWS OF THE AMERICAN SOCIETY OF CERTIFIED PUBLIC ACCOUNTANTS

(As amended July 1, 1923)

Article I

It shall be the duty of the board of directors to conduct the affairs of the society. It shall be their duty to perform such acts as shall protect and foster the C. P. A. certificate as granted by the States, or political subdivisions, of the United States of America. To this end they shall supervise the publication of a monthly magazine, to be known as "The Certified Public Accountant"; they shall take cognizance of all present and proposed legislation relative to the granting of the C. P. A. certificate and shall take such action in respect thereto as in their judgment will further the objects of the society; they shall collect and consider evidence indicating that any holder of a C. P. A. certificate granted by a State board has committed any act which would be a cause for the rescinding of his certificate, and if the evidence in their opinion justifies, take action to assist the State boards in securing a trial and determination of the case; they shall collect and consider evidence concerning the violation of any statute regulating the granting of C. P. A. certificates, and if, in their opinion, the evidence justifies, take action to assist the State boards in forwarding the prosecution of such violation.

Article II—Duties of Officers

It shall be the duty of the president to preside at all meetings. The duties of vice-presidents, treasurer, and secretary shall be those usually appertaining to such office.

Article III—Meeting of the Board of Directors

The president shall call meetings of the board of directors whenever he considers it advisable, and upon written request signed by four directors the secretary shall call such meeting. A quorum shall consist of seven members of the board.

Article IV—General Meetings

Conventions and meetings of the members or representatives shall be held as the board of directors may consider desirable, or they shall be held on the written request of fifteen representatives or fifty members, ten of whom shall reside in ten States. The annual meeting shall be held in the month of September.

Article V—Election of Representatives, Directors, and Officers

For the purpose of individual membership activity and expression in the business of this society, each State shall be considered a distinct unit. The membership of each State shall during the month of June in each year nominate by mail, on ballots furnished by the society, the number of representatives to which the State shall be entitled.

The membership of each State shall during the month of July of each year elect from among the nominations so made the number of representatives to which the State is entitled. The election of representatives shall be by mail on ballots furnished by the society.

During the month of August the elected representatives of the States in each district shall by mail vote, on ballots provided by the society, elect a director (in the second district three directors) from among their own number.

On the last day of the annual meeting in each year the newly elected directors shall convene at the headquarters of the society and elect the officers of the society and transact such other business as may be necessary. The retiring board of directors shall hold a

meeting the day previous for the purpose of closing up the affairs of the year and preparing its annual report.

In voting for directors each representative shall indicate his first, second, and third choices. In case no person receives a majority of first choice, the votes shall be counted with a value of three points for first choice, two points for second, and one point for third choice.

Article VI—Auditors

Three auditors shall be nominated and elected annually by the membership at the same time and the same manner as the State representatives. The duties of the auditors shall be not only to audit the accounts of the society, but also to audit the elections.

Article VII

This society shall maintain offices in the city of Washington, D. C., and such other place or places as may be determined by the board of directors.

Article VIII—Fees and Dues

The initiation fee, which shall include dues for that year to be paid by each member upon admission, is twenty-five dollars, until such time as the board of directors see fit to reduce it, and no application for membership shall be considered unless it is accompanied by this fee.

The dues to be paid by each member are fifteen dollars per year, until such time as the board of directors see fit to reduce it, payable during the month of January for that year. The dues shall include an annual subscription to "The Certified Public Accountant."

Article IX—Expulsion

Any member whose dues shall remain unpaid thirty days after the last day for payment as provided in Article VIII may be dropped from the membership rolls one month after written notice has been given. His membership status may be restored by a two-thirds vote of the board of directors.

The board of directors shall expel any member whose C. P. A. certificate has been rescinded by any State.

The board of directors may by a two-thirds vote revoke the certificate of any member for sufficient cause after written notice to the holder thereof and a hearing thereon. The secretary shall issue such notice whenever requested by three directors or five members of the society,

SECTION 29

ECONOMICS[1]

Wealth

DEFINITIONS.—Economics is the science of wealth.

Wealth consists of material objects owned by human beings. The fact of ownership implies utility, so that it is not necessary to include the word "utility" in the definition. Some writers include in their definition of wealth the idea of utility but omit the concept of ownership, but by doing so they include things which, although useful, are not ordinarily regarded as wealth, as, rain, the sun, air, and so on.

Money is that form of wealth in terms of which other forms of wealth are measured. Money must be carefully distinguished from wealth in general. Were money the only form of wealth, making money on the part of one person might necessarily involve losing it on the part of another. In reality making money simply means acquiring additional ownership of wealth and this may be accomplished by one person without necessary loss on the part of another. The amount of wealth in form of money is small compared with that in other forms. The amount of wealth in form of money is determined by the necessity of people for money just as the amount of wealth in form of houses is determined by the need people have for that form of wealth.

Prices are determined by the ratio of wealth in form of money to wealth in other forms. Assuming that no change in the method of conducting exchanges takes place, if the quantity of wealth in form of money increases more rapidly than that in other forms, money becomes relatively more abundant and prices rise. If the opposite is true, money becomes relatively scarce and prices fall. When prices are properly adjusted to the amount of money the absolute amount of money in existence is of little consequence.

Money is a convenience, but not an indispensable means of acquirin wealth. Wealth is acquired by fashioning iron, wood, etc., into useful forms not by increasing the quantity of money in circulation beyond an amoun sufficiently large to meet ordinary requirements. However, our moder complex society could not function without money.

Money as the essence of wealth was the concept upon which a school c economists known as **mercantilists** rested their theories. They believe that a nation, to be wealthy, should have an abundance of money. The regarded international trade as beneficial only if the amount of money re ceived exceeded that expended, and established policies intended to kee

[1] By permission of author and publisher, this section is adapted practically in its entiret from "Elementary Principles of Economics," by Professor Irving Fisher, published by th Macmillan Company. Professor Fisher's method of treatment indicates the close relatio ship which exists between accounting and economics.

money from being sent out of the country. A **favorable balance of trade** is still regarded by many as a factor in prosperity.

CLASSIFICATION OF WEALTH.—Wealth consists of **real estate** and **commodities.** Real estate consists of **land** and **land improvements.** Commodities are of endless variety—clothing, machinery, furniture, etc. Following is a brief outline of the forms of wealth:

I. Wealth

1. Real Estate
   - (a) Land
     - (1) Farm land
     - (2) Highways
     - (3) Building land
   - (b) Land improvements
     - (1) Buildings
     - (2) Drainage systems
     - (3) Embankments, etc.

2. Commodities
   - (a) Raw materials
     - (1) Mineral
     - (2) Agricultural
     - (3) In various stages of manufacture
   - (b) Goods in process
   - (c) Finished goods
     - (1) Consumable
     - (2) To be used to produce other goods

MEASURING WEALTH.—Wealth may be **measured** by units of **weight** or by units of **space.** Thus the pound is a unit of weight. Units of space may be of volume, area, or length. Such measures are applied in conjunction with qualitative or descriptive terms to afford a complete statement of essential information regarding any given homogeneous portion of wealth, as, 10 acres of meadow land, a pound of cane sugar, a quart of maple syrup, etc.

PRICE.—The price of any given kind of wealth is the quantity of any other kind of wealth which can be exchanged for one unit of it. Thus, if 100 bushels of corn exchange for \$50 in gold, the price of a unit of corn (bushel) is one-half of a gold dollar. Likewise, the price of a gold dollar is 2 bushels of corn. Price is usually indicated in terms of money because money is the commodity especially adapted to facilitate exchange. It is more acceptable in exchange, as a rule, than other forms of wealth for the reason that it can be exchanged readily for other forms of wealth.

Barter consists of exchange without the use of money as one of the forms of wealth exchanged.

VALUE.—The value of a given quantity of wealth is determined by multiplying the number of units of which it is composed by the price per unit. Thus if corn is worth one-half dollar per bushel, the value of 100 bushels is $100 \times \frac{1}{2}$, or \$50. Value, like price, may be expressed in terms of commodities other than money. By expressing value of all kinds of wealth in terms of money, we reduce them to a common basis of comparison. There is nothing absolute about value as thus expressed, and, in fact, relative values are constantly changing as the result of changes constantly taking place in production and consumption of all classes of commodities. Moreover, measurement of wealth is at best an approximation. The degree of accuracy attainable is often exaggerated. Quantitative measurements can be made with relative accuracy. The error in measuring value arises in attempting to determine what amount of wealth a measured unit represents. Frequently this is determined by **appraisal**, which is a more or less inaccurate attempt to ascertain what a thing should sell for. In case of staple commodities for which there is a regular market, reference may be had to current sales prices and the appraisal may be made within narrow limits of accuracy, say 1%. In case of real estate located in cities where sales

are being constantly made, an error of not more than 10% may be expected, whereas in out-of-the-way places appraisals are untrustworthy.

PROPERTY.—The fundamental attribute of wealth is its usefulness, i.e., the benefits which are derived from it. Such benefits may be in various forms other than mere receipt of money, but they are all measurable in money. The accuracy with which such benefits are measurable depends upon their nature. **Time** is usually an essential factor and it is customary in many instances to assume that benefit derived is in direct proportion to expiration of time, as when rentals are stated as so much per month. Enjoyment of benefits of wealth entails the **cost** of securing it and taking care of it. Costs are measured in terms of money, as is wealth. One who owns wealth possesses certain **rights,** which are simply rights to enjoy the benefits of wealth. It is the possession of these rights which constitute **property.** These property rights are not material things but are merely abstract relationships, which may be included under the term **ownership.** Since past benefits are expired, property consists only of rights to future benefits. Unencumbered ownership of wealth means the right to all its future benefits. Anything less than unencumbered ownership is called an

Table 1. Typical Cases Illustrating the Existence of Wealth Behind Property Rights

Name of Case	Wealth on which the Property Right is Based	Benefits of That Wealth	Description of Property Right	Certificate of Ownership, if any
Unencumbered	Farm	Yielding crops	Right to all use of farm forever	Deed
Partnership	Dry goods	Yielding profits from sale	One partner's "undivided" fractional interest	Articles of agreement
Joint Stock	Railway	Yielding profits	The shares of stock	Stock certificate
Street Franchise	Street	Use of same for passage, etc.	Right to run cars through it	Charter
Lease or Hire	Dwelling	Use of same for shelter, etc.	Right of tenant till fixed date	Lease
Railway Ticket	Railway	Transportation	Right to specified trip	Ticket
Railway Bond	Railway	Payment of "interest" and "principal'	Right to same and contingent right to foreclose	Bond certificate
Personal Note	All the possessions of the signer	Payments	Right to same and in default thereof right to collateral security	Note
Work due from Contract Labor	Workmen	Work	Right of employer to performance of same	Written contract

interest in wealth. The present value of the future benefits is their discounted worth. Where more than one party possesses an interest in ownership, the rights to future benefits are parceled out on some agreed basis. Property rights are frequently evidenced by written documents known as **certificates of ownership.** Examples are stock certificates, warehouse receipts, bonds, etc. The preceding Table 1 lists important forms of property rights, shows upon what form of wealth they are based, the benefits derived, nature of the property right, and evidence or certificate of ownership, if any.

Capital and Income

ACCOUNTING FOR CAPITAL.—Wealth may be considered as at a given time or it may be considered over a period of time. The former concept is static, whereas the latter is dynamic, because changes in amount and character of wealth occur only over periods of time. The concept of time involves the concept of a flow of values, as, for example, where purchases and sales are made over a year's period, where crops are brought to fruition, where minerals are converted to useful forms, etc. This conception of flow makes necessary the distinction between wealth as at a given point in time and the benefits derived from wealth over a period of time. Wealth at any given time is **capital.** The benefit derived therefrom over a period of time is **income.** The procedure necessary to distinguish capital from income is the fundamental problem in accounting. The capital of an individual at a given point in time is disclosed by a **balance sheet,** which is a statement showing the positive and negative elements of his wealth. His total assets constitute his **economic capital.** The difference between his total assets and his liabilities constitute his **accounting capital,** net worth, or proprietorship. In case of partnerships the ownership is split up among two or more individuals. In case of corporations the division of ownership is sometimes very great and is represented by certificates of ownership known as stock certificates.

The asset and liability items in a balance sheet undergo constant modification, with the result that the **accounting capital** changes also. Since accountants prefer usually to retain at its original figure the account showing accounting capital, a net increase in accounting capital is recorded in a **Surplus** account; a net decrease in a **Deficit** account. In case of corporations issuing shares of stock having a par value, there is additional reason for this procedure, in that the Capital Stock account represents the total par value of stock outstanding. Sometimes current gains are carried to an Undivided Profits account, so that capital may be distributed among three accounts—Original Invested Capital, Surplus, and Undivided Profits. Sometimes in case of corporations a recapitalization is effected, the nominal capital being increased or decreased, according to requirements. **Stock dividends** have become a familiar means of increasing the amount of outstanding stock. When the number of shares remains unchanged, their value nevertheless changes continually as surplus changes in amount.

Book value of stock is not usually the same as its market price, because the bookkeeper's valuation differs from that of the market. The bookeeper's valuation is based largely on cost, the market's valuation is based on prospective earning capacity.

Insolvency is a condition in which assets are not equal in amount to liabilities. Before such a status results the whole amount of accounting capital must be absorbed by losses. Since every line of business is subject to periods

of depression, there must be adequate capital to absorb any reasonable amount of losses. The percentage of capital to liabilities necessary to accomplish this varies greatly in different lines. It may be as high as 50% in some cases and as low as 5% in others. Inadequacy of capital is, perhaps, the most frequent cause of insolvency and consequent bankruptcy. As the relative amount of capital decreases, the risk of insolvency increases. **Technical insolvency** may result from failure to preserve correct proportions among current, working, and fixed assets even though from the point of view of the balance sheet as a whole the business is solvent.

COMMUNITY CAPITAL vs. INDIVIDUAL CAPITAL.—Having found the net capital of each member of a community, the net capital of the community is found by combining the net capital of the members. The same result may be achieved by canceling each asset item of the community against an equal liability item. These are known as the method of **balances** and the method of **couples,** respectively.

Illustration.—The following are the balance sheets of three persons, A, B, and C:

Balance Sheet of A

C's note	$ 40,000	Note held by B	$ 30,000
Real estate	65,000	Capital	155,000
Bonds	80,000		
			$185,000
	$185,000		

Balance Sheet of B

A's note	$ 30,000	Mortgage held by C	$ 25,000
Real estate	50,000	Capital	75,000
Shares of stock	20,000		
			$100,000
	$100,000		

Balance Sheet of C

B's mortgage	$ 25,000	Note held by A	$ 40,000
Store	40,000	Capital	40,000
Personal property	15,000		
			$ 80,000
	$ 80,000		

By adding together the capital accounts of A, B, and C, the total capital is obtained by the method of balances. By canceling the items which appear twice, i.e., as asset and as liability items, the same result is secured by the method of couples. The results of both methods are summarized thus:

Method of Balances		Method of Couples	
A's capital	$155,000	Real estate	$115,000
B's capital	75,000	Bonds	80,000
C's capital	40,000	Shares of stock	20,000
		Store	40,000
	$270,000	Personal property	15,000
			$270,000

The method of balances shows capital shares of each individual. The method of couples shows the amount of each kind of capital asset.

There are among the capital assets thus shown, two items representing certificates of ownership, viz., "bonds" and "shares of stock." Assume that these are both securities of Corporation D, whose balance sheet is as follows:

Ba'ance Sheet of Corporation D

Factory	$100,000	Bonds held by A	$ 80,000
		Stock held by B	20,000
	$100,000		$100,000

By the method of couples we now have for all four balance sheets:

Real estate	$115,000
Factory	100,000
Store	40,000
Personal property	15,000
	$270,000

By the process of combination all debts are eliminated and a true statement of the combined wealth represented by the four balance sheets is secured. By combining all balance sheets in which assets on certain ones are liabilities on certain others, this result is secured. The procedure is analogous to that of consolidating the balance sheets of affiliated companies, all intercompany obligations being eliminated. It may be described as substitution of the thing itself for the evidence of ownership thereof. Taking all balance sheets together, it is evident that wealth stated therein in the form of **rights** to wealth constitutes a duplication, because the actual property to which such rights refer is listed as assets on other balance sheets. If balance sheets were obtainable for all real and fictitious persons, thus including all assets and liabilities, it would be possible to secure, by using the method of balances, a complete statement of actual wealth. All representatives of wealth such as stocks, bonds, notes, etc., would be eliminated; only the actual property in form of cash, buildings, merchandise, etc., would be included. The fact that such rights to property are not in themselves wealth does not mean that they are not of great usefulness in making wealth more effective than it would otherwise be.

The general scheme of the industrial world as it is now constituted, is such that by means of **credit** certain classes of people control much more wealth than they own. Credit results in the duplication above mentioned. In itself it does not result in an increase of the world's capital, although it may indirectly cause its increase by stimulating more effective combinations of wealth.

When both the actual wealth and the representative forms of wealth are taxed, the result is **double taxation.** Any just scheme of taxation must take this situation into consideration. Likewise any attempt at placing a valuation upon the combined wealth of a community should allow for all such duplications.

ACCOUNTING FOR INCOME.—Income is the flow of benefits derived from wealth over a period of time. These benefits need not be in form of money, although it has become customary to measure them in terms of

money. Usually the benefits of property owned by an individual are sold for money, which he in turn uses to buy what he needs for the satisfaction of his wants. Thus a farmer's income in the form of crops is more than he requires for the sustenance of himself and family, so he sells a portion of it and uses the proceeds to buy clothing and other useful commodities, or perhaps adds a part of it to his capital, thus increasing his future income. In some cases the income is less obvious, although just as real, than in other cases. Thus the income from a house is more obvious when it is rented at a fixed monthly rental received in money than when the owner occupies it and receives his income in the form of shelter, although the latter is as much a flow of benefits as the former.

Since income is a flow of benefits it can occur only over a period of time. This brings out the distinction between capital and income, viz., that whereas capital is a fund existing at a given instant, income is a flow of benefits extending over time.

Since income can be measured in terms of dollars and cents it can be accounted for. Revenue constitutes positive income. Expenses constitute negative income or outgo. Expenses are almost always necessary to the creation of income. Expenses or costs are measurable in terms of money and can therefore be accounted for. They need not, however, consist of money or even involve its disbursement. Total income (revenue) attributable to a given division of capital, minus total outgo (expense) attributable to the same capital, gives net income attributable to that capital.

Illustration.—A owns a factory in which he has invested $20,000. During a given year his revenue amounts to $8,000 and his expenditures to $4,000, as follows: fuel $1,000, labor $1,200, repairs $200, depreciation $800, salaries $800. In account form this is stated as follows:

Income Account

Fuel	$1,000	Sales	$8,000
Labor	1,200		
Repairs	200		
Depreciation	800		
Salaries	800		
Balance, Net Income	4,000		
	$8,000		$8,000

The item **depreciation** represents the estimated depreciation on factory building and machinery, which cost originally $16,000 and has an estimated average life of 20 years, so that 5%, or $800, represents the annual depreciation expense, straight-line method, assuming that the plant has no scrap value at the end of the 20-year period. Another way to care for depreciation is to consider it as an expense only when replacement takes place, ignoring it in the intervening years. But the effect of such a policy is to burden the year in which such replacement is made with more than its proper share of expense. This is illustrated in the following chart (Fig. 1), which shows graphically the income accounts of A for a period of 14 years. The entire space above the horizontal line represents revenue; that below represents expense. In the first year shown revenue exceeds expense by the amount represented by space *a*. In the second, expense exceeds revenue by the amount represented by space *b*. It is in this year that the replacement is made, the whole cost of replacement being charged to expense. The following years

show a fairly uniform rate of excess of revenues over expenses. The trouble is that, whereas normally a surplus is shown, in one year out of each 20 (assuming that a replacement must be made every 20 years) a large deficit results due to charging the cost of replacement to expense.

To prevent this uneven distribution of costs, a **reserve for depreciation** is employed, the cost of construction of the building being in the first instance capitalized and the expense resulting from its depreciation being charged to Profit and Loss in 20 instalments (equal or otherwise according to the method of writing off depreciation followed) and reserve for depreciation being credited. According to this plan, when the time arrives to make the replacement, either the original cost of the building replaced or an equal amount of the cost of replacement may be charged, not against Profit and Loss but against the reserve for depreciation thus accumulated. As a consequence the depreciation expense is distributed over the period representing the life of the building, each year bearing its share of the expense. In the diagram below, under this plan, year number 2 would not be charged with

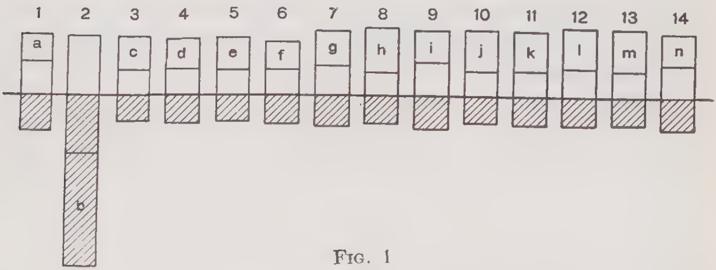

FIG. 1

a disproportionate share of expense, but instead each year, except the second, would show a somewhat larger shaded area, the increase being represented by 1/20 of the total depreciation cost for the 20-year period.

As the number and variety of capital assets increase, the irregularity in net income resulting from charging replacements direct to Profit and Loss decreases, because in such case replacements become more and more evenly distributed as the variety and number of depreciating assets increase. Thus if, in the above illustration, twenty houses instead of one are owned, and they have been constructed so that one is replaced each year, the need of a depreciation reserve to equalize profits is greatly lessened.

A man's total income is the combined income from all the capital he owns. Theoretically, it is possible to set up a separate income account for each item of his capital, debits being entered for all costs and credits for all gains or benefits applicable to each such item. The difference between costs and benefits applicable to any item of capital is the net income or deficit applicable to it. By considering costs and benefits applicable to all items of his capital, his total net income is determined.

Fundamentally, only real persons have net incomes. Fictitious persons do not have net incomes because the so-called net capital of fictitious persons is really a liability to real persons who are stockholders. The net income is really that of the stockholders who receive the benefits of which such net income consists.

OMISSIONS AND ERRORS IN PRACTICE.—Individuals, when accounting for their incomes, omit from their capital accounts their own persons because free human beings are not ordinarily regarded as wealth; but in their income accounts they enter their earnings. Again, individuals enter their dwellings in their asset accounts but do not enter the income derived therefrom, in form of shelter, in their income accounts.

Mere receipts and disbursements of money are sometimes confused with income and expense. Only under certain circumstances does accounting for money income and outgo give a fairly true picture of income and expense, viz., when all income and outgo are in form of money. Generally, however, money income is an unsafe indicator of real income.

COMBINING INCOME ACCOUNTS.—It is possible to ascertain the income of society by combining all income accounts, just as it is possible to ascertain society's capital by combining all balance sheets, as shown above. There are two ways of accomplishing this, viz., the methods of **balances,** and of **couples,** these corresponding to the methods employed to combine balance sheets.

By the method of balances it is necessary simply to make up the income accounts of all persons for a given period so that society's total income is included. The net balances added together give society's total net income for the period in question.

The method of couples is based on the fact that there are self-canceling or offsetting items in income accounts, just as there are in balance sheets. This is true because an item which represents a cost in one income account often represents a benefit in another income account. Thus, if a plumber repairs a house the charge for services made to the owner represents income to the plumber, whereas to the owner it represents outgo or expense. In fact, the business world is continually engaged in passing on services from hand to hand, but with this important qualification, viz., that between the original effort to give utility to something and the final stage in which somebody gets the benefit from that original effort there are frequently many stages. Throughout this process, which begins by the creation of utility through somebody's effort and finally ends in giving a satisfaction or a benefit, there is a series of exchanges or **interactions** having both a positive, or benefit side and a negative, or expense side. The only benefits which do not have a corresponding negative side are those which take the form of **consumption.** The only costs which do not have a corresponding benefit side are the labor and trouble or original creation. Labor and trouble on the one hand and satisfactions on the other are the outer edges or limits of a chain of productive processes, each link of which has a positive, or benefit side and a negative, or cost side, the two in each case canceling or offsetting each other.

PRODUCTION, TRANSPORTATION, AND EXCHANGE.—The interactions mentioned above are of three chief kinds:

1. Those which change the form of wealth.
2. Those which change the position of wealth.
3. Those which change the ownership of wealth.

The first type of interaction is equivalent to what is ordinarily known as **production,** although all three processes really constitute parts of the productive process. It includes manufacture and agriculture. As a rule, production consists of a series of stages, each representing an interaction. The finished product of one stage becomes the raw material of the next. Each

operation is a credit to the groups of instruments earlier in the series and a debit to the group next later in the series.

The second group of interactions is termed **transportation.** The distinction between transportation and production in the narrower sense is that, whereas production consists in changing the position of the parts as related to one another, transportation consists in changing the position of wealth as a whole. Transportation also consists of a series of canceling interactions. Thus, when merchandise is transported between merchants it becomes a debit to the one who receives it and a credit to the one who transmits it.

The third group of interactions constitutes **exchange.** This is also a form of interaction as between parties. An exchange usually takes the form of a pair of interactions, two commodities being transferred in opposite directions between owners. An exchange consists of two transfers, each of which is a self-canceling interaction. It follows that each exchange is self-canceling and so does not form a part of society's income. A commodity may undergo a series of exchanges, each self-canceling, so that no income results until it comes into the hands of the ultimate consumer who is the first and only one to derive service or benefits from it.

It must be borne in mind that in speaking of income, society's income, as distinguished from the income of individuals, is meant. The owner of a forest may by selling it derive income but society derives no income from the transfer because the purchaser surrenders a sum equal to that which the buyer receives. The income of society consists only of the benefits or satisfactions derived from consumption.

Although interactions are self-canceling it does not follow that they are useless. They are steps in the achievement of the final income, although they cancel out under the method of couples.

Society's income and outgo never take the form of money, but always of benefits on the one hand and of effort or work on the other. Capital is not for the purpose of making money but to aid production, transportation, and exchange, and thus make society's income greater than it would otherwise be. Many so-called costs of production are in reality self-canceling interactions, not costs in the absolute sense. Expenses paid for in money are of this type. The money paid for wages, rent, materials, etc., although costs to the person making the disbursement, are incomes to other people. "The wages are the earnings of labor; the payment for raw material is received by some other manufacturer, farmer, or miner; the rent is received by the landlord; the interest charges, by the creditor. Labor itself—human effort, not the payment for it—remains, however, uncanceled."

INTERACTIONS OF PRODUCTION ILLUSTRATED.—Not only all money transactions but a great majority of the natural benefits of capital cancel out. This is illustrated in case of a forest from which logs, lumber, furniture, etc., are produced. The gross income produced by the forest consists of logs, but production of logs is merely an intermediate stage, because the logs are in turn debited to the sawmill. The sawmill makes lumber of the logs, the lumber representing the gross income of the mill. The lumber is in turn debited to a warehouse when it is used for repairing it. But the warehouse represents merely an intermediate stage because it is used for storing cloth; thus the cost of the lumber produces income which in turn represents cost to the tailor who buys the cloth. The tailor secures income when he sells a suit of clothes, but this is canceled by the cost of the suit to his customer. The only uncanceled element is the income which the customer receives when he wears the suit and thus secures benefits from it.

Table 2. Society's Income Account

Capital Source	Outgo		Income	
Logging camp			Yielding logs to sawmill	$ 50,000
Sawmill	Receiving logs from logging camp	$ 50,000	Yielding lumber to lumber yard	60,000
Lumber yard	Receiving lumber from sawmill	60,000	Yielding lumber to warehouse	70,000
Warehouse	Receiving lumber from lumber yard	70,000	Warehouse shelter to cloth	80,000
Stock of cloth in warehouse	Shelter from warehouse	80,000	Yielding cloth to tailor	90,000
Stock of cloth of tailor	Receiving cloth from warehouse stock	90,000	Yielding suits to customers	500,000
Stock of clothes of customers	Receiving suits from tailor's stock	500,000	Yielding "wear"	600,000

These various transformations and cancellations are set out in Table 2, which is an income account showing how society derives its income from the forest.

Note the successive cancellation of items. An item on the right is the positive side of an interaction of which the item on the left in the line next below is the negative side. Ultimately, the only surviving item is the "wear" of the suits which represents society's only income from the various stages or interactions. A study of this income account shows that, as regards a certain group of capital goods, such as is described in the first column of the above income account, what is income for one division of capital becomes outgo for another. The $90,000 received when cloth is sold to the tailor represents income for the first five capital groups but not for the sixth capital group—stock of cloth of tailor—for which it represents outgo. In other words, income is always relative to its source. Tables 3, 4 show how the various interactions cancel by the method of balances and the method of couples.

Table 3. Method of Balances

Capital	Outgo	Income	Net Income
Logging camp	....	$ 50,000	$ 50,000
Sawmill	$ 50,000	60,000	10,000
Lumber yard	60,000	70,000	10,000
Warehouse	70,000	80,000	10,000
Stock of cloth in warehouse	80,000	90,000	10,000
Stock of cloth of tailor	90,000	500,000	410,000
Stock of clothes of customers	500,000	600,000	100,000
			$600,000

Table 4. Method of Couples

Income	Outgo
$ ~~50,000~~	
~~60,000~~	~~$ 50,000~~
~~70,000~~	~~60,000~~
~~80,000~~	~~70,000~~
~~90,000~~	~~80,000~~
~~500,000~~	~~90,000~~
600,000	~~500,000~~

By the **method of balances** we determine the amount of income contributed by each capital group. By the **method of couples** we determine society's income in form of service or "wear," but the amounts contributed by the different capital groups are not shown.

The accounting for income by the methods of balances and of couples is analogous to the accounting for capital by these two methods. In accounting for capital the method of balances gives the amount of capital belonging to each individual, whereas the method of couples gives the elements of which total capital consists. In accounting for income the method of balances gives the amounts of income contributed by each capital group, whereas the method of couples shows of what the resulting income consists. In capital accounting the canceling items are **debts.** In income accounting they are **interactions.** Both debts and interactions are self-canceling because they possess both positive and negative sides. Their presence in balance sheets and income accounts is due to double counting, the same debt or interaction being enumerated as both a positive and a negative item.

The fact that these items are self-canceling does not mean that society's total income would be the same were there no debts or interactions. Both are important factors in the creation of additional capital and income.

TRUE COSTS AND INCOME.—From the foregoing it is evident that most of what is termed **cost of production** is not cost. All payments between persons are only cancellations, not costs. Labor or effort is the only ultimate cost. Satisfactions or benefits are the only ultimate income. Between efforts and satisfaction a small or large number of interactions may intervene, depending upon the complexity of the social and industrial organization.

It also follows that much that is termed wealth and income really consists of items which are canceled by other items. Stocks and bonds are of this type. All money salaries and wages are also of this type. A man's real income is the living he gets, and society's income is the total of the benefits enjoyed by its members. Likewise, society's capital is that which exists after all contra items on the balance sheets of its members are canceled. It is only by the application of the method of couples that interactions in society's income account and offsetting items in society's balance sheet are eliminated and society's true income and capital are determined.

RELATION BETWEEN CAPITAL AND INCOME.—The connecting link between capital and income, i.e., the factor which enables us to calculate capital when income is given, is the **rate of interest.** The rate of interest is the **ratio** between income and capital when both are expressed in terms of money. Thus, if a man is willing to pay $600 per year perpetually for the use of $10,000 worth of capital the ratio is 6/100, or 6%.

Another way of defining the rate of interest is to call it the premium on present goods as related to the same goods when they cannot come into our possession until 1 year hence. In an exchange of equivalent present and future goods, present goods are always at a premium; and when the future goods will come into our possession 1 year hence this premium equals the rate of interest. If $100 in present goods exchange for $106 of goods deliverable 1 year hence, the rate of interest is 6%.

The rate of interest enables us to translate present money value into future money value, and vice versa. Thus to translate present value into values of a year hence, we multiply present value by 1 plus the rate of interest, or 1.06, which is known as the **ratio of increase.** If, on the contrary, we wish to translate values of a year hence into present values, we divide by 1.06.

Interest is earned not only by money but by all other forms of wealth.

In economics the chief problem in interest consists in translating future into present values—in other words, finding the value of capital. This is

true because the value of capital is derived from the value of the income produced by it, and only when we know what income a given quantity of capital will produce can we determine the value of that capital. Moreover, to enable us to determine such value with a fair degree of accuracy we must know not only what income the capital will produce this year and next year, but throughout its future useful life, as well as the rate of interest to employ in discounting future income.

For purposes of illustration, we may assume that both future income and rate of interest are known with certainty. These being the conditions, capital value may be computed accurately.

If future income consists of \$1 **due 1 year hence** and the rate of interest is 6%, the present value of \$1 due 1 year hence is $\$1 \div 1.06$, or \$0.943.

If future income consists of two instalments of \$1 each, **due** respectively **1 and 2 years hence,** it is necessary to consider compound interest. One dollar amounts, in 1 year, to \$1.06, and in 2 years to $\$1.06 \times 1.06$, or \$1.1236. It follows that \$1 due 2 years hence is worth at present $\$1 \div 1.1236$, or \$0.889, which added to the present value of \$1 due 1 year hence, gives the present value of these to future instalments, viz., \$1.832.

Similarly the present worth of a sum **due 3 years hence** is found by dividing it by 1.06^3, the present value of a sum **due 4 years hence** is found by dividing it by 1.06^4, and so on.

In determining present value we have to deal either with one future sum, or with a series of future sums, usually the latter. Thus the valuation of a bond involves the valuation of a series of future income items, and that of the principal sum due a given number of periods hence.

When the rate of interest employed in valuing a bond is the same as the coupon rate, the present value is equal to the par value of the bond. If the rate of interest employed is less than the coupon rate, the value of the bond is above par. If it is greater than the coupon rate, the value of the bond is below par.

Since value is a function of the rate of interest, it is evident that changing interest rates exert a direct influence on values, increases in the interest rate being accompanied by decreases in capital values, and vice versa. Different parts of capital are affected differently by changing rates accordingly as the income derived from it is derived in the near or in the remote future. The various effects resulting from the varying remoteness of incomes are shown in Table 5.

Lowering the interest rate results in a general increase in capital values, but the increase varies greatly for different articles. The more enduring parts of capital are affected most. In case of land, possessing infinite durability, halving the interest rate results in a doubling of values. At the other extreme of the scale, the price of bread remains unchanged. A high rate of interest diminishes the attractiveness of income of the remote future as compared with that of the near future.

INTEREST ACCRUED AND INCOME TAKEN OUT.—The increase in capital value is due to the accumulation of interest; its decrease is due to the taking out of income, income being considered in the sense of benefits or satisfactions received by individuals. When the accumulation of interest just equals the income taken out, capital remains at its original amount. If the income taken out exceeds interest accumulated, capital value is impaired; if income taken out is less than interest accumulated, capital value is increased. The principle may be stated as follows:

1. If a property yields a specific income which is known beforehand

Table 5

Capital	Rate of Net Income Per Year	Total Income	Capital Value (Int. at 5%)	Capital Value (Int. at $2\frac{1}{2}$%)
Land	$1,000 per yr. Forever —	Infinite	$20,000.00	$40,000.00
House	$1,000 per yr. For 50 yr.—	$50,000.00	18,300.00	28,400.00
Horse	$100 per yr. For 6 yr. —	600.00	508.00	551.00
Suit of clothes	$20 1st yr., $10 2nd yr.	30.00	28.00	29.00
Loaf of bread	$36.50 per yr. For 1 day —	.10	.10	.10

Table 6

Capital Wealth	Income Taken Out Per Year	Capital Value (Int. at 5%)	Interest Accrued for 1st Year	Increase (+) or Decrease (−) of Capital Value in 1st Year	Ratio of 1st Year's Income to Original Capital Value
Forest land	$1,000 a yr. for 14 yrs., and then $3,000 a year forever	$40,000.00	$2,000.00	+$1,000.00	2.5
Farm land	$1,000 a yr. forever	20,000.00	1,000.00	0.00	5.0
House	$1,000 a yr., for 50 yrs.	18,300.00	915.00	− 85.00	5.4
Horse	$100 a yr., for 6 yrs.	508.00	25.40	− 74.60	19.6
Suit of clothes	$20 1st yr. $10 2nd yr.	28.00	1.40	− 18.60	71.4

and the value of that property is found by discounting this income at a certain rate of interest, if income taken out equals the interest accrued, the value of the capital will be restored each year to the level of the year before.

2. If income taken out exceeds interest accrued, capital value falls below that of the preceding year, the fall equaling in amount the excess of income taken out over interest accrued.

3. If income taken out is less than interest accrued, capital value rises above that of the preceding year, the rise equaling in amount the excess of interest accrued over income taken out.

Table 6 gives income assumed to be taken from five kinds of capital wealth, capital value determined by discounting that income at 5%, interest accrued for 1st year, resulting change in capital value, and ratio of 1st year's income to original capital value.

1. The **forest land** yields $1,000 income the 1st year on a capital value of $40,000, from which, on the 5% basis assumed, the interest accrued is 5% of $40,000, or $2,000. Income taken out is less than interest accrued ($2,000) by $1,000. Therefore, the forest appreciates in the year by the excess, $2,000 − $1,000, or $1,000, and is worth $41,000 at end of the year. It continues appreciating for 14 years, when it is worth $60,000. After that income taken out annually ($3,000) is equal to annual accrued interest on $60,000.

2. The **farm land,** yielding $1,000 yearly in perpetuity, is, on a 5% basis, worth $20,000, and continues to be worth that amount. Income taken out ($1,000) always equals interest accrued from $20,000.

3. The **house** yields the 1st year a $1,000 income on a capital value of only $18,300. Interest accrued on $18,300 is 5% thereof, or $915. Consequently there results an excess of income taken out over interest accrued, $1,000 − $915, or $85, and a corresponding fall of $85 in value of capital. In other words, the house depreciates $85 the 1st year. It continues to depreciate each year until its value vanishes at the end of 50 years.

4. The **horse** depreciates rapidly. Its owner realizes an income of $100 on a capital value of $508, from which interest accrued would be only $25.40. The difference between income taken out and interest accrued is $100 − $25.40, or $74.60. The horse loses that much in value during the year and continues to depreciate for 6 years.

5. The **suit of clothes** yields $20 income the 1st year on a capital of $28, from which interest accrued is only $1.40. It depreciates by the difference, $20 − $1.40, or $18.60.

In all cases interest accrued is 5% of capital value, whereas income taken out may be a higher or a lower percentage. Expressed in percentages the actual rate of value return (i.e., ratio of income taken out to capital) on forest land is 2.5%; on farm land, 5%; on the house, 5.4%; on the horse, 19.6%; and on the suit of clothes, 71.4%. If the rate of value return exceeds the interest rate capital is decreased. The house yields a rate of return only slightly higher than the rate of interest, and lasts 50 years. The horse yields a rate of return nearly 4 times the rate of interest, but lasts only 6 years. The clothes yield a rate of return over 14 times the rate of interest, but last only 2 years.

The above illustrations emphasize **two concepts,** viz., income taken out and interest accrued.

Interest accrued is the income which, if taken out, serves to maintain capital intact, neither increasing nor decreasing it.

Income taken out decreases capital, increases it, or causes its amount to remain stationary accordingly as it is greater, less than, or equal to interest accrued. It is a fundamental concept, for upon its understanding depends the understanding of capital preservation. Increase of capital resulting from an excess of interest accrued over income taken out is termed **savings.**

The **four concepts** involved in a discussion of capital and income are:

1. Income taken out.
2. Capital value (discounted value of expected income to be taken out).
3. Interest accrued.
4. Appreciation, or excess of interest accrued over income taken out, and its opposite, depreciation, or excess of income taken out over interest accrued.

Purchasing Power of Money

PRINCIPLES WHICH DETERMINE PRICES.—Since prices are expressed in money, the willingness to receive or surrender a certain quantity of goods at a specified price in money depends on the willingness to give or receive a specified amount of money in exchange. This willingness depends on the purchasing power of money. When the purchasing power of money is high, an individual has so high a regard for it that he is willing to exchange a comparatively large quantity of goods for a given amount of it, which means that the price of goods is low and that of money high.

When the price of money is high, the prices of articles in general are low and the money price of every particular commodity depends partly on prices of other commodities, or on the general level of prices.

Purchasing power of money and **general level of prices** are reciprocal expressions, for to say that the purchasing power of money is high is equivalent to saying that the general level of prices is low, and vice versa.

Money consists of goods generally acceptable in exchange for other goods. This acceptability in exchange is its chief characteristic. When this acceptability is legalized money becomes **legal tender,** but this feature is not essential.

The feature which, in the first instance, makes a commodity acceptable as money is its very ready salability. Gold and silver are such commodities, especially gold, and for this reason it has become the most important form of money. An example of a commodity possessing a low degree of salability is real estate. Between this and gold are a great variety of commodities possessing varying degrees of salability.

Currency is any kind of goods which, whether generally acceptable or not, serves as means of exchange. The **two chief classes of currency** are: (1) money, and (2) bank deposits.

Bank deposits serve as a means of payment through the agency of **checks,** which serve as evidences of transfer of deposits. Although checks are acceptable only by consent of payee, they serve as a medium of exchange to a greater extent than does money. The fact that checks are acceptable only by special consent of the payee distinguishes them from real money which the payee accepts without question.

Real money consists of two classes, **primary** and **fiduciary.**

Primary money is money which has as much value as a commodity as it has as money.

Fiduciary money is that the value of which depends partly or entirely on the owner's confidence that it can be exchanged at any time for primary money or can be used at any time to discharge debts. Silver dollars are fiduciary money because the silver they contain is worth intrinsically less than a dollar. Bank notes are also fiduciary money, the material of which they are made being worth but a fraction of a cent. In the United States the greater part of money in use is fiduciary, the chief kinds being silver dollars, fractional silver, minor coins, silver certificates, gold certificates, government notes or "greenbacks," and bank notes.

The **chief qualities of primary money** are portability, durability, and divisibility.

The **chief quality of fiduciary money** is its redeemability in primary money, or else its imposed quality of "legal tender."

Gold coin is the only primary money in the United States.

EXCHANGE.—Exchange consists of three types:

1. Exchange of goods for goods, or **barter.**
2. Exchange of money for money, or **changing money.**
3. Exchange of money against goods, or **purchase and sale.**

The third type of exchange alone involves the **circulation of money,** which is simply the aggregate amount of money transfers against goods.

EQUATION OF EXCHANGE.—The price level, if we ignore the influence of checks, depends on three influences:

1. Quantity of money in circulation.
2. Velocity of circulation (average yearly turnover of money).
3. Volume of trade (amount of goods bought with money during one year).

The equation of exchange is the mathematical expression of the total volume of transactions effected during a given period in a given community. It represents the sum of the equations of exchange for all individual transactions occurring during such period.

Thus, if 5 bushels of wheat be purchased for \$10, we may say that \$10 = 5 bushels of wheat multiplied by \$2 a bushel. All other transactions may be expressed similarly. By adding all resulting equations together the equation of exchange for the given period and community is obtained. The left side of this equation represents all money spent; the right side represents the value of goods bought during the period. This left side is greater than the amount of money in circulation if the same money serves for more than one transaction during the given period.

The equation has a **goods side** and a **money side.** The money side is the total money exchanged. It is the product of quantity of money multiplied by its rapidity of circulation or turnover—the number of times it is exchanged for goods during the period. **Velocity of circulation** is found by dividing the total money payments for goods during the period by the average amount of money in circulation and used to effect such payments.

If, for example, there are \$10,000,000 in circulation and their velocity or turnover is 20 times a year, the total transactions amount to 20× \$10,000,000, or \$200,000,000. This is the **money side** of the equation.

The goods side must also be \$200,000,000, since that amount of purchases is made. Assume that there are only three kinds of goods, viz., bread, coal, and cloth, and that the sales of these are as follows:

400,000,000 loaves bread	@	$0.10	per loaf
20,000,000 tons coal	@	5.00	per ton
60,000,000 yards cloth	@	1.00	per yard

The total of these transactions is $200,000,000, i.e.,

$40,000,000 worth of bread
$100,000,000 worth of coal
$60,000,000 worth of cloth

and the equation of exchange is

$$\$10{,}000{,}000 \times 20 = \begin{array}{l} 400{,}000{,}000 \text{ loaves} \times \$0.10 \text{ a loaf} \\ 20{,}000{,}000 \text{ tons} \times 5.00 \text{ a ton} \\ 60{,}000{,}000 \text{ yards} \times 1.00 \text{ a yard} \end{array}$$

On the **money side** of this equation there are two magnitudes:

1. Quantity of money
2. Turnover velocity per year

On the **goods side** there are two groups of magnitudes in two columns:

1. Quantities of goods (loaves, tons, yards) exchanged in a year.
2. Prices of these goods.

It is evident that **prices** must bear a definite relationship to the other magnitudes—quantity of money, its turnover, and quantities of goods sold. As a whole, they must vary proportionally with the quantity of money and its turnover, but inversely with the quantity of goods exchanged.

Thus, if quantity of money is doubled while its rapidity of turnover and quantity of purchases are not altered, the equation of exchange still holding, it is evident that prices generally must be doubled. Of course the rise of individual prices need not be uniform. It is only in case the rise of prices is even that they will all be exactly doubled. In case of such an even rise of prices the above equation becomes:

$$\$20{,}000{,}000 \times 20 = \begin{array}{l} 400{,}000{,}000 \text{ loaves} \times \$0.20 \text{ a loaf} \\ 20{,}000{,}000 \text{ tons} \times 10.00 \text{ a ton} \\ 60{,}000{,}000 \text{ yards} \times 2.00 \text{ a yard} \end{array}$$

If prices rise unevenly, as would ordinarily be true in an actual case, prices which more than double would be compensated by other prices which do not double themselves. The only requirement necessary to fulfil the equation is that prices be doubled **on the average.**

The **conclusion** to be drawn from the above is that the level of prices must rise or fall with changes in quantity of money, unless changes also occur in velocity of circulation or in quantities of goods exchanged.

Just as changes in quantity of money affect prices, so changes in other terms of the equation affect prices. Thus an increase in velocity of circulation has an effect similar to an increase in quantity of money. If, in the above equation, turnover of money doubles whereas its quantity remains unchanged, the equation becomes:

$$\$10{,}000{,}000 \times 40 = \begin{array}{l} 400{,}000{,}000 \text{ loaves} \times \$0.20 \text{ a loaf} \\ 20{,}000{,}000 \text{ tons} \times 10.00 \text{ a ton} \\ 60{,}000{,}000 \text{ yards} \times 2.00 \text{ a yard} \end{array}$$

or some prices will be more than and others less than doubled.

If quantity of goods is doubled prices will be halved, thus:

$$\$10{,}000{,}000 \times 20 = \begin{array}{l} 800{,}000{,}000 \text{ loaves} \times \$0.05 \text{ a loaf} \\ 40{,}000{,}000 \text{ tons} \times 2.50 \text{ a ton} \\ 120{,}000{,}000 \text{ yards} \times 0.50 \text{ a yard} \end{array}$$

or some prices will be more than and others less than halved.

If there is a change in two or three of the terms of the equation at the same time, the price level is the **resultant** of these changes. It is for this reason that the doubling of the quantity of money does not necessarily result in the doubling of prices.

GRAPHIC ILLUSTRATION OF EQUATION OF EXCHANGE.—Fig. 2 shows a mechanical balance in equilibrium. One side symbolizes the money side of the equation; the other side symbolizes the goods side. The weight at the left, symbolized by a purse, represents money in circulation. The distance of the purse from the fulcrum represents turnover or velocity of circulation of money. The weight multiplied by this leverage is equal to corresponding products on opposite side. On the opposite side are three weights which represent bread, coal, and cloth, and are symbolized as shown. The distance of each from the fulcrum is its price. To prevent leverages at right from being too long, the unit of measure of coal is reduced from tons to hundredweights, and that of cloth from yards to feet, while the number of units are correspondingly enlarged. The measure of coal is changed from 10,000,000 tons to 200,000,000 hundredweight; that of cloth from 30,000,000 yards to 90,000,000 feet. In these units coal becomes 25 cents per hundredweight; that of cloth becomes 33⅓ cents per foot.

If the purse becomes heavier, to retain the balance some of the weights at the right must either be heavier or they must be moved farther to the right, or else the purse must be moved to the right.

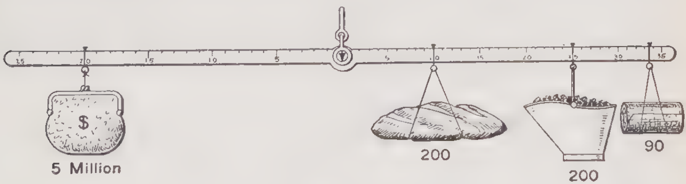

Fig. 2

Assume that the last and first of these three changes do not occur; then the middle one must occur. That is, if position of purse is unaltered (equivalent to saying that velocity of circulation of money remains unchanged) and if weights at right remain unaltered (equivalent to saying that trade remains unchanged), then some or all of the weights must move to the right (equivalent to saying that prices of goods must increase). If prices increase uniformly, they must increase in the same ratio as the money does. If they do not increase uniformly, some must increase more and some less to keep the average increase in the same ratio.

Again, if velocity of circulation increases (equivalent to lengthening the leverage to the left) and if money in circulation (purse) and trade (weights at right) remain the same, prices must increase (equivalent to lengthening of leverage at right).

Again, if volume of trade increases (increase in weights at right), and if velocity of circulation of money (left leverage) and quantity of money (left weight) remain unchanged, prices must decrease (equivalent to saying that left leverages must shorten).

In general, any change in one of the four sets of magnitudes must be accompanied by such change or changes in one or more of the other three as will maintain equilibrium.

ALGEBRAIC EXPRESSION OF EQUATION OF EXCHANGE.—Assume that

M = money in circulation
V = velocity of circulation
p, p', p'', etc. = prices of various goods
Q, Q', Q'', etc. = quantities of those goods sold

Then the formula of the equation of exchange is expressed thus:

$$\begin{aligned} MV = {} & pQ \\ & + p'Q' \\ & + p''Q'' \\ & + \text{etc.} \end{aligned}$$

MV represents amount of money spent for goods during the year, while pQ, $p'Q'$, etc., represent values of goods bought.

If M is doubled (V and Q's remaining unchanged), the p's will be doubled.

If V is doubled (M and Q's remaining unchanged), the p's will also be doubled.

If Q's are doubled (M and V remaining unchanged), the p's will be halved.

The right side of the equation is the sum of terms of the form pQ—prices multiplied by quantities. The sum may be expressed by using the Greek "Σ," which means, in mathematics, "the sum of." The equation may then be expressed thus:

$$MV = \Sigma pQ$$

Again, if P is the weighted average of all p's, and T the sum of all Q's, the equation may be expressed thus:

$$MV = PT$$

QUANTITY THEORY OF MONEY.—From the foregoing principles we are able to state that the price level varies:

1. Directly as the quantity of money in circulation (M).
2. Directly as the velocity of its circulation (V).
3. Inversely as the volume of trade done by it (T).

The first statement above constitutes the quantity theory of money. The following four illustrations show the four most important ways in which the number of dollars in circulation may be changed.

Illustration No. 1.—The government doubles the denominations of all money, half-dollars being called dollars, etc. This doubles the number of dollars in circulation, and the price level will be doubled, each person paying twice as many dollars for the same commodities as before.

Illustration No. 2.—The government cuts each dollar in two, coining the halves into new dollars. It recalls all paper notes, replacing them with double the orginal number, two new ones for each old one. Prices will be doubled as a result, as in the preceding illustration.

Illustration No. 3.—The government duplicates each piece of money and presents the duplicate to the possessor of the original. Prices will be doubled.

Illustration No. 4.—After duplicating all money the government subtracts half of each coin as seigniorage, thus reducing the weight to that of the debased coinage in the second illustration, removing the difference between them. Prices will remain at the same level as before the seigniorage is abstracted.

The **conclusion** to be drawn from these illustrations is as follows: Doubling the quantity of money in any way doubles prices, unless there occurs a change in velocity of circulation of money or in volume of trade.

To **generalize,** if the number of dollars is increased, whether by renaming, cutting into parts, duplication, or by other means, prices increase proportionately, providing velocity of circulation and volume of trade remain unchanged.

INFLUENCE OF BANK DEPOSITS.—Bank checks are merely presumptive evidences of rights to draw money on the basis of bank deposits, but the ultimate **currency** consists of the bank deposits themselves. **Bank deposits** are not money, because not generally acceptable. The special consent of the payee is implied, if not actually secured. They are currency, however, because they serve as a medium of exchange.

Post office orders and **money orders** are similar to checks, being distinguishable therefrom only in that they are not issued by banks and in that they originate in special deposits of money.

In general, what is true of bank checks is true of bank notes, the difference between them lying in the fact that notes circulate freely from hand to hand while checks or deposit currency require special indorsement.

When a payment is made by check, what really changes ownership, or "circulates," is the right to draw money. The check is merely presumptive evidence of this right.

Bank deposits may consist either of gold or of promises to pay. In exchange for these deposits banks give either gold or rights to draw. Whether one deposits actual money or a mere promise to pay, he is given the same right to make out checks to draw money. Total value of rights to draw, in whatever way they arise, is termed "deposits."

In addition to lending **deposit rights,** banks lend their own **bank notes.** Bank notes are governed by the same principles as are deposit rights, the holder merely receiving notes instead of a bank credit. In either case the bank stands ready to pay on demand.

By means of credit deposits and notes of a bank may exceed its cash. Banking operations are not necessarily money operations. It is only necessary that there be wealth behind the promise to pay. A note holder is one who has exchanged his own less-known credit for the bank's better-known credit.

Ordinarily the assets of a bank consist largely of notes of merchants, although they might consist of other forms of wealth as well. Banks prefer interest-bearing notes to grain or machinery; in fact, they are compelled by law to take notes. In this way banks, in effect, cause concrete, tangible wealth to circulate.

As a matter of expediency banks must so regulate their loans and note issues as to keep on hand sufficient cash reserves to prevent any threatening insufficiency of cash. They do this by regulating the reserve in various ways. One way is to discount less freely, by raising the discount rate. Another is to refuse outrightly to lend or to renew old loans. Another is to call in loans subject to payment on demand.

Cash reserves of banks, though money, are not money in circulation, because they are not held to purchase goods but to redeem deposits. Consequently money in society is divided into two chief parts, **money in circulation** and **money in banks.**

Bank currency consists of two kinds, **bank notes,** belonging to the category of money, and **deposits,** a kind of substitute for money.

We may now classify all goods as follows:

1. Money
2. Deposits
3. Goods

Among these there are six possible types of exchange as follows:

1. Money against money
2. Deposits against deposits
3. Goods against goods
4. Money against deposits
5. Money against goods
6. Deposits against goods

The last two are important because they constitute the **circulation of currency.**

It is desirable to include bank deposits or circulating credit in the equation of exchange. Let M express quantity of actual money, and V the velocity of its circulation. Let M' express total deposits subject to transfer by check, and V' the average velocity of their circulation. It follows that total value of purchases is measured, not by MV, but by $MV+M'V'$, and the **equation of exchange** becomes

$$MV+M'V'=\Sigma pQ=PT$$

This equation is illustrated mechanically in Fig. 3. Trade is represented on the right by weight of a miscellaneous assortment of goods, their average price by the distance to the right from the fulcrum, or the leverage at which

FIG. 3

this weight hangs. At the left, money (M) is represented by a purse, and its velocity of circulation (V) by its leverage. The new weight at the left, in form of a bank book, represents bank deposits, M'. Velocity of circulation (V') of bank deposits is represented by its distance from the fulcrum.

Average price (right leverage) increases with increase of money or bank deposits and velocities of their circulation, but decreases with increase in volume of trade.

The introduction of bank deposits (M') in a community tends to raise prices.

RATIO OF DEPOSIT CURRENCY TO MONEY.—The quantity of deposit currency or circulating credit, M', tends to hold a definite ratio to the quantity of money in circulation, M. There are three reasons for this:

1. Bank reserves are kept in a more or less definite ratio to bank deposits.

2. Individuals, firms, and corporations preserve more or less definite ratios between cash and check transactions, also between their money and deposit balances.

3. Money and checks each have separate spheres, tending at any given time to maintain a fairly definite relation to each other because they are used in definitely different ways by different classes.

As a consequence, M and M' bear a fairly definite ratio to **each other.**

TRANSITION PERIODS.—During transition periods the relation between money (M) and deposits (M') does not remain constant. A period of transition is an interval during which a disturbance in any of the six magnitudes in the equation of exchange works out its effect. The problem is one of rising and falling prices.

When prices are rising borrowers are benefited and lenders injured. **When prices are falling** the opposite is true.

Moreover, a rise in prices generates a further rise. Assume a slight initial disturbance caused by an increase in quantity of gold. According to the equation of exchange this causes a rise in prices. Profits of business men measured in money will also rise, even if costs of business rise in the same proportion. Thus, if a man who sells goods for $20,000 which cost $10,000, clearing $10,000, could get double prices at double costs, his profit would be $40,000 – $20,000, or $20,000. This gain is only nominal since other things rise in proportion, so that no advantage is gained.

Usually, however, profits increase more than do prices because expenses do not increase as rapidly as prices. Wages are an illustration. Also past loans from creditors are more easily liquidated. As the result of unusual profits the business man expands his business by increased borrowings, mostly in form of short-time loans at banks. This engenders deposits, so that deposit currency (M') increases. This tends to increase prices still further, and still greater profits result. Borrowing is still further stimulated, and more loans are demanded, which again increases deposit currency (M'), and prices rise still further. This process is summarized below:

1. Prices rise due to some such cause as increase in gold.
2. Business men secure higher prices without proportionate increase in expenses, and so make greater profits.
3. Thus encouraged, they increase borrowings.
4. Deposit currency (M') expands relatively to money (M).
5. Because of this expansion of deposit currency (M'), prices rise still further; so that No. 1 is repeated; then No. 2, etc.

The expansion of deposit currency abnormally increases the ratio of M' to M. There are also disturbances in the Q's, in V, and in V'. Stimulation of loans stimulates trade. New construction is begun, and times are said to "boom."

The check upon this tendency comes when it grows more difficult to secure loans, banks being compelled to refuse loans because the loans have already become abnormally large with reference to reserves. Those who cannot secure new loans may find themselves unable to pay their debts, so that they become insolvent and fail. Banks fall under suspicion, depositors fearing that they may not be able to realize on loans already made. Runs on the banks result, and reserves are depleted when most needed. Renewed borrowing becomes difficult or impossible, and original loans may be called. As a result many businesses become bankrupt. This reduces the demand for loans, and tends to end the **crisis.**

When reaction sets in, bank loans grow smaller and deposits (M') are reduced. This contraction of deposit currency causes a further fall in prices. Those who borrowed to buy goods find they cannot get their money back. The order of events is as follows:

1. Prices fall.
2. Business men get lower prices than before without corresponding reductions in expenses, and thus profits are reduced.

3. Discouraged by small profits, they diminish their loans.
4. Deposit currency (M') diminishes relatively to money (M).
5. As a result, prices fall still further, and Nos. 1 and 2 are repeated, etc.

The process continues so long as profits remain abnormally low. People in debt lose most. Business is called "bad." The process stops when loans are easier to get. They are easier to get because of the accumulation of reserves in banks. Gradually, after the weaker ones are forced out, conditions return to normal, and the strong concerns build up a new credit structure. Then the inflationary tendency repeats itself.

Monetary Systems

GRESHAM'S LAW.—For a long time it has been noticed that it is difficult to keep two or more metals in circulation at the same time. The monetary unit of one becomes cheaper than the other or others, and tends to drive out the dearer. This tendency has been named "Gresham's Law," after Sir Thomas Gresham, an adviser of Queen Elizabeth, who called attention to it about the middle of the sixteenth century, although many others had noted it previously. Briefly stated, the law is: **The cheaper monetary unit tends to drive out the dearer.**

The reason the cheaper money prevails rests with the one giving it in exchange, not with the one receiving it, because being given the choice of paying his debts in either of two moneys, he naturally selects the cheaper. Were the initiative with the one receiving the money, dearer money would be chosen in preference to cheaper money.

Two classes especially interested in withdrawing the dearer money from circulation are bankers and goldsmiths, who use it for export or melting. The reason it is required in foreign trade is that it is the foreigner receiving the money who is in a position to dictate what kind of money he will accept.

BIMETALLISM.—Under bimetallism, governments open their mints to free coinage of two metals, usually gold and silver, at a fixed coinage ratio, making both kinds of coin unlimited legal tender at that ratio.

By **coinage ratio** is meant the ratio of the weight of the silver dollar to that of the gold dollar. At present, this is 16 to 1. A silver dollar weighs $412\frac{1}{2}$ grains, almost exactly 16 times the weight of a gold dollar, 25.8 grains.

Under bimetallism the debtor has the option, unless otherwise bound by contract, of making payment in either gold or silver money.

The two requisites of complete bimetallism are:

1. Free and unlimited coinage of both metals at a fixed ratio.
2. Unlimited legal tender of each metal at that ratio.

The **purpose of bimetallism** is to render the purchasing power of money more stable.

Notwithstanding Gresham's Law, there are certain conditions under which bimetallism works. The situation when opening mints to free and unlimited coinage of gold and silver at a given ratio, silver dollars being cheaper than gold, may be summarized as follows:

1. The first effect (as emphasized by the monometallists) is the operation of Gresham's Law, the cheap silver dollars tending to drive the dear gold dollars from circulation.

2. But (as emphasized by the bimetallists) this operation of Gresham's Law tends to reduce the disparity between the values of gold and silver

dollars. Due to eagerness of debtors to use silver instead of gold to pay debts, the value of silver is increased while that of gold is decreased. As a result the values of gold and silver dollars may become equal.

3. But the next result is a stimulus to silver mining and the discouragement of gold mining, so that silver becomes more plentiful, consequently cheaper, and gold scarcer, consequently dearer. As a result, silver again tends to drive out gold.

4. This increase of silver (coin and bullion) and decrease of gold are self-limiting. The increased production of silver is checked by increased cost of production, and consumption tends to overtake production, whereas the opposite adjustments apply to gold.

THE "LIMPING" STANDARD.—Being no longer practiced, bimetallism is a subject of historical interest only. In certain countries where formerly practiced, as France and the United States, there has resulted a monetary system known as the "limping" standard. This results when, in a system of bimetallism, before either metal wholly expels the other, the mint is closed to the cheaper metal, while the coins outstanding in that metal are not recalled. As a result, supposing silver to be the restricted metal, the coins thus restricted are retained in circulation at par with gold, and this parity may continue even if additional limited amounts of silver are coined. There then results a difference in value between silver bullion and silver coin, the latter being overvalued. Since newly mined silver cannot become money, the value of silver coins remains artificially greater than that of silver bullion.

So long as the quantity of silver or other token money is too small to displace gold entirely, gold will continue to circulate, and the value of other money cannot fall below that of gold, for if it should, it would displace gold. The parity between gold and silver under a "limping" standard is not necessarily dependent on redeemability in gold, but may result simply from the limited amount of silver coin. In such a case, loss of confidence in the silver money would be sufficient to cause its depreciation and even its disappearance from circulation.

Irredeemable paper money, like irredeemable silver dollars, may continue to circulate at par with gold limited in quantity and not too unpopular; but if gradually increased in amount it may expel all metallic money.

As a rule, irredeemability in paper money is undesirable, causing distrust and discouraging long-time contracts and enterprises.

Price Levels and Quantities

PRICE TENDENCIES.—Prices do not move in unison. Some rise higher, some not so high, as the average. Some prices are contractual and so cannot change between date of making contract and date of its fulfilment. Frequently, also, there are legal restrictions, as in case of fares charged by utilities. Also prices of goods consisting largely or wholly of the money metal cannot fluctuate widely. The same is true to a somewhat less degree of their substitutes. The forces of supply and demand are continually at work on individual prices. These together cause a very considerable **dispersion** of prices, which means that prices are constantly changing relatively to each other, regardless of their **general level** or average.

The general levels and general movement of prices are expressed by means of **index numbers** which give average levels of prices at different times.

Similarly, **quantities** of goods vary both absolutely and relatively to other

goods. Changes of quantities are no more uniform than are changes of prices.

It therefore becomes necessary, in order to fulfil the requirements of the equation of exchange, to formulate two composite or average magnitudes: the **price level** (index number) and the **volume of trade.**

In the equation of exchange the right side, ΣpQ, is converted into PT, in which T measures the volume of trade, and P is the index number expressing the price level at which this trade is carried on. T is the sum of all the Q's, and P is the average of all the p's.

To carry out these definitions in practice, suitable **units** of measure for the various articles must be selected. The ordinary units in which the various Q's are measured will not be the most suitable. Coal is sold by the ton, sugar by the pound, wheat by the bushel, etc. If we should merely add together these tons, pounds, bushels, etc., and call their grand total so many "units" of commodities, we should have a very arbitrary summation. It will make a difference to the result whether we measure coal by tons or hundredweights. The system becomes less arbitrary and more useful for the purpose of comparing price levels in different years if we use, as the unit for measuring any commodity, not the unit in which it is commonly sold, but the **amount which constitutes a "dollar's worth" at some particular year called the base year.** Then **every** price in the base year becomes exactly one dollar, and the **average** of all prices in that year also becomes exactly one dollar. In any other year, the average price (i.e., the average of the prices of the arbitrarily chosen units which in the base year were worth a dollar) will be the index number representing the price level, while the number of such units will be the volume of trade. Thus, let us suppose, for simplicity, that there are only three commodities (bread, coal, and cloth), and let us use the table below (Table 7) for facts to start with.

We wish to compare the average price or price level in the year 1912 with that in 1909 as the base year, and also to reckon the total volume of trade in 1912 in comparison with that in 1909. If we were not desirous of taking great pains to secure the best results, we could use the figures just as they stand—averaging the prices and adding together the quantities. By this rough-and-ready method the average price per unit for 1909 would be $(.10+5.00+1.00)\div 3$, or \$2.03; and for 1912 $(.15+6.00+1.10)\div 3$, or \$2.42; the total trade for 1909 would be $200+10+30$, or 240 million units; and for 1912, $210+11+35$, or 256. That is, the price level would show a **rise** between 1909 and 1912 from \$2.03 to \$2.42, or a rise of 19.2%, while the volume of trade would show a rise from 240 to 256, or 6.6%. But the simple method just used gives too much weight in the price comparison to coal, the price of which happens to be expressed by a large number simply because it is measured by a large unit. One way to remedy this disproportionate weighting is to measure all articles by one unit, as the pound; but a better way is that already described above, viz., to use as our unit "the dollar's worth in 1909." The dollar's worth of bread in 1909 was evidently ten loaves, the dollar's worth of coal, the fifth of a ton, and that of cloth, the yard. Taking these units, we now have:

The average price in 1909, on the basis of these new units, is simply \$1, since this is the price of each individual article; while the average price in 1912 is, if we take the simple arithmetical average, $(\$1.50+\$1.20+\$1.10)\div 3$, or \$1.27. The total volume of trade in 1909 is (in millions of units) $20+50+30$, or 100; and in 1912, $21+55+35$, or 111. Thus, according to this reckoning, the price level has risen from \$1.00 to \$1.27, or, as it is usu-

Table 7

Year	Prices			Quantities Exchanged		
	Bread (per loaf)	Coal (per ton)	Cloth (per yard)	Bread (millions of loaves)	Coal (millions of tons)	Cloth (millions of yards)
1909......	\$0.10	\$5.00	\$1.00	200	10	30
1912......	.15	6.00	1.10	210	11	35

Table 8

Year	Prices			Quantities		
	Bread (per ten loaves)	Coal (per ⅕ ton)	Cloth (per yard)	Bread (millions of ten loaves)	Coal (millions of ⅕ tons)	Cloth (millions of yards)
1909......	\$1.00	\$1.00	\$1.00	20	50	30
1912......	1.50	1.20	1.10	21	55	35

ally expressed, from a base of 100% to a height of 127%—a rise of 27%; while trade has increased from 100 million units to 111 million units, an increase of 11%.

We may slightly improve the above method by taking for 1912 a "weighted" average of prices instead of a simple average. It is found by dividing the total **value** of all the goods by their total **quantity.** This is a better method because, in the result, it gives less weight to the commodities less dealt in, such as bread. The average for 1909 will still be \$1.00, for that is the price for each individual commodity; but the average for 1912 will be slightly different. The total value is (in millions of dollars) $1.50 \times 21 + 1.20 \times 55 + 1.10 \times 35$, or 136 million dollars, and the total quantity is, as we have already seen, $21 + 55 + 35$, or 111 million units; consequently the average price is $136 \div 111$, or \$1.23. According to this last and best method, then, the price level has risen from \$1 (or 100%) to \$1.23 (or 123%); this indicates a rise of 23%. The index numbers are 100% for 1909 and 123% for 1912.

The results of the three methods of reckoning the average rise of prices differ slightly, showing respectively a rise of 19%, 27%, and 23%. Other methods, of which many are possible, would also differ slightly. No method gives an absolutely perfect index of changes in price levels, but the last one worked out above is as good as any. The main point in any system of averages is to give great weight to the great staples of trade, and little weight to the insignificant articles. Radium has fallen in price enormously in the last few years, but radium is so unimportant as an article of commerce that its great fall ought not to be allowed in our reckoning to have much effect on the index number for the general price level. Introducing, then, our newly found magnitudes, P and T, into the equation of exchange, it assumes the form

$$MV + M'V' = PT,$$

its right member being the product of the index number, P (or the average of

prices), multiplied by the volume of trade, T (or the sum total of "units" sold).

Supply and Demand

INDIVIDUAL PRICES.—An individual price presupposes a price level. The following considerations prove this.

Price of sugar is a ratio between sugar and money. In the mind of the buyer of sugar, money stands for the other things it might buy if not spent for sugar. The greater this power of money to buy things in general, the less will be offered for sugar in particular, and the lower the price of sugar will become. In other words, the lower the general price level, the lower the price of sugar.

Supply and demand of sugar determine its price **at a given level,** because those who supply and demand it are governed by their idea of the general purchasing power of money.

DETERMINATION OF INDIVIDUAL PRICES UNDER COMPETITION.—Price determination falls under two heads, according as there is competition or monopoly. Assume perfect competition—independent buyers and independent sellers. In such a market there is only one resultant price for all buyers and all sellers, since if there were more than one price no buyers would buy at any of the higher prices and no sellers would sell at the lower prices. Watchfulness of competitors eliminates price differences. Slight differences which exist are the result of the imperfection of competition.

MEANING OF DEMAND AND SUPPLY.—Demand for a commodity is different for different prices. The same is true of supply. Demand increases as prices fall; supply increases as prices rise. A demand and supply schedule results. Such a schedule is illustrated in Table 9 below. The second column shows demand relative to the prices given in the first column.

Table 9

Price	Schedule of Demand	Schedule of Supply
$ .08	900	1,100
.07	940	1,050
.06	1,000	1,000
.05	1,100	900
.04	1,250	750

The third column shows supply relative to the prices given in the first column, giving largest quantities which will be supplied at stated prices. The supply at first exceeds the demand, but as prices fall demand increases and supply decreases, until, at 6 cents, they are equal. For prices below 6 cents demand exceeds supply.

It is evident that there is but one price, 6 cents, which will make demand and supply equal, and it is finally fixed at that point, because if it goes higher supply would exceed demand and the price would fall; if it goes below, demand would exceed supply, and the price would rise. Such a price which makes supply and demand equal "clears the market" and is the **market**

price. The amount supplied and demanded at the market price is the **amount marketed.**

CURVES OF DEMAND AND SUPPLY.—In Fig. 4, $S\ S'$ represents the supply curve; $D\ D'$ the demand curve. If we take the price $O\ P''$ the supply is represented by the long line $P''\ S''$; the demand by the short line $P''\ D''$, leaving the difference between them, $D''\ S''$, as excess of supply over demand. Efforts of sellers to get rid of this excess drives prices down. The market price cannot exceed $O\ P'$. If it were only $O\ P'''$, demand would be $P'''\ D'''$, and supply only $P'''\ S'''$, leaving an excess of demand over supply of $D'''\ S'''$, which at that price buyers are unable to secure, so that they bid up the price to $O\ P'$. At point P the two curves intersect. Its latitude

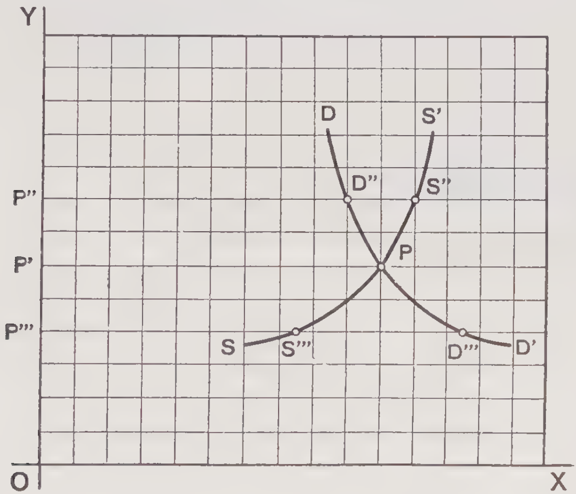

Fig. 4

represents market price, whereas its longitude represents the amount demanded and sold.

All demand curves descend to the right, but at different rates. Those which are steep represent demand schedules of **necessities,** because a great fall in price is necessary to materially affect demand. Demand curves of **luxuries** descend slowly, because a slight fall in price leads to a great expansion in demand. Similarly supply curves ascend at different rates, the steep ones representing commodities whose supply is inelastic.

SHIFTING OF DEMAND AND SUPPLY.—An **increase of demand** may mean simply that demand has increased because market prices have fallen, in which case the **demand schedule** remains unchanged; or, more properly, it means that demand has increased without a change in prices. The same double meaning applies to an increase of supply. It may mean an increase in market supply due to a rise in prices, or it may mean an increase in the supply schedule.

INFLUENCES BEHIND DEMAND.—It is shown above that the market price of any particular commodity is that which "clears the market," making supply and demand equal. Market price and quantity marketed are determined by intersection of the supply and demand curves.

But supply and demand are not the ultimate influences determining prices; they are the proximate influences.

The **demand schedule** is the resultant of a large number of **individual demand schedules.** Each individual demand schedule is the resultant of two **desirability schedules.**

The general demand schedule is resolvable into constituent demand schedules, one for each person in the market. Total demand at any price is the sum of the individual demands at that price.

Back of each individual demand curve are two opposing forces, the desire for the goods and the desire for the money they would cost. On the relative strength of these desires depends the price he is willing to pay.

Desire for goods implies **desirability** in those goods. The desirability of a commodity is measured by the intensity of an individual's desire for it under particular conditions. Desirability is an important factor in determining price. It may refer to, (1) the desirability of the whole, or (2) the desirability of one or more units. The desirability of one unit more or less is called the **marginal desirability.**

Marginal desirability of any good is the desirability of one unit more or less of it.

In economics the concept of marginal desirability is more important than that of total desirability.

Illustration.—A person wishes to furnish his house with chairs. A few chairs are extremely desirable, but each succeeding one diminishes the need for more. The first chair is indispensable. A second one is extremely desirable. A third is highly desirable. Yet each succeeding one has a lower degree of desirability than the preceding one. If the person finally decides to buy ten chairs, the tenth chair is the marginal one; its desirability is the marginal desirability of the ten chairs. It is added to the other nine because it is regarded as worth the price paid. The eleventh is rejected because not regarded as worth the price asked. If the price of a chair is \$10, then this represents the marginal desirability. But total desirability is not 10 x \$10. It is the sum of the desirabilities of all ten chairs, or what the person would pay to secure ten chairs if he were required to buy ten chairs or none at all. Total desirability is merely of theoretical importance. Marginal desirability is of great practical importance.

Money as well as goods has a marginal desirability for each individual, being the intensity of a man's desire for an additional dollar.

ORIGIN OF INDIVIDUAL DEMANDS.—The demand curve of each individual depends on the comparison of his marginal desirabilities for goods and money. In each case the highest price he is willing to pay for a given quantity is measured by the ratio of the desirability of the last ton to the desirability of a dollar.

Illustration.—If a person regards one ton of coal as twelve times as desirable as a dollar, he will pay as much as \$12 for it, but not more. A second ton has ten times as much desirability as a dollar, so he is willing to pay as high as \$10 for it. Similarly for a third ton he will pay \$8 and for a fourth \$6, and so on. Derivation of prices from desirabilities is shown in Table 10. The last column is found by taking the ratio of the figures in the second to those in the third, i.e., dividing (*a*) by (*b*). The resulting demand schedule

Table 10

Tons Purchased	Desirability of Last Ton Purchased (*a*)	Desirability of a Dollar (*b*)	Price per Ton Customer Would Be Willing to Pay ($a \div b$)
1	12	1	$12
2	10	1	10
3	8	1	8
4	6	1	6
5	5	1	5
6	4	1	4

is the fourth column considered with respect to the first column. It gives the highest prices an individual will pay for stated quantities of coal (column 1).

If another person prizes a dollar twice as highly as the one just considered his marginal desirability of a dollar is twice the above, and Table 11 results

Table 11

Tons Purchased	Desirability of Last Ton Purchased (*a*)	Desirability of a Dollar (*b*)	Price per Ton Customer Would Be Willing to Pay ($a \div b$)
1	12	2	$6
2	10	2	5
3	8	2	4
4	6	2	3
5	5	2	2.50
6	4	2	2

The two individuals have the same intensity of desire for coal, but very different demands for coal. If coal is $5 per ton, the first individual will buy up to the fifth ton; for when he reaches the fifth ton, but not before, marginal desirability of coal (5) to him will be just five times that of a dollar. At the same price of $5 the second individual will buy only up to two tons, because for him the second ton is the point at which the marginal desirability of coal (10) is five times the marginal desirability of a dollar (2). For the poor man the marginal desirability of a dollar is relatively high.

RELATION OF DESIRABILITY TO MARKET PRICE.—Market price of a commodity is equal to the ratio between two intensities of desire in the mind of each purchaser, viz., the ratio of marginal desirability of coal to that of money. No one individual can determine the market price of coal. But when all consumers are taken together they constitute the demand side of the market and exert a great influence on prices.

Market price must clear the market. This means that the market price must be such that when each individual on the demand side adjusts his purchase to it in such manner that the ratio of his marginal desirability of coal to his marginal desirability of money is equal to the price, the sum total of all such purchases equals the total supply.

The principle that market price of any good is equal to the ratio between its marginal desirability and the marginal desirability of money for each and every buyer may be restated in the following form:

1. Each purchaser buys until the ratio of the marginal desirability of the good to the marginal desirability of money is brought into equality with the price.
2. Each purchaser buys until the desirability of the marginal unit becomes equal to the desirability of the money spent for this marginal unit.
3. Each purchaser buys until his marginal gain (of desirability) is reduced to nothing.
4. Each purchaser buys until he makes his total gain (or surplus desirability) a maximum.

INFLUENCES BEHIND SUPPLY.—Total supply at any price is the sum of individual supplies at that price, as illustrated in Table 12, showing supply schedules for coal for two individuals, No. I and No. II.

Table 12

Price	Supply Schedules, Tons which Would Be Supplied by Individuals		Total $(a+b)$
	I (a)	II (b)	
$4	1,500	2,000	3,500
5	1,600	2,400	4,000
6	1,800	3,000	4,800
7	2,100	3,900	6,000

At $4 a ton individual No. I supplies 1,500 tons, and individual No. II, 2,000 tons. At $5 a ton individual No. I supplies 1,600 tons, and individual No. II, 2,400 tons, and so on. If all instead of two suppliers were included, a total supply schedule would be obtained.

Furthermore, just as each demand schedule is the resultant of a pair of desirability schedules, so each supply schedule is the resultant of two desirability schedules. But in the case of the seller it is not desirability but

undesirability which must be considered—the undesirability or trouble of supplying coal. **Marginal undesirability** is also called **marginal cost.**

Derivation of seller's undesirability or marginal cost curve is illustrated in Table 13. Figures in the last column, found from second and third by

Table 13

Tons Sold	Undesirability of Supplying Last Ton (*a*)	Desirability of a Dollar (*b*)	Price Dealer Would Be Willing to Take ($a \div b$)
1,500	8	2	$4
1,600	10	2	5
1,800	12	2	6
2,100	14	2	7

division, give prices a coal dealer would be willing to take in view of the undesirability involved in providing coal and the desirability of money he asks in return for it. If the 1,500th ton costs him 8 units of undesirability, and a dollar represents to him 2 units of desirability, he will take $4 a ton up to the 1,500th ton, and so on for other figures in the table.

The supply curve is the undesirability curve translated into money. Labor or human effort stands at the end of the analysis of supply, just as satisfactions stand at the end of the analysis of demand.

PRINCIPLE OF MARGINAL COST.—In treating demand it is usually satisfactory to assume that the marginal desirability of money remains constant, because it is not likely to be greatly influenced by any one of the many commodities one buys. But this cannot be assumed in treating supply because one may make his living by selling one, or a comparatively few, commodities, so that changes in amounts sold, or price, may make much difference in the total amount of money he secures.

Instead, the greater the sales and the more money consequently obtained, the less is the marginal desirability of money.

The **total supply curve**, analogously to the total demand curve, may be derived from a number of individual supply curves. Each such individual supply curve may be derived from,

1. Curves of marginal undesirability of furnishing the article, and
2. Curves of marginal desirability of money.

Consequently the supply curve is an undesirability curve translated into terms of money.

The market price, as finally determined by supply and demand, is not only equal to the marginal desirability of getting goods, but also to the marginal undesirability of furnishing them, both desirability and undesirability being measured in terms of money.

These principles may be summarized as:

1. The equalization of all marginal desirabilities and undesirabilities, both being measured in money, or
2. The equalization of supply and demand.

On the **supply side of the market** the great determinant of market price (in terms of money) is marginal cost (in terms of money).

The **two determinants of price**—marginal desirability and marginal cost—are human desires translated into cost.

Marginal desirability represents the desire to secure something agreeable.

Marginal cost represents the desire to avoid something disagreeable.

VARIATIONS IN SUPPLY CURVES.—Practically all demand curves descend to the right, but all supply curves do not ascend to the right.[2]

One peculiar supply curve grows out of the fact that there is a descending curve of marginal desirability of money dependent on the price assumed

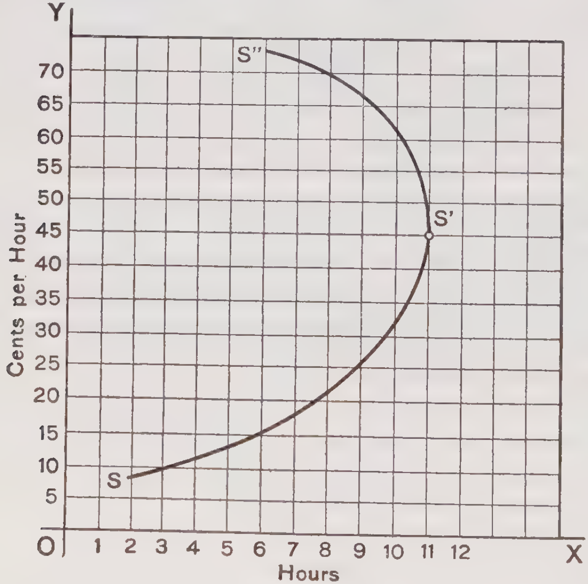

Fig. 5

This combined with the ascending curve of undesirability of efforts and sacrifices tends to bend the curve upward—so much sometimes as to curl back to the left, as in Fig. 5. This curve does not ascend to the right throughout its course. It applies especially to the labor supply, and means that rise in price does not always result in an increase in supply. It does at first, but beyond the point where the curve begins to curl back, a rise in price causes the supply to be reduced. This is because a rise in wages, for instance, results in the workman spending more time in idleness.

Another type of supply curve does not ascend, but descends. Where large production causes less trouble per unit than small, the marginal unde-

[2] See normal curves illustrated in Fig. 5.

sirability of furnishing the goods decreases with an increased supply, and decreases in faster ratio than does the marginal utility of money; so that the marginal cost expressed in money decreases with an increase of supply.

Only when the **supply curve ascends** is the price at which a seller is willing to supply equal to its marginal cost, and so is derived from curves of undesirability. **Descending supply curves** depend not on **marginal cost** but on **average cost.**

This is because no seller is willing to sell regularly at a loss, which he would do if he sold at prices corresponding to marginal cost when marginal cost decreases with the amount sold. Thus, if it costs $5 to supply the 3,000th ton of coal, while the cost of all preceding tons is greater than $5, no coal except the last ton could be sold at $5 without causing loss. In case of an ascending curve, if cost of supplying the 3,000th ton were $5, that of all preceding tons would be less than $5, so that, sold at $5, there would result a profit on each but the last.

When cost of each succeeding ton is greater than that of the preceding ton, the cost of the last, or marginal cost, is the greatest cost of all, and so exceeds average cost. Consequently, a dealer is assured a profit when he sells at a price equal to marginal cost. But when cost of each successive ton is less than that of the preceding ton, cost of the last ton is least of all, and so is below average cost. In this case, to sell at a price equal to marginal cost would result in loss.

In either case, whether the curve ascends or descends, the seller attempts to fix his price on the basis of the higher cost -marginal or average.

When marginal cost increases with supply, marginal cost is higher, and will rule supply.

When the opposite is true, average cost is higher, and will rule supply.

Cases governed by descending supply curves are said to obey the **law of decreasing cost** and sometimes the **law of increasing returns,** it being the same thing to say that ratio of cost to product decreases as to say that ratio of product to cost increases.

Opposite cases are governed by the **law of increasing cost** or, as someimes stated, **law of diminishing returns.**

Intermediate between these is the **law of constant cost,** or **law of constant returns.**

CUTTHROAT COMPETITION.—In the case of ascending supply curves, based on marginal costs, the supply at a price is the **maximum** the seller is willing to offer at that price.

In the case of descending supply curves, based on marginal costs, the supply at a price is the **minimum** the seller is willing to offer at that price.

In the first case, the more the seller can sell, the more he charges. In the second case, the more he can sell, the less he charges.

The situation is summarized as follows:

I. At a given price, each buyer is willing to take a certain **maximum amount or less** at that price.

II. At a given price, each seller is willing

1. (In case marginal cost increases with an increase of supply) to offer **a certain amount or less** at that price.
2. (In case marginal—and therefore also average—cost decreases with an increase of supply) to offer **a certain amount or more** at that price.

If the **total supply curve** descends, the price represented at the intersection

of supply and demand curves, although it clears the market, is not a stable price, but tends always to fall, and this holds true so long as the supply curve descends. The individual competitor cannot raise prices without entering into agreement with others. If he should raise prices without such agreement he could make no sales. His only course, in absence of agreement, is to undersell his competitors and drive them out of business. If he fails to do this, he must go out of business himself.

The effect of cutthroat competition is to create losses.

MONOPOLY.—Competition when supply curves are descending always lowers prices so long as there remain any competitors. The only check to the tendency is the ceasing of competition or the ceasing of the supply curve to descend.

Monopoly may arise either as the result of the survival of the fittest, or by combination.

In practice competition is more or less imperfect. **Custom,** the habit of people to continue trading with their old dealers, deters them from going where they could buy more cheaply. As a consequence, competition may, in some instances, be so limited as to prevent fierce rate wars.

MONOPOLY PRICE.—Economic action is guided by the **principle of maximum gain.** It applies to both monopoly and competition. Monopolists fix prices with an eye to effect on demand, putting prices up to a point which affords maximum profit. The higher the price, the larger the profit per unit sold; but if made too high, sales are killed. If made too low, profit per unit is killed. A middle course is therefore steered by the method of **trial and error.**

Where monopoly prices exceed competitive prices, competition may thereby be invited. Competition feared but not actually existent is potential competition. Its effect is similar to that of real competition, so that under monopoly the price is usually somewhat less than the traffic will bear.

The chief **evils of monopoly** are the ruthless crushing of competitors and discrimination; also political corruption and control.

Not all monopolies, however, are evil; where supply curves are of the descending type monopolies are beneficial because they prevent cutthroat competition.

Mutually Related Prices

ARBITRAGE.—Prices of the same article in different markets act and react on each other. The extent to which prices of the same article in different markets differ at a given time depends upon means available for transportation and for communication. A special class of men make it their business to watch prices in different markets and to make profits by buying in cheaper markets and selling in dearer ones. In such arbitrage transactions equalization of prices is limited by cost of transportation. Thus, if it costs 5 cents per bushel to transport wheat from Chicago to New York, the price in New York will tend to be not more than 5 cents higher than that in Chicago. Reduction of transportation costs means greater equalization of prices in different markets. In general, such equalization is advantageous, but it sometimes causes hardship **among producers** who are thus brought into competition with those who can produce more cheaply because favored by superior natural resources. It follows, of course, that corresponding benefits accrue to the favored producers. Opposite results accrue **among consumers,** because those enjoying low prices are injured by the rise which

equalization beings about, whereas those paying high prices are benefited by the fall produced.

SPECULATION.—This refers to equalization of prices between different times. This kind of equalization is accomplished by keeping the commodity when it is abundant and cheap until the time when it is scarce and dear. The effect is to equalize prices at different times.

Speculation may be for the **rise** or for the **fall.** Speculators who try to profit by a rise in prices are called **bulls.** They buy and hold for higher prices. Those who try to profit by a fall in prices are called **bears.** They sell future goods short, i.e., they agree to sell in advance of time of delivery, depending on the expected fall in price to enable them to buy the wheat needed to fulfil their contracts. This is called **selling short.** The effect is to encourage consumption of present supplies, because producers by buying from those who sell short are guaranteed certain future stocks at definite prices. It reduces present prices because it reduces present demand. It increases future prices because it increases future demand. By reducing the gap between present high prices and future low prices, it tends to equalize the two. When, however, differences between present and future prices become too small to cover interest charges and other costs involved, it is no longer profitable.

Speculation is beneficial when it succeeds in equalizing prices; it is injurious when it aggravates differences in prices.

Interest

FUNCTION OF INTEREST.—Most prices are determined with reference to interest, because time of use of most commodities is a consideration.

Interest may be **explicit** or **implicit.** Explicit interest is that fixed by contract. Implicit interest is that which an investor expects to realize who makes sacrifices at one time for sake of compensating benefits at a later time. It is the **effective interest rate,** and, when used to discount a bond's income, gives the price at which it was bought.

Every investment is analogous to a loan, involving a rate of interest on purchase price, just as a loan does. Moreover, every purchase is an investment of present money for future benefits in money or measurable in money. Consequently every purchase price is fixed with reference to a rate of interest.

THE BASIS OF INTEREST.—An understanding of the basis of interest involves an analysis of the supply and demand of loans, which resolves itself into a comparison between different marginal desirabilities and undesirabilities, not simultaneous, but distributed at different points in time.

The **essence of interest** is impatience, the desire to secure gratifications earlier than we can get them; in other words, the preference for present over future goods.

The **market rate of interest** is formed out of various degrees of impatience in minds of many people. The rate of impatience in any individual's mind is his preference for an additional dollar, or dollar's worth of goods, available today, over an additional dollar, or dollar's worth of goods, available a year from today. Expressed in numbers, it is the premium a man is willing to pay for this year's over next year's goods.

Thus, if he is willing to promise to pay \$1.06 next year to get \$1 today, his rate or degree of impatience is 6%. This willingness to pay a premium for present use of money or goods causes the phenomenon of interest.

This preference for present over future goods resolves itself into impatience for immediate income over remote income.

This preference for immediate over remote income resolves itself into preference for present enjoyable income over future enjoyable income.

Thus all preference for present over future goods resolves itself into a preference for early enjoyable income over late enjoyable income.

The problem of determining the rate of interest is that of determining what premium people are willing to pay for present enjoyable income in terms of future enjoyable income.

The **degree of impatience** varies among individuals, depending upon such personal characteristics as foresight, self-control, habit, expectation of life, and love for posterity.

As to **foresight,** the greater it is the less the impatience.

As to **self-control,** the greater it is the less the impatience.

As to **habit,** the influence may be in either direction.

As to **expectation of life,** the longer the expectation of life, the less the impatience.

As to **love for posterity,** this is probably the most powerful cause tending to reduce the rate of interest, because of the desire of parents to provide for their children.

Risks tend to increase the rate of interest because they increase impatience.

DETERMINATION OF RATE OF INTEREST.—The rate of interest is determined by six conditions, as follows:

1. The dependence of impatience upon prospective income—its size, distribution in time, and uncertainties.
2. The tendency of the rates of impatience for different individuals to seek a common level in the resulting rate of interest.
3. The fact that supply and demand must be equal so that the modifications in the income streams of individuals, through buying and selling, or borrowing and lending, must "clear the market."
4. Of all optional uses to which one can put his capital, he chooses the one which at the market rate of interest makes the present value of his capital the largest possible.
5. What is borrowed at any time by some persons equals what is loaned at that time by other persons.
6. What any person borrows at one time must be repaid by that person at another time with interest at the market rate.

In general, the rate of interest is low,

1. If people are by nature thrifty, farsighted, self-controlled, or thoughtful for the future welfare of their children, or
2. If they have large or descending income streams.

It is high,

1. If people are shiftless, shortsighted, impulsive, selfish, or
2. If they have small or ascending income-streams.

Income from Capital

RATIO OF INCOME TO CAPITAL.—Income is usually the **joint product** of labor and capital, these usually being complementary to each other, each helping to produce the joint product of both.

The ratio of the value of income to the quantity of capital which it yields is termed **rent.** In other words, rent is the value of income yielded per physical unit of capital. Thus land may yield a "rent" of $10 per acre.

This is a broader conception of the word than is found in ordinary usage, since it includes implicit rent as well as explicit rent, or that named in a lease between landlord and tenant.

Explicit rent is rent in the usual and strict sense of the word, the amount of income being stipulated.

Implicit rent is a broader term, being equivalent to capitalists' profits. The income is not stipulated and can only be appraised.

If a landlord rents his land to a tenant for $1,000 a year, the rent is explicit; if, however, he works the land himself, the income earned is implicit rent. To state it, it is first necessary to appraise the crops, both which he sells and which he consumes.

Explicit rent, being stipulated, is usually fixed and certain.

Implicit rent, not being stipulated, is usually variable and uncertain.

RENT OF LAND.—Rent of land, separate from that of buildings, is called **ground rent.**

Land has two important peculiarities. First, the land in the world is fixed in quantity. Second, its different qualities cannot, in most cases, be as fully separated and classified as the different qualities of most other kinds of wealth. Consequently the price of land varies with each individual piece.

Illustration.—For given corn lands assume:

1. That they are fixed in quantity.
2. That they differ in quality or productivity by continuous gradation from very fertile to very infertile lands, each fixed and invariable as to corn productivity and having no other product.
3. That the cost of tilling each acre is likewise fixed and invariable, say $10.
4. That the lands are substantially equal in accessibility.

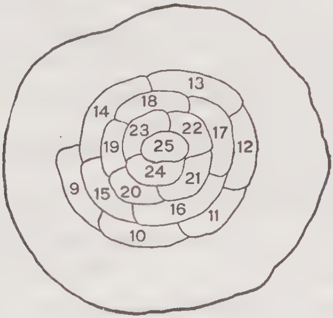

Fig. 6

Assume an island, Fig. 6, fulfilling the above conditions. Assume that the most fertile land is situated in the center and is capable of producing 25 bushels of wheat per acre per year, while other lands are arranged around it spiral fashion in order of descending productivity. If a superabundance of 25-bushel-per-acre land exists, so that it can be had merely by occupancy, and there is no prospect that inferior grades will be needed, the land is valueless and yields no rent. Corn will have a price equal to its marginal desirability measured in money and also to its marginal cost measured in money.

Since by our assumption, this cost is fixed for each grade of land and is the same for every bushel, the price of corn is in this case simply **equal to the marginal cost of producing the corn.**

If population increases so as to create a demand for corn which cannot be supplied from the most fertile land, some of the next grade, yielding 24 bushels per acre, will be used. This second-grade land will now be valueless but the first-grade land will have a value and yield rent, due to the rise in price of corn. The price will still be equal to marginal cost, but this now becomes the **cost of producing a bushel on second-grade land.**

Since there cannot be two prices for the same article in the same market, the price of corn produced on the first-grade land must be the same as that produced on the second-grade land. Consequently, owners of first-grade land now have a crop worth more than the cost of producing it, and can, if they choose, obtain a rent for it equal to the excess, i.e., one bushel per acre.

Each increase in population necessitating cultivating of lower grade of land gives a rental value to the next better grade and adds to that of all higher grades. In each case the rent of any grade of land is the difference between its productivity and that of the worst or marginal land occupied.

Two important conclusions are:

1. Price of corn is equal to its cost of production on the margin of cultivation.
2. Ground rent of any land is the difference between productivity of that land and productivity of land on the margin of cultivation.

Increase in value of land due to extension of cultivation to poorer areas is termed the **unearned increment,** because it is not due to the labor of the owner.

MODIFYING FACTORS UNDER ACTUAL CONDITIONS.—In the actual world,

1. Land is not absolutely fixed in quantity.
2. Productivity of any piece of land is not fixed, but varies from time to time both in kind and in degree.
3. Cost of tilling is not fixed, but varies with different land, and is influenced by the price of the product.
4. Some lands are more distant to reach than others and their product more difficult to bring to market.
5. Land is capable of more than one use, as corn-growing, and a change in price of corn may shift the use to which certain lands are put.

The farther cultivation is extended to poorer lands, or the more intensively the same land is cultivated, the greater is marginal cost. This is called the **law of diminishing returns.**

FOUR FORMS OF INCOME FROM CAPITAL.—Men receive income from capital in four forms, viz., interest, rent, dividends, and profits. If by rent we mean only explicit rent, and if by profits we mean implicit rent, then interest and rent represent explicit or assured income, whereas dividends and profits represent implicit or uncertain income. In case of interest and rent as thus understood, the income is free of business risk and **regular.** In case of dividends and profits, the recipient bears the business risk involved and receives an **irregular** income.

In general, those who assume risk may receive either more or less income than those who do not, and over long periods probably receive fluctuating instead of steady income. Also, on the average, risk takers probably receive

a larger income than those guaranteed against risk. Risks are assumed because of the hope of receiving a higher reward.

AVOIDANCE OF RISK.—Risk is reduced in the following ways:

1. Increasing our knowledge of the future.
2. Employing safeguards against mischances.
3. Insurance.
4. Speculative contracts, especially "hedging."

1. Risk decreases with progress of knowledge. Many trade journals make it their chief aim to aid their readers to forecast the future. Government weather bureaus supply weather forecasts, and government reports of crop conditions are for the same purpose. Engineers and geologists forecast the probable output of mines.

2. Safeguards are provided against shipwreck, fire explosion, burglary, etc.

3. Insurance consists in consolidating risks. It does not decrease risks for society as a whole, but by pooling them it steadies individual incomes and spreads the burden of risk more evenly.

4. Speculation, although dealing in chances, may be used to reduce chance. Short selling reduces risk to the vendee. Contractors reduce risk to a minimum by contracting for supplies in advance of the time when they will be needed, frequently with parties who do not yet have the goods and who therefore "sell short," thus assuming the risk. **Hedging** is a method of shifting risks whereby a dealer is relieved of risk of change in price. Thus, if he buys grain in Chicago intending to ship it to New York, thus making a profit in form of "arbitrage" which arises as the result of different prices in different places, he may find it desirable to protect himself against price changes during the period required to transport the grain. Hedging eliminates the **time** gain or loss but retains the **place** gain. It is speculation so arranged that if one loses in his regular business he wins in his speculation, or if he gains in his regular business he loses in his speculation.

Income from Labor

WAGES.—Income from labor is termed **wages.** Wages are **explicit** or **implicit.** Explicit wages are those actually paid to a hired person. Implicit wages are the earnings of a person who does not sell his services but enjoys them himself. Such a person is called an **enterpriser.** His earnings are **enterpriser's profits.**

A community's income consists of rent and wages, each being subdivided into explicit and implicit classes.

Therefore the four great branches of income are: explicit rent, explicit wages, implicit rent (capitalists' profits), and implicit wages (enterprisers' profits).

COMMUNITY INCOME.—Practically, the income of a community is divisible into six main parts by separating out from rent, whether explicit or implicit, that part which is reckoned in terms of value of capital, i.e., that part which is interest, whether explicit or implicit. While it is true that all rent may be translated into interest, only part of rent is actually so expressed. Therefore there are in the modern world **six great branches of income** considered with reference to the source from which derived, viz., wages and enterprisers' profits, rent and capitalists' profits, interest and dividends. These may be arranged as follows:

	Explicit	Implicit
From Capital	Interest per cent Rent per acre	Profits per cent (dividends) Profits per acre
From Labor	Wages per man	Profits per man

PRODUCTIVITY OF LABOR.—Men differ in productive power, some possessing a much greater earning power than others. They may be classified as common manual laborers, skilled manual laborers, common mental workers, superintending workers, and enterprisers.

The most inefficient workers correspond roughly to no-rent land in economic analysis.

PECULIARITIES OF LABOR SUPPLY.—The peculiarities of wages as compared with rent result from the fact that laborers own themselves. These peculiarities lie in the **supply curve.** See Fig. 7. The supply curve of human

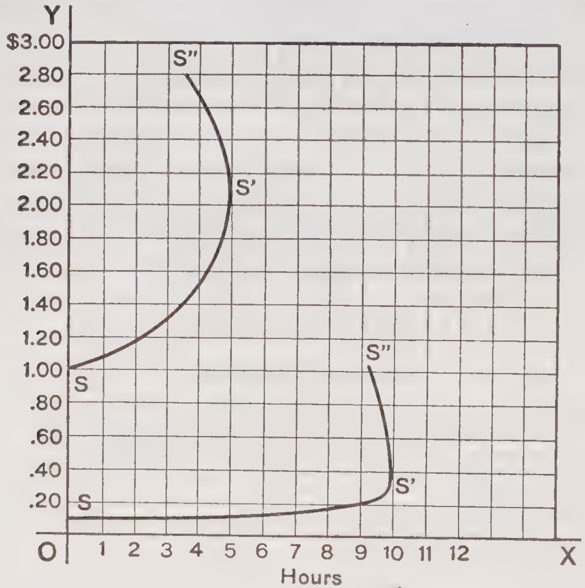

Fig. 7

services ascends very rapidly and often "curls back," due to the fact that a man's desire for more money decreases rapidly with increased earnings. Beyond a certain point, the more he is paid, the less he will work.

Curve $S\ S'\ S''$ is the supply curve of work for a well-to-do man, with income from sources other than his work. Curve $s\ s'\ s''$ is that of a poor man who depends wholly on earnings. He cannot afford to be idle, and employment is seldom voluntary. The minimum price necessary to induce him to work rather than become a tramp or beggar is represented in the diagram

by 0's, or 10 cents an hour. Only a slight rise in price induces him to work a full day. Height of s' is the price at which he works the greatest number of hours. Above this he prefers slightly shorter hours.

If wages remain high and a workman has a low enough degree of impatience for income to enable him to accumulate savings, he becomes more independent and his supply curve $s\,s'\,s''$ shifts in form towards that of the rich man's curve $S\,S'\,S''$. Consequently a higher minimum wage is necessary to induce the laborer to work and he is willing to work a smaller maximum number of hours.

A second peculiarity is that the earnings of a laborer are seldom discounted to ascertain his capital value. Such appraisement is usually made only for sale purposes and laborers are not sold except under slavery.

A third peculiarity is that wages are always reckoned as gross, never as net. The reason is that they are reckoned from the standpoint of the employer who pays them, not of the laborer who receives them.

A fourth peculiarity is that the supply of wage-earners differs from the supply of any other instrument. Workmen are not bred on commercial principles as are cattle, so that a rise in price of human services does not necessarily create a larger supply of laborers.

DEMAND FOR LABOR.—The demand of employers for workmen's services is generally analogous to their demand for services of other productive agents. The influence of sentiment has but little effect in altering it. Wages paid are the discounted future value of the laborer's work. The rate of wages is equal to the marginal desirability of the laborer's services measured in present money. It should be emphasized that the employer's valuation is, (1) marginal, and (2) discounted.

The employer pays for all workmen's services on the basis of the services least desirable to him, just as one buying corn buys it all on the basis of the least desirable ton. At a given rate of wages he "buys labor" to the point where the last or marginal man's work is barely worth the amount paid for it. This marginal unit is the **barometer of wages.**

In saying that wages are the discounted value of future benefits derived by the employer, we refer to the same principle as is employed to determine benefits of land hired, viz., discounting its future yield in grain or other benefits. This requires taking into account the probable future product and the time before it will be available. The employer of labor must discount the expected value of the product of labor.

A **rise in the rate of interest,** therefore, tends to lower the rate of wages because it lowers the discounted value of the final benefits derived from labor. A fall in interest rates has the opposite effect. The more remote are the ultimate benefits to which the work of the laborer leads, the more are wages influenced by a change in the interest rate. Also, a change in the interest rate diverts laborers from one employment to another. If the rate rises, labor is diverted from enterprises requiring much time to those yielding more immediate benefits.

The rate of wages is such as makes supply and demand equal, i.e., "clears the market." This means that unemployment tends to correct itself. When unemployment exists, the rate of wages tends to fall. This results in increased demand, which tends to absorb unemployment. In practice this equalization of supply and demand works itself out slowly.

EFFICIENCY OF LABOR.—The laborer's income depends both on the price he receives for each unit of work performed and on the number of units

turned out. His capacity to accomplish work is his **efficiency**. The greater his efficiency, the greater amount of income he receives. This is quite obvious in case of implicit wages, where one works for oneself. It is less so in case of explicit wages, where one works for others.

Efficiency of laborers can be increased in three ways:

1. Improvement in physical and mental vitality.
2. Improvement in trade education.
3. Improvement in organization and division of labor.

1. Some of these factors are matters of personal habit, others are matters of public health regulation. Still others are matters of working conditions. Use of alcoholic drinks and bad diet are matters of personal habit. Exposure to infectious diseases, housing conditions, and conditions under which one works, are matters largely of public health regulation. Hours of labor are an important consideration.

2. Modern division of labor has reduced the need for long apprenticeship. It has consequently fallen into disuse. Technical training is, however, necessary. This has led to establishment of trade schools.

3. Division of labor leads to great perfection of workmanship in a limited range of operations. It also makes possible the adaptation of work to the qualities and abilities of laborers, especially mental workers. Geographical division of labor, the concentration of industries where natural conditions are most favorable, is a factor in the efficiency of production.

SECTION 30

FOREIGN EXCHANGE

CONTENTS

(For list of forms, see complete table of contents.)

SECTION 30

FOREIGN EXCHANGE

DEFINITION.—Foreign exchange applies to **bills of exchange** (see Form 1) in which drawer and drawee are residents of different countries. In the United States residents of different states are legally foreign but it is not customary to classify as foreign bills originating between them. Foreign exchange, more broadly, refers to all monetary and credit instruments employed in the settlement of international transactions. It covers bankers' drafts, commercial bills, cable transfers, gold, silver, currency, money orders, travelers' checks, bond coupons, and dividend and interest checks.

FORM 1. Foreign Bill of Exchange. Drawn by an American firm against an English importer and payable 90 days after sight

PAR OF EXCHANGE.—Par of exchange is the ratio of the intrinsic values of monetary units of two countries. Between countries having the same metallic standard, par of exchange is determined by dividing number of grains in the standard coin of one country into number of grains in the standard coin of the other country. The English sovereign contains 113.0016 grains of pure gold. United States gold coins contain 23.22 grains of pure gold per dollar. The pound, therefore, contains 4.8665 times as much gold as the dollar, so that $4.8665 is the par of exchange between these countries. Par of exchange between the United States and France is 19.3 cents. Between countries on the same metallic standard par of exchange remains a constant until the content of pure metal in the monetary standard is changed.

In two countries on a gold and a silver basis, respectively, the two pars of exchange, silver and gold, cannot be determined by applying the laws of arithmetic to the relative weights of the two standard coins. Reference must be made to market prices of the two kinds of bullion, silver in one

country and gold in the other. Thus the Shanghai tael, one of several principal Chinese monetary units, contains 516.4058 grains of fine silver. With market price of silver in New York at 60 cents per five ounces (480 grains), the silver par of exchange between the United States and Shanghai is \$0.646 $\left(\frac{516.4058}{480}\times 60 \text{ cents}\right)$. But when price of silver advances to 90 cents per 5 ounces, the new par of exchange is \$0.968. Because market price of silver in terms of gold money is continually changing, the silver par of exchange is not fixed but varies with each fluctuation in the silver bullion market. The same is true of the gold par which is equivalent to the price of gold in Shanghai.

MAINTAINING BANK BALANCES AT FOREIGN EXCHANGE CENTERS.—At London, New York, Paris, Berlin, Yokohama, and other cities, foreign exchange is dealt in on a large scale. International bankers maintain deposit balances with their correspondents in such cities. These deposit balances are built up by buying from local merchants or bankers, drafts, cable transfers, or other credit instruments for remittance abroad, and are drawn against when drafts, cable transfers, or other credit instruments are sold to local merchants or local bankers who wish to remit funds abroad.

Illustration.—Exporter & Co., New York, sell merchandise, £40,000, to Importer & Co., London. Having made shipment, Exporter & Co., in accordance with terms agreed upon, draw a sight bill (i.e., payable immediately on presentation to drawee), for £40,000 on Importer & Co., or on latter's London bank. This draft is then offered to a New York banker who buys it at the market rate for this class of bills and immediately forwards it to a London correspondent. London correspondent effects collection of the item, and places proceeds to credit of the New York banker.

With a credit in London, the New York banker can sell drafts, or the right to draw them, against this deposit balance, to customers who wish to send funds abroad. Suppose that an importing house in New York has purchased some jute in Calcutta and has made necessary arrangements with New York banker already mentioned, to finance the transaction by means of sterling drafts. The New York banker informs his London correspondent that the Calcutta merchant has been authorized to draw bills under certain specified conditions against the New York banker's London balance. The Calcutta merchant is able to convert his bills into cash immediately by selling them to his local banker in India.

Thus the more essential operations of the foreign exchange department of a bank are: purchase of bills of exchange, their deposit with correspondent bankers abroad, and against the credit thus established, the sale of either the right to draw or drafts drawn by the bank. The banker, in buying and selling foreign exchange, does much the same as the merchant who deals in commodities. As the merchant handling staples can negotiate transactions involving hedging, futures, or options, so the foreign exchange trader employs these devices to insure himself against risk and to cover his position in the market.

FLUCTUATIONS OF RATES.—Fluctuations in exchange rates are due to forces operating through demand and supply channels and in this respect are subject to same influences as price movements for any commodity. If the United States sells goods abroad or in some other way becomes a creditor of a foreign country, ordinarily bills of exchange drawn against

such shipments of merchandise are offered by our exporters to American banks. In autumn when we export much grain and cotton, the increased supply of bills of exchange causes exchange rates on England, France, Germany, and other European countries to reach normal low level for the year. In winter and spring, when our exports are not ordinarily as heavy, exchange rates on foreign points tend to stiffen. Besides merchandise exports, the other chief items which increase the supply of bills of exchange and so tend to cause rates to become easier are: sale to foreigners of securities held in this country, payment of interest and dividends on foreign securities held here, foreign travelers in the United States, ocean transportation in American ships for merchants abroad, and remittance by European insurance companies to beneficiaries in United States. Similarly, besides merchandise imports, chief sources of demand for foreign bills of exchange are: purchase by Americans of securities held abroad, flotation of foreign loans in this country, payment for ocean freight by American exporters to foreign shipping companies, insurance premiums paid to European underwriters, and expenditures by American travelers abroad.

GOLD POINTS.—Between two countries on a gold basis, movements of exchange rates are restricted to fairly well-defined limits. These limits are called the **upper** and **lower gold points.** When exchange rates reach either limit, gold shipments take place and check the further rise or fall in rates. Before the World War, when Great Britain was on a gold standard and specie payments were not suspended, sterling rates did not depart from par by more than 2 or 3 cents, the cost of shipping gold equivalent to one pound between New York and London. Whenever sterling rates reached the upper gold limit, an American banker who had a debt of one pound to meet in Great Britain would buy, in this country, $4.8665 of gold for shipment abroad at his own expense. It was thus advantageous to send gold rather than buy sterling exchange at a price which exceeded par by more than the shipping costs of sending gold. In like manner, a holder of a sterling demand draft would not sell it for any sum less than the equivalent in United States money of the sum due in England after deducting cost of sending gold to this country, because with the British gold the American could obtain at the mint or in the market our money at the rate of $4.8665 for one sovereign. The upper and lower gold points are not absolute but vary slightly from time to time as shipping costs decrease or increase.

DEPRECIATED PAPER MONEY AND EXCHANGE RATES.—When the principal European countries took steps, shortly after outbreak of war in 1914, to protect their gold reserves, irredeemable paper money soon became the circulating medium. The stabilizing influence on exchange rates of unrestricted gold shipments no longer prevailed. Par of exchange had less significance in relation to actual rates as the different countries departed farther from their gold bases.

Paper money is in essence a promise to pay bearer, on demand, basic or standard money. Basic or standard money in the United States and Europe is a piece of gold of a certain weight and fineness bearing stamp of the issuing government. When a nation suspends its promise to pay, on demand, gold for paper money, the two cease to remain at parity. Gold disappears from circulation because every one elects to pay his debts in cheaper paper money. When gold money passes hands, it commands a premium in terms of the depreciated currency. The premium is large if it is expected that a long time will elapse before specie payments are resumed. Quantity of

paper money outstanding and economic condition of the country are important factors affecting exchange rates under these circumstances.

Depreciated paper money not only causes exchange rates to become speculative and fluctuate over a very wide area, but also makes commercially possible gold shipments under conditions that might seem contrary to the principles connected with the upper and lower gold points. Thus with sterling exchange at $4.50 in New York, it might seem unprofitable to ship gold to London; it would be if England were not on an irredeemable paper basis. But as long as England is on a paper basis, gold commands a premium in terms of paper and is bought and sold in the market like any other commodity. Therefore, if price of gold advances sufficiently in England it may pay to export it from here just as wheat is exported.

Exchange rates on Europe will not return to par until European countries make their paper money redeemable in gold at face value. Even if unfavorable trade balances against European countries were wiped out, their moneys in the foreign exchanges would remain depreciated in some measure comparable to the extent to which their currency is depreciated internally.

PEGGING EXCHANGE. -On certain occasions exchange rates are not determined solely by commercial and banking factors. Particularly during wars nations interfere with the free operation of the law of supply and demand and artificially influence gold movements, interest rates, exchange rates, and certain prices. During the Great War English, French, and Italian exchanges were "pegged," or fixed by agreement, at a point somewhat below par, called the "war par." The British government maintained the sterling cable rate in New York at $4.76\frac{7}{16}$ from Jan. 1916, to Mar. 1919. This the British government effected by instructing its fiscal agents in this country to buy sterling cables offered for sale at the pegged rate. To create funds to make such purchases money was borrowed from the Treasury of the United States. When the plan was suspended in Mar. 1919, a sharp prolonged decline in sterling followed.

TYPES OF EXCHANGE -SPOTS AND FUTURES. -Exchange, like commodities, may be bought and sold for "spot," or "future" delivery. In the first case the buyer obtains his exchange immediately. In the second he contracts to receive it at some specified date in advance. To illustrate use of futures in exchange, suppose that in December a Boston exporter accepts an order for a shipment of leather amounting to 800,000 francs for delivery in Paris before the following Feb. 20. To protect himself from a speculative loss due to a decline in French exchange, the Boston exporter contracts in December to sell to his local banker the 60-day sight draft to be drawn at time of shipment. Assume that the future rate agreed upon is 8 cents per franc. With the price for his draft thus definitely fixed, the American merchant can proceed with certainty because no matter which way the exchange rates move his profit will remain the same. To be sure, he shuts out the possibility of speculative profit due to an increase in rate for francs. In February when the leather is ready for shipment, the Boston exporter draws his 60-day sight draft and delivers it to his banker as agreed. At 8 cents per franc the sum received is $64,000 which produces the anticipated profit from the transaction.

In like manner an importer can protect himself from losses from exchange risks. Mr. T. Merchant purchases tea from China and expects to make remittance with a sterling draft of £15,000 at end of 90 days. In the meantime, perhaps before cargo arrives, he sells to a retail house $\frac{1}{15}$ of total

shipment. At this time sterling demand drafts for spot delivery sell at \$4.60. Mr. T. Merchant, in quoting his price to the retailer, fixes it in reference to the \$4.60 sterling rate, allowing for handling costs and a margin of profit on the sale. Wishing to insure his merchandise profit on the transaction, Mr. T. Merchant immediately arranges at his bank for the purchase of £1,000 of sterling exchange for delivery some 90 days hence, when he will be required to remit £15,000 covering total cargo. The bank may quote its customer a rate slightly above spot rate for demand drafts, say, \$4.60$\frac{3}{8}$. Subsequently the importer makes other sales, fixing his wholesale price in each case in reference to the sterling demand rate, and at same time arranging with his bank for purchase of future exchange. When total cargo is sold, Mr. T. Merchant realizes his anticipated merchandise profit. It does not matter to him whether sterling rates advance to \$4.80 or decline to \$4.00. At the appointed time he secures from his banker at previously agreed rates the £15,000 demand draft, the amount necessary to pay purchase price of tea.

To avoid gambling in foreign exchange the bank follows a policy of compensating purchase and sale of bills. Exchange bought for future delivery ultimately provides funds abroad to cover exchange sold for future delivery. It is hardly to be expected that sales and purchases of futures can be made to match without ingenuity and alertness on the part of the foreign exchange trader. Interbank transactions offer the most important means by which a trader can cover his own position in the market. Whereas one bank may be long on futures, i.e., overbought, another may be short, i.e., oversold. Thus it is mutually advantageous for one bank to buy from the other. In transactions of this kind it is common for banks to swap bills. For example, if, in February, Bank A has too many April bills and too few May bills, whereas Bank B has the reverse situation, it is mutually desirable for Bank A to swap its surplus of April bills for Bank B's surplus of May bills.

SIX TYPES OF EXCHANGE.—Spot and future exchange may be further classified according to when the item calls for payment by the drawee, as: (a) cable transfers, (b) demand drafts, and (c) time drafts. Therefore from this point of view we have six types of exchange:

1. Spot cable transfers	4. Future cable transfers
2. Spot demand exchange	5. Future demand exchange
3. Spot time exchange	6. Future time exchange

A **cable transfer** is in effect a draft, payable immediately upon presentation to drawee, which is sent by telegraph. It is used when the saving of time is of prime importance. Cable transfers command a higher price than demand drafts because the selling banker's foreign balance is drawn upon almost immediately, whereas in case of a demand draft no such effect takes place until the required mailing time between the two cities has elapsed.

A **demand draft** or **sight bill** is a written order calling for payment of funds by drawee immediately upon presentation. It is forwarded through the mail. There is no occasion for formal acceptance by drawee as is necessary for a time bill; the item is either paid or dishonored as soon as presented to the party on whom it is drawn.

A **time bill** is a written order calling for payment of funds at a fixed or determinable future date after the item has been drawn or has been formally accepted by drawee. It is forwarded through the mail. Time bills may be drawn payable so many days "after date," i.e., after being made out by drawer; or they may be drawn payable so many days "after sight," that

is, after formal acceptance by drawee. In foreign exchange most time bills are drawn payable after sight; this makes it necessary for holder to mail them promptly to fix the maturity date early as possible and thus avoid interest losses. The longer a time bill has to run, the smaller its present value and therefore the lower its rate in the market. The reasonableness of this becomes evident when we consider the negotiating banker to whom a time bill has been offered by an exporter. The banker in quoting his price must be governed by the proceeds he expects to realize upon the item from a foreign correspondent. If the bill has 90 days to run, discount charges to be deducted by foreign correspondent are greater than if maturity date is only 30 days hence.

SPREAD IN RATES.—In the market at a given moment rates for different types of exchange tend to parity with each other when account is taken of the factor interest. Cable transfers command the highest rate, demand drafts the next highest, while time drafts are lowest of the three types of exchange. The spread or difference in rates between types is a function of time and interest, with an occasional minor disturbing factor entering into the equation. If for any reason rates do not conform to a parity relation, opportunity is offered exchange traders to make a profit until the situation is corrected. Suppose time bills are relatively low as compared with demand bills. This makes it profitable for a trader to buy time bills, remit them to foreign correspondents for credit, and at same time sell in this country demand drafts against the anticipated proceeds. Again, if demand drafts are relatively high as compared with the cable transfer rate, a trader can realize a profit by purchasing cables and selling against the proceeds abroad demand exchange in the United States.

The higher the discount rate abroad, the greater is the spread between the different types of exchange. This is due to the fact that a banker in buying a bill of exchange must quote his rate primarily upon the basis of what he expects to obtain as proceeds abroad. Therefore, the lower the foreign discount rate, the more nearly the rates for time bills, demand bills, and cable transfers approach each other.

Spot and future exchange of a given type are subject to the same market influences and tend to follow a consistent trend. In this respect the situation is no different than for spot and futures in the commodity market. The anticipation in April that franc drafts drawn the following August will be higher causes the April rate to strengthen, and vice versa. Purchase or sale of spots can always be postponed and futures can be dealt in at present; thus competition ties the two together.

RELATIONSHIP OF EXCHANGE RATES IN TWO MARKETS.—Competition causes exchange rates between two markets to maintain a consistent relationship. The situation is very much the same as that which arises when traders in cotton, grain, wool, or other commodities, noticing a discrepancy in prices in two cities, buy in one for immediate sale in the other. To illustrate: when exchange on Paris is at a discount in New York, dollar exchange is at a corresponding premium in Paris. Expressed more concretely, when franc cable transfers are quoted at 8 cents in New York, a dollar draft ordinarily costs 12.50 francs in Paris ($1÷8). Assume that the rate in Paris advances to 13 francs without a corresponding change in New York. Although on a market subject to violent fluctuations foreign exchange traders may consider the risks too great to warrant trying for a profit, nevertheless any such condition as the one under consideration is only temporary.

A New York foreign exchange trader cables his Paris correspondent to sell dollar cables on New York in the Paris market. At the rate of 13 francs for a dollar, $10,000 would place 130,000 francs to the credit of the New York banker in Paris. At the same time the New York banker sells franc cables in this country at the rate of 8 cents. Therefore, 130,000 francs would yield $10,400, or a profit, before allowing for incidental expenses, of $400 on the original $10,000 paid by the New York banker for cables drawn against him. The result of this transaction and similar ones is a tendency to correct the discrepancy in rates through increasing the supply of dollar cables in Paris and franc cables in New York. In the first part of the above illustration the same results are obtained if the New York banker brings cables for remittance to his Paris correspondent instead of instructing latter to sell cables on New York.

TRIANGULAR ARBITRAGE.—Arbitrage in exchange consists essentially of buying exchange in one place at a low rate and selling it simultaneously in another place at a profit. Triangular arbitrage means operating between three markets for the purpose of making a profit due to lack of consistency in rates between the points in question. Arbitrage transactions require rapid action on the part of the foreign exchange trader and so are almost entirely confined to cable transfers.

Suppose that on a certain date cable transfer rates between New York, London, and Paris are quoted as below:

1. Sterling cables in New York, $4.60.
2. Cable transfers in New York on Paris, 8 cents.
3. London cables on Paris, 58.35 francs.

A foreign exchange trader in New York purchases a cable transfer for £10,000, paying $46,000, and at the same time instructs his London correspondent to purchase with this amount of sterling franc cables in the London market. At 58.35 francs per pound, £10,000 will purchase 583,500 francs for remittance to a Paris correspondent. The New York banker now proceeds to sell cables against his credit in Paris, and at the rate of 8 cents per franc will realize $46,680. But since he started by purchasing £10,000 at a cost of $46,000, he has made a profit of $680 before allowing for cable charges, commission, and incidental expenses. The possibility of continuing to make a profit of this kind tends to be quickly corrected by the very transaction itself; the supply of the dearer exchange is increased and the demand for the cheaper exchange is also increased.

FINANCING IMPORTS AND EXPORTS.—The bulk of imports and exports are financed by means of bank drafts drawn under commercial letters of credit. A commercial letter of credit is a statement of authorization and undertaking by the issuing bank, naming the conditions under which the beneficiary (exporter) may draw drafts against the bank or its correspondent. One of the chief purposes which a letter of credit serves is to enable the exporter to find a ready market for his bills which will be drawn on a bank whose standing is known instead of on a merchant who is not widely known. By means of a letter of credit, an importer can readily obtain goods from foreign merchants who cannot be expected to know or rely upon his business standing. Furthermore, purchases can be safely made where the exporter requires cash at time of shipment. By the system of letters of credit the importer is enabled to finance the transaction by borrowing funds ultimately from the world's monetary centers at the comparatively low rates of interest regularly prevailing there.

To point out the main steps in financing an importation: Importer & Co. of New York arrange with their bank, the Prosperity Trust Co., to open a 90 days' credit in favor of Exporter & Co., of Rio de Janeiro. The transaction involves a purchase of coffee amounting to $12,000. After receiving the New York bank's letter of credit authorizing drafts under certain stipulated conditions, the Brazilian export house, already having secured cargo space, makes shipment. At the same time it draws on the New York bank a 90-day sight bill for the purchase price of the coffee. To the draft are attached the ocean bill of lading, commercial invoice, consular invoice, and other shipping papers. The draft is then turned over by Exporter & Co. to their local bank which either discounts the item or receives it for collection. Draft and documents are immediately forwarded to the Brazilian bank's New York correspondent which gets in touch with the drawee, the Prosperity Trust Co. Upon acceptance of the draft, the documents, but not the draft, are surrendered to the Prosperity Trust Co., and the latter notifies its customer, Importer & Co. Before being able to obtain the cargo from the steamship company, Importer & Co. will need possession of the bill of lading calling for the delivery of the coffee. In order to protect its interests the Prosperity Trust Co. requires Importer & Co. to sign a trust receipt in return for obtaining the bill of lading. Trust receipts vary in form and terms but in general specify that title to the goods rests with the bank to which the proceeds of the sale must be given until the debt is settled. It is not customary, however, for a bank to insist rigidly upon the terms of the contract, unless there is danger that the customer will not be able to meet his obligations. At the end of 90 days the Prosperity Trust Co. will look to Importer & Co. for funds to cover the maturing draft, and also for the usual or agreed-upon commission of, say $\frac{3}{8}\%$, figured on the amount of the letter of credit.

DOCUMENTARY INSTRUCTIONS.—When drafts have attached bills of lading or other shipping papers they are known as "documentary" bills, whereas if no such papers are attached they are called "clean" bills. The shipping papers of a documentary bill include, in addition to the bill of lading, insurance policies, consular invoices, certificate of origin, certificates of inspection, and similar papers, according to the character and destination of the shipment. Most important of these papers is the bill of lading which carries title to the merchandise, the sale of which the draft represents. The importer, who is the drawer of a documentary bill, has the right in any event to receive attached bill of lading and other papers when he makes payment. However, he may be treated more liberally. Shipping documents may be handed to him for his mere acceptance of the draft. The disposition to be made of the shipping papers by the negotiating banker is indicated by the documentary instructions accompanying the draft. These instructions may be:

1. Documents for payment (D. P.)
2. Documents for acceptance (D. A.)
3. Documents for delivery (D. D.)

Of the three types of instructions, "documents for payment" give holder the greatest security because he retains possession of the collateral until payment has been made by the foreign importer. These are the usual instructions when the draft is drawn on a merchant. In the event of such a draft being a time bill, the importer becomes entitled to a rebate of interest for taking up the item before maturity. When the drawee of the draft is a

bank, the terms are never "documents for payment," but rather "documents for acceptance" or perhaps "documents for delivery." Drafts drawn with the instructions "documents for delivery" are exceptional. Instructions of this third class confer authority upon the agent of the exporter to surrender bill of lading and other shipping papers even before acceptance is made.

Accounting Procedure

COMMERCIAL LETTERS OF CREDIT.—These are instruments by which exporters are authorized to draw their drafts against banks, for the account of importers. (See Form 2.) The **bank accounting procedure** required depends upon: (*a*) whether or not the drafts are to be drawn in the currency of the exporter, (*b*) the method of notifying the beneficiary of the existence of the credit, (*c*) how the foreign accepting bank is reimbursed.

Credit No.....*538*....

PROSPERITY TRUST COMPANY
FOREIGN DEPARTMENT

For *$12,000—U. S. C.*

New York City,......*March 10, 1923.*

EXPORTER AND COMPANY
Rio de Janeiro, Brazil

Dear Sirs:

At the request of......*Importer and Company, New York City*......we hereby authorize you to value on Prosperity Trust Company, by your drafts at...... *three (3) months*......sight for any sum or sums not exceeding a total of...... *Twelve Thousand Dollars*......accompanied by commercial invoice, consular invoice, bills of lading representing..........shipment of......*coffee from Rio de Janeiro to New York*......Insurance......*marine, to be effected by shippers.*

Bills of lading for such shipments must be drawn to the order of Prosperity Trust Company unless otherwise specified in this credit.

A copy of the consular invoice and one bill of lading must be sent by the bank or bankers negotiating drafts, direct to the Prosperity Trust Company, New York City, U. S. A.

The amount of each draft negotiated together with the date of negotiation must be endorsed hereon.

We hereby agree with bona fide holders that all drafts drawn by virtue of this credit, and in accordance with the above stipulated terms, shall be honored upon presentation at Prosperity Trust Company if drawn and negotiated on or before ......*June 10, 1923.*

N. B. All drafts drawn under this credit must bear clause "drawn under Prosperity Trust Company Letter of Credit No. 538 dated New York City ......*March 10, 1923* ......to cover shipment of.... *coffee*......from......*Rio de Janeiro to New York City*......

FORM 2. Import Letter of Credit (Dollars)

For convenience the importer's bank which arranges for the granting of the credit to the exporter is referred to as the "opening" bank. By "notifying" bank is meant the institution which advises the beneficiary of the granting of the credit. In some cases one bank may perform both functions.

If the drafts are to be drawn in terms of the money of importer's country, the opening bank issues a letter of credit on itself which is probably transmitted directly to the exporter either by the bank or by the importer. The bank may choose, however, to have a foreign correspondent notify the beneficiary. In the latter case the notifying bank simply forwards the instructions; no credit relations are involved and therefore the transmission of such advice calls for no accounting debits or credits for either bank. If notifying bank, or some other institution located in beneficiary's vicinity, voluntarily, and not at request of opening bank, purchases beneficiary's draft, accounting transactions are required. As drawer of the draft the beneficiary is contingently liable to purchasing bank. The transaction in this respect involves same accounting procedure as a domestic bank discount or loan. Opening bank now becomes liable to purchasing bank as a holder of the draft, but no accounting record is necessary until the item is presented to drawee (opening bank) for payment.

When the **letter of credit** specifies that the drafts are to be drawn in the currency of beneficiary's country, a foreign correspondent is requested to pay the drafts of which it is customarily the drawee. Opening bank probably has a deposit balance with the foreign correspondent. The latter simply makes its charges against this account. The American bank in turn credits its account with the foreign bank; this credit is offset by a debit to the customer's account or by funds received from him. In case no accounts with foreign correspondent exists, or the opening bank prefers not to have this account debited, foreign correspondent may reimburse itself by drawing a draft either on the opening bank or on another correspondent bank with which the opening bank maintains a balance.

In **handling commercial letters of credit** the important accounts which a foreign exchange department of a typical bank must keep are as follows:

(a) **Customers' Liability under Commercial Credits—Asset Account.**—Represents the amount of cover which customers must furnish the bank to meet drafts drawn under credits issued at request of such customers. This account is debited for drafts which the bank itself accepts or when foreign banks advise that they have accepted drafts. Credits to this account are made for payments received from customers.

(b) **Our Acceptances under Commercial Credits—Liability Account.**—Shows amount of drafts accepted by bank itself; it is credited when acceptances are made and debited when they are paid.

(c) **Acceptances of Foreign Banks under Commercial Credits—Liability Accounts, Similar to (b).**—Represents liability of bank to provide funds to cover acceptances made by foreign correspondents at bank's request under letters of credit. The account is credited upon advice from abroad that acceptance has been made. It is debited at maturity of draft or before that time if payment is made in advance. Offsetting credit is the account of the foreign bank.

(d) **Commissions—Revenue Account.**—Commissions earned under commercial credits are credited to this account. Debits are made for adjustments and closing entries.

(e) **Commercial Letters of Credit Issued (Foreign Currency)—Contingent Liability Account.**—The face value of each commercial credit issued in foreign

currency is converted into United States money at a predetermined or an arbitrary rate and resulting figure is credited to this account. It shows contingent liability of the bank to meet total amount of drafts, drafts not yet drawn but which foreign beneficiaries are entitled to draw under outstanding letters of credit. Debits are made to this account upon advice of acceptance by foreign banks, which act changes the contingent liability to a real one. Debits are also made to take care of canceled or expired credits.

(f) **Commercial Letters of Credit Issued (Dollars)—Contingent Liability Account.**—This account is similar to (e) and represents contingent liability for drafts which have not yet been drawn but which beneficiaries are entitled to draw on this bank under dollar letters of credit. Debits are made to this account when drafts are accepted and the contingent liability thereby becomes real. Debits are also recorded when credits have expired or are canceled.

FOREIGN BRANCH ACCOUNTING.—Exchange rates on nearly every gold standard country (this includes most important commercial nations) prior to the Great War fluctuated within very narrow limits. Foreign branch accounting was then a comparatively simple matter. Par rates or a figure close to that point was used to convert foreign currencies into dollars. Any difference between the rates so used and the actual market rate was unimportant, being taken care of in the Profit and Loss account on books of home office. Although some concerns still adhere to the old policy of conversion, the results are misleading. Both sales and expenses for the foreign branch are overstated.

From the point of view of the home office the accounting problem centers about the consolidated balance sheet and profit and loss statement. The accounting principles and procedure applying in this country to transactions between a concern and a domestic branch are not altered when branch is located abroad. Only the details vary to some extent, depending upon method of invoicing and manner of making remittance. In an illustrative case home office ships goods to foreign branch, charging latter at same prices which would be quoted to an independent dealer. When remittances are received from abroad the foreign branch account at home office is credited for invoice price of goods thus paid for. If remittance includes a profit on sale of goods, home office also credits Profit and Loss account. If a loss results, a debit is made to same account.

When consolidated statements are prepared by home office, figures on books of foreign branch should as a rule be converted into dollars at rate of exchange effective on last day of period. This assumes that exchange rates have not returned to their pre-war levels. An exception to the above rule may be desirable in converting the value of **fixed assets** of foreign branch. If this item is a comparatively large one and exchange rates have depreciated heavily since such investments were made, it is best accounting practice to convert the values either on the basis of actual rates or of average monthly rate at time fixed assets were purchased. These assets will be serviceable for a number of years; their value for this purpose is not dependent upon current fluctuations in exchange. Same treatment should be given to corresponding depreciation reserves. Reserves should also be set up on consolidated balance sheet to provide for difference between cost of merchandise to home office and price at which it was invoiced to foreign branch. Adjustment reserves of this kind should be figured on basis of exchange rate used to convert merchandise.

For illustration of foreign exchange accounting see section on "Accounting Principles."

PURCHASE OF TIME BILLS.—Purchasing of 30, 60, or 90-day time drafts or acceptances is a common type of bank transaction. The bills are immediately forwarded to a foreign correspondent either for rediscount or to be held until maturity. At the time of purchase the American bank debits Advances on Time Bills, or an account with some such appropriate title, and credits Cash, and Purchase Discounts on Time Bills. Whether the bills are sent abroad for rediscount or to be held until maturity, foreign correspondent in either case credits in foreign currency the American bank's deposit account for the proceeds. A **letter of advice** is also sent to the American bank, which thereupon debits the account with its foreign correspondent. The debit is shown both in foreign currency and in dollars converted at market rate at time of collection or discount.

EXCHANGE SALES.—When a bank sells to a customer, or to another bank, drafts or cables on a foreign correspondent, Accounts Receivable or Exchange Sales is debited and the account with the foreign correspondent is credited. The handling of charges to the customer for brokerage commissions and cable costs follows the regular routine of general accounting. Exchange Sales is debited, not credited, at time of sale. This is because Exchange Sales represents the amount due the bank. It is the practice for sales of drafts or cables to be paid immediately or within a few days. Exchange Sales is, therefore, not only a controlling account, but also in effect a clearing account. When payments are received, the bank debits Cash and credits Exchange Sales.

POSITION SHEETS.—One of the most important routine duties of the foreign exchange department is recording the "position" of the purchases and sales of exchange and commitments for the future. Position records are kept so that the trader can tell at a glance not only where and how much funds the bank has abroad, but also what these foreign balances will be as a result of items in transit and future contracts which have been entered into.

A **sight position sheet** is arranged to show in advance the amount of foreign funds available for drawing sight or time drafts upon arrival abroad of the next mail steamer; the calculations do not include purchases or sales of exchange that will take place while vessel is en route. To determine sight position at beginning of any day, add to the cable balance at end of previous day those bills purchased and those drafts sold which will go forward on the steamer under consideration, also any previously purchased bills which the foreign correspondent has been instructed to hold until maturity and which become due on that day.

A **cable position sheet** shows the bank's balances abroad available for cable sales. Separate data are kept for each foreign correspondent, indicating amount of the deposit and the different dates on which the funds become available. Opposite each correspondent's name appears in the first column the cable transfer balance for a given day. In the next column is shown the net debits or credits which will affect the balance on the succeeding day. The debits are found by adding to the cable transfers sold calling for payment on that day, draft advices and other debit items due to arrive abroad that day, also amounts to meet maturing drafts drawn under commercial letters of credit. The credits are computed by adding all the bank's payments and remittances, whether by bought transfers, cable, or otherwise, that will be received by the foreign correspondent on that day. Similarly the cable position can be determined for as many succeeding days as desired.

The Working Sheet

(For list of forms, see complete table of contents.)

SECTION 31

ACCOUNTING PRINCIPLES

Fundamentals

DEBIT AND CREDIT.—The rules for debits and credits are as follows:

1. Debit wealth received by us.
2. Debit expenses incurred by us.
3. Debit losses incurred by us.
4. Credit wealth surrendered by us.
5. Credit debts incurred by us.
6. Credit profits made by us.

Debit and Credit Rules Illustrated.—These rules are illustrated by the following examples:

Purchases (wealth received—Rule 1)	$500	
Anson Company (debt incurred—Rule 5)		$500
For purchase of goods on credit.		
Cash (wealth received—Rule 1)	$200	
Sales (wealth surrendered—Rule 4)		$180
Profit and Loss (profit made—Rule 6)		20
For sale of goods, profit being shown separately.		
Cash (wealth received—Rule 1)	$ 80	
Profit and Loss (loss incurred—Rule 3)	20	
Sales (wealth surrendered—Rule 4)		$100
For sale of goods, loss being shown separately.		
Profit and Loss (loss incurred—Rule 3)	$200	
Purchases (wealth surrendered—Rule 4)		$200
Record loss of goods due to fire.		
James Thompson (wealth received—Rule 1)	$300	
Sales (wealth surrendered—Rule 4)		$200
Profit and Loss (profits made—Rule 6)		100
Record sale and profit made thereon.		
Profit and Loss (expense incurred—Rule 2)	$ 30	
Cash (wealth surrendered)		$ 30
For payment of rent expense.		

In the above illustrations the profit and loss element is separated from sales to bring out the differentiation which, in practice, is made at the end of the accounting period.

APPLICATION OF DEBIT AND CREDIT TO ASSET AND LIABILITY ACCOUNTS.—A set-up of a few accounts is given below, and such entries as are more frequently used are given.

The **cash account** is outlined below:

Cash

Debit: For amount of cash on hand at beginning. For all receipts or incoming items.	**Credit:** For all disbursements or outgoing items.

The transactions with cash are self-explanatory, and the balance represents an asset.

Accounts receivable accounts are outlined below:

(Name of Customer)

Debit: For amount he owes us at beginning. For goods sold to him on account.	**Credit:** For money he pays us on account. For notes he gives us on account. For goods he returns to us. For discount we give him. For claims we allow him.

The balance of this account is an asset, representing what the customer owes us

Fixed asset accounts are set up according to the following outline:

(Name of Account)

Debit: For full cost to the business in position ready for use.	**Credit:** For sale or loss, at cost price.

The charge to this account should include all expenditures necessary to secure full title and to place the asset in position ready for use, such as freight, cartage, and placement costs. If a part or all of the asset is sold at purchase price, balance shows pro rata cost of part left. If it is sold at a profit, cost is credited in the account and excess of selling price above cost is carried to a profit and loss or nominal account. If the asset sells at a loss, this account is credited with the amount received therefor and with the difference between this sum and the cost of the asset. This difference represents loss, and is charged to a profit and loss account.

Accounts payable accounts are outlined below

(Name of Creditor)

Debit: For money paid to creditor on account. For notes given him on account. For goods returned to him. For discounts he gives us. For claims he allows us.	**Credit:** For amount we owe creditor at beginning. For goods sold us on account by creditor.

APPLICATION OF DEBIT AND CREDIT TO PROPRIETORSHIP ACCOUNTS.—Proprietorship accounts record the effects of business transactions upon net worth or proprietorship. The receipt of income and the payment of expenses result, respectively, in increase and decrease of proprietorship. These increases and decreases are recorded temporarily in income and expense accounts. At close of the fiscal period these accounts are summarized to determine net effect of all transactions on net worth or proprietorship. **Temporary proprietorship accounts** are used to record immediately the results of transactions and influences. If the business is successful these result in a profit. They set forth in detail the efforts to make a profit. **Vested proprietorship accounts** record the summarized results of these transactions and influences. They record the original investment and its subsequent net increases and decreases. Income and expense accounts are set up to record temporarily proprietorship changes. Later their balances are transferred, by a process of summarization, to the vested proprietorship accounts.

Income accounts are outlined thus:

(Name of Account)

Debit: For all deductions from yield shown contra. For transfers to Profit and Loss.	**Credit:** For the yield.

As shown in the outline, items representing yield appear on the credit side of income accounts. When debits are required they indicate: (1) adjustments of overstatements of amount of yield as originally credited; (2) adjustments of errors in originally crediting items of income to a given account; and (3) transfers to a summary account for purposes of closing at the end of accounting periods.

Expense accounts are outlined thus:

(Name of Account)

Debit: For cost incurred.	**Credit:** For any deductions from cost.

In general, the principles governing debits and credits to expense accounts are the same as those governing debits and credits to income accounts, except that the situation is reversed.

Vested proprietorship accounts are outlined as follows:

(Name of Account)

Debit: For items transferred or withdrawn.	**Credit:** For items invested.

The proprietorship account passes under various titles. In case of a sole proprietorship it consists of the name of the proprietor plus the suffix "Capital," as "John Doe, Capital." The same designation is used in case of partnerships,

but there are as many proprietorship accounts as there are partners. In corporation accounting the "Capital Stock" and "Surplus" accounts perform the function of showing proprietorship. Ordinarily the capital account shows no change until the end of the period, when net increase or decrease of wealth for the period is transferred to it. In case of sole proprietorships and partnerships, **personal accounts** are kept in which more or less regular withdrawals of cash or merchandise and like transactions are recorded. Withdrawals are shown on the debit side, also payment of the proprietor's personal debts. On the credit side are shown the temporary investment of funds in the business, and retention by the business of funds belonging to the proprietor.

APPLICATION OF DEBIT AND CREDIT TO MIXED ACCOUNTS.—The term "mixed account" is applied to accounts which possess a mixed character, i.e., contain both real and nominal elements. Many accounts begin the fiscal period as real accounts but take on a mixed character as time passes. This is illustrated by the Machinery account, which becomes a mixed account through the effects of depreciation. Effect is given to this in the account only periodically because of the impossibility of making daily allowance therefor.

The **Merchandise account** in its original form is an illustration of the mixed account. Assume the case of a sale of merchandise, costing $10, for $15. Theoretically, the sale price $15 can be split up into two parts, $10 covering cost price, $5 representing profit. But as the old Merchandise account is used, the entire $15 is credited to it. The Merchandise account thus used becomes a **mixed** account. It is outlined as follows:

Merchandise

Debit: For goods on hand at beginning of period. For purchases, including freight-in and drayage. For returned sales. For sales rebates and allowances.	**Credit:** For sales. For returned purchases. For purchases, rebates and allowances.

At the end of each accounting period the inventory as at that time is credited in the Merchandise account, after which the account becomes purely nominal, representing either gross profit or loss on sales. Under modern methods the old form of Merchandise account has been abandoned largely, separate accounts being kept for the distinctive elements formerly entering into the one account.

Assets subject to depreciation are the subject matter for another class of mixed accounts. The amount of depreciation is estimated at the close of each period. This constitutes an expense which must be deducted from the old balance of the account in order to reduce it again to a **real** basis. Depreciation occurs daily but cannot be recorded daily, which accounts for the fact that accounts for wasting assets are mixed accounts except on the dates when the necessary adjustments are made to separate the nominal and real elements thereof. In order to leave the account for such an asset in its original condition, it is customary to credit a **depreciation reserve** instead of the asset account itself. To secure a true valuation of the asset account, it must be considered in connection with its corresponding depreciation reserve. The depreciation reserve is sometimes called a **valuation reserve.** These principles are illustrated as follows:

Building

1922 Jan. 1 . . . . $25,000	

Reserve for Depreciation of Building

	1922 Dec. 31 . . . . $1,000 1923 Dec. 31 1,000

At the end of 1923 the building has depreciated $2,000 and possesses a theoretical value of $23,000.

The Financial Statement

THE PROPRIETORSHIP EQUATION.—The proprietorship equation is expressed thus:

Assets − Liabilities = Proprietorship, or
Assets = Liabilities + Proprietorship

Proprietorship is the difference between assets and liabilities, being positive when assets exceed liabilities and negative when liabilities exceed assets. When there are no liabilities the equation becomes:

Assets = Proprietorship

If the assets consist entirely of cash, $10,000 the equation is:

Assets ($10,000 in cash) = **Proprietorship** ($10,000)

If the assets consist of cash $1,000, real estate $3,000, and merchandise $4,000, and liabilities consist of accounts payable amounting to $3,500, the equation is:

Assets		Liabilities and Proprietorship	
Cash	$1,000	Accounts Payable	$3,500
Real Estate	3,000	Proprietorship	4,500
Merchandise	4,000		
	$8,000		$8,000

This may be expressed also in the following form:

Assets		
Cash	$1,000	
Real Estate	3,000	
Merchandise	4,000	
Total Assets		$8,000
Liabilities		
Accounts Payable	$3,500	
Total Liabilities		3,500
Proprietorship		
Net Worth		$4,500

THE BALANCE SHEET.—When arranged according to conventional rules the proprietorship equation becomes the balance sheet. The purpose of the balance sheet is to show the financial condition of a business at any time. Although the balance sheet shows the financial condition of a business at a given date, it does not afford all data necessary for the interpretation of the results of a business over a period of time. The balance sheet may be discussed under the two titles of **form** and **content.**

By **form** of a balance sheet is meant its arrangement and the classification of its items. There is no standard form, and in general the form of the balance sheet depends upon the purpose to be served. Sometimes other expressions are employed in place of the expression "Balance Sheet," as, "Statement of Assets and Liabilities," or "Financial Statement." The title of the balance sheet should show clearly to what firm or company it belongs and to what date it applies, as:

The Brooklyn Edison Company
Balance Sheet, as at December 31, 19—

Since the chief use of a balance sheet is to show the degree of solvency or insolvency of a business for purposes of credit granting, the arrangement must be subordinated to that end. Solvency is determined not simply by the quantity of assets but also by the amounts of the different classes of assets and the relationship which they bear to the liabilities. If funds are tied up in form of fixed assets, they are useless for liquidation of current liabilities. Items in a balance sheet should be so arranged that the application of assets to liabilities will be clearly indicated. Usually debts are paid in cash and fall due at definite dates. Arrangements must be made to meet these obligations at maturity. The cycle of operations must be so arranged as to provide funds to meet debts as they fall due. Occasionally it becomes necessary to borrow at a bank, in which case the bank demands a balance sheet showing the credit status of the borrower.

Cash is the most liquid asset. Next in order usually come **notes receivable** because these can be converted into cash when properly indorsed. Next, ordinarily, come **accounts receivable**, and finally **merchandise.** These constitute the **current assets.** Usually items may be regarded as current if convertible into cash within six months from date, although in case of manufacturers this period may be considerably longer. Sometimes **investments** in stocks or bonds of other companies are included among current assets. This is correct if they are readily convertible into cash.

The corresponding liabilities which these assets are used to liquidate are **notes payable, accounts payable** and **accrued expenses.** Debts maturing within a given time, as six months or one year, may be regarded as **current liabilities.** Excess of current assets over current liabilities is **working capital.** By a rule-of-thumb standard sometimes adopted current assets should be twice the amount of current liabilities.

Deferred charges constitute another important subdivision of assets. Items such as stationery, fuel, and supplies are known as expense assets and the unexpired debits to these accounts are deferred charges.

Fixed assets are assets not to be resold. They usually comprise plant, furniture, fixtures, delivery equipment, etc. Corresponding to these among the liabilities are the **fixed liabilities,** usually comprising debts maturing after one year from date.

Other assets is an additional group sometimes employed to contain items which for some reason cannot be included in the above groups. Similarly a division for **other liabilities** may be required.

By **content** of a balance sheet is meant: (a) inclusion of all assets and liabilities, and (b) their correct valuation. The correct valuation consists in including them at a figure which may be regarded as conservative in view of all the circumstances. Thus in case of accounts receivable there are invariably some which prove uncollectible. Allowance must be made for this on the basis of past experience in this and similar enterprises. The merchandise inventory must be valued according to approved methods, the customary formula being, cost or market, whichever is lower. In case of deferred charges the amounts must be periodically reduced that reduced values may be accurately shown.

FINANCIAL STATEMENT ILLUSTRATED.—The balance sheet of a partnership shown in Form 1 illustrates much of the foregoing.

Allen & Thomson
Balance Sheet, as at December 31, 1923

Assets			
CURRENT ASSETS:			
Cash		$ 3,127.00	
Accounts Receivable	$7,900.00		
Less—Reserve for Bad Debts	200.00	7,700.00	
Merchandise		11,000.00	$21,827.00
DEFERRED CHARGES:			
Unexpired Insurance		$ 200.00	
Supplies		400.00	600.00
FIXED ASSETS:			
Buildings	$10,300.00		
Less—Reserve for Depreciation	200.00	$10,100.00	
Furniture and Fixtures	1,000.00		
Less—Reserve for Depreciation	50.00	950.00	
Land		4,000.00	15,050.00
TOTAL ASSETS			$37,477.00
Liabilities			
CURRENT LIABILITIES:			
Notes Payable	$4,000.00		
Accounts Payable	3,200.00		
Wages Accrued	320.00	$ 7,520.00	
FIXED LIABILITIES:			
Mortgage on Buildings		4,000.00	
TOTAL LIABILITIES			11,520.00
Proprietorship			
A. J. ALLEN, CAPITAL		$15,000.00	
P. O. THOMSON, CAPITAL		10,957.00	$25,957.00

FORM 1. Balance Sheet of Partnership

It is sometimes desirable to set balance sheets as at the beginning and end of an accounting period in juxtaposition to permit comparison of similar items. This is illustrated in Form 2.

James Gorman
Comparative Balance Sheet
As at December 31, 1922, and December 31, 1923

	1923	1922	Increase or Decrease
Assets			
CURRENT ASSETS:			
Cash	$ 725.00	$ 920.00	−$ 195.00
Notes Receivable	200.00	150.00	+ 50.00
Accounts Receivable	5,920.00	6,235.00	− 315.00
Merchandise	9,000.00	8,725.00	+ 275.00
	$15,845.00	$16,030.00	−$ 185.00
FIXED ASSETS:			
Store Fixtures	$ 500.00	$ 430.00	+$ 70.00
Delivery Equipment	300.00	320.00	− 20.00
	$ 800.00	$ 750.00	+$ 50.00
Total Assets	$16,645.00	$16,780.00	−$ 135.00
Liabilities			
CURRENT LIABILITIES:			
Notes Payable	$ 500.00	$ 470.00	+ 30.00
Accounts Payable	7,230.00	8,727.00	− 1,497.00
Accrued Wages	320.00	200.00	+ 120.00
Total Liabilities	$ 8,050.00	$ 9,397.00	−$1,347.00
Proprietorship			
JAMES GORMAN, CAPITAL	$ 8,595.00	$ 7,383.00	+$1,212.00

FORM 2. Comparative Balance Sheet of Proprietorship

Net worth shows an increase of $1,212, which is accounted for by a net decrease in assets of $135 and a net decrease in liabilities of $1,347.

Books of Original Entry

RECORDING FINANCIAL TRANSACTIONS.—Every financial transaction can be recorded in form of a journal entry. The usual form of journal entry is illustrated thus:

Cash	$100	
Sales		$100

Which represents an application of the rules of debit and credit. "Cash" is debited because it represents wealth received by the business. "Sales" is credited because it represents wealth surrendered by the business. The arrangement of the journal entry is arbitrary, being the result of experience in attempting to express business transactions in the most convenient form. A form known as the **journal** has been contrived to contain such entries. A simple form of journal is shown in Form 3.

Journal

			L. F.	Dr.		Cr.	
		Cash		100	00		
		Sales				100	00

Form 3. Journal—Simple Form

SUBDIVISION OF THE JOURNAL.—Transactions occur on either a cash or a credit basis. According to this twofold classification the journal is subdivided into two parts, one employed to record cash transactions and the other to receive all other transactions. Journal entries may be classified as:

1. Those in which cash does not enter.
2. Those in which cash enters as a receipt.
3. Those in which cash enters as a disbursement.

On the basis of this classification it is customary to subdivide the original journal into two separate books, one the **general journal,** in which entries for all except cash transactions are made, and another known as the **cash journal,** or more frequently the **cash book,** in which cash transactions only are entered. The general journal may take the form shown above or it may vary more or less widely from it, depending upon circumstances.

During a single business day the number of sales is such that separate entry cannot be made for each in the general journal without involving unnecessary labor. It is customary now to limit the use of the general journal by setting up special journals to receive entries for purchases and sales, these being trans-

actions which ordinarily involve numerous entries similar in nature. The same principle may be extended to other groups of transactions if they are frequent enough to justify the step. If, for example, it is customary to receive settlement of customer's accounts in notes, a **notes receivable journal** may be desirable. Likewise a **notes payable journal** may be useful if many notes are given in settlement of purchases.

PURCHASES AND SALES JOURNALS.—A separate **purchases journal** is frequently employed in which are recorded all purchases of stock-in-trade.

Purchases Journal

Date		Explanation	L. F.				
19—							
Jan.	6	J. T. Sully					
		100 bu. corn @ $0.75		75	00		
		50 bu. wheat @ 1.00		50	00		
		10 cordwood @ 3.00	50	30	00	155	00
		Terms 2/10, n/60.					
	7	L. G. Luther					
		300 bu. oats @ $0.40		120	00		
		100 bu. corn @ 0.75	54	75	00	195	00
		Terms 2/10, n/30.					
	8	C. D. Hanover					
		20 bu. wheat @ $1.00	58			20	00
		Terms 2/10, n/30.					
	31	Purchases, Dr.	125			370	00

Form 4. Purchases Journal

Sometimes this takes the form of an **invoice book.** Sometimes, too, the purchases journal is made to record miscellaneous purchases as well as purchases of stock-in-trade. In this case it is usually given the form of the **voucher register** or the **accounts payable register,** explained elsewhere. All types of purchases may be regarded as a debit to purchases and a credit to the vendor, regardless of the method of payment pursued. Since all debits are to "Purchases," in making the current entry the formal debit element may be omitted. The debit is set up as a total at the end of the month, and the principle of equal debits and credits is thus fulfilled. In simple form the purchases and sales journals are the same as the general journal. Provision is made for date, classification, explanation, ledger folio index, and two money columns. The first money column is used for detailed extensions and the second one for the total of each purchase. (See Form 4.) Below are shown three purchases and their entries in the purchases journal:

Jan. 6, 19—, from J. T. Sully, 2/10, n/60.
 100 bu. corn @ $0.75
 50 bu. wheat @ 1.00
 10 cord wood @ 3.00

Jan. 7, 19—, from L. G. Luther, 2/10, n/30.
 300 bu. oats @ $0.40
 100 bu. corn @ 0.75

Jan. 8, 19—, from C. D. Hanover, 2/10, n/30.
 20 bu. wheat @ $1.00

It is usually preferable to use some such form as illustrated in Form 5, which provides for the file number of the original invoice (560 B, 569 B, 570 B, etc.) in place of the details given in the above form.

Purchases Journal

Date		Inv. No.	Name		Terms	Folio		
19—								
Jan.	6	25	J. T. Sully	560B	2/10, n/60		155	00
	7	26	L. G. Luther	569B	2/10, n/30		195	00
	8	27	C. D. Hanover	570B	2/10, n/30		20	00

FORM 5. Purchases Journal—Modern Type

In **posting** the purchases journal, the credits to vendor accounts should be posted daily in order that their accounts may be kept up to date. The debit to purchases is posted at the end of each month, after the total of purchases for the month is ascertained. This brings the ledger into equilibrium. The **ledger folio** column is for entry of the ledger page to which the posting is made. The ledger contains a similar folio column for entry of page of the journal from which the posting is made.

Purchases Journal

Date			L.F.	Dept. A		Dept. B		Dept. C		Totals	
				5,912	70	437	80	3,125	09	9,475	59
		Purchases Dept. A, Dr.								5,912	70
		" " B, "								437	80
		" " C, "								3,125	09

FORM 6. Departmental Purchases Journal

Dr. **Cash Receipts**

Date		Explanation	L. F.	Amount Columns			
19—

	2	Cash Sales	20	172	00		
	3	A. B. Southey on acct.	12	50	00		
	5	Investment Income	30	170	00		
		Cash Dr.				392	00
						2,892	00
Jan.	5	Balance				2,546	00

FORM 7a. Cash Book (left-hand page)

Departmentalization of a business necessitates certain modifications in form of purchases journal to permit the segregation of purchases by departments. Form 6 is illustrative.

The **sales journal** is practically identical in form with the purchases journal and subject to the same variations in form. When posting to the ledger "Sales" is credited and the customer is charged. When sales are for cash an account may be opened with the customer as in case of charge sales, and then be immediately closed as an offset to the debit to cash. To keep accounts of customers up to date, postings of sales are made daily. At end of month a summary entry is made in sales journal for total sales for month, which, when posted to credit of "Sales," brings the ledger into equilibrium. Closing rulings are made as in case of the purchases journal.

THE CASH BOOK.—The two journals required to record cash receipts and disbursements, respectively, are usually combined in one book, known as the **cash book,** the pages for each alternating throughout the book. Cash receipts are entered on the left-hand page and cash payments on the right-hand page. A simple form of cash book is shown in Forms 7a, 7b.

Function of Cash Book.—The cash book takes the place of a detailed cash account in the general ledger, only the total receipts and payments being posted periodically to the cash account. Sometimes no postings are made to a cash account in the ledger, in which case the cash book is regarded as a cash account and its balance is included when a trial balance of the ledger is taken. On the

Cash Payments Cr.

Date		Explanation	L. F.	Amount Columns

Jan.	1	Rent for month	3	40	00		
	2	Advertising	6	31	00		
	3	Mr. Arthur on acct.	8	200	00		
	4	Wages	12	75	00		
		Cash Cr.				346	00
		Balance				2,546	00
						2,892	00

Form 7b. Cash Book (right-hand page)

debit side of the cash book the debit element is indicated merely by the fact that the entry appears on the left-hand page. Likewise on the credit side the credit element is indicated by the mere presence of the entry. The manner of posting is indicated in the above form. The method of balancing and ruling is also shown. When the record is to be carried forward to new pages, either the current pages may be balanced and ruled, only the balance being carried forward, or the current pages may be totaled and the totals carried forward. Both sides are closed and ruled simultaneously even though one page may not be entirely used. This always keeps current receipts and disbursements in juxtaposition.

Cash shorts and overs sometime occur when the cash book is balanced and the cash on hand and in bank fail to agree with the cash book balance. If the

FORM 8a. Columnar Cash Book—Debit Side

discrepancy cannot be located, an entry is made to bring the cash book balance into agreement with the actual balance. This debit or credit is to a **Cash Short and Over** account. Later if the discrepancy is located the adjustment is made through the same account. The Short and Over account should be regarded as an income or expense account according as its balance at the close of the accounting period is a credit or a debit balance. Sometimes this account is treated as an asset or liability account.

Cash purchases may be cleared through the vendor's account as are credit purchases. A shorter method is as follows:

Make a record of the purchase in both purchases journal and cash book, but do not post any credit to cash from the purchases journal and do not post any charge to purchases from the cash book.

Columnar Cash Book.—It is sometimes desirable to simplify postings by segregating certain classes of cash transactions. Thus of all items of cash

receipts, usually a large percentage consists of cash sales and of receipts from customers. To accommodate these numerous items additional columns may be provided on the debit side of the cash book. Under this plan all cash receipts are entered in the **net** or **total** column and are then distributed to the proper special column, cash sales to the cash sales column and receipts from customers to the accounts receivable column. Similarly an analysis of cash disbursements may be accomplished. Two special columns frequently found on the credit side are those for creditors and for expenses. Any particular class of expenses, if the items are sufficiently numerous, may be given a separate column. If cash purchases are numerous a special column may be employed for them. These special columns are particularly important when separate ledgers are used for accounts receivable and accounts payable. Frequently sales and pur-

		Discount on Purchases Cr.		22					1 00

Form 8b. Columnar Cash Book—Credit Side

chases are made on a cash discount basis, as, 2% off if payment is made in 10 days. These may be cared for in the cash book by introducing a column on the credit side for **discounts on purchases** and a column on the debit side for **discounts on sales.** These various points are illustrated in Forms 8a, 8b.

THE MODERN JOURNAL.—Although the use of a cash book and purchases and sales journals takes much detail out of the general journal, there yet remain many transactions and adjustments which can be booked only in the general journal. Among these are transactions involving notes receivable and payable and the opening, closing, and adjusting entries. To meet the requirements for such entries the analytical journal has been developed. This is used to enable the efficient collection of totals which are to be posted to ledger controlling accounts and to aid in the operation of a system of controlling accounts. Form 9 is an illustration. The columns may be varied to suit requirements. Sometimes an account receivable column on the debit side and an account payable column on the credit side are desirable in addition to the ones shown.

Journal

Accounts Payable	Sundry	Date 19—		Explanation	L.F.	Sundry	Accounts Receivable
	600.00	Jan.	20	Notes Receivable	6		
				To L. R. Nash	15		600.00
				Note due in 6 mos. at 6 %, in payment of bill of 6/12/22			

Form 9. Divided Column Journal

The Ledger

THE LEDGER ACCOUNT.—The ledger is a record in which accounts are kept. An account collects in compact and legible form all data relative to the influence or thing to which it refers. There are two general classes of accounts—real and nominal. **Real accounts** record assets, liabilities, and proprietorship. **Nominal accounts** record gains, expenses, and losses. Each account is composed of two parts, or right and left sections. (See Form 10.) The account head or title is placed immediately over the line which separates the two sections. The date columns are at the left of the sections. The year appears at the head of the date column. Following the date column is a wide column for explanatory matter. Next comes the folio column in which is placed the page of the journal from which postings are made. The last column in the section is the money column, which in practice is subdivided into columns for the digits.

	5	Sales		45	00						

Form 10. Ledger

The account is designed to bring together all items relating to that account, and represents a summarization of this data. Items on one side of the account represent additions. Those on the other side represent subtractions. The difference between the two sides of the account is the **balance.** If the excess

is on the left-hand side of the account, it is a debit balance; if on the right-hand side, it is a credit balance. **Asset accounts** have balances on the left. Whenever an asset is increased the entry showing the amount of the increase is made on the left side of the account. For decreases in assets entries are made on the right side. **Liability accounts** show excess of items on the right side. Increases in liabilities are indicated by additional items entered on the right side. Decreases in liabilities are indicated by entries on the left side of liability accounts. The balances of proprietorship accounts are normally on the right side, as are also balances of income accounts. The balances of expense accounts are usually on the left side. The ledger accounts taken together form an equation similar to that represented by the balance sheet or financial statement, but in addition to the asset, liability, and proprietorship items entering into the balance sheet there are also income and expense accounts, which affect proprietorship as well as assets and liabilities, but whose effect is determined accurately only at the end of accounting periods.

A **classification of accounts** based upon the requirements of an enterprise is one essential feature of a system of accounts. The asset, liability, proprietorship, and income and expense accounts must be such as represent an intelligent and logical analysis of these large groups of accounts. The classification of accounts which follows has been adopted by the Committee on Industrial Accounting and Executive Reports, Boston Chamber of Commerce. It is not intended to fit the requirements of any particular concern or industry, but to illustrate broadly the representative accounts used in manufacturing industries. For definitions of accounts reference should be made to the section on "Glossary."

CLASSIFICATION OF LEDGER ACCOUNTS

I—Assets and Deductions from Assets

A. Current Assets
- 1. Cash
  - (a) Petty Cash
  - (b) Cash on Hand
  - (c) Demand Deposits in Banks
    - (1) Domestic
    - (2) Foreign
- 2. Liquid Investments
  - (a) Time Deposits
  - (b) Certificates of Deposit
  - (c) Negotiable Stocks
  - (d) Negotiable Bonds
- 3. Receivables
  - (a) Accounts Receivable
    - (1) Customers
    - (2) Sundry Debtors
  - (b) Amounts due from parent, subsidiary, or affiliated companies.
  - (c) Personal Accounts
    - (1) Officers
    - (2) Partners
    - (3) Employees
  - (d) Notes Receivable
    - (1) Customers
    - (2) Sundry Debtors
  - (e) Intercompany Notes Receivable
  - (f) Personal Notes Receivable
    - (1) Officers
    - (2) Partners
    - (3) Employees
  - (g) Acceptances
    - (1) Trade
    - (2) Bank
- 4. Inventories
  - (a) Raw Material
  - (b) Supplies
    - (1) Factory
    - (2) Commercial
  - (c) Work in Process
    - (1) Stock
    - (2) Special Order
  - (d) Finished Product
    - (1) Stock
    - (2) Special Order
  - (e) Purchases for Resale
  - (f) Perishable Equipment

B. Fixed Assets
- 1. Real Estate
  - (a) Operating
    - (1) Land
    - (2) Land Improvements

- (3) Buildings
  - (a) Buildings Proper
  - (b) Plumbing and Sanitary Fixtures
  - (c) Heating and Ventilating Equipment
  - (d) Wiring and Piping
- (b) Non-operating
  - (1) Tenements
  - (2) Club Houses
  - (3) Parks and Recreation Grounds
  - (4) Miscellaneous

2. Power Equipment
   - (a) Plant
   - (b) Transmission
3. Machinery
4. Tools
   - (a) Machine
   - (b) Hand
5. Transportation Equipment
6. Furniture
   - (a) Plant
   - (b) Office
7. Non-Operating Equipment
   - (a) Equipment of Tenements and Clubhouses
   - (b) Lunchroom and Hospital Equipment
   - (c) Miscellaneous Non-operating Equipment
8. Other Tangible Property
   - (a) Patterns
   - (b) Drawings
   - (c) Miscellaneous
9. Miscellaneous Equipment

C. Securities

- (a) For Investment
  - (1) Bonds
  - (2) Stocks
  - (3) Leases
  - (4) Mortgages
- (b) For Control
  - (1) Stocks
  - (2) Subsidiary Securities

D. Intangible Assets

1. Patents
2. Trade-Marks
3. Good-Will

E. Miscellaneous Assets and Deferred Accounts

1. Deferred Charges to Operations
   - (a) Unexpired Insurance
   - (b) Prepaid Rent
   - (c) Prepaid Interest
   - (d) Other Prepaid Accounts
2. Cash Value of Life Insurance
3. Accrued Earnings
   - (a) Interest Receivable
   - (b) Rent Receivable
4. Claims Receivable
   - (a) Insurance
   - (b) Damages
5. Organization Expenses
6. Capital Deficit (deductions from Net Worth)

F. Allowances for Depreciation of Fixed and Real Assets

1. Depreciation (deductions from corresponding assets)
   - (a) Buildings
     - (1) Buildings Proper
     - (2) Plumbing and Sanitary Fixtures
     - (3) Heating and Ventilating Equipment
     - (4) Wiring and Piping
   - (b) Non-operating Property
     - (1) Tenements
     - (2) Clubhouses
     - (3) Parks
     - (4) Miscellaneous
   - (c) Power Equipment
     - (1) Plant
     - (2) Transmission
   - (d) Machinery
   - (e) Tools
     - (1) Machine
     - (2) Hand
   - (f) Transportation Equipment
   - (g) Furniture
     - (1) Plant
     - (2) Office
   - (h) Non-operating Equipment
     - (1) Equipment of Tenements and Clubhouses
     - (2) Lunchrooms and Hospital Equipment
     - (3) Miscellaneous Non-operating Equipment
   - (i) Other Tangible Property
     - (1) Patterns
     - (2) Drawings
     - (3) Miscellaneous
   - (j) Miscellaneous Equipment
2. Miscellaneous Allowances affecting other Assets

II—Liabilities

A. Current Liabilities
  1. Accounts Payable
  2. Notes Payable
  3. Dividends Payable
  4. Interest Payable
  5. Other Payables
  6. Accrued Expenses
    (a) Wages
    (b) Taxes
    (c) Insurance
    (d) Interest
    (e) Rent
    (f) Others

B. Funded Liabilities
  1. Long-time Notes
    (a) Secured
    (b) Unsecured
  2. Mortgages Payable
  3. Bonds
  4. Debentures

C. Capital Liabilities
  1. Stock
    (a) Par
      (1) Preferred
      (2) Common
    (b) No-par
    (c) Premium Surplus and (or) Capital Surplus
  2. Surplus
    (a) General
  3. Undivided Profits

D. Reserves to Meet Expected Losses or Expected Liabilities
  1. Bad Debts
  2. Claims
  3. Taxes
  4. Interest
  5. Foreign Deposits
  6. Losses in Inventory
  7. Miscellaneous

E. Treasury Stock
  1. Preferred
  2. Common

F. Sinking Fund Investments and Debits to Funded Debt
  1. Pledged Assets
  2. Miscellaneous

G. Contingent Liabilities
  1. Purchase Commitments
  2. Accounts Receivable Discounted
  3. Notes Receivable Discounted
  4. Guaranteed Bonds and Notes of Subsidiaries

III—Profit and Loss

A. Sales
  1. Gross Sales
  2. Returns
  3. Rebates
    (a) Shortages
    (b) Damages
    (c) Factory Errors
    (d) Commercial Office Errors
    (e) Salesmen's Errors
    (f) Transportation Claims
    (g) Policy Allowances (customers' errors)
    (h) Miscellaneous Reasons
  4. Collected Discounts
  5. Transportation Deductions
    (a) F.o.b. Allowances
    (b) Miscellaneous Allowances
    (c) Prepaid Charges (deductions from Sales)
      (1) Freight
      (2) Express
      (3) Miscellaneous

B. Cost of Goods Sold
  1. Processed Products
    (a) When cost of product is determined by dependable cost system:
      (1) Having a Controlled Operating Ledger
      (2) Having the Accounts Carried in the General Ledger
    (b) When Cost is Determined by the Inventory Plan
  2. Purchases for Resale

C. Selling Expenses

Use Either One

1. First Alternative (expense classification)
   - (a) Salaries
     - (1) Officers and Department Heads
     - (2) Selling Force
     - (3) Engineering and Drafting Force
     - (4) Clerical Force
     - (5) Other Employees
   - (b) Rent, Light, Heat, and Power
   - (c) Office Equipment, Alterations, Repairs, and Replacements
   - (d) Traveling and Entertainment Expenses
   - (e) Telephone and Telegraph Expenses
   - (f) Postage
   - (g) Stationery and Office Supplies
   - (h) Advertising
   - (i) Miscellaneous Expense Accounts
2. Second Alternative (responsibility classification)
   - (a) By Functions
   - (b) By Location
   - (c) By Products

D. Other Income

1. Income from Investments
2. Income from Outside Buildings, Tenements, and Miscellaneous Properties
3. Interest from Notes Receivable
4. Income from Miscellaneous Sources

E. Charges to Other Income

1. Taxes, Maintenance and Depreciation of Outside Buildings, Tenements, and Miscellaneous Properties
2. Collection Charges
3. Miscellaneous Charges

F. General Expenses

1. Administrative Expenses Not Previously Apportioned
2. Interest Paid and Accrued
   - (a) Interest on Funded Debt
   - (b) Interest on Other Obligations
3. Neglected Discounts
4. Losses on Bad Debts
5. Miscellaneous Expenses

G. Loss and Gain

1. Adjustment Accounts
   - (a) Inventory Adjustment Accounts
   - (b) Idleness Accounts
   - (c) Miscellaneous Adjustment Accounts
2. Income Taxes
3. Profit and Loss Account
   - (a) Monthly Profit and Loss Account
   - (b) Cumulative Profit and Loss Account (for the year only)

The **principles of classification** are discussed in the section on "Classification." In any case there must be a broad classification into assets, liabilities and proprietorship accounts. But in addition there must be details as to kind of assets owned, liabilities owed, and sources of increments and decrements in proprietorship. The nature of the information desired must determine the amount of detail to be required. The classification must be logical and the titles of accounts therein should indicate their function clearly with little or no additional explanation. In matching transactions with accounts affected, first determine the main group of accounts affected, then determine the particular account.

SUBDIVISION OF LEDGERS.—A single general ledger suffices only in case of comparatively small businesses. It soon becomes necessary to segregate certain classes of accounts in subordinate ledgers; the accounts thus treated first are in most instances those with customers and creditors. But the principle of segregation of accounts in subordinate ledgers may be carried out with as many different classes of accounts as conditions warrant. Sometimes a given class is further subdivided, as when accounts receivable are classified as "city" and "country," or "A to M" and "N to Z." Sometimes the ledgers for customers' accounts are arbitrarily subdivided on the basis of geographical districts.

Form 15. Boston Ledger Sometimes Used for Depositors

KINDS OF LEDGERS.—As to **rulings,** ledgers are standard, balance, and progressive. (See Forms 11–15.) **Standard ruling** has two duplicate parts, debit and credit, division line usually being in center of page. (See Forms 11, 12.) **Balance ruling** is a three- or four-column ledger with money columns either at center or at right-hand margin, or at both center and right-hand margin (see Forms 13, 14). Extra columns are for account balances. If balance is usually either a debit or a credit, only one balance column is necessary; but if the balance is apt to change from a debit to a credit, or vice versa, both debit balance and credit balance columns should be provided. This form of ruling is particularly useful for personal accounts which require that the balance be kept up to date. When this ledger is used, entry of new debits or credits should always be made on next blank line as shown in balance column, to permit extension of new balance opposite the last entry even when the several preceding lines on the debit and credit sides are blank. The **progressive** form, sometimes known as the Boston or tabular (see Form 15), makes provision for progress horizontally according to time. Account title is written at left-hand margin of master sheet, and is sometimes repeated at right margin in case of very wide sheets. The page contains columns for each day of the period, short-margin insert sheets being bound in to provide room for an entire period.

As to **bindings,** ledgers are solid-bound, loose-leaf, and card. Loose-leaf and card ledgers possess greater flexibility than do bound books. They may be arranged according to any desired grouping and all dead material is easily discarded or filed away in reserve binders. Removal of leaves or cards makes it possible to subdivide clerical work. There is the danger, however, of failing to return a leaf or card which has been removed.

The Interpretative Process

PERIODIC WORK ON LEDGER.—The process of interpretation of data contained in ledger accounts is comprised under the following heads:

1. Taking a trial balance.
2. Making the adjusting entries.
3. Making the closing entries.

TAKING A TRIAL BALANCE.—A trial balance is taken, after all transactions applicable to the current accounting period have been posted to the ledger, by listing the debit and credit balances of all accounts. This furnishes mathematical proof of the accuracy of the work, but is not absolute proof that all items have been posted to the right accounts and does not detect certain offsetting errors. Before a trial balance is taken the accounts should all be totaled on each side, the totals being shown in small pencil figures directly beneath the last entry, sufficiently close up to it not to prevent making a regular entry on the line directly below. The difference between these two totals should be written in pencil in the explanation column on the side of the account having the larger total. Sometimes, however, it is desirable to **balance the account.** This is done by bringing in the balance on the side of the account having the smaller total and then ruling up the account, the totals on both sides now being equal. Form 16 indicates the procedure. On the line below the double ruling the balance is brought down on its proper side. For ruling the account, black ink is preferable to red ink. It is sometimes desirable to **transfer** an account from one page to another. This process is similar to balancing, but in place of the word "Balance" the words "Forwarded to page" should be used, the page to which it is transferred being entered in the folio

column. The name of the account appears on the page to which the transfer is made. The first entry is for the balance transferred, page reference to the old account being made in the folio column and the words "Forwarded from page" placed in the explanation column. A trial balance appears in Form 17.

FORM 17. Trial Balance

PERIODIC ADJUSTMENTS OF LEDGER.—At the end of an accounting period the ledger does not indicate conditions accurately because some of the accounts it contains are out of adjustment. Thus the depreciation of buildings and machinery which has occurred during the period has not been allowed for. Likewise some of the accounts receivable entered during the month will prove to be uncollectible. Other items may require adjustment. Certain expenses have accrued during the period and are not liquidated until some later period. Adjustments are necessary to show their status at the date of closing. Sometimes expenses are incurred the full benefit from which does not accrue until later periods. The value remaining in these at the end of the period is called a **deferred charge** and is in reality an asset. Sometimes income is received in advance in payment of services to be rendered in a succeeding period. Such income should not be credited to current income but is in the nature of a suspense item as at the close of the current period. Merchandise is bought at one price and sold at another. As a result an element of profit arises which can be determined only by making adjustments for the merchandise remaining on hand.

ACCRUALS AND DEFERRED CHARGES.—A frequent item of expense incurred for use of borrowed money is **interest.** When loans are made to others it is an item of income.

Interest is reckoned as a per cent per annum on the principal sum, and normally ranges from, say, 3% to 7%, depending on the risk involved. Interest is usually payable at regular intervals determined upon at the time the loan is made. Interest periods and accounting periods are co-terminous only in exceptional cases. If nominal accounts are closed at end of each month while interest payments are made semiannually, adjustments must be made for interest accruing during intervening months. To permit the proper distribution of the interest expense an **Accrued Interest** account is employed.

Assume that on Jan. 1, A borrows $6,000 for a term of years, interest at 5%, payable semiannually Dec. 31 and June 30. Interest amounts to $300 yearly, each semiannual amount being $150. The interest incident to each month is $25. The adjusting entry on January 31 is:

Interest	$25	
Interest Accrued		$25

When posted, Interest account is charged for the month's proportion of expense and the Interest Accrued records the liability thereon. This "interest accrued" does not become payable until the end of the 6-month period. It is a real account. If above entry is made each month for 6 months, there is $150 to the credit of "Interest Accrued" at the end of the interest period, when interest falls due. When paid the following entry is made:

Interest Accrued	$150	
Cash		$150

Wages and salaries may require some treatment as interest. Salaries are usually paid monthly and when so paid are charged to a Salaries account. When not paid monthly and the period of accrual is not co-terminous with the accounting period, the theory of accruals applies. **Wages** are usually paid weekly or semimonthly. As a rule, monthly accounting periods do not terminate on same day as do wage periods, in which case there is an overlapping of wages expense in a weekly or semimonthly period which extends from one month into the next.

Assume that a merchant pays his assistants semimonthly. One pay-day

falls on June 7. Profit and loss for May must be charged for wages accruing during last week of May, although not due until June 7. If the week's wages are $50, adjusting entry is:

Wages Expense	$50	
Wages Accrued		$50

"Wages Expense" is carried to Profit and Loss. "Wages Accrued" enters balance sheet at May 31 as a liability.

Deferred charges are expenses paid in advance of the period to which they are incident. **Organization expenses** are of this type. Also costs of ore-stripping in mines.

A concern invests $500,000 cash in a mine which it will exploit. $60,000 is spent to strip ores of overlying strata, enough ore bed being uncovered to last 6 years. Each year 1/6 of this $50,000 should be charged off, distribution being on a monthly basis if books are closed monthly. Entry is:

Profit and Loss	$8,333.33	
Deferred Charges		$8,333.33

In a broad sense the theory of deferred charges applies to all assets whose value diminishes as time expires.

DEPRECIATION.—Depreciation is fully discussed in the section on "Depreciation." It is an accruing expense resulting from the wear and tear to which physical assets are subjected. Failure to make due allowance for it results in financial embarrassment and frequently bankruptcy. The correct treatment of depreciation involves the use of **valuation reserves.** Assume case of a building costing $100,000 and possessing an estimated life of 50 years with no-scrap value. Each year the depreciation expense amounts to $2,000 and if books are closed monthly the charge is 1/12 of $2,000, or $166.67. This is journalized thus:

Profit and Loss	$166.67	
Reserve for Depreciation of Building		$166.67

In the balance sheet the reserve for depreciation should be shown as a deduction from the asset account which it evaluates. The charge to Profit and Loss represents the current month's depreciation expense. When it comes time to make the replacement, the reserve serves as a clearing account, the old building account being charged against the reserve, thus:

Reserve for Depreciation of Building	$100,000	
Building		$100,000

BAD AND DOUBTFUL DEBTS.—Accounting procedure to care for uncollectible accounts receivable is similar to that employed to take care of depreciation. Amount of loss from this source depends on nature of business and methods employed in collecting accounts. Its amount during any current period is a matter of estimate, because some of the accounts receivable originating during such period cannot be liquidated until a later period. This estimate is made on basis of past losses and a journal entry is made charging estimated loss to Profit and Loss and crediting a reserve for bad debts, thus:

Profit and Loss	$.......	
Reserve for Bad Debts		$.......

When an individual account receivable is found to be worthless, it should be charged against the reserve, thus:

Reserve for Bad Debts	$.......	
(Name of Party)		$.......

MERCHANDISE.—Modern accounting practice approves keeping the ollowing separate accounts: Merchandise Inventory, Purchases, Freight and 'artage Inward, Returned Purchases, Rebates and Allowances on Purchases, ales, Returned Sales, and Rebates and Allowances on Sales. This plan makes ertain information more available than where simply a single merchandise ccount is kept. To determine gross profit on sales it is necessary to bring this ata together and in conjunction therewith the amount of merchandise remainng unsold. Gross profit is determined by deducting net cost of goods sold from et amount of sales. For illustration of procedure see section on "Inventories."

The following is adapted from R. B. Kester's "Accounting Theory and Practice":[1]

Careful analysis and study of the adjustment of **merchandise records** should e made to see how the logic of the trading section of the profit and loss statenent is worked out in the ledger. Record of the merchandise asset should e kept, in strict theory, same as that of any other asset, viz., the accounts hould be charged with the full cost of the asset and credited at cost with the ortion sold, profit or loss on sale being carried in a separate account. Balance of Merchandise account then shows value of merchandise on hand at any time.

Theory, however, gives way to practical difficulties of handling the account n this way. Therefore, periodically the mixture of asset decreases and income increases brought about through the practical method of handling merchandise records must be corrected, or "unmixed," so that these elements will appear separately. The **Purchases account,** after the opening inventory, inward freight, and purchase returns, rebates, and allowances are transferred to it, gives net total of the merchandise asset for the period. This net total represents two things: (1) merchandise still on hand, and (2) merchandise sold. To adjust records, goods on hand, as shown by physical inventory, are separated from the total and put into the **Merchandise Inventory account,** which shows by its title that it is an asset. That leaves in Purchases account cost of goods sold. The credits which should indicate the decrease in the asset, equal to cost of goods sold, are found in **net merchandise sales** as shown by **Sales account** after transferring to it sales returns, rebates, and allowances. But these credits are here mixed with gross profit. Portion of net sales representing cost of sales of merchandise should now, in strict theory, be transferred from Sales account, to **Purchases account.** This transfer would effect balancing of Purchases account, indicating that there are no merchandise asset values in that account, these having been transferred to **Merchandise Inventory account.** Result of this theoretically correct procedure would be to bring about a segregation of merchandise records into their two elements, the asset element as shown by the Merchandise Inventory account, and the income element as shown by the remaining balance in the Sales account.

PROFIT AND LOSS ACCOUNT.—After all necessary adjustments have been made, the ledger accounts may be said to reflect actual conditions, the real accounts showing the true status of assets and liabilities and the nominal accounts expressing the facts regarding current gains and losses. There remain no mixed accounts. The capital account or accounts stand as at the beginning of the period, while the increases and decreases resulting from the period's transactions still stand in the nominal accounts. To summarize them, a **Profit and Loss account** is opened and their balances are transferred to it. This account must not be confused with the **profit and loss statement** which is made up, not as a ledger account, but as a separate document.

---

[1] Vol. I, pp. 121–123.

ADJUSTING AND CLOSING ENTRIES ILLUSTRATED.—Seven types of adjustment entries are needed for the ledger of a mercantile concern:[2]

1. Merchandise Inventory
2. Depreciation
3. Bad Debts
4. Accrued Income
5. Deferred Expenses
6. Accrued Expenses
7. Deferred Income

These are illustrated in the following trial balance taken from the ledger of U. R. Smart as at Dec. 31, 19—:

Trial Balance, December 31, 19—

1	New York National Bank	$ 17,600	
2	Petty Cash	100	
3	Notes Receivable	15,000	
4	Trade Customers	35,000	
5	Reserve for Doubtful Accounts		$ 875
6	Liberty Bonds	3,000	
7	Merchandise Inventory	30,000	
9	Office Furniture and Fixtures	2,800	
10	Depreciation Reserve for Office Furniture and Fixtures		700
11	Store Furniture and Fixtures	12,000	
12	Depreciation Reserve for Store Furniture and Fixtures		3,000
13	Delivery Equipment	4,500	
14	Depreciation Reserve for Delivery Equipment		2,250
15	Buildings	35,000	
16	Depreciation Reserve for Buildings		7,000
17	Land	15,000	
18	Notes Payable		12,000
19	Trade Creditors		25,000
20	Mortgages Payable		17,500
21	U. R. Smart, Capital		90,000
22	U. R. Smart, Personal	10,500	
24	Sales		195,000
25	Sales Returns and Allowances	1,850	
26	Purchases	135,000	
27	Purchases Returns and Allowances		5,400
28	In-Freight and Cartage	1,350	
29	Salesmen's Salaries	13,500	
30	Selling Supplies and Expense	1,600	
31	Advertising	4,800	
32	Out-Freight	400	
33	Delivery Expense	3,300	
34	Office Salaries	5,000	
35	General Expense	2,000	
36	Office Expense	4,500	
37	Printing and Stationery	750	

[2] R. B. Kester, Accounting Theory and Practice, Vol. I, Chs. XXVII, XXVIII.

38	Taxes	2,840	
39	Insurance	1,750	
40	Interest Cost	900	
41	Collection and Exchange	85	
42	Sales Discount	850	
43	Interest Income		1,500
44	Purchase Discount		1,300
45	Sub-Rentals Income		650
46	Special Police on Strike Duty	1,200	
	Total	$362,175	$362,175

Adjustment Data, December 31, 19—

Inventory of Merchandise	$ 26,500
Estimated Depreciation:	
Office Furniture and Fixtures, 10% of original cost.	
Store Furniture and Fixtures, 10% of original cost.	
Delivery Equipment, 16 2/3% of original cost.	
Buildings, 4% of original cost.	
Doubtful Accounts, ¼% of Net Sales.	
Accrued Income:	
Interest Accrued on Notes Receivable	150
Deferred Expenses:	
Insurance Unexpired	250
Advertising Paid in Advance	300
Printing and Stationery Supplies on hand	150
Selling Supplies and Expense	200
Accrued Expenses:	
Taxes	340
Salesmen's Salaries	175
Interest on Notes Payable	50
Special Police on Strike Duty	150
Office Salaries	100
Deferred Income:	
Sub-Rentals Paid in Advance	50

Adjusting entries for above trial balance are as follows:

Purchases	$30,000.00	
Merchandise Inventory		$30,000.00
Merchandise Inventory	$26,500.00	
Purchases		$26,500.00
Depreciation	$ 3,630.00	
Depreciation Reserve for Office Furniture and Fixtures		$ 280.00
Depreciation Reserve for Store Furniture and Fixtures		1,200 00
Depreciation Reserve for Delivery Equipment		750.00
Depreciation Reserve for Buildings		1,400.00
Bad Debts	$ 482.88	
Reserve for Doubtful Accounts		$ 482.88
Interest Income (Accrued)	$ 150.00	
Interest Income		$ 150.00

Insurance (Deferred)		$ 250.00	
Insurance			$ 250.00
Advertising (Deferred)		$ 300.00	
Advertising			$ 300.00
Printing and Stationery (Deferred)		$ 150.00	
Printing and Stationery			$ 150.00
Selling Supplies and Expense (Deferred)		$ 200.00	
Selling Supplies and Expense			$ 200.00
Taxes		$ 340.00	
Taxes (Accrued)			$ 340.00
Salesmen's Salaries		$ 175.00	
Salesmen's Salaries (Accrued)			$ 175.00
Interest Cost		$ 50.00	
Interest Cost (Accrued)			$ 50.00
Special Police on Strike Duty		$ 150.00	
Special Police on Strike Duty (Accrued)			$ 150.00
Office Salaries		$ 100.00	
Office Salaries (Accrued)			$ 100.00
Sub-Rentals Income		$ 50.00	
Sub-Rentals Income (Deferred)			$ 50.00

After these adjustment entries are posted, the ledger reflects the true status of affairs, but the necessary information is scattered over many accounts. The next step is to summarize this information. This is done by means of the **Profit and Loss account,** to which the balances of nominal accounts are transferred, by means of the **closing entries.** These **closing entries** are as follows:

Purchases		$ 1,350.00	
In-Freight and Cartage			$ 1,350.00
Purchase Returns and Allowance		$ 5,400.00	
Purchases			$ 5,400.00
Profit and Loss		$134,450.00	
Purchases			$134,450.00
Sales		$ 1,850.00	
Sales Returns and Allowances			$ 1,850.00
Sales		$193,150.00	
Profit and Loss			$193,150.00
Profit and Loss		$ 25,225.00	
Salesmen's Salaries			$ 13,675.00
Selling Supplies and Expense			1,400.00
Advertising			4,500.00
Out-Freight			400.00
Delivery Expense			3,300.00
Depreciation			1,950.00
Store Furniture and Fixtures	$1,200.00		
Delivery Equipment	750.00		
Profit and Loss		$ 18,560.00	
Office Salaries			$ 5,100.00
Office Expense			4,500.00
General Expense			2,000.00
Printing and Stationery			600.00
Taxes			3,180.00
Insurance			1,500.00

Depreciation			1,680.00
Office Furniture and Fixtures	$ 280.00		
Building	1,400.00		
Profit and Loss		$ 2,367.88	
Interest Cost			$ 950.00
Sales Discount			850.00
Bad Debts			482.88
Collection and Exchange			85.00
Interest Income		$ 1,650.00	
Purchase Discount		1,300.00	
Profit and Loss			$ 2,950.00
Profit and Loss		$ 1,350.00	
Special Police on Strike Duty			$ 1,350.00
Sub-Rentals Income		$ 600.00	
Profit and Loss			$ 600.00
Profit and Loss		$ 14,747.12	
U. R. Smart, Personal			$ 14,747.12
U. R. Smart, Personal		$ 4,247.12	
U. R. Smart, Capital			$ 4,247.12

Note that after net sales and cost of goods sold are transferred to profit and loss, expenses connected directly with sales are closed into Profit and Loss.

The groups of accounts next closed are those covering administrative expenses, financial management expenses, financial management income, non-operating expense, and non-operating income. Order of closing follows order in which same items appear in profit and loss statement (see Form 19). The Profit and Loss account is shown in Form 18. The balance of profit and loss is transferred to Smart's Personal account and the balance of that account is in turn transferred to Smart's Capital account. This completes the process of closing. The final step in the interpretative process consists in setting up a profit and loss statement and a balance sheet.

Profit and Loss

Date	Item	Amount	Date	Item	Amount
19—			19—		
Dec. 31	Purchases	$134,450.00	Dec. 31	Sales	$193,150.00
	Selling Expenses	25,225.00		Financial Management Income	2,950.00
	Administrative Expenses	18,560.00		Sub-Rentals Income	600.00
	Financial Management Expenses	2,367.88			
	Special Police on Strike Duty	1,350.00			
	Net Profit, to U. R. Smart, Personal	14,747.12			
		$196,700.00			$196,700.00

Form 18. Profit and Loss Account in Ledger

PROFIT AND LOSS STATEMENT.—The profit and loss statement is shown in both report and account form (Forms 19. 20). The account form

resembles the Profit and Loss account in form and content, the chief difference being the greater detail introduced in showing sales and cost of goods sold.

FORM 22. Balance Sheet—Account Form

BALANCE SHEET.—Balance sheet may be arranged in accordance with either of two forms. The first form shown (Form 21) is called the **report form.** It is non-technical and easily understood by business men not skilled in accounts. The second balance sheet (Form 22) is given in **account form,** subtraction of liabilities from assets being indicated by their respective debit and credit positions in the account.

Controlling Accounts

PURPOSE OF CONTROLLING ACCOUNTS.—Accounting records must be adaptable to conditions as well as be correct in principle. As markets widen customers and creditors grow more numerous, so that the simple arrangement of general and cash journals and of general ledger becomes inadequate. The cash journal remains an adequate record so far as cash is concerned, but by the use of columns the handling of certain classes of receipts and disbursements may be improved. The ledger becomes encumbered with the increasing number of accounts receivable and payable, making it difficult to avoid errors or to locate them after they are made. Subdivision of work among clerks becomes difficult.

The principle of columnar journals and controlling accounts supplies a remedy for such a situation. **Controlling accounts** are accounts kept in the general ledger to which are posted, from the journals, totals of debits and credits. The details of debits and credits are posted to subordinate ledgers which the controlling accounts govern. Frequently the subordinate ledger is given the same name as its controlling account. Thus the **accounts receivable ledger** contains the accounts receivable and is controlled by the **Accounts Receivable controlling account** in the general ledger. Also the **accounts payable ledger** contains the accounts payable and is controlled by the **Accounts Payable controlling account** in the general ledger.

Use of controlling accounts necessitates specialization in the forms of journals. In so far as possible those entries which affect accounts in subordinate ledgers should be removed from the general journal, or special columns should be provided in the general journal for their reception. Special columns for the reception of these entries should also be provided in the cash book. By providing (a) special journals, or (b) special columns in general and cash journals or both, to receive items to be posted in detail to subordinate ledgers, it is possible to post totals to controlling accounts, thus fulfilling the requirements of carrying to controlling accounts totals of debits and credits posted in detail to subordinate ledgers.

DEBITS TO CONTROLLING ACCOUNTS RECEIVABLE.—Figures to be entered in controlling account must be debit and credit summaries and must be secured with least possible effort. Most debits to customer's accounts are from the sales journal, but some may come from the credit side of cash journal, as when cash payments are made as a rebate or refund. Others come from the general journal for various adjustments. This class of debits is not numerous, however. As usually operated the sales journal carries a column for credit sales whose total represents the total of all detailed debits to customers' accounts. Total of credit sales column determines total debits to all customers on account of charge sales In showing this total it should be indicated that it is to be posted both to credit side of sales account and to debit side of controlling accounts receivable account in the general ledger. This latter is so because the controlling account takes the place of the accounts receivable ledger in the general ledger.

If total sales per sales journal includes both cash and credit sales, the following is a summary entry thereof:

Accounts Receivable	\$.......	
Cash	....	
Sales		\$.......

The Cash debit is not posted, being set up simply to show the equality of the summary. It is posted from the cash book. The debit to Accounts Receivable when posted to the general ledger account of that title secures a charge to that account equal to all individual debit postings to the accounts receivable ledger. Debits to this controlling account are also posted from general journal and cash book. An accounts receivable analysis column may appear on debit side of general journal in which charges to customers are made. At end of month the total of this column gives in one figure item to be posted to the general ledger accounts receivable account. This is equal to the individual debits posted from general journal to customers' accounts in the accounts receivable ledger.

Ordinarily, on account of fewness of items involved, it is not necessary to provide an accounts receivable column on the credit side of the cash book. Each item posted to debit of an account receivable in the accounts receivable ledger must be posted separately to general ledger accounts receivable controlling account.

CREDITS TO CONTROLLING ACCOUNTS RECEIVABLE.—Four main sources of credits to accounts receivable accounts are:

1. Payments by customers entered in cash book.
2. Goods returned by customers entered in returned sales journal.
3. Notes received in payment entered in notes receivable journal.
4. Adjustments of various kinds entered in general journal, also notes and returned sales entered in general journal where special journals for those transactions are not kept.

Special credit columns may be provided in cash journal and general journal the totals of which are posted to credit of the Accounts Receivable controlling account, the details to the individual accounts receivable in the subordinate accounts receivable ledger. The posting from the returned sales journal at the month end is summarized thus:

Sales Returns	\$.......	
Accounts Receivable		\$.......

This total credit posting equals in amount the individual postings to the credit of the accounts receivable accounts posted from the returned sales journal. If a notes receivable journal is kept a similar entry is required for it, thus:

Notes Receivable	\$.......	
Accounts Receivable		\$......

Thus all debits and credits which are carried in detail to subordinate ledgers are represented in summary form in the general ledger controlling account. It is possible to secure a trial balance of the general ledger without considering the detailed accounts found in the subordinate ledger. Nevertheless part of the work of checking up at end of period consists in making a list of customers' balances and seeing that their total agrees with the controlling account balance.

CONTROLLING ACCOUNTS PAYABLE ACCOUNT.—The principles governing the controlling Accounts Payable account are the same as those

governing the controlling accounts receivable accounts, but the details differ. Summary entry for purchases journal is:

Purchases	$.......	
Accounts Payable		$.......
Cash		....

The cash item should not be posted.

Debits to accounts payable controlling account come from accounts payable columns in cash book, credit side, general journal, and summaries for notes payable and returned purchases journals.

SELF-BALANCING SUBORDINATE LEDGERS.—The subordinate ledger may be made self-balancing by setting up an exact duplicate of the controlling account in the subordinate ledger but with the **sides reversed.**

INTRODUCING CONTROLLING ACCOUNTS.—If desired to introduce controlling accounts where not formerly used, adjustments are necessary. Accounts to be controlled should be segregated and controlling account columns provided for in books of original entry. With transfer of these accounts to a separate ledger and introduction of controlling accounts in general ledger, latter's balance is preserved. Opening entry in the newly established controlling account is sum of balances of transferred accounts. The new controlling account may be established by journal entry as shown in Form 23. Posting this entry opens the accounts receivable controlling account in the general ledger and closes the individual customers' accounts in the general ledger. The individual customers' accounts are in turn opened in the accounts receivable ledger.

TREATMENT OF WITHDRAWALS OF STOCK-IN-TRADE.—Sales journal is designed to contain only sales of stock-in-trade. Sometimes goods are withdrawn at cost for use in the business or for proprietor's personal use. Although it is not strictly correct to enter these at cost price in sales journal, it is sometimes done as a matter of convenience. Results for statistical purposes are not thereby vitiated materially if such withdrawals are small, or if they continue fairly constant from period to period. When so recorded a problem arises in summarizing the sales journal if controlling accounts are used. The accounts receivable ledger is limited to customer's accounts only. Proprietors' accounts and other accounts to which withdrawals might be charged are kept in the general ledger. Whereas most items entered in sales journal are posted to the accounts receivable ledger, such withdrawals at cost must be posted in detail to the general ledger. This total of sales journal does not represent correct debit to Accounts Receivable controlling account. It is necessary to make an analysis of the sales journal contents to secure this figure. To do this, if possible three columns in addition to departmental columns should be used. Column titles would be: "Sales ledger," "Cash," and "Sundry." Sum of these three gives total to check against total of other distributive columns, but only "sales ledger" total is posted to accounts receivable controlling accounts, and individual items in that column are posted to customers' accounts in accounts receivable ledger. Items in the 'sundry" c lumn are posted to proper accounts in the general ledger. If number of such withdrawal items is small, they may be recorded in the regular column in the sales journal and be given some distinguishing mark. At month's end these must be totaled separately and their sum subtracted from total of sales column to secure correct amount to post to the controlling account. Another plan is to make a correcting journal entry when entry for total of the sales journal is made. The special items being included in the total of the sales column, an

Form 26b. Cash Book Summary—Disbursements Side

overcharge occurs to the Accounts Receivable controlling account. A correcting journal entry is made crediting the controlling Accounts Receivable account and charging the proprietor's Personal account, thus:

Proprietor, Personal	$.......	
Accounts Receivable		$.......

The debit to the proprietor should be checked here and posted from sales journal, or vice versa.

TREATMENT OF CASH SALES.—A separate column for cash sales in the sales journal may be dispensed with. Under one plan cash sales are included

in the charge to accounts receivable controlling account although the individual items are not posted to the subsidiary ledger. They are also included in the total to be credited to the accounts receivable controlling account as per the debit side of the cash book. Inflated debit in controlling account is offset by an equally inflated credit item.

EXTRANEOUS ITEMS IN PURCHASES JOURNAL.—When items not intended for stock are purchased and entered in purchases journal, such items should not be charged to purchases but to the personal account of proprietor, or whatever account is affected.

SUMMARY ENTRIES FOR COLUMNAR BOOKS.—The summary entries for special journals may be made in the general journal, but are preferably made directly in the special journals. A **sales journal summary** is shown in Form 24. A **general journal summary** is shown in Form 25. A **cash book summary** is shown in Forms 26a, 26b.

Partnership Accounting

PARTNERSHIP DEFINED.—The New York law say that "a partnership, as between the members thereof, is the association, not incorporated, of two or more persons who have agreed to combine their labor, property and skill, or some of them, for the purpose of engaging in any lawful trade or business, and sharing the profits and losses as such between them."

The English Partnership Act of 1890 defines a partnership as "the relation which subsists between persons carrying on a business with a view of profit."

PARTNERSHIPS CLASSIFIED.—In general, partnerships are either common law or limited, but other special subdivisions may occur. Thus under the Income Tax Law of 1918 personal service corporations were regarded as partnerships and were taxed accordingly. **Common law partnerships** are meant when reference is made to partnerships without limitation or qualification. These are governed not by statute but by the common law. Of course the common law may be modified by statute. According to the principles governing common law partnerships, the members are subject to unlimited liability. **Limited partnerships** are those in which restrictions are placed on the liability of some of the partners, providing certain requirements of the law are met. Partners limited in liability to their investments are **special partners.** Those who retain unlimited liability are **general partners.** In order to become a limited partnership the usual requirement is that a certificate be deposited in a public office, stating:

1. Name of firm.
2. Name and residence of each partner, and whether general or special.
3. Nature of business.
4. Amount of each partner's investment,
5. Amount of capital.
6. Duration of partnership.

The New York law governing formation of limited partnerships reads:

Two or more persons may form a limited partnership which shall consist of one or more persons of full age, called **general** partners, and also of one or more persons of full age who contribute in actual cash payments, a special sum as capital, to the common stock—or fund—called **special** partners, for the transaction within this state

of any lawful business, except banking and insurance by making, severally signing and acknowledging and causing to be filed and recorded in the clerk's office in the county where the principal place of business of such partnership is located, a certificate in which is stated:

1. The name or firm under which such partnership is to be conducted and the county wherein the principal place of business is to be located.
2. The general nature of the business intended to be transacted.
3. The names, and whether of full age, of all general and special partners therein, distinguishing which are general and which are special partners, and their places of residence.
4. The amount of capital which each special partner has contributed to the common stock—or fund.
5. The time at which the partnership is to begin and end.

JOINT-STOCK COMPANY.—This is a partnership or association in which a participation in ownership and control and in a right to a proportion of profits is evidenced by transferable shares of stock. A board of directors chosen by the stockholders exercises management and control. In above respects the joint-stock company resembles the corporation, but insufficiency of assets to pay debts in case of bankruptcy is made good out of private fortunes of partners as is done in case of general partnerships.

CLASSIFICATION OF PARTNERS.—An **ostensible partner** is one who holds himself out as and is known to be a partner. A **nominal partner** is one known as a partner but who possesses no real interest in the firm. A **dormant** or **silent partner** is one who does not take an active part in the firm's affairs and who is not known as a partner to outsiders. A **secret partner** is one who possesses an interest in a firm and takes an active part in its affairs but who is not known as a partner to outsiders.

ARTICLES OF AGREEMENT.—Prospective partners usually form an agreement regarding management of the future enterprise. Points to be covered in this agreement are:

1. Capital to be invested by individual partners. Amounts and proportions of contributions should be stated. Admission of new partners should be covered. Good-will adjustments should be set forth.
2. Provision for division of profits or losses among partners.
3. Provision regarding allowance of interest on capital invested by partners.
4. Provision regarding treatment of withdrawals.
5. Provision for admission of new partners. In this it may be desirable to indicate method to be pursued in adjusting book values to real values, and treatment of good-will.
6. Provision for keeping of records. Preferably by double entry, and periodical audits by certified public accountants may be desirable.
7. Provision for dissolution. After creditors are satisfied any excess of assets over capital is divided equally among partners, unless there is provision to the contrary.

Other topics may require treatment. One requiring extended consideration is the question of interest on drawings. If desirable, a limit to drawings may be prescribed, interest being charged on excesses drawn over the prescribed amount and credited on any excess of amount prescribed over amount withdrawn.

Provision may be made to avoid dissolution in case of death of a partner. A partner's death is likely to occur at a time when it would be inconvenient to

close the books. If profits do not fluctuate greatly, provision may be made that the outgoing partner or the estate of the deceased partner be compensated on basis of past year's profits. If desirable to avoid disbursement of too great an amount at one time, such payment may be arranged on the instalment plan.

DISSOLUTION OF PARTNERSHIPS.—Partnerships are dissolved,

1. By arrival of a time predetermined by agreement.
2. By illegality of purpose.
3. By impossibility of accomplishing purpose for which formed.
4. By unanimous consent of partners.
5. By assignment of interest of a partner without consent of all other partners.
6. By death of a partner.
7. By anything incapacitating a partner, as insanity or drunkenness.

Distribution of Assets at Dissolution.—Obligations are liquidated in the following order:

1. Creditors.
2. Loans from partners.
3. Capital of partners.
4. Residue is distributed among partners in ratio in which profits and losses are shared.

OPENING ENTRIES.—The opening entry should express clearly the contribution of each partner. Assume that two individuals about to form a partnership possess following assets and liabilities:

E. Johnson:	
Assets:	
Cash	$ 2,000
Merchandise	6,000
Real Estate	15,000
Accounts Receivable	4,000
Furniture and Fixtures	800
Notes Receivable	900
	$28,700
Liabilities	
Mortgage	$ 8,000
Accounts Payable	1,200
	$ 9,200
S. Arthur:	
Assets:	
Cash	$12,000
Liabilities:	
None.	

It may be agreed that Arthur's investment entitles him to one-half of profits and interest in the entire investment proportionate to his contribution; or he may be given a half-interest in the whole investment, in which case capital accounts of partners require adjusting to make them equal. If each partner's interest in the investment is to be proportionate to his contribution, opening entry is:

E. Johnson and S. Arthur agree to form a partnership this day under the firm name of Johnson and Arthur. Assets, liabilities, and capital are as follows:

Cash	$14,000	
Merchandise	6,000	
Real Estate	15,000	
Accounts Receivable	4,000	
Furniture and Fixtures	800	
Notes Receivable	900	
Mortgage		$ 8,000
Accounts Payable		1,200
E. Johnson, Capital		19,500
S. Arthur, Capital		12,000

If thought preferable, the assets each partner contributes may be set out separately, instead of being shown in a compound entry as above.

If it is desired to give each partner a half-interest in the business, the capital accounts require adjusting. Either (a) Johnson's account should be charged and Arthur's account should be accredited with half the difference between the accounts as they stand above, or (b) good-will should be brought in as part of Arthur's investment.

For (a) the adjustment is:

E. Johnson, Capital	$3,750	
S. Arthur, Capital		$3,750
To equalize capital accounts of partners.		

For (b) the adjusting entry is:

Good-Will	$7,500	
S. Arthur, Capital		$7,500

There can be no objection to bringing good-will into books if it represents a real condition. If there is no good-will then method (a) should be followed.

DISTRIBUTION OF PROFITS.—The fundamental principles governing profit distribution are:

1. In absence of agreement to contrary, profits are divided equally among partners.
2. If profits are to be divided in ratio of capital interests, it should be specified in agreement whether original investments or capital accounts as at beginning of period should determine ratio of subdivision.
3. Agreement should contain provision for a change in profit-sharing ratio in case one partner should withdraw a part of his investent.
4. Unless special provision is made for sharing of losses the profit-sharing ratio controls.
5. Salaries are not allowed to partners unless provided for in the articles or later agreement.
6. Provision should be made for handling of profits not drawn by partners. They may be carried either as open balances in the partners' Drawing accounts or they may be transferred to the Capital accounts.

Average Investment Basis for Profit-Sharing.—Sometimes special partnerships are formed to undertake a special contract or to do some special kind of work. Total capital required may not be known at beginning, or it may be a policy to let whatever partner happens to have funds in readiness advance

them for a longer or shorter period. Under these circumstances the average investment of the partners may be made the basis of profit-sharing.

Determining Average Investment.—Assume that two partners, A and B, invest \$6,000 and \$12,000, respectively, on Jan. 1, and make the following withdrawals and additional investments:

Withdrawals:	
A—Mar. 31	\$ 500
May 31	700
B—June 30	200
July 31	2,000
Oct. 30	300
Additional Investments:	
A—July 31	\$ 2,000
B—Aug. 30	6,000

At end of year A has invested:	
\$6,000 for 12 mos., or	\$ 72,000 for 1 mo.
2,000 " 5 " "	10,000 " " "
	\$ 82,000 " " "
He has withdrawn:	
\$500 for 9 mos., or	\$ 4,500 for 1 mo.
700 " 7 " "	4,900 " " "
	\$ 9,400 " " "

His investment is \$82,000 – \$9,400, or \$72,600 for 1 month, or an average investment of \$72,600 ÷ 12 = \$6,050. At end of year B has invested:

\$12,000 for 12 mos., or	\$144,000 for 1 mo.
6,000 " 4 " "	24,000 " " "
	\$168,000 " " "
He has withdrawn:	
\$ 200 for 6 mos., or	\$ 1,200 for 1 mo.
2,000 " 5 " "	10,000 " " "
300 " 2 " "	600 " " "
	\$ 11,800 " " "

His investment is \$168,000– \$11,800, or \$156,200 for 1 month, or an average investment of \$156,200 ÷ 12 = \$13,016.67.

Interest on Investments.—In partnership accounting interest question arises in connection with: (a) adjustment of profits, and (b) withdrawals. When interest is employed to adjust profits, the purpose is to give one partner more and another less than the rule of equal division of profits would permit. If A, B, and C invest, respectively, \$500,000, \$750,000 and \$1,000,000, average investment of all is \$750,000. If each is credited 6% on capital, the charge therefor being carried to profit and loss, the partners' capital accounts are credited for interest with following amounts:

A	\$ 30,000
B	45,000
C	60,000
Total	\$135,000

Since the \$135,000 is charged to profit and loss, each partner bears 1/3 of it, or \$45,000. B does not gain or lose, but A gets \$15,000 less and C \$15,000 more than if interest were not brought in. A simple way of accomplishing the same result, so far as Capital accounts are affected, is by means of the following adjusting entry:

A, Capital	\$15,000	
C, Capital		\$15,000

Sometimes when partners contribute more or less than the agreed amount, those contributing more are allowed interest on the excess and those who contribute less are charged interest on the deficit. Usually these adjustments are handled through Profit and Loss, the final balance of Profit and Loss being distributed in profit and loss sharing ratio. Some accountants advocate that this interest adjustment be made direct through appropriation section of profit and loss; others that it be carried to regular interest accounts.

A, B, and C, equal partners, each agree to contribute \$10,000. 6% is to be credited on excess contributions and charged on deficits. A contributes \$15,000, B, \$9,000, and C, \$7,000.

A's excess is \$5,000; interest thereon is \$300.
B's deficit is \$1,000; interest thereon is \$ 60.
C's deficit is \$3,000; interest thereon is \$180.

Entries to bring these interest items into books are as follows

Profit and Loss	\$300	
A		\$300
B	\$ 60	
C	180	
Profit and Loss		\$240

As a result the balance in Profit and Loss is a debit of \$60 which is distributed among partners as per following entry:

A	\$20	
B	20	
C	20	
Profit and Loss		\$60

CHANGES IN PARTNERS' CAPITAL ACCOUNTS.—Since amount of profit left in Capital accounts of partners differs, the ratio of the accounts may be different at the end of a period than at the beginning. If profits are to be shared on basis of investments, profit-sharing ratio changes with changes in investments. The agreement should cover this point specifically. In event of dissolution, accretions through profits constitute claims ranking ahead of partners' capitals. They are in the nature of loans from partners and may be carried in special **partners' Loan accounts.** Sometimes such accretions are carried in the **partners' Personal accounts.**

CAPITAL CONTRIBUTIONS vs. LOANS FROM PARTNERS.—Money advanced by partners may be either an additional contribution of capital or a loan to the partnership. It is important that there be a specific understanding on this point and it may be desirable to include a provision thereon in the articles of agreement. If advances are to be regarded as capital contributions they should be reflected in the capital account of the partner making the advance. This will require a recomputation of the profit-sharing ratio if this is based on invested capital. If they are loans they are reflected in partners' Loan accounts. If evidenced by notes payable of the firm, these notes should

not be carried in the regular Notes Payable account representing liability to outsiders. At common law a partner cannot bring suit against his firm.

CLOSING ENTRIES.—Balance of Profit and Loss must be transferred to Capital accounts according to an accepted ratio or, in absence of agreement, by equal subdivision. Balances of Withdrawal accounts are not carried to Profit and Loss, but direct to Capital accounts, if closed out. Usual plan is to bring net profits into personal accounts and then carry balance of personal accounts to capital accounts.

A, B, and C are partners and share profits equally. Balance of Profit and Loss for a period is $30,000. Their Personal accounts stand charged with $200, $400, and $700, respectively, for withdrawals. Entries to carry net profit to withdrawals and thence to capital are:

Profit and Loss	$30,000	
A, Personal		$10,000
B, Personal		10,000
C, Personal		10,000
To carry profits to partners' Personal accounts.		
A, Personal	$ 9,800	
A, Capital		$ 9,800
B, Personal	$ 9,600	
B, Capital		$ 9,600
C, Personal	$ 9,300	
C, Capital		$ 9,300
To carry balance of Personal accounts to Capital accounts as additional investments of partners.		

ACCOUNTING FOR PARTNERSHIP DISSOLUTION.—Theoretically, capital invested is returned to partners at dissolution in ratio in which it was invested. An increment in investment over contributions is due to accumulation of profits; its distribution is governed by rule governing distribution of profits. A deficit is governed by rule governing distribution of losses. First step is to divide accumulated profit or deficit among partners as per rule. Remaining investment is distributed among partners in proportion to Capital accounts. If a deficit exists, ratio of partners' capital is changed, unless profit and loss distribution ratio is same as ratio of investments.

Assume that balance sheet of C and D is:

Assets	$100,000	C, Capital	$100,000
Deficit	40,000	D, Capital	40,000
	$140,000		$140,000

If there is equal distribution of profits and losses, balance sheet becomes:

Assets	$100,000	C, Capital	$ 80,000
		D, Capital	20,000
	$100,000		$100,000

Asset distribution is now made in ratio of 4 to 1, whereas ratio of original investment was 5 to 2.

Distribution of deficit may change Capital account of one or more partners to a deficit. Assume balance sheet of E, F, G, and H is as follows:

Assets	$ 400,000	E, Capital	$ 500,000
Deficit	600,000	F, Capital	100,000
		G, Capital	200,000
		H, Capital	200,000
	$1,000,000		$1,000,000

Distribution of the deficit leaves it thus:

Assets	$ 400,000	E, Capital	$ 350,000
F, Capital	50,000	G, Capital	50,000
		H, Capital	50,000
	$ 450,000		$ 450,000

E, G, and H receive amounts indicated by their capital accounts if F makes good his deficit. If he does not, the loss must be distributed equally among the three solvent partners.

ADMISSION OF NEW PARTNERS.—When a new partner is to be admitted, the question of valuation of assets arises. If the book value of these is not satisfactory, steps must be taken to determine a satisfactory valuation. When the existing book value is accepted, it is necessary merely to make an entry charging the proper account for his contribution and crediting his Capital account. Thus if his contribution consists of $25,000 in cash the entry is:

Cash	$25,000	
A, Capital		$25,000

Another case is where a new valuation of the old assets of the existing partnership is necessary to permit the admission of an additional partner on an equitable basis. After proper revision of book values are made, the new partner is admitted as in preceding illustrations.

A third case arises where there is a good-will value additional to values indicated on books. Good-will value being determined, an entry is necessary to bring it upon books as an asset, Capital accounts of partners being credited. An entry is next in order to bring in the new partner's investment.

Consignments

DEFINITION.—A **consignment** is a shipment of goods to another party to be sold by latter for the account of the shipper. The owner or shipper is the **consignor.** The party receiving the goods is the **consignee.** A **consignment-out** is a shipment of goods on consignment to another. A **consignment-in** is a receipt of goods on consignment from another. Consignments are governed by the law of bailments and agency. The consignor is principal and the consignee is agent. A **broker** is not usually a consignee, but acts as middleman, bringing buyer and seller together. His charge for his service is a commission usually known as brokerage. A commission merchant is sometimes known as a **factor.** A broker sells goods for account of his principal, but the principal delivers the goods direct to the purchaser and collects the account. A factor has his principal's goods in his own possession and may sell either in his own name or that of his principal. The factor may or may not operate under a formal contract. If he operates under a formal contract it may be either

specific or general, i.e., it may cover a single consignment or it may cover all consignments between the two parties.

RIGHTS AND DUTIES OF FACTOR.—The factor is expected to exercise the same care with the goods of his principal as with his own. He may extend credit to the purchaser according to custom, but must use care in determining his credit rating. He must use ordinary diligence in making collections. He can transfer title to the goods and if principal is unknown to purchaser he may give a better title than was possessed by principal. While goods are in possession of factor he must give them adequate protection, but he is not liable in case they are damaged by forces over which he has no control. The character of the goods determines the degree of diligence factor must exercise. Factor must keep goods and funds of principal separate from his own goods and funds. It is usually sufficient, however, if funds are carefully separated in factor's accounts so that actual physical separation can be accomplished at any time if necessary. Factor may incur necessary expenses, as insurance, duty, freight, etc., properly to handle principal's goods and effect their sale. These are charges against the principal. The factor holds a lien on principal's goods for legitimate expenses incurred as well as for any money advanced to principal in advance of regular settlement. He also possesses a lien for commission and may apply proceeds of sale towards its payment. Factor must sell at the price fixed by his principal if acting under specific instructions; otherwise at highest price obtainable, exerting due diligence to that end. If a minimum sale price is fixed by consignor a sale below that price makes the factor liable for the difference. Factor is not liable to principal for money value of sales until amount due therefor is collected; but this rule does not hold if factor has not used due diligence in granting credit or in making collections. Under *del credere* agreements, factors, in consideration of a higher commission, hold themselves responsible for proceeds of sales. Consignee must not pledge as his own, goods received by him on consignment; but if he has made advances to his principal, to secure his debt he may deposit goods equivalent to his advances, provided third party is given notice. In absence of contrary instructions factor may accept buyer's promissory note in payment for consigned goods. He is not held liable for its dishonor if he has at time of acceptance thereof determined credit standing of maker and has not discounted it for his own use. Disposition of proceeds of a sale must accord with wishes of the principal. Factor is not chargeable with interest unless so provided in agreement or unless such a provision can be implied either from the contract or from custom. Concerning factor's duty to account, Francis B. Tiffany, in "Handbook of the Law of Principal and Agent," says:

> It is the duty of the agent to account to the principal for all the money and property coming into his hands by virtue of his employment, including all profits resulting from the transactions, either as agent, or on his own account in breach of his duty as agent.
>
> His specific duties in this respect are:
>
> 1. To keep accounts of all his transactions in the course of the agency, and to render his accounts whenever required by the terms of his employment, or upon demand.
> 2. To keep money and property of the principal separate from his own, and from those of third persons.
> 3. To pay or deliver to the principal all money and property of the principal coming into his hands as agent, whether required by the terms of the employment, or upon demand.

The factor may keep accounts affecting consignments either in his general books or he may keep a special set of agency books. If he keeps consignment accounts in general books, they must be so kept as to be readily distinguishable

from his other interests. If he keeps special books, he will from time to time transfer results of his commission business to his general books in order to show the effect on his assets, liabilities, and income.

ACCOUNT SALES.—Upon completion of his work for his consignor the factor renders to him an **account sales,** which is a summarized statement of transactions. It shows what goods were received by factor, what he has sold, expenses incurred in connection therewith, and amount due principal. This may be credited to the principal's account on the factor's books, or it may be remitted to him. The factor's accounting takes no account of price at which principal bills goods to him, which may be at cost, current market, or a fictitious price. The price at which the factor sells is the amount against which he charges his expenses. An account sales is shown in Form 27.

Account Sales

of fruit received via P & Q Steamboat Line,

Form 27. Account Sales

ENTRIES ON BOOKS OF CONSIGNOR.—The consignor desires to learn the outcome on each consignment and to do so must keep a separate record for it. This account may be kept either in a subsidiary consignments ledger or in the general ledger, the number of accounts determining which policy should be pursued in this respect. Sending a consignment of goods is not a sale, and entry is not made therefor in the Sales account. **One method** is to transfer

the goods from the Purchases account to a Consignment account. The word "Consignment" should be followed by the consignee's name and be given a number, as, "Consignment No. 27, L. T. Morton." The transfer from Purchases to Consignment account is made at cost price and this Consignment account is also charged with all expenses applicable to the consignment—insurance, freight, taxes, etc. When account sales is received Consignment account is credited with gross sales and charged with expenses, or credited with net proceeds, final result being same in either case. If factor remits money with account sales, cash is debited, but if he does not, his account is charged for amount of net proceeds. As it stands thus, Consignment account shows a purely nominal balance—profit or loss. When a Consignment account has been completed its balance should be transferred to a Consignments Profit and Loss account, the balance of which is transferred to general Profit and Loss at end of accounting period.

Another plan is to set up memorandum accounts at time consignment is sent, charging a Consignment account and crediting a Consignment Sales account for invoice value of goods. No entry is made in Purchases account, and any expenses incurred are charged to regular expense accounts, not to the Consignment account as in above case. For original entry a special consignments journal is required only if consignments are numerous. When account sales is received, regular sales account is credited with net or gross proceeds. If with gross proceeds, cash or consignee and expenses are at the time charged. If with net proceeds, cash or consignee is charged. Memorandum accounts are then canceled by a reversal entry. Under this method consignment and regular sales are merged and it is impossible to ascertain results secured from each.

At end of consignor's fiscal period, if any consignments are outstanding, under first method explained above goods shown in Consignment account are included in the **inventory**; under second method unsold consigned goods are so included.

ENTRIES ON BOOKS OF CONSIGNEE.—One plan is to open memorandum accounts, "Consignments" and "Consignments-In," the former being charged for invoice price of goods when received and latter being credited. A third account is operated with the principal, as, for example, "James Lott, Principal," and is charged with expenses and commission and credited with sales. Its balance, when all goods are sold and all expenses and commissions charged, is amount due principal. It is closed by a debit when amount is transmitted to principal. So long as this account with principal stands open on books of consignee, it represents a trustee's liability, not an ordinary account payable.

Another plan is to record receipt of goods in a memorandum book or consignments received book, along with information as to price, amount, etc. In general books a Consignment account in principal's name is opened and charged with expenses and credited with sales. After all sales are completed, balance of this account represents amount due principal.

It is always important that all transactions relating to a given consignment be so designated that this relationship is always evident. If consigned goods are sold on account, it is important to be able to distinguish to what consignment any uncollectible account belongs.

PROFIT ON FACTOR'S BOOKS.—In case of transactions which are completed, the profit earned thereon is reflected by credits in a Commissions Earned account, the corresponding debits having been made to accounts of proper principals. In case all goods in a given consignment are not sold at end of an

accounting period, it is necessary to make an adjusting entry charging account of principal for amount of commission earned to date and crediting commissions earned account. Unsold goods of principal must be excluded from **inventory of factor.**

Illustration.—T. B. Arthur ships a consignment of goods costing $800 to L. O. McGinnis to be sold on his account. Arthur pays insurance $12, and cartage $5. McGinnis pays expenses amounting to $21.42. He sells the goods for $1,300 and charges 5% commission.

Books of T. B. Arthur:

(a) *When goods are shipped:*		
Consignment, L. O. McGinnis, No. 1	$ 800.00	
Purchases		$ 800.00
Consignment, L. O. McGinnis, No. 1	$ 17.00	
Cash		$ 17.00
Insurance $12, cartage $5.		
(b) *Upon receiving account sales:*		
Consignment, L. O. McGinnis, No. 1	$ 86.42	
L. O. McGinnis	1,213.58	
Consignment, L. O. McGinnis, No. 1		$1,300.00
To credit consignment with total amount sold, charge it for expenses paid by factor, and charge factor for balance.		
Consignment, L. O. McGinnis, No. 1	$ 461.58	
Consignments Profit and Loss		$ 461.58
To carry profit to profit and loss.		
(c) *Upon receiving payment:*		
Cash	$1,213.58	
L. O. McGinnis		$1,213.58

Books of L. O. McGinnis:

(a) *When goods are received:*		
Consignment	$ 800.00	
Consignments-In		800.00
Memo account for goods received on consignment from T. B. Arthur.		
T. B. Arthur, Principal	$ 21.42	
Cash		$ 21.42
Expenses paid.		
(b) *During transactions:*		
Accounts Receivable	$1,300.00	
T. B. Arthur, Principal		$1,300.00
For sale of goods.		
T. B. Arthur, Principal	$ 65.00	
Commissions		$ 65.00
For commission of 5%.		
Consignments-In	$ 800.00	
Consignments		$ 800.00
To reverse.		
(c) *When cash is sent:*		
T. B. Arthur, Principal	$1,213.58	
Cash		$1,213.58

Under second plan suggested under "Entries on Books of Consignee" (page 1475), on books of Arthur:

(*a*) *becomes:*

Consignment, L. O. McGinnis, No. 1	$ 800.00	
Consignments-Out		$ 800.00
Insurance	$ 12.00	
Cartage	5.00	
Cash		$ 17.00

and (*b*) *becomes:*

Expense	$ 21.42	
Commissions	65.00	
L. O. McGinnis	1,213.58	
Sales		$1,300.00
Consignments-Out	$ 800.00	
Consignment, L. O. McGinnis, No. 1		$ 800.00

Branch House Accounts

BRANCH vs. AGENCY.—An agency acts as a local salesman, securing buying orders and forwarding them to the head office. Head office assumes all responsibility for the sale and pays agent a commission for securing the order. A branch is more highly organized and possesses a greater degree of self-management. Usually it makes its own sales, and it may pass on its own credits and make its own collections. Sometimes it pays all branch expenses. The degree of autonomy of branches varies greatly. In some cases the branch deposits all receipts to credit of home office, in which case its own disbursements are made from a petty cash fund run on the imprest basis. In other cases the branch receives and pays out funds and at intervals remits surplus amounts to head office as if it were independent. As a consequence of varying conditions of interrelationship between branch and main office varying methods of control have been adopted. If it is necessary for local management to have on hand a large stock of merchandise and to exercise a great amount of discretion, the unit must be largely independent except in so far as it forms a part of a more general organization.

PRINCIPLES OF BRANCH ACCOUNTING.—The three chief factors to be kept in mind are: (a) method of control by head office, (b) results secured by each branch, and (c) method of presentation of results. No exact line of distinction can be drawn between agency and branch organizations. In case of a simple sales agency little in the way of an accounting control is necessary. The agency is supplied with an expense fund and sends orders and sales to head office. The expense fund should be operated under the imprest system. On the head office books a separate record of the activities of each branch must be kept. In some instances the records kept at the branch office are comparatively simple; in other instances they are fairly complex. Periodic reports may be required by the head office of all branches.

Illustration No. 1.—Home office in Philadelphia sends $200,000 to branch manager in St. Louis, who is to construct a factory building. In home office books an account is opened with "St. Louis Branch Investment" and is debited for the amount advanced, $200,000. On books of St. Louis branch an account "Home Office" is credited with the $200,000 advanced. Balance sheet of the branch is somewhat as follows:

Balance Sheet—St. Louis Branch
As at December 31, 1923

Cash	$ 15,000	Home Office	$200,000
Plant	140,000	Accounts Payable	20,000
Machinery	30,000		
Inventories	35,000		
	$220,000		$220,000

When home office sets up its balance sheet, it may either bring in the account "St. Louis Branch Investment" as an asset, or it may make a journal entry bringing into home office books the items on the branch's books which the "St. Louis Branch Investment" account stands for. The first plan is usually followed, and is somewhat simpler.

During the following year home office advances an additional $100,000, and the branch earns a profit of $27,000. Before bringing this profit into books of home office, latter's books show "St. Louis Branch Investment" charged with $300,000; "Home Office" account on books of branch showing an equal credit before the net profit for the year, $27,000, is transferred to it. Balance sheet of branch should be somewhat as follows on Dec. 31, 1924:

Balance Sheet—St. Louis Branch
As at December 31, 1924

Cash	$117,000	Home Office	$300,000
Plant	180,000	Accounts Payable	16,000
Machinery	35,000	Profit and Loss	27,000
Inventories	11,000		
	$343,000		$343,000

The profit and loss item on branch books should be transferred to "Home Office" account, increasing it to $327,000; while on books of home office "St. Louis Branch Investment" should be charged and Profit and Loss credited. Instead of showing "St. Louis Branch Investment" charged with $327,000, the home office on its balance sheet may bring in the assets and liabilities of the branch. This illustration indicates a great degree of autonomy on part of the branch, which acts independently of head office in all routine matters, such as buying and selling. If the home office should at times find it desirable to make purchases for the branch, home office makes an entry charging Branch, and branch office credits Home Office account, at same time charging Purchases. If branch sells goods but home office receives payment therefor, home office credits Branch and branch debits Home Office and credits customer.

Illustration No. 2.—Assume that head office supplies cash required to begin operations, also all stock-in-trade. Branch keeps complete records. During year head office forwards $6,000 cash and $70,000 stock-in-trade. Branch sells $37,000 on account and $27,000 for cash. Expenses amount to $10,500. Collections from customers $33,000. Cash is remitted to head office $50,000. Closing inventory of stock-in-trade is $20,000.

Entries on branch books, in summary form:

Cash	$ 6,000	
Head Office		$ 6,000
Merchandise	$70,000	
Head Office		$70,000
Accounts Receivable	$37,000	
Merchandise		$37,000
Cash	$27,000	
Merchandise		$27,000
Expenses	$10,500	
Cash		$10,500
Cash	$33,000	
Accounts Receivable		$33,000
Head Office	$50,000	
Cash		$50,000
Inventory	$20,000	
Merchandise		$20,000
Merchandise	$14,000	
Profit and Loss		$14,000
Profit and Loss	$10,500	
Expenses		$10,500
Profit and Loss	$ 3,500	
Head Office		$ 3,500

Entries on head office books, in summary form:

Branch Office	$76,000	
Cash		$ 6,000
Merchandise		70,000
Branch Office	$ 3,500	
Profit and Loss		$ 3,500

Illustration No. 3.—Merchandise is sent to branch at a fictitious price and branch manager is not to be permitted to know profit or loss secured. One account is opened on head office books to record merchandise transactions with branch and another to record all other transactions with branch. Transactions are same as in illustration No. 2 above, except that merchandise is billed to branch at $80,000, a fictitious figure $10,000 in excess of its true cost, and closing inventory is also taken at same price and amounts to $22,857.14.

Two accounts opened on branch books are "Head Office General" and "Head Office Merchandise." Other accounts appear on branch books as in preceding illustration.

Entries on books of branch:

Cash	$ 6,000.00	
Head Office General		$ 6,000.00
Purchases from Head Office	$80,000.00	
Head Office Merchandise		$80,000.00
Accounts Receivable	$37,000.00	
Sales		$37,000.00
Cash	$27,000.00	
Sales		$27,000.00

Expenses	$10,500.00	
Cash		$10,500.00
Cash	$33,000.00	
Accounts Receivable		$33,000.00
Head Office General	$50,000.00	
Cash		$50,000.00
Inventory	$22,857.14	
Purchases from Head Office		$22,857.14
Head Office Merchandise	$57,142.86	
Purchase from Head Office		$57,142.86
Sales	$64,000.00	
Head Office General		$64,000.00
Head Office General	$10,500.00	
Expense		$10,500.00

"Head Office General" account serves as a summary account in place of Profit and Loss. This is preferable because profit or loss cannot be determined on books of branch. Expenses are purposely grouped under one account.

Entries on books of head office:

Branch Office	$ 6,000.00	
Cash		$ 6,000.00
Branch Office Merchandise	$80,000.00	
Sales to Branch		$80,000.00
Cash	$50,000.00	
Branch Office		$50,000.00

At close of period:

Branch Office	$64,000.00	
Sales		$64,000.00
Expenses	$10,500.00	
Branch Office		$10,500.00

Or this alternative:

Branch Office	$64,000.00	
Branch Profit and Loss		$64,000.00
Branch Profit and Loss	$10,500.00	
Branch Office		$10,500.00

When the latter alternative is followed activities of branch are not merged with activities of head office as they are under former alternative. When former alternative is pursued it is necessary to make up a statistical abstract for each branch showing the results of its activities for the period.

Where policy of billing goods to branch at a fictitious price is pursued, an adjustment is necessary on books of head office to show true cost of goods sold by branch. Information necessary to accomplish this is found in memorandum accounts covering merchandise transactions with branch. If, for example, goods are billed at 20% above cost, billed price is 120% of cost and by dividing billed price of goods sold by 1.2, their true cost is determined. If all activities are merged with head office activities, consolidated gross profit can be ascertained by finding cost of all inventories at branches and merging this with head office inventory. But if, as is usual, it is desirable to ascertain results secured by each branch and to set these up on head office books, billed cost of sales made

by each branch must be converted to a true cost basis and this amount must then be credited to head office purchases account and charged to branch profit and loss account. When all such transfers have been made, balance remaining in head office purchases account is proper amount to be considered in determining head office gross profit.

In above illustration goods were shipped to branch at a billed price of $80,000 and inventory at close was $22,857.14, same valuation; hence billed value of goods sold is $57,142.86. Goods were billed to branch at 114.28% of cost. Hence true cost was $57,142.86 ÷ 1.1428 = $50,002.50. Adjustment is made as follows:

Branch Profit and Loss	$50,002.50	
Purchases		$50,002.50

Branch Profit and Loss now stands charged and credited as follows:

Branch Profit and Loss

Branch Office	$10,500.00	Branch Office	$64,000.00
Purchases	50,002.50		
Balance, Gross Profit	3,497.50		
	$64,000.00		$64,000.00
		Balance, Gross Profit	$ 3,497.50

The branch inventory of goods on hand must also be converted to a cost basis and be included in head office inventory before head office gross profit can be determined.

BRANCH OFFICE REPORTS.—No universally applicable forms of reports can be prescribed. If branch office books are kept in duplicate, duplicates being sent to head office at least once a month, head office can secure all necessary data therefrom. Sometimes head office requires daily duplicate copies of all business papers reflecting transactions at branch. Sales tickets are manifolded, one copy being sent to head office and if branch keeps a bank account a duplicate ticket of all deposits is sent to head office. Banker forwards all canceled checks to head office. Instead of daily reports, periodic summaries may be preferable. If traveling auditors are maintained, daily reports are unnecessary.

FOREIGN EXCHANGE.—Equivalence of one currency expressed in terms of another is **rate of exchange.** **Par rate of exchange** is the rate at which two currencies exchange on a basis of equality. Between United States and England it is $4.8665, as the gold content of that number of dollars equals the gold content of one pound sterling. The **market rate of exchange** varies from the par rate. When foreign branches exist the problem of conversion of foreign money, in which books of branches are kept, into terms of the currency of the country in which head office is located arises, in order that at the close of each accounting period the results may be incorporated in the books of head office. Since all transactions of the branch cannot be converted at rate of exchange prevailing at time transactions occur, it is customary to convert at the rate prevailing at close of fiscal period.

Branch books contain a **Head Office Adjustment account** representing the

head office's ownership in the branch, and a similar complementary account appears on books of head office. Sometimes in addition a **Remittance account** is carried, in which are entered remittances from branch to head office.

Branch trial balance must be converted before being incorporated in books of head office and chief problem is to determine on what basis the various items therein should be converted. Under certain conditions a uniform rate of conversion may be employed, but under other conditions such a uniform rate for all items would prove inequitable. If different rates are used, after conversion branch trial balance is usually out of balance. Difference is charged or credited to a **Fluctuations in Exchange account.** Conversion may show either a profit or a loss. Either of two methods of handling the resulting profit or loss may be followed.

1. Set up a **reserve for Fluctuations in Exchange account,** credit all conversion profits to it, and charge all conversion losses against it. In case a loss occurs in first accounting period, appropriate sufficient profits to wipe it out.
2. Regard the result as a current profit or loss, as the case may be.

Except under abnormal conditions the item is not likely to be large and debits and credits offset each other fairly closely.

The basis of conversion is the rate adopted. If fluctuations are not abnormal an **average rate** is usually sufficiently accurate, all profits or losses resulting from differences between actual rates and the average rate being carried to the Fluctuations in Exchange account. If branch is located in a country having a silver currency or a depreciated currency, an average rate is not satisfactory. Following is a summary of practices to be followed under such conditions.[3]

First convert foreign currency into dollars at following rates:

1. Fixed assets at same rate as before, i.e., rate at time of purchase, or at average rate for purchases of a fiscal period. Reason for this is that fluctuations in value of fixed assets should not affect results of period.
2. Floating assets and liabilities at rate current as of date of balance sheet.
3. Revenue items at an average rate for period.
4. Remittances at actual rates paid.
5. Control or Adjustment account at same rate as was established on head office books at last period.

To secure average rate for fixed assets, take rate prevailing at end of each month of year and divide the sum by 12. If rate resulting is below par, difference is a credit to capital expenditure and a charge to Profit and Loss on books of head office. For same item the branch charges Exchange and credits Head Office account.

Convert current assets and liabilities at rates current at balance sheet date. Convert revenue items at average rate. Remittance account should not be changed because it represents actual cash paid for cash transmitted, and there is no reason for changing the rate thus used at various times during the period. Same is true of the Control or Adjustment account. After all conversions are made, a reserve should be provided to cover losses on exchange not provided for by such conversion. This is desirable because the conversion is merely an estimate of the worth in head office currency of the branch business.

Illustration.—Trial balance of Liverpool branch of a Philadelphia concern is as follows:

[3] R. B. Kester, Accounting Theory and Practice, Vol. II, pp. 546–548.

Trial Balance—Liverpool Branch

Philadelphia Control ($4.7475)		£150,000
Remittances	£ 70,000	
Purchases	120,000	
Sales		150,000
Expenses	10,000	
Cash	6,000	
Accounts Receivable	16,000	
Accounts Payable		7,000
Inventory	70,000	
Fixtures	15,000	
	£307,000	£307,000

Inventory at close £75,000.

On Philadelphia books Liverpool Control account shows a balance of $712,125, and Remittance account $332,785, composed of five drafts, as follows:

£10,000 @ $4.75
20,000 @ 4.73825
10,000 @ 4.76
10,000 @ 4.752
20,000 @ 4.77

It is required to set up on Philadelphia books results of Liverpool transactions for the period and show Liverpool Control and Liverpool Profit and Loss accounts after adjustment.

Current rate of exchange is $4.7545.
Average rate is $4.762.
Rate when fixed assets were purchased was $4.86.
Depreciation and bad debts are to be ignored.
A reserve for fluctuation of exchange is to be set up.

	£	£	Rate of conversion	$	$
Philadelphia Control		150,000	4.7475		712,125.00
Remittances	70,000		(See above)	332,785.00	
Purchases	120,000		4.762	571,440.00	
Sales		150,000	4.762		714,300.00
Expenses	10,000		4.762	47,620.00	
Cash	6,000		4.7545	28,527.00	
Accounts Receivable	16,000		4.7545	76,072.00	
Accounts Payable		17,000	4.7545		80,826.50
Inventory	70,000		4.7545	332,815.00	
Fixtures	25,000		4.86	121,500.00	
Fluctuation of Exchange Reserve					3,507.50
	317,000	317,000		1,510,759.00	1,510,759.00

FORM 28. Conversion of Foreign Branch Trial Balance

Closing inventory £75,000 @ $4.7545 = $356,587.50.

Entries to adjust Philadelphia books:

Remittances	$332,785.00	
Liverpool Control		$332,785.00
To credit Liverpool with its remittances, as follows: £10,000 @ $4.75 . . . . $47,500.00 20,000 @ 4.73825 . . . . . 94,765.00 10,000 @ 4.76 . . . . 47,600.00 10,000 @ 4.752 . . . . 47,520.00 20,000 @ 4.77 . . . . 95,400.00		
Liverpool Control	$714,300.00	
Liverpool Profit and Loss		$714,300.00
To charge Liverpool with its sales: £150,000 @ $4.764		
Liverpool Profit and Loss	$332,815.00	
Liverpool Control		$332,815.00
To credit Liverpool with opening inventory: £70,000 @ $4.7545		
Liverpool Profit and Loss	$571,440.00	
Liverpool Control		$571,440.00
To credit Liverpool with its purchases: £120,000 @ $4.762		
Liverpool Control	$356,587.50	
Liverpool Profit and Loss		$356,587.50
To charge Liverpool with final inventory: £75,000 @ $4.7545		
Liverpool Profit and Loss	$ 47,620.00	
Liverpool Control		$ 47,620.00
To credit Liverpool with its expenses: £10,000 @ $4.762		
Liverpool Control	$ 3,507.50	
Reserve for Exchange Fluctuations		$ 3,507.50
To charge Liverpool with profit from conversion.		
Liverpool Profit and Loss	$119,012.50	
Profit and Loss		$119,012.50
To carry Liverpool branch profit to general profit and loss.		

FOREIGN SELLING AGENCIES.—If foreign branch serves simply as a **selling agency,** the home office makes out the invoice but in terms of the foreign currency. A separate set of records should be kept for each foreign currency involved. The books should consist of a foreign sales journal, a customers ledger, a cash receipts journal, and, if necessary, foreign notes receivable and sales returns and allowances journals. By this plan all transactions for sales and returns and allowances thereon are kept in terms of the foreign currency. At certain periods the transactions thus recorded should be converted into home currency and brought into general ledger. Under normal conditions a fixed rate of exchange may be sufficiently accurate. Under abnormal conditions the prevailing rate for the day or possibly the monthly average of daily rates may be used. When converted the general ledger Accounts Receivable

LIVERPOOL CONTROL

Item	Rate	£	$	Item	Rate	£	$
Balance, end last period		150,000	712,125.00	Remittances	Sec. J(1)	70,000	332,785.00
Liverpool Profit and Loss (Sales)	4.762	150,000	714,300.00	Liverpool Profit and Loss (Opening Inventory)	4.7545	70,000	332,815.00
Liverpool Profit and Loss (Final Inventory)	4.7545	75,000	356,587.50	Liverpool Profit and Loss (Purchases)	4.762	120,000	571,440.00

LIVERPOOL PROFIT AND LOSS

Opening Inventory	$ 332,815.00	Sales	$ 714,300.00
Purchases	571,440.00	Closing Inventory	356,587.50
Expenses	47,620.00		
Profit and Loss, General	119,012.50		
	$1,070,887.50		$1,070,887.50

FORM 30. Foreign Branch Profit and Loss Account

and Sales accounts are debited and credited, respectively, for sales, and credited and debited, respectively, for returns and allowances. Total of discount column of cash receipts journal, after being converted at the average rate, should be charged to Sales Discount account and credited to Accounts Receivable controlling account.

For cash received conversion is at actual rate at which foreign draft is converted when sold to a banker. This necessitates an adjustment of the Accounts Receivable control to bring it into agreement with the foreign customers ledger when latter is converted at the average rate. In general, cash books provide two additional columns: **"profit on exchange"** and **"loss on exchange,"** respectively. When a foreign draft is received it is entered in foreign cash receipts book and posted therefrom to customer's credit. When draft is sold it is entered in accounts receivable column at fixed average rate of conversion and difference between this figure and amount actually received from bank for sale of draft is entered in profit on exchange column or in loss on exchange column, as case may be.

Voucher Systems

EVOLUTION OF PURCHASE JOURNAL.—Originally the **purchase journal** was a scrap book in which invoices were posted. It contained an extension column for amounts of invoices. This column totaled gave purchases for periods under consideration, and, where necessary, two or more columns gave the desired analysis of purchases. The modern purchase journal is either bound or loose-leaf. Analysis of purchases is secured by introducing the necessary columns. Name of creditor, amount of invoice, and number of invoice appear. When purchase invoices are received **duplicate purchase orders** may be corrected to correspond and then be used as basis for purchase journal entry. A step in the development of the purchase journal has been the entering therein of such expense items as salaries, supplies, etc., as purchases, the entry being made at time of securing the service, not when paid for. By using a formal document as basis for the entry, what is known as the **voucher record system** has been developed and the purchase journal has become the **voucher register.**

If business engaged in is manufacturing, the problem of purchasing is more complicated than in case of one buying merchandise merely to sell it again in the same form. A larger variety of purchases must be made and a rather complicated group of expenses must be accounted for. The introduction of a sufficient number of columns enables the desired analysis to be secured.

An essential feature of the voucher register is the manner in which accounts with creditors are handled. Instead of being posted to an accounts payable subordinate ledger, the voucher register itself serves the purpose of the subordinate ledger. In many concerns the creditors' list is undergoing constant change, old names being dropped and new ones being added. If an accounts payable ledger is kept it is necessary to be making changes therein constantly. By eliminating the necessity of posting to an accounts payable ledger much detailed work is avoided.

THE VOUCHER.—In a broad sense a voucher is some sort of receipt or evidence. In a narrower sense it is a formal document containing an itemized statement of goods or services and a space for receipting by the vendor when he receives payment therefor. The essential feature of the voucher as thus understood is that it provides for receipting for specific items or services. In addition to providing for a statement of bill being paid and proper space for acknowledgment of receipt by payee, provision is also usually made for certification as to correctness of details by an official of the company issuing the

voucher and for a distribution of items according to the classification of accounts of issuing company. Such a voucher is shown in Forms 31a, 31b. Face of form provides for detailed statement of bill, approval by proper authorities, and

space for receipt by payee. On reverse side is space for distribution to accounts to be charged. This entry may be made by bookkeeper either from the original or from a duplicate office copy thereof.

THE VOUCHER CHECK.—A chief objection to the above voucher is that payee frequently fails to receipt and return it, thus leaving files of payor incomplete. To remedy this defect the **voucher check** has been contrived. It is a combination of voucher and check. Indorsement of check serves as receipt of

bill and, being attached to check, it inevitably is returned to party issuing same. Legality of signature of payee serving both as indorsement and receipt has been established. Voucher checks are both folded and single in form. Folded voucher check is shown in Form 32. Single voucher check is shown in Form 33

Single form is appropriate where detailed statement of invoices is not required. It is frequently used for dividend payments.

VOUCHER REGISTER FORM.—The essential data on the voucher is shown properly entered and distributed in the voucher register. It is essentially a purchases journal but with expanded functions so that it also takes the place of the accounts payable ledger. In its essential form it provides space for date, name of creditor, voucher number, amount and distribution of payment, and mode of payment. A form of voucher register is shown in Form 34. A slightly modified form of the voucher register is shown in Form 35.

ROUTINE PROCEDURE.—After an invoice has been checked up and approved, a voucher is made out for it, the distribution made thereon, and entry made in voucher register. Vouchers are numbered consecutively and are entered in same sequence in voucher register, amount thereof in vouchers payable column and distribution in analytical columns. The sundries column is intended to receive items which do not occur with sufficient frequency to make special columns therefor desirable. The final column is intended to show unpaid vouchers at end of period, and total of these should agree with vouchers payable control in general ledger. In practice the number of columns is sometimes much greater than that shown in forms here given. By use of short-margin insert sheets as many columns as desirable may be introduced, subject only to physical limitations.

At end of each accounting peroid voucher register columns are totaled and

posted. This posting represents a complete double entry, but it is not now customary to make a general journal entry of it. It can best be posted direct

Form 35b. Voucher Register (right-hand page)

to be posted should be made by comparing totals of distributive columns with total of vouchers payable column. In posting, the distributive column totals are debits, while the totals of the vouchers payable column and discount on purchases columns are credits. Under voucher register system it is unnecessary to enter checks in detail in cash book because all are charges to vouchers payable; yet it is usually the practice to do so. Checks are sometimes given a new series of numbers when issued to pay vouchers. These are known as **treasurer's numbers** and the checks are entered in their sequence. These are used because vouchers are not necessarily paid in order of their numbers. Check should be made out for net amount of voucher if there is a deductible cash discount. An unpaid vouchers tickler is used for filing vouchers which are to be paid at a later date, arrangement being such that they come up automatically for payment on proper date. Original invoice should be filed temporarily in a file arranged alphabetically. When voucher is paid it should be filed permanently with it.

An **alphabetic index of creditors** is frequently desirable to permit reference to all transactions with any given creditor. This is usually in form of a card index, one card being assigned to each creditor. Thereon is noted a list of all vouchers representing transactions with a given creditor. To a certain extent this index fulfils the function of a customers ledger by making it possible to collect data on all transactions with any given party.

When voucher system is to be introduced where a creditors ledger is in operation, open accounts in creditors ledger are closed and transferred to voucher register. Either of two ways may be followed: (1) Balance creditors ledger accounts, indicating transfer to voucher register in explanation column. In voucher register each item of an account payable should be vouchered separately, because different credit and discount terms frequently apply. Distribute amounts to sundry column and charge to Vouchers Payable control account. Total all columns and rule off. Totals may or may not be posted, as they represent equal debits and credits to the vouchers payable controlling account. (2) Leave register open and include credit to Vouchers Payable account with total of vouchers payable at end of current period. A corresponding charge must then be made of amounts carried to sundry column, as explained above.

RETURNS AND ALLOWANCES.—If adjustment can be made before voucher is made out, voucher is for net amount, so that no change is necessary. No account is required for returns and allowances. But when this cannot be done, make entry of allowances in small red ink figures just under voucher affected, indicating voucher number in red. Give amount of allowance in both vouchers payable columns and in columns in which distribution is made. When summarizing the columns at end of month deduct red ink amounts from totals of black ink figures and bring down net amounts as totals.

An **alternative procedure** is to cancel the original voucher and issue a new one in its place. Distribution is made in voucher register to sundry column, charging Vouchers Payable, Purchases having been charged from original voucher. In journal form the transaction is as follows:

Vouchers Payable..............................	$197.20	
Vouchers Payable........................		$175.20
Returns and Allowances......................		22.00
To cancel voucher No. 75 and to authorize in its place voucher No. 89, difference being on account of returned goods.		

Partial payments should be avoided if possible. If necessary, however,

cancel original voucher and in its place issue two new ones, one for amount to be paid, other for balance. On voucher register make cross-reference between old voucher and ones issued in its place in "how paid" column.

Notes payable given in payment of an invoice cancels the voucher payable. Entry is made in general journal or notes payable journal. If voucher checks are used, cancel check on original voucher. Alternative plan is to issue note directly at time of purchase, if feasible, charging Purchases and crediting Notes Payable. When note falls due, make out voucher therefor charging notes payable in the distribution and handle voucher in usual way.

Cash discounts are cared for by providing a purchase discount column in the voucher register, or in cash book, or in both. If all cash discounts are taken, the voucher may be made up for net amount; but this should not be done unless there is certainty that the discount can be made. If voucher is net, enter discount in discount column and carry gross amounts to distribution columns. Sum of totals of voucher payable and discount on purchases columns should equal sum of totals of distribution columns. When this procedure is followed discount column may be dispensed with in cash book or be regarded as a memo column. Since purchase discount is not earned until voucher is paid, at close of fiscal period it is necessary to make an adjustment for discount entered on vouchers not yet paid. If a discount column is kept also in cash book, the amount of this item is the difference between voucher register discount column total and cash book discount column total. Adjustment may be made by charging Purchase Discount account and crediting a Deferred Purchase Discount account. At opening of next period reverse this entry.

An **alternative method** of handling purchase discounts is to make out voucher in gross and post earned discounts from the cash book discount column. Discount column may be omitted in voucher register or used merely as a memo column.

Reserves and Funds

THEORY OF RESERVES.—The development of the theory of reserves has not been wholly satisfactory and uniformity in their uses does not exist. Reserves are used to offset reduction in value of assets, as in case of reserves for depreciation. They are used to provide for future contingencies which may never happen. They are used to represent liabilities the exact amount of which cannot be determined until some future date, as in case of reserves for taxes. Finally they may represent dispositions of surplus for purposes other than dividends. The possible uses of reserves are, therefore, to show:

1. Valuation of assets.
2. Contingent liabilities.
3. Actual liabilities not definitely ascertained as to amount.
4. Surplus.

Since the use of reserves for these various purposes has become established custom it is necessary to secure as logical an outline as possible. The following is given by Professor H. A. Finney:[4]

I. **Profit and loss reserves,** set up by debits to profit and loss, because some expense, properly chargeable to current operations, has resulted in
   (a) A decrease in the value of an asset; or
   (b) The creation of a liability.

[4] *Journal of Accountancy*, Oct. 1922, p. 251.

II. **Surplus reserves,** representing
   (a) Conservative provisions for possible future losses not already incurred; and
   (b) Appropriations of surplus, earmarked as unavailable for dividends because of
      (1) Contracts with bondholders, other creditors, or preferred stockholders, in relation to sinking funds.
      (2) Action by stockholders or directors intended to limit the payment of dividends for various financial reasons.

III. Reserves for **unrealized profits.**

Reserves of Class I are set up because losses or expenses have occurred in the nature of depreciation of assets or the accrual of taxes, thus decreasing net profit. Reserves of Class II represent subdivisions of surplus or accumulated net profits. Reserves of Class III represent unrealized profits not yet properly allocable to surplus. Profit and loss reserves are set up by charges to normal accounts which in turn are closed into surplus. Surplus reserves are always charged to surplus and thus do not affect profit and loss.

Where the decrease in the asset value is exactly measurable reserves should not be employed, but the credit indicating reduction in value should be carried direct to the asset account reduced. An illustration is a leasehold which decreases in value by a fixed definite amount each year. An illustration of proper use of reserves to show liabilities is in case of taxes, amount of which at end of fiscal period is necessarily an estimate. A reserve for accrued wages should not be used because amount of the accrual is definitely ascertainable. Finney suggests the following limitation: "If the loss is contingent and problematical it may be provided for out of surplus, but the provision should not be called a reserve. If the loss is certain in amount it should be recorded otherwise than by a reserve." Also, "Exactly measurable deductions from assets would be recorded by writing down the assets; exactly measurable liabilities for expenses would be recorded in liability accounts. Contingent deductions from assets and contingent liabilities on account of expenses or losses which may or may not occur in the future would be provided for as conservative appropriations of surplus."

Surplus reserves are either contractual or optional. An illustration of former is seen in provision of a trust indenture of bonds providing that surplus be set aside in providing a fund for ultimate redemption of bonds. Same provision sometimes applies to preferred stock. An illustration of latter is found in reservations of surplus for making additions and betterments. Such reserves should be returned to surplus when the liability for liquidation of which they were established has been paid.

Unrealized profit reserves result from writing up of fixed assets due to the increase in their market value. Such increase should not be carried to capital surplus until profit is realized through conversion.

ACCOUNTING PROCEDURE FOR RESERVES.—When the theory is clear the accounting procedure is not usually complicated. In case of profit and loss reserves the charge at end of fiscal period affected is to some nominal account and the credit to a reserve account which receives a designation which indicates its nature. In case of depreciation reserves the charge is to a depreciation expense account and a credit to "Reserve for Depreciation." See section on "Depreciation." In case of bad and doubtful debts, the charge is to a nominal bad debts account and a credit to "Reserve for Bad and Doubtful Debts." In case of surplus reserves the charge is to Surplus and the credit

to an appropriately named reserve account. Thus if surplus is to be reserved for the liquidation of bonded indebtedness, surplus is charged and "Reserve for Bond Redemption" is credited, amount applicable to current period having been ascertained by proper mathematical calculations. See section on "Mathematics." In case of reserves for unrealized profit charge asset whose valuation is increased by appraisal and credit "Unrealized Profits Reserves."

Illustration of Profit and Loss Reserves.—See pp. 1448 above, for illustrations of depreciation and bad debt reserves.

Illustration of Surplus Reserves.—The deed of trust of a bond issue provides that there shall be set aside out of surplus $10,000 at the close of each year to provide for the payment of the bonds at maturity. The entry is:

Surplus	$10,000	
Reserve for Bond Redemption		$10,000

Merely establishing a reserve for redemption of a bond issue does not guarantee that cash will be on hand to make the payments when date of maturity arrives. To do this it may be desirable to establish a **sinking fund.** (See treatment of funds below, pp. 1496-1499.) Other forms of surplus reserve are established in accordance with the same procedure as the above.

Illustration of Unrealized Profit Reserve.—Land owned by an enterprise cost $100,000 but an appraisal made by experts indicates that its present market value is $150,000. The $50,000 is in the nature of an unrealized profit. Were it realized by sale it could be carried to surplus; but since it is not realized, if it is to be reflected on books of account, it must be credited to an unrealized profits reserve, thus:

Land	$50,000	
Reserve for Unrealized Profits		$50,000

If this profit is realized later through sale, the reserve for unrealized profits is then closed into capital surplus.

THEORY OF FUNDS.—Funds may or may not be related to corresponding reserves. Profit and loss reserves serve to preserve capital by retaining sufficient gross income to cover loss resulting from diminishing value of some asset. Surplus reserves serve to retain a portion of surplus in the business, preventing its withdrawal for dividend payments. Neither of these reserves provides for the retention of a fund in form of cash or securities which may be said to represent the income or surplus thus reserved. The wealth which represents this reserved income or surplus is not intact in the form of any one asset but may be regarded as being scattered among all the assets, thus resulting in a greater total of assets than would exist had the reservation not been made. The purpose of a **fund** is to segregate the wealth thus reserved in the form of a special asset account which may be in the form of cash or securities, or possibly in some other form of wealth. Funds are assets and are established by transferring cash to a special account and holding it in that form or using it to purchase securities which are placed in the fund. Funds may be established for a great variety of purposes, as, **sinking funds** for the liquidation of bond indebtedness, **old-age pension funds** to provide pensions for superannuated employees, **improvement and betterment funds** for constructing additional facilities, etc.

ACCOUNTING PROCEDURE FOR FUNDS.—The chief problem in accounting for funds is to ascertain the amount of cash to put aside at a given time in order that, with past and future contributions to the fund, an amount of money will be provided sufficient to accomplish the purpose for which the fund is established. If it is desired to have on hand a definite amount of cash at a

given future date, the amount to be placed aside at the beginning or end of each fiscal period will depend upon the length of time over which the fund is to be accumulated, whether or not interest earned by the fund is to be added to it, and, if so, what rate can be earned and how often it can be compounded. For mathematical principles governing accumulation of funds see section on "Mathematics." When cash is paid into the fund the entry is:

Fund	$......	
Cash		$......

If interest earned by fund is added to it, naturally the contributions are smaller than if interest earned is turned back into the general fund.

Bond Redemption Fund and Reserve Illustrated.—Bonds must be redeemed out of capital or out of profits. Assume that the Johnson Manufacturing Co. sells an issue of bonds at par $1,000,000, receipts therefrom being used to construct new plant. It is necessary to determine as a matter of policy, whether these bonds are to be redeemed out of capital or out of profits. If out of profits net worth will be increased $1,000,000; if out of capital net worth will not be altered, so far as it is affected by the issue of bonds. Balance sheet, after sale of bonds and investment of proceeds, is:

Fixed Assets	$4,000,000	Capital Stock	$3,000,000
Accounts Receivable	200,000	Mortgage Bonds	1,000,000
Cash	110,000	Accounts Payable	310,000
	$4,310,000		$4,310,000

Assume that bonds run ten years and that interest is to be disregarded. Each year $100,000 must be placed in a sinking fund. If this is reserved out of profits, then balance sheet at end of ten years, but before redemption of bonds, stands thus:

Fixed Assets	$4,000,000	Capital Stock	$3,000,000
Accounts Receivable	200,000	Mortgage Bonds	1,000,000
Cash	1,110,000	Accounts Payable	310,000
		Surplus Reserved to Redeem Bonds	1,000,000
	$5,310,000		$5,310,000

When bonds are paid, entry is:

Mortgage Bonds	$1,000,000	
Cash		$1,000,000

after which balance sheet appears as follows:

Fixed Assets	$4,000,000	Capital Stock	$3,000,000
Accounts Receivable	200,000	Accounts Payable	310,000
Cash	110,000	Surplus Reserved to Redeem Bonds	1,000,000
	$4,310,000		$4,310,000

Whereas liabilities have not increased, assets have increased $1,000,000, because bonds have been redeemed out of profits. Had no profits been reserved

and had sufficient fixed assets been converted to redeem bonds (assuming this could be done without loss), balance sheet would be as follows:

Fixed Assets	$3,110,000	Capital Stock	$3,000,000
Accounts Receivable	200,000	Accounts Payable	310,000
	$3,310,000		$3,310,000

This plan leaves the company in the same position as at the beginning.

In the above illustration assumption is made that depreciation is not mentioned. In order to preserve capital as indicated, however, a systematic procedure for handling depreciation is necessary. If depreciation is neglected and bonds are redeemed out of capital the result will be disastrous, because the investment will be diminished.

In the foregoing illustration no actual reservation of cash in form of a sinking fund is made. Whether or not such reservation is desirable is entirely aside from the question whether bonds should be redeemed out of capital or profits. The sinking fund is intended to serve as a guaranty that cash will be forthcoming to pay off a bond issue when due. Usual procedure is for company to pay over to a trustee of the sinking fund periodic instalments which are invested, principal and income thereon to be employed in redemption of bonds. Methods of redemption vary, but here it is assumed tnat whole issue is redeemed at maturity. Ignoring interest, to accumulate a fund of $1,000,000 in 10 years requires ten annual instalments of $100,000 each. When each instalment is paid to trustee, following entry is made:

Sinking Fund Trustee	$100,000	
Cash		$100,000

At end of 10 years balance sheet is as follows:

Fixed Assets	$4,000,000	Capital Stock	$3,000,000
Accounts Receivable	200,000	Mortgage Bonds	1,000,000
Sinking Fund	1,000,000	Accounts Payable	310,000
Cash	110,000	Surplus	1,000,000
	$5,310,000		$5,310,000

Following entry is made when bonds are redeemed:

Mortgage Bonds	$1,000,000	
Sinking Fund		$1,000,000

If a surplus for redemption of bonds had been set up, as in illustration of reserves above, this would now be transferred back to surplus.

Interest on Sinking Fund.—Interest earned by sinking fund may be added to sinking fund or turned back into general funds. If added to sinking fund following entry is required monthly:

Accrued Income on Sinking Fund	$.......	
Sinking Fund Income		$.......
To record interest accrued on sinking fund investment during month.		

When cash is received by trustee in payment of accrued interest, following entry is in order:

Sinking Fund Trustee........................	$.......	
Accrued Income on Sinking Fund..........		$.......
To charge trustee for cash received by him on sinking fund investments.		

If sinking fund trustee turns this cash over to the company, following entry is necessary:

Cash..	$.......	
Sinking Fund Trustee....................		$.......
For cash received by trustee as interest on sinking fund investments, same now being paid over to company.		

RESERVE AND FUNDS IN BALANCE SHEET.—Funds are assets accounts and should appear on the asset side of the balance sheet. Reserves should appear on the liability side of the balance sheet if they are surplus reserves or reserves representing liabilities not definitely ascertained. If they are valuation reserves and therefore complementary to some definite asset account, it is preferable to show them as deductions from the asset in the balance; although some balance sheets show them on the liability side. Form 36 shows the balance sheet of U. S. Steel Corporation which illustrates current practice relative to funds and reserves.

Accruals and Deferred Charges

NATURE OF ACCRUALS AND DEFERRED CHARGES.—Certain kinds of expenses are incurred each day but payment therefor can be made only at certain, sometimes distant, intervals. Other kinds of expenses are paid for in advance of the day to which they are incident. The former are **accruals**; the latter **deferred charges.**

INTEREST.—Interest on money borrowed is an accruing expense representing an accumulating liability incurred for the use of borrowed money. It may be temporary, as in case of bank loans, or a permanent fixed charge as in case of long-term or perpetual bonded obligations. Interest is figured on a percentage per annum basis on amount borrowed, rate normally ranging from 3% to 7%, depending on safety of principal, market conditions, etc. Ordinarily interest is paid at regular intervals determined when loan is made. On mortgage indebtedness interest payments are usually made semiannually, at end of 6-month intervals. In case of loans at banks, one month with privilege of renewal is customary. In such cases interest is paid monthly. Only in exceptional instances are interest periods and accounting periods co-terminous. If all nominal accounts are closed monthly into profit and loss while interest payments are made semiannually and no adjustment is made for accruals at end of each month, each sixth month will bear the interest charge really applicable to six months.

Illustration.—On July 1 a merchant borrows $5,000 for 5 years, interest at 6%, payable semiannually, Dec. 31 and June 30. Interest amounts to $300 yearly, and each semiannual instalment to $150. If he makes no entry in his books until end of first 6-month period, when in cash book he credits Cash and charges Interest for $150, the December Profit and Loss account is charged with interest cost for 6 months. This should be prorated over the 6-month period so that each monthly Profit and Loss account is charged with one months'

Sinking and Reserve Fund Assets:			
Cash resources held by Trustees account of Bond Sinking Funds		$ 1,407,009.93	
(In addition Trustees hold $146,730,000 of redeemed bonds, which are not treated as an asset.)			
Contingent Fund and Miscellaneous Assets		16,189,211.57	
Insurance and Depreciation Fund Assets and purchased bonds available for future bond sinking fund requirements, viz.:			
Securities	$53,825,106.66		
Cash	2,469,615.71		
	$56,294,722.37		
Less—Amount of foregoing represented by obligations of Subsidiary Companies issued for capital expenditures made	22,288,475.00	34,006,247.37	51,602,468.87
Current Assets:			
Inventories, less credit for Reserve and for amount of inventory values representing Profits earned by subsidiary companies on Intercompany sales of products on hand in Inventories December 31, 1921. (See note opposite)		$241,504,369.79	
Accounts Receivable		63,643,028.45	
Bills Receivable		7,586,968.30	
Agents' Balances		1,452,966.99	
Sundry Marketable Securities (including U. S. Liberty Loan Bonds)		131,462,690.73	
Time and other special Bank Deposits		6,924,462.89	
Cash (in hand and on deposit with Banks, Bankers and Trust Companies, subject to cheque)		116,856,842.99	569,431,330.14
			$2,339,105,310.47

We have audited the above Balance Sheet, and certify that in our opinion it is properly drawn up so as to show the financial position of the United States Steel Corporation and Subsidiary Companies on December 31, 1921.

Price, Waterhouse & Co.,
Auditors.

New York, March 10, 1922.

Form 36. Consolidated General Balance

Balance Sheet

31, 1921

LIABILITIES

CAPITAL STOCK OF UNITED STATES STEEL CORPORATION:		
Common	$508,302,500.00	
Preferred	360,281,100.00	$ 868,583,600.00
CAPITAL STOCK OF SUBSIDIARY COMPANIES NOT HELD BY UNITED STATES STEEL CORPORATION (*Par Value*)		405,642.50
BONDED AND DEBENTURE DEBT OUTSTANDING:		
U. S. Steel Corporation 50 Year 5% Bonds	$217,806,000.00	
U. S. Steel Corporation 10-60 Year 5% Bonds	172,239,000.00	
	$390,045,000.00	
Subsidiary Companies' Bonds, guaranteed by U. S. Steel Corporation	92,567,000.00	
Subsidiary Companies' Bonds, not guaranteed by U. S. Steel Corporation	58,094,561.24	540,706,561.24
CAPITAL OBLIGATIONS OF SUBSIDIARY COMPANIES AUTHORIZED OR CREATED FOR CAPITAL EXPENDITURES MADE (HELD IN TREASURY SUBJECT TO SALE, BUT NOT INCLUDED IN ASSETS OR LIABILITIES)	$ 27,072,000.00	....
SUBSIDIARY COMPANIES' NON-INTEREST BEARING NOTES—Maturing over a period of 36 years, substituted for previously existing mining royalty obligations—Guaranteed by U. S. Steel Corporation (See Contra)		31,234,352.24
MORTGAGES AND PURCHASE MONEY OBLIGATIONS OF SUBSIDIARY COS.:		
Mortgages	$ 158,206.50	
Purchase Money Obligations issued in acquirement of Fixed Property	10,000.00	168,206.50
CURRENT LIABILITIES:		
Current Accounts Payable and Pay-Rolls	$ 39,694,093.59	
Accrued Taxes, not yet due, including Tax Reserves	24,446,945.16	
Accrued Interest, Unpresented Coupons and Unclaimed Dividends	7,448,816.47	
Preferred Stock Dividend No. 83, payable Feb. 27, 1922	6,304,919.25	
Common Stock Dividend No. 70, payable Mar. 30, 1922	6,353,781.25	84,248,555.72
Total Capital and Current Liabilities		$1,525,346,918.20
SUNDRY RESERVES:		
Contingent, Miscellaneous Operating and Other Reserves	$137,352,240.12	
Insurance Reserves	26,580,280.46	163,932,520.58
APPROPRIATED SURPLUS TO COVER CAPITAL EXPENDITURES:		
Invested in Property Account—Additions and Construction		140,898,914.10
UNDIVIDED SURPLUS OF UNITED STATES STEEL CORPORATION AND SUBSIDIARY COMPANIES:		
Capital Surplus provided in organization	$ 25,000,000.00	
Balance of Surplus accumulated by all companies from Apr. 1, 1901, to Dec. 31, 1921	483,926,957.59	
Total Surplus, exclusive of Profits earned by Subsidiary Companies on Intercompany sales of products on hand in Inventories Dec. 31, 1921 (see note below)		508,926,957.59
NOTE.—That part of the Surplus of Subsidiary Companies representing Profits accrued on sales of materials and products to other subsidiary companies and on hand in latters' Inventories is, in this Balance Sheet, deducted from the amount of Inventories included under Current Assets.		
		$2,339,105,310.47

Sheet—U. S. Steel Corporation

interest. To accomplish this an entry should be made at end of each month, before closing, as follows:

Interest	$25	
Interest Accrued		$25

This charges the nominal Interest account with month's due proportion of interest expense and shows the accruing liability in the Interest Accrued account. The latter account, being real, is not closed until interest is actually paid at end of 6-month period, when following entry is made:

Interest Accrued	$150	
Cash		$150

unless the 6th month's interest is not credited to Interest Accrued account, in which case entry is:

Interest	$ 25	
Interest Accrued	125	
Cash		$150

If last month's interest is credited to Interest Accrued, appearance of Interest Accrued account after cash payment of $150 is made, entered, and posted is:

Interest Accrued

Dec. 31	Cash	$150	July 31	Interest	$ 25
			Aug. 31	"	25
			Sept. 30	"	25
			Oct. 31	"	25
			Nov. 30	"	25
			Dec. 31	"	25
		$150			$150

WAGES AND SALARIES.—These may require same treatment as interest payable. Usually salaries are paid monthly and when paid in cash are a charge to a Salaries Expense account. It is only when time of payment does not correspond with time of closing books that the principle of accruals applies. **Wages** are ordinarily paid weekly or biweekly. Since last day of month does not ordinarily correspond with the week-end an overlapping occurs. There must be a correct proration of wages to the two fiscal periods affected.

Illustration.—A merchant pays wages biweekly. Pay-day falls on June 7. May profit and loss should be charged for accruals of wages during last week in May. If one week's wages amounts to $120, adjusting entry required on May 31 is:

Wages Expense	$120	
Wages Accrued		$120

Profit and Loss is charged for wages expense at time of closing and Wages Accrued is a balance sheet account representing a liability. When wages are paid June 7, following entry is made:

Wages	$120	
Wages Accrued	120	
Cash		$240

DEFERRED CHARGES.—Some expenses are paid in advance of time to which they are incident. An illustration is developmental expenses incurred by a new concern in form of advertising and developmental work of various kinds benefits of which last for a period of years. Cost of ore-stripping in mines is an illustration. When money is expended in such work the charge is to a **Deferred Asset** or **Deferred Charges** account. At end of each fiscal period a due proportion thereof is charged to Profit and Loss.

Illustration.—A mining enterprise invests $500,000 in a mine. Investment is distributed as follows: land $300,000, plant $150,000. Balance sheet now stands thus:

Land	$300,000	Capital Stock	$500,000
Plant	150,000		
Cash	50,000		
	$500,000		$500,000

An amount of $40,000 is now spent for stripping ore beds of overlying strata, and it is estimated that sufficient is thus uncovered to last 5 years. Balance sheet now stands thus:

Land	$300,000	Capital Stock	$500,000
Plant	150,000		
Cash	10,000		
Deferred Charges	40,000		
	$500,000		$500,000

One-fifth of cost of ore-stripping, or $8,000, is applicable to profit and loss each year. If books are closed monthly, 1/12 of $8,000, or $666.67, is amount to be charged off.

The Working Sheet

PURPOSE OF WORKING SHEET.—The purpose of the **working sheet** is to insure accuracy of the periodic work of closing books preliminary to the actual work of closing. The summarization is made outside instead of in the books. The actual procedure consists in separating the trial balance into two groups of items—those to be entered in the profit and loss statement and those to be entered in the balance sheet, such adjustments being made as are necessary to make proper separation of all nominal and real items and show effect of all accruals, etc. Ordinary analysis paper may be used for the working sheet. Its columns should be headed as shown in Form 37. The working sheet forms no part of the double-entry books but is set up simply as a process of summarization and adjustment preliminary to formal closing of the books. On pp. 1450 and 1451 are shown a trial balance, and **adjustment data** necessary to the determination of profit and loss and setting up of a balance sheet. On p. 1506 is shown list of **adjusting entries** in journal form. These adjusting entries are not actually entered in the journal. **Working sheet** is shown in Form 36.

(q) Sub-Rentals Income (Deferred)	(55)		$ 50.00

Remarks on Data.—To set up adjusting entries it is necessary to add certain new accounts on working sheet. On working sheet these are appended at end of the regular trial balance. The first is bad debts, which is followed by others. Certain adjusting entries are not set up in the adjustment columns in same way in which the same items are entered on the ledger, but rather are in accord with use to be made of the particular items in drawing up the periodic statements. Purpose of the columns is not to make the adjustments and summarization in a formal way as is done in the books, but to gather together all adjusting data so that a correct separation of balance sheet and profit and loss items can be made for use in the formal summary entries and in the statements. Thus instead of transferring initial inventory to Purchases account, it remains

under its own title, because it will be needed as a separate item in drawing up the cost-of-goods-sold section of the profit and loss statement. Also, the final inventory is not deducted from purchases, but is set up, debit and credit, in the adjustment columns, opposite the title "merchandise inventory—final," which is inserted immediately following "merchandise inventory—initial." At time of summarizing, the debit item goes into the balance sheet, while the credit item goes into Profit and Loss. This provides in profit and loss columns detailed information needed for the cost-of-goods-sold section of the statement, comprising initial inventory, purchases, in-freight, purchases returns and allowances, and final inventory.

Bad debts adjustment is entered in adjustment columns as a debit to Bad Debts and a credit to Reserve for Doubtful Accounts. Likewise the depreciation entry is shown as a debit to depreciation in detail, the credits going to the various depreciation reserve accounts.

Adjustments covering deferred charges are shown as debits to Deferred Charges to operation classification in detail, offsetting credits being to the various expense accounts as shown in trial balance. These credits in the adjustment column, when combined with corresponding debits in trial balance column, indicate net amount of charge to Profit and Loss. Other classes of adjustment entries follow same procedure.

After all adjustments are made, a complete distribution of items in trial balance and adjustment columns is made either to the profit and loss or the balance sheet columns. The difference between the profit and loss columns thus shows net profit or loss for the period and must be transferred to balance sheet as a vested proprietorship item. Instead of being shown as a definite addition to proprietor's capital, the transfer is indicated as the final item on the work sheet, being a debit in the profit and loss column to balance them, and a credit in the balance sheet columns. This difference, \$14,747.12, is net profit of the period, and when added to credit side of balance sheet column should give a total equal to total of the debit balance sheet column. This transfer of net profits effects a proof of the accuracy of the work.

When this proof is secured the formal profit and loss statement should be drawn up, all material for which is found in the profit and loss columns of the working sheet, where it is arranged in almost the exact order needed for the formal statement. Information for the balance sheet is found in the balance sheet columns, all detail being properly grouped but a rearrangement of the order of some items being necessary. Thus while details of deferred charges to operation are gathered together in one place in the work sheet, in the formal balance sheet this group of items must appear immediately after the current asset section. Profit and loss statement and balance sheet are shown in Forms 19–22 (pp. 1454–1457).

The adjustment columns of the work sheet are the source of data for making the formal adjusting entries made in the journal. These adjusting entries are shown on p. 1451.

These closing entries follow immediately the last current entry of the month in the journal. After these are posted, the ledger reflects the true status of affairs as at date of entries. The next process is to summarize this information. The nominal items are transferred to the Profit and Loss account where they are summarized. The net balance of this account is in turn carried to the vested proprietorship accounts. These closing entries are shown on p. 1452.

The Profit and Loss account, when closed by transfer of net profit to Personal account, is shown in Form 17 (p. 1446).

SECTION 32

GLOSSARY

The definitions which follow are not intended to take the place of a dictionary, but rather to serve as a convenient explanation of the terms most frequently used by accountants, Although, under the present status of accounting terminology, it is not possible to secure definitions which in all instances are beyond criticism, those here presented are based on the best available authorities and have been carefully examined by reviewers. The index to the Handbook should be consulted to locate additional definitions and discussions contained in the the text of other sections.

Abatement.—A deduction or allowance, as, a discount given for prompt payment. **In case of contracts** the deduction is granted by the creditor. **In taxation,** abatement refers to lessening of taxes assessed or recovery of taxes illegally paid.

Abeyance.—State of suspense, as, an estate to which no one is at present entitled, or an account held in suspense for future adjustment or settlement.

Abscond.—To remove oneself clandestinely in order to avoid court processes.

Abstract of Title.—A summary of all deeds, wills, and legal proceedings, giving the names of the parties, the description of the land, and the agreement.

Acceptance.—Defined in Federal Reserve Act as follows: "A draft or bill of exchange drawn to order, having a definite maturity, and payable in dollars, in the United States, the obligation to pay which has been accepted by an acknowledgment written or stamped and signed across the face of the instrument by the party on whom it is drawn; such agreement to be to the effect that the acceptor will pay at maturity according to the tenor of such draft or bill without qualifying conditions." See "Draft," "Bill."

Such instrument without qualifications is sometimes termed an **absolute acceptance.**

In reference to the act of accepting, the term "acceptance" is defined in §132 of the Uniform Negotiable Instruments Law as "the signification by the drawee of his assent to the order of the drawer. The acceptance must be in writing and signed by the drawee. It must not express that the drawee will perform his promise by any other means than the payment of money."

When the drawee merely writes the word "Accepted" on the face of the instrument, followed by date, signature, and place of payment, it is a **clean** or **general acceptance.**

When an instrument is accepted it is said to be honored. It thus becomes the obligation of the drawee.

If a **place of payment** is not named, the instrument is payable at the acceptor's place of business.

If the acceptor adds some qualification to the word "Accepted," the

instrument becomes a **qualified acceptance.** Such qualification relieves previous parties from liability unless made with their knowledge and approval. It should not, therefore, be allowed by the party presenting the draft for acceptance. §141 of the Uniform Negotiable Instruments Law states that an acceptance is **qualified** which is:

1. Conditional; that is to say, which makes payment by the acceptor dependent on the fulfilment of a condition therein stated.
2. Partial; that is to say, an acceptance to pay part only of the amount for which the bill is drawn.
3. Local; that is to say, an acceptance to pay only at a particular place.
4. Qualified as to time.
5. The acceptance of some one or more of the drawees, but not of all.

Dollar acceptance, as used in international trade, refers to an accepted bill of exchange drawn in American dollars.

Bank acceptance is defined by the Federal Reserve Board as "a bill of exchange of which the acceptor is a bank or trust company, or a firm, person, company, or corporation engaged in the business of granting bankers' acceptance credits."

Trade acceptance is a bill of exchange drawn by the seller directly on the purchaser of goods, and accepted by the purchaser.

An acceptance for honor of drawer or an endorser after a bill has been protested for non-acceptance by drawee is an **acceptance supra protest.**

When a party other than the drawee accepts a bill, which the drawee has failed to accept, to save the honor of the drawer, it is an **acceptance for honor.** Such acceptor must look to the drawer for reimbursement.

Accommodation.—Indorsement of another's note as a favor; also a loan of money as a favor. "As a favor" means without consideration. Corporations cannot sign for accommodation. The party signing for accommodation is not liable to the party accommodated, but is liable to any other holder for value. Accommodation is regarded as bad financial practice. More generally, any advance of funds.

Accord and Satisfaction.—An agreement whereby one party having right of action against another permits this latter party to do something in satisfaction of such right of action.

Account.—A detailed statement of items affecting property or claims, listed respectively as debits or credits, and showing excess of debits or credits in form of a balance. Sufficient explanatory matter should be given to set forth the complete history of the account. There need not necessarily be both debits and credits, nor more than one of either of these.

If debits or credits, or both, are made frequently, the account is **active.**

Items held in suspense awaiting future classification or allocation may be charged or credited to an **Adjustment account.**

When desirable to keep a separate accounting for specific shipments of goods, it is known as an **adventure account.** If more than one party is interested in such shipment it is a **joint venture account.**

Asset accounts record values owned. **Liability accounts** record values owed.

Book accounts are kept in books, and show in formal manner the details regarding transactions between parties. To be of legal effect the entries must be original, not transferred or posted.

Capital accounts show the amounts invested in an enterprise, either **net,**

as in case of the capital accounts of proprietors, partners, and stockholders shown on the liability side of balance sheets; or **gross,** as in case of the asset accounts which show both owned and borrowed capital invested.

Cash accounts set forth receipts and disbursements of cash, as well as balance on hand at beginning and end of period.

Clearing accounts are employed to collect items preliminary to their allocation to a more detailed classification of accounts, or preliminary to the determination of the accounts to which such items properly belong.

Contingent accounts are those which list liabilities or assets dependent for their validity upon some event which may or may not occur.

Contra accounts are those which offset each other.

Controlling accounts are those which summarize and afford an independent check upon detailed accounts of a given class which are usually kept in a subordinate ledger. The controlling accounts are kept in the general ledger. The balance of the controlling account equals the aggregate of the balances of the detailed accounts when all postings affecting these accounts are completed.

Current accounts are open or running accounts not balanced or stated.

Deficiency accounts supplement statements of affairs of an insolvent enterprise, showing what items comprise the deficiency of assets subject to lien for payment of unsecured creditors.

Depreciation accounts are expense accounts which are charged periodically with the amounts credited to the respective depreciation reserve accounts.

Depreciation reserve accounts are credited periodically with the amounts charged to contra depreciation expense accounts. Depreciation reserve accounts are **valuation accounts** because they supplement or evaluate the asset accounts for the ultimate replacement of which they are intended.

Discount accounts are accounts which are, (a) either charged with discounts allowed to customers as reward for prompt payment, or credited with discounts secured from creditors by meeting their conditions regarding prompt payment, or (b) accounts which are charged with amounts paid to have notes discounted, or (c) accounts in which are carried unamortized differences between par of bonds sold and the amounts realized at time of sale, such amounts realized being less than the par of the bonds.

Dividend accounts are credited with amounts declared payable as dividends by boards of directors. Entry should be made as of date of declaration. These accounts are charged for amounts disbursed in payment, the charge being made either at time checks are sent out and for the full amount of the dividend, or for the amounts of the individual checks as they are returned for payment.

Donation accounts are credit accounts contra to treasury stock accounts. They are credited at the time treasury stock accounts are charged for amounts of treasury stock donated. If treasury stocks donated are sold at a profit, amounts of profits thus made should be credited to these accounts; if sold at a loss, the amounts of losses should be charged to these accounts. Thereafter, donation accounts should be either closed into capital surplus or be permitted to stand as capital reserves. Donations from other sources than treasury stock may also be credited to donation accounts.

Drawing accounts, in partnership accounting, are charged and credited, respectively, with amounts currently withdrawn by partners to avoid frequent modifications in the partners' capital accounts. Also accounts

of salesmen or other employees to which cash advances made from time to time are charged and against which their commission accounts are later credited.

Economic accounts are those which record currently transactions affecting proprietorship. They are frequently termed **nominal accounts.**

Estate accounts, in executorship accounting, are credited with net worth of estates and profits made in their realization. They are also charged with liabilities of the estates and the various expenses and losses incurred in their realization.

Impersonal accounts record expenses and revenues, assets and liabilities, but do not make reference, in their titles, to persons.

Income accounts show sources and amounts of operating revenues, expenses incurred for operations, sources and amounts of non-operating revenues, fixed charges, net income, and disposition thereof.

Instalment accounts are used in corporation accounting to record instalments on capital stock sold as they fall due. As many instalment accounts are opened as there are instalments. As each instalment falls due, charge instalment account (appending proper number to the account) and credit subscriptions account. When the instalment is paid the account is closed.

Investment accounts record property owned but not used for operating purposes.

Liquidated accounts are those upon which the interested parties are agreed, either specifically, or as the result of lapse of time without objection on the part of the debtors.

Liquidation accounts are those credited with amounts realized on sale of assets and charged with debts paid and expenses, when enterprises are wound up.

Merchandise accounts are charged with costs of buying goods and credited with sales, thus exhibiting gross profit when opening and closing inventories are taken into consideration. It is now customary to subdivide this account into merchandise purchases, merchandise sales, returned purchases, and returned sales.

Merchandise purchases accounts record purchases of merchandise. Sometimes adjustments for returns are made in this account instead of in a returned purchases account.

Merchandise sales accounts record sales of merchandise. Sometimes adjustments for returns are made in this account instead of in a returned sales account.

Nominal accounts are those which, during the accounting period, record changes which affect proprietorship favorably or unfavorably. At the close of each period they are balanced and their net resultant effect shown in the net worth accounts. If their net balances are debits they represent expenses or losses, or decreases of net worth. If their net balances are credits they represent gains, or increases of net worth. It is customary to adopt a **classification** of nominal accounts adapted to the requirements of management.

Open accounts are those not balanced or closed.

Outlawed accounts are those not collectible because the time limit set by the statute of limitations has expired.

Personal accounts are those with individuals, usually customers and creditors.

Profit and loss accounts are set up at the close of accounting periods to

summate profits and losses of the period and show net results upon proprietorship.

Real accounts record assets and liabilities.

Realization and liquidation accounts are employed in winding up businesses or estates, to show disposition of assets and liquidation of liabilities.

Revenue accounts are equivalent to nominal accounts, showing income and expense.

Running accounts show, in chronological order, reciprocal transactions between two parties. Such accounts are operated only when the reciprocal transactions are numerous, and being the result of mutual agreement, may be terminated by either party by notification to the other party.

Sales accounts are rendered by agents to principals in explanation of consigned goods sold. For example, see index.

Sinking fund accounts record periodic instalments paid into sinking funds and interest accretions added thereto.

Surplus accounts record accretions to capital from profits. If the profits result from operations the surplus is **earned surplus.** If from sale of capital assets, from donations, from sale of stock at a premuim, or as the result of revaluation of appreciated assets, the surplus is **capital surplus.**

Stated accounts are those accepted as correct by the persons liable thereon.

Accounting.—The science of accounts, their construction, classification, and interpretation.

Accrue.—Accumulation of wealth or liabilities based on passage of time.

Accrued Expense.—A liability representing expense that has accrued but is not yet due and payable. It is in reality **postpaid expense** (and therefore the opposite of prepaid expense, which is an asset). What is accrued expense to the debtor is accrued income to the creditor.

Accrued Income.—Income that has accrued but not yet due. It is in reality postpaid income (and therefore the opposite of prepaid expense, which is a liability).

Accumulation.—In accounting for bond issues, the procedure by which bonds bought below par are gradually written up to par between date of purchase and date of maturity.

Act of God.—An inevitable occurrence, such as flood, tempests, death, etc.

Action.—In law, the process followed to recover property or secure justice.

Actuary.—One skilled in the application of the mathematical principles applicable to various forms of insurance.

Adjudication.—A court decision or judgment.

Administration.—In law, settlement of estates of intestates. More generally, management of business affairs.

Administrator.—One appointed by the probate court where a person dies intestate to take charge of the decedent's personal property.

Adventure, Joint.—An agreement to engage in a particular transaction in the form of a consignment or shipment of goods. The liability of those participating is limited to the transaction in question.

Agent.—One possessing authority to act for another to a more or less limited extent.

Del credere agents guarantee to their principals payment for goods sold when terms of credit granted by such agents expire.

General agents have implied authority to do all acts connected with the regular businesses of their principals.

Special agents may perform only such acts as are specifically indicated in the authority granted.

Alienate.—To transfer property.

Allocation.—Determination of the proper distribution of a given sum among a series of accounts.

Allonge.—A paper attached to a negotiable instrument to receive indorsements for which no space remains on the instrument itself.

Amortization.—Extinction of a debt by systematic application of instalments to a sinking fund; or reduction of premium or discount incurred on sale or purchase of bonds by application of the effective interest rate.

Amortization of leaseholds refers to the amounts charged to expense due to the expiration of leaseholds, the amounts charged at intervals depending on the life of the leaseholds.

Ancillary.—Referring to letters testamentary or of administration issued supplementary to those regularly granted in another jurisdiction; also to receiverships.

Annuity.—A sum of money payable periodically in instalments. The word means, literally, payable yearly, but the time intervening between payments may be any fixed period.

Deferred annuities are those the payments of which do not begin until some future time. This future time is frequently determined by a death, as where a widow receives an annuity from a life insurance company, the payments beginning upon the date of her husband's death.

Life annuities run for the life of one or more individuals.

Anticipation.—Paying an account before it falls due, for which a rebate additional to the regular cash discount is sometimes made.

Appreciation.—Increase in value of assets.

Arbitrage.—Taking advantage of differences in prices, in two or more markets, by purchasing commodities where they are cheap and selling where they are dear.

Arson.—The wilful and malicious burning of a building.

Asset.—Wealth owned. Assets may be classified in various ways. From the point of view of ease of liquidation they are fixed or quick in varying degrees.

Fixed assets are not readily convertible into cash and in the usual routine of business are not so converted.

Quick assets can ordinarily be readily converted into cash without involving heavy loss.

Assets which in normal course of business are converted into cash are termed **circulating.** Merchandise inventories are examples.

Assets the definite realization of which depends upon future events which may or may not occur, are said to be **contingent.**

Expenses incurred for benefit of future periods are sometimes capitalized as **deferred assets** or as **deferred charges to operation.** See "Prepaid Expense."

Assets which have no physical existence are **intangible.**

Assets having a physical texture are **tangible.**

Assets subject to depletion are termed **wasting.** Examples are mines and timber lands.

Working assets are those consumed in productive processes but which do not enter into the physical texture of the product.

Assign.—To transfer property and rights in action (chose in action).

Attestation.—The evidence by witness as to the execution of any instrument.

Attorney in Fact.—One who acts under sealed authority.

Audit.—Verification of the accuracy of books of account by means of an examination of supporting vouchers, making tests of postings and computations, and determining whether all entries are made in accordance with correct accounting principles, also that there are no omissions.

A **balance sheet audit** is one made only in sufficient detail to satisfy the auditor of the correctness of the income statement and the balance sheet.

A **complete audit** is one made of the accounts for a period which is closed before the audit is commenced. It is customary to submit a final report on the period covered.

A **complete detailed audit** involves the review of all transactions and entries and the checking of all postings, footings, and so on. Usually the work is abridged by using **tests** in place of a complete review of all details.

A **continuous audit** is one carried out by means of occasional visits during the period covered. A final report cannot be submitted until after the close of the period.

Average.—A contribution or adjustment made by merchants shipping goods by steamer, for goods that have been thrown overboard or lost. It is either general or particular. For statistical definition see section on "Statistics and Graphics."

Average Balance.—The average daily balance in a checking account. Computation is made monthly, the average for each customer being recorded in a card file.

Bailment.—A contract arising from the delivery of goods by one person to another for some specific purpose, the latter agreeing to return or to account for them.

Balance.—The excess of the sum of the items on one side of an account over the sum of the items on the other side. As between two persons it is the amount remaining due from one to the other after offsetting items are canceled.

Agents' balances are amounts due to or from representatives of various kinds, and consequently may be either assets or liabilities.

Balance of trade refers to excess of a country's imports over exports, or vice versa. The balance is **favorable** when exports exceed imports; **unfavorable** when imports exceed exports.

Cash balance is the excess of receipts over payments, taking into account cash on hand before transactions commence.

Reducing balance refers to a method of writing off depreciation whereby an equal percentage of the balance remaining is written off each year.

Balance Sheet.—A schedule of assets and liabilities so classified and arranged as to enable an intelligent study to be made of the important financial ratios existing between different classes of assets, between different classes of liabilities, and between assets and liabilities; also to enable one to observe the origin of the equity existing in the assets and to determine to whom it belongs.

Consolidated balance sheets are used to show the true status of corporations which, although legally distinct enterprises, are really united by common control through agency of intercompany ownership of stock.

Bankers' Acceptance.—A time draft drawn on a bank. The bank, in accordance with a previous arrangement, accepts it and returns it to the owner to be paid at maturity.

Bank Acceptance.—See "Acceptance."

Bankruptcy.—The act or process of becoming a bankrupt; also the status of one who, in accordance with bankruptcy law, has been judicially declared unable to pay his debts.

Bankrupts are **voluntary** and **involuntary,** the former being brought into the courts by their own voluntary action, the latter by action of creditors.

Barter.—A contract to exchange goods for goods instead of for money.

Batch.—A small group of deposit tickets and checks, or corresponding items, balanced as a unit.

Beneficiary.—One who has the profit, benefit, or advantage arising from a contract or an estate; also a *cestui que trust.*

Bequeath.—To make a gift of personal property by will.

Betterments.—Alteration of or additions to property which increase its earning power.

Bilateral Contract.—A contract where both the contracting parties are bound to fulfil obligations reciprocally towards each other.

Bill of Exchange.—A written order by one party to another directing him to pay a fixed sum of money at a specified time. A bill, to be negotiable under the Uniform Negotiable Instruments Law, must:

1. Be in writing and signed by maker or drawer.
2. Contain an unconditional promise or order to pay a sum certain in money.
3. Be payable on demand, or at a fixed or determinable future time.
4. Be payable to order or to bearer.
5. Have drawee's name indicated therein with reasonable certainty, where it is addressed to a drawee. See "Acceptance," "Draft."

Clean bills are without documents attached.

Documentary bills have papers attached showing how they are secured. These papers are usually a bill of lading, a policy of insurance, and invoice covering shipment of goods out of which the bill arises. Bills drawn against stocks or bonds are **security bills.**

Foreign bills are those payable in a state other than the state of origin.

Bill of Lading.—A receipt, usually in duplicate or triplicate, of goods received, given by the carrier to the shipper, and also a contract to carry the goods.

Bill of Sale.—A document given as security for a debt, transferring title to interest in personal property, which may be seized by the creditor in case of nonfulfilment by the debtor.

Bills Payable.—Comprise notes and drafts upon which a concern is primarily liable as maker or acceptor.

Bills Receivable.—Comprise notes and drafts owned and which therefore are listed as assets.

Block System.—A system under which the receiving teller's deposits are taken from him in small batches and balanced, also used to balance incoming mail remittances.

Blotter.—See Daybook under "Books of Account."

Bona Fide.—In good faith; honestly.

Bond.—A bond is a written promise under seal to pay a certain sum of money at a specified time. Bonds bear interest at a fixed rate, usually payable semiannually. Bonds may be sold either above or below par, in which case the **coupon rate** of interest differs from the **effective rate,** being lower than the effective rate when bonds are sold below par, and higher when bonds are sold above par.

Classification of bonds, according to Chamberlain, may be made on the four following bases:

1. According to character of issuing corporation.
2. According to character of security for bonds.
3. According to purpose or function of issue.
4. According to conditions attending payment of principal and interest.

According to character of issuing corporation, bonds fall into two great groups, viz.: **civil loans,** comprising both government and municipal bonds, and **corporation loans,** comprising transportation, public utility, industrial, and miscellaneous bonds.

According to character of security, bonds are either **simple** or **reinforced.** Simple obligations comprise civil loans and corporate debentures. Reinforced obligations have either guaranty or lien security. Guaranteed bonds are assumed or endorsed by some other than the issuing corporation. Lien bonds are secured on either personalty or realty. Security in form of personalty consists of stocks or bonds held as collateral, rolling stock, or funds. Security in form of realty consists of land, and various forms of improvements made on land.

According to purpose or function of issue, bonds fall into many varieties. The purpose is usually expressed in the title of the bond. Thus refunding bonds are those issued to secure funds with which to redeem an outstanding issue; school bonds are those issued to finance the construction and equipment of schools, etc.

According to conditions attending payment of principal and interest, bonds are of many varieties. As to interest, for example, bonds may be unconditional, or they may be income, adjustment, participating, etc. Also, they may be registered or coupon, high rate or low rate, high yield or low yield.

As to principal, bonds may be classified on the following bases:

1. Payment of principal.
2. Maturity of principal.

Bonds are frequently made payable in gold to prevent possible redemption in depreciated currency. Other bonds are payable in legal tender.

As to maturity, bonds are straight and serial, long-term and short-term, perpetual, etc.

Sometimes the date of maturity is optional with the payer, as in case of callable and redeemable bonds.

Sometimes the payee may exercise discretion regarding the maturity date, as in case of cash surrender bonds, bonds optional with payee, convertible bonds, etc.

Car trust certificates. See "Equipment bonds."

Collateral mortgage bonds are those having mortgage bonds as security.

Convertible bonds are those which, under prescribed conditions, may be exchanged for other securities of the issuing company.

Coupon bonds have attached coupons which, as interest payments become due, may be clipped and presented for payment.

Debenture bonds are those issued on the general credit of a corporation and so are not secured by mortgage.

Definitive bonds are permanent documents issued upon surrender of **interim bonds.** The latter are receipts issued to the purchaser to be held as evidence of ownership while the definitive bonds are being prepared, a process requiring several weeks.

Equipment bonds are an evolution from **car trust certificates.** Whereas **car trust certificates** are secured by deposit of the contract of lease, equip-

ment bonds are issued by the railroad company and are secured by lien on the contract of conditional sale. The trust deed, covering movable property, is a chattel mortgage, and also a conditional bill of sale. Being a conditional sale, the railroad company does not secure title to the equipment and consequently it is not affected by any blanket mortgage the company issues. Title passes to the company only upon fulfilment of the deferred payments.

First mortgage bonds are secured by a first mortgage. In case of insolvency their claim upon assets upon which they are a lien is prior to all other claims.

General mortgage bonds are secured by a mortgage but are preceded by senior issues.

Gold bonds are payable, usually both as to principal and interest, in gold.

Income bonds are those upon which interest is paid only when sufficient profits have been earned.

Junior bonds are those preceded by other bonds having a prior lien upon assets.

Mortgage bonds are secured by a mortgage on real estate.

Prior lien bonds are those having a lien superior to other issues, usually to all others.

Redeemable bonds are those which, at the option of the issuing corporation, are callable, usually at a premium, prior to date of maturity.

Registered bonds may be registered only as to principal, or as to both principal and interest. If registered only as to principal, they are transferred by assignment, but interest is paid upon coupons made payable to bearer. If registered also as to interest, checks are used to make interest payments.

Serial bonds mature in series, usually of equal or nearly equal amounts.

Bond and mortgage. When money is borrowed on security it is customary to give a note secured by a mortgage. The mortgage gives the creditor the right to enter foreclosure proceedings in case debtor fails to make payment, at the time specified, of either interest or principal.

Bond of indemnity. When a security is lost, the debtor corporation, upon issuing another to replace it, requires a guaranty, known as bond of indemnity, as protection against future presentation of the lost security.

Books of Account.—Books used for keeping a systematic record of transactions and influences affecting an enterprise. Books kept vary greatly with the size and nature of the business.

Passbook is used for making entry of deposits of cash in bank. Formerly it was customary to balance the passbook monthly, but **monthly statements** of account issued to the depositor now render this unnecessary in most instances.

Cash book contains a record of receipts and disbursements and shows balance on hand.

Daybook, or blotter, is used in single-entry bookkeeping to record transactions chronologically.

Journal is the book of original entry in double-entry bookkeeping. When the system becomes highly developed the journal, as such, disappears, its place being taken by more or less highly specialized sales and purchase books, cash books, etc. It is then customary to use a **general journal** to record only such transactions as cannot properly be entered in the more specialized books. Among these are various adjustment, transfer, and closing entries.

Cash journal is a combination cash book and journal, containing columns for both cash and non-cash transactions.

Purchases journal records purchases made and the names of persons credited therefor. By introducing columns an analysis of purchases may be made by classes of goods purchased and by departments to which they are to be charged.

Sales journal records sales and the names of persons charged therefor. Analysis columns may be introduced classifying sales according to types of goods and departments.

Notes receivable and **notes payable journals** are used when the number of these instruments is sufficient to make their use profitable. They may be used as memoranda, or be made an integral part of the accounting system, in which case postings therefrom are made direct to the ledger.

Voucher register is a columnar book employed to take the place of the purchase journal and accounts payable ledger by showing the distribution to accounts charged in the various columns.

Ledger is the book in which transactions are classified according to function. When subordinate ledgers are used the general ledger becomes a digest of details kept in subordinate ledgers as well as the record of all usual ledger accounts.

Accounts receivable ledger contains a record of all transactions affecting trade debtors.

Accounts payable ledger contains a record of all transactions affecting trade creditors.

Cost ledger contains a record of goods in process and shows the elements entering into cost of manufacture. It may also show raw material transactions and deliveries of finished goods. It is usually controlled by a special general ledger account.

Raw materials ledger contains a record of raw materials purchased, also of raw materials sent to manufacturing departments on requisition of foremen.

Finished goods ledger contains a record of finished product.

Private ledger is used to record only such accounts as it is desirable to keep secret from persons having access to the general ledger.

Petty cash book records payments of cash from the petty cash fund. Under the **imprest system** the amount disbursed as petty cash is refunded to petty cash by means of a check drawn to "Cash" and charged to the accounts for which such disbursements are made.

Boston ledger is of columnar type; in banking a double sheet usually contains a week's work. A column is used for each day; one account for every line.

Books of Record (Corporate).—Certain distinctive books of record are used by corporations. Their development has resulted from the methods of procedure followed by corporations. The chief ones are briefly described below:

Minute book records proceedings at meetings of stockholders and directors. Sometimes minutes of stockholders' and directors' meetings are kept in separate books. When but one book is used the minutes of stockholders' meetings may alternate with those of directors' meetings. In the first pages it is customary to bind in, or otherwise insert, a copy of the charter, leaving space for entering amendments thereto; next, beginning at the top of the right-hand page, the by-laws, leaving thereafter, several

blank pages for new by-laws or amendments of old ones; next, the minutes. Meetings of committees may also be recorded in minute books.

Subscription records are usually in form of loose sheets, adequately headed with explanatory matter, upon which the subscribers enter their names and addresses. The number of shares subscribed and the amount in dollars are set forth. If payments are to be made in instalments the conditions thereof should be set forth in the agreement. If both common and preferred stocks are to be sold, separate blanks should be provided for each kind of stock. Subscribers are not bound until their subscriptions are accepted by the corporation. To avoid revocation by subscribers a trustee may be appointed to act in behalf of the company, which, when organized, may bring suit to enforce payment. In New York a subscription contract is voidable unless 10% is paid down at time of subscribing.

Instalment receipts are issued to subscribers to stock as instalments fall due and are paid. Upon payment of all instalments and surrender of such receipts, the stock certificates are issued. In case **stock scrip** is used instead of certificates, a single instrument is arranged to permit endorsement on back of the certificate of all instalments paid.

Instalment book contains a list of subscribers, number of shares subscribed by each, amount of instalment due, with such information as is necessary relative to the particular instalment. A new page may be made out for each instalment, or, to avoid rewriting names each time an instalment falls due, the same list of names may be used by having groups of columns across the page, each group for one instalment. An alternative plan is to use short pages after the first. Essential columns are: a folio for posting to the stock ledger, columns for subscribers' names and addresses, number of shares, amount of instalment, when paid, amount received, cash book folio, and remarks. The instalment book is compiled from subscription sheets, and may be bound or loose-leaf.. This book is dispensed with when subscriptions are few, entry for instalments paid being made directly in the cash book.

When subscriptions are paid in full and permanent stock certificates are not ready for delivery, **receipts** or **temporary certificates** are issued. These are turned in and canceled when permanent certificates are delivered.

Stock certificate books usually contain from 100 to 500 certificates, each one attached to a stub. Separate books are ordinarily used for common and preferred stock. When certificates are returned for cancellation and issue of new ones, those canceled are pasted to the original stubs.

Stock certificates vary as to size, form, and wording. Each certificate should show the corporate name, state of incorporation, total number of shares, number of shares represented by the certificate, and whether it is full-paid. Certificates should be numbered consecutively and issued in that order. Each certificate has an **assignment form** printed on the back. When the owner wishes to surrender title he usually signs in blank, thus making the certificate transferable by delivery. Legal title, however, remains in the former owner until transfer is made on the corporation's books.

A **split** consists in having a stock certificate canceled and two more issued for the same aggregate number of shares as were represented by the original certificate; or when two or more certificates are surrendered and one is issued in their place.

Stock transfer book is employed to authorize and record transfers of shares of stock. It is a duplication of the assignment form found on the

back of certificates. For this reason some corporations do not use it. Usually there are from two to six transfer forms on each page. The transfer book is closed a number of days before annual meetings and before days when dividends are paid, to permit preparation of lists of stockholders' names and addresses.

A **register of transfers** is sometimes employed to supplement the stock transfer book, serving as a medium for posting to the stock ledger. It is used only by large concerns having many transfers to make. Where transfers are few, postings are made from the transfer book, or sometimes direct from the stock certificate book.

Many large corporations select trust companies to act as transfer agents. The proper official of the trust company countersigns all certificates after they are signed by the proper official of the issuing corporation, usually president or treasurer. The following is a form of countersignature:

Countersigned this 23rd day of October, 19—.
The Eastern Trust Company of Philadelphia,
Transfer Agent.
By T. H. Hatter,
Auditor.

Stock ledger is required by law. It shows stock acquired, transferred, and held by each stockholder. It serves as legal evidence of stock ownership. Postings to this book are made from the stock certificate in case of original issues. Transfers are posted from the transfer book, transfer register, or stock certificate book, to the stock ledger. Where both preferred and common stocks are outstanding, either separate stock ledgers or separate divisions of the same book should be used. The stock ledger is controlled by the Capital Stock account in the general ledger. The alphabetical arrangement is usually required in the stock ledger.

Bond register is employed to keep a record of registered bonds. Space is provided for bondholder's name and address, bond number, date of purchase, from whom transferred, and, if the bond is registered as to interest, twice as many columns for interest payments as the bond has years to run.

Coupon register is used as a receptacle for paid coupons. Ordinarily one page is provided for each bond and divided into spaces equal in number to the number of coupons, these spaces being consecutively numbered to correspond with the numbers of the coupons. When the coupons are returned they are pasted over their corresponding numbers in the register.

Bottomry.—A species of mortgage on a ship, by which it is pledged as security for the repayment of a sum of money. If the ship is totally lost, the lender loses his money; but if the ship returns safely, he recovers his principal together with the interest agreed on, which is usually at a high rate corresponding to the risk. The contract may be by a bottomry bill, or bond. The owner or master of the vessel does not make himself personally responsible in case of loss.

Boycott.—To combine to abstain from or prevent social or business relations with a trades person, landlord, etc.

Breach of Covenant.—A violation of some agreement in a deed.

Brokerage.—Commission allowed to brokers for buying or selling property.

Budget.—A forecast of income and expenditures based on departmental estimates for a definite period, as a year or a month. Its successful application involves coordination of all activities and preparation of

reports showing to what extent actual results secured agree with estimates; also, such revision of original plans as these reports show to be necessary.

Burden.—Elements of cost of production which, not being directly allocable to output, must be distributed on more or less arbitrary basis.

General burden applies to plant as a whole and is distributed to departments on an arbitrary basis.

Departmental burden originates from costs definitely assignable to given departments. This, plus a department's proportion of general overhead, is total overhead to be distributed to work in process within the department.

Burden is sometimes termed **overhead, indirect expense,** or **oncost.**

Burglary.—A breaking or entering of a dwelling in the night-time with the intent to commit a felony.

By-Laws.—Regulations adopted by stockholders governing the routine activities of directors and officers of a corporation. A set of by-laws is usually adopted at the first stockholders' meeting. Directors do not have power to make by-laws unless specially authorized by the stockholders. By-laws may regulate the relationships of the corporation with outsiders if the latter know of their provisions and act accordingly. Associations and societies also adopt by-laws.

By-Products.—Materials of marketable value resulting from manufacturing processes but forming no part of the main output.

Cable Transfer.—A code cablegram sent by a bank to its correspondent abroad, directing the correspondent to pay an amount to the party named and charge its account.

Capital.—In the accounting sense, capital is excess of assets over liabilities of a given enterprise. Sometimes the term is used in the sense of wealth employed in a productive undertaking, which ordinarily is equivalent to the sum of the assets. The concepts of wealth and capital correspond when the balance sheets of all persons are taken into consideration, because all debts cancel, leaving assets (productive wealth) and capital equivalent.

Fixed capital consists of wealth in form of land, buildings, machinery, furniture and fixtures, etc. The distinguishing feature of fixed capital is that profit is ordinarily derived not from its sale but from its use.

Floating capital is capital which can be readily converted into cash.

Nominal capital is the authorized capital stock of a corporation.

Paid-up capital is the amount of capital stock issued and full paid.

Working capital is the excess of current assets over current liabilities. This excess is the amount left free for use within the business for purchasing merchandise, supplies, and so on, and meeting all current expenses incident to production. Ratio of current assets to current liabilities is an index of the condition of solvency of an enterprise, as well as a relative measure of working capital.

In speaking of **banks,** capital always means paid-in par value of capital stock outstanding, without regard to surplus or undivided profits.

Capital Account.—See "Account."

Capital Stock.—See "Stock."

Card of Accounts.—A classified list of all ledger accounts used in any given accounting system, usually accompanied with explanations regarding entries to particular accounts.

Cargo.—The entire load of a vessel excluding passengers.

Cash.—All forms of media of exchange which by custom are received in settlement of debts.

Petty cash is a special fund used to make small payments where checks are for some reason undesirable. See "Imprest System."

In banking, cash may mean actual circulating medium only ("in vault" often added in this case), or may include cash items and checks due on sight from other banks.

Cash letter.—Form letter of transmittal on which is listed a group of checks being mailed to out-of-town point for collection. Also called **transit letter** or **remittance.**

Cashier.—The member of a bank's executive staff officially responsible for the custody of cash and other securities. In general, anyone who receives or pays out money.

Cashier's Check.—A draft, signed by the cashier or other appropriate officer, drawn by the bank on itself.

Causa Mortis.—A gift made in prospect of death, and revocable any time before death. A gift causa mortis fails if donor does not die from the expected cause.

Caveat Emptor.—Let the buyer beware; **caveat venditor,** let the seller beware; **caveat viator,** let the traveler beware.

Cede.—To assign or transfer.

Certificate.—Written or printed evidence of property rights, or of assurance that certain things have been done, as in case of an auditor's certificate.

Auditor's certificates are signed statements setting forth briefly the status of the accounts which have been the subject of audit. If **qualified,** they place some form of limitation upon the auditor's responsibility.

Interim bond certificates are temporary bonds issued to purchasers of bonds pending preparation of definitive forms.

Certificate of deposit is a standardized certificate or receipt issued by a bank showing that a stated sum has been left on deposit. It may be payable either on demand or after a certain time, according to terms of certificate issued. Time certificates of deposit customarily bear interest.

Receiver's certificates are notes issued by a receiver at the order of a court to secure funds to enable him to continue the operations of a public utility, discontinuance of which would be contrary to public policy. Such instruments rank ahead of all other obligations of the borrowing corporation.

Stock certificates are formal evidences of ownership of shares of stock in a corporation.

Cestui Que Trust.—The person to whom the benefits of an estate held in trust accrue; a beneficiary.

Charges.—Items debited in accounts.

Deferred charges are expenditures made to promote operations but which are not to be carried to profit and loss in the current period. Ordinarily they are distributed over from 1 to 5 years, depending on the nature of the expenses. See also "Prepaid Expense."

Fixed charges are those not dependent upon operations, but must be met regardless of quantity of business transacted. Interest on bonded indebtedness is an illustration.

Charter.—An instrument issued by a governmental authority evidencing the creation and existence of a corporation, as well as the privileges and rights which such corporation possesses.

Charter Party.—A written contract by which the owner of a ship hires it out to another party for a specified time.

Chattels.—Personal property and real property, i.e., leases and interests

inland which are less than a freehold. **Chattels personal** are movable personal property and not permanently attached to realty.

Check.—A form of demand negotiable instrument wherein the maker is a depositor in a bank and the drawee is the bank. Checks are made payable to a person named to his order, or to bearer.

Cashier's checks are drawn by banks against themselves.

Certified checks are ordinary checks which have been "certified" by the cashier of the bank against which they are drawn. Such certification makes the bank primarily liable upon the check and discharges the drawer. If the drawer secures certification of his own check he remains secondarily liable if the bank becomes insolvent.

Voucher checks contain detailed statements of obligations liquidated, so that acceptance thereof is acknowledgment of their discharge, and the payee is estopped from applying them against other obligations.

Clearing Account.—See "Account."

Chose in Action.—The right to a debt, or money or personal property recoverable in a suit at law. Also applies to the written obligation upon which suit may be begun.

Circulation.—Notes payable which a national bank has circulating as money.

Citation.—A summons to appear before a court to do something specifically mentioned or show cause why it should not be done.

Clearing House.—An organization which primarily controls a meeting place where messengers from different banks may come together and exchange checks drawn on each other's institutions, an individual bank only paying or receiving the net difference between the total amount of checks which all other banks hold against it and the total amount of checks which it holds drawn on other banks. Out of these meetings have grown organizations which, in many cases, regulate interest rates, prescribe service charges, and examine member banks.

Codicil.—An additional clause added to a will after the will has been signed, sealed, and witnessed. It must be signed and witnessed as formally as the will.

Collateral Security.—Personal property transferred by the owner to another to secure the carrying out of an obligation.

Compos Mentis.—Sound of mind or capable of doing acts.

Composition.—An agreement among creditors to accept partial payment of the debts of a party in satisfaction of their full amount.

Conflict of Laws.—The difference and variations of laws as between states or countries in regard to the subject matter of some case. Also applies in case of different laws of the same state.

Consanguinity.—The relationship of persons descended from a common ancestor.

Consignee.—An agent who receives shipments of goods from his principal to be sold on commission basis, title to goods remaining in the principal, or consignor.

A merchant whose chief business consists in receiving such consignments is a **factor.** His commission is sometimes termed **factorage.**

Consignment.—A shipment of goods to another and held by him for account of the principal or consignor.

Consignor.—One who ships goods to an agent or factor who holds them for account of the consignor or principal.

Consolidated Statement.—See "Statement."

Consolidation.—Unification or affiliation of enterprises engaged in competitive or supplementary undertakings.

Consummation.—The completion or finish of some act.

Contingent.—That which depends upon some happening or occurrence; doubtful, conditional.

Contract.—An agreement between parties, for consideration, to do or to refrain from doing a specified thing or things. To constitute an agreement the minds of the parties must meet. To render the contract legally enforcible,

1. Parties to the agreement must be legally competent to contract.
2. The thing to be done must be lawful.
3. The agreement must be concerning the same thing.
4. The consideration must be sufficient.

Controlling Account.—See "Account."

Conversion.—The wrongful taking or using of property belonging to another.

Convertible.—See "Bond."

Corporation.—Corporations are artificial persons created by law to carry out a certain purpose or purposes.

Public corporations, sometimes termed **municipal corporations,** are those formed by communitites for governmental purposes, as, cities and counties.

Private corporations comprise all other than public corporations.

Close corporations are those whose stock is held by a comparatively few persons and which is seldom or never publicly traded in.

Public service corporations, also known as public utilities, are those engaged in supplying for public consumption such services as lighting, power, and transportation. Being monopolistic in character, they are usually subject to commission control as to capitalization, rates, etc.

Corporeal.—A material thing.

Correspondent.—In banking, another bank with which deposit relations are maintained, a balance being due to or from it. Also, a bank with which arrangements are made to handle collections or similar business.

Cost.—Cost is the outlay, usually measured in terms of money, necessary to buy or to produce a commodity. The two elements of cost are prime cost and overhead, or burden.

Prime cost is outlay on direct labor and raw materials necessary to produce a commodity.

Burden includes all other elements of cost than direct labor and raw materials.

Cost Accounting.—Determination, by means of the application of accounting principles, of the elements of cost entering into the production of a commodity or a service.

Counterfoil.—That part of a document which remains as a record of the contents of the main instrument after the latter has been removed or detached.

Countersign.—Placing an additional signature upon a document for purposes of identification or authenticity.

Country Bank.—Any bank located outside a reserve city.

Coupon.—Certificates attached to a bond each containing a promise to pay to bearer the amount of interest on said bond falling due at the date specified.

Creditor.—One owning wealth in the form of obligations of others to pay him.

A secured creditor is one who holds a lien on specific property for the full or partial payment of a debt owing to him.

A preferential creditor is one who has a claim on the assets of a debtor prior to that of other creditors.

Currency.—Money and bank deposits.

Curtesy.—The husband's estate in the wife's property after her death.

Dating.—The extending of credit beyond the date for which it is ostensibly granted.

In **forward dating** the invoice is dated ahead of the date of sale. Date for payment is reckoned from the forward date. Forward dating is sometimes termed **postdating.**

Days of Grace.—Three days beyond the maturity of notes during which payment cannot be enforced. Days of grace have been abolished in most states.

De Bonis Non.—An administrator *de bonis non* is one who takes charge of any property not executed or settled by a previous administrator whose place he is taking.

Dead Freight.—The part left empty in a ship chartered by a person who has cargo enough for only a part of the ship. In general, any unused but paid for freight space.

Debenture.—See "Bond."

Debt.—An obligation to pay money or that which one owes to another.

Bad debts are those which cannot be collected because of insolvency of the debtors.

Contingent debts are those for which actual reponsibility depends on future uncertainties.

Doubtful debts are those past due but not yet ascertained to be uncollectible.

Floating debts are those not represented by bonds.

Funded debts are those represented by long-term bonds which usually pledge certain property for the payment of interest and principal.

Judgment debts are those which have been affirmed as lawful by a court.

Debtor.—One who owes money.

Decree.—The order made by a court of equity.

Deed.—A formal document employed to transfer title to real estate.

Quitclaim deed transfers only the interests of the immediate grantors.

Trust deeds are documents conveying titles to one party, usually a trust company, known as the trustee, for security of creditors of the grantor.

Defalcation.—Fraudulent conversion of funds.

Deferred Asset or Charge.—See "Prepaid Expense."

Deferred Credit, Income, or Liability.—See "Prepaid Income."

Deficiency.—Insufficiency of assets to discharge debts or other obligations.

Deficiency Account.—See "Account."

Del Credere.—See "Agent."

Delivery.—The act of transferring property or value of any kind from one to another.

Demurrage.—The act of detaining a ship or freight car; also, charge made by the carrier for detention longer than the period agreed upon.

Deposit.—Obligation of a bank to a customer, in form of a book credit, given in exchange for cash or its equivalent, or as a loan, or as consideration in a purchase of some form of wealth.

Demand deposits are those subject to payment without notice.

Time deposits are those payable after expiration of a specified period of time. The Federal Reserve Act places under head of time deposits those payable after 30 days, savings accounts and certificates of deposit subject to not less than 30 days' notice, and all postal savings deposits.

Depreciation.—Decline in value of assets resulting from one or more of the following:

1. Wear and tear.
2. Tenure of holding.
3. Permanency or steadiness of industry.
4. Exhaustion of raw materials.
5. Obsolescence.
6. Accidents.
7. Fluctuations in trade.
8. Inadequacy.

Depreciation Reserve Account.—See "Account."

Devise.—Usually a gift of real property by will; also used sometimes for personal property.

Diminishing Returns, Law of.—The tendency of production costs to increase with increased application of labor and capital. It applies to land cultivation, extraction of ores, etc., but not to manufactures. Sometimes called the **law of increasing cost.** Great advance in methods may delay temporarily the operation of the law.

Direct Line.—The amount a bank loans or will loan to an individual or a business.

Disbursement.—A cash payment. The word is customarily used with reference to cash payments over a period, as one month, or one year.

Discharge.—The order of a court releasing a bankrupt from his debts. More generally, it refers to any debt or obligation.

Disclaimer.—A formal instrument made by a patentee renouncing part of his patent.

Discount.—Deduction from a listed or named figure, usually computed on a percentage basis.

Bank discount is a deduction from the face amount of a loan as an interest charge, made when the loan is granted.

Bond discount is the difference between the par value of bonds and the sum for which they are sold, when this sum is less than the par value.

Cash discount is a deduction from the invoice price allowed to encourage prompt payment. It is composed of two factors, interest and bad debts expense, and should be shown in the administrative section of the profit and loss account, although some authorities place it in the trading section.

Commercial discount is a deduction allowed by merchants to customers for the prepayment of notes.

Trade discount is a deduction from a list price made, (a) to avoid frequent changes in catalog prices, and (b) to secure partial secrecy regarding actual quotations. The key to the actual price is the discount or series of discounts allowed from the list price.

True discount is the difference between the present worth and the amount of a note, the present worth being that amount which, at interest for the given time at the given rate, will accumulate to the amount of the note.

Discount Account.—See "Account."

Dividend.—Ordinarily, division of profits among stockholders on a pro rata basis.

Cumulative dividends are those which, if unpaid in any year owing to insufficient profits, become a lien on future profits.

Ex-dividend refers to the sale of stock shares after the date when books are closed to transfers of stock so that names and addresses of stockholders of record, to whom dividend checks are to be mailed, may be compiled. The seller of stock **ex-dividend** receives the dividend because he is the stockholder of record when the dividend checks are made out.

Extra dividends are those declared in addition to regular dividends.

Liquidating dividends are those paid to the creditors or owners of a business being wound up. They represent distribution of capital and ordinarily are made whenever a sufficient amount of assets is converted into cash to warrant making a disbursement.

Passed dividends are those remaining unpaid because the directors for some reason fail to vote affirmatively at the time the question of continuing dividend payments is considered.

Scrip dividends are those paid in promissory notes which usually bear interest and fall due on a specified date or after the occurrence of a specified event. Sometimes the notes are made convertible into the issuing company's stock. Sometimes they are made transferable by assignment.

Stock dividends are those paid in capital stock newly issued, the charge being to Surplus account. They are not a distribution of profits but a modification of the divisions of net worth or proprietorship.

Dividend orders are specific instructions from stockholders stating to whom dividends shall be paid.

Dividend Account.—See "Account."

Dollar Acceptance.—See "Acceptance."

Donation Account.—See "Account."

Dower.—That portion of the interest in real estate of a deceased husband which the law gives for life to his widow.

Draft.—A draft or bill of exchange is defined in §126 of the Uniform Negotiable Instruments Law as "an unconditional order in writing addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a certain sum in money to order or to bearer."

A draft drawn and payable within a state is an **inland bill.** All others are **foreign bills.**

When a draft is accepted it becomes an **acceptance.**

A **sight draft** is one payable on presentation.

A **documentary draft** is one which has a warehouse receipt, bill of lading, or other paper attached, which is delivered to drawee upon payment.

A **clean draft** is one which has no documents, such as bills of lading or warehouse receipts, attached.

Drawback.—The return of part of an amount paid; more specifically, return of duty paid on imports being exported in one form or another.

Drawee.—The person against whom a draft is drawn and who becomes primarily liable upon acceptance.

Drawer.—The maker of a draft or bill of exchange.

Drawing Account.—See "Account."

Due Date.—Date of maturity of an obligation.

The **average due date** is the date when a single settlement of a number of items falling due at different dates can be made equitably.

Duress.—The forcing of a person by words or acts to perform some act.

Earnings.—Gross revenues from operations. Sometimes termed **gross earnings.**

Net earnings are determined by deducting operating expenses from gross revenues from operations.

Easement.—Right of way over another's land, air, light, water, and support, given by the owner.

Economics.—The science which treats of the production, distribution and consumption of wealth.

Embezzlement.—Fraudulent conversion or appropriation of another's wealth by one to whose care and control it is entrusted.

Emblements.—Growing crops. It applies only to crops raised each year or those cared for by a tenant.

Eminent Domain.—A right which the government has over the real property of individuals to take it for some public use, paying for it reasonable value.

Encumbrance.—Any liability attached to property, as a judgment, mortgage, etc.

Entrepreneur.—One who undertakes business ventures in order to secure large profits. Sometimes called **enterpriser** or **undertaker.**

Entry.—Written description of a business transaction or adjustment made in books of account.

Closing entries are those made as of the last day of a fiscal period to ascertain profit or loss and to convert the final trial balance into the balance sheet.

Opening entries are those made in books of account to set up asset, liability, and proprietorship accounts according to an adopted classification and accompanied by all necessary information regarding the origin and purposes of the business under consideration.

Original entries are those made as soon as possible after the consummation of a transaction for the purpose of securing a written record thereof. Such entries are usually made in a **journal** or **daybook,** and are of special importance as records in case of litigation.

Error.—A mistake.

Errors of commission arise from recording transactions incorrectly.

Errors of omission arise from failure to record on the books a transaction which forms part of current operations.

Errors of principle arise from a wrong conception of the treatment required for a given item, as when an item of expense is charged to an asset account.

Offsetting errors are those which counterbalance each other, thus making detection difficult.

Escrow.—A sealed instrument given by one party to another to deliver to a third person when that third person performs a certain act or acts. It is not in force until delivered to that third party.

Estate.—A right of ownership in property.

Estate in fee simple is the ownership of property outright.

Estate for life is the right to property for the life of the owner or for that of another person.

Estate in remainder is one which, upon expiration of a life estate, passes to a person other than the original owner.

Estate in reversion is one which, upon expiration of a life estate, goes back to the original owner.

Estate in trust is one held and managed by a trustee for the benefit of the real owner.

Estate Accounts.—See "Account."

Estoppel.—A legal bar to alleging or denying any fact because of one's previous action by which the contrary has been admitted or implied.

Exchange.—Reciprocal transfer of values.

Foreign exchange is the conversion of money of one country into that of another to facilitate payment in the latter country.

Par of exchange is the point at which moneys of two countries exchange on a basis of equality with reference to the amount of gold represented.

Rate of exchange is amount of currency of one country which exchanges for a given amount of currency of another country at a given moment. The rate is favorable or unfavorable according as the rate offered for bills on foreign countries is high or low.

In banking exchange is money on deposit in other banks which may be drawn upon at sight; also income received from selling drafts on such accounts.

Executor.—One appointed by the terms of a will to carry out the provisions of that will.

Executory Contract.—One which has not yet been completed or which requires something to be done or to happen before it will be executed.

Expenditure.—An outlay of wealth, in form of cash disbursed or debts incurred.

Expense.—An expenditure whose benefits have already been, or will shortly be, absorbed in services performed or goods manufactured. The term is relative, for in a broad sense all expenditures are expense.

Accrued Expenses.—See "Accrued Expense."

Deferred Expenses are those temporarily capitalized by being carried as assets. The expression is loosely employed to refer to both prepaid expenses which represent present value and to those which represent only expired value but which for some reason are not to be charged off currently. See also "Prepaid Expense."

Direct expenses, in industry, are those which can be charged direct to specific orders in process without intervention of any arbitrary plan of allocation.

Indirect expenses are those which cannot be charged direct to specific orders in process but must first be charged to clearing accounts and in turn allocated to orders in process on some arbitrary basis.

Extinguishment.—The destruction of a right by satisfaction or by the acquisition of another right which is of equal or greater value.

Factor.—An agent employed to sell merchandise, delivered to him by the principal for a compensation called a "factorage" or "commission."

False Pretenses.—A statement which is not true, made for the purpose of selling goods, obtaining money, etc.

Fee.—An estate of inheritance. It is divided into three kinds: (1) **fee simple**, an absolute estate of inheritance; (2) **qualified or limited estate**; and (3), **fee tail,** an inherited estate limited to one person and the heirs of his body.

Felony.—Any crime greater than a misdemeanor which may be punishable by death or penal servitude.

Fiduciary.—A trustee.

Fiduciary relationships are those which arise between a trustee and a **cestui que trust.**

Fiscal Agent.—A bank which handles disbursements and, to a lesser extent, receives money as an agent for a large organization, such as a state government or a corporation. Paying coupons is a common duty.

Fixed Asset.—See "Asset."

Fixture.—An article of personal property, which through annexation to land or building becomes real property.

Flotsam or Floatsam.—Goods thrown overboard, which float. Ownership of such property is not lost but is liable for salvage.

Foreclosure.—An equitable proceeding by which a mortgagor is banned from the redemption of his property and thereby loses it forever.

Forgery.—The false making or alteration of an instrument, which purports on the face of it to be good for the purposes for which it was created; the false or unauthorized signature of a document with a design to defraud.

Franchise.—A privilege or liberty given by the government to certain individuals.

Fraud.—False representation made by a person who knows it to be false, or has no positive knowledge in the matter, intending to induce action and to create a false impression in another party's mind, or to prevent him from investigating to find out the truth about the transaction.

Fund.—See "Sinking Fund," "Reserve Fund," "Trust Fund."

Garnishee.—A person warned, at the suit of a creditor plaintiff, not to pay money which he owes to, or to deliver over property which belongs to, the defendant, because the defendant is indebted to the plaintiff.

General Average.—Where a loss has been incurred intentionally for the benefit of all on board, the owners of the ship and all having cargo thereon contribute proportionately toward making good the loss.

Good-Will.—Present right to receive expected future superprofits, superprofits being the amount by which future profits are expected to exceed all economic expenditure incident to its production. See section on "Good-Will."

Guaranty or Guarantee.—A promise to another that the promisor will be responsible for the payment of a certain sum if the other cannot collect it from the debtor.

Guardian.—One controlling the person and property of another who is incapable of managing his affairs for himself, as an infant or an insane person.

Hedging.—Speculation so arranged that if one loses in his regular business he wins in the speculation, or if he gains in his regular business he loses in the speculation. It usually consists in purchasing against a sale or selling against a purchase, and is entered into to protect one in another transaction.

Heir.—One who succeeds by descent to an estate in land or would have succeeded had his ancestor died intestate.

Hereditaments.—Every sort of inheritable property, such as corporeal, incorporeal, real, personal, and mixed.

Holder in Due Course.—The Uniform Negotiable Instruments Law (§52) says that a holder in due course is one who takes the instrument under the following conditions:

1. That it is complete and regular upon its face.
2. That he became the holder of it before it was overdue, and without

notice that it had been previously dishonored, if such were the fact.

3. That he took it in good faith and for value.
4. That at the time it was negotiated to him he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it.

Holograph.—A will or other instrument written entirely in the handwriting of the maker of the will or other instrument.

Hush-Money.—Money given as a bribe to keep another from giving some certain information.

Hypothecate.—To pledge property as security.

Impersonal Account.—See "Account."

Imprest System.—Plan used to account for petty cash disbursements in accordance with which the cashier is at intervals reimbursed for the amount disbursed by him by means of a check drawn to "Cash" and charged to the accounts against which such disbursements were made.

Inadequacy.—Loss in value resulting from the inability of facilities to meet the demands made upon them.

Incendiary.—A person who wilfully sets fire to a building.

Income.—A flow of benefits from wealth over a period of time.

Gross operating income includes total revenues from operations without deduction for costs of securing it.

Net operating income is the excess of gross operating income over costs of securing it.

Non-operating income is that derived from sources other than primary operations.

Accrued income. See "Accrued Income."

Prepaid income. See "Prepaid Income."

Incorporeal.—That which is not material; intangible; unable to be handled, seen, or heard; invisible.

Indenture.—A deed between two or more parties.

Index number.—Index numbers are averages employed to express movements of prices, wages, etc., over a period of time.

Indorsement.—Writing one's name across the back of a note or check. The effect is to warrant to subsequent holders in due course that:

1. The instrument is genuine.
2. The indorser has good title to it.
3. All prior parties had capacity to contract.
4. The instrument, at time of indorsement, is valid and subsisting.

A **special indorsement** specifies the person to whom, or to whose order, the instrument is payable.

An **indorsement in blank** specifies no indorsee, so that the instrument is then negotiable by delivery.

A **restrictive indorsement** is one which prohibits further negotiation, constitutes the indorsee the agent of the indorser, or vests title in the indorsee in trust for or to the use of some other person.

A **qualified indorsement** constitutes the indorser merely an assignor of title to the instruments. For this purpose the words "without recourse" are commonly used.

A **conditional indorsement** imposes some condition on payment, as,

"Pay to John Jones, upon delivery of 10 bu. wheat, on July 5, 19—. Joe Roe."

Ingress.—The right of the lessee to enter, to go upon the land which he has leased.

Injunction.—An order from a court forbidding the performance of a certain act or acts.

Insolvency.—Inability to pay debts due.

Insurance.—See "Policy."

Interest.—Expense or income resulting from use of wealth over a period of time.

Simple interest is computed on the principal only.

Compound interest is interest on a principal sum increased periodically by the addition of interest.

Effective interest rate is that figured on the actual selling price of the bond, allowing for amortization of premium or discount.

Nominal interest rate is that figured on the par value of the bond.

Interim Certificate.—See "Receipt, temporary."

Interior Clearing House.—The proof desk; or department of a bank which collects all items from the cages and balances them, charging checks and items deposited to various departments.

Inventory.—An itemized list of goods giving amounts and prices.

A **book inventory** is a running record of the acquisition of additions to, and subtractions from, assets of a certain class, kept in terms of quantities and prices or either. Such record is usually made a part of the double-entry system.

Investigation.—A study undertaken in connection with the sale of an enterprise to secure information relative to its financial affairs, alleged fraudulent transactions, profits derived from infringements, and so on.

Invoice.—A statement issued by a seller of goods to the purchaser giving details regarding quantities, prices, and terms of payment.

Jetsam.—Jetsam is where goods are cast into the sea, and then sink and remain under water.

Jettison.—The throwing of part of a cargo overboard in order to lighten the ship.

Joint-Stock Company.—An unincorporated association having articles of association as well as a capital stock under a form of organization similar to that of a corporation and possessing some of the powers of a corporation, but is not in fact a corporation.

Joint-Tenants.—The owning by two or more persons of a piece of property; upon the death of one the share owned by him passes to the survivor or survivors.

Journal.—See "Books of Account."

Judgment Debtor.—One against whom a judgment of the court ordering him to pay his debt is unsatisfied.

Justice of the Peace.—A justice of the peace is a judicial officer of an inferior local court with jurisdiction in civil cases where the amounts involved are small and in criminal cases of misdemeanors and petty crimes.

Labor.—Cost of help other than administrative and clerical.

Direct labor is that which can be charged to an order without being allocated on an arbitrary basis. See "Expense."

Indirect labor is that which cannot be charged directly to an order or process.

Larceny.—Stealing personal property.

Law.—A rule of action prescribed by supreme authority commanding that which is legally right and prohibiting that which is legally wrong.

Written law is embodied in constitutions, acts of Congress, state legislatures, and other bodies having legislative authority.

Unwritten law is custom which has become recognized by courts as rules of action.

Common law is the unwritten law, as distinguished from statutory law, as developed in England, being based on custom and usage as reflected in court decisions.

Civil law is the old Roman law which has been made the foundation of the jurisprudence of the governments of continental Europe, also of the State of Louisiana.

Commercial law is that part of substantive law which governs business relationships.

Lease.—A conveyance, given usually in exchange for rent, of the right of possession of certain property for a certain period.

Ledger.—See "Books of Account."

Legacy.—A gift of personal property made by will.

Lessee.—Party to a lease who secures the right to use of property during the term specified.

Lessor.—Party to a lease who surrenders the right to use of property during the term specified.

Letter of Credit—(Commercial).—Instrument issued by a bank upon a purchaser's request in accordance with which it agrees to pay a seller's draft if drawn at sight, or to accept it if it is a time draft. Purchaser, under separate contract, agrees to reimburse the bank.

Letter of Credit (Travelers).—A document issued by a bank enabling a traveler to identify himself, by means of his signature, at places where he is not personally known, and thus to secure funds up to the amount authorized.

Letters Testamentary.—An instrument given by a court to a person named as executor in a will to proceed with administration of the estate.

Lex Loci.—The law of the place where a contract is made or an act performed.

Liability.—A debt.

Capital liabilities are those which are incurred in the acquisition of permanent assets, and which are usually in form of bonded indebtedness having a maturity date removed, say, more than one year.

Current liabilities are those which will fall due within a comparatively brief period, say not over 6 months or a year.

Contingent liabilities are those which may or may not become definite obligations, depending upon some event.

Deferred liabilities are income received but not yet due. See "Prepaid Income."

Fixed liabilities are those in form of bonds or long-term notes.

Lien.—The right of a person to property belonging to another until that other pays what is due.

Liquidated Damages.—Damages which parties to a contract agree shall be paid in case of a breach of contract.

Lis Pendens.—A suit or action that is pending.

Locus Sigilli.—The place of the seal.

Maintenance.—Costs of upkeep.

Mandamus.—"We command." An order by court to some person sole, or corporate, to do some specified act.

Mandate.—A judicial order.

Manifest.—Invoice of a ship's cargo giving names of parties to whom shipments are made.

Material.—A general term employed to describe whatever commodities or goods are used in manufacture.

Direct material becomes an integral part of the manufactured product.

Indirect material does not become an integral part of the product manufactured. It includes supplies, small tools, etc.

Raw material is the unconsumed portion of material, to be distinguished from **material in process,** which is that material which has already undergone some essential process.

Member bank.—A national or state bank belonging to the federal reserve system.

Mercantile law.—The law which deals with matters pertaining to trade affairs.

Merchandise Account.—See "Account."

Merger.—Unification of two or more concerns in which the legal entities of the original enterprises disappear.

Misappropriation.—Embezzlement.

Misdemeanor.—A breach of criminal law less than a felony.

Mistake.—In contracts two kinds of mistakes are possible.

Mistake of fact, i.e., as to whom one contracts with, as to subject matter, or as to what is to be performed. A mistake of fact renders the contract void.

Mistake of law, i.e., as to the quality or value of the subject dealt with. A mistake of law does not void a contract.

Mitigation.—The lessening of damages or of punishment.

Money.—Wealth which is generally acceptable in exchange.

Real money is that which a payee accepts without question because it is **legal tender,** i.e., may be legally tendered in payment of debts, or because it has become the custom to accept it.

Primary money is real money which has the same value as a commodity as it has as money. e.g., gold in a gold standard country.

Fiduciary money is real money whose value depends partly or wholly on the owner's confidence that it can be readily exchanged for primary money. Sometimes termed representative money. Example: paper money.

Fiat money is money not convertible into primary money.

Mortgage.—An instrument, in form like a deed, assigning real estate to one who loans money, but providing that upon repayment thereof when due, the assignment becomes null and void.

Deeds of trust are mortgages given by deed in trust to a third party as trustee.

Purchase money mortgages are those given for part or the whole of the purchase price of land.

Building and loan mortgages are those given to secure funds to erect a building.

Chattel mortgages are sales of chattel under condition that if a debt or other obligation is paid by the party who makes the mortgage, the

sale shall be void and the title shall return to the party who made the mortgage.

Closed mortgages are those under which no additional indebtedness can be incurred.

Open mortgages are those under which additional indebtedness can be incurred.

Mortgagee.—The one who loans money under a mortgage and therefore holds the mortgage.

Mortgagor.—The one who borrows money under a mortgage.

A **release of mortgage** is a formal paper recorded in the same way as are mortgages indicating that the obligation is discharged and the property again unencumbered.

Negotiable Instrument.—Under the Uniform Negotiable Instruments Law an instrument, to be negotiable, must,

1. Be in writing and signed by the maker or drawer.
2. Contain an unconditional promise or order to pay a sum certain in money.
3. Be payable on demand, or at a fixed or determinable future time.
4. Be payable to order or to bearer.
5. Where the instrument is addressed to a drawee, he must be named or otherwise indicated therein with reasonable certainty.

Next of Kin.—"Those related by blood who would take personal estate of one who dies intestate" (Joseph's Surrogate Practice, page 96). First, children, and then descendants; second, father; third, mother and brothers and sisters; and fourth, collateral relatives.

Nominal Account.—See "Account."

Nominal Damages.—The smallest degree of damages awarded, 6 cents.

Notary Public.—An officer whose function is to attest and certify by his hand and official seal various instruments, in order to give to them authenticity in other jurisdictions; to take acknowledgments and certify the same; and to perform other official acts, the power to do which is conferred by law. In order to become a notary public, a person must be a citizen of the United States. Minors are eligible, unless barred by constitutional or statutory provision. Women are eligible in many states, among them New York and New Jersey. A notary is empowered to administer oaths, take affidavits, depositions, and the acknowledgment of creditors in bankruptcy proceedings.

Note.—Described and defined in the Uniform Negotiable Instruments Law, thus:

1. It is a written promise without condition.
2. By the maker to another, or to maker's order.
3. To pay a sum certain in money or to order or bearer.
4. On demand at a fixed or determinable future time.

Circulating notes are bearer notes in even denominations, designed to circulate as money, as, national bank notes and federal reserve notes.

Collateral notes are those secured by deposit of securities.

Coupon notes are those having interest coupons attached.

Judgment notes are ordinary notes containing a power of attorney to appear and confess judgment for the debtor, thus making it unnecessary to bring suit against him.

Short-term notes are corporate bonds, usually secured by collateral, and ordinarily running for not over 5 years.

Notes Payable.—The sum of all notes and acceptances upon which a concern is primarily liable as maker, endorser, or acceptor.

Notes Receivable.—The sum of all notes and acceptances upon which others are liable to the holding concern.

Notes Receivable Discounted.—Contingent liability for all notes receivable discounted at bank but not yet liquidated by the makers.

Novation.—Substitution of other parties, or another party, for one or more original parties to a contract.

Nuncupative Will.—A will made by word of mouth before someone else and afterwards written out.

Obiter Dictum.—An opinion of a judge and so not of as great weight as a judgment rendered.

Obsolescence.—Loss in value resulting from new inventions of machinery or other facilities which accomplish equivalent work at less cost; or resulting from adverse legislation which makes the output less profitable.

Officer.—An executive who is elected and whose compensation is fixed by the board of directors.

Overdraft.—A debit balance in a deposit account which should normally have a credit balance.

Overs and Shorts.—Cash differences that are carried in a suspense account to the close of the accounting period.

Particular Average.—Incidence of partial loss or damage of ship, cargo, or freight, through unavoidable accident, upon the individual owners (or insurers) of their respective interests.

Partnership.—A contract between two or more competent parties to combine their money, property, skill, or labor for the transaction of a lawful business for profit. As between the parties the essential elements are:

1. An agreement.
2. Parties competent to contract.
3. Partnership capital or property.
4. A community of control.
5. A lawful business.
6. Profit-sharing as a motive.

Common law partnerships are those governed by the common law and in which members have unlimited liability.

Dormant partners, sometimes called sleeping partners, are those who invest as partners but whose connection with the firm is secret and who consequently take no part in the management. Dormant partners are both **secret** and **silent.**

General partners are those who take part in the management and who are liable for the firm's indebtedness without limitation as to amount.

Limited partners are those who do not participate in full liability, and take no part in the management.

Limited partnerships are those organized under state laws, restrictions being placed on the liability of one or more **special** partners.

Nominal partners are those who, although having no financial interest in the business, permit the use of their names as partners, and are therefore liable on firm obligations.

Silent partners have no voice in the management but may be publicly known to be partners. Sometimes called **sleeping partners.**

Special partners are those whose liability is limited by statute.

Subpartners are outsiders, with whom partners agree to share interest in the firm's profits and property.

Pen-Posted.—Account on which entries are made by pen.

Personal Account.—See "Account."

Pivot Desk.—Another name for the **interior clearing house** or **proof desk.** Also called **check desk.**

Policy.—The instrument containing the contract of insurance whereby the insurer, in consideration of one or more premiums received, agrees to assume certain risks to which the insured is subject.

Postal Savings.—Deposits made with the post office under the postal savings system are redeposited by the government in local banks. These deposits are known in the bank as **postal savings.**

Postdating.—See "Dating."

Posting.—Transferring items from journals to ledgers, and making the necessary cross-references in folio columns.

An **abstract of postings** is a list of ledger postings made usually to check up with the books of original entry.

Power of Attorney.—Formal sealed authority to an agent authorizing him to act for another. Such power of attorney may be **special,** granting authority to do only a single act, or **general,** granting authority to act generally.

Premium on Bonds.—Amount above par at which bonds are bought or sold.

Prepa d Expense.—An asset representing expenditures for services not rendered. Also known as **deferred charge** or **deferred asset.** (What is an asset to the payer is a liability to the payee, which liability is known as a prepaid income, deferred credit, or deferred liability.)

Prepaid Income.—Income received for services not yet rendered. It is therefore a liability. Also known as **deferred credit** or **deferred liability.** It is the opposite of accrued income. (What is a liability to the payee is an asset to the payer.)

Price.—The amount of money for which a commodity exchanges.

Primary Line.—Same as **direct line.**

Principal.—The sum involved in an obligation exclusive of interest earned or accrued.

Proceeds.—The amount of money received when a note or acceptance is discounted.

Profit.—Increase in net worth resulting from business operations.

Gross profit usually refers to excess of selling price over cost of goods sold.

Net profit, or **profit,** is excess over all costs of doing business.

Undivided profits are those which have neither been carried to surplus nor distributed to stockholders.

Profit and Loss Account.—An account into which all earnings and expense are closed. In banks the Profit and Loss account is not always used, such entries being posted direct to the **Undivided Profits account.**

Profit-Sharing.—A system of wage and salary payment by which employees participate in surplus earnings.

Progression.—A mathematical series in which each quantity, except the first and last, is a mean of a definitely determined type between its preceding and succeeding quantities.

Arithmetical progressions are those which increase or decrease by a common difference.

Geometrical progressions are those which increase or decrease by a common factor, called the **ratio.**

Proof Desk.—In banking, a clerk or group of clerks who have the duty of bringing together all departmental figures, striking a balance for the bank as a whole. The proof desk may relieve the receiving tellers of much detail by collecting the deposits from the cages and proving them in small batches. See **"Interior Clearing House."**

Property.—Right to enjoy the benefits of wealth.

Personal property is the right to enjoy the benefits of wealth in movable form.

Real property or real estate is the right to enjoy the benefits of wealth in form of land and buildings where such right lasts for one's own life or that of another.

Rights in real property of less dignity than a life estate are personal property.

Proprietorship.—Equity in assets over and above liabilities.

Protest.—A notary's certificate to the effect that an instrument has been presented, demand made for payment, and such demand refused, and that the notary has protested against such non-payment and has sent notice of such protest and non-payment to the party concerned. This is followed by the notary's seal and official signature. The purpose of protesting is to hold persons secondarily liable. Acceptors of drafts and makers of notes, being primarily liable, are held with or without protest.

An endorser may **waive protest** by writing "Protest waived" over his signature.

Protest may be for **non-acceptance** or for **non-payment.** The former is made on refusal of drawee to accept a draft. The latter is made on refusal of the maker of a note or the acceptor of a draft to pay at maturity

Proxy.—Written authority to an agent to vote at a stockholders' meeting.

Quash.—To discharge an action.

Quick Asset.—See "Asset."

Rate of Interest.—See "Interest."

Real Account.—See "Account."

Real Estate.—See "Property."

Realization and Liquidation Account.—See "Account."

Receipt.—Written evidence of surrender of wealth given to the party surrendering it by the party receiving it.

Temporary receipts are certificates issued to bond purchasers pending preparation of definitive bonds.

Treasurer's receipts are issued to purchasers of stock when the certificates are not ready to be issued. The receipts are later exchanged for certificates.

Trust company receipts are those issued to owners of securities who, to facilitate reorganization procedure in a corporation, surrender the securities themselves to a trust company as custodian in order that a properly constituted committee may look after the owners' interests.

Warehouse receipts are given for goods placed in warehouses. Transfer of title to the goods is made by assigning the receipts.

Receiver.—One appointed to take charge of property in bankruptcy proceedings pending appointment of a trustee by the creditors.

Ancillary receivers are those appointed to manage property situated in jurisdictions other than the one in which the principal receiver receives his authority.

Recognizance.—An obligation of record to do some particular act, as to pay a debt, or keep the peace, or to appear in court.

Reconcilement.—Due to delay in transit, a bank's ledger will not agree with the depositor's books at any given time. A reconcilement shows the two balances and accounts for the outstanding items.

Recoupment.—The right of a defendant to set up a claim for damages against the plaintiff at the same action, because of his violation of an obligation owing on the contract on which he sues, or for some failure of consideration.

Recourse.—The right by the holder of a note to look to the previous endorser to pay the amount set forth in the note.

Rediscount.—A note or similar obligation which has been discounted or purchased by a bank, then endorsed and sold to another bank, usually the federal reserve, for the purpose of raising funds.

Referee.—In judicial proceedings, an officer appointed by the court to investigate and report a decision as to some feature of a matter in suit.

Register.—A memorandum book in which particular transactions are entered as they occur. Example is a certificate of deposit register in which each certificate of deposit is recorded as issued.

Bond register. See "Books of Account."

Voucher register. See "Books of Account."

Remainder.—That remnant or residue of interest which, on the creation of a particular prior estate, is by the same instrument limited to another to be enjoyed on the termination of that estate.

Remittances.—See "Cash Letter."

Repairs.—Expenses incurred in the upkeep of fixed assets of a nature such that their cost is fairly uniform from year to year. The term is relative, for what might be regarded as repairs in a very extensive plant requiring the constant replacement of parts of considerable magnitude, might properly be considered replacements in a smaller plant, to be taken care of by means of depreciation reserves.

Replacements.—Renewals of sufficient cost to make it desirable to provide a depreciation reserve against which they may be charged, thus avoiding extraordinary charges to Profit and Loss in those years when they are made.

Replevin.—An action to recover possession of property.

Report of Condition.—In banking, a formal statement, required by law, of assets and liabilities, with supporting schedules and other pertinent information.

Reserve.—A segregation of surplus, or a retention of revenues equivalent to losses in asset values. In the former case the reserve is a **reserve of surplus**; in the latter case, a **valuation reserve.** In banking, an amount in cash or in assets quickly convertible into cash which can be used in paying depositors.

Reserve fund.—An amount set aside in form of cash or investments for general or special purposes.

Returns and Allowances.—Deduction from gross sales for defective goods and containers returned by customers; also for rebates granted to customers.

Revenue.—Income from all sources.

Operating revenue is that derived from operations as distinguished from that derived from investments and miscellaneous sources.

Reversion.—The residue of an estate left after the granting of part of it to another by the grantor.

Royalty.—A payment made for the use of a patent, for the privilege of extracting ores from land, or for the privilege of publishing books.

Safekeeping.—Securities left with a bank for the convenience of the owner, the bank acting as bailee.

Sale.—The Uniform Sales Act defines a sale as "an agreement whereby the seller transfers the property in goods to the buyer for a consideration, called the price."

A sale should be distinguished from a **contract to sell.** In case of the latter the goods are not delivered and title does not pass. A sale is an executed contract, whereas a contract to sell is an executory contract.

Salvage.—Value an article possesses for some use other than that to which it has been devoted.

Savings Account.—An account on which interest is paid, the rules of which provide that the passbook or receipt must be presented for each deposit and withdrawal. Before withdrawal can be made the bank retains the privilege of requiring notice.

Savings Bank.—A bank specializing in savings accounts. In a number of states only mutual organizations can use the name.

Scrap.—Value an article possesses when broken up. Sometimes termed **junk.**

Scrip.—In general, a temporary receipt or certificate.

Scrip dividends are those paid in form of promissory notes which usually bear interest and fall due on a specified date, or after some event, such as the sale of an issue of bonds.

Seal.—An impression upon wax, paper, etc., to authenticate any document to which it is attached; or a metal die with which an imprint is made on the document.

Secondary Line.—Amount which an individual or a business has endorsed at the bank; or amount which the bank is willing to accept on such an endorsement.

Sinking Fund.—An amount set aside in form of cash or investments for the purpose of liquidating some liability.

Specialty.—A written, sealed, and delivered instrument.

Statement.—A setting forth in systematic form of all data with reference to some phase of a business undertaking. To present essential details, subordinate schedules are frequently appended. In banking, a list of checks paid on account, deposits and balances furnished the depositor, commonly made up each month; also a statement of assets and liabilities of a customer or of the bank itself.

Balance sheets set forth the status of a business as at a given date.

Consolidated balance sheets set forth the status of affiliated businesses as at a given time.

Consolidated income statements set forth the results of operations of affiliated enterprises over a period.

Income statements set forth the results of operations over a period.

Statements of affairs set forth the status of an insolvent business as at a given time, the arrangement being such as to show both book value of

assets and what they are expected to realize and gross liabilities and how they are expected to rank.

Statements of realization and liquidation are employed in winding up the affairs of a concern to set forth assets unrealized and liabilities not yet liquidated, assets realized and liabilities liquidated and the loss or gain resulting, and resulting cash to be turned over.

Statements of receipts and disbursements set forth cash on hand at the beginning of a period, receipts and disbursements during the period, properly classified, and the balance on hand at the close of the period.

Statistics.—The science of interpreting large numerical quantities by means of processes of summarization.

Stock.—Share issued by a corporation, evidenced by formal certificates representing ownership therein. The total amount of such shares is known as the capital stock of the corporation.

Assented stock is that upon which one or more assessments have been paid in case of reorganization procedure, thus indicating the assent of the holder to the reorganization.

Common stock is that upon which dividends are paid only after dividend requirements on preferred stock and interest requirements on bonds are met. When there is but one class of stock it is common.

Donated stock is stock of a corporation which has been given back to be sold at a discount, usually to afford working capital in cases where the stock was originally issued in payment for fixed assets.

Guaranteed stock is that which is guaranteed as to principal or interest, or both, by some other corporation or corporations.

Inactive stock is that which is seldom traded in on the exchanges.

Preferred stock is that which has prior rights over common stock either as to dividends or assets, or both. Various provisions are found relative to the voting power, as for example, the preferred stock may be given control of the corporation if dividends thereon remain unpaid for two consecutive years. In case of **cumulative preferred stock** unpaid dividends become a **lien** upon profits of following years.

Treasury stock is that which has been returned to the treasury of the issuing corporation.

Unissued stock is the excess of authorized over issued stock.

Stock bonuses are gifts of stock offered to furnish incentive to investors to buy some other security of the issuing company.

Stock subscriptions are agreements to purchase the stock of a corporation. They become effective only when ratified by the corporation, unless accepted by a trustee in behalf of the corporation.

Stock Right.—Privilege extended to stockholders to subscribe to new stock at a price below the market value of outstanding stock.

Stop Payment.—An order given a bank by a depositor directing that the bank refuse to honor a check which has been issued by the depositor.

Stoppage in Transitu.—If a buyer becomes insolvent while goods being shipped to him are in transit, the seller has the right of stoppage in transitu, i.e., he may again take possession of them and will have priority over all other creditors of the insolvent.

Supplies.—Materials used in manufacture but which do not become a part of output.

Surplus.—In case of corporations having only par value, stock surplus ordinarily measures excess of net worth or proprietorship over par value of stock outstanding.

Capital surplus is that derived from extraordinary sources, as sale of stock at a premium or sale of fixed assets at a profit.

Surplus from operations is that derived from undertakings from the carrying out of which the business was established.

Syndicate.—An association of bankers formed to sell an issue of securities.

Tax.—Levy made by a government to pay running expenses and to finance public works.

Direct taxes are those levied upon those expected to bear the burden. Poll, property, income, and inheritance taxes are usually regarded as direct.

Indirect taxes are those shifted from those upon whom they are levied to others. Customs and excise taxes are usually regarded as indirect.

General property taxes are those levied on all, or nearly all, property, real and personal, in private ownership.

Excise taxes are those levied upon commodities, this term being broadly interpreted.

Inheritance taxes are those levied on estates inherited, certain exemptions being allowed.

Capitation taxes are those paid by everybody in a community; **poll taxes.**

Telegraphic Transfer.—A telegram sent by one bank to another, directing that money be paid.

Teller.—In banks, the person who actively receives or pays deposits, or who otherwise waits on the public accepting or delivering valuable documents.

Tenancy in Common.—A holding by two or more persons of a piece of property. Upon the death of one, the deceased's share goes to his heirs and not to the other tenants as in joint-tenancy.

Time Deposits.—Funds left with a bank which are only payable after expiration of a stated period. For reserve purposes, under the Federal Reserve Act, only such deposits can be considered as time deposits which still have a maturity of over 30 days.

Trade Acceptance.—See "Acceptance."

Trade-Mark.—A distinguishing mark, device, or symbol used by a manufacturer or merchant to identify and advertise his goods.

Transit.—Checks or corresponding items that must be sent by mail for collection.

Transit Letter.—Another term for cash or remittance letter.

Traveler's Check.—A cashier's check or draft printed in even denominations, carrying the signature of the payee for identification.

Treasurer's Check.—Similar to cashier's check, except that it is issued by a trust company or a trust department of a bank.

Trial Balance.—A list of balances of all general ledger accounts made to determine the correctness of postings from books of original entry as well as the correctness of the work of determining these balances. Sometimes the list consists of the account totals instead of the balances.

Trover.—An action against another for the wrongful detention of property.

Trust Department.—Department of a bank handling fiduciary matters.

Trust Fund.—Money placed in the hands of a trustee for purposes of investment and management.

Trustee.—One appointed by creditors of a bankrupt to take over his prop-

erty, reduce it to cash, pay off all charges, and distribute the remainder among creditors according to law.

More generally, a trustee is any person placed in charge of property for the benefit of another known as the *cestui que trust.*

Turnover.—Rapidity of replacement of capital invested in inventories, accounts receivable, etc.

Two-Named Paper.—Notes or similar negotiable paper that have been signed by two parties or signed by one and endorsed by a second.

Ultra Vires.—Beyond the powers of; applied to the acts of directors of a corporation when beyond the power of the charter of that corporation.

Undivided Profits Account.—In bank accounting the surplus is a formal account to which entries are only made by action of the board of directors. The net profits for the period, the payment of dividends, and the charging off of losses is usually made against a proprietorship account known as Undivided Profits.

Unilateral Contract.—A contract where only one promise is to be performed.

Value.—The value of a given quantity of wealth is that quantity multiplied by the price.

Void.—Destitute of legal effect.

Voidable.—Not void unless made so by disaffirmance, or a decree of court.

Voucher.—Any document which serves as proof of a transaction.

Voucher System.—A scheme of accounting under which distribution of all expenditures is made on vouchers preliminary to their entry in the voucher register.

Waive.—To give up; to forego a right.

Warrants.—Checks drawn by a national, state, or other government body against its treasurer; or similar items drawn by large semi-public organizations, such as a railroad. A warrant is drawn by an officer against the organization's own treasurer. (Often payable at a bank.)

Warranty.—Defined by the Standard Dictionary as "an assurance or undertaking by the seller of property, express or implied, that the property is or shall be as it is represented or promised to be, as to quantity, quality, or title.

Will.—A formal written disposition of property to take effect after death, made by a person of sound and disposing mind.

Working Asset.—See "Asset."

Work in Process.—Materials in process of manufacture.

Payment of Tax at Source

SECTION 33

TAXATION

NATURE OF TAXATION IN GENERAL.—Taxation should be equal and uniform, but this does not necessitate rigid equality or narrow uniformity of treatment. Certain institutions are properly exempt; others of a harmful character should be subjected to especially heavy taxation. Productivity and cheapness of collection are factors to be considered. Only **approximate justice** is secured under any system of taxation. In the United States the courts adhere to the theory that taxes should be proportioned to **benefits derived.** This is only a general rule and of varying validity under different circumstances. Thus it is not possible to determine exactly the extent to which particular persons benefit from governmental activities. **Ability to pay** is the basis upon which the majority of economists think taxes should be apportioned. There is, however, no simple measure of ability to pay. In general, ability to pay is the best basis for apportionment of general taxes, but not necessarily for specific taxes. Income, consumption, and property are possible **measures of ability.** Any measure of ability is only approximately correct.

Proportional taxation consists in levying taxes in direct proportion to income.

Progressive taxation consists in increasing the tax rate as amount of income or property increases.

PROVISIONS OF FEDERAL CONSTITUTION.—The character of taxation in the United States is determined, fundamentally, by constitutional provisions to the effect that:

1. "Direct taxes shall be apportioned among the several states—according to their respective numbers."
2. "All duties, imposts, and excises shall be uniform throughout the United States."
3. "No state shall, without the consent of Congress, levy any imposts or duties on imports or exports except what may be absolutely necessary for executing its inspection laws."

In 1894 the United States Supreme Court declared income taxes to be direct taxes. Eighteen years later the Sixteenth Amendment was adopted empowering Congress to levy taxes on incomes without apportionment among the several states and without regard to any census or enumeration.

Direct taxes are taxes levied upon those expected to bear the burden.

Indirect taxes are taxes shifted from those upon whom they are levied to others.

Poll, property, income, and inheritance taxes are usually regarded as **direct.**

Customs and excise taxes are usually regarded as **indirect.**

State and Local Taxation

GENERAL PROPERTY TAX.—This may still be regarded as the basis of state and local taxation. It is levied, theoretically, at least, upon nearly all property, real and personal, in private ownership. In each community assessors prepare statements of taxable property owned by the people. In some states they receive sworn **lists** of property owned and taxable from all residents. Practice of assessors and reviewing bodies regarding **valuation** of such property varies greatly. Taxes are levied on basis of valuations made. Owing to the serious defects of this tax there is a tendency to substitute for it other forms of taxation, notably the income tax.

CORPORATION TAXES.—In most systems of corporation taxation the following elements may be discovered:

1. The **incorporation fee,** to cover clerical expenses of registering corporations and value of privileges granted, the most important being limited liability.
2. The **franchise tax proper,** which covers valuable privileges granted to most public utilities.
3. The **general property tax,** which is supposed to impose upon the corporation a burden equivalent to that borne by the average taxpayer of the district.
4. The **income tax** in some jurisdictions.

SUMMARY OF ANNUAL TAXES PAID BY CORPORATIONS IN NEW YORK STATE.—The following summary, prepared by the Special Joint Legislative Committee on Taxation and Retrenchment of the State of New York, in 1921, is fairly typical of state taxation of corporations.

A—Taxes Paid by Business Corporations.

(The term "business corporations" covers mercantile and manufacturing corporations, excluding:

a. Real estate corporations.
b. Holding corporations.
c. Transportation and transmission corporations.
d. Elevated or surface railroads not operated by steam.
e. Waterworks companies, gas companies, electric or steam heating, lighting and power companies.
f. Insurance corporations.
g. Banks, State and national.
h. Savings banks.
i. Trust companies.
j. Investment companies.

(See article 9-a, section 210, Tax Law.)

1. Franchise Tax (article 9-a, Tax Law), 4½ per cent on net income.

(Minimum tax to be not less than $10 and not less than one mill upon each dollar of issued capital stock.)

(Definition of net income: "total net income before any deductions have been made for taxes paid or to be paid to the Government of the United States on either profits or net income or for any losses sustained by the corporation in other fiscal or calendar years whether deducted by the Government of the United States or not." Section 208, article 9-a, Tax Law.)

2. General Property Tax (articles 1–5, inclusive, Tax Law).

(Business corporations are taxable on real property and certain fixed equipment; they are exempt from the payment of taxes on personal property See article 9-a, sections 219-j, 219-i, Tax Law.)

B—Taxes Paid by Financial Institutions.

1. State and National Banks.
   - a. Bank Stock Tax (article 1, section 13, article 2, sections 23–24, Tax Law).
     - 1 per cent on value of shares (total value of shares equal to capital, surplus and undivided profits).
   - b. General Property Tax (articles 1–5, inclusive, Tax Law).
     - (Institutions paying the bank stock tax are taxable only on real property; they are exempt from the payment of taxes on personal property. See article 2, section 24-c.)
2. Trust Companies.
   - a. Franchise Tax (article 9, section 188, Tax Law).
     - 1 per cent on capital, surplus and undivided profits (based on *average* during preceding year).
   - b. General Property Tax.
     - (On real property; trust companies are exempt from payment of taxes on personal property. See article 9, section 205, Tax Law.)
3. Investment Companies.
   - a. Franchise Tax (article 9, section 188-a, Tax Law).
     - 1½ mills for each dollar, face value, of capital.
     - 1 per cent on surplus and undivided profits.
   - b. General Property Tax.
     - (On real property; investment companies are exempt from payment of taxes on personal property. See article 9, section 205, Tax Law.)
4. Savings Banks.
   - a. Franchise Tax (see article 9, section 189, Tax Law).
     - 1 per cent on par value of surplus and undivided earnings.
   - b. General Property Tax.
     - (On real and personal property; deposits in savings banks exempt from taxation.)
5. Insurance Corporations and Surety Companies.
   - a. Franchise Tax (article 9, section 187, Tax Law).
     - 1 per cent on excess of gross amount of premiums charged, over deductions allowed by law, on business done within this State during previous calendar year.
   - b. General Property Tax (on real and personal property).

C—Taxes Paid by Public Service Corporations.

1. Steam Railroads.
   - a. General Franchise Tax (article 9, section 182, Tax Law).
     - (Franchise tax is based upon the capital stock of the corporation. Tax rate variable, depending upon dividend rate, relation of assets to liabilities, and average price of stock sold.)
   - b. Additional Franchise Tax (article 9, section 184, Tax Law).
     - One-half of 1 per cent on gross intra-State earnings (not including earnings derived from business of an interstate character).
   - c. Special Franchise Tax (article 2, sections 44–49, Tax Law).
     - (Tax Commission annually determines valuation of special franchises subject to assessment in each city, town or village. Final equalized valuation is the assessed valuation on which all taxes based upon special franchise are levied by local authorities. Tangible property situated upon streets, highways, public places or public waters in connection with the special franchise is taxed with such franchise.)
   - d. General Property Tax.
     - (Real and personal property, excluding that which is assessed with special franchises, is taxed under this head.)
2. Telephone and Telegraph Companies.
   - (Taxed upon same basis as steam railroads.)
3. Elevated or Surface Railroads not operated by steam.
   - a. Franchise Tax (article 9, section 185).
     - 1 per cent on gross earnings from all sources within the State.
     - 3 per cent upon amount of dividends declared or paid in excess of 4 per cent upon actual amount of paid-up capital.

b. Special Franchise Tax (article 2, sections 44–49, Tax Law).
(Same as steam railroads.)
c. General Property Tax (same as steam railroads).
4. Other Transportation Companies (taxed upon same basis as steam railroads)
5. Waterworks Companies, Gas Companies, Electric or Steam Heating, Lighting and Power Companies.
a. Franchise Tax (article 9, section 186).
One-half of 1 per cent on gross earnings from all sources within the State.
3 per cent upon amount of dividends declared or paid in excess of 4 per cent upon actual amount of paid-up capital.
b. Special Franchise Tax (article 2, sections 44–49, Tax Law).
(Same as for steam railroads.)
c. General Property Tax.
(Same as steam railroads.)

D—Taxes Paid by Corporations Not Included in the Above Classes.
1. Realty Companies.
a. General Franchise Tax (article 9, section 182, Tax Law).
(Franchise tax based upon the capital stock of the corporation.)
b. General Property Tax (on real and personal property).
2. Holding Companies.
a. General Franchise Tax (article 9, section 182, Tax Law).
b. General Property Tax (on real and personal property).

Federal Income Tax Procedure[1]

HISTORICAL.—Wisconsin enacted the first state income tax law in 1911. Other states soon followed. In 1915 Connecticut began taxing incomes of corporations. In 1917 New York levied a franchise tax of 3% on manufacturing and mercantile corporations. In 1919 New York began the taxation of personal incomes.

The first federal income tax was levied during the Civil War. One was levied in 1894 but was declared unconstitutional a year later on the ground that it was a direct tax.

The corporation excise tax of 1909 was an income tax in fact but not in form.

Various developments and refinements have been introduced in the laws of 1913, 1916, 1917, 1918, and 1921, the tendency being toward eliminating arbitary provisions and recognition of accepted customs and practices in business procedure and accounting.

Law of 1909.—This provided that every corporation "be subject to pay annually a special excise tax with respect to the carrying on or doing business by such corporation—equivalent to one per centum upon the entire net income over and above five thousand dollars received by it from all sources during such year." It was declared constitutional on the ground that it was an excise tax, not an income tax. The law provided that net income be determined by deducting from gross income received certain costs, expenses paid, and losses. In actual administration of the law the tax was paid on net income as ascertained in ordinary accounting practice, i.e., by deducting

[1] The material contained in the remainder of this section is based upon "Income Tax Procedure, 1923," by Robert H. Montgomery. In so far as income tax administration is dependent upon specific provisions of any statute, those of the Revenue Act of 1921 control. Present procedure before the Bureau of Internal Revenue has been evolved from experience derived from administration of the several revenue laws enacted since passage of the Sixteenth Amendment. It has now become fairly well standardized, so that future changes are not likely to alter its more fundamental aspects.—The Editor.

accrued expenses from earned income. The effective period of this law extended from Jan. 1, 1909, to Dec. 31, 1912.

Law of 1913.—This law, effective Mar. 1, 1913, was passed following the ratification of the Sixteenth Amendment. It placed the personal exemption at $3,000 for single persons, with an additional $1,000 for married couples. The former exemption of $5,000 to corporations was eliminated. The normal tax for corporations and individuals was 1%. For individuals only surtaxes began with 1% when net income reached $20,000, and increased gradually to 6% on portions of income in excess of $500,000. The 1913 law contained provision for an excise tax of 1% on net income of corporations for January and February, 1913.

Deduction for depletion of mines was restricted to 5% of value of output.

Law of 1916.—The normal rate for both corporations and individuals was made 2%, and the surtax on individual incomes was made to range from 1% to 13%. The lowest surtax rate applied to income immediately above $20,000, the highest to that part of income exceeding $2,000,000. The law was passed Sept. 8, 1916, and applied to income received after Jan. 1, 1916. This law definitely fixed Mar. 1, 1913, as the date upon which appreciation and depreciation of property were to be measured for tax purposes. Stock dividends were included in taxable income. The arbitrary 5% limitation upon depletion allowances was eliminated. Losses in deductions entered into for profit but not connected with an individual's trade or business were made allowable deductions, to an amount not exceeding the profits arising therefrom. The 1916 law was in effect from Jan. 1, 1916, to Dec. 31, 1916.

Law of 1917.—This law was passed Oct. 3, 1917, and became effective as of Jan. 1, 1917, remaining in effect one year. The revenue Act of 1917 contained two separate laws:

(a) A reenactment of the 1916 law with amendments. This was known as the Act of 1916, as amended by the Act of Oct. 3, 1917.
(b) The War Income Tax Act of Oct. 3, 1917.

Both (a) and (b) had their own separate normal and surtax rates and exemptions. An unmarried individual with an income over $1,000 but not in excess of $3,000 was subject to tax under the War Income Tax Act but not subject under (a). A married man living with his wife, or a single person head of a family, with an income over $2,000 and not over $4,000 was likewise only subject to tax under the War Income Tax Act of Oct. 3, 1917. Single persons with an income over $3,000 and married persons or heads of families with an income over $4,000 were subject to tax under both (a) and (b).

"Information at the source" was substituted for collection at source. Deduction of gifts by individuals to charitable, religious, and educational institutions was permitted up to 15% of net taxable income as calculated without this deduction. Limitations were imposed on several deductions, income and excess profits taxes being made non-deductible, also interest on money borrowed for purchase of tax-exempt securities. For the new 4% tax on corporations permission was given to deduct dividends on stock in other corporations. To prevent corporations from avoiding the tax by postponing dividend declarations, the law prescribed that dividends be "taxed to the distributee at the rates prescribed by law for the years in which such profit or surplus was accumulated by the corporation." This was repealed by the 1918 law.

The 1917 law introduced **excess profits taxes.** A law of this type was

passed Mar. 3, 1917, but was replaced by act of Oct. 3, 1917, which also placed a heavy levy on supernormal profits. For treatment of this act and its successor of 1918, see Montgomery's "Excess Profits Tax Procedure, 1921."

Law of 1918.—This law was finally approved Feb. 24, 1919, but was retroactive to Jan. 1, 1918. It remained in effect until the effective date of the act of 1921, which, for most provisions, was Jan. 1, 1921. This law completely replaced the 1916 and 1917 acts. It imposed a new version of profits tax, certain luxury taxes, and other internal revenue charges. Normal rate and corporation tax rate were both 12%, with a reduction to 6% on first $4,000 of the taxable income of a citizen or resident of the United States. These rates stood only until Jan. 1, 1919, when normal rate applying to taxable income of a citizen or resident became 8% (4% on first $4,000) and the corporation tax dropped from 12% to 10%.

Surtaxes on individual incomes ranged from 1% to 65%, the highest rate applying to portions of income exceeding $1,000,000. The maximum total rate in 1918 was 10% higher than in 1917, and the higher normal rate and steeper progression made the tax heavier on moderate incomes than was the preceding one. Maximum total rate on 1919 and 1920 incomes was 73%.

The provision permitting an individual to deduct losses not incurred in trade was liberalized. For the first time the individual was required to report on basis of his annual accounting period, even though it did not coincide with the calendar year. Affiliated corporations were required to file **consolidated returns.** Depreciation allowances were liberalized. Depletion of mines and of gas and oil wells was placed upon a generous basis. Special provision was made for charging off reasonable amortization on equipment contributing to prosecution of the war. For the first time corporations were relieved of the arbitrary limitation on deductible interest, in force in some form since 1909, also of the discriminating tax on dividends received from other corporations. Income and excess profits taxes paid to other jurisdictions upon income arising therein were, under certain conditions, allowed as credits against the tax. A specific credit of $2,000 was granted corporations. As under previous laws, members of partnerships were taxed as individuals. **Personal service corporations** were placed in the same category as partnerships.

Law of 1921.—This law was approved Nov. 23, 1921. It was a rewritten draft of the 1918 law. The law became effective Jan. 1, 1921, but some radical changes provided for did not become effective until Jan. 1, 1922, such as the sections which abolished the excess profits tax and the personal service corporation, increased the corporation tax rate, and established a new class of capital gains and losses. The personal service corporation disappeared with the abolition of the excess profits tax, and the income tax rose from 10% to 12½%. Surtax rates on individual incomes were reduced. The maximum rate was made 50% instead of 65% under the 1918 law, and applied to all incomes in excess of $200,000. Surtaxes began when the $6,000 point was reached and for incomes between $6,000 and $10,000 were 1%.

Capital gains were established as a new division of income. Beginning Jan. 1, 1922, profits made by individuals from sales or exchanges of property "held for profit or investment," were subject to a maximum rate of 12½% instead of the regular rates which, since that date, range as high as 58% (normal plus surtaxes).

The section prescribing the basis for determining gain or loss, which be-

came effective Jan. 1, 1921, adopts the Frierson rule (which, in case of property purchased before Mar. 1, 1913, states that a profit or loss must be shown when comparison is made with original cost and be limited to the portion thereof accrued after Mar. 1, 1913) and also liberalizes the definition of the closed transaction. The law states that no gain or loss on exchanges of property for property shall be recognized unless property received in the trade "has a readily realizable market value." In certain cases the gain need not be accounted for at time of exchange.

An innovation was the breaking away from the practice of refusing to permit a business loss in one accounting period to offset income of another.

Reduced surtax rates became effective in 1922 and personal exemptions were liberalized, the changes affecting the 1921 returns. For a married person or the head of a family whose income does not exceed \$5,000, the exemption was increased from \$2,000 to \$2,500. The allowance for each dependent was increased from \$200 to \$400.

After Jan. 1, 1922, personal service corporations were taxed as ordinary corporations.

Affiliated corporations were given the option, after Jan. 1, 1922, of filing separate or consolidated returns.

The law set up a Tax Simplification Board to investigate the procedure of the Bureau of Internal Revenue and to make recommendations for its simplification.

The law required that the Treasury pay interest on taxes refunded.

Other changes included a limitation of time for filing amortization claims; a provision that returns must be filed in all cases where an individual's gross income exceeds \$5,000; a limitation on the deduction of interest to carry Liberty bonds; permission to deduct business traveling expenses in full; and a change in the limitation periods for amended returns.

There were also important changes in administrative features, such as the sections permitting binding agreements between the Treasury and the taxpayer, changing the procedure with reference to appeals, and authorizing the Treasury to defer collection in cases of undue hardship.

Administration of Income Tax

The administration of the income tax law is placed in the hands of the Commissioner of Internal Revenue, subject to supervision and control by the Secretary of the Treasury. In the following discussion wherever the Treasury regulations are quoted but the regulation number is omitted it is understood that Regulations 62 are referred to.

BUREAU OF INTERNAL REVENUE.—The Bureau of Internal Revenue collects federal revenue other than customs. There are five deputy commissioners[2] and one Assistant Commissioner, the latter acting in the Commissioner's place. Income and excess profits taxes are collected through the local collectors of internal revenue, who are also charged with the collection of all other internal revenue taxes. Collectors of internal revenue are held primarily responsible for the proper collection of the tax in their districts. There are some 64 collection districts, each with a collector at its head assisted by subordinates. There are also 35 internal revenue divisions with internal revenue agents or supervising internal revenue agents in charge.

[2] The deputies are in charge of the following: 1. Income Tax Unit; 2. Estate and Capital Stock Tax Unit; 3. Sales Tax Unit; 4. Accounts and Collections Unit; 5. Miscellaneous (publications, administration, etc.).

Procedure.—Procedure of the Bureau of Internal Revenue is as follows:[3]

1. The taxpayer makes a return and pays the collector, who receives the return, one-fourth or all the tax shown due on face of return.

2. The collector lists the returns, shows taxes due, makes a few obvious corrections in some cases and forwards returns to Washington.[4]

3. In Washington returns are first checked against collector's lists and the original tax verified.

4. The "audit" of returns begins and supplemental amounts of taxes due [and amount of overpayments] are determined; taxpayer is notified and [after procedure laid down in Sec. 250 (d) has been complied with], return is sent to a separate section of the Bureau for entry on a supplemental list.[5]

5. Supplemental lists are transmitted monthly to collectors, taxpayer is formally notified [of additional taxes], and tax is due for payment within ten days after such notice.

COMMITTEE ON APPEALS AND REVIEW.—Under the 1918 law[6] the Commissioner was empowered to appoint an Advisory Tax Board.[7] The Board was appointed Mar. 14, 1919, and abolished Oct. 1, 1919.

In place of the Board, a Committee on Appeals and Review was established, membership being recruited from within the Bureau.

Organization.—The Committee is independent of the Income Tax Unit and in theory is responsible only to the Commissioner. Its personnel embraces a chairman, vice-chairman, eleven members, and a secretary, who give their entire time and attention to all matters referred to the Committee for consideration. All members have held responsible positions in the Bureau as heads of divisions or chiefs of sections and are either attorneys at law or accountants.

Procedure.—The principal duties of the Committee are:

1. Hearing and consideration of cases appealed by taxpayers from action of Income Tax Unit.
2. Consideration of questions submitted by Income Tax Unit with request for Committee's advice.
3. Criticism or approval of letters making new rulings or new applications of old rulings which are submitted by Income Tax Unit or the Commissioner.
4. Criticism or approval of proposed Treasury decisions.
5. Consideration of matters presented in informal conferences by officers of the Bureau and by taxpayers upon questions of interpretation, policy, or procedure.

Cases may be **appealed** to the Committee only after final disposition has been made of the case by the Income Tax Unit, and upon such questions, either as to law or facts, as are in controversy between taxpayer and Income Tax Unit.[8]

---

[3] A. E. James, Bulletin of National Tax Association, Vol. VI, p. 49.

[4] Returns on form 1040A are not sent to Washington, but are audited in collectors' offices.

[5] If it is found there has been an overpayment of tax, the taxpayer is sent a certificate of overassessment which enables an adjustment to be made by the local collector.

[6] Sec. 1301 (d-1).

[7] For a full discussion of its powers and procedure see Montgomery: Income Tax Procedure, 1920, pp. 159–161.

[8] Prior to the 1921 law, it was contrary to the policy of the Bureau to defer assessments pending the taking up of an appeal. This was an unjust rule, which is now, in most cases, abolished by Sec. 250 (d) of the 1921 law.

Following ruling outlines procedure in hearings before the Committee:

Ruling. When an appeal is taken from a ruling of the Income Tax Unit to the Committee on Appeals and Review or a question is certified to that Committee at the request of the taxpayer and an oral presentation is desired, the record shall immediately be examined to ascertain as to whether there is a question of law involved. If it is found that a question of law is involved, the Solicitor shall be notified and he will thereupon designate one member of the Solicitor's office to sit with the Committee and himself for the purpose of hearing the appeal, or if the Solicitor finds it inconvenient to sit with the Committee he may designate two members of his office to do so.[9]

At the hearing before the Committee the taxpayer or his attorney or representative will be expected to make his full oral argument on the law as well as the facts, and this presentation shall be the only oral presentation except in unusual circumstances, or unless a further argument of the facts or the law is deemed desirable by either the Chairman of the Committee or the Solicitor.

The attorney or attorneys so designated by the Solicitor for the hearing will be expected, in conjunction with the Solicitor and the Conference Committee in the Solicitor's office, if the Solicitor so desires, to consider the legal aspects of the case, and the Solicitor's recommendation in the form of an opinion or memorandum will then be made to the Chairman of the Committee, and thereupon the Committee's findings shall be prepared and submitted to the Commissioner for his approval. . . . (C. B. 3, p. 370; O. D. 709.)

The appeal and related papers are transmitted to the Committee on Appeals and Review and docketed for assignment to a member for consideration.

Upon assignment of the case the papers are carefully examined. In event that additional information is desired or an oral hearing is requested or is deemed advisable, taxpayer is notified.

In event of an oral hearing, which will presumably be final, taxpayer submits such arguments and presentation both as to law and facts as he desires to have considered by the Bureau. The oral hearing may be supplemented by a written brief to be submitted after the hearing. Three copies of this brief should be furnished.

Conclusions of individual members of the Committee, after being formulated and reduced to writing, are submitted to a conference of the entire Committee and, when agreed to, are submitted to the Commissioner as recommendations.

Upon approval of Committee's recommendation by the Commissioner, the decision is final as far as the Bureau is concerned. It will not be reconsidered except upon presentation of new and material evidence, accompanied by an explanation satisfactory to the Committee of failure to produce such evidence prior to closing of the case.

The taxpayer is notified by the Committee of its recommendation and the case and related papers are thereupon returned to the Income Tax Unit for such further action as is necessary in accordance with the decision of the Committee, of which action the taxpayer is duly notified by the Income Tax Unit.

REGULATIONS GOVERNING PRACTICE BEFORE TREASURY.—The Commissioner has issued regulations (Department Circular No. 230, Revised Apr. 25, 1922, Form 23)[10] governing recognition of attorneys and agents and other persons representing taxpayers before the Treasury. Following are extracts:

---

[9] As a general rule, the auditor who has handled the case also attends the conferences of the Committee.

[10] C. B. I-1, p. 469. This circular supersedes Treasury Department Circular No. 230 (C. B. 4, pp. 408–414), dated Feb. 15, 1921, as amended June 7, 1921, July 1, 1921, and Dec. 23, 1921.

Regulation. 2. *Applications for enrollment.*—Applicants for enrollment pursuant to these regulations shall submit to the Secretary of the Treasury an application, properly executed, on **Form 23,** . . . . Applications in any other form will not be considered. The statements contained in the application must be verified by the applicant. The applicant must also take the oath of allegiance, and to support the Constitution of the United States as required by section 3478, Revised Statutes. A person who can not take the oath of allegiance, and to support the Constitution of the United States can not be enrolled. Members of the bar of a court of record will apply for enrollment as attorneys; all others will apply for enrollment as agents. The Secretary of the Treasury may in any case require other and further evidence of qualification. Applicants will be notified of the approval or disapproval of their applications. All applications for enrollment must be individual, and individuals who practice as partners should apply for enrollment as individuals and not in the partnership name. An individual who has been enrolled may, however, represent claimants and others before the Treasury Department in the name of a partnership of which he is a member or with which he is otherwise regularly connected. Except as hereinafter provided in paragraph 3, a corporation can not be enrolled and attorneys or agents will not be permitted to practice before the Treasury Department for account of a corporation which represents claimants and others in the prosecution of business before the Treasury Department. Persons applying for enrollment who propose to act for such a corporation in the prosecution of claims and other business before the Treasury Department, will be subject to rejection, and enrolled attorneys or agents who act for a corporation in representing claimants and others in the prosecution of claims and other business will be subject to suspension from practice, as to such claims or business.

. . . .

4. *Restriction of right to be heard to parties and enrolled attorneys and agents.*—(*a*) The committee on enrollment and disbarment shall maintain in the office of the chief clerk, Treasury Department, a roll of attorneys and agents entitled to practice before the Treasury Department. It shall likewise maintain lists of those whose applications for enrollment have been rejected and those who have been suspended or disbarred. The chief clerk shall furnish copies of said roll and lists, with such additions thereto or subtractions therefrom as may be made from time to time, to the several bureaus, offices and divisions of the Treasury Department, and upon request may furnish information as to whether or not any person is enrolled as an attorney or agent before the Treasury Department.

(*b*) All bureaus, offices and divisions of the Treasury Department are hereby prohibited from recognizing or dealing with anyone appearing as attorney or agent unless the name of such attorney or agent appears upon the list of those entitled to practice before the Treasury Department, provided, however, that the head of any bureau, office or division may, in his discretion, temporarily recognize such representative pending action upon his application for enrollment, provided his name does not appear on the list of those whose applications for enrollment have been rejected or on the list of those who have been suspended or disbarred. It shall be the duty of the several bureaus, offices and divisions of the Treasury Department to ascertain in each case whether the name of one appearing before them in a representative capacity appears on the roll of those entitled to practice, whether such representative has been suspended or disbarred, and whether he is ineligible under section (*c*) of this paragraph or under section 190 of the Revised Statutes. Nothing herein contained shall preclude individual parties or members of firms, or officers of corporations, or authorized employees of firms or corporations, from appearing, upon proper identification, as representatives of their own interests or of their respective firms or corporations in any matter before the department in which such person, firm or corporation is concerned as a principal; but attorneys, counsel, solicitors, accountants and other agents for such persons, firms or corporations must be enrolled.

(*c*) No attorney or agent shall be permitted to appear in a representative capacity before the Treasury Department, or any of the bureaus, offices, units, divisions, subdivisions, or other agencies thereof, in regard to any claim, application for reaudit, refund, abatement or reduction in tax assessed, or any other matter, to which he gave actual personal consideration, or as to the facts of which he had actual personal knowledge, while in the service of the Treasury Department

The foregoing regulation is in addition to the inhibition contained in section 190 of the Revised Statutes of the United States, and does not authorize the appearance of an attorney or agent in the prosecution of any claim that would be prohibited by that section.

. . . .

6. *Causes for rejection, suspension or disbarment.*—(*a*) The Secretary of the Treasury may, as herein provided, suspend or disbar any enrolled attorney or agent shown to be incompetent or disreputable, or who refuses to comply with these rules and regulations, or who shall with intent to defraud, in any manner willfully and knowingly deceive, mislead, or threaten any claimant or prospective claimant, by word, circular or letter, or by advertisement. It shall be the duty of every attorney and agent to use the utmost diligence in furnishing evidence required in matters presented to the Treasury Department, and the use of any means whereby the final settlement of a claim or other business pending before the Treasury Department is unjustifiably delayed may be sufficient cause for suspension or disbarment. If any enrolled attorney or agent shall knowingly employ as correspondent or subagent in any matter pending before the Treasury Department a person who is at the time denied enrollment, or suspended or disbarred from practice before the department, such attorney or agent himself may be suspended or disbarred.

(*b*) Advertising by enrolled attorneys or agents which describes their capacity or ability to render service as enrolled attorneys or agents is forbidden. Letterheads, business cards, and insertions in directories, newspapers, trade journals, or other publications should set forth only the name and address of the attorney or agent and a brief description of his practice. The description should not do more than state the nature of the attorney's or agent's business, that is to say, whether he practices as an attorney, accountant or agent, and, if desired, any special field of service or practice covered. The use by attorneys, agents, or others of adjectives or other terms which might imply official capacity or connection with the Government or any of its departments, is specifically forbidden.

(*c*) The solicitation of claims or other business as attorney or agent for others before the Treasury Department by circulars, advertisements, or other means, including personal letters, communications, or interviews not warranted by previous business or personal relations with the persons addressed, is forbidden. *Advertising or solicitation which makes any suggestion of previous connection with the Treasury Department or acquaintance with its officials or employees, or any reference to the fact of enrollment, is specifically forbidden.*

(*d*) Statements or implications to the effect that an attorney or agent is in position by reason of past experience, past official connection, or personal association with the Treasury Department or any officials or employees thereof, directly or indirectly to influence the disposition of business in the Treasury Department, and statements or implications to the effect that the agent or attorney is able to obtain information or consideration that is not available to the public in regard to such business, are forbidden.

(*e*) While contingent fees may be proper in some cases before the department, they are not generally looked upon with favor and may be made the ground of suspension or disbarment. Both their reasonableness in view of the services rendered and all the attendant circumstances are a proper subject of inquiry by the department. The Commissioner of Internal Revenue or the head of any other Treasury bureau or division of the Secretary's office may at any stage of a pending proceeding require an attorney or agent to make full disclosure as to what inducements, if any, were held out by him to procure his employment and whether the business is being handled on a contingent basis, and, if so, the arrangement regarding compensation.

(*f*) Violation of any of the foregoing regulations is declared cause for suspension or disbarment of any attorney or agent enrolled to practice before the Treasury Department, while violation thereof by any person applying for enrollment as attorney or agent will be cause for rejection of his application.

Power of Attorney Must Comply With Certain Requirements.—

Ruling. . . . . Any power of attorney offered in evidence in any case will be accepted only provided it is in regular form. It is considered necessary in the case of an individual that the power of attorney be signed by the taxpayer, contain language to convey his intention, not necessarily in strictly legal form, and be attested before a notary public or be witnessed before two disinterested individuals. In the case of a partnership, a

power of attorney must be signed by all members of the partnership and properly sworn to or witnessed as above. In the case of a corporation, it must be signed by an officer of the corporation, attested by the secretary under the seal of the corporation and executed before a notary or attested as above. Under no circumstances shall a power of attorney which does not have attached to it a revenue stamp in the amount of 25 cents be accepted. . . . . (C. B. I-1, p. 419; Misc.)

The following form is suggested:

Power of Attorney

To the Commissioner of Internal Revenue,
Washington, D. C.

Sir:

Mr.............................., or/and Mr........................., is authorized to represent.. in connection with all tax returns which have been filed by this company with any department of the United States Government. The said representatives are authorized to act for it and in its name, place and stead. This letter will serve as written authority authorizing him to examine and secure copies of all returns, claims, correspondence and papers in connection therewith. This letter will also serve as written authority authorizing him to receive any warrants which may be issued in its name. We hereby specifically authorize the above mentioned representatives to secure, if necessary, copies of any income or excess profits tax returns heretofore filed by us.

The said representatives are vested with full Power of Substitution and Revocation. The execution of this instrument hereby ratifies and confirms all that said representatives shall lawfully do or cause to be done, by virtue hereof.

Respectfully,

(affix corporate seal)

....
(Name of Corporation)

attest:

By...................................

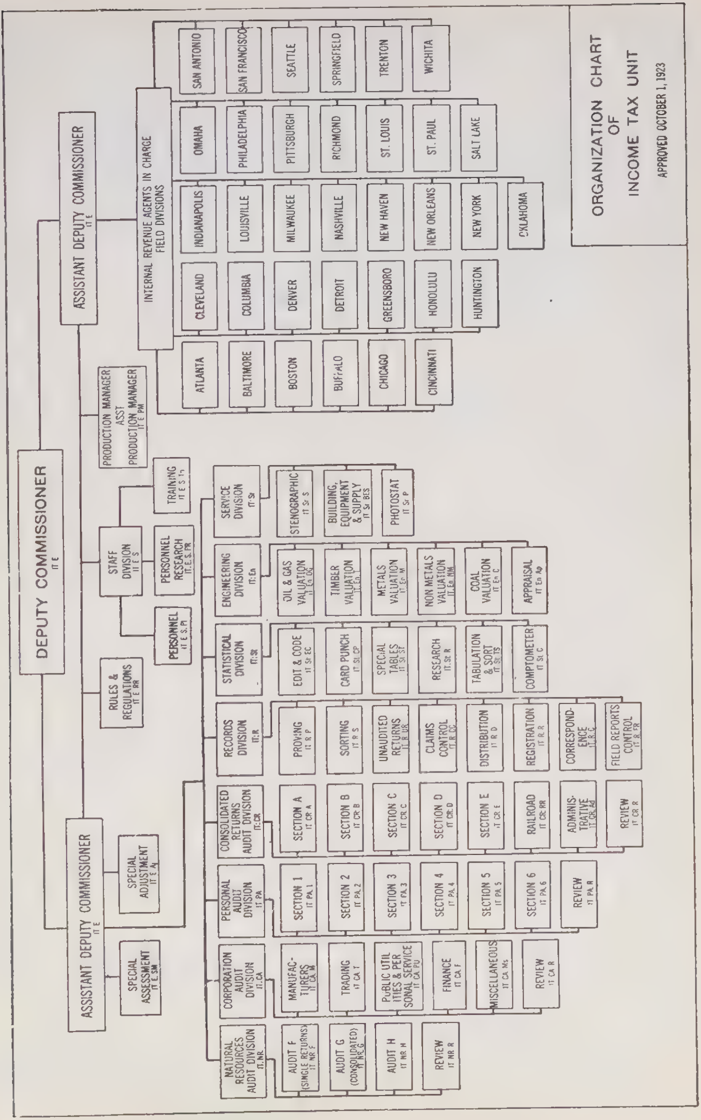
Power of Attorney

ORGANIZATION OF INCOME TAX UNIT.—A chart showing organization of the Income Tax Unit is reproduced on following page.



Organization of Income Tax Unit

ADMINISTRATIVE INTERPRETATION.—Pending construction of statutes by courts and subject to such construction, the Treasury supplies official interpretation of the law. The Treasury interprets the law strictly. Large sums are involved in disputes turning on close constructions of the law. Taxpayers cannot assume that their interests will be protected by blind conformity with Treasury rulings. The system assumes that they will not follow the rulings blindly, but will contest doubtful points operating to their disadvantage.

In recent regulations, interpretations are made as general and illuminating as possible. Instead of treating a narrow, particular instance, the Commissioner in most cases essays a comprehensive treatment of the problem of procedure involved and does not hesitate to enunciate general principles to serve as official guides to action by taxpayers.

Legal Force and Effect of Treasury Interpretations.[11]—The Supreme Court of the U. S. is final authority on income tax questions. In an old case this court said:

Decision. . . . . The construction of the law is open to both parties, and each is presumed to know it. Any instructions from the Treasury Department could not change the law or affect the rights of the plaintiff. He was not bound to take or adopt that construction. He was at liberty to judge for himself, and act accordingly. . . . .[12]

The following statement was made in a more recent case:

Decision. A practical construction by public officers whose duty it is to enforce a statute is conceded to be entitled to great influence, provided the statute presents an ambiguity which is real, and not captious. . . . .

Where a statute that has been construed by the courts has been re-enacted in the same or substantially the same terms, the legislature is presumed to have been familiar with its construction, and to have adopted it as a part of the law, unless a different intention is indicated; and the same principle is applied to statutes and parts of statutes which have been re-enacted after they have been construed by the legislative or executive departments of the government. (*Edwards* v. *Wabash Railway Co.*, 264 Fed. 610.)

Regarding taxpayer's right to question rulings and assessments, note the following authoritative quotation:

And it follows that it will be a legitimate mode of construing the present income tax law, in cases where its language in relation to a particular point or subject is obscure, confusing, or unintelligible, to compare it with the corresponding provisions on the same point in the earlier acts, which may be more clear and precise, and to presume that Congress intended its words to be understood in the same sense as before, unless there is such a distinct change of language as to compel the inference that a change in legislation was certainly intended.[13]

Note the following quotation from a decision of the U. S. Supreme Court:

Decision. In the interpretation of statutes levying taxes it is the established rule not to extend their provisions, by implication, beyond the clear import of the language used, or to enlarge their operations so as to embrace matters not specifically pointed out.

[11] Under this title Mr. Fred T. Field, formerly member of the Advisory Tax Board, presented a paper published in the Columbia University Lectures—The Federal Income Tax (Columbia University Press, 1921, pp. 91-113) in which he makes the following statements: "Rulings are of two principal classes—**administrative rulings** which deal with procedure, and **interpretative rulings** which purport to state the meaning of the statute and to affect substantive rights. Administrative rulings are made under authority of a delegated quasi-legislative power, and if within the scope of the delegation, have the effect of law as quasi-statutes. They are presumed to be valid. Interpretative rulings have no effect as law since they are not within the delegation of the quasi-legislative power and since no power of conclusive quasi-judicial construction is given to the Treasury Department. Interpretative rulings are, however, under some conditions aids to the construction of the statute and have certain important practical effects."

[12] *Elliott* v. *Swartwout*, 35 U. S. 137, 10 Pet. 137, 12 Curtis 46, 9. L. Ed. 373

[13] Black, Income and Other Federal Taxes, (4th Ed p. 36.).

In case of doubt they are construed most strongly against the government, and in favor of the citizen. *United States* v. *Wigglesworth*, 2 Story 369, Fed. Cas. No. 16,690; *American Net and Twine Co.* v. *Worthington*, 141 U. S. 468, 474, 35 L. Ed. 821, 824, 12 Sup. Ct. Rep. 55; *Benziger* v. *United States*, 192 U. S. 38, 55, 48 L. Ed. 331, 338, 24 Sup. Ct. Rep. 189.[14]

The authority of Treasury Department regulations is discussed in Black's "Income Taxes" (4th Ed.), p. 9:

But of course it is not within the lawful power of these officers to go a step beyond the limits of the act of Congress under which their authority is exercised. They could neither bring within the purview of the law or of their regulations anything not definitely within the words of the act, nor except from its operation anything not clearly meant to be excluded, nor add to the burden of the taxpayer anything which Congress did not intend to impose upon him. But within the limits of their rightful authority, regulations prescribed by the Commissioner of Internal Revenue, pursuant to statutory authority, with the approval of the Secretary of the Treasury where necessary, in respect to the assessment and collection of internal revenue taxes, or for the government of the officers of the revenue department, have all the force and effect of law, and are as binding as if incorporated in the statute law of the United States; and the acts of the Commissioner are presumed to be the acts of the Secretary. But the construction given to an act of Congress imposing internal revenue taxes by the Commissioner of Internal Revenue, though officially published, is not a construction of so much dignity that a re-enactment of the statute subsequent to the construction is to be regarded as a legislative adoption of that construction, and especially when the construction would make a proviso to the act repugnant to the body of the act.

Policy of Bureau Regarding Requests for Rulings and Advice upon Abstract Propositions.—

Ruling. It will be the policy of the Bureau not to answer any inquiry except under the following circumstances:

(*a*) The transaction must be completed and not merely proposed or planned.

(*b*) The complete facts relating to the transaction, together with abstracts from contracts, or other documents, necessary to present the complete facts, must be given.

(*c*) The names of all the real parties interested (not "dummies" used in the transaction) must be stated, regardless of who presents the question, whether attorney, accountant, tax service, or other representative. (C. B. I-1, p. 400; Mim 2880.)

Legal Effect of Changes in Form of Organization Made to Reduce Taxation.—

Ruling. A change of form from that of a corporation or association to that of a trust or partnership accompanied by a transfer of capital assets to trustees for the benefit of shareholders followed by a sale of such assets at a price in excess of the cost thereof to the corporation or association, and the distribution of proceeds to the beneficiaries (shareholders), such change being made for the main purpose of avoiding the tax which would accrue to the corporation had the sale been made by it, should be disregarded as a mere sham to avoid assessment of tax against the corporation or association upon the profit derived from such sale, and the corporation or association should be required to return as income any profit derived as though the sale had been made by it directly. (C. B. 2, p. 203; Digest S. 1385.)

The taxpayer against whom the foregoing case was decided, appealed to the courts and the opinion of the Solicitor was reversed.

Decision.[15] It is insisted in the opinion of the solicitor for the Bureau of Internal Revenue that this change is a sham and a subterfuge and is ineffective. This same opinion admits the right of an individual or corporation to regulate or change its business with a view of reducing or avoiding taxation in the future, but in contradiction with this admission holds that the parties involved in this transaction could not do so. Supporting this view there are several cited cases, most of them by state courts. The case of

---

[14] *Gould* v. *Gould*, 245 U. S. 151, 38 Sup. Ct. 53, 62 L. Ed. 211.

[15] *Weeks* v. *Sibley*, 269 Fed. 155.

Pollard v. *Bank*, 47 Kans. 406, 28 Pac. 202, cited by the solicitor, is directly opposed to his contention. . . . .

Bearing in mind the rule of construction which the Supreme Court announced in the case of *Gould* v. *Gould*, 245 U. S. 151, 38 Sup. Ct. 53, 62 L. Ed. 211, and numerous other cases, to the effect that the provisions of the taxing statutes are not to be extended by implication beyond the clear import of the language used, and that they are to be construed most strongly against the government and in favor of the taxpayer, it is the opinion of this court that the right to change the status of an organization, or to dissolve an organization in any legal manner, is not made ineffectual because the motive impelling the change is to reduce or avoid taxation in the future. The right so to do is an incidental right, inseparably connected with an individual's right to own and control his property. It is practically identical with the sale by a citizen of tax-burdened securities and the investment of the proceeds thereof in tax-exempt ones, for the purpose of reducing or avoiding taxation.

Determination and Assessment of Tax

DUTY OF COMMISSIONER.—The function of determining and assessing the tax is delegated to the Commissioner.

Law. Sec. 1311. [Sec. 3176, Rev. Stat.] . . . . The Commissioner of Internal Revenue shall determine and assess all taxes, other than stamp taxes, as to which returns or lists are so made under the provisions of this section. . . . .

EXAMINATION AND AUDIT.—

Law. Sec. 250. . . . . (b) As soon as practicable after the return is filed, the Commissioner shall examine it. If it then appears that the correct amount of the tax is greater or less than that shown in the return, the instalments shall be recomputed. . . . .

Regulation. When the returns are received at the collectors' offices they are examined and listed before being forwarded to the Commissioner. As soon as practicable after the returns are received in the office of the Commissioner they are carefully audited in connection with any reports of examination that may have been made by agents of the Department. If error in the amount of tax as stated in the return is detected the tax is recomputed and if the amount is less than that shown in the return the excess will be credited or refunded. . . . . If the amount is greater than that shown in the return the deficiency will be handled as provided in section 250 (d) of the statute and article 1006. . . . . (Art. 1012.)

The returns, or at least the larger ones, are audited exhaustively "as soon as practicable," but this is usually long after payment of the tax.

Sec. 250 (b) of the 1918 and 1921 laws and the usual procedure which governs the examination of returns by revenue agents from the Commissioner's office in Washington, are supplemented by the provision of the law which gives to local collectors the right to question the accuracy of returns.

Law. Sec. 228. That if the collector or deputy collector has reason to believe that the amount of any income returned is understated, he shall give due notice to the taxpayer making the return to show cause why the amount of the return should not be increased, and upon proof of the amount understated, may increase the same accordingly. Such taxpayer may furnish sworn testimony to prove any relevant facts and if dissatisfied with the decision of the collector may appeal to the Commissioner for his decision, under such rules of procedure as may be prescribed by the Commissioner with the approval of the Secretary.

Regulation. If a collector has reason to believe that the amount of any income is understated in a return, he may on his own initiative take up the matter with the taxpayer and upon becoming satisfied that the amount was understated may increase it accordingly, subject to the right of the taxpayer to appeal to the Commissioner. The Commissioner, however, without the intervention of the collector may exercise original jurisdiction in cases of understatements or other errors in returns, in which event sections 250 and 1300 of the statute and section 3176 of the Revised Statutes,

as amended by section 1311 of the statute, are applicable instead of section 228 . . . . (Art. 451.)

In view of the right of appeal to the Commissioner in any event, if the collector gives notice of intention to increase an assessment, taxpayers should appeal at once to the Commissioner.

Collectors may summon any person residing or found within the state or territory in which their districts lie, and even in other districts, and make examinations authorized by law. If a return is not filed, the collectors are required to make returns from their own knowledge and from such information as they can obtain through testimony or otherwise.

Law. Sec. 1311. [Sec. 3172, Rev. Stat.] Every collector shall, from time to time, cause his deputies to proceed through every part of his district and inquire after and concerning all persons therein who are liable to pay any internal-revenue tax, and all persons owning or having the care and management of any objects liable to pay any tax, and to make a list of such persons and enumerate said objects.

Sec. 1311. [Sec. 3165, Rev. Stat.] Every collector, deputy collector, internal-revenue agent, and internal-revenue officer assigned to duty under an internal-revenue agent, is authorized to administer oaths and to take evidence touching any part of the administration of the internal-revenue laws with which he is charged, or where such oaths and evidence are authorized by law or regulation authorized by law to be taken.

Examination of Books and Persons.—Properly accredited officers of the internal revenue service have full power to examine books and records and to require attendance of the necessary persons at examinations into accuracy of income tax returns. The auditing and examinations, whether done in the office or in the field, are performed by internal revenue agents, who are under the direction of the Commissioner at Washington and not of the local collectors.

Law. Sec. 1308. That the Commissioner, for the purpose of ascertaining the correctness of any return or for the purpose of making a return where none has been made, is hereby authorized, by any revenue agent or inspector designated by him for that purpose, to examine any books, papers, records, or memoranda bearing upon the matters required to be included in the return, and may require the attendance of the person rendering the return or of any officer or employee of such person, or the attendance of any other person having knowledge in the premises, and may take his testimony with reference to the matter required by law to be included in such return, with power to administer oaths to such person or persons.

Sec. 1310. (a) That if any person is summoned under this Act to appear, to testify, or to produce books, papers, or other data, the district court of the United States for the district in which such person resides shall have jurisdiction by appropriate process to compel such attendance, testimony, or production of books, papers, or other data.

(b) The district courts of the United States at the instance of the United States are hereby invested with such jurisdiction to make and issue, both in actions at law and suits in equity, writs and orders of injunction, and of ne exeat republica, orders appointing receivers, and such other orders and process, and to render such judgments and decrees, granting in proper cases both legal and equitable relief together, as may be necessary or appropriate for the enforcement of the provisions of this Act. The remedies hereby provided are in addition to and not exclusive of any and all other remedies of the United States in such courts or otherwise to enforce such provisions. . . . .

Liability to examination extends to persons, other than the taxpayer, who have knowledge of his income.

Relations with Revenue Agents.—Revenue agents usually call upon individual taxpayers without notice. In the case of business concerns appointments convenient to both are often made by telephone. Although

the right of revenue agents to examine the books and accounts of all taxpayers is unquestioned, they usually do not insist on an immediate examination to inconvenience of the taxpayer.

Taxpayers should furnish the revenue agent with all information called for and expedite the examination by placing at his disposal original data supporting returns. In case of doubt, too much rather than too little information should be tendered.

Field agents, as a rule, discuss proposed reports freely with taxpayers. When examination has been by an agent under immediate supervision of the revenue agent in charge of a district, the taxpayer is sent a copy of the report after it is reviewed by agent in charge. If examination is made by an agent directly from Washington, a copy of the report is not furnished the taxpayer. The assessment letter is first official notice to taxpayer of results of the examination.

Unnecessary Examinations.—

Law. Sec. 1309. That no taxpayer shall be subjected to unnecessary examinations or investigations, and only one inspection of a taxpayer's books of account shall be made for each taxable year unless the taxpayer requests otherwise or unless the Commissioner, after investigation, notifies the taxpayer in writing that an additional inspection is necessary.

Procedure when Audit Discloses Additional Taxes Due.—

Law. Sec. 250. . . . . (d) . . . . If upon examination of a return made under the Revenue Act of 1916, the Revenue Act of 1917, the Revenue Act of 1918, or this Act, a tax or a deficiency in tax is discovered, the taxpayer shall be notified thereof and given a period of not less than thirty days after such notice is sent by registered mail in which to file an appeal and show cause or reason why the tax or deficiency should not be paid. Opportunity for hearing shall be granted and a final decision thereon shall be made as quickly as practicable. Any tax or deficiency in tax then determined to be due shall be assessed and paid together with the penalty and interest, if any, applicable thereto, within ten days after notice and demand by the collector as hereinafter provided, and in such cases no claim in abatement of the amount so assessed shall be entertained: *Provided*, That in cases where the Commissioner believes that the collection of the amount due will be jeopardized by such delay he may make the assessment without giving such notice or awaiting the conclusion of such hearing. . . . .

Regulation. Sec. 250 (d) of the Revenue Act of 1921 provides that if upon examination of a return made under the Revenue Act of 1916, 1917, 1918, or 1921, an income or excess profits tax or a deficiency therein (which deficiency is defined in Section 250 (b) as meaning the difference, to the extent not covered by any credit due to the taxpayer under Section 252, between the amount of the tax already paid and that which should have been paid) is discovered the taxpayer shall be notified thereof and shall have the right of an appeal and a hearing before an assessment is made. As soon as practicable, therefore, after a return is filed, whether by the taxpayer or as provided in section 3176 Revised Statutes, as amended, it is examined and if a tax or a deficiency in tax is discovered, the taxpayer shall be notified thereof by registered mail and a period of not less than 30 days given the taxpayer in which to file an appeal to the Commissioner and show cause or reason why such tax or deficiency should not be paid. Full 30 days from the mailing (not the receipt) of such notice to file an appeal shall be given the taxpayer. The appeal must be filed in the office of the Commissioner in Washington within 31 days from the mailing of the notice, but if it is mailed in time to be received by the Commissioner within such period in the ordinary course of the mails it will be considered as having been filed within such period. No particular form of appeal is required, but the appeal must set forth specifically the exceptions upon which it is taken. The appeal shall be under oath and must contain a statement that it is not taken for the purpose of delay. The facts and grounds upon which the taxpayer relies in connection with his appeal must be fully stated.

Upon the receipt of the appeal and before it is made the subject of a hearing by the agency designated by the Commissioner to hear such appeal, the appeal will be

referred to the income tax unit in Washington, or to the division thereof where such proposed assessment is being considered. The taxpayer may request a conference before the income tax unit to be held within a period prior to the expiration of five days after the time for the filing of an appeal. Five days prior to the expiration of the time allowed for a conference the taxpayer shall submit all data and briefs upon which he relies in connection with his appeal. If the income tax unit and the taxpayer are unable to reach an agreement respecting the amount of the proposed assessment, the appeal shall be transmitted to such agency as the Commissioner may designate for consideration and hearing. Opportunity for a hearing before the appeal agency shall be granted if requested within a reasonable time in accordance with the practice and procedure of such agency. The taxpayer in his appeal may rely upon data previously submitted, or he may obtain a reasonable extension of time, if cause therefor is shown, in which to file additional data, evidence or argument.

Such request shall be under oath and must state specifically the reasons for additional time.

In the case of a return which is examined in the collector's office where a tax or deficiency therein is discovered, the taxpayer will be notified thereof by registered mail and the same period given the taxpayer in which to file an appeal to the Commissioner and show cause or reason why such tax or deficiency should not be paid. Such appeal shall be filed in the manner prescribed above. The appeal will be referred to the collector's office where such proposed assessment is being considered. The procedure in connection with such appeal shall be the same as hereinbefore provided in the case of appeals from the decision of the income tax unit.

No assessment under section 250 (d) shall be made without notification to the taxpayer of his right to appeal and show cause, except that in any case where the Commissioner believes that the collection of the amount due will be jeopardized by delay, he may make the assessment without giving such notice or awaiting the conclusion of a hearing.

Where a taxpayer has been given an opportunity to appeal and has not done so, as above set forth, and an assessment has been made, or where a taxpayer has appealed and an assessment in accordance with the final decision on such appeal has been made, no claim in abatement of the assessment shall be entertained.

Where an assessment has been made without giving the taxpayer an opportunity to appeal or without awaiting a decision on an appeal that has been perfected, a bona fide claim in abatement of the assessment, filed within ten days after notice and demand by the collector, may be entertained. (Art. 1006, as amended by T. D. 3409, Nov. 13, 1922.)

STATEMENT WITH REPORT OF INSPECTOR--PRELIMINARY HEARING.—As a first step, not specifically provided for in the regulations, it is sometimes helpful, when an examination has developed points of dispute between taxpayer and revenue agent, to prepare a statement of relevant facts, furnish one copy to the revenue agent with a request that it be forwarded to the Treasury, and send another copy, with affidavit attached, to the personal or corporation audit department (as the case may be) of the Income Tax Unit at Washington. This is not an amended return, but merely insures full presentation of taxpayer's side of case for consideration by the audit section, which also has before it the report of the revenue agent. If taxpayer does not feel that his statement, unsupported by oral evidence, is sufficient, he may in the copy forwarded to Washington request a hearing and an opportunity to submit additional evidence should it appear to the audit section that an adverse report is likely. Usually, if such request is filed, taxpayer is granted a hearing in person or by attorney before additional tax is assessed against him. After the hearing a decision is made by the audit section from which the usual appeal can be taken.

NOTICE OF PROPOSED ASSESSMENT.—If the Commissioner's audit (which may or may not include consideration of taxpayer's statement and preliminary hearing outlined in preceding paragraph) indicates that an

additional assessment is justified, "the taxpayer shall be notified thereof and given a period of not less than thirty days after such notice is sent by registered mail in which to file an appeal and show cause or reason why the tax or deficiency should not be paid."[16]

Generally, an **assessment letter** is accompanied by a form asking taxpayer either to consent to the additional tax or to protest against it. If taxpayer consents to the assessment, he waives his rights to a hearing and appeal under Sec. 250 (d). These forms should not be signed without proper advice. Taypayers should also be sure that they understand what action has been taken on claims for refund, credit, or abatement which may be on file. Sometimes an assessment letter may show an overpayment, but when consideration is also given to a claim for abatement previously filed which has been rejected, the "overpayment" becomes merely a partial offset to a larger amount of additional tax.

PROTEST AND APPEAL.—All communications from the Commissioner regarding additional assessments should receive prompt attention. In many cases, especially where the amount involved is very large, it is not possible to file a complete brief taking up in detail the proposed assessment. In such cases, it should be sufficient, as is contemplated by Art. 1006, to file the formal appeal, setting forth the items which will be contested and the general reasons why the tax should not be paid. These reasons should be specific enough to enable the Treasury to decide whether or not the contentions are meritorious.

Taxpayers should request reasonable extensions of time in which to prepare properly the details of their cases. In complicated cases an oral hearing should be requested, since the questions involved are of the same nature as in litigated cases.

Form of Appeal.—An appeal must be in affidavit form and contain a statement that it is not taken for the purpose of delay. These are the only requirements set forth in the regulations. The form shown on p. 1567 may be used in most cases.

PROCEDURE UPON ASSESSMENT.—After final decisions are made, or if appeals are not made within specified time, the proposed assessments are included in next list sent to collector by the Commissioner. Upon receipt of lists, collector issues notice and demand for payment as soon as possible. The tax must be paid within 10 days after notice and demand. The collector cannot accept a claim in abatement. If taxpayer still wishes to contest assessment, a claim for refund may be filed immediately after payment is made—a procedure necessary in order to file suit. Under all circumstances payments should be made **under protest.**

TIME LIMITS ON SUMMARY ASSESSMENTS.—

Law. Sec. 250. . . . . (d) The amount of income, excess-profits, or war-profits taxes due under any return made under this Act for the taxable year 1921 or succeeding taxable years shall be determined and assessed by the Commissioner within four years after the return was filed, and the amount of any such taxes due under any return made under this Act for prior taxable years or under prior income, excess-profits, or war-profits tax Acts, or under section 38 of the Act entitled "An Act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," approved August 5, 1909, shall be determined and assessed within five years after the return was filed, unless both the Commissioner and the taxpayer consent in writing to a later determination, assessment, and collection of the tax; and no suit or proceeding for the collection of any such taxes due under this Act or under prior income,

[16] Sec. 250 (d).

TREASURY DEPARTMENT

BUREAU OF INTERNAL REVENUE

IN THE MATTER OF JOHN SMITH & CO., INC. } APPEAL

TO THE COMMISSIONER OF INTERNAL REVENUE:

The above named taxpayer is in receipt of a registered letter, dated . . . ., advising it that it has been decided that a proposed additional income tax of $. . . . . ., for the years . . . ., will be assessed after the expiration of thirty days unless an appeal is filed within that time.

Accordingly an appeal is hereby taken from such decision, which it is understood was rendered by the . . . . (Division, Subdivision or Section, as the case may be) of the Income Tax Unit.

STATEMENT OF FACTS

. . . .

EXCEPTION No. I

THE TAXPAYER TAKES EXCEPTION TO THE INCOME TAX UNIT'S REDUCTION OF THE DEPRECIATION RATE FOR MACHINERY AND EQUIPMENT FROM 10 PER CENT TO 7½ PER CENT.

The above taxpayer is engaged in manufacturing cotton goods. It has for the past six years, the period of its existence, depreciated machinery and equipment at the rate of 10 per cent per annum.

Proof has been submitted to show that, under the circumstances, 10 per cent per annum is a reasonable rate of depreciation.

EXCEPTION No. II

. . . .

EXCEPTION No. III

. . . .

CONCLUSION

. . . .

The taxpayer requests an oral hearing, and reserves the right to submit additional evidence and a supplementary brief.

This appeal is not taken for the purpose of delay.

Respectfully,

Dated. . . . . JOHN SMITH & CO., INC.

By . . . .

(Name of official)

STATE OF. . . . . } ss.
COUNTY OF. . . . . }

. . . . of full age, being duly sworn according to law, on his oath says that he is the. . . . . of the above named company, that the facts set forth in the foregoing appeal to the Commissioner of Internal Revenue are true to the best of deponent's knowledge and belief.

. . . .

(Name of official)

Subscribed and sworn to before me this. . . . . .day of. . . . . .192. .

. . . .

Notary Public

Specimen Appeal

excess-profits, or war-profits tax Acts, or of any taxes due under section 38 of such Act of August 5, 1909, shall be begun, after the expiration of five years after the date when such return was filed, but this shall not affect suits or proceedings begun at the time of the passage of this Act: *Provided*, That in the case of income received during the lifetime of a decedent, all taxes due thereon shall be determined and assessed by the Commissioner within one year after written reouest therefor by the executor, administrator, or other fiduciary representing the estate of such decedent: *Provided further*, That in the case of a false or fraudulent return with intent to evade tax, or of a failure to file a required return, the amount of tax due may be determined, assessed, and collected, and a suit or proceeding for the collection of such amount may be begun, at any time after it becomes due: *Provided further*, That in cases coming within the scope of paragraph (9) of subdivision (a) of section 214, or of paragraph (8) of subdivision (a) of section 234, or in cases of final settlement of losses and other deductions tentatively allowed by the Commissioner pending a determination of the exact amount deductible, the amount of tax or deficiency in tax due may be determined, assessed, and collected at any time; but prior to the assessment thereof the taxpayer shall be notified and given a period of not less than thirty days in which to file an appeal and be heard as hereinafter provided in this subdivision. . . . .

The tax must be both determined and assessed within limitation period.

Limitation Period 5 Years Under 1918 and Prior Laws.—The limitation period of the 1918 law is not disturbed, but in case of all acts prior to the 1918 law, the period is increased to 5 years by the 1921 law. Before this change, the government, notwithstanding that assessment could not be made, could bring suit at any time under laws prior to the 1918 act. The 1921 law provides that neither assessment nor suit under 1918 and prior laws shall be legal after the 5-year limitation period has expired.

Limitation Period 4 Years Under 1921 Law.—Any tax due under a return filed for the taxable year 1921, or any subsequent year, must be assessed within 4 years after the return was filed. If any tax is due under any return made under the 1921 law for prior taxable years, the assessment must be made within 5 years after the return was filed. The limitation period for taxes under the 1921 law is not the same for assessment and suit. Assessment must be made within 4 years and suit or proceedings must be instituted within 5 years after return is filed.

Limitation Period 1 Year in Case of Estates.—Sec. 250 (d) provides, "that in case of income received during the lifetime of a decedent, all taxes due thereon shall be determined and assessed by the Commissioner within one year after written request therefor by the executor, administrator, or other fiduciary representing the estate of such decedent." A request for determination must be made by the executor. Such an application should be rendered unnecessary by more expeditious handling of returns. This section does not apply to the income of the decedent's estate but only to that received by the decedent during his lifetime.

The 1-year period does not apply to suits. The government has 5 years after the return was filed within which to institute suit.

No Limitation Period in Case of False or Fraudulent Return.—Under the provisions of Sec. 250 (d) if a taxpayer files a false or fraudulent return with intent to evade tax, or has failed to file a required return, an assessment may be made or suit instituted at any time.

Limitation Period Where Amortization Is Claimed or Deductions Are Tentatively Allowed.—The last proviso of Sec. 250 (d) is of especial importance to taxpayers who have filed amortization claims. It appears that if amortization has been claimed or if the Commissioner has tentatively allowed a deduction, the Commissioner may reopen the case to make an

assessment or bring suit at any time. The assessment or suit must be confined to amortization or to the deduction tentatively allowed. The other limitation periods of Sec. 250 (d) apply to other items of the return.

Law. Sec. 214. (a) . . . . (9) . . . . At any time before March 3, 1924, the Commissioner may, and at the request of the taxpayer shall, reexamine the returns and if he then finds as a result of an appraisal or from other evidence that the deduction originally allowed was incorrect, the income, war-profits, and excess-profits taxes for the year or years affected shall be redetermined; and the amount of tax due upon such redetermination, if any, shall be paid upon notice and demand by the collector, or the amount of tax overpaid, if any, shall be credited or refunded to the taxpayer in accordance with the provisions of section 252; . . . .

The rule of law is that a specific section controls a general section. It might be thought that each section is specific. A careful reading shows, however, that Sec. 214 is specific with reference to the deduction for amortization, whereas Sec. 250 is specific with reference to limitation. Should the courts hold that Sec. 214 governs Sec. 250, the Commissioner would have to complete all re-examinations of amortization claims before Mar. 3, 1924, but could make an assessment or bring suit thereon at any time thereafter.

Limitation Period may be Extended by Agreement.—A provision included in Sec. 250 (d) makes it possible to extend the time limit on assessments by consent of Commissioner and taxpayer.

No Limitation Period for Examination of Books.—There is no time limit on the right of the Commissioner or collectors to examine the books of a taxpayer, but under the 1921 law[17] no tax can be assessed by the government after 4 years from filing of return (excepting with consent of the taxpayer) unless fraud is alleged.[18]

PROCEDURE WHEN TAX IS IN JEOPARDY.—Sec. 250 (d) quoted on p. 1566, provides that in cases where the Commissioner believes that collection of tax will be jeopardized by delay due to appeal, he may make the assessment without giving notice or awaiting the conclusion of a final hearing. In such a case, if the collector will accept it, claim for abatement may be filed. If claim is accepted, collector will no doubt require a bond or security. Merits of the case would then be fought out under a claim in abatement. If collector refuses to accept a claim in abatement, tax must be paid and a claim for refund filed.

Ruling. The probable run of the statute of limitations against the Government as a result of which it would be precluded from bringing suit or proceedings against the taxpayer constitutes jeopardy within the meaning of section 250 (d) of the Revenue Act of 1921 and under such circumstances the Commissioner may assess the tax without giving the notice or awaiting the conclusions of the hearing provided for in said section. (C. B. I–1, p. 305; I. T. 1333.)

WHERE TAXPAYER HAS NOT BEEN PROPERLY NOTIFIED.—Sec. 250 (d) specifically provides that in the case of an additional assessment " . . . . the taxpayer shall be notified thereof and given a period of not less than thirty days after such notice is sent by registered mail in which to file an appeal. . . . . Opportunity for hearing shall be granted and a final decision thereon shall be made as quickly as practicable. . . . ."

The foregoing section applies to the 1916, 1917, 1918, and 1921 laws.

---

[17] Sec. 250 (d).

[18] Sec. 250 (d) also provides that the assessment must be made within 5 years, for taxes applicable to years prior to 1921.

Therefore, any assessment made after Nov. 23, 1921, the date of enactment of the 1921 law, is illegal if the above section has not been followed.[19]

ADDITIONAL ASSESSMENTS BEAR INTEREST.—The assessment bears interest from date tax was due.

Law. Sec. 250. . . . . (b) . . . . If the amount already paid is less than that which should have been paid, the difference, to the extent not covered by any credits due to the taxpayer under section 252 (hereinafter called "deficiency"), together with interest thereon at the rate of one-half of 1 per centum per month from the time the tax was due (or, if paid on the installment basis, on the deficiency of each installment from the time the installment was due), shall be paid upon notice and demand by the collector. . . . .

The foregoing provision applies only to returns for 1921 and subsequent years.

ASSESSMENT WHEN CONSOLIDATION RETURNS ARE FILED.—

Law. Sec. 240. . . . . (b) In any case in which a tax is assessed upon the basis of a consolidated return, the total tax shall be computed in the first instance as a unit and shall then be assessed upon the respective affiliated corporations in such proportions as may be agreed upon among them, or, in the absence of any such agreement, then on the basis of the net income properly assignable to each. There shall be allowed in computing the income tax only one specific credit computed as provided in subdivision (b) of section 236.

The foregoing formula for apportionment of taxes is modified in the case of consolidated returns for 1917 filed by corporations and partnerships, thus:

Ruling. It is held, therefore, that where corporations and partnerships are consolidated the excess profits tax should be allocated to the partnerships as a group according to the invested capital and net income assignable to the partnership group. After the proper amount of the excess profits tax has been allocated to the partnership group, article 78 may then be applied within the partnership group as it is now applied within the corporation group. (C. B. I–1, p. 295; L. O. 1083.)

FINAL DETERMINATION AND ASSESSMENT.—The law provides that a case, under certain conditions, may be finally determined, thus overcoming the uncertainty which has heretofore existed as to when a tax case was actually closed.

Law. Sec. 1312. That if after a determination and assessment in any case the taxpayer has without protest paid in whole any tax or penalty, or accepted any abatement, credit, or refund based on such determination and assessment, and an agreement is made in writing between the taxpayer and the Commissioner, with the approval of the Secretary, that such determination and assessment shall be final and conclusive, then (except upon a showing of fraud or malfeasance or misrepresentation of fact materially affecting the determination or assessment thus made) (1) the case shall not be reopened or the determination and assessment modified by any officer, employee, or agent of the United States, and (2) no suit, action, or proceeding to annul, modify, or set aside such determination or assessment shall be entertained by any court of the United States.

To bring about such a **final determination,** there must be (1) an agreement in writing between the taxpayer and the Commissioner, and (2) the agreement must be approved by the Secretary of the Treasury. In case of a corporation a certified copy of the minutes of the board of directors authorizing an officer to sign the agreement must be filed with the Treasury. The agreement should be executed in duplicate. (See Art. 1141.)

When taxpayers wish to enter into an agreement under Sec. 1312, a formal request should be addressed to the Commissioner.

---

[19] The Treasury has ruled that where an assessment was made prior to this date the taxpayer is not entitled to the benefit of this provision. (C. B. I–1, p. 305; I. T. 1200.)

Ruling. In connection with the closing of cases under section 1312 taxpayers are required to obtain a statement from the local collector of internal revenue showing the amount of taxes paid for the period to be closed by the agreement. This requirement has been made in the interest of expeditious action on taxpayers' requests for agreements in view of the fact that the Bureau is not in possession of the record as to payments, this matter being recorded only in the offices of the local collectors. The taxpayer is usually in the possession of complete data as to the total payments made by years and by tabulating them in such manner as to permit the collector's office to verify them promptly the entire proceeding is very materially expedited. (I-33-460; I. T. 1421.)

Forms of Agreement Between Commissioner and Taxpayer.—An agreement may be made under the following conditions:

1. Where an assessment has been paid without protest.
2. Where an assessment has been made and the Commissioner has abated the tax in part or in full.
3. Where an assessment has been made and the Commissioner has credited the tax in part or in full.
4. Where the Commissioner has allowed a refund.

Case 1 is covered by **Form A.**

THIS AGREEMENT, made this ....day of.................. ...., 19 , under and in pursuance of Section 1312 of the Revenue Act of 1921, by and between...... ....

a taxpayer residing at.......having its principal office or place of business at ....

and the COMMISSIONER OF INTERNAL REVENUE, with the approval of the SECRETARY OF THE TREASURY:

WHEREAS, There has been a determination and assessment of. ....(\$......) as the amount of tax .. .. .penalt... ....due the United States of America from said taxpayer on account of.......... . ... and,

WHEREAS, said taxpayer has without protest paid in whole the amount of tax.... .....penalt......... ...so determined and assessed.

NOW, THIS AGREEMENT WITNESSETH: That said taxpayer and said COMMISSIONER OF INTERNAL REVENUE, with the approval of the SECRETARY OF THE TREASURY, hereby mutually agree that such determination and assessment shall be final and conclusive.

IN TESTIMONY WHEREOF, the parties to these presents have hereunto set their hands and seals the day and year first above written.

....
TAXPAYER

Signed, sealed and delivered in the presence of:

By..
....
COMMISSIONER

....
....

APPROVED:
....
SECRETARY

(Note. Strike out inapplicable language.)

FORM "A" (734M)

Case 2 is covered by **Form B,** which is the same as Form A except immediately after colon at end of first paragraph there should be substituted:

. . . .

WHEREAS, on or about the. . . . . .day of. . . . ., 19. ., there was assessed against the taxpayer the sum of. . . . .($. . . . . . .), as the amount of tax. . . . . .penalt. . . . . .due the United States of America from the taxpayer on account of. . . . ., and,

WHEREAS, There has been a determination by the Commissioner that the sum of. . . . .($. . . . .) is the correct amount of tax . . . . .penalt. . . . . .due the United States of America from the taxpayer on account of said. . . . ., and,

WHEREAS, The Commissioner has made an abatement, based on such determination and such assessment, of the sum of. . . . .($. . . . . .) and the taxpayer has accepted such abatement;

NOW, THIS AGREEMENT WITNESSETH: That the taxpayer and the COMMISSIONER OF INTERNAL REVENUE, with the approval of the SECRETARY OF THE TREASURY, hereby mutually agree that such determination of the sum of. . . . . ($. . . . . .) as the correct amount of tax. . . . . .penalt. . . . . .due from the taxpayer on account of said . . . . and such assessment as abated in accordance with such determination, shall be final and conclusive.

IN TESTIMONY WHEREOF . . . .

FORM "B" (735M)

Case 3 is covered by **Form C,** which is the same as Form A except immediately after colon at end of first paragraph there should be substituted:

. . . .

WHEREAS, on or about the. . . . . .day of . . . ., 19. ., there was assessed against the taxpayer the sum of. . . . . ($ . . . .) as the amount of tax. . . . . due the United States of America from the taxpayer on account of. . . . ., and,

WHEREAS, the taxpayer, pursuant to such assessment, on or about the. . . . . .day of. . . . ., 19. ., paid the sum of. . . . . ($. . . . .) as tax. . . . . .due the United States of America on account of said . . . ., and,

WHEREAS, there has been a determination by the Commissioner that the sum of. . . . .($. . . . .) is the correct amount for which the taxpayer was liable on account of said. . . . ., and,

WHEREAS, the Commissioner has made a credit, based on such determination and such assessment, of the sum of. . . . . ($. . . . .) against tax. . . . . .due from the taxpayer on account of. . . . . and the taxpayer has accepted such credit;

NOW, THIS AGREEMENT WITNESSETH: That the taxpayer and the COMMISSIONER OF INTERNAL REVENUE, with the approval of the SECRETARY OF THE TREASURY, hereby mutually agree that such determination of the sum of. . . . . ($. . . . .) as the correct amount of tax. . . . . for which the taxpayer was liable on account of said. . . . . and such assessment as reduced by the amount credited as aforesaid, shall be final and conclusive.

IN TESTIMONY WHEREOF . . . .

FORM "D" (737M)

FINAL DETERMINATION OF CLAIMS.—

Law. Sec. 1313. That in the absence of fraud or mistake in mathematical calculation, the finding of facts in and the decision of the Commissioner upon (or in case the Secretary is authorized to approve the same, then after such approval) the merits of any claim presented under or authorized by the internal-revenue laws shall not be subject to review by any other administrative officer, employee, or agent of the United States.

It is possible, notwithstanding the heading, that Congress intended this section to apply only to claims filed by the taxpayer. Sec. 1312 is confined, to a "determination and assessment in any case the taxpayer has without protest paid in whole any tax . . . . or accepted any abatement, credit, or refund based on such determination and assessment." It is possible that Sec. 1312 is intended to apply to cases initiated by the government, and Sec. 1313 to cases initiated by the taxpayer.

WHEN MAY CASE BE REOPENED?—The following decision[20] is of interest in connection with cases which have been closed under laws prior to the 1921 law. It is also of interest in connection with Secs. 1312 and 1313. The courts will no doubt insist upon a strict application of these sections.

[20] *Penrose* v. *Skinner*, 278 Fed. 284.

Decision. . . . . No authority has been vested in a commissioner to overrule and reverse the action of his predecessor in office. Commissioner Osborne, acting under his authority, heard and determined a question of fact necessary to enable him to act intelligently in ascertaining and determining the amount of plaintiff's net income on which he would be required to make the levy and assessment, and his finding on that issue not having been impeached by the answer should, under every principle and rule of law, be regarded here as final. . . . .

There is no doubt that an allowance by the Commissioner may be impeached anywhere for fraud, for that avoids all contracts into which it enters as against the party defrauded; or for want of jurisdiction, or for a mistake apparent upon the certificate of allowance; or generally for such other irregularities in the proceedings as would avoid an award made by arbitration so far as the proceedings are similar; but not for what might seem to others to be a mere mistake of judgment in the weighing and giving force and effect to evidence.

PROCEDURE TO REOPEN A CASE.—The following ruling applies to cases which have been finally settled by the Treasury. It does not apply to cases closed under Secs. 1312 and 1313 of the 1921 law.

Ruling. Where any case in the Bureau of Internal Revenue has been finally closed after the taxpayer, or other party thereto, has had a hearing or has been afforded by written notice an opportunity to present oral or written arguments or statements of fact in support of his contentions, the case will not be reopened except (1) where a showing is made of new and material facts, accompanied by an explanation, satisfactory to the Commissioner of Internal Revenue, of the failure to produce such facts prior to the closing of the case, or (2) where the case is materially affected by the change of regulations or by the final decision of another case either by the Commissioner of Internal Revenue or by a court of competent jurisdiction. The application for reopening a case should be addressed to the Commissioner of Internal Revenue, should state succinctly the facts and circumstances upon which the application is based, and must be supported by the affidavit of a person having knowledge of the facts.

This decision is not to be construed as modifying the regulations relating to the filing of claims in abatement or claims for refund, nor as denying the right of a taxpayer to a hearing or to an appeal at any stage of his case until the case has been finally closed. After the taxpayer has exhausted his remedies within the Bureau, however, and the case has been finally closed, it will be reopened only under the conditions stated in the decision. (C. B. 5, p. 313; T. D. 3240.)

Procedure in Cases Arising Prior to T. D. 3269.—Prior to the passage of the 1921 law (Nov. 23, 1921) and issuance of T. D. 3269,[21] it was contrary to the policy of the Treasury to permit an appeal to Committee before assessment. That is, a proposed assessment was not withheld pending an appeal. Consequently, there are now many cases pending before the Committee on Appeals and Review. There are others which have been assessed and formal appeal not yet made. The present procedure should not affect any of these cases.

Taxpayers were advised to file claims in abatement pending an appeal,[22] and collectors should be notified by the Secretary of the Treasury to postpone any action looking to collection until final decisions by the Committee are handed down.

CLAIMS PROCEDURE.—The procedure of the Treasury should provide for an orderly appeal to the Commissioner in cases where the Unit has ruled adversely on a claim for abatement, refund or credit.

In view of the provisions of the 1921 law, all decisions of the Unit should be sent to taxpayers and their right to dissent and appeal made clear.

A rule should be made that taxpayers be notified by letter that the Unit has rejected their claims and that they have, say, 30 days, to give notice of

[21] This T. D. was incorporated in Art. 1006 as originally issued.
[22] C. B. 3, p. 370; O. D. 709

appeal to the Commissioner. If notice of appeal is not filed, collectors may reasonably demand payment in case of rejected claims for abatement or credit. Until such a rule is promulgated, taxpayers should notify the Treasury when claims are filed that if the decision of the Unit is adverse, right of appeal to the Commissioner is requested before the claims are formally rejected.

CONTEMPLATED EVASION.—

Law. Sec. 250. . . . . (g) If the Commissioner finds that a taxpayer designs quickly to depart from the United States or to remove his property therefrom, or to conceal himself or his property therein, or to do any other act tending to prejudice or to render wholly or partly ineffectual proceedings to collect the tax for the taxable year then last past or the taxable year then current unless such proceedings be brought without delay, the Commissioner shall declare the taxable period for such taxpayer immediately terminated and shall cause notice of such finding and declaration to be given the taxpayer, together with a demand for immediate payment of the tax for the taxable period so declared terminated and of the tax for the preceding taxable year or so much of said tax as is unpaid, whether or not the time otherwise allowed by law for filing return and paying the tax has expired; and such taxes shall thereupon become immediately due and payable. In any action or suit brought to enforce payment of taxes made due and payable by virtue of the provisions of this subdivision the finding of the Commissioner, made as herein provided, whether made after notice to the taxpayer or not, shall be for all purposes presumptive evidence of the taxpayer's design. A taxpayer who is not in default in making any return or paying income, war-profits, or excess-profits tax under any Act of Congress may furnish to the United States, under regulations to be prescribed by the Commissioner with the approval of the Secretary, security approved by the Commissioner that he will duly make the return next thereafter required to be filed and pay the tax next thereafter required to be paid. The Commissioner may approve and accept in like manner security for return and payment of taxes made due and payable by virtue of the provisions of this subdivision, provided the taxpayer has paid in full all other income, war-profits, or excess-profits taxes due from him under any Act of Congress. If security is approved and accepted pursuant to the provisions of this subdivision and such further or other security with respect to the tax or taxes covered thereby is given as the Commissioner shall from time to time find necessary and require, payment of such taxes shall not be enforced by any proceedings under the provisions of this subdivision prior to the expiration of the time otherwise allowed for paying such respective taxes.[23] In the case of a citizen of the United States about to depart from the United States the Commissioner may, at his discretion, waive any or all of the requirements placed on the taxpayer by this subdivision. No alien shall depart from the United States unless he first secures from the collector or agent in charge a certificate that he has complied with all the obligations imposed upon him by the income, war-profits, and excess-profits tax laws. If a taxpayer violates or attempts to violate this subdivision there shall, in addition to all other penalties, be added as part of the tax 25 per centum of the total amount of the tax or deficiency in the tax, together with interest at the rate of 1 per centum per month from the time the tax became due. . . . .

Persons Going Abroad Must Present Certificates of Compliance.—

Ruling. In order to obtain income tax clearance, American citizens planning to leave the United States are required to present their certificates of compliance or receipts showing payment of income tax, at the office of the internal revenue agent in charge at the port of embarkation, rather than to the internal revenue agent at the pier. (C. B. 3, p. 301; O. D. 666.)

This ruling was issued under the 1918 law. The present law gives the Commissioner power to waive this requirement as to citizens of the United States and it is waived. Aliens departing from the United States must present evidence that they have satisfied their income tax obligations. The Internal Revenue officers cannot investigate the status of an alien as resident

[23] The portion of this subdivision following this point was added to the provision of the 1918 law.

or non-resident before sailing. Many aliens when leaving the United States are classed as non-residents. Often residents are erroneously classed as non-residents, in which case claims for refund may be filed after the aliens return.

Payment of Tax

PAYMENT IN INSTALMENTS.—The law permits the taxpayer either to divide his tax into four instalments, spread evenly throughout the year, or to pay it in a lump sum at time of filing return.

Law. Sec. 250. (a) That except as otherwise provided in this section and sections 221 and 237 [payment at the source] the tax shall be paid in four installments, each consisting of one-fourth of the total amount of the tax. The first installment shall be paid at the time fixed by law for filing the return,[24] and the second installment shall be paid on the fifteenth day of the third month, the third installment on the fifteenth day of the sixth month, and the fourth installment on the fifteenth day of the ninth month, after the time fixed by law for filing the return. Where an extension of time for filing a return is granted the time for payment of the first installment shall be postponed until the date of the expiration of the period of the extension, but the time for payment of the other installments shall not be postponed unless the Commissioner so provides in granting the extension. In any case in which the time for the payment of any installment is at the request of the taxpayer thus postponed, there shall be added as a part of such installment interest thereon at the rate of ½ of 1 per centum per month from the time it would have been due if no extension had been granted, until paid. If any installment is not paid when due, the whole amount of the tax unpaid shall become due and payable upon notice and demand by the collector.

The tax may at the option of the taxpayer be paid in a single payment instead of in installments, in which case the total amount shall be paid on or before the time fixed by law for filing the return, or, where an extension of time for filing the return has been granted, on or before expiration of the period of such extension.

It should be noted that the extension of time for filing the return ordinarily operates to extend the time of payment of the first instalment only.

Ruling. Where an understatement of the tax in a return is not attributable to negligence or fraud and a taxpayer accordingly fails to pay at least one quarter of the tax due at the time for filing the return, he does not lose his right to make installment payments. (C. B. 4, p. 317; Digest O. D. 961.)

NOTICE OF PAYMENT DUE.—The law states that the tax "shall be paid" at dates fixed by Sec. 250 (a) quoted above, but penalties cannot be imposed until notice and demand has been made in accordance with the following:

Law. Sec. 250. . . . . (e) . . . . In the case of the first installment provided for in subdivision (a) the instructions printed on the return shall be sufficient notice of the date when the tax is due and sufficient demand, and the taxpayer's computation of the tax on the return shall be sufficient notice of the amount due. In the case of each subsequent installment the collector may, within thirty days and not later than ten days before the installment becomes due, mail to the taxpayer notice of the amount of the installment and the date on which it is due for payment. Such notice of the collector shall be sufficient notice and sufficient demand under this section. . . . .

Subdivision (h) of this section makes this change retroactive with respect to the 1917 and 1918 laws.

If taxpayers wait for notice from collector on second and third installments, they run the risk of being called upon to pay all the remaining installments at once, for subdivision (a) of Sec. 250, which fixes the dates when

[24] The 15th day of the 3rd month following the close of the taxable year—Mar. 15 in case the calendar year is used.

the instalments must be paid, provides that "if any instalment is not paid when due, the whole amount of the tax unpaid shall become due and payable upon notice and demand by the collector." In case of the fourth instalment taxpayers can postpone payment until they receive notice in accordance with Sec. 250 (e) without incurring this risk. In no case can penalty or interest be assessed until proper notice has been given.

Additional Notice in Cases of Absence.—In special cases where, for causes such as absence, there is delay in receiving mail, additional time is allowed.

Regulation. . . . . By reason, however, of the absence from home or place of business in a foreign country or in the military or other service of the country and the consequent delay in receiving mail, or by reason of the location of the residence of an individual or of the office of a corporation to which the notice was addressed at a distance from the collector's office, it is frequently impossible for a taxpayer to receive notice and demand and to make payment of the tax so that such payment may be received by the collector within the 10-day period (following the service of notice and demand). In all such cases the collector will enter on the notice as the date on which the tax becomes due and payable a date as nearly as possible 10 days after the time that the notice should be received in the ordinary course of the mails by the taxpayer. In such cases where it is established that a remittance for the tax was placed in the mails within the 10-day period after the due date specified in the notice, and tardiness was occasioned because the notice was not delivered in due time by reason of delay in the mail and satisfactory evidence of that fact is furnished, the penalty and interest will not be collected. (Art. 1007.)

Ruling. A taxpayer having filed his return and paid the first installment of tax is aware of his liability to pay the balance of the tax on the respective due dates, and failure to receive notice and demand for the payment of the later installments by reason of his absence from this country does not constitute a sufficient cause for waiving the penalty and interest on any installment of the tax not paid when due. (C. B. 2, p. 236; O. D. 408.)

Notice Required in All Cases.—The law binds Commissioner and collectors to give ample notice of all proceedings, including imposition of penalties. Notices must allow sufficient time to the taxpayer to produce evidence supporting his original returns, or to pay within the statutory time of 10 days after formal demand.

CALCULATING INTEREST.—

Ruling. (a) Where interest is collectible at the rate of 1 per cent per month from the due date interest must be collected for the fractional part of a month where the tax is not paid within 10 days from notice and demand for payment.

(b) Under sections 502, 504, 629, 903, and 905,[25] interest is collectible at the rate of 1 per cent for each full month, and fractional parts of a month must be disregarded.

(c) Interest is collectible from the month tax becomes due. (C. B. 1, p. 244; O. 884.)

WHEN A CORPORATION LIQUIDATES.—

Regulation.[26] A corporation going into liquidation during any taxable year may upon the completion of such liquidation prepare a return covering its income for the fractional part of the year during which it was engaged in business and may file immediately such return with the collector. . . . .

When a corporation is dissolved, its affairs are usually wound up by a receiver or trustees in dissolution. The corporate existence is continued for the purpose of liquidating the assets and paying the debts, and such receiver or trustees stand in the stead of the corporation for such purposes. Any sales of property by them are to be treated

---

[25] Sec. 502 relates to taxes due on transportation and telegraph, etc., service; section 504, to taxes due on insurance policies issued; section 629, to taxes due on soft drinks; sections 903 and 905, to taxes due on luxuries.

In the detailed ruling by the Treasury, it is stated: "Heretofore this office has held repeatedly that no interest for a fraction of a month shall be demanded."

[26] See C. B. 4, p. 279; O. D. 821.

as if made by the corporation for the purpose of ascertaining the gain or loss. . . . (Reg. 62, 1922, Art. 548.)

Rulings. Where a corporation dissolves and distributes all of its assets prior to the time the list carrying an assessment of additional tax against the corporation comes into the hands of the collector, the tax is not collectible upon notice and demand followed by distraint, but may be recovered only by means of a suit instituted against the stockholders or other persons who may have received the corporation's assets, except bona fide purchasers for a valuable consideration and creditors. (C. B. 4, p. 324; O. D. 769.)

Where a corporation dissolves and disposes of its assets without making provision for the payment of its accrued Federal income tax liability for the tax follows the assets so distributed, and upon failure to secure the unpaid amount suit to collect the tax should be instituted against the stockholders and other persons receiving the property, except bona fide purchasers for a valuable consideration. The penalties prescribed in section 253 of the Revenue Act of 1918 will attach to the principal officers of the corporation upon failure to comply with the provisions of that section. (C. B. 3, p. 300; O. D. 597.)

Receivers Personally Responsible—When? In *Pennsylvania Cement Company* v. *Bradley Contracting Company* (274 Fed. 1003), receivers were directed not to declare a dividend to creditors before federal taxes had been adjusted, because they could be held personally responsible for the taxes under Secs. 3466 and 3467 of the Revised Statutes.

WHEN DELINQUENT ASSESSMENT PAYABLE.—

Law. Sec. 250. . . . . (c) If the return is made pursuant to section 3176[27] of the Revised Statutes as amended, the amount of tax determined to be due under such return shall be paid upon notice and demand by the collector.

The tax levied by collectors must be paid if (after an appeal to the Commissioner) the assessment is confirmed, even if, in opinion of taxpayer, it is in error. The U. S. Supreme Court has held that Congress has afforded a complete and adequate remedy at law open to all persons aggrieved by collection of an erroneous or illegal revenue tax, and that taxpayer must pay the tax and may then bring an action to recover it after appeal.

MEDIA OF PAYMENT.—

Payment May Be Made by Mailing Uncertified Checks.—Taxes may be paid to the collector by check and should be mailed at least a day or two before date fixed for payment. During the last few days of the payment period many taxpayers pay in person at the offices of the collectors. This causes congestion and delays. Use of mails is preferable and on the whole trustworthy.

The law[28] authorizes collectors of internal revenue to accept uncertified checks in payment of income and excess profits taxes.[29] Checks should be made payable to "Collector of Internal Revenue at (City), (State)" and be made collectible at par without deduction for exchange.

Ruling. A taxpayer who tenders a check whether certified or uncertified in payment for taxes is not released from his obligation until the check is paid. Where such a check is lost in the mails a Collector of Internal Revenue is not required, as a condition precedent to the issuing of a duplicate check by a taxpayer, to furnish bond indemnifying him against possible loss in connection with the first check. (C. B. 3, p. 371; O. D. 626.)

Payments in Treasury Notes or Certificates of Indebtedness.—

Law. Sec. 1325. That collectors may receive, at par with an adjustment for accrued interest, notes or certificates of indebtedness issued by the United States . . . . in payment of income, war-profits and excess-profits taxes and any other taxes payable other than by stamp, ...

---

[27] Sec. 3176 deals with the subject of false and fraudulent returns.
[28] Sec. 1325. See also Art. 1733.
[29] [Former Procedure]. The 1917 law (Sec. 1010) was the first to authorize collectors to accept uncertified checks in payment of taxes. (See T. D. 2627, 2666.)

Purchase of certificates of indebtedness affords a sound method of providing in advance for taxes. They may be purchased at par, and bear interest at a fair rate. They mature at various dates. Taxpayers can accumulate the certificates, as funds are available, at any time before tax payments are due and on due dates present them with the tax bills. In the meantime interest accrues.

EXTENDING DATE OF PAYMENT.—The law permits the Commissioner, under certain conditions, to extend date of payment of additional assessments.

Law. Sec. 250. . . . . (f) In the case of any deficiency (except where the deficiency is due to negligence or to fraud with intent to evade tax) where it is shown to the satisfaction of the Commissioner that the payment of such deficiency would result in undue hardship to the taxpayer, the Commissioner may, with the approval of the Secretary, extend the time for the payment of such deficiency or any part thereof for such period not in excess of eighteen months from the passage of this Act as the Commissioner may determine. In such case the Commissioner may require the taxpayer to furnish a bond with sufficient sureties conditioned upon the payment of the deficiency in accordance with the terms of the extension granted. There shall be added in lieu of other interest provided by law, as a part of such deficiency, interest thereon at the rate of two-thirds of 1 per centum per month from the time such extension is granted; except where such other interest provided by law is in excess of interest at the rate of two-thirds of 1 per centum per month. If the deficiency or any part thereof is not paid in accordance with the terms of the extension granted, there shall be added as part of the deficiency, in lieu of other interest and penalties provided by law, the sum of 5 per centum of the deficiency and interest on the deficiency at the rate of 1 per centum per month from the time it becomes payable in accordance with the terms of such extension.

Subdivision (h) of this section provides that the above shall also apply to any assessments which may be made under the 1917 and 1918 laws.

Regulation. . . . . The term "undue hardship" means more than an inconvenience to the taxpayer. It is defined as meaning that substantial financial loss or sacrifice will result to the taxpayer from making payments of the deficiency at the due date.

. . . . No extension of time may be granted under subdivision (f) of section 250 for the payment of any regular installment of tax due as shown by the original return of the taxpayer.

Any application for the extension must be made under oath on Form 1127 in accordance with instructions printed thereon and must be accompanied by evidence showing that undue hardship to the taxpayer would result if the extension were refused. The extension will not be granted on a general statement of hardship, but in each case there must be furnished a statement of the specific facts showing what, if any, financial loss or sacrifice will result if the extension is not granted. The application should, wherever practicable, contain a certified statement of assets and liabilities of the taxpayer.

The application, with the evidence, must be filed with the collector, who will at once transmit it to the Commissioner with his recommendations as to the extension. When it is received by the Commissioner it will be examined and within thirty days either rejected or tentatively approved.

Where the application is tentatively approved and a bond is required it must be filed with the collector within 10 days after the notification by the Commissioner that a bond is required. It shall be conditioned for the payment of the deficiency and applicable penalties, if any, and interest in accordance with the terms of the extension to be granted and shall be executed by a surety company holding a certificate of authority from the Secretary of the Treasury as an acceptable surety on Federal bonds and shall be subject to the approval of the Commissioner. In lieu of such a bond the taxpayer may file a bond secured by deposit of Liberty bonds or other bonds or notes of the United States equal in their total par value to the amount of the deficiency and applicable penalties, if any, and interest, as provided in section 1329 of the Revenue Act of 1921. (Art. 1014.)

If collectors insist on surety bonds in all cases, the "relief" will be barren because most taxpayers who cannot pay are also unable to comply with

the requirements of surety companies. If taxpayers are able to furnis bond, that fact should make the filing of bonds unnecessary. The Unite States has a first lien on the property of taxpayers and this is reasonabl protection. It is not fair to creditors whose claims are subordinate, tha surety bonds be demanded when taxpayers are unable to furnish them.

Rulings. A taxpayer protests against an additional assessment of tax for 1919 b filing a claim for abatement, and also requests an extension of time to make paymen under the provisions of section 250. Held, that where a taxpayer has not conceded th correctness of the tax assessed, a request for an extension of time to make paymen is not in order. (C. B. I-1, p. 311; I. T. 1290.)

Section 250 (f) of the Revenue Act of 1921 is applicable to deficiencies of income an excess profits tax under the Revenue Act of 1917 and the Revenue Act of 1918 not ye paid although assessment was made prior to November 23, 1921. (C. B. I-1, p. 31(I. T. 1199.)

. . . . Section 250 (f) is a relief provision and should be given a liberal rather tha a strict, construction. There is no element of bad faith present in connection with th returns of this company, nor is negligence to be imputed. It is believed that a deficienc in tax within the meaning of the Act appears as well in those cases where no tax wa shown by the face of the returns as in a case where less than the correct amount appears In the instant case the members of the corporation have undoubtedly reported in thei personal returns the profits of the M Company and have already paid a tax thereon Having in good faith reported as a personal service corporation, and the Bureau havin disallowed that classification and as a corporation found them subject to a certain tax the tax so found is believed to be a deficiency within the meaning of the Act and th Commissioner may in his discretion extend the time within which to make payment o the same. (I-32-453; I. T. 1417.)

RECEIPTS FOR TAXES PAID.—The law requires collectors to giv receipts only when requested to do so by taxpayers.

Law. Sec. 251. That every collector to whom any payment of any tax is made unde the provisions of this title shall upon request give to the person making such payment a full written or printed receipt, stating the amount paid and the particular account fo which such payment was made; and whenever any debtor pays taxes on account o payments made or to be made by him to separate creditors the collector shall, if requestec by such debtor, give a separate receipt for the tax paid on account of each creditor ir such form that the debtor can conveniently produce such receipts separately to his several creditors in satisfaction of their respective demands up to the amounts statec in the receipts; and such receipt shall be sufficient evidence in favor of such debtor to justify him in withholding from his next payment to his creditor the amount therein stated; but the creditor may, upon giving to his debtor a full written receipt acknowledging the payment to him of any sum actually paid and accepting the amount of tax paid as aforesaid (specifying the same) as a further satisfaction of the debt to that amount, require the surrender to him of such collector's receipt.

Ruling. . . . . Receipts are documents required by provisions of the internal revenue laws and by regulations made in pursuance thereof, within the meaning of section 3451 Rev. Stat., making it an offense to simulate or falsely or fraudulently execute or sign any document required by the internal revenue laws, or any regulation made in pursuance thereof, or to procure the same to be falsely or fraudulently executed, or to advise, aid in, or connive at such execution thereof. . . . .

The offense may be committed either where the receipt itself is a genuine receipt of the kind kept for that purpose in the office of the internal revenue collector but signed by the defendent without authority, or where, even if not a blank of the kind required to be kept, the blank itself is simulated or falsely or fraudulently executed and issued by a person who has no power or authority to do so. . . . . (T. D. 2874, June 23, 1919.)

Payment of Tax Under Protest

UNNECESSARY TO SUPPORT CLAIM FOR REFUND.—It is not necessary to pay under protest to secure a legal right to demand a refund

when it is believed that the tax has been erroneously assessed.[30] Sec. 3220 of Revised Statutes covers this point. The intention of the law is that no one shall be erroneously or excessively taxed. This intention is respected by the Commissioner of Internal Revenue.

FORM OF PAYMENT UNDER PROTEST.—In case of an additional assessment after examination, where facts upon which the government bases its claims are, in the opinion of taxpayer, unfounded and illegal when making the payment, a simple form of protest should be attached, e.g.:

I hereby protest against the assessment of the tax levied against me as evidenced in notice dated.........., on the ground that it is erroneous and illegal, and payment is hereby made solely to prevent the imposition of penalties threatened and the attachment of my property.

WHEN PAYMENT WAS MADE UNDER MISTAKEN TREASURY REGULATIONS.—It is not necessary to have paid under protest where a taxpayer prepared his returns in accordance with Treasury regulations, believing them to be correct, and, having been assessed thereon, paid the tax in due course.

PROOF OF INVOLUNTARY PAYMENTS REQUIRED IN CERTAIN ACTIONS AT LAW.—While involuntary payment need not be made under protest to secure a refund as provided by the act, in cases where recovery of taxes alleged to be illegally exacted is sought by an action at law, the federal courts have held that the claimant must show involuntary payment. In *City of Philadelphia* v. *Diehl, Collector*,[31] the U. S. Supreme Court said:

Decision. Where the party voluntarily pays the money, he is without remedy; but if he pays by compulsion of law, or under protest, or with notice that he intends to bring suit to test the validity of the claim, he may recover it back, if the assessment was erroneous or illegal, in an action for money had and received.

ARGUMENTS IN FAVOR OF PAYING UNDER PROTEST.— Although the Treasury states that a tax, if excessive, need not have been paid under protest to be recovered, certain cases indicate that a taxpayer should pay under protest to protect his right to sue for refund. The tendency is to waive formal protest.

In *Herold* v. *Kahn*,[32] the court said:

Decision. The proper administration of the fiscal affairs of the government, require that the payment of taxes should not be delayed by disputes as to their legality, but that the taxes should first be paid and all questions in regard to them be determined in suits brought for their refunding. It is a wise policy, therefore, that encourages the payment under protest of disputed taxes. Though there is some conflict in the dicta of the Supreme Court. we think that the true doctrine is that, when taxes are paid under protest that they are being illegally exacted, or with notice that the payer contends that they are illegal and intends to institute suit to compel their repayment, a sufficient foundation for such suit has been established.[33]

Actions to Restrain Payment of Taxes

If no claim for abatement is made, or if one is not permitted because a final decision has been made, or if claim is made and denied, the tax imposed must ordinarily be paid.

---

[30] It is, however, always wise to do so because the taxpayer may wish to institute suit.
[31] 5 Wall. 720, 72 U. S. 720, 18 L. Ed. 614.
[32] 159 Fed. 608, 86 C. C. A. 598.
[33] The mandate was recalled and amended in 163 Fed. 947, 90 C. C. A. 307, so as to include interest from the date of the judgment of the District Court.

SUITS NOT MAINTAINABLE.—

Law. Sec. 3224. [Rev. Stat.] [Barnes' Federal Code, Sec. 5123.] No suit for the purpose of restraining the assessment or collection of any tax shall be maintained in any court.

Exceptional Cases.—The U. S. Supreme Court in a very recent case[34] says, however:

Decision. . . . . It has been held by this court, in *Dodge* v. *Brady*, 240 U. S. 122, 126, that Section 3224 of the Revised Statutes does not prevent an injunction in a case apparently within its terms in which some extraordinary and entirely exceptional circumstances make its provisions inapplicable. See also *Dodge* v. *Osborn*, 240 U. S. 118, 122. In the case before us, a sale of grain for future delivery without paying the tax will subject one to heavy criminal penalties. To pay the heavy tax on each of many daily transactions which occur in the ordinary business of a member of the exchange, and then sue to recover it back, would necessitate a multiplicity of suits and, indeed, would be impracticable. For the Board of Trade to refuse to apply for designation as a contract market, in order to test the validity of the act, would stop its 1600 members in a branch of their business most important to themselves and to the country. We think these exceptional and extraordinary circumstances with respect to the operation of this act make Section 3224 inapplicable. . . . .

STOCKHOLDERS' SUITS.—In cases where a speedy determination of the constitutionality of the tax is desirable, a procedure has been followed which appears to be a justifiable evasion of the statutory inhibition against litigating the validity of taxes before payment. This is done under color of a stockholder's suit, brought to restrain the corporation from an alleged illegal use of corporate assets. The right of a stockholder to maintain such a suit is well established.[35] The application of this procedure to tax cases was first resorted to in the *Income Tax Cases*,[36] and has been subsequently upheld as proper in view of the confusion and injustice which would result if the corporation paid the tax.[37]

Collection of Taxes by Suit and Summary Process

COLLECTION BY SUIT.—The government will not resort to an action at law if taxes can be collected by summary assessment followed by distraint on property of taxpayer. Taxpayers who have meritorious cases cannot be criticized for not signing waivers which may enable the government to force the collection of taxes illegally assessed. If the taxpayer agrees that the additional tax is due, the waivers should be signed, but not otherwise. Specific, not blanket waivers, should be signed. The law contains a limitation period both as to suits and assessments for all laws.

SUITS BARRED AFTER FIVE YEARS.—

Law. Sec. 1320. That no suit or proceeding for the collection of any internal revenue tax shall be begun after the expiration of five years from the time such tax was due, except in the case of fraud with intent to evade tax, or willful attempt in any manner to defeat or evade tax. This section shall not apply to suits or proceedings for the collection of taxes under section 250 of this Act, nor to suits or proceedings begun at the time of the passage of this Act.

The foregoing section applies to all internal revenue taxes. While included in the 1921 law, it covers all prior laws.

[37] *Brushaber* v. *Union Pacific Ry. Co.*, 240 U. S. 1, 36 Sup. Ct. 236, 60 L. Ed. 493; *Stanton* v. *Baltic Mining Co.*, 240 U. S. 103, 36 Sup. Ct. 278, 60 L. Ed. 546.

COLLECTION BY DISTRAINT.—The following regulation summarizes Secs. 3187 and 3196 of the Revised Statutes which authorize collectors to collect taxes by distraint and sale:

Regulation. If any person liable to pay any taxes neglects or refuses to pay them within ten days after notice and demand, it shall be lawful for the collector or his deputy to collect such taxes with 5 per cent additional and interest at 12 per cent per annum by distraint and sale of the goods, chattels or effects, including stocks, securities, and evidences of debt, or other property or rights of property, of the person delinquent. When goods, chattels, or effects sufficient to satisfy the taxes and penalties imposed upon any person are not found by the collector or deputy collector, he is authorized to collect such taxes by seizure and sale of real estate. . . . . (Art. 1009.)

Rulings. The property of one spouse is not subject to distraint to enforce payment of an income tax obligation of the other spouse unless there has been a transfer of property from one spouse to the other after a tax has been assessed and demand made for payment thereof. (C. B. 5, p. 239; O. D. 1056.)

Property possessed by a taxpayer at the time a lien for tax attached under section 3186, R. S., is subject to distraint for the collection of the tax and interest in the hands of a person who acquired it by reason of his death. (C. B. 5, p. 239; O. D. 1144.)

ENFORCEMENT OF TAX LIEN BY BILL IN EQUITY.—The government may secure a lien for unpaid taxes. The following regulation outlines procedure to be followed under Sec. 3186 of Revised Statutes:

Regulation. In the event of nonpayment of a tax and penalties after demand, the amount becomes a lien in favor of the United States from the time when the assessment list was received by the collector upon all property and rights to property belonging to the taxpayer, except that the lien is not valid as against any bona fide mortgagee, purchaser, or judgment creditor until notice thereof is filed in the proper public office or offices on Form 668. The collector may file such notice of lien upon making demand for payment of the tax, unless payment is made immediately upon demand. What is immediate payment will depend upon the nature of the demand. Where the collector contemplates filing such notice of lien on demand, whenever practicable, the demand should be made upon the taxpayer in person. In any case where there has been refusal or neglect to pay the tax and it has become necessary to seize and sell real estate to satisfy it, a bill in equity may be filed in a district court of the United States to enforce the lien of the United States for tax upon any real estate in which the delinquent has any right, title, or interest subject to the lien. This remedy does not supersede distraint but is cumulative. (Art. 1010.)

Ruling. Section 3466, Revised Statutes, is in pari materia with sections 64 (a) and 64 (b) of the Bankruptcy Act, and to the extent that it is in conflict therewith it is superseded thereby. Therefore, no priority is given to Federal taxes except over creditors, and such taxes are not entitled to priority over the administration expenses of the bankruptcy proceedings. (C. B. 2, p. 241; T. D. 3000.)[38]

District courts of the United States are invested with jurisdiction to render such judgments and decrees, in law and in equity, as are necessary or appropriate for enforcement of the law.[39]

COMPROMISE OF TAXES AND PENALTIES.—Sec. 3229 of the Revised Statutes gives the Commissioner power to compromise cases of taxes and penalties both before and after suit has been commenced. The nature and extent of this power are explained in the following regulation.

Regulation. The Commissioner, with the advice and consent of the Secretary of the Treasury, may compromise any civil or criminal case arising under the internal revenue laws instead of commencing suit thereon, and with the advice and consent of the Secretary and the recommendation of the Attorney General may compromise any such case after suit thereon has been commenced by the United States. Accordingly, the power

---

[38] This is a digest of the Circuit Court decision in the case of *Smielanka* v. *Zibell*, 263 Fed. 883.

[39] Sec. 1318.

to compromise extends to (*a*) civil and criminal cases; (*b*) cases whether before or after suit; and (*c*) taxes and penalties, except that taxes legally due from a solvent taxpayer may not be compromised. Refunds can not be made of accepted offers in compromise in cases where it is subsequently ascertained that no violation of law was involved. . . . . (Art. 1011.)

Claims for Abatement

The following pages deal with remedial procedure provided by the Treasury or courts whereby the taxpayer may secure abatement or cancellation of an assessment or obtain refund of taxes overpaid.

IMPORTANCE OF FILING CLAIMS.—Preceding pages cover appeals from findings of revenue agents, and all remedial measures up to time of assessment. After an assessment has been entered on collector's list, there is no recourse except by claim for abatement (before tax is paid) or refund (after tax is paid).

Because of the many erroneous assessments made, taxpayers should know how to question an assessment. If a claim is refused, the necessary procedure to secure from the courts an impartial opinion as to the sufficiency of the taxpayer's side of the contention should be understood. Until the case reaches the courts it cannot always be said that the facts are passed upon impartially.

RESTRICTION ON USE OF CLAIMS IN ABATEMENT.—Change of procedure brought about by Sec. 250 (d) regarding notice and appeal in cases of proposed additional assessments, greatly restricts use of claims in abatement.

This section, after providing for assessment of additional taxes only after notice and opportunity for appeal, states that when such assessments after notice have been made, "no claim in abatement of the amount so assessed shall be entertained: *Provided*, That in cases where the Commissioner believes that the collection of the amount due will be jeopardized by such delay he may make the assessment without giving such notice or awaiting the conclusion of such hearing. . . . ."

Except when the Commissioner believes the additional tax is in jeopardy, an application in the nature of a formal appeal must be allowed and a decision must be made before assessment, provided notice of appeal is filed in accordance with statutory provision. If notice of appeal is not given within specified time, or if decision on appeal is unfavorable, assessment will be made and must be paid in due course. The collector is not authorized to accept a claim for abatement. In such a case a claim for refund is the only recourse.

ABATEMENTS MAY BE FILED—WHEN?—Claims for abatement have not been entirely abolished. Use for them may be found in the following cases:

1. Where the Commissioner believes the tax is in jeopardy, in which case he may assess the tax without giving usual notice and opportunity for appeal.
2. Where it is necessary to postpone payment of one or several instalments, as when an error has been discovered before all instalments of a tax have been paid.
3. Where a claim for abatement or credit on file with Treasury has been disallowed without taxpayer having had opportunity to be heard on appeal.

4. Where an erroneous assessment is made, as when, through a mistake, assessments are made without legal notice to taxpayer or in spite of a notice of appeal.

5. Where an abatable penalty has been assessed as part of a tax.

Experience may show that other cases will arise, because a claim for abatement may be used where there is any good reason to hold a payment in abeyance; provided the case is of a kind in which Sec. 250 (d) does not specifically forbid its acceptance.

CONTENT OF CLAIM SUPPORTED BY SWORN STATEMENT.—The following regulation sets forth details of procedure in claims for abatements.

Regulation. Claims for abatement of taxes illegally or erroneously assessed shall be made on Form 843. They must be sustained by the affidavits of the parties against whom the taxes were assessed or of other parties cognizant of the facts. When a tax has been assessed and turned over to the collector, the presumption is that the assessment is correct. The burden of proof in rebutting the presumption and showing that it was improperly or illegally assessed, or that relief should be given under a remedial statute, rests upon the applicant for abatement. The affidavits must therefore contain full and explicit statements of all the material facts relating to the claim in support of which they are offered and to the proper consideration of which they are essential. The legality of the claim is to be determined by the Commissioner upon the facts presented to him. The filing of a claim for abatement does not necessarily operate as a suspension of the collection of the tax or make it any less the duty of the collector to exercise due diligence to prevent the collection of the tax being jeopardized. He should, if he considers it necessary, collect the tax and leave the taxpayer to his remedy by a claim for refund. Claims for abatement may not be filed where the taxpayer has had the benefit of the provisions of section 250 (d).[40] . . . . (Art. 1032).

Many claims for abatement are denied because foregoing procedure is not followed. It is not enough to make a short affidavit to the effect that the tax is illegally or wrongfully assessed. The additional assessment is often the result of a long and careful audit of returns. The taxpayer is entitled to full particulars of the basis of assessment.

The claim for abatement should contain complete references to law and regulations bearing on matters in dispute. It should cite such authorities, precedents, and business practices as are applicable.

MEANING OF "BONA FIDE CLAIMS."—Sec. 250 (e) of the law provides that, when claim for abatement is made in good faith and subsequently denied, interest at rate of ½ of 1% per month, instead of 1%, shall be charged on the tax from time it was due until claim is decided. It is important not to invoke the law unless the abatement can be proved to be "the subject of a bona fide claim."

COLLECTOR MAY REQUIRE A BOND.—As it is within the discretion of a collector to accept or reject a claim for abatement, and as he is charged personally with the assessment, he may require a bond at time of accepting a claim for abatement.

Ruling. . . . . While there is no provision of law expressly authorizing the collector to require a bond as a condition of suspending the collection of the tax, he is personally charged with the amount of the assessments made against taxpayers in his district and he is required to use due diligence in collecting such taxes. If he fails to exercise due diligence, it is clear that he becomes personally liable for any tax which may be lost through such failure. He may require the tax to be paid and leave the taxpayer to his remedy by a claim for refund, and if he see fit to suspend the collection of the tax in

---

[40] Sec. 250 (d) gives the taxpayer the right, upon notice of assessment to be made in 30 days, to appeal before such assessment is finally made.

any case where a final collection may thus be jeopardized he does it at his own risk. It is within his discretion to protect himself by requiring the taxpayer to execute a bond in the amount of the tax the collection of which is postponed. . . . . (C. B. 1, p. 257; O. 957.)

REJECTION OF CLAIM BY COLLECTOR.—After a claim for abatement has been accepted by a collector and has been forwarded to the Commissioner, collector may send out a second notice and demand, although the Commissioner has neither allowed nor rejected the claim.

After a collector accepts a claim for abatement and forwards it to the Commissioner for consideration, he should not send out a second notice and demand until the Commissioner has notified him that it has been rejected. When the claim is accepted the collector must be convinced that it is a "bona fide claim," and that the taxpayer is in a position to pay and will pay the tax if the Commissioner, after consideration, rejects it. If after a claim has been accepted some unforeseen event takes place which jeopardizes the government's interest, it would be reasonable to demand either a bond or payment. But this should be done only with approval of the Commissioner, because there are many taxpayers who have claims pending with the Treasury which have been on file many months.

It is improper to include the 5% penalty and interest at rate of 1% a month, because the penalty has beeen made inoperative by the filing of the claim for abatement. Interest can be collected only on the amount of the claim disallowed by the Commissioner.

When a second notice and demand is received, the matter should be taken up immediately with the collector. He should be informed that a claim for abatement is on file and that it has not been acted upon by the Commissioner. By this means, summary action by the collector will probably be prevented.

CLAIM BY RECEIVERS—NO BOND.—

Ruling. Where the property of a corporation is in the hands of a receiver who files a claim for abatement of an additional assessment of income and profits taxes for 1917, no bond should be required as security for the payment of such taxes. The government, however, has the right under section 3466, R. S., to receive payment of these taxes from the receiver in preference to the creditors of the corporation. (C. B. 3, p. 308; O. D. 733.)

INTEREST AND PENALTIES ON REJECTED CLAIMS.—When claim for abatement is filed there is no assurance that it will be allowed by the Commissioner. Therefore, it is important that the claim be filed with the collector within 10 days from date of assessment to prevent imposition of the 5% penalty.

Law. Sec. 250. . . . . (e) . . . . *Provided*, That as to any such amount which is the subject of a bona fide claim for abatement filed within ten days after notice and demand by the collector, where the taxpayer has not had the benefit of the provisions of subdivision (d), such sum of 5 per centum shall not be added and the interest from the time the amount was due until the claim is decided shall be at the rate of one-half of 1 per centum per month on that part of the claim rejected. . . . .

Ruling. . . . . In accordance with the provisions of section 250 (e) and 250 (h) of the Revenue Act of 1921, interest at the rate of 1 per cent a month upon the rejected amount embraced in said claim for abatement for 1917 taxes, which claim was filed prior to the passage of the Revenue Act of 1921, ceased to run with the passage of that Act, and from that date until the claim for abatement was decided such rejected portion of the claim carries interest at the rate of one-half of 1 per cent a month. . . . . (I-31-443; I. T. 1408.)[41]

---

[41] For discussion of this ruling see Montgomery's Income Tax Procedure, 1923.

CLAIMS FOR INVENTORY LOSSES.—The 1918 law fixed the interest rate on such rejected claims at 1% a month [Sec. 214(a-12)]. Ruling I-46-595; I. T. 1500 holds that the 1% rate is still in force. If Sec. 250 (e) is applicable, the ruling may not be sound. Payment should be made under protest until the point is authoritatively settled.

Claims for Credit

Prior to 1918, taxes overpaid in previous years could not be used to offset taxes of later years. To remedy this injustice, Congress established the claim for credit.

WHEN MAY A CLAIM FOR CREDIT BE FILED?—

Law. Sec. 252. That if, upon examination of any return of income made pursuant to this Act, the Act of August 5, 1909, entitled "An Act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," the Act of October 3, 1913, entitled "An Act to reduce tariff duties and to provide revenue for the Government, and for other purposes," the Revenue Act of 1916, as amended, the Revenue Act of 1917, or the Revenue Act of 1918, it appears that an amount of income, war-profits or excess-profits tax has been paid in excess of that properly due, then notwithstanding the provisions of section 3228 of the Revised Statutes, the amount of the excess shall be credited against any income, war-profits or excess-profits taxes, or installment thereof, then due from the taxpayer under any other return, ...

Regulation. Any amount of income, war profits or excess profits tax paid in excess of that properly due shall be credited against any such taxes due from the taxpayer under any other return. To obtain such credit the taxpayer should proceed as follows:

(1) Where the credit demanded is equal to or less than any outstanding assessment of tax, a taxpayer desiring to obtain such credit shall file with the collector for the district in which his original return was filed a claim on Form 843, which shall be sworn to and shall contain the following statements: (*a*) business engaged in by the claimant; (*b*) character of assessment or tax; (*c*) amount of tax claimed as a credit; (*d*) unpaid assessment against which credit is asked and for what taxable year; and (*e*) all facts regarding the overpayment.

(2) Where the amount claimed as a credit is greater than the outstanding assessment of tax, a taxpayer desiring to obtain such credit and the refund to which he is entitled shall file Form 843, stating thereon the respective amounts claimed as a credit or as a refund. . . . . All the facts regarding the total overpayment should be stated in the claim. (Art. 1034.)

Claim for Credit May Be Applied Only Against Overpayment of "Income, War Profits, or Excess Profits Tax."—

Rulings. Munitions tax overpayments for one year may not be credited against an additional assessment of munitions taxes for a subsequent or prior year.

Munitions tax overpayments may not be credited against additional assessments of income, excess profits and war profits taxes for the same or for any subsequent or prior taxable year. (C. B. 4, p. 330; Digest A. R. M. 123.)

The tax imposed on undistributed net income of corporations by section 10 (b) of the act of September 8, 1916, as amended by the act of October 3, 1917, is held to be an income tax within the meaning of section 252 of the Revenue Act of 1918 and may, therefore, be credited against an additional amount of income tax due from the taxpayer within the limitations of that section. (C. B. 2, p. 244; Digest O. 974.)

The amount of any ad valorem penalty and interest which has been collected without authority may be made the subject of a claim for credit against income, excess-profits, or war-profits taxes due from the taxpayer under any other return, if such claim is filed within the five-year period of limitation provided in section 252 of the Revenue Acts of 1918 and 1921.

This conclusion is based on the theory that interest and penalties are in the nature of

accretions to the tax and should be considered as a part thereof in connection with any refund or credit of the tax. (I–37–505; I. T. 1447.)

Claim for Credit May Not Include Judgment Claims.—

Ruling. . . . . After careful reconsideration of the question it is the opinion of this office that section 252 of the Revenue Act of 1921 is not applicable to judgments and that no part of a judgment entered in favor of a taxpayer and against the United States or a collector for income and excess-profits taxes illegally or erroneously collected and interest allowed thereon by the court may be credited against any income or profits taxes then due from the taxpayer under any other return. . . . . (I–39–521; L. O. 1106.)

COLLECTOR NEED NOT RECEIVE CLEARANCE.—It is no longer necessary for taxpayers to secure clearances for claims for credit.

Regulation. Upon receipt by the collector of a claim for credit on Form 843, he will make proper record thereof in his office and, except in the case of claims covering tax assessed on the basis of returns on Form 1040 A, forward the claim immediately to the Commissioner irrespective of whether or not a claim for refund of the tax now claimed as a credit has previously been filed. Due notice will be given the collector and the taxpayer of the action taken on the claim.

If a claim is allowed against additional taxes due for other years, but such other taxes have not yet been assessed, only the amount of the excess of such taxes over the overpayment shall be assessed, or the excess of the overpayment over such taxes due shall be refunded as the case may be. The effective date of the filing of a claim for credit shall be the actual date of presentation to the collector. The filing of a claim for credit against the tax due under another return shall be subject to the same rules with respect to the addition of interest and penalties as if the taxpayer had filed a claim for abatement of the tax against which credit is desired. . . . .

Under no circumstances will a taxpayer be entitled to credit for an alleged overpayment of tax prior to the allowance of such credit by the Commissioner. An attempt to take a credit prior to such allowance shall not be held to be the filing of a claim under section 252 of the Revenue Act of 1921. (Art. 1035.)

WHAT CONSTITUTES MAKING OR ALLOWANCE OF A CREDIT?—

Ruling. The reference, in effect, asks advice whether in a case where a claim for credit has not been filed by the taxpayer a credit for an excess of tax assessed for a prior year may be made or allowed if the examination of the return was made and the excess amount determined upon within the five-year period of limitation named in section 252, and the taxpayer within the limitation period was advised of the amount due on subsequent returns after the credit had been applied; but after the limitation period has expired the Department reconsiders and finds that a mistake was made in the amount of the tax due on the subsequent returns and the excess amount originally found as a credit (*a*) has not been changed, (*b*) should be increased, (*c*) should be decreased. It is assumed from the reference that the assessment represented by the original letter of advice to the taxpayer was not made. If it was made there would seem no room for doubt, since clearly the credit was made when the assessment list went out and any reduction or increase of tax would have to be accomplished by abatement or refund or further assessment.

The question presented depends for solution upon what constitutes the making or allowance of a credit within the meaning of section 252. A statement contained in a letter from the Department to a taxpayer that the taxpayer is entitled to a credit is clearly not a credit actually made or allowed. Something must be done in a formal way that will amount to a direction to the collector who is charged with the collection of internal taxes. Prior to such a direction he has nothing to do with the taxpayer's account since it has not assumed that status of an account stated to him. Such direction by the Commissioner is usually made by formal assessment list signed by him. When such a formal statement or direction to the collector is signed by the Commissioner and forwarded to the collector, showing the amount of the tax to be collected over and above the credit, the Commissioner has formally made or allowed the credit. When this is done the credit has been made or allowed, but prior thereto anything that is done in the way of stating the case by employees of the Bureau or in the way of statements to the

taxpayer in letters from the Department can be nothing more than preliminary to the actual making or allowance of the credit by the Commissioner.

This is true where credits are considered and passed upon formally by the Commissioner. Where, however, the collector because of the provisions of the statute and regulations made pursuant thereto makes the credit without specific instructions from the Commissioner, the credit is actually made or allowed when the collector so records it, and in such a case subsequent action by the Commissioner in the way of a review of the collector's action, would not operate to fix the time when the credit was made or allowed, since in such a case the collector had before him the account of the taxpayer and is charged by law and the regulations to enter the credit.

. . . . It is held that where the allowance of a credit as provided in section 252 of the Revenue Act of 1918 is being considered by the Commissioner, the credit is made or allowed only when the Commissioner signs and forwards to the collector a formal statement or direction or assessment list showing the amount of the tax to be collected over and above the amount of the credit. (C. B. 4, p. 339; Sol. Op. 106.)

It is important that the privilege of filing claims for credit be not abused. The Treasury is justified in interpreting the law strictly. It is not unreasonable to require full compliance with provisions regarding claims for refund.

EFFECT OF CLAIM FOR CREDIT.—

Ruling. A . . . . credit can not be made until the facts have been carefully examined and the validity of the credit approved by the Commissioner. That is not to say, however, that a claim for credit has no effect until approved. The *claim* for credit may have precisely the same effect as a *claim* for abatement; that is, by forbearance of the collector it may suspend collection until it is acted upon by the Commissioner. If approved, credit is then given relieving both the collector and the taxpayer from any further liability. If rejected, interest is to be paid upon the amount suspended from the time it was due.

This view of the law appears to be entirely consistent with its language and also with the purpose which it was believed Congress had in mind; that is to say, relief to the taxpayer from being required to pay into the Treasury amounts, possibly large, at the same time that he is making a bona fide claim that other amounts are due him. As held in Law Opinion No. 957, it does not prevent the collector, if he so desires, from proceeding to collect at once just as he may do in the case of an abatement claim filed, but leaves it optional with him to suspend collection until such time as credit is given relieving both him and the taxpayer. (C. B. 2, p. 247; A. R. M. 46.)

PLACE OF FILING WHEN DISTRICT IS CHANGED.—

Ruling. Where a corporation filed a return for 1918 with the collector of one district and a return for 1919 with the collector of another district, and subsequently rendered an amended return for 1918, showing less tax liability, together with a claim for credit against the outstanding tax due for 1919, covering the overpayment to the extent shown by the amended return, it should file the amended return with the collector with whom the original return was filed for the year 1918.

The claim for credit should be filed with the collector with whom the return for 1919 was filed, who should forward same to the collector with whom the return for 1918 was filed, for a notation thereon of the facts required by the certificate on the reverse side as to the assessment overpaid for 1918. When this has been done it will be returned by him to the collector with whom the 1919 return was filed, who will make a notation thereon as to the 1919 assessment to be credited, and forward same to the Commissioner of Internal Revenue for consideration.

In filing the amended return the taxpayer should call attention to the fact that a claim for credit of the overpayment has been filed with the collector with whom the 1919 return was filed, and the collector with whom the claim for credit was filed should be notified that an amended return has been filed. (C. B. 3, p. 310; O. D. 740.)

CLAIM FOR CREDIT BY AFFILIATED COMPANIES.—

Ruling. Upon the audit of the returns of several affiliated companies for the period 1909-1917, inclusive, it is found that certain of these companies are entitled to refund on account of excess taxes paid during that period. On the basis of the consolidated return for 1918, covering these companies, it appears that assessment of additional taxes

will be required. The question therefore arises whether refunds due the subsidiary companies may not be used as a credit against the additional tax to be assessed on the basis of the consolidated return.

For the purposes of the income tax Acts each affiliated corporation is considered a separate and distinct entity even though a consolidated return is submitted on behalf of all. A claim for credit or refund of excess tax paid by one of the affiliated corporations can be made only by the corporation entitled to receive such credit or refund. Thus with respect to refunds, credits, and additional assessments each affiliated corporation occupies a status similar to that of an independent and unaffiliated corporation. The additional tax assessed for the year 1918, on the basis of the consolidated return for that year, must be apportioned among the affiliated corporations, and to the extent that each debtor corporation is entitled to receive back a part of the taxes paid in prior years, a claim for credit may be filed and the amount of additional tax each subsidiary is required to pay may be reduced thereby by the amount it is entitled to receive. In case the amount payable to the subsidiary exceeds its proportionate part of the additional tax assessed under the consolidated return, it may file a claim for refund for the difference. A subsidiary which is required to pay additional tax and is at the same time entitled to receive back in the form of a refund a portion of the amount paid as taxes in prior years, may, however, within its option pay the entire amount of the additional tax and file a claim for refund for the entire amount it is entitled to receive. (C. B. 3, p. 311; O. D. 683.)

Affiliated companies may apportion any tax assessed against them on any basis upon which they may agree. Apportionment should be made so as to exhaust the entire amounts due from the government for prior years.

PARTNERSHIP OVERPAYMENT UNDER 1917 LAW.—

Ruling. In accordance with a memorandum from the Solicitor of Internal Revenue, dated May 5, 1922, an overpayment of excess-profits taxes by a partnership for the year 1917 may be credited against any income taxes due from the individual members of the partnership, provided the claim for credit is accompanied by an agreement between the partnership and the individual members thereof requesting that such action be taken. This is in harmony with the converse of this ruling, which appears as A. R. R. 859 (Bulletin I–15-217), in which it was held that an overpayment of income taxes by the individual members of a partnership for 1917 may be credited against an additional assessment of excess-profits tax due from the partnership for that year. This decision also agrees with the ruling that overpayments of tax by a husband are allowable as a credit against amounts due from the wife as a result of the community property ruling. Credit for taxes in the above cases can not be made in the absence of express agreements between the parties concerned.

It is not necessary that the taxpayer file a formal claim for credit. Credits may be made between the accounts of individuals and partnerships of which the individuals are members and vice versa as well as between husband and wife, even though no claim for credit is actually involved, provided an agreement between the partners is obtained. Certificates of overassessment in such cases may, therefore, be made in accordance with the agreements without the taxpayer going through the formality of filing a claim for credit. (O. D. 180, C. B. 1, p. 309, modified.)[42] (C. B. I–1, p. 318; I. T. 1361.)

PARTNERSHIP INCORPORATED PRIOR TO JULY 1, 1919.—

Ruling. Returns for 1918 were filed for a partnership and its members in accordance with the Revenue Act of 1917, prior to the passage of the Revenue Act of 1918, and tax paid accordingly. The partnership was incorporated prior to July 1, 1919, and elected to be taxed as a corporation under the provisions of paragraph 3, section 330, Revenue Act of 1918. Amended returns for 1918 showing overpayment of tax were filed by the partners.

There is no provision in the law whereby either the tax by the partnership or any excess tax paid by the partners may be credited against any tax liability of the successor corporation for any year. Remedy may be sought only by the partnership and the

[42] O. D. 180 did not permit such a credit. For criticism of O. D. 180, see Income Tax Procedure, 1922, p. 284.

individual members thereof filing claims for the refunding of any excess tax paid. (C. B. 2, p. 247; O. D. 457.)

SOLE OWNER OF CORPORATION.—

Ruling. Certain corporations overpaid their taxes in prior years and there is no way in which they can now use the excess amount of tax paid as a credit inasmuch as there is no tax due. An individual owning 100 per cent of the stock in one of these corporations finds that he is liable to pay a tax to the Government and claims that he should not be required to pay his individual tax while the corporation of which he is the sole owner is waiting for a claim for refund to be adjusted and paid.

It is held that inasmuch as the individual and the corporation of which he is the sole owner are two separate and distinct entities, he is not entitled to claim as a credit against taxes due under his personal return an amount of tax overpaid by the corporation. (C. B. I-1, p. 316; I. T. 1259.)

SUCCESSOR CORPORATION FILING CREDIT.—

Ruling. In view of the fact that the statute of New Jersey under which a merger or consolidation of corporations resulting in the formation of another corporation is accomplished provides, in effect, that the successor corporation shall represent predecessor corporations in the enforcement of their rights, it is held that the successor corporation is entitled to file claim for credit on account of the overpayment of tax by the predecessor corporation. (C. B. 4, p. 335; O. D. 950.)

CLAIM FOR CREDIT BY EITHER HUSBAND OR WIFE.—

Ruling. Where claims for the refund of taxes erroneously paid for 1919 and prior years have been filed by the husband as a result of the Attorney General's ruling relative to community property under the laws of Texas (T. D. 3071), such claims for refund may be converted into claims for credit to be applied against any taxes due from the husband or wife as shown by separate returns filed by them for the taxable year 1920 and subsequent years, subject to the provisions of section 252 of the Revenue Act of 1918. Such claims for credit must be accompanied by an agreement signed by the husband and wife consenting to the adjustments therein demanded. A claim for refund may be filed for any excess of the amount claimed as a credit over taxes shown to be due. (C. B. 4, p. 335; O. D. 854.)

CLAIM FOR CREDIT ARISING FROM JOINT RETURN.—

Ruling. When an amended joint return for 1918 is filed by husband and wife, a single claim for credit may be so applied against any outstanding taxes due at the time the claim for credit is filed, providing an agreement signed by the taxpayer and his wife consenting to the adjustments therein demanded accompanies such a claim. However, if no outstanding taxes are due by the taxpayer or his wife, a claim for refund of the excess taxes paid for 1918 should be filed, accompanied by the agreement by the taxpayer and his wife referred to. (C. B. I-1, p. 316; Digest I. T. 1162.)

Claims for Refund

NATURE OF CLAIM.—After a tax has been paid and taxpayer believes it was unlawfully or wrongfully assessed or collected, he may make claim for refund. Generally speaking, excepting restriction with respect to time limit for filing, the government imposes no restrictions upon claims for refund and such claims are considered on their merits. This practice must not be confused with the procedure in case of **suit** against the government. When suit is brought the government interposes all legal obstacles at its command.

Regulation. Claims by the taxpayer for the refunding of taxes and penalties erroneously or illegally collected shall be made on Form 843. In this case the burden of proof rests upon the claimant. All the facts relied upon in support of the claim should be clearly set forth under oath. In the case of the taxpayer's death, certified copies of the letters of administration or letters testamentary, or other similar evidence, must be annexed to the claim to show the authority of the administrator or executor. The

affidavit may be made by an agent of the person assessed, but in such a case a power of attorney must accompany the claim. Checks in payment of claims allowed will be drawn in the names of the persons entitled to the money and shall, unless otherwise directed, be sent directly to the proper persons. The Commissioner has no authority to refund on equitable grounds penalties legally collected.[43] . . . . (Art. 1036.)

The regulations do not require that claims for refund be accompanied by collector's receipt or by paid check showing payment of tax.

If claim for abatement was not made, claim for refund should be supported by satisfactory evidence. If claim for abatement was made and denied, it cannot be expected that claim for refund will be allowed, but taxpayer has nothing to lose by attempting to improve his case and by securing any new evidence to strengthen it.

CLAIMS FOR REFUND NOT FILED WITH COMMISSIONER DIRECTLY.[44]—Notwithstanding that Sec. 3228 of the Revised Statutes, as amended by Sec. 1316, provides that claims for refund "must be presented to the Commissioner," the Treasury for administrative reasons requires claims to be filed with the collector.

Ruling. Claims for refund should in all cases be filed with the collector of internal revenue to whom the tax was paid or with the deputy collector of the division of such district in which the claimant resides. Warrants in payment of such claims will be made to the order of the claimants as provided in section 6, Department Circular 230. (C. B. 4, p. 408.)

ATTORNEY MAY FILE CLAIM FOR REFUND AND RECEIVE WARRANT.—

Rulings. The Bureau will recognize a general power of attorney as sufficient authority for the filing of more than one claim for refund on behalf of the grantor of such power. It should be noted, however, that under the provisions of section 6 of the abovementioned circular special powers are required in certain cases. In cases where a number of claims are to be filed under a general power of attorney the original power should be attached to the first claim filed on behalf of the claimant granting the power, and a copy thereof should be annexed to each succeeding claim, special reference being made in each copy to the claims to which the original instrument was attached.

The Bureau does not require that a power of attorney to file a claim for refund be in any special form. It is merely necessary that the instrument meet the legal requirements of powers of attorney in general.

A power of attorney given by a corporation should be signed by the officers who are duly authorized to execute such instrument.[45] (C. B. 4, p. 341; O. D. 927.)

Before a refund may be made of a tax paid by a withholding agent in behalf of a foreign Government, it is necessary that a power of attorney be obtained from the foreign Government authorizing the agent to file the claim and to collect the money in its behalf. In the absence of special authorization, the diplomatic representative of the foreign country may not act for the foreign country in matters of public moneys. (C. B. I-1, p. 318; I. T. 1175.)

WHEN FORMAL CLAIMS FOR REFUND NOT NECESSARY.—The Commissioner may issue warrants to cover overpayment without requiring taxpayer to file a formal claim for refund or credit when Treasury's examination shows an overpayment by taxpayer. It is advisable, however, always to file a formal claim. If a claim has been filed, Commissioner may make a refund even though statutory period expires subsequent to filing of claim.

Law. Sec. 1315. That section 3220 of the Revised Statutes, as amended, is reenacted without change, as follows:

---

[43] For cases in which refund is made through collectors, see Montgomery's Income Tax Procedure, 1920, p. 217.

[44] Formerly, claims for refunds could be filed directly with the Commissioner. See letter dated Mar. 29, 1919, Montgomery, Income Tax Procedure, 1921, p. 212.

[45] For form of power of attorney, see p. 1558.

"Section 3220. The Commissioner of Internal Revenue, subject to regulations prescribed by the Secretary of the Treasury, is authorized to remit, refund, and pay back all taxes erroneously or illegally assessed or collected, all penalties collected without authority, and all taxes that appear to be unjustly assessed or excessive in amount, or in any manner wrongfully collected; . . . ."[46]

The Solicitor issued the following opinion interpreting the 1918 law. It is applicable to the 1921 law.

Ruling. . . . . Section 3220, Revised Statutes, was amended by Congress at the instance of the Treasury Department. Before amendment section 3220, Revised Statutes, provided that the Commissioner could remit or refund taxes subject to regulations made by the Secretary only upon appeal to him made. The Treasury Department believed that a taxpayer should in every case be advised of every overpayment of tax and that the overpayment should be refunded, and it was believed that it would facilitate the work of the Internal Revenue Bureau if the Commissioner could make a refund without the necessity of a claim being filed. It was not the intention of the Treasury Department that the Commissioner should have authority to allow claims which were barred by any statute of limitation, or to refund a tax where the taxpayer had no right to file a claim for the refund therefor. It was apparently not the intention of Congress to make it possible for the Commissioner, subject to regulations made by the Secretary, to ignore statutes of limitation. It must therefore be held that the Commissioner has authority to refund a tax only in a case where a claim has been filed which is not barred by any statute of limitation or where the taxpayer has a legal right to file a claim for the refund of the tax. (C. B. 3, p. 302; Sol. Op. 79.)

Collectors have been instructed that a reduction of assessments and adjustments of overpayments of revenues may be accomplished "on the basis of a certificate of overassessment prepared by the appropriate administrative unit in the Bureau in each case in which an overassessment of tax is disclosed through the audit of a return."[47]

CLAIMS FOR REFUNDS BY RESIDENT OR NON-RESIDENT ALIENS.—

Ruling. When a claim for refund is filed by aliens, resident or non-resident, on Form 46, a copy of the form upon which the alien was assessed and taxed should be attached to Form 46.[48] (C. B. 1, p. 258; O. D. 472.)

STATUTE OF LIMITATIONS.—

Ruling. An amount refundable under section 252 of the Revenue Act of 1921 can not be applied against a tax which is not collectible, either by assessment or suit, due to the running of the statute of limitations. . . . . (C. B. I-1, p. 313; L. O. 1095.)

TIME LIMITS FOR FILING CLAIMS FOR REFUND.—Taxpayers, to secure credits or refunds of taxes overpaid, must file claims before expiration of 5 years from dates when returns were made or within 4 years after payment of tax.

Law. Sec. 252. That if, upon examination of any return of income made pursuant to this Act, the Act of August 5, 1909, entitled "An Act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," the Act of October 3, 1913, entitled "An Act to reduce tariff duties and to provide revenue for the Government, and for other purposes," the Revenue Act of 1916, as amended, the Revenue Act of 1917, or the Revenue Act of 1918, it appears that an amount of income, war-profits or excess-profits tax has been paid in excess of that properly due, then, notwithstanding the provisions of section 3228 of the Revised Statutes, the amount of the excess shall be credited against any income, war-profits or excess-profits taxes, or installment thereof, then due from the taxpayer under any other return, and any balance of such excess shall be immediately refunded to the tax-

[46] Sec. 1323 (Sec. 1316 of the 1918 law) re-enacts Sec. 3225 of the Revised Statues which limits refunds to cases in which the return was not *wilfully* false.

[47] T. D. 3260, dated Dec. 8, 1921.

[48] Form 46 has now been replaced by Form 843.

payer: *Provided*, That no such credit or refund shall be allowed or made after five years from the date when the return was due, unless before the expiration of such five years a claim therefor is filed by the taxpayer: *Provided further*, That if upon examination of any return of income made pursuant to the Revenue Act of 1917, the Revenue Act of 1918, or this Act, the invested capital of a taxpayer is decreased by the Commissioner, and such decrease is due to the fact that the taxpayer failed to take adequate deductions in previous years, with the result that an amount of income tax in excess of that properly due was paid in any previous year or years, then, notwithstanding any other provision of law and regardless of the expiration of such five-year period, the amount of such excess shall, without the filing of any claim therefor, be credited or refunded as provided in this section: *And provided further*, That nothing in this section shall be construed to bar from allowance claims for refund filed prior to the passage of the Revenue Act of 1918 under subdivision (a) of section 14 of the Revenue Act of 1916, or filed prior to the passage of this Act under section 252 of the Revenue Act of 1918.

Sec. 1316. [Sec. 3228, Rev. Stat.] "All claims for the refunding or crediting of any internal revenue tax alleged to have been erroneously or illegally assessed or collected, or of any penalty alleged to have been collected without authority, or of any sum alleged to have been excessive or in any manner wrongfully collected, must be presented to the Commissioner of Internal Revenue within four years next after payment of such tax, penalty, or sum."

This section, except as modified by section 252, shall apply retroactively to claims for refund under the Revenue Act of 1916, the Revenue Act of 1917, and the Revenue Act of 1918.

Under Sec. 252, Treasury may grant refunds for all years subsequent to 1909 when based upon **inadequate depreciation** or other deductions to which taxpayer was entitled in such years. These refunds must be made in connection with examination of returns made under 1917, 1918, or 1921 laws.

Generally speaking, the distinction between Sec. 252 and Sec. 3228 (Revised Statutes) is that former applies only to income, excess profits and war profits taxes; while latter applies to all taxes specified—all Internal Revenue Acts. Furthermore, Sec. 3228 grants relief in cases not covered by Sec. 252. There is no doubt about the right to file claims for refund within 5 years after return was due. Dr. Adams in explaining Secs. 250 and 252 to the (Finance) Committee stated, "We have placed on the Government a 5-year limitation and on the taxpayer a 5-year limitation." (C. B. I-1, p. 314; L. O. 1095.)

Sometime during 1919, the Solicitor expressed the opinion that Sec. 252 of the Revenue Act of 1918 was not intended to take away the right given a taxpayer under Sec. 3228 of the Revised Statutes to make a claim for refund within 2 years after cause of action accrued or date of payment of tax under protest.[49] Presumably the same interpretation also applies to Sec. 252 of the 1921 law. In other words, it supplements the present Sec. 3228, with its limitation of "four years next after payment."

Meaning of "Paid."—

Ruling. . . . . Reference is made to a letter of April 7, 1921, wherein the following statement was made and questions asked:

The taxpayer's books and accounts are examined by a revenue agent. The agent finds that for the year 1914 the taxpayer has overpaid the amount of tax due. He also finds that the taxpayer owes additional tax for the year 1916, and in the adjustment of the agent's report the overpayment for 1914 is applied as a credit against the additional tax found due for 1916 and the balance of the 1914 overpayment is refunded. It later develops that the taxpayer instead of being liable for additional tax for the year 1916, as found by the revenue agent, has overpaid his tax for that year. The taxpayer files a claim for credit of this overpayment against tax due for subsequent

---

[49] C. B. 1, p. 249; O. 833.

years. The question presented is, how much tax may be assumed to have been paid by the taxpayer for the year 1916, i.e., the amount actually paid in cash or the cash payment plus the credit on account of the overpayment for 1914?

If it is held in the foregoing that the taxpayer has paid the cash payment plus the amount credited on account of the overpayment for 1914, and a claim for refund is filed, how should the refund claim be adjusted?

It is to be understood that in both instances mentioned above no record of a credit for overpayment of 1914 tax against additional tax originally found due for the year 1916 appears on the assessment list.

. . . . The Government in the present instance was expressly authorized to refund the taxes erroneously collected or to accept such taxes as a credit. The credit having been duly made, it seems clear that if the real remedial purpose of section 252 is to be effected, "paid" must be construed in its broader sense as including a credit duly made. It is accordingly held that where there has been an overpayment of taxes on an income return for a certain year and within five years from the date the return was due the overpayment is credited to taxes due on an income return for a subsequent year, such credit constitutes payment or part payment of the taxes for the year in which it was applied.

In reply to your second question, you are advised that the cash payment plus the amount allowed as a credit on account of the overpayment for 1914 should be adjusted for the year 1916 where the taxpayer files a claim for refund covering the latter year.

The fact that no record of a credit for overpayment of 1914 taxes appears on the 1916 assessment list does not affect the treatment of the credit as a payment for the year 1916, where the credit was in fact made within five years from the date the 1914 return was due. (C. B. 4, p. 336; Sol. Op. 107.)

Closing Date of 5-Year Period.—

Ruling. . . . . the schedule authorizing the allowance of a claim for refund must be actually signed by the Commissioner within five years from the date when the return was due, taking into consideration any extension of time granted for filing the original return.

(b) Does the fact that a revenue agent's report, or a valuation engineer's report, determining an overpayment within the five-year period, is not audited until after the five-year limit, bar the auditor from allowing same as an offset, it being recognized that taxpayer is not in possession of the valuation engineer's finding and in some cases not in possession of the revenue agent's report, and, therefore, could not have filed claim within five-year limitation?

A. Neither a refund nor a credit claim could be allowed under these circumstances. If a claim for refund is filed and the overpayment considered in connection with the refund claim, it would be barred by the five-year limitation. If it is proposed to allow credit for the overpayment, the fact that an overpayment has been made is not conclusively determined until audit of the agent's or engineer's report which is subsequent to the expiration of the five-year limitation.

(c) The auditor in auditing a case finds overpayment for 1913 and offsets this overpayment in an A-2 letter to taxpayer dated February 25, 1919. The taxpayer takes exception to depletion allowed and after several conferences with the valuation engineers a greater depletion for all years is allowed and a reaudit of his return is made October 10, 1919. The five-year limitation on 1913 has expired at the time the latter audit was made. Can this credit be allowed in view of the fact that a portion was allowed in the audit of February 25, 1919, or is the entire amount now barred by the statute?

A. The additional overpayment determined subsequent to the expiration of the five-year limitation could neither be refunded nor credited. . . . . (C. B. 4, p. 332, Mim. 2764.)

Claims Filed Before Sept. 8, 1916.—

Ruling. . . . . It is therefore the opinion of this office that a claim for refund filed prior to the passage of the Revenue Act of 1916 and after five years from the due date of the return and rejected either under section 3228, Revised Statutes, or on its merits can not be made the basis of a claim for refund under Section 252 of the Revenue Act of 1921. A claim filed prior to September 8, 1916, may be allowed, however, under section 252 when filed within five years from the date the return was due, regardless of

whether it was theretofore rejected under section 3228, Revised Statutes, or on its merits. . . . . (C. B. I-1, p. 319; L. O. 1093.)

Claims Filed Under Sec. 14 (a) of 1916 Law.—During 1920 a ruling appeared to the effect that claims filed under Sec. 14 (a) of the 1916 law, but which were not filed within 5 years from date when return was due, could not be allowed under the 1918 law.[50] The last proviso in Sec. 252 of the 1921 law (see p. 1587) revives these claims.

Ruling. . . . . The second query propounded raises the question whether a claim filed under section 14 (a) of the Revenue Act of 1916, which could not be allowed under section 252 of the Revenue Act of 1918 because not filed within five years of the due date of the return, may now be allowed by reason of the last proviso of section 252 of the Revenue Act of 1921. It will be noted from Solicitor's Opinion 79, heretofore quoted, that claims filed under section 14 (a) of the Revenue Act of 1916, pending in the Commissioner's office on February 25, 1919, and not saved by section 252 of the Revenue Act of 1918, fell by reason of the repealing Act. That opinion recognized the unfortunate situation which the above ruling resulted in and recommended congressional relief. . . . .

. . . . It was to meet this situation that Congress, in substantially re-enacting section 252 in the 1921 Act, added the last proviso thereof already set forth in this opinion.

Claims filed under section 14 (a) more than five years from the date when the return was due would have been refundable except for the prohibition found in section 252 of the Revenue Act of 1918. Section 14 (a) merely permitted the filing of the claim and, once filed, the authority for the refund was found in section 3220, Revised Statutes; section 252 of the 1918 Act having been repealed by the 1921 Act and the same section of the later Act having specifically provided that nothing contained therein shall be construed to bar from allowance claims for refund filed prior to the passage of the 1918 Act under subdivision (a) of section 14, supra, such overpayment may be refunded. The legislative history of the proviso clearly discloses that its purpose was to permit of the allowance of claims filed under section 14 (a), regardless of whether such claims were filed within five years from the date the return was due, and this is further emphasized by the fact that it follows the general five-year limitation contained in section 252 and also that proviso which takes away every limitation as to time in the case of the recomputation of invested capital by the allowance of depreciation. It is believed that the proviso serves to grant the relief intended. To hold otherwise would make meaningless this provision of the Act.

It is therefore held that a claim for refund of taxes filed prior to the passage of the Revenue Act of 1918 under the provisions of section 14 (a) of the Revenue Act of 1916 may be allowed under the last proviso of section 252 of the Revenue Act of 1921. . . . .

(3) . . . . a written motion or application filed under section 14 (a) of the Revenue Act of 1916 to reopen a claim for refund theretofore rejected under section 3228, Revised Statutes, satisfies the requirement of section 14 (a), and if filed before the passage of the Revenue Act of 1918, the claim may be allowed under section 252 of the Revenue Act of 1921. (C. B. I-1, p. 319; L. O. 1093.)

Responsibility for Reopening Old Claims.—

Ruling. (4) A claim heretofore rejected and now allowable by the provisions of section 252 of the Revenue Act of 1921 should not be reopened and allowed by the Bureau on its own motion, except in those cases where, in the regular course of the examination of a return, it is found that a tax has been paid in excess of the amount due. (C. B. I-1, p. 319; L. O. 1093.)

Soldiers' and Sailors' Relief Act Does Not Apply to Time Limit on Refunds.—

Ruling. Section 205 of the Soldiers' and Sailors' Relief Act (40 Stat. 440), which excluded the period of military service in computing the period limited by law for the "bringing of any action," has no application to claims for refund and credit under the provisions of section 252 of the Revenue Act of 1921. (C. B. I-1, p. 311; Digest I. T. 1269.)

SUITS FOR RECOVERY WITHIN 5 YEARS AFTER PAYMENT.—An appeal to the Commissioner in form of claim for refund is first step in seeking

[50] C. B. 3, p. 302; Sol. Op. 79.

relief by a taxpayer. If the Commissioner delays action on claim for refund, suit may be brought against the collector after 6 months, without awaiting Commissioner's decision.

Law. Sec. 1318. That section 3226 of the Revised Statutes is amended to read as follows:

"Section 3226. No suit or proceeding shall be maintained in any court for the recovery of any internal-revenue tax alleged to have been erroneously or illegally assessed or collected, or of any penalty claimed to have been collected without authority, or of any sum alleged to have been excessive or in any manner wrongfully collected, until a claim for refund or credit has been duly filed with the Commissioner of Internal Revenue, according to the provisions of law in that regard, and the regulations of the Secretary of the Treasury established in pursuance thereof. No such suit or proceeding shall be begun before the expiration of six months from the date of filing such claim unless the Commissioner renders a decision thereon within that time, nor after the expiration of five years from the date of the payment of such tax, penalty, or sum."

This section shall not affect any suit or proceeding instituted prior to the passage of this Act, but shall apply to all suits and proceedings instituted after the passage of this Act, whether or not barred by prior Acts of Congress.

Since the Treasury is experiencing difficulties in clearing up claims within 5-year limit, taxpayers should be careful not to permit the period to expire before instituting suit.

PROOF OF APPEAL TO COMMISSIONER.—The Court of Claims of the U. S. has decided that when suit is brought by taxpayer against collector for recovery of tax, burden of proof is upon him to show that his appeal to the Commissioner has been taken and decided, or else that decision was delayed more than 6 months from date of appeal.[51]

Decision. The written appeal was the best evidence of which the case was susceptible, and if it was not in his power to have produced the original, it was nevertheless his duty to have produced an authentic copy thereof, or accounted for its absence.[52]

Regulation. The lodging of an appeal (claim for refund) made out in due form with the proper collector of internal revenue, for the purpose of transmission to the Commissioner of Internal Revenue in the usual course of business under the requirements of the regulations of the Secretary of the Treasury, is in legal effect a presentation of the appeal to the Commissioner. (Reg. 33, 1918, Art. 270.)[53]

An Amended Return or Claim for Abatement Does Not Constitute an Appeal.—The 1921 law amended Sec. 3226, Revised Statutes, by inserting the specific statement that "no suit . . . . shall be maintained . . . . until a claim for refund or credit has been duly filed with the Commissioner. . . . ."

Ruling. . . . . (d) A taxpayer, on April 15, 1918, filed amended returns for 1913 and subsequent years which showed an overpayment for 1913. The amended returns were not audited until July 1, 1919—four months after the expiration of the five-year limitation placed on the original return. Does the filing of an amended return within the five-year period act in the same capacity as a claim, as far as being allowed to offset the overpayment against an additional tax, or is it barred due to the fact that the final audit was not reached before the expiration of the five-year limitation on 1913 return?

A. . . . Amended returns do not take the place of a claim for refund or credit, and if filed, unsupported by such claim or claims, do not in themselves constitute a sufficient claim within the meaning of the statute to warrant the crediting or refunding of any taxes thereunder after the expiration of the five-year period. (C. B. 4, p. 332; Mim. 2764.)

---

[51] *Lauer* v. *U. S.*, 5 Ct. Cl. 447.
[52] *Hubbard* v. *Kelley*, 8 W. Va. 46.
[53] This regulation is based upon *U. S.* v. *Real Estate Savings Bank*, 14 Otto 728, 104 U. S. 728, 26 L. Ed. 908, 28 Int. Rev. Rec. 87.

The Supreme Court of the U. S. has held[54] under an earlier law that a claim in abatement does not constitute an appeal to the Commissioner for a refund. For this decision as well as a decision[55] of a Circuit Court of Appeals taking the opposite position, see Montgomery's Income Tax Procedure, 1922, pp. 265–267. In view of this situation, taxpayers should be careful to reserve their legal rights by filing a claim for refund when a claim for abatement is rejected.

In a lower court, however, it has been held that if the Commissioner advised the taxpayer that no claim for refund was necessary, under such circumstances, collector cannot defend on ground that claim for refund was not filed.[56]

Application for Special Relief Does Not Constitute a Claim for Refund or Credit.—

Ruling. An application for special assessment under the provisions of sections 327 and 328 of the Revenue Act of 1918 does not in itself constitute a sufficient specific protest to meet the requirements of section 1324 of the Revenue Act of 1921, relative to the payment of interest on claims for credit or refund allowed after the passage of such Act. (C. B. I–1, p. 404; I. T. 1335.)

SUIT AGAINST COLLECTOR OF TAX AND NOT SUCCESSOR.—The United States Circuit Court of Appeals for the Seventh Circuit certified the following two questions to the U. S. Supreme Court:[57]

Decision. 1. Assuming that the declaration states a good cause of action had the suit been brought against S. M. Fitch, the internal revenue collector who actually collected and received the taxes, does it state any cause of action whatever against said S. M. Fitch's successor in office, the plaintiff in error, against whom the suit was brought, but who had no participation in the collection, receipt, or disbursement of such taxes?

2. May suit in the district court of the United States properly be brought and maintained against a United States collector of internal revenue for the recovery of the amount of a United States internal revenue tax, unlawfully assessed and collected, but in the collection and disbursement of which such collector had no agency, the entire transaction of such assessment, collection, and disbursement having occurred during the incumbency of such office of a predecessor in office of such collector?

The court answered both questions in the negative.

SUITS WHEN COLLECTOR IS DEAD.—The 1921 law gives a district court concurrent jurisdiction with the Court of Claims in cases where the collector is dead.

Law. Sec. 1310. . . . (c) Paragraph Twentieth of section 24 of the Judicial Code is amended by adding at the end thereof the following new paragraph:

"Concurrent with the Court of Claims, of any suit or proceeding, commenced after the passage of the Revenue Act of 1921, for the recovery of any internal-revenue tax alleged to have been erroneously or illegally assessed or collected, or of any penalty claimed to have been collected without authority or any sum alleged to have been excessive or in any manner wrongfully collected, under the internal-revenue laws, even if the claim exceeds $10,000, if the collector of internal-revenue by whom such tax, penalty, or sum was collected is dead at the time such suit or proceeding is commenced."

STATE COURTS HAVE NO JURISDICTION TO DETERMINE FEDERAL TAXES.—Two interesting cases,[58] decided by the Supreme Court of

---

[54] *Rock Island, Arkansas & Louisiana Railroad Co.* v. *U. S.*, Nov. 22, 1920, 254 U. S. 141, 65 L. Ed. 188, 41 Sup. Ct. 55.

[55] *Loomis* v. *Wattles*, 266 Fed. 876. In the *Rock Island* case, *supra*, the Supreme Court criticized *Loomis* v. *Wattles*.

[57] *Smietanka* v. *Indiana Steel Co.*, 42 Sup. Ct. 1, 66 L. Ed.—

[58] *Willmann, et al.* v. *Walsh*, 112 Atl. 804, 96 Conn. 79; and *Application of Willmann, et al.*, 112 Atl. 806. For the details of these decisions, see Income Tax Procedure, 1922, pp. 268–271.

Errors for the State of Connecticut, hold that Sec. 3449 of the Connecticut Statutes, which provides that any claim not presented to trustees in the liquidation of the affairs of a corporation within the time limited shall be barred, does not apply to federal taxes.

The higher court affirmed the lower court's decision in each case. In commenting upon the second case, the higher court said:

Decision. The facts found disclose that the federal taxes involved in these proceedings have not been paid, and that a claim for the abatement of said taxes is pending before the Commissioner of Internal Revenue, under Section 5949 (Sec. 3226, R. S., U. S.) of the Compilation of United States Statutes 1916. Under such facts, in accord with the terms of Section 5949 (Sec. 3226, R. S., U. S.) no suit, formal or, as here, informal, can be maintained to recover back or to abate such federal taxes in any court, state or federal.

Under Section 5947 of such Compilation no suit, formal or informal, can be maintained to restrain the collection of federal taxes.

Therefore the superior court had no jurisdiction to pass upon the legality of the assessment of the internal revenue taxes in question, or to issue a restraining order relating thereto, because of the provisions of the United States Statutes quoted above.

PENALTIES IMPROPERLY COLLECTED.—If an illegal tax is paid, the fact that it was not paid within the time allowed by law will not prevent any taxpayer from recovering the penalty of 1% a month paid by him for non-payment; for if the tax was illegal it was never due and therefore the penalty was as much unauthorized as the tax itself.[59]

INTEREST ALLOWABLE ON REFUNDS.—Contrary to previous laws, the 1921 law provides that interest must be paid upon all claims for refund or credit allowed. The section seems to apply to refunds arising under all previous laws and covers all internal revenue taxes. Interest when allowed is payable on all claims, whether allowed by the Commissioner voluntarily or by the courts.

Law. Sec. 1324. (a) That upon the allowance of a claim for the refund of or credit for internal revenue taxes paid, interest shall be allowed and paid upon the total amount of such refund or credit at the rate of one-half of 1 per centum per month to the date of such allowance, as follows: (1) if such amount was paid under a specific protest setting forth in detail the basis of and reasons for such protest, from the time when such tax was paid, or (2) if such amount was not paid under protest but pursuant to an additional assessment, from the time such additional assessment was paid, or (3) if no protest was made and the tax was not paid pursuant to an additional assessment, from six months after the date of filing of such claim for refund or credit. The term "additional assessment" as used in this section means a further assessment for a tax of the same character previously paid in part.

(b) Section 177 of the Judicial Code is amended to read as follows:

"Section 177. No interest shall be allowed on any claim up to the time of the rendition of judgment by the Court of Claims, unless upon a contract expressly stipulating for the payment of interest, except that interest may be allowed in any judgment of any court rendered after the passage of the Revenue Act of 1921 against the United States for any internal-revenue tax erroneously or illegally assessed or collected, or for any penalty collected without authority or any sum which was excessive or in any manner wrongfully collected, under the internal-revenue laws."

Note that date when interest begins to run varies with certain conditions. The amendment to the Judicial Code permits interest to be paid on all internal revenue claims allowed by the Court of Claims.

The Solicitor has issued a lengthy opinion dealing with interest on judg-

---

[59] *Camp Bird v. Howbert*, 262 Fed. 114. Certiorari denied Mar. 8, 1920, 252 U. S. 579, 64 L. Ed. 725, 40 Sup. Ct. 344.

ment claims. The various points of the opinion are summarized in the official digest which reads as follows:

Ruling. 1. Where suit is instituted directly against the United States in the Court of Claims or the District Court for the recovery of internal revenue taxes alleged to have been erroneously or illegally collected, interest is not allowable *on* such judgment, except:

(*a*) Where suit is instituted directly against the United States in the Court of Claims and a judgment is rendered in favor of the claimant, which judgment is thereafter appealed by the United States and affirmed by the Supreme Court, interest is allowable on such judgment at the rate of 4 per centum per annum from the date of filing the transcript of judgment in the Treasury Department up to and including the date of affirmance by the Supreme Court, but in no case shall interest be allowed after the term of the Supreme Court at which such judgment was affirmed. (Sec. 1, Act of September 30, 1890.)

(*b*) Where a suit is instituted directly against the United States in the District Court, sitting as a Court of Claims, interest is allowable at the rate of 4 per centum per annum from the date of such final judgment or decree until the time when an appropriation is made for the payment of the judgment or decree. (Sec. 10, Act of March 3, 1887.)

2. By virtue of section 1324 (b) of the Revenue Act of 1921, interest may be allowed *in* any judgment for the recovery of internal revenue taxes erroneously or illegally collected where suit is brought directly against the United States in the District Court or the Court of Claims, and when so allowed by the court must be refunded with the tax. Where interest is not allowed in the judgment by the court it can not be allowed by way of refund.

3. Where suit is instituted against a collector of internal revenue for the recovery of taxes alleged to have been erroneously or illegally collected interest may be allowed by the court *in* the judgment, and when so allowed must be refunded with the tax. Where interest is not allowed in the judgment by the court it can not be allowed by way of refund.

4. Interest is allowable against the United States only when specifically provided for by law, and if the law does not provide for interest, a provision in a judgment of a court that the United States pay interest would not be sufficient authority for an administrative officer to pay the same. . . . . (I-39 522; Sol Op. 143.)

The position of the Solicitor is stated in the detailed opinion as follows:

Ruling. Section 1324 (b) of the 1921 Act in effect simply extends the allowance of interest prior to judgment in the case of suits brought directly against the United States and was not designed to permit of allowance of interest after judgment, nor does said section require that interest be paid; it simply permits the court to allow it, and, where the court does not allow it, it is not to be refunded.

Sec. 1324 (a) provides "that upon the allowance of a claim for refund . . . . for internal revenue taxes paid, interest *shall be allowed and paid.*" Before a suit can be instituted a claim for refund must be filed. A suit in effect requests the court to compel the Commissioner to make the refund. Any interest received, whether by suit or not, should be credited to interest. Such interest is taxable income.

MAY GOVERNMENT OPEN UP THE ENTIRE RETURN?—

Ruling. . . . . Where an action for money had and received is brought against a collector of internal revenue for the amount of an additional tax paid on net income, the taxpayer is entitled to recover only such amount as is in reality greater than the tax which should have been assessed under the law as properly interpreted and applied. The fact that the Commissioner in assessing the tax erroneously allowed some deductions for depreciation does not operate as an estoppel against the collector or against the United States, as it is well settled that no assessment of the Commissioner is necessary for the collection of the tax, at least in a direct action by the United States; nor does it make any difference that an assessment has been made, for in spite of the assessment and of the expiration of the period within which an amended assessment can be made, the United States may still sue for the amount actually due. It is immaterial that suit is in form against the collector, because the recovery in the end comes from the

United States, so that even if the collector were personally estopped, that estoppel under the circumstances does not apply against the United States. The conclusion is reached therefore that sums due the United States as determined by the court in suit against a collector of internal revenue are a valid offset as against the amount found due the taxpayer, though such sums include items which the Commissioner did not claim to be due the United States when considering the return for purposes of assessment. (C. B. 1, p. 258; T. D. 2882 (2).)

If limitation period has run against government before any counterclaim is made, it is doubtful if entire return may be opened up. If taxpayer filed a claim for refund for a certain item and also instituted suit within limitation period, the government would certainly contend that the suit could include only the specific item claimed. In other words, after the period had expired, the claim could not be amended to include other items. District Court for Western Division of Western District of Missouri[60] has held that a suit may not include items which have not been presented to the Commssioner.

Ruling. . . . . A taxpayer can not claim a deduction in court for the first time where, in its claim for refund filed precedent to bringing suit, it did not claim the right to such deduction or assert that it had failed to take it in computing net income in its return, or that it had failed to take credit for it, and where, consequently, a claim for the deduction was never presented to the Commissioner of Internal Revenue for his decision. . . . . (C. B. 4, p. 266; Digest T. D. 3164; Ct. D. 11.)

CLAIM FOR REFUND OF SUMS RECOVERED BY SUIT.—The following regulation sets forth detailed procedure necessary for a taxpayer to secure refund of taxes or penalties erroneously collected by the government after he has brought suit and secured judgment.

Regulation. (*a*) Claims by taxpayers for the amount of a judgment representing taxes or penalties erroneously collected should be made on Form 843. The claimant should state the grounds of his claim under oath, giving the names of all the parties to the suit, the cause of action, the date of its commencement, the date of the judgment, the court in which it was recovered, and its amount. To this affidavit there should be annexed a certified copy of the final judgment, a certificate of probable cause, and an itemized bill of the costs paid receipted by the clerk or other proper officer of the court, together with a certified copy of the docket entries of the court in the case or so much thereof as may be required by the Commissioner. When a recovery is had in any suit or proceeding against a collector or other internal revenue officer for any act done by him, or for the recovery of any money exacted by or paid to him and by him paid into the Treasury, in the performance of his official duty, and the court certifies that there was probable cause for the act done by the collector or other officer, or that he acted under the directions of the Secretary of the Treasury, or other proper officer of the Government, no execution shall issue against such collector or other officer, but the amount so recovered shall, upon final judgment, be provided for and paid out of the proper appropriation from the Treasury. . . . . (*b*) If the judgment debtor shall have already paid the amount recovered against him, the claim should be made in his name. There should also be a certificate of the clerk of the court in which the judgment was recovered (or other satisfactory evidence), showing that the judgment has been satisfied and specifying the exact sum paid in its satisfaction, with a detail of all items of costs which were paid by the judgment debtor or for which he is liable. . . . . (Art. 1051.)

APPROPRIATIONS FOR PAYING REFUNDS.—

Law. Sec. 1317. That the paragraph of section 3689 of the Revised Statutes, as amended, reading as follows: "Refunding taxes illegally collected (internal revenue): To refund and pay back duties erroneously or illegally assessed or collected under the internal revenue laws," is repealed from and after June 30, 1920; and the Secretary of the Treasury shall submit for the fiscal year 1921, and annually thereafter, an estimate of appropriations to refund and pay back duties or taxes erroneously or illegally assessed or collected under the internal-revenue laws, and to pay judgments, includ-

[60] *Kemper Military School* v. *Crutchley*, 274 Fed. 125.

ing interest and costs, rendered for taxes or penalties erroneously or illegally assessed or collected under the internal-revenue laws.

VALIDITY OF TAX DETERMINED BY BANKRUPTCY COURT.—In the cases of *In re General Film Corporation* and *U. S.* v. *Kellogg*,[61] the government filed proofs of claim against bankrupt for additional taxes and interest. Trustee in bankruptcy objected to claims and court disallowed them. The government claimed that the only remedy open to trustee for correcting any error was to pay the taxes and then proceed under Rev. Stat., Sec. 3226, by appealing to the Commissioner for refund and subsequently bringing suit.

Decision. We regard this section (Section 64(a) of the Bankruptcy Act) as binding upon the government because it is named therein and, while conferring priority, as giving the bankruptcy court the power to hear and determine any question that arises as to the amount or legality of a tax assessed by it. The provision applies to taxes of all the persons mentioned, and we could not differentiate the government from the other persons in the absence of language justifying it.

But section 3226, U. S. Rev. Stat., could under no circumstances apply to the case under consideration because the trustee is not seeking to maintain a suit for the recovery of internal revenue taxes illegally assessed. *Clinkenbeard* v. *United States*, 21 Wall. 65, 22 L. Ed. 477; *United States* v. *Nebraska Distilling Co.*, 80 Fed. 285, 25 C. C. A. 418.

NO REOPENING OF CASE AFTER FINAL DETERMINATION.—Secs. 1312 and 1313 of the 1921 law provide that taxpayer and Commissioner may by agreement finally close a case. After this agreement has been made, neither may reopen the case.

FRAUD OR UNDERSTATEMENT.—

Law. Sec. 1323. That section 3225 of the Revised Statutes of the United States, as amended, is reenacted without change as follows:

"Section 3225. When a second assessment is made in case of any list, statement, or return, which in the opinion of the collector or deputy collector was false or fraudulent, or contained any understatement or undervaluation, such assessment shall not be remitted, nor shall taxes collected under such assessment be refunded, or paid back, or recovered by any suit, unless it is proved that such list, statement, or return was not willfully false or fraudulent and did not contain any willful understatement or undervaluation."

Information at the Source

PURPOSE.—In the revision of the income tax law in 1917, which is followed in the 1918 and 1921 laws, a system of "information at the source" was adopted, except as to non-resident aliens and certain corporation mortgage interest. This system requires returns of information concerning certain payments made by individuals and corporations, to enable the government to see that recipients of some classes of taxable income report and pay taxes thereon.

CLASSIFICATION OF INFORMATION RETURNS.—Returns of information may be divided into the following groups:

1. Returns by corporations of dividends paid to stockholders.
2. Returns by brokers of profits or losses of customers.
3. Returns by employers, fiduciaries, lessees, mortgagors or others of all payments of fixed or determinable income, such as salaries, rent, mortgage interest, etc.

[61] 274 Fed. 903; see also *In re Anderson*, 275 Fed. 397; aff'd 279 Fed. 525.

4. Ownership certificates, required in the collection of interest on corporation bonds and dividends on foreign stocks.
5. "Withholding" returns, required in the case of fixed or determinable income payable to non-resident aliens or foreign corporations.

RETURNS BY CORPORATIONS OF DIVIDENDS PAID TO STOCKHOLDERS.—

Law. Sec. 254. That every corporation subject to the tax imposed by this title and every personal service corporation shall, when required by the Commissioner, render a correct return, duly verified under oath, of its payments of dividends, stating the name and address of each stockholder, the number of shares owned by him, and the amount of dividends paid to him.

Regulation. When directed by the Commissioner, either specially or by general regulation, every domestic or resident foreign corporation . . . . shall render a return on Form 1097 of its payments of dividends and distributions to stockholders for such period as may be specified, stating the name and address of each stockholder, the number and class of shares owned by him, the date and amount of each dividend paid him, and when the surplus out of which it was paid was accumulated. (Art. 1060.)

RETURNS BY BROKERS.—

Law. Sec. 255. That every individual, corporation, or partnership doing business as a broker shall, when required by the Commissioner, render a correct return duly verified under oath, under such rules and regulations as the Commissioner, with the approval of the Secretary, may prescribe, showing the names of customers for whom such individual, corporation, or partnership has transacted any business, with such details as to the profits, losses, or other information which the Commissioner may require, as to each of such customers, as will enable the Commissioner to determine whether all income tax due on profits or gains of such customers has been paid.

Regulation. When directed by the Commissioner, either specially or by general regulation, every person doing business as a broker shall render a return on Form 1100, showing the names and addresses of customers to whom payments were made or for whom business was transacted during the calendar year or other specified period next preceding and giving the other information called for by the form. (Art. 1065.)

RETURNS OF FIXED OR DETERMINABLE INCOME.—The law requires returns of information only when the income is fixed or determinable. It is not necessary that the income be annual or periodical, as stipulated in the requirement for withholding.

Regulation. . . . . (*a*) Income is fixed when it is to be paid in amounts definitely predetermined. On the other hand, it is determinable whenever there is a basis of calculation by which the amount to be paid may be ascertained. . . . . (Art. 362.)

It has been held that where a lease provides for a payment of rental in crop shares, the landlord and tenant sharing proportionately the expenses and dividing the proceeds, such payments are not fixed and determinable and need not be reported.[62]

Commission on account of a single transaction has been held not to be fixed or determinable annual income.[63] Income credited but not paid is subject to provisions of Art. 362.[64] Fees for professional services should be included in information returns.[65] Earnings of lawyers and doctors are not usually within the purview of this provision of the law (unless paid a regular retainer).[66]

It has been held that cash deposits by a tenant to guarantee the carrying out of the provisions of his lease are not necessarily income for year in which

received, but should be reported as income for years in which applicable as rent.[67]

Ruling. A receiver in partition proceedings is required to file returns of information covering payments of commissions, attorney's fees, and other fixed or determinable income of $1,000 or more made to any person during the taxable year. (C. B. 5, p. 252; O. D. 1149.)

Persons Required to File Returns of Fixed or Determinable Income.—

Law. Sec. 256. That all individuals, corporations, and partnerships, in whatever capacity acting, including lessees or mortgagors of real or personal property, fiduciaries, and employers, making payment to another individual, corporation,[68] or partnership, of interest, rent,

Description of payment.—

salaries, wages, premiums, annuities, compensations, remunerations, emoluments, or other fixed or determinable gains, profits, and income (other than payments described in section 254 and 255), [The exceptions are dividends and transactions by brokers]

Amount to Be Reported.—

of $1,000 or more in any taxable year,

Employees of United States Government Must Make Return.—

or, in the case of such payments made by the United States, the officers or employees of the United States having information as to such payments and required to make returns in regard thereto by the regulations hereinafter provided for,

Form of Returns.—

shall render a true and accurate return to the Commissioner, under such regulations and in such form and manner and to such extent as may be prescribed by him with the approval of the Secretary, setting forth the amount of such gains, profits, and income, and the name and address of the recipient of such payment. . . . .

The regulation covering this matter follows:

Regulation. All persons making payment[69] to another person of fixed or determinable income of $1,000 or more in a taxable year must render a return thereof to the Commissioner for the preceding calendar year on or before March 15 of each year, except as specified in articles 1073, 1074, 1075, 1076, and 1079. The return shall be made in each case on Form 1099, accompanied by a letter of transmittal on Form 1096 showing the number of returns filed. The street and number where the recipient of the payment lives shall be stated, if possible. Where no present address is available, the last known post-office address must be given. Although to make necessary a return of information the income must be fixed or determinable, it need not be annual or periodical.[70] . . . . (Art. 1071.)

Returns Cover Calendar Year.—

Law. Sec. 256. . . . . The provisions of this section shall apply to the calendar year 1921 and each calendar year thereafter, ...

The instructions on Form 1099 (1920) state:

One of these forms must be filled in for each person to whom income, as described on this form, was paid during the calendar year. . . . .

Returns Under Systems of "Information at Source" and "Payment at Source."—Returns are required of the various classes of withholding agents covered by the regulations.

Corporations paying interest on bonds and similar forms of indebtedness

---

[67] C. B. I-1, p. 324; I. T. 1291.

[68] Payments to corporations need not be reported (Art. 1074).

[69] These returns are required for actual amounts *paid or credited and made available* during the calendar year equal to or exceeding $1,000. (C. B. 2, p. 249; O. D. 428.)

[70] When withholding is required the income must be annual or periodical as well as fixed or determinable [Sec. 221 (a)].

are required to report the amount withheld in any month on or before the 20th day of the following month, using for this purpose Form 1012. At the close of the year and on or before Mar. 1 of the following year, these monthly returns are summarized on an annual return, using Form 1013.

Monthly returns referred to above are not specifically required by the statute, but are demanded under regulations prescribed by the Commissioner in accordance with the statute as a convenience in reporting this tax. Their purpose is to enable the Treasury to audit and check from month to month the items therein reported, thus avoiding congestion at close of year. The annual reports, however, are required by the statute, and failure to file them subjects withholding agent to penalties the same as those for failure to file annual returns of net income. An extension of time may be obtained for filing the list returns in same manner and for same reasons as those applying to returns of net income.

Tax withheld from income other than bond interest will be accounted for on income tax Form 1042, and separate reports of payments entered in Form 1042 will be made on Form 1098.

Employers, tenants, and debtors must report annually on Form 1099 amounts of $1,000 or more, paid for salaries, wages, rents, interest, premiums, etc., during the year. In the case of collection of bond interest and of foreign dividends the report is not limited to amounts in excess of $1,000. As one person, firm, or corporation may find it necessary to fill out more than one Form 1099, it will be necessary to accompany the forms with a letter of transmittal, known as Form 1096. The form used for non-resident aliens is 1098.

Affiliated corporations do not make a consolidated report for purposes of information. Form 1099 is to be used by each corporation separately in reporting payments. However, where two corporations were merged during the year 1921, information returns showing payments made by both corporations should be filed by the continuing corporation.[71]

The present regulation omits the requirement of reporting on Form 1096 the aggregate amount represented by the separate Form 1099. The revised Form 1096 requires only a statement of the number of Forms 1099 attached thereto.

Payments to Employees.—Returns of information regarding payments to employees, other than those against whom withholding is required, are specifically covered as follows:

Regulation. The names of all employees to whom payments of $1,000 or over a year are made, whether such total sum is made up of wages, salaries, commissions, or compensation in any other form, must be reported. Heads of branch offices and subcontractors employing labor, who keep the only complete record of payments therefor, should file returns of information in regard to such payments directly with the Commissioner. When both main office and branch office have adequate records, the return should be filed by the main office. In case an employer has a large number of employees and the computation of exact amounts paid during the calendar year will result in an undue hardship, careful estimates may be made on the basis of any representative month, and unless the yearly payment based on this estimate in the case of any employee amounts to $1,000 or more, no return of payments to such employee is required. (Art. 1072.)

The present regulation permits employers who have a large number of employees to make returns on **estimated payments.** The old regulation extended this privilege only to employers having a large number of employees who were being moved from job to job.

[71] C. B. I-1, p. 324; I. T. 1313.

If an employer is required under a state law to withhold a tax on an employee's salary, the gross payment before deduction should be reported.

Ruling. In executing Form 1099, an employer who is required to withhold tax from an employee under a State income-tax law, should report on such form the amount of the salary paid to the employee plus the amount of the tax withheld. The employee should report the same amount in his personal return on Form 1040 or Form 1040A as the case may be. (C. B. 2, p. 249; O. D. 401.)

Value of living quarters and board furnished employees[72] must be considered by employers in preparing returns of information:

Rulings. . . . . A person receives cash compensation for services rendered, and in addition thereto living quarters; when such quarters are furnished for the benefit and convenience of employees, the amount of cash compensation plus the value of living quarters must be returned. When, however, living quarters are furnished for the convenience of the employer only, the value thereof need not be returned. Board and lodging furnished seamen in addition to their cash compensation is held to be supplied for the convenience of the employer. . . . . (Treasury Bulletin "B," p. 38.)

The value to a domestic servant of the board and lodging received as part of his compensation for services rendered is deemed to be the same amount which he would be required to pay for board and lodging elsewhere than in his employer's household.

If the value of the board and lodging added to the cash compensation equals or exceeds $1,000 an employer is required to report such amount on Forms 1099 and 1096. The value of the board and lodging should be entered separately on Form 1099, as evidence of the fact that such value has been considered in computing the total amount received by the servant. (C. B. 4, p. 348; O. D. 874.)

In view of the foregoing, employees should be advised by employers regarding the tax to which they are subject.

Return of Information by Partnerships and Fiduciaries.—Information returns on Forms 1099 and 1096 are required in all above cases regardless of whether such income amounts to more or less than $1,000 annually.[73] Salaries paid to members of partnerships must also be included in returns of information. If a fiduciary receives a salary from an estate, an information return must be filed. All payments by partnerships and fiduciaries to employees must be reported if such payments equal or exceed the statutory minimum.

Many taxpayers object to making information returns for members of partnerships and for beneficiaries, because such information is shown on partnership return 1065 and fiduciary return 1041. This duplication of information returns was the subject of a conference at Washington between the Secretary of the Treasury and representative bankers and others. It resulted in the elimination of Forms 1096 and 1099 in these cases, as stated in the instructions on the present Form 1096.

Returns of Payments to Non-Resident Aliens.[74]—

Regulation. In the case of payments of annual or periodical income to nonresident alien individuals, partnerships composed in whole or in part of nonresident aliens and not having an office or place of business within the United States, or to foreign corporations not engaged in trade or business within the United States and not having any office or place of business therein, the returns filed by withholding agents on Form 1042 shall constitute and be treated as returns of information. . . . . (Art. 1075.)

Form 1042 is the annual list return of the withholding agent which must be filed on or before Mar. 1.

---

[72] The 1921 law specifically provides that the rental value of a minister's house is not taxable and should therefore not be reported.

[73] See Treasury Bulletin "B," p. 39; also C. B. 4, p. 348; Mim. 2708.

[74] If the income of non-resident aliens is not fixed or determinable, no information return is required. (C. B. 3, p. 312; O. D. 673.)

Ruling. A withholding agent is not relieved from obligation to pay to the Federal Government the amount of tax correctly withheld from the income of a nonresident alien by reason of the fact that the nonresident alien has filed a return showing no tax liability. (C. B. 5, p. 194; O. D. 985.)

Where No Return of Information on Forms 1099 and 1096 Is Required.—As previously stated, the statute gives the Commissioner discretionary powers as to the class of payments to be reported on information returns 1099 and 1096. The list of specific payments which require no information returns follows:

Regulation. Payments of the following character, although over $1,000, need not be reported in returns of information on Form 1099: (*a*) payments of interest on obligations of the United States; (*b*) dividends paid by domestic or resident foreign corporations; (*c*) payments by a broker to his customers; (*d*) payments of any type made to corporations; (*e*) bills paid for merchandise, telegrams, telephone, freight, storage, professional services, and similar charges; (*f*) annuities representing the return of capital; (*g*) payments of rent made to real estate agents (but the agent must report payments to the landlord if they amount to $1,000 or more annually); (*h*) payments made by branches of business houses located in foreign countries to alien employees serving in foreign countries; and (*i*) payments made by the United States Government to sailors and soldiers and to its civilian employees. (Art. 1073.)

The instructions on Form 1096 state that no return on Form 1099 is required in case of "Distributions to members of a partnership . . . . and beneficiaries."

Ruling. An employer is not required to report on Form 1099 the amount representing compensation for personal injuries or sickness paid to an employee. (C. B. 4, p. 349; Digest O. D. 858.)

Although several types of income paid by states or political subdivisions thereof are exempt from tax, there are numerous instances in which taxable income is paid. Such taxable income must be reported:

Ruling. A department of municipal government is required to file a return of information as provided in section 256 of the Revenue Act of 1918, showing payments of fixed or determinable gains, profits, and income of $1,000 or over in any taxable year, excluding from the return, however, payments made as salary or wages to officials or employees of a State or political subdivision thereof, and payments of interest on the obligations of a State or political subdivision thereof. (C. B. 2, p. 249; O. D. 470.)

HEAVY PENALTIES FOR FAILURE TO FURNISH INFORMATION.—The specific penalties for failure or refusal to furnish information were increased in the 1918 law.[75]

Regulation. A penalty of not more than $1,000 attaches for failure punctually to make a required return, whether of income, withholding or information, or to pay or collect a required tax. If the failure is willful, however, or an attempt is made to defeat or evade the tax, the offender is liable to imprisonment and to a fine of not more than $10,000 and costs. See also the act of July 5, 1884. In addition to these specific penalties *ad valorem* penalties are imposed in various cases. An *ad valorem* penalty is assessed and collected as a part of the tax, while a specific penalty is enforceable only by suit. . . . . (Art. 1055.)

Ownership Certificates

INFORMATION RETURNS OF BOND INTEREST AND FOREIGN DIVIDENDS.—The statutory provision as to information returns in case of bond interest and foreign dividends is as follows:

Law. Sec. 256. . . . . Such returns may be required, regardless of amounts, (1) in

[75] Sec. 253. The 1921 law re-enacted this section without change.

the case of payments of interest upon bonds, mortgages, deeds of trust, or other similar obligations of corporations, and (2) in the case of collections of items (not payable in the United States) of interest upon the bonds of foreign countries and interest upon the bonds of and dividends from foreign corporations by individuals, corporations, or partnerships, undertaking as a matter of business or for profit the collection of foreign payments of such interest or dividends by means of coupons, checks, or bills of exchange. . . . .

Regulations. The owners of bonds or other obligations, except domestic and resident corporations, whether or not such bonds or other obligations contain a tax-free covenant, issued by domestic or resident foreign corporations, when presenting interest coupons for payment shall file a certificate of ownership for each issue of bonds, showing the name and address of the debtor corporation, the name and address[76] of the owner of the bonds, the nature of the obligations, the amount of interest and its due date,[77] and the amount of any tax withheld. No ownership certificates need be filed in the case of interest payments on bonds the income from which is not required to be included in gross income, nor in the case of any obligations of the United States. . . . (Art. 365.)

In the case of payments of interest, regardless of amount, upon bonds and similar obligations of domestic or resident foreign corporations, the original ownership certificates, when duly filed, shall constitute and be treated as returns of information. If a bondholder files no ownership certificate in the case of payments of interest on registered bonds, the withholding agent shall make out such a certificate in each instance and file it with his monthly return. No ownership certificate is required to be filed in case bonds or other obligations are owned by domestic or resident corporations. . . . (Art. 1074.)

In the collection of interest on corporation bonds, whether in coupon or registered form, bondholder (unless it is itself a corporation) is required to file an ownership certificate as to each series of coupons or registered interest. One certificate may cover any number of coupons of same due date and same issue of bonds.

Ruling. The following is a schedule of ownership certificates required to be used under the Revenue Act of 1921:

Classification of owner.	Bonds of domestic or resident corporations.	
	Containing tax-free clause.	Not containing tax-free clause.
Citizen or resident of the United States. (Individual or fiduciary.) *Personal exemption not claimed.*	Form 1000, line 1.	
Citizen or resident of the United States. (Individual or fiduciary.) *Personal exemption claimed or interest not subject to tax at the source.*	Form 1001, line 1.	Form 1001, line 2.
Domestic or resident partnership..........	Form 1000, line 2.	Form 1001, line 3.
Nonresident alien. (Individual or fiduciary)	Form 1000, line 3.	Form 1000, line 3.
Partnership composed in whole or in part of nonresident aliens and having no office or place of business in the United States.	Form 1000, line 4.	Form 1000, line 4.
Foreign corporation not having an office or place of business in the United States and not engaged in trade or business therein.	Form 1000, line 5.	Form 1000, line 5.
Unknown owner........................	Form 1000, line 6.	Form 1000, line 6.

[76] It is not necessary to enter the street address of the debtor corporation on the ownership certificate. (C. B. 3, p. 216; O. D. 615.)

[77] Bondholders frequently make the error of entering the maturity date of the bond, instead of the due and payment date of the coupon.

Classification of owner.	Bonds of foreign corporations or foreign Governments.		Stock of foreign corporations.
	Containing tax-free clause and having paying agent in the United States.	Not containing tax-free clause and whether or not having paying agent in the United States.	
Citizen or resident of the United States. (Individual or fiduciary.) *Personal exemption not claimed.*	Form 1000, line 1.	....	
Citizen or resident of the United States. (Individual or fiduciary.) *Personal exemption claimed or income not subject to tax at the source.*	Form 1001A, line 1.	Form 1001A, line 1.	Form 1001A, line 1.
Domestic or resident partnership........	Form 1000, line 2.	Form 1001A, line 2.	Form 1001A, line 2.
Unknown owner......	Form 1000, line 6.	....	

There is no space provided on Form 1001A for reporting income when the owner is unknown. If the foreign item is an interest coupon on bonds not containing a tax-free covenant clause, issued by a foreign Government or a foreign corporation, or is a dividend check on stock issued by a foreign corporation, the procedure set forth in the second paragraph of article 1078, Regulations 62, should be followed. There is ample space on Form 1001A below the word "partnership" for the insertion of the word "unknown" under classification of owner, and for entering the income in the appropriate column. (C. B. I-1, p. 222; I. T. 1331.)

The regulations provide that ownership certificates shall constitute and be treated as returns of information; but no ownership certificate is required to be filed in case bonds are owned by domestic or resident foreign corporations.

DUTY OF BANKS AND COLLECTING AGENCIES.—All ownership certificates should contain complete information, or payment should be refused. The interest of both taxpayers and agents demands this. Taxpayers who fail to file the required form automatically waive the credit which they might otherwise claim for tax constructively withheld at the source. Once a form has been accepted by banks or other collecting agents, the responsibility for its corrections lies with such banks or agents. The certificates should always bear the signature of the owner or his agent. Use of ownership certificates takes the place of information returns 1099 and 1096 so far as bond interest payments are concerned.

Regulation. In the case of payments of interest, regardless of amount, upon bonds and similar obligations of domestic or resident foreign corporations, the original ownership certificates, when duly filed, shall constitute and be treated as returns of information. . . . . (Art. 1074.)

Rulings. If banks and other collecting agents accept coupons for collection to which are attached incomplete or otherwise improperly executed ownership certificates, such banks or collecting agents become a party to the filing of incomplete returns of information and shall upon demand of the debtor furnish the name and address of the owner of the coupons so that such ownership certificates may, when filed, be accepted as re-

turns of information in accordance with the provisions of the regulations issued under section 256 of the Revenue Act of 1918.[78] (C. B. 4, p. 232; Digest Mim. 2725.)

Paying agents must not require bank cashing coupons to secure ownership certificates unless law and regulations require certificates. Department cannot prescribe definite ruling for inter-banking transactions. (Telegram to National City Co., New York, N. Y., signed by Commissioner D. H. Blair, and dated Mar. 9, 1922.)

INTEREST COUPONS PRESENTED WITHOUT OWNERSHIP CERTIFICATES.—

Regulation.—When interest coupons are received unaccompanied by certificates of ownership, unless the first bank be satisfied that the owner is a domestic or resident corporation, the first bank shall require of the payee a statement showing the name and address of the payee, the name and address of the debtor corporation, the date of maturity of the interest, the name and address of the person from whom the coupons were received, the amount of the interest, and a statement that the owner of the bonds is unknown to the payee. Such statement shall be forwarded to the Commissioner with the monthly return on Form 1012. The first bank receiving such coupons shall also prepare a certificate on Form 1000, crossing out "owner" and inserting "payee" and entering the amount of interest on line 6, and shall stamp or write across the face of the certificate "Statement furnished," adding the name of the bank. (Art. 369.)

The affidavit form is no longer required, a mere statement only being necessary. If the first bank is satisfied that the owner of the coupon is a corporation, no statement is now required.

Ruling. Bank cashing coupons should exercise ordinary business care in ascertaining owner of bonds in cases where coupons are unaccompanied by ownership certificates. If owner is unknown, certificate should be prepared as required by Article 369. Written statement in lieu of ownership certificate not required in connection with interest payments on bonds owned by domestic or resident corporations. (Telegram to National City Co., New York, N. Y., signed by Deputy Commissioner E. H. Batson, dated Mar. 7, 1922.)

CERTIFICATE WHEN WITHHOLDING.—

Regulation. For the purposes of article 365 Form 1000 shall be used (*a*) by citizens or residents of the United States when no personal exemption or credit is claimed against interest on bonds containing a tax-free covenant; (*b*) by nonresident alien individuals, by partnerships composed in whole or in part of nonresident aliens and not having an office or place of business within the United States, and by foreign corporations not engaged in trade or business within the United States and not having any office or place of business therein, whether or not such bonds contain a tax-free covenant; (*c*) by partnerships, resident or nonresident, and (prior to January 1, 1922) personal service corporations, in the case of bonds containing a tax-free covenant; and (*d*) where the owner is unknown to the withholding agent. (Art. 366.)

Partnerships are now included under (c) and class (d) is entirely new.

CERTIFICATES WHEN NO WITHHOLDING.—

Regulation. For the purposes of article 365, Form 1001 shall be used (*a*) by citizens or residents of the United States when personal exemption is claimed against interest on bonds containing a tax-free covenant and when presenting coupons from bonds not containing a tax-free covenant; (*b*) by domestic and resident partnerships, in the case of bonds not containing a tax-free covenant. In case a citizen or resident alien individual receives interest on bonds containing a tax-free covenant in excess of the amount of personal exemption which the individual may claim, any such excess must be reported on Form 1000. (Art. 367.)

Form 1001 is no longer used by domestic corporations, non-resident partnerships, or foreign corporations.

[78] Also applicable under 1921 law.

USE OF SUBSTITUTE CERTIFICATES.[79]—

Regulation. Resident collecting agents, including responsible banks and bankers receiving interest coupons for collection with ownership certificates attached, may present the coupons with the original certificates to the debtor corporation or its duly authorized withholding agent for collection, or may detach and forward the original certificates directly to the Commissioner, provided each such collecting agent shall substitute for such original certificates its own certificates, Form 1058 or Form 1059, and shall keep a complete record of each transaction, showing (*a*) serial number of item received; (*b*) date received; (*c*) name and address of person from whom received; (*d*) name of debtor corporation; (*e*) class of bonds from which coupons were cut (whether containing a tax-free covenant or not); and (*f*) face amount of coupons. The original certificate for which the certificate of the collecting agent is substituted shall be endorsed, preferably with a rubber stamp, by the collecting agent, as follows:

Owner's certificate No.. ....

....

(Name of collecting agent)

........................., 19..
(Give date of certificate)

The counterpart of the within certificate bearing like number was attached to the coupons within mentioned for delivery to the debtor or withholding agent, by whom the coupons are payable.

For the purpose of identification the substitute certificates shall be numbered consecutively, reverting to the numeral 1 at the beginning of each calendar year, and corresponding numbers given the original certificates of ownership. The use of substitute certificates by collecting agents, banks, and bankers is not permitted, however, in the case of ownership certificates presented with coupons for collection by nonresident alien individuals, partnerships, or corporations. (Art. 368.)

Form 1059 is used instead of Form 1000; Form 1058 instead of Form 1001. The Treasury places the burden on the bank or collecting agent to see that certificates are properly made out. By accepting an ownership certificate, the bank or agent becomes directly responsible for its being made out in accordance with the requirements of law and regulations.

Ruling. . . . . The attention of the Bureau of Internal Revenue has been invited to the fact that in many instances indifference and carelessness has been shown by owners in executing ownership certificates accompanying coupons presented to banks and other collecting agents for collection of the interest on bonds and other obligations of debtors, and also that banks and other collecting agents have been accepting incomplete and improperly executed ownership certificates with such coupons deposited for collection and have been transmitting same to debtors for payment. . . .

Banks and other collecting agents are not required by law or regulations to accept interest coupons for collection. If, however, as a matter of convenience to their customers, they do accept interest coupons for collection, it is their duty to see that the ownership certificates which are executed by the owner of the coupons are properly filled out. These ownership certificates cannot be accepted as returns of information unless they are properly filled out and debtors receiving coupons from banks or collecting agents with incomeplete or otherwise improperly executed ownership certificates are, under the foregoing quoted provisions of Section 256, authorized to demand that the name and address of the owner of the coupons accompanied by incomplete or otherwise improperly executed ownership certificates shall be furnished before the coupons are paid.

If banks and other collecting agents accept coupons for collection to which are attached incomplete or otherwise improperly executed ownership certificates, such banks or collecting agents become a party to the filing of incomplete returns of information and shall upon demand of the debtor furnish the name and address of the owner of the

---

[79] Substitute certificates are favored by persons who wish to conceal the identity of bondholders from the debtor corporation or its paying agent.

coupons so that such ownership certificates may, when filed, be accepted as returns of information in accordance with the provisions of the regulations issued under Section 256 of the Revenue Act of 1918. (C. B. 4, p. 232; Mim. 2725.)

CORRECTION OF CERTIFICATES BY BANKS OR COLLECTING AGENTS.—

Ruling. Banks or other collecting agents receiving coupons attached to ownership certificates executed on the wrong form, in order to expedite the collection of the interest, are permitted to transfer the necessary information from the erroneous to the proper form, the following notations being stamped in the lower left-hand corner:

"......................................
(Name and address of bank or collecting agent.)
By......................................"
(Name of official executing certificate.)

The original certificate should be forwarded with the certificate executed on the proper form by the bank or collecting agent, the original certificate bearing the notation substantially as follows: "Superseded by ownership certificate Form . . . . ," designating the form of certificate executed by the bank or collecting agent. (C. B. 2, p. 192; O. D. 562.)

CERTIFICATES TO BE USED BY FIDUCIARIES AND JOINT OWNERS.—

Regulation. When fiduciaries have the control and custody of more than one estate or trust, and such estates and trusts have as assets bonds of corporations and other securities, a certificate of ownership shall be executed for each estate or trust, regardless of the fact that the bonds are of the same issue. When bonds are owned jointly by two or more persons, a separate ownership certificate must be executed in behalf of each of the owners. (Art. 374.)

CERTIFICATES FOR PAYMENTS OF REGISTERED INTEREST.—

Regulation. Ownership certificates are required in connection with interest upon registered bonds the same as interest upon any other class of bonds. If ownership certificates are not furnished by the owner of the bonds, such certificates must be prepared by the debtor corporation or its withholding agent. (*a*) If the bonds contain a tax-free covenant clause, ownership certificates must be prepared on Form 1,000 for the following classes of bondholders: Citizens or residents of the United States, nonresident alien individuals, partnerships, whether foreign or domestic, foreign corporations having no office or place of business within the United States. (*b*) If the bonds do not contain a tax-free covenant clause, Form 1000 shall be prepared in the case of nonresident alien individuals, partnerships composed in whole or in part of nonresident aliens and not having an office or place of business within the United States, or in case the owner is a foreign corporation not engaged in trade or business within the United States and not having an office or place of business therein. If ownership certificates are not filed by a citizen or resident of the United States or a resident partnership in connection with interest payments upon registered bonds not containing a tax-free covenant clause, Form 1001 should be prepared by the debtor corporation or its withholding agent.

Regardless of whether the registered bonds do or do not contain a tax-free covenant clause, no ownership certificate is required in connection with such bonds owned by domestic or resident corporations. (Art. 370.)

Ruling. Where bonds owned by domestic or resident corporations are registered in name of individual, ownership certificate Form 1001 required to be filed, altered to show names and addresses of owner and nominee. (Telegram to Philadelphia Association of Stock Transfer Agents, signed by Deputy Commissioner E. H. Batson, dated June 6, 1922.)

PAYER HAS RIGHT TO DEMAND NAME AND ADDRESS OF RECIPIENT OF INCOME.—

Law. Sec. 256. . . . . When necessary to make effective the provisions of this section the name and address of the recipient of income shall be furnished upon demand of the individual, corporation, or partnership paying the income. . . . .

Regulation. When the person receiving a payment falling within the provisions of the statute for information at the source is not the actual owner of the income received, the name and address of the actual owner shall be furnished upon demand of the individual, corporation or partnership paying the income, and in default of a compliance with such demand the payee becomes liable to the penalties provided. . . . . (Art. 1080.)

Ruling. Official position of person authorized to sign ownership certificates in behalf of corporation and identity of person signing ownership certificates in behalf of partnership required to be disclosed on certificates. (Telegram to the Southern Pacific Co., New York, N. Y., signed by Deputy Commissioner E. H. Batson, and dated June 16, 1921.)

USE OF FORM 1087 (REVISED) TO DISCLOSE OWNERSHIP.—The proper use of this ownership certificate is most conveniently summarized as follows:

Ruling. This ownership certificate [form 1087 (revised)], is designed primarily for the use of a foreign principal to disclose the actual ownership of stock of a domestic corporation registered in the name of his representative in the United States. Unless the disclosure is made to the Commissioner on this form, the record owner will be liable for any additional tax on dividends on stock of domestic corporations or resident foreign corporations. In all cases where the actual owner is a nonresident alien individual, and the record owner a person in the United States, the record owner will be considered for tax purposes to have the receipt, custody, control, and disposal of the dividend income, and must make return for the actual owner, regardless of the amount of income, and pay any surtax found by such return to be due.

When a foreign corporation is the registered owner of stock of a domestic corporation and the actual owner is a nonresident alien, individual or partnership, disclosure of actual ownership should be made on Form 1087 (Revised). This form should be adapted to make disclosure in order that a domestic corporation required to render a return of information as to dividends in accordance with section 254 of the act, may have at its disposal information as to the actual ownership of the stock. . . . . (Treasury Bulletin "B," p. 27.)

CERTIFICATES NOT REQUIRED FOR INTEREST ON OBLIGATIONS OF THE U. S. AND POLITICAL SUBDIVISIONS.—

Law. Sec. 256. . . . . The provisions of this section . . . . shall not apply to the payment of interest on obligations of the United States.

Regulation. . . . . No ownership certificates need be filed in the case of interest payments on bonds the income from which is not required to be included in gross income, nor in the case of any obligations of the United States. . . . . (Art. 365.)

War Finance Corporation bonds are not obligations of the United States.[80] Hence ownership certificates are required in collecting interest on such securities. Ownership certificates are not required in case of municipal bonds and such other bonds the interest from which is exempt from tax.

DUTIES OF BANKS.—

Ruling. Where a debtor corporation fails to withhold the 2 per cent tax on tax-free-covenant bonds, and the owner has filed Form 1000, there is no obligation on the bank receiving the coupons to withhold the tax, as assessment will be made against the debtor or its withholding agent, based on the tax liability as disclosed by the ownership certificates, Form 1000.

A bank purchasing abroad coupons of bonds issued by domestic corporations will be held prima facie to be the recipient of income. Ownership certificates should therefore be secured from original owners of bonds in order that tax may be withheld as provided by law.

Where a promissory note, signed by a corporation, is left with a bank or trust company for collection, such bank or trust company should not require an ownership certificate to be attached.

Ownership certificates are required to be filed with respect to interest payments upon first-mortgage participation bonds issued by a trust company and secured by a real

[80] C. B. 1, p. 185; O. D. 284.

estate mortgage deposited with the trustee. In cases where coupons of the bonds are not accompanied by ownership certificates, the first bank is required to furnish a certificate. Where no ownership certificates are filed in connection with interest upon such registered bonds, the withholding agent will be required to prepare certificates. (Treasury Bulletin "B," p. 31.)

It has been held that in case of interest payments on overdue coupon bonds, interest coupons of which have been exhausted, ownership certificates must be filed when collecting interest, in same manner as if interest coupons were presented for collection.[81]

Use of Stamps and Facsimile Signatures by Banks and Trust Companies.—If proper authorization is obtained from the Commissioner of Internal Revenue, banks and trust companies may use facsimile signatures in executing income tax certificates (substitute or otherwise) issued under their names.[82]

INFORMATION REGARDING FOREIGN ITEMS.—"Foreign items" and source from which information is obtained are expressly stated:

Definition of "Foreign Item."—

Regulation. The term "foreign item," as here used, means any dividend upon the stock of a nonresident foreign corporation or any item of interest upon the bonds of foreign countries or nonresident foreign corporations, whether or not such dividend or interest is paid in the United States or by check drawn on a domestic bank.

Source of Information.—

(*a*) Wherever a foreign country or nonresident foreign corporation issuing bonds has appointed a paying agent in this country, charged with the duty of paying the interest upon such bonds, such paying agent shall be the source of information. If such foreign country or foreign corporation has no such agent, then the last bank or collecting agent in this country shall be the source of information.

(*b*) In the case of dividends on the stock of a nonresident foreign corporation, however, the first bank or collecting agent accepting such item for collection shall be the source of information. No return of information is required with respect to foreign items owned by a nonresident alien individual, a foreign partnership, or a foreign corporation, provided the first bank or collecting agent is satisfied as to such ownership. In such case the foreign item may be stamped "foreign owner." (Art. 1076.)

License Required for the Collection of Foreign Items.—

Law. Sec. 259. That all individuals, corporations, or partnerships undertaking as a matter of business or for profit the collection of foreign payments of interest or dividends by means of coupons, checks, or bills of exchange shall obtain a license from the Commissioner and shall be subject to such regulations enabling the Government to obtain the information required under this title as the Commissioner, with the approval of the Secretary, shall prescribe; and whoever knowingly undertakes to collect such payments without having obtained a license therefor, or without complying with such regulations, shall be guilty of a misdemeanor and shall be fined not more than $5,000, or imprisoned for not more than one year, or both.

Regulation. Banks or agents collecting foreign items, as defined in article 1076, and required by article 1079 to make returns of information with respect thereto, must obtain a license from the Commissioner to engage in such business. Application Form 1017 for such license may be procured from collectors. The license is issued without cost on Form 1010. Foreign items shall not be accepted for collection by any bank or collecting agent so licensed unless properly indorsed or accompanied by proper ownership certificates giving all the information called for by such certificate. . . . . (Art. 1111.)

---

[81] C. B. 2, p. 191; O. D. 392.

[82] Either rubber stamps or printed signatures may be used. This concession was made to facilitate collection of coupons by banks. It avoids much delay and inconvenience.

Ownership Certificates for Foreign Items.

Regulation. When bonds of foreign countries, or bonds or stocks of non resident foreign corporations, are owned by citizens or residents of the United States, individual or fiduciary, or by resident partnerships, ownership certificate Form 1001 A shall be executed by the actual owner or by his duly authorized agent when presenting the item for collection, whether such item is a dividend or an interest payment, except in the case of a foreign country or a foreign corporation having a fiscal agent or a paying agent in this country and issuing bonds which contain a tax free covenant clause. In such excepted case the fiscal agent or paying agent is required to withhold a tax of 2 per cent from the interest on such bonds and ownership certificate Form 1000, modified to show the name and address of the fiscal agent or the paying agent, should be used unless the owner (if so entitled) desires to claim exemption, in which case Form 1001A should be filed.[33] . . . (Art. 1077.)

Domestic corporations are no longer required to execute Form 1001A.

Ruling. Ownership certificates representing interest on bonds owned by non resident aliens bearing addresses of domestic bankers in lieu of the residences of the aliens, will be accepted. (C. B. 4, p. 233; O. D. 908.)

No Ownership Certificates Required for Certain Foreign Dividends.—Following the principle in force under the 1918 law, it is presumed that ownership certificates will not be required in collecting dividends from foreign corporations which are free from normal tax.[34] Ownership certificates will be necessary in the case of dividends from other foreign corporations.

Foreign Items Presented for Collection Unaccompanied by Ownership Certificates.

Regulation. If the foreign item is an interest coupon detached from bonds containing a tax free covenant clause, issued by a foreign country or corporation having a paying agent in the United States, a statement and ownership certificate, Form 1000, shall be furnished as provided in article 369.

In the case of other foreign items which are received unaccompanied by an ownership certificate and the owner is unknown, a statement shall be required of the payee, showing the name and address of the payee, the name and address of the debtor organization, the date of the dividend check or the maturity of the interest coupon, the name and address of the person from whom the dividend check or interest coupon was received, and a statement that the owner of the securities is unknown to the payee. The first bank receiving such foreign item shall prepare a certificate of ownership, Form 1001A, crossing out the word "owner" and substituting therefor the word "payee." The first bank shall stamp or write across the face of the certificate "statement furnished," adding the name of the bank. Thereupon the statement and certificate shall be forwarded to the Commissioner as provided in article 1079. (Art. 1078.)

Returns of Information for Foreign Items. The following regulation applies to use of ownership certificates in collection of items (not payable in United States) of interest on bonds of foreign countries, and interest on bonds or dividends on stock of non resident foreign corporations.

Regulation. In the case of collections of foreign items, regardless of amount, the required ownership certificates, when duly filed, shall constitute and be treated as returns of information. (a) In the case of dividends, as to which the first bank or collecting agent is the source of information, it shall detach the ownership certificate and endorse on the item the words, "Certificate detached and information furnished," adding its name and address. When foreign items have been indorsed as above prescribed, the certificates shall be forwarded to the Commissioner on or before the 20th day of the month following that during which the items were accepted, accompanied by a return on Form 1096A showing the number of certificates. An annual return on

[33] No attempt is made to tax non resident aliens on income which simply passes through American banks for collection and is not income derived from sources within the United States.

[34] See Secs. 216 (a), 234 (a-6).

Form 1096B shall be forwarded to the Commissioner not later than March 15 of each year, on which shall be given a summary of the monthly returns. (*b*) In the case of interest items, as to which the paying agent or the last bank or collecting agent in this country is the source of information, the ownership certificate shall accompany the coupon to such agent or source of information, who shall forward the ownership certificate to the Commissioner in the same manner as above provided with respect to dividend items. Where ownership certificate Form 1000 is used, a monthly return shall be made on Form 1012 and an annual return on Form 1013, as provided in articles 361–375. . . . . (Art. 1079.)

Name of paying agent should be shown on Forms 1012 and 1013 when they are used to make returns of ownership certificates covering foreign interest. Aggregate amount of foreign items is no longer reported on Form 1096A.

Provisions of subdivision (b) above are applicable also to foreign registered bonds.[85]

Payment of Tax at Source

APPLICATION.—The 1917 law substituted a system of "information at the source" for collection at source.[86] Withholding was abolished, excepting only the cases of non-resident aliens and interest on bonds containing a so-called tax-free[87] covenant clause. The withholding provisions of the 1921 law are substantially the same as those of the two laws preceding it.

Sec. 221 of the 1921 law deals with the payment or withholding of tax at the source.

So far as citizens or residents of the United States are concerned, there is now no withholding or payment of tax at the source, except in the case of tax-free covenant bonds. After the enactment of the 1913 law many bonds were issued which contained tax-free covenants whereby the debtor corporations agreed to pay interest in full without deducting the amount of tax required to be withheld at the source. Bonds having such covenants commanded a somewhat higher price than they otherwise would. Those who had purchased bonds with this privilege were naturally opposed to any modification of the law which would abolish it. To meet these objections the 1917, 1918, and 1921 laws provided for restricted withholding in the case of tax-free covenant bond interest.

LEGAL THEORY OF "DEDUCTION."—Confusion arises chiefly from the necessarily involved legal phraseology of tax-free covenants and the legal fiction of "deduction." The legal fiction is that a tax-free covenant requires the debtor corporation actually to deduct 2% from the amount of the coupon pay this sum to the government, and then pay the bondholder 98% of his coupon *plus* an additional 2%, if the corporation has agreed to reimburse him to that extent. In practice the corporation pays the coupon in full and in

---

[85] C. B. 3, p. 313; O. D. 674.

[86] This is variously called "collection at the source," "deduction at the source," "withholding at the source," and "stoppage at the source." Collection at the source was early instituted in British income tax administration to prevent evasion of the law. In the 1920 Report of the Royal Commission on the Income Tax, the opinion was emphatically expressed that retention of deduction at the source is necessary to the efficient administration of the revenue. At least 70% of the present British income tax is collected at the source. The Commission also concluded: "We are not satisfied that any system of 'information at the source' would be a practical and efficient substitute for the present system, and it would be a source of trouble and irritation to the community in general."

[87] This term should not be confused with "tax-exempt," which means freedom from taxation—state, local or federal, or all three.

addition pays on behalf of the bondholder to the government a tax equivalent to 2% of the amount of the coupon.

Under some tax-free covenants debtor corporation agrees to reimburse bondholder only up to 1% of amount of coupon. The theory is that 2% is deducted from the coupon and the bondholder is paid 98% of the coupon *plus* a reimbursement of 1%. Practically, bondholder gets 99% of his coupon and corporation pays 2% to the government for him.

LIMITATION OF THE DEBTOR CORPORATION'S LIABILITY.—The usual tax-free covenant obligates the corporation to pay only such normal tax as it is required by law to **deduct and retain** for account of bondholders. Sometimes the covenant is to pay only up to a sum which is less than it is required to deduct and retain (e.g., 1%, while the deduction now required is 2%). If withholding at the source were to be entirely abolished the corporation would not be required by such a covenant to pay any normal tax for the bondholder.

Since the imposition of a high normal tax there has been a tendency to state the actual percentage of tax for which the corporation will make reimbursement. Among such provisions are: "Both principal and interest payable in full without deduction for any federal normal income tax . . . . not in excess of 2 per cent" and "both principal and interest payable in full without deduction for any federal normal income tax . . . . up to 4 per cent." The first clause limits the present and future liabiliy to reimburse to 2 %. The second clause limits such future liability to 4%. Thus if under a future law 6% were the lawful deduction, reimbursement would be made to the extent of 2% under the first clause or 4% under the second. This 4% limitation should not be construed to render corporations liable to 4% under the present law, because 2% is the maximum lawful deduction in case of a bond containing a tax-free covenant clause.

WHAT IS A "TAX-FREE COVENANT?"[88]—The law defines a tax-free covenant as follows:

Law. Sec. 221.[89] . . . . (b) In any case where bonds, mortgages, or deeds of trust, or other similar obligations of a corporation contain a contract or provision by which the obligor agrees to pay any portion of the tax imposed by this title upon the obligee, or to reimburse the obligee for any portion of the tax, or to pay the interest without deduction for any tax which the obligor may be required or permitted to pay thereon, or to retain therefrom under any law of the United States. . . . .

By Treasury interpretation, bonds issued under a trust deed containing a tax-free covenant are treated as if they themselves contained such a covenant. It is also held:

Ruling. Where neither bonds nor the trust deeds given by the obligor to secure them contain a tax-free convenant, supplemental agreements executed by the obligor corporation and the trustee containing a tax-free covenant and which modify the original trust deeds to that extent are of the same effect from the date of their proper execution as if they had been part of the original deeds of trust, and the bonds from such date are subject to the provisions of section 221(b) of the Revenue Act of 1918, provided proper authority exists for the modification of the trust deeds in this manner. The authority must be contained in the original trust deeds or actually secured from the bondholders. (C. B. 2, p. 187; O. D. 1414.)

---

[88] Tax-free covenants are frequently not limited to federal taxes, but include any state, county, or local taxes or impositions which the obligor may be required or permitted to deduct or retain under present or future laws.

[89] Subsec. (a) refers only to non-resident alien individuals or partnerships.

AMOUNT OF TAX WITHHELD BY OBLIGOR CORPORATION.—

Law. Sec. 221. . . . . (b) . . . . the obligor shall deduct and withhold a tax equal to 2 per centum of the interest upon such bonds, mortgages, deeds of trust, or other obligations, whether such interest is payable annually or at shorter or longer periods. . . . .

FROM WHOM TAX IS WITHHELD.—The law provides that in making payments of interest on tax-free covenant bonds, the obligor shall deduct and withhold a tax equivalent to 2% of the coupon.

Law. Sec. 221. . . . . (b) . . . . whether payable to a nonresident alien individual or to an individual citizen or resident of the United States or to a partnership: *Provided*, That the Commissioner may authorize such tax to be deducted and withheld in the case of interest upon any such bonds, mortgages, deeds of trust, or other obligations, the owners of which are not known to the withholding agent. . . . .

Sec. 237. That in the case of foreign corporations subject to taxation under this title not engaged in trade or business within the United States and not having any office or place of business therein, there shall be deducted and withheld at the source in the same manner and upon the same items of income as is provided in section 221 a tax equal to 12½ per centum thereof (but during the calendar year 1921 only 10 per centum), and such tax shall be returned and paid in the same manner and subject to the same conditions as provided in that section: *Provided*, That in the case of interest described in subdivision (b) of that section the deduction and withholding shall be at the rate of 2 per centum.

Regulation. In general, withholding is required (*a*) of a tax of 8 per cent in the case of fixed or determinable annual or periodical income payable to a nonresident alien individual or to a partnership composed in whole or in part of nonresident aliens and having no office or place of business within the United States, except (1) dividends of a class allowed as a credit by subdivision (*a*) of section 216, (2) interest on deposits with persons carrying on the banking business, paid to persons not engaged in business in the United States and not having an office or place of business therein, and (3) interest upon corporate bonds containing a tax-free covenant clause; (*b*) of a tax of 10 per cent for the calendar year 1921 and 12½ per cent for subsequent years in the case of fixed or determinable annual or periodical income (with the exceptions just stated) payable to a foreign corporation not engaged in trade or business within the United States and not having any office or place of business therein; and (*c*) of a tax of 2 per cent in the case of interest payable to an individual or a partnership, whether resident or nonresident, or to a foreign corporation not engaged in trade or business within the United States and not having any office or place of business therein, upon bonds or other obligations of domestic or resident foreign corporations containing a so-called tax-free covenant clause. Where the owner of bonds or other like obligations is unknown to the withholding agent a tax of 2 per cent must be withheld from interest on so-called tax-free covenant bonds, and a tax of 8 per cent must be withheld from interest on all other corporate bonds or securities. Bonds issued under a trust deed containing a tax-free covenant are treated as if they contained such a covenant. A foreign corporation having a fiscal agent or paying agent in this country is required to withhold a tax of 2 per cent upon the interest on its tax-free covenant bonds. . . . .

A debtor corporation having an issue of bonds or other similar obligations may appoint a duly authorized withholding agent to act in its behalf, provided notice of such appointment is filed with the Commissioner. (Art. 361.)

"WITHHOLDING AGENT" DEFINED.—

Law. Sec. 200. . . . . (3) The term "withholding agent" means any person required to deduct and withhold any tax under the provisions of section 221 or section 237; . . . .

INCOME SUBJECT TO WITHHOLDING.—

Regulation. Only (*a*) fixed or determinable (*b*) annual or periodical income is subject to withholding. Among such income, giving an idea of the general character of income intended, the statute specifies interest, rent, salaries, wages, premiums, annuities, compensations, remunerations, and emoluments. But other kinds of income may be included. . . . . (Art. 362.)

Fixed Income Defined.—

Regulation. . . . . Income is fixed when it is to be paid in amounts definitely predetermined. . . . . (Art. 362.)

Determinable Income Defined.—

Regulation. . . . . On the other hand, it is determinable whenever there is a basis of calculation by which the amount to be paid may be ascertained. (*b*) The income need not be paid annually if it is paid periodically, that is to say, from time to time, whether or not at regular intervals. That the length of time during which the payments are to be made may be increased or diminished in accordance with someone's will or with the happening of an event does not make the payments any the less determinable or periodical. A salesman working by the month for a commission on sales which is paid or credited monthly receives determinable periodical income. (Art. 362.)

EXEMPTION FROM WITHHOLDING.—Under the law debtor corporation or its paying agent is required to withhold a tax of 2% on tax-free covenant bond interest paid to individual citizens or residents **who do not claim exemption,** and in the case of resident partnerships.[90]

The statute provides that exemption from withholding may be claimed in the following manner:

Law. Sec. 221. . . . . (b) . . . . Such deduction and withholding shall not be required in the case of a citizen or resident entitled to receive such interest, if he files with the withholding agent on or before February 1 a signed notice in writing claiming the benefit of the credits provided in subdivisions (c) and (d) of section 216; nor in the case of a nonresident alien individual if so provided for in regulations prescribed[91] by the Commissioner under subdivision (g), section 217.

Regulation. Withholding from interest on bonds or other obligations containing a tax-free covenant shall not be required in the case of a citizen or resident alien individual if he files with the withholding agent when presenting interest coupons for payment, or not later than February 1 following the taxable year, an ownership certificate on Form 1001 claiming a personal exemption or credit for dependents. . . . . (Art. 363.)

If exemption is claimed on coupons, taxpayer thereby merely serves notice on debtor corporation that his income is too small to be subject to tax and therefore nothing should be paid to the government on his behalf. If exemption is not claimed, a tax of 2% of the amount of the coupon is paid to the government by the obligor.

Who Should Claim Exemption from Withholding?—Individual citizens or residents are privileged to claim exemption from withholding, but partners may not claim such exemption. A resident alien is required, in claiming such exemption, to file in addition a certificate of residence (Form 1078 revised) with withholding agent.

Individual citizens or residents should claim exemption, if total amount of net taxable income does not exceed their personal exemptions, i.e., $1,000 for a single person, $2,000 or $2,500 for a married person, plus $400 for each dependent. By filing such claim the individual relieves debtor corporation from paying a tax not lawfully due.

Debtor corporation's liability under a tax-free covenant covers only the portion of **normal tax** deductible at source. If, therefore, a taxpayer is **subject only to surtax,** because his lawful deductions exceed the amount of income, if any, subject to normal tax, he should relieve the debtor corporation from making payment to the government in his behalf by filing a claim for exemption in collecting tax-free covenant bond interest.

---

[90] For withholding on account of non-resident alien individuals, foreign partnership and corporations, see Montgomery's Income Tax Procedure, 1923, Ch. XLI.

[91] Sec. 217 gives the Commissioner discretion in allowing non-resident alien individuals to claim exemption by means of certificates of ownership.

If an individual who has not claimed exemption at time of collecting the interest afterwards desires to claim exemption, he may file in writing with paying agent, at any time prior to Feb. 1 of succeeding year, notice claiming exemption. Form 1001 may be used.

An individual who has claimed exemption and subsequently desires not to claim exemption must file notice in writing (Form 1000) with paying agent on or before Feb. 1.

Ruling. A foreign organization which has established its exemption from the payment of income tax in accordance with the provisions of article 511 of Regulations 62 will be permitted to claim exemption from having any tax withheld at the source upon interest payments made on bonds belonging to it. Ownership certificate, Form 1000, revised, is the proper form to be filed with such interest payments, but a notation should be made on the certificate substantially as follows: "As this organization has been declared exempt from the payment of income tax by the Commissioner of Internal Revenue under date of —— the interest entered on this certificate is not subject to withholding," giving the date of the official letter in which the organization was held to be exempt. (I–30–430; I. T. 1399.)

NO WITHHOLDING AGAINST DOMESTIC AND RESIDENT FOREIGN CORPORATIONS.—The law does not require withholding from interest on tax-free covenant bonds paid to a domestic corporation or to a foreign corporation having an office or place of business in the United States and engaged in a trade or business therein.[92]

As a rule, in case of payments of tax-free covenant bond interest to domestic or resident corporations,[93] no payment is made to the government on their behalf; hence the tax-free covenant is of no value to such holders. This feature of the law makes the tax-free covenant less costly to the issuing corporation, since large blocks of bonds are sold to banks, insurance companies, and other corporations.

WITHHOLDING OBLIGATION ON BOND INTEREST PAID IN YEARS AFTER INTEREST BECAME DUE.—

Ruling. . . . . Bond interest represents income to taxpayer when due and payable in accordance with article 54, Regulations 45. No tax required to be withheld from interest upon bonds due prior to March 1, 1913, but paid subsequent to that date. Interest due on and after March 1, 1913, subject to withholding at rates in force at time of payment but in case excess tax is withheld and paid to government claim for refund on form 46[94] will be considered. (Telegram to A. Iselin & Co., New York, N. Y., signed by P. S. Talbert, Acting Assistant to the Commissioner, and dated Sept. 8, 1919.)

From above it appears that no withholding is necessary by a debtor corporation in case of coupons from bonds containing a tax-free covenant clause now presented but due prior to Mar. 1, 1913; but on any coupons maturing subsequent to that date, withholding must be made at rate in existence at time of payment. Date of maturity does not determine rate of withholding. If an excessive tax is withheld and paid, bondholder may secure relief by filing claim for refund.

WITHHOLDING AT SOURCE OF INTEREST ON BONDS HAVING NO TAX-FREE COVENANT.—The government has taken the position that corporations whose securities do not contain a tax-free covenant must not pay the tax except under supplemental agreements.

---

[92] Forms 1086 should be retained by a debtor corporation in order that it may have in its possession competent evidence in case it should seek to account for its failure to withhold from the income of a foreign corporation. (Letter to Prentice-Hall, Inc., signed by E. H. Batson, dated June 7, 1922.)

[93] Excepting personal service corporations during years 1918 to 1921, inclusive.

[94] Now Form 843.

Ruling. Your telegram May 29. Bonds without tax-free covenant not permitted to be considered tax-free bonds at option of issuing corporation. Corporation only allowed to withhold tax at rate of 8 and 10 per cent from non-resident alien individuals and non-resident alien corporations respectively. Corporation prohibited from paying tax on interest derived from such bonds when owned by citizens or residents of United States. (Telegram to the Farmers' Loan & Trust Co., New York, N. Y., signed by Commissioner Daniel C. Roper, and dated June 2, 1919.)

WITHHOLDING IN CASE OF PARTNERSHIPS HAVING NON-RESIDENT ALIEN MEMBERS.—

Regulation. The Revenue Act of 1921 provides for withholding in the case of payments made to a partnership composed in whole or in part of nonresident aliens. This provision does not apply to such payments made prior to November 23, 1921. However, in the case of a partnership having an office or place of business in the United States, withholding will not be required (except in the case of interest upon tax-free bonds) even though one or more of the members thereof is a nonresident alien; the partnership, however, as agent of the nonresident alien member or members, should file a return of the income of such nonresident alien member or members in accordance with the provisions of article 404. [Art. 371 (a).]

NO WITHHOLDING ON INTEREST PAID ON FOREIGN LOANS NOT EVIDENCED BY BONDS OR NOTES. Foreign partnerships and corporations are taxable only upon so much of their income as is derived from sources within the United States, determined under provisions of Sec. 217 of the law. Sec. 217 (a) lists specific items of income as income from sources **within** the United States, and among others includes "(1) Interest on bonds, notes or other interest-bearing obligations of residents, corporate or otherwise." Sec. 217 (c) lists specific items of income as income from sources **without** the United States—among other "interest other than that derived from sources within the United States as provided in paragraph (1) of subdivision (a)."

Where a citizen or resident of the United States has borrowed money from a foreign partnership or corporation, but such borrowing is evidenced only by book entries, and no bond, note, or other interest-bearing obligation has been given therefor, it is the opinion of some authorities that interest paid or credited thereon is not income from sources within the United States as defined by the law, and is not subject to taxation or withholding.

RETURNS OF WITHHOLDING.—

Law. Sec. 221. . . . . (c) Every individual, corporation, or partnership required to deduct and withhold any tax under this section shall make return thereof on or before March 1 of each year and shall on or before June 15 pay the tax to the official of the United States government authorized to receive it. . . . .

WITHHOLDING AGENTS LIABLE FOR DEDUCTIBLE TAXES.—

Law. Sec. 221. . . . . (c) . . . . Every such individual, corporation, or partnership is hereby made liable for such tax and is hereby indemnified against the claims and demands of any individual, corporation, or partnership for the amount of any payments made in accordance with the provisions of this section. . . . .

When No Liability of Withholding Agent for Collecting of Tax at Source.—

Law. Sec. 221. . . . . (e) If any tax required under this section to be deducted and withheld is paid by the recipient of the income, it shall not be recollected from the withholding agent; nor in cases in which the tax is so paid shall any penalty be imposed upon or collected from the recipient of the income or the withholding agent for failure to return or pay the same, unless such failure was fraudulent and for the purpose of evading payment.

MONTHLY AND ANNUAL RETURNS REQUIRED.—Withholding agent is required to make monthly and annual returns as follows:

Regulation. (*a*) Every withholding agent shall make an annual return to the collector of the tax withheld from interest on corporate bonds or other obligations on or before March 1 on Form 1013. He shall also make a monthly return on Form 1012 on or before the 20th day of the month following that for which the return is made. The original ownership certificates, or the substitute certificates where authorized, must be forwarded to the Commissioner with the monthly return . . . . the tax withheld must be paid on or before June 15 of each year to the collector. . . . . (Art. 371.)

Ownership certificates are now to be sent to the Commissioner, not to the collector as previously.

If a non-resident alien claims exemption on tax-free covenant bonds on or before Feb. 1 by filing with withholding agent Form 1001B, amount of tax due from withholding agent as shown by Form 1013 may be reduced by 2% of aggregate amount of interest payments made to such individual during calendar year.

When Forms 1001 and 1001A are used **there is no actual withholding,** such returns being simply **information returns.** Monthly and annual returns are nevertheless required.

Regulation. Where a debtor corporation or its duly authorized withholding agent has made payments of interest on its bonds, but in certain instances has been required to withhold no tax, the ownership certificates on Form 1001 filed in connection with such payments shall be transmitted to the Commissioner, accompanied by a return on form 1096A showing the number of ownership certificates thus transmitted and the total amount of interest paid. This return shall be made by the 20th day of each month following that for which the return is made and need not be sworn to. An annual return shall be forwarded to the Commissioner not later than March 15 of each year on form 1096B, on which shall be given a summary of the monthly returns. . . . . (Art. 373.)

TAX PAID ON TAX-FREE COVENANT BOND INTEREST, WHEN CONSIDERED INCOME.[95]—The Treasury Department, in 1919, ruled that any tax paid pursuant to a tax-free covenant clause on behalf of a taxpayer should be considered as additional interest and should be reported by taxpayer in his return. The 1921 law, under Sec. 234 (a-3), provides that taxes paid under tax-free covenants shall not be included in gross income of taxpayer.

Not Deductible by Corporation.[96] —Under Sec. 234 (a-3), debtor corporation is not allowed to make deduction for federal taxes so paid under heading of either interest or taxes.

Credit for Taxes Paid on Tax-Free Covenant Bond Interest. —Taxpayers may credit total normal and surtaxes with amount of any tax paid for them at source by a debtor corporation pursuant to a tax-free covenant clause.[97]

[95] For discussion, see Montgomery's Income Tax Procedure, 1923, Ch. XXIV.
[96] For discussion, see preceding reference.
